 3. Board independence: We generally support U.S. shareholder proposals requiring that a certain percentage (up to 66⅔%) of the company’s board members be independent directors, and promoting all-independent audit, compensation and nominating/governance committees.
 4. Board diversity: We consider on a case-by-case basis shareholder proposals urging diversity of board membership with respect to gender, race or other factors.

5. Majority voting: We generally support proposals requesting or requiring majority voting policies in election of directors, so long as there is a carve-out for plurality voting in the case of contested elections.
6. Proxy access: We consider on a case-by-case basis shareholder proposals on particular procedures for inclusion of shareholder nominees in company proxy statements.
7. Reimbursement for dissident nominees: We generally support well-crafted U.S. shareholder proposals that would provide for reimbursement of dissident nominees elected to a board, as the cost to shareholders in electing such nominees can be factored into the voting decision on those nominees.
8. Proposals to elect directors more frequently: In the U.S. public company context, we usually support shareholder and management proposals to elect all directors annually (to “declassify” the board), although we make an exception to this policy where we believe that long-term shareholder value may be harmed by this change given particular circumstances at the company at the time of the vote on such proposal. As indicated above, outside the United States we generally support greater accountability to shareholders that comes through more frequent director elections, but recognize that many markets embrace longer term lengths, sometimes for valid reasons given other aspects of the legal context in electing boards.
9. Cumulative voting: We generally support proposals to eliminate cumulative voting in the U.S. market context. (Cumulative voting provides that shareholders may concentrate their votes for one or a handful of candidates, a system that can enable a minority bloc to place representation on a board.) U.S. proposals to establish cumulative voting in the election of directors generally will not be supported.
10. Separation of Chairman and CEO positions: We vote on shareholder proposals to separate the Chairman and CEO positions and/or to appoint an independent Chairman based in part on prevailing practice in particular markets, since the context for such a practice varies. In many non-U.S. markets, we view separation of the roles as a market standard practice, and support division of the roles in that context. In the United States, we consider such proposals on a case-by-case basis, considering, among other things, the existing board leadership structure, company performance, and any evidence of entrenchment or perceived risk that power is overly concentrated in a single individual.
11. Director retirement age and term limits: Proposals setting or recommending director retirement ages or director term limits are voted on a case-by-case basis that includes consideration of company performance, the rate of board renewal, evidence of effective individual director evaluation processes, and any indications of entrenchment.
12. Proposals to limit directors’ liability and/or broaden indemnification of officers and directors: Generally, we will support such proposals provided that an individual is eligible only if he or she has not acted in bad faith, with gross negligence or with reckless disregard of their duties.

C. Statutory auditor boards. The statutory auditor board, which is separate from the main board of directors, plays a role in corporate governance in several markets. These boards are elected by shareholders to provide assurance on compliance with legal and accounting standards and the company’s articles of association. We generally vote for statutory auditor nominees if they meet independence standards. In markets that require disclosure on attendance by internal statutory auditors, however, we consider voting against nominees for these positions who failed to attend at least 75% of meetings in the previous year. We also consider opposing nominees if the company does not meet market standards for disclosure on attendance.

D. Corporate transactions and proxy fights. We examine proposals relating to mergers, acquisitions and other special corporate transactions (i.e., takeovers, spin-offs, sales of assets, reorganizations, restructurings and recapitalizations) on a case-by-case basis in the interests of each fund or other account. Proposals for mergers or other significant transactions that are friendly and approved by the Research Providers usually are supported if there is no portfolio manager objection. We also analyze proxy contests on a case-by-case basis.

E. Changes in capital structure.

1. We generally support the following:

- Management and shareholder proposals aimed at eliminating unequal voting rights, assuming fair economic treatment of classes of shares we hold.
- U.S. management proposals to increase the authorization of existing classes of common stock (or securities convertible into common stock) if: (i) a clear business purpose is stated that we can support and the number of shares requested is reasonable in relation to the purpose for which authorization is requested; and/or (ii) the authorization does not exceed 100% of shares currently authorized and at least 30% of the total new authorization will be outstanding. (We consider proposals that do not meet these criteria on a case-by-case basis.)
- U.S. management proposals to create a new class of preferred stock or for issuances of preferred stock up to 50% of issued capital, unless we have concerns about use of the authority for anti-takeover purposes.
- Proposals in non-U.S. markets that in our view appropriately limit potential dilution of existing shareholders. A major consideration is whether existing shareholders would have preemptive rights for any issuance under a proposal for standing share issuance authority. We generally consider market-specific guidance in making these decisions; for example, in the U.K. market we usually follow Association of British Insurers' ("ABI") guidance, although company-specific factors may be considered and for example, may sometimes lead us to voting against share authorization proposals even if they meet ABI guidance.
- Management proposals to authorize share repurchase plans, except in some cases in which we believe there are insufficient protections against use of an authorization for anti-takeover purposes.
- Management proposals to reduce the number of authorized shares of common or preferred stock, or to eliminate classes of preferred stock.
- Management proposals to effect stock splits.
- Management proposals to effect reverse stock splits if management proportionately reduces the authorized share amount set forth in the corporate charter. Reverse stock splits that do not adjust proportionately to the authorized share amount generally will be approved if the resulting increase in authorized shares coincides with the proxy guidelines set forth above for common stock increases.
- Management dividend payout proposals, except where we perceive company payouts to shareholders as inadequate.

2. We generally oppose the following (notwithstanding management support):

- Proposals to add classes of stock that would substantially dilute the voting interests of existing shareholders.
- Proposals to increase the authorized or issued number of shares of existing classes of stock that are unreasonably dilutive, particularly if there are no preemptive rights for existing shareholders. However, depending on market practices, we consider voting for proposals giving general authorization for issuance of shares not subject to pre-emptive rights if the authority is limited.
- Proposals that authorize share issuance at a discount to market rates, except where authority for such issuance is de minimis, or if there is a special situation that we believe justifies such authorization (as may be the case, for example, at a company under severe stress and risk of bankruptcy).
- Proposals relating to changes in capitalization by 100% or more.

We consider on a case-by-case basis shareholder proposals to increase dividend payout ratios, in light of market practice and perceived market weaknesses, as well as individual company payout history and current circumstances. For example, currently we perceive low payouts to shareholders as a concern at some Japanese companies, but may deem a low payout ratio as appropriate for a growth company making good use of its cash, notwithstanding the broader market concern.

F. Takeover Defenses and Shareholder Rights.

1. Shareholder rights plans: We generally support proposals to require shareholder approval or ratification of shareholder rights plans (poison pills). In voting on rights plans or similar takeover defenses, we consider on a case-by-case basis whether the company has demonstrated a need for the defense in the context of promoting long-term share value; whether provisions of the defense are in line with generally accepted governance principles in the market (and specifically the presence of an adequate qualified offer provision that would exempt offers meeting certain conditions from the pill); and the specific context if the proposal is made in the midst of a takeover bid or contest for control.
2. Supermajority voting requirements: We generally oppose requirements for supermajority votes to amend the charter or bylaws, unless the provisions protect minority shareholders where there is a large shareholder. In line with this view, in the absence of a large shareholder we support reasonable shareholder proposals to limit such supermajority voting requirements.
3. Shareholders right to call a special meeting: We consider proposals to enhance a shareholder's rights to call meetings on a case-by-case basis. At large-cap U.S. companies, we generally support efforts to establish the right of holders of 10% or more of shares to call special meetings, unless the board or state law has set a policy or law establishing such rights at a threshold that we believe to be acceptable.
4. Written consent rights: In the U.S. context, we examine proposals for shareholder written consent rights on a case-by-case basis.
5. Reincorporation: We consider management and shareholder proposals to reincorporate to a different jurisdiction on a case-by-case basis. We oppose such proposals if we believe the main purpose is to take advantage of laws or judicial precedents that reduce shareholder rights.
6. Anti-greenmail provisions: Proposals relating to the adoption of anti-greenmail provisions will be supported, provided that the proposal: (i) defines greenmail; (ii) prohibits buyback offers to large block holders (holders of at least 1% of the outstanding shares and in certain cases, a greater

amount) not made to all shareholders or not approved by disinterested shareholders; and (iii) contains no anti-takeover measures or other provisions restricting the rights of shareholders.

7. Bundled proposals: We may consider opposing or abstaining on proposals if disparate issues are “bundled” and presented for a single vote.

G. Auditors. We generally support management proposals for selection or ratification of independent auditors. However, we may consider opposing such proposals with reference to incumbent audit firms if the company has suffered from serious accounting irregularities and we believe rotation of the audit firm is appropriate, or if fees paid to the auditor for non-audit-related services are excessive. Generally, to determine if non-audit fees are excessive, a 50% test will be applied (i.e., non-audit-related fees should be less than 50% of the total fees paid to the auditor). We generally vote against proposals to indemnify auditors.

H. Executive and Director Remuneration.

1. We generally support the following:
 - Proposals for employee equity compensation plans and other employee ownership plans, provided that our research does not indicate that approval of the plan would be against shareholder interest. Such approval may be against shareholder interest if it authorizes excessive dilution and shareholder cost, particularly in the context of high usage (“run rate”) of equity compensation in the recent past; or if there are objectionable plan design and provisions.
 - Proposals relating to fees to outside directors, provided the amounts are not excessive relative to other companies in the country or industry, and provided that the structure is appropriate within the market context. While stock-based compensation to outside directors is positive if moderate and appropriately structured, we are wary of significant stock option awards or other performance-based awards for outside directors, as well as provisions that could result in significant forfeiture of value on a director’s decision to resign from a board (such forfeiture can undercut director independence).
 - Proposals for employee stock purchase plans that permit discounts, but only for grants that are part of a broad-based employee plan, including all non-executive employees, and only if the discounts are limited to a reasonable market standard or less.
 - Proposals for the establishment of employee retirement and severance plans, provided that our research does not indicate that approval of the plan would be against shareholder interest.
2. We generally oppose retirement plans and bonuses for non-executive directors and independent statutory auditors.
3. In the U.S. context, we generally vote against shareholder proposals requiring shareholder approval of all severance agreements, but we generally support proposals that require shareholder approval for agreements in excess of three times the annual compensation (salary and bonus). We generally oppose shareholder proposals that would establish arbitrary caps on pay. We consider on a case-by-case basis shareholder proposals that seek to limit Supplemental Executive Retirement Plans (SERPs), but support such shareholder proposals where we consider SERPs excessive.
4. Shareholder proposals advocating stronger and/or particular pay-for-performance models will be evaluated on a case-by-case basis, with consideration of the merits of the individual

- proposal within the context of the particular company and its labor markets, and the company's current and past practices. While we generally support emphasis on long-term components of senior executive pay and strong linkage of pay to performance, we consider factors including whether a proposal may be overly prescriptive, and the impact of the proposal, if implemented as written, on recruitment and retention.
5. We generally support proposals advocating reasonable senior executive and director stock ownership guidelines and holding requirements for shares gained in executive equity compensation programs.
 6. We generally support shareholder proposals for reasonable "claw-back" provisions that provide for company recovery of senior executive bonuses to the extent they were based on achieving financial benchmarks that were not actually met in light of subsequent restatements.
 7. Management proposals effectively to re-price stock options are considered on a case-by-case basis. Considerations include the company's reasons and justifications for a re-pricing, the company's competitive position, whether senior executives and outside directors are excluded, potential cost to shareholders, whether the re-pricing or share exchange is on a value-for-value basis, and whether vesting requirements are extended.
 8. **Say-on-Pay: We consider proposals relating to an advisory vote on remuneration on a case-by-case basis. Considerations include a review of the relationship between executive remuneration and performance based on operating trends and total shareholder return over multiple performance periods. In addition, we review remuneration structures and potential poor pay practices, including relative magnitude of pay, discretionary bonus awards, tax gross ups, change-in-control features, internal pay equity and peer group construction. As long-term investors, we support remuneration policies that align with long-term shareholder returns.**

I. Social, Political and Environmental Issues. Shareholders in the United States and certain other markets submit proposals encouraging changes in company disclosure and practices related to particular corporate social, political and environmental matters. We consider how to vote on the proposals on a case-by-case basis to determine likely impacts on shareholder value. We seek to balance concerns on reputational and other risks that lie behind a proposal against costs of implementation, while considering appropriate shareholder and management prerogatives. We may abstain from voting on proposals that do not have a readily determinable financial impact on shareholder value. We support proposals that if implemented would enhance useful disclosure, but we generally vote against proposals requesting reports that we believe are duplicative, related to matters not material to the business, or that would impose unnecessary or excessive costs. We believe that certain social and environmental shareholder proposals may intrude excessively on management prerogatives, which can lead us to oppose them.

J. Fund of Funds. Certain Funds advised by an MSIM Affiliate invest only in other MSIM Funds. If an underlying fund has a shareholder meeting, in order to avoid any potential conflict of interest, such proposals will be voted in the same proportion as the votes of the other shareholders of the underlying fund, unless otherwise determined by the Proxy Review Committee. Other MSIM Funds invest in unaffiliated funds. If an unaffiliated underlying fund has a shareholder meeting and the MSIM Fund owns more than 25% of the voting shares of the underlying fund, the MSIM Fund will vote its shares in the unaffiliated underlying fund in the same proportion as the votes of the other shareholders of the underlying fund.

III. ADMINISTRATION OF POLICY

The MSIM Proxy Review Committee (the “Committee”) has overall responsibility for the Policy. The Committee, which is appointed by MSIM’s Long-Only Executive Committee, consists of investment professionals who represent the different investment disciplines and geographic locations of the firm, and is chaired by the director of the Corporate Governance Team (“CGT”). Because proxy voting is an investment responsibility and impacts shareholder value, and because of their knowledge of companies and markets, portfolio managers and other members of investment staff play a key role in proxy voting, although the Committee has final authority over proxy votes.

The CGT Director is responsible for identifying issues that require Committee deliberation or ratification. The CGT, working with advice of investment teams and the Committee, is responsible for voting on routine items and on matters that can be addressed in line with these Policy guidelines. The CGT has responsibility for voting case-by-case where guidelines and precedent provide adequate guidance.

The Committee will periodically review and have the authority to amend, as necessary, the Policy and establish and direct voting positions consistent with the Client Proxy Standard.

CGT and members of the Committee may take into account Research Providers’ recommendations and research as well as any other relevant information they may request or receive, including portfolio manager and/or analyst comments and research, as applicable. Generally, proxies related to securities held in accounts that are managed pursuant to quantitative, index or index-like strategies (“Index Strategies”) will be voted in the same manner as those held in actively managed accounts, unless economic interests of the accounts differ. Because accounts managed using Index Strategies are passively managed accounts, research from portfolio managers and/or analysts related to securities held in these accounts may not be available. If the affected securities are held only in accounts that are managed pursuant to Index Strategies, and the proxy relates to a matter that is not described in this Policy, the CGT will consider all available information from the Research Providers, and to the extent that the holdings are significant, from the portfolio managers and/or analysts.

A. Committee Procedures

The Committee meets at least quarterly, and reviews and considers changes to the Policy at least annually. Through meetings and/or written communications, the Committee is responsible for monitoring and ratifying “split votes” (i.e., allowing certain shares of the same issuer that are the subject of the same proxy solicitation and held by one or more MSIM portfolios to be voted differently than other shares) and/or “override voting” (i.e., voting all MSIM portfolio shares in a manner contrary to the Policy). The Committee will review developing issues and approve upcoming votes, as appropriate, for matters as requested by CGT.

The Committee reserves the right to review voting decisions at any time and to make voting decisions as necessary to ensure the independence and integrity of the votes.

B. Material Conflicts of Interest

In addition to the procedures discussed above, if the CGT Director determines that an issue raises a material conflict of interest, the CGT Director may request a special committee to review, and recommend a course of action with respect to, the conflict(s) in question (“Special Committee”).

A potential material conflict of interest could exist in the following situations, among others:

1. The issuer soliciting the vote is a client of MSIM or an affiliate of MSIM and the vote is on a matter that materially affects the issuer.

2. The proxy relates to Morgan Stanley common stock or any other security issued by Morgan Stanley or its affiliates except if echo voting is used, as with MSIM Funds, as described herein.
3. Morgan Stanley has a material pecuniary interest in the matter submitted for a vote (e.g., acting as a financial advisor to a party to a merger or acquisition for which Morgan Stanley will be paid a success fee if completed).

If the CGT Director determines that an issue raises a potential material conflict of interest, depending on the facts and circumstances, the issue will be addressed as follows:

1. If the matter relates to a topic that is discussed in this Policy, the proposal will be voted as per the Policy.
2. If the matter is not discussed in this Policy or the Policy indicates that the issue is to be decided case-by-case, the proposal will be voted in a manner consistent with the Research Providers, provided that all the Research Providers consulted have the same recommendation, no portfolio manager objects to that vote, and the vote is consistent with MSIM's Client Proxy Standard.
3. If the Research Providers' recommendations differ, the CGT Director will refer the matter to a Special Committee to vote on the proposal, as appropriate.

Any Special Committee shall be comprised of the CGT Director, and at least two portfolio managers (preferably members of the Committee), as approved by the Committee. The CGT Director may request non-voting participation by MSIM's General Counsel or his/her designee and the Chief Compliance Officer or his/her designee. In addition to the research provided by Research Providers, the Special Committee may request analysis from MSIM Affiliate investment professionals and outside sources to the extent it deems appropriate.

C. Proxy Voting Reporting

The CGT will document in writing all Committee and Special Committee decisions and actions, which documentation will be maintained by the CGT for a period of at least six years. To the extent these decisions relate to a security held by an MSIM Fund, the CGT will report the decisions to each applicable Board of Trustees/Directors of those Funds at each Board's next regularly scheduled Board meeting. The report will contain information concerning decisions made during the most recently ended calendar quarter immediately preceding the Board meeting.

MSIM will promptly provide a copy of this Policy to any client requesting it. MSIM will also, upon client request, promptly provide a report indicating how each proxy was voted with respect to securities held in that client's account.

MSIM's Legal Department is responsible for filing an annual Form N-PX on behalf of each MSIM Fund for which such filing is required, indicating how all proxies were voted with respect to such Fund's holdings.

APPENDIX A

Appendix A applies to the following accounts managed by Morgan Stanley AIP GP LP or Private Investment Partners Inc. ("AIP"): (i) closed-end funds registered under the Investment Company Act of 1940, as amended, (ii) separate accounts and (iii) unregistered funds.

Generally, AIP will follow the guidelines set forth in Section II of MSIM's Proxy Voting Policy and Procedures. To the extent that such guidelines do not provide specific direction, or AIP determines that consistent with the Client Proxy Standard, the guidelines should not be followed, the Proxy Review Committee has delegated the voting authority to vote securities held by accounts managed by AIP to the Fund of Hedge Funds investment team, the Private Equity Fund of Funds investment team or the Private Equity Real Estate Fund of Funds investment team of AIP. A summary of decisions made by the investment teams will be made available to the Proxy Review Committee for its information at the next scheduled meeting of the Proxy Review Committee.

In certain cases, AIP may determine to abstain from determining (or recommending) how a proxy should be voted (and therefore abstain from voting such proxy or recommending how such proxy should be voted), such as where the expected cost of giving due consideration to the proxy does not justify the potential benefits to the affected account(s) that might result from adopting or rejecting (as the case may be) the measure in question.

Waiver of Voting Rights

For regulatory reasons, AIP may either 1) invest in a class of securities of an underlying fund (the "Fund") that does not provide for voting rights; or 2) waive 100% of its voting rights with respect to the following:

1. Any rights with respect to the removal or replacement of a director, general partner, managing member or other person acting in a similar capacity for or on behalf of the Fund (each individually a "Designated Person," and collectively, the "Designated Persons"), which may include, but are not limited to, voting on the election or removal of a Designated Person in the event of such Designated Person's death, disability, insolvency, bankruptcy, incapacity, or other event requiring a vote of interest holders of the Fund to remove or replace a Designated Person; and
2. Any rights in connection with a determination to renew, dissolve, liquidate, or otherwise terminate or continue the Fund, which may include, but are not limited to, voting on the renewal, dissolution, liquidation, termination or continuance of the Fund upon the occurrence of an event described in the Fund's organizational documents; provided, however, that, if the Fund's organizational documents require the consent of the Fund's general partner or manager, as the case may be, for any such termination or continuation of the Fund to be effective, then AIP may exercise its voting rights with respect to such matter.

Nationwide Asset Management, LLC

Nationwide Asset Management, LLC ("NWAM") authority to vote client proxies is established by Registrant's investment advisory agreements or comparable documents.

Generally, NWAM does not provide advice on securities that issue proxies and therefore does not exercise voting authority with respect to client accounts or the securities held within those accounts.

From time to time NWAM may be in a position to vote client proxies. In these instances, NWAM intends to vote proxies in accord with the best economic interests of its clients. NWAM endeavors to resolve any conflicts of interest exclusively in the best economic interests of clients. In order to avoid conflicts of interest, NWAM or an affiliate has contracted with Institutional Shareholder Services (“ISS”), an independent third party service provider. NWAM will vote clients’ proxies according to ISS’s proxy voting recommendations.

On an annual basis, NWAM will review information obtained from RiskMetrics to ascertain whether RiskMetrics (i) has the capacity and competency to adequately analyze proxy issues, and (ii) can make such recommendations in an impartial manner and in the best economic interest of its clients.

NWAM’s Investment Committee votes proxies when RiskMetrics has recused itself from a vote recommendation or if senior officers or a member of the Committee believes it necessary in the best economic interests of clients to vote differently. Upon request, Registrant provides clients with a copy of its proxy voting procedures and information on how the client’s proxies were voted.

NATIONWIDE FUND ADVISORS

GENERAL

The Board of Trustees of Nationwide Mutual Funds and Nationwide Variable Insurance Trust (the “Funds”) has approved the continued delegation of the authority to vote proxies relating to the securities held in the portfolios of the Funds to each Fund’s investment adviser or sub-adviser, some of which advisers and sub-advisers use an independent service provider, as described below.

Nationwide Fund Advisors (“NFA” or the “Adviser”), is an investment adviser that is registered with the U.S. Securities and Exchange Commission (the “SEC”) pursuant to the Investment Advisers Act of 1940, as amended (the “Advisers Act”). NFA currently provides investment advisory services to registered investment companies (hereinafter referred to collectively as “Clients”).

Voting proxies that are received in connection with underlying portfolio securities held by Clients is an important element of the portfolio management services that NFA performs for Clients. NFA’s goal in performing this service is to make proxy voting decisions: (i) to vote or not to vote proxies in a manner that serves the best economic interests of Clients; and (ii) that avoid the influence of conflicts of interest. To implement this goal, NFA has adopted proxy voting guidelines (the “Proxy Voting Guidelines”) to assist it in making proxy voting decisions and in developing procedures for effecting those decisions. The Proxy Voting Guidelines are designed to ensure that, where NFA has the authority to vote proxies, all legal, fiduciary, and contractual obligations will be met.

The Proxy Voting Guidelines address a wide variety of individual topics, including, among other matters, shareholder voting rights, anti-takeover defenses, board structures and the election of directors, executive and director compensation, reorganizations, mergers, and various shareholder proposals.

The proxy voting records of the Funds are available to shareholders on the Trust’s website, www.nationwidefunds.com, and the SEC’s website.

HOW PROXIES ARE VOTED

NFA has delegated to Institutional Shareholder Services (“ISS”), an independent service provider, the administration of proxy voting for Client portfolio securities directly managed by NFA, subject to oversight by NFA’s “Proxy Voting Committee.” ISS, a Delaware corporation, provides proxy-voting services to many asset managers on a global basis. The NFA Proxy Voting Committee has reviewed, and will continue to review annually, the relationship with ISS and the quality and effectiveness of the various services provided by ISS.

Specifically, ISS assists NFA in the proxy voting and corporate governance oversight process by developing and updating the “ISS Proxy Voting Guidelines,” which are incorporated into the Proxy Voting Guidelines, and by providing research and analysis, recommendations regarding votes, operational implementation, and recordkeeping and reporting services. NFA’s decision to retain ISS is based principally on the view that the services that ISS provides, subject to oversight by NFA, generally will result in proxy voting decisions which serve the best economic interests of Clients. NFA has reviewed, analyzed, and determined that the ISS Proxy Voting Guidelines are consistent with the views of NFA on the various types of proxy proposals. When the ISS Proxy Voting Guidelines do not cover a specific proxy issue and ISS does not provide a recommendation: (i) ISS will notify NFA; and (ii) NFA will use its best judgment in voting proxies on behalf of the Clients. A summary of the ISS Proxy Voting Guidelines is set forth below.

CONFLICTS OF INTEREST

NFA does not engage in investment banking, administration or management of corporate retirement plans, or any other activity that is likely to create a potential conflict of interest. In addition, because Client proxies are voted by ISS pursuant to the pre-determined ISS Proxy Voting Guidelines, NFA generally does not make an actual determination of how to vote a particular proxy, and, therefore, proxies voted on behalf of Clients do not reflect any conflict of interest. Nevertheless, the Proxy Voting Guidelines address the possibility of such a conflict of interest arising.

The Proxy Voting Guidelines provide that, if a proxy proposal were to create a conflict of interest between the interests of a Client and those of NFA (or between a Client and those of any of NFA’s affiliates, including Nationwide Fund Distributors LLC and Nationwide), then the proxy should be voted strictly in conformity with the recommendation of ISS. To monitor compliance with this policy, any proposed or actual deviation from a recommendation of ISS must be reported by the NFA Proxy Voting Committee to the chief counsel for NFA. The chief counsel for NFA then will provide guidance concerning the proposed deviation and whether a deviation presents any potential conflict of interest. If NFA then casts a proxy vote that deviates from an ISS recommendation, the affected Client (or other appropriate Client authority) will be given a report of this deviation.

CIRCUMSTANCES UNDER WHICH PROXIES WILL NOT BE VOTED

NFA, through ISS, shall attempt to process every vote for all domestic and foreign proxies that they receive; however, there may be cases in which NFA will not process a proxy because it is impractical or too expensive to do so. For example, NFA will not process a proxy in connection with a foreign security if the cost of voting a **foreign proxy** outweighs the benefit of voting the foreign proxy, when NFA has not been given enough time to process the vote, or when a sell order for the foreign security is outstanding and proxy voting would impede the sale of the foreign security. Also, NFA generally will not seek to recall the **securities on loan** for the purpose of voting the securities unless it is in the best interests of the applicable Fund to do so.

DELEGATION OF PROXY VOTING TO SUB-ADVISERS TO FUNDS

For any Fund, or portion of a Fund that is directly managed by a sub-adviser, the Trustees of the Fund and NFA have delegated proxy voting authority to that sub-adviser. Each sub-adviser has provided its proxy voting policies to NFA for review and these proxy voting policies are described below. Each sub-adviser is required to represent quarterly to NFA that (1) all proxies of the Fund(s) advised by the sub-adviser were voted in accordance with the sub-adviser’s proxy voting policies as provided to NFA and (2) there have been no material changes to the sub-adviser’s proxy voting policies.

ISS' 2013 U.S. Proxy Voting Concise Guidelines

Routine/Miscellaneous

Auditor Ratification

Vote FOR proposals to ratify auditors unless any of the following apply:

- An auditor has a financial interest in or association with the company, and is therefore not independent;
- There is reason to believe that the independent auditor has rendered an opinion that is neither accurate nor indicative of the company's financial position;
- Poor accounting practices are identified that rise to a serious level of concern, such as: fraud; misapplication of GAAP; and material weaknesses identified in Section 404 disclosures; or
- Fees for non-audit services ("Other" fees) are excessive.

Non-audit fees are excessive if:

- Non-audit ("other") fees > audit fees + audit-related fees + tax compliance/preparation fees.

Board of Directors:

Voting on Director Nominees in Uncontested Elections

Votes on director nominees should be determined CASE-BY-CASE.

Four fundamental principles apply when determining votes on director nominees:

1. Board Accountability
2. Board Responsiveness
3. Director Independence
4. Director Competence

1. Board Accountability

Vote AGAINST⁵ or WITHHOLD from the entire board of directors (except new nominees⁶, who should be considered CASE- BY-CASE) for the following:

Problematic Takeover Defenses

Classified Board Structure:

- 1.1. The board is classified, and a continuing director responsible for a problematic governance issue at the board/committee level that would warrant a withhold/against vote recommendation is not up for election. All appropriate nominees (except new) may be held accountable.

Director Performance Evaluation:

⁵ In general, companies with a plurality vote standard use "Withhold" as the contrary vote option in director elections; companies with a majority vote standard use "Against". However, it will vary by company and the proxy must be checked to determine the valid contrary vote option for the particular company.

⁶ A "new nominee" is any current nominee who has not already been elected by shareholders and who joined the board after the problematic action in question transpired. If ISS cannot determine whether the nominee joined the board before or after the problematic action transpired, the nominee will be considered a "new nominee" if he or she joined the board within the 12 months prior to the upcoming shareholder meeting.

1.2. The board lacks accountability and oversight, coupled with sustained poor performance relative to peers. Sustained poor performance is measured by one- and three-year total shareholder returns in the bottom half of a company's four-digit GICS industry group (Russell 3000 companies only). Take into consideration the company's five-year total shareholder return and operational metrics. Problematic provisions include but are not limited to:

- A classified board structure;
- A supermajority vote requirement;
- Either a plurality vote standard in uncontested director elections or a majority vote standard with no plurality carve out for contested elections;
- The inability of shareholders to call special meetings;
- The inability of shareholders to act by written consent;
- A dual-class capital structure; and/or
- A non-shareholder approve poison pill.

Poison Pills:

- 1.3. The company's poison pill has a "dead-hand" or "modified dead-hand" feature. Vote AGAINST or WITHHOLD from nominees every year until this feature is removed;
- 1.4. The board adopts a poison pill with a term of more than 12 months ("long-term pill"), or renews any existing pill, including any "short-term" pill (12 months or less), without shareholder approval. A commitment or policy that puts a newly adopted pill to a binding shareholder vote may potentially offset an adverse vote recommendation. Review such companies with classified boards every year, and such companies with annually elected boards at least once every three years, and vote AGAINST or WITHHOLD votes from all nominees if the company still maintains a non-shareholder-approved poison pill; or
- 1.5. The board makes a material adverse change to an existing poison pill without shareholder approval.

Vote CASE-BY-CASE on all nominees if:

- 1.6. The board adopts a poison pill with a term of 12 months or less ("short-term pill") without shareholder approval, taking into account the following factors:
- The date of the pill's adoption relative to the date of the next meeting of shareholders—*i.e.* whether the company had time to put the pill on ballot for shareholder ratification given the circumstances;
 - The issuer's rationale;
 - The issuer's governance structure and practices; and
 - The issuer's track record of accountability to shareholders.

Problematic Audit-Related Practices

Generally vote AGAINST or WITHHOLD from the members of the Audit Committee if:

- 1.7. The non-audit fees paid to the auditor are excessive (see discussion under "[Auditor Ratification](#)");
- 1.8. The company receives an adverse opinion on the company's financial statements from its auditor; or
- 1.9. There is persuasive evidence that the Audit Committee entered into an inappropriate indemnification agreement with its auditor that limits the ability of the company, or its shareholders, to pursue legitimate legal recourse against the audit firm.

Vote CASE-BY-CASE on members of the Audit Committee and potentially the full board if:

1.10. Poor accounting practices are identified that rise to a level of serious concern, such as: fraud; misapplication of GAAP; and material weaknesses identified in Section 404 disclosures. Examine the severity, breadth, chronological sequence and duration, as well as the company's efforts at remediation or corrective actions, in determining whether WITHHOLD/AGAINST votes are warranted.

Problematic Compensation Practices/Pay for Performance Misalignment

In the absence of an Advisory Vote on Executive Compensation ballot item or in egregious situations, vote AGAINST or WITHHOLD from the members of the Compensation Committee and potentially the full board if:

1.11. There is a significant misalignment between CEO pay and company performance (pay for performance);

1.12. The company maintains significant problematic pay practices;

1.13. The board exhibits a significant level of poor communication and responsiveness to shareholders;

1.14. The company fails to submit one-time transfers of stock options to a shareholder vote; or

1.15. The company fails to fulfill the terms of a burn rate commitment made to shareholders.

Vote CASE-BY-CASE on Compensation Committee members (or, in exceptional cases, the full board) and the Management Say-on-Pay proposal if:

1.16. The company's previous say-on-pay proposal received the support of less than 70 percent of votes cast, taking into account:

- The company's response, including:
 - Disclosure of engagement efforts with major institutional investors regarding the issues that contributed to the low level of support;
 - Specific actions taken to address the issues that contributed to the low level of support;
 - Other recent compensation actions taken by the company;
- Whether the issues raised are recurring or isolated;
- The company's ownership structure; and
- Whether the support level was less than 50 percent, which would warrant the highest degree of responsiveness.

Governance Failures

Under extraordinary circumstances, vote AGAINST or WITHHOLD from directors individually, committee members, or the entire board, due to:

1.17. Material failures of governance, stewardship, risk oversight⁷, or fiduciary responsibilities at the company;

1.18. Failure to replace management as appropriate; or

1.19. Egregious actions related to a director's service on other boards that raise substantial doubt about his or her ability to effectively oversee management and serve the best interests of shareholders at any company.

⁷ Examples of failure of risk oversight include, but are not limited to: bribery; large or serial fines or sanctions from regulatory bodies; significant adverse legal judgments or settlements; hedging of company stock; or significant pledging of company stock.

2. Board Responsiveness

Vote AGAINST or WITHHOLD from individual directors, committee members, or the entire board of directors as appropriate if:

- 2.1. For 2013, the board failed to act⁸ on a shareholder proposal that received the support of a majority of the shares outstanding the previous year;
- 2.2. For 2013, the board failed to act on a shareholder proposal that received the support of a majority of shares cast in the last year and one of the two previous years;
- 2.3. For 2014, the board failed to act on a shareholder proposal that received the support of a majority of the shares cast in the previous year;
- 2.4. The board failed to act on takeover offers where the majority of shares are tendered;
- 2.5. At the previous board election, any director received more than 50 percent withhold/against votes of the shares cast and the company has failed to address the issue(s) that caused the high withhold/against vote; or
- 2.6. The board implements an advisory vote on executive compensation on a less frequent basis than the frequency that received the majority of votes cast at the most recent shareholder meeting at which shareholders voted on the say-on-pay frequency.

Vote CASE-BY-CASE on the entire board if:

- 2.7. The board implements an advisory vote on executive compensation on a less frequent basis than the frequency that received a plurality, but not a majority, of the votes cast at the most recent shareholder meeting at which shareholders voted on the say-on-pay frequency, taking into account:
 - The board's rationale for selecting a frequency that is different from the frequency that received a plurality;
 - The company's ownership structure and vote results;
 - ISS' analysis of whether there are compensation concerns or a history of problematic compensation practices; and
 - The previous year's support level on the company's say-on-pay proposal.

3. Director Independence

Vote AGAINST or WITHHOLD from Inside Directors and Affiliated Outside Directors (per the Categorization of Directors) when:

- 3.1. The inside or affiliated outside director serves on any of the three key committees: audit, compensation, or nominating;

⁸ Responding to the shareholder proposal will generally mean either full implementation of the proposal or, if the matter requires a vote by shareholders, a management proposal on the next annual ballot to implement the proposal. Responses that involve less than full implementation will be considered on a case-by-case basis, taking into account:

- The subject matter of the proposal;
- The level of support and opposition provided to the resolution in past meetings;
- Disclosed outreach efforts by the board to shareholders in the wake of the vote;
- Actions taken by the board in response to its engagement with shareholders;
- The continuation of the underlying issue as a voting item on the ballot (as either shareholder or management proposals); and
- Other factors as appropriate.

- 3.2. The company lacks an audit, compensation, or nominating committee so that the full board functions as that committee;
- 3.3. The company lacks a formal nominating committee, even if the board attests that the independent directors fulfill the functions of such a committee; or
- 3.4. Independent directors make up less than a majority of the directors.

4. Director Competence

Attendance at Board and Committee Meetings:

- 4.1. Generally vote AGAINST or WITHHOLD from directors (except new nominees, who should be considered CASE-BY- CASE ⁹) who attend less than 75 percent of the aggregate of their board and committee meetings for the period for which they served, unless an acceptable reason for absences is disclosed in the proxy or another SEC filing. Acceptable reasons for director absences are generally limited to the following:
 - Medical issues/illness;
 - Family emergencies; and
 - Missing only one meeting (when the total of all meetings is three or fewer).
- 4.2. If the proxy disclosure is unclear and insufficient to determine whether a director attended at least 75 percent of the aggregate of his/her board and committee meetings during his/her period of service, vote AGAINST or WITHHOLD from the director(s) in question.

Overboarded Directors:

Vote AGAINST or WITHHOLD from individual directors who:

- 4.3. Sit on more than six public company boards; or
- 4.4. Are CEOs of public companies who sit on the boards of more than two public companies besides their own— withhold only at their outside boards¹⁰.

Proxy Access

ISS supports proxy access as an important shareholder right, one that is complementary to other best-practice corporate governance features. However, in the absence of a uniform standard, proposals to enact proxy access may vary widely; as such, ISS is not setting forth specific parameters at this time and will take a case-by-case approach in evaluating these proposals.

Vote CASE-BY-CASE on proposals to enact proxy access, taking into account, among other factors:

- Company-specific factors; and
- Proposal-specific factors, including:

⁹ For new nominees only, schedule conflicts due to commitments made prior to their appointment to the board are considered if disclosed in the proxy or another SEC filing.

¹⁰ Although all of a CEO's subsidiary boards will be counted as separate boards, ISS will not recommend a withhold vote from the CEO of a parent company board or any of the controlled (>50 percent ownership) subsidiaries of that parent, but will do so at subsidiaries that are less than 50 percent controlled and boards outside the parent/subsidiary relationships.

- The ownership thresholds proposed in the resolution (*i.e.*, percentage and duration);
- The maximum proportion of directors that shareholders may nominate each year; and
- The method of determining which nominations should appear on the ballot if multiple shareholders submit nominations.

Proxy Contests -- Voting for Director Nominees in Contested Elections

Vote CASE-BY-CASE on the election of directors in contested elections, considering the following factors:

- Long-term financial performance of the target company relative to its industry;
- Management's track record;
- Background to the proxy contest;
- Qualifications of director nominees (both slates);
- Strategic plan of dissident slate and quality of critique against management;
- Likelihood that the proposed goals and objectives can be achieved (both slates);
- Stock ownership positions.

When the addition of shareholder nominees to the management card ("proxy access nominees") results in a number of nominees on the management card which exceeds the number of seats available for election, vote CASE-BY-CASE considering the same factors listed above.

Shareholder Rights & Defenses

Poison Pills - Management Proposals to Ratify Poison Pill

Vote CASE-BY-CASE on management proposals on poison pill ratification, focusing on the features of the shareholder rights plan. Rights plans should contain the following attributes:

- No lower than a 20% trigger, flip-in or flip-over;
- A term of no more than three years;
- No dead-hand, slow-hand, no-hand or similar feature that limits the ability of a future board to redeem the pill;
- Shareholder redemption feature (qualifying offer clause); if the board refuses to redeem the pill 90 days after a qualifying offer is announced, 10 percent of the shares may call a special meeting or seek a written consent to vote on rescinding the pill.

In addition, the rationale for adopting the pill should be thoroughly explained by the company. In examining the request for the pill, take into consideration the company's existing governance structure, including: board independence, existing takeover defenses, and any problematic governance concerns.

Poison Pills- Management Proposals to Ratify a Pill to Preserve Net Operating Losses (NOLs)

Vote AGAINST proposals to adopt a poison pill for the stated purpose of protecting a company's net operating losses (NOL) if the term of the pill would exceed the shorter of three years and the exhaustion of the NOL.

Vote CASE-BY-CASE on management proposals for poison pill ratification, considering the following factors, if the term of the pill would be the shorter of three years (or less) and the exhaustion of the NOL:

- The ownership threshold to transfer (NOL pills generally have a trigger slightly below 5 percent);
- The value of the NOLs;
- Shareholder protection mechanisms (sunset provision, or commitment to cause expiration of the pill upon exhaustion or expiration of NOLs);The company's existing governance structure including: board

- independence, existing takeover defenses, track record of responsiveness to shareholders, and any other problematic governance concerns; and
- Any other factors that may be applicable.

Shareholder Ability to Act by Written Consent

Generally vote AGAINST management and shareholder proposals to restrict or prohibit shareholders' ability to act by written consent.

Generally vote FOR management and shareholder proposals that provide shareholders with the ability to act by written consent, taking into account the following factors:

- Shareholders' current right to act by written consent;
- The consent threshold;
- The inclusion of exclusionary or prohibitive language;
- Investor ownership structure; and
- Shareholder support of, and management's response to, previous shareholder proposals.

Vote CASE-BY-CASE on shareholder proposals if, in addition to the considerations above, the company has the following governance and antitakeover provisions:

- An unfettered¹¹ right for shareholders to call special meetings at a 10 percent threshold;
- A majority vote standard in uncontested director elections;
- No non-shareholder-approved pill; and
- An annually elected board.

CAPITAL/RESTRUCTURING

Common Stock Authorization

Vote FOR proposals to increase the number of authorized common shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.

Vote AGAINST proposals at companies with more than one class of common stock to increase the number of authorized shares of the class of common stock that has superior voting rights.

Vote AGAINST proposals to increase the number of authorized common shares if a vote for a reverse stock split on the same ballot is warranted despite the fact that the authorized shares would not be reduced proportionally.

Vote CASE-BY-CASE on all other proposals to increase the number of shares of common stock authorized for issuance. Take into account company-specific factors that include, at a minimum, the following:

- Past Board Performance:
 - The company's use of authorized shares during the last three years
- The Current Request:
 - Disclosure in the proxy statement of the specific purposes of the proposed increase;

¹¹ "Unfettered" means no restrictions on agenda items, no restrictions on the number of shareholders who can group together to reach the 10 percent threshold, and only reasonable limits on when a meeting can be called: no greater than 30 days after the last annual meeting and no greater than 90 prior to the next annual meeting.

- Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request; and
- The dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns.

Dual Class Structure

Generally vote AGAINST proposals to create a new class of common stock unless:

- The company discloses a compelling rationale for the dual-class capital structure, such as:
 - The company's auditor has concluded that there is substantial doubt about the company's ability to continue as a going concern; or
 - The new class of shares will be transitory;
- The new class is intended for financing purposes with minimal or no dilution to current shareholders in both the short term and long-term; and
- The new class is not designed to preserve or increase the voting power of an insider or significant shareholder.

Preferred Stock Authorization

Vote FOR proposals to increase the number of authorized preferred shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.

Vote AGAINST proposals at companies with more than one class or series of preferred stock to increase the number of authorized shares of the class or series of preferred stock that has superior voting rights.

Vote CASE-BY-CASE on all other proposals to increase the number of shares of preferred stock authorized for issuance. Take into account company-specific factors that include, at a minimum, the following:

- Past Board Performance:
 - The company's use of authorized preferred shares during the last three years;
- The Current Request:
 - Disclosure in the proxy statement of the specific purposes for the proposed increase;
 - Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request;
 - In cases where the company has existing authorized preferred stock, the dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns; and
 - Whether the shares requested are blank check preferred shares that can be used for antitakeover purposes.

Mergers and Acquisitions

Vote CASE-BY-CASE on mergers and acquisitions. Review and evaluate the merits and drawbacks of the proposed transaction, balancing various and sometimes countervailing factors including:

- Valuation - Is the value to be received by the target shareholders (or paid by the acquirer) reasonable? While the fairness opinion may provide an initial starting point for assessing valuation reasonableness, emphasis is placed on the offer premium, market reaction and strategic rationale.

- Market reaction - How has the market responded to the proposed deal? A negative market reaction should cause closer scrutiny of a deal.
- Strategic rationale - Does the deal make sense strategically? From where is the value derived? Cost and revenue synergies should not be overly aggressive or optimistic, but reasonably achievable. Management should also have a favorable track record of successful integration of historical acquisitions.
- Negotiations and process - Were the terms of the transaction negotiated at arm's-length? Was the process fair and equitable? A fair process helps to ensure the best price for shareholders. Significant negotiation "wins" can also signify the deal makers' competency. The comprehensiveness of the sales process (e.g., full auction, partial auction, no auction) can also affect shareholder value.
- Conflicts of interest - Are insiders benefiting from the transaction disproportionately and inappropriately as compared to non-insider shareholders? As the result of potential conflicts, the directors and officers of the company may be more likely to vote to approve a merger than if they did not hold these interests. Consider whether these interests may have influenced these directors and officers to support or recommend the merger. The CIC figure presented in the "ISS Transaction Summary" section of this report is an aggregate figure that can in certain cases be a misleading indicator of the true value transfer from shareholders to insiders. Where such figure appears to be excessive, analyze the underlying assumptions to determine whether a potential conflict exists.
- Governance - Will the combined company have a better or worse governance profile than the current governance profiles of the respective parties to the transaction? If the governance profile is to change for the worse, the burden is on the company to prove that other issues (such as valuation) outweigh any deterioration in governance.

COMPENSATION

Executive Pay Evaluation

Underlying all evaluations are five global principles that most investors expect corporations to adhere to in designing and administering executive and director compensation programs:

1. Maintain appropriate pay-for-performance alignment, with emphasis on long-term shareholder value: This principle encompasses overall executive pay practices, which must be designed to attract, retain, and appropriately motivate the key employees who drive shareholder value creation over the long-term. It will take into consideration, among other factors, the link between pay and performance; the mix between fixed and variable pay; performance goals; and equity-based plan costs;
2. Avoid arrangements that risk "pay for failure": This principle addresses the appropriateness of long or indefinite contracts, excessive severance packages, and guaranteed compensation;
3. Maintain an independent and effective compensation committee: This principle promotes oversight of executive pay programs by directors with appropriate skills, knowledge, experience, and a sound process for compensation decision-making (e.g., including access to independent expertise and advice when needed);
4. Provide shareholders with clear, comprehensive compensation disclosures: This principle underscores the importance of informative and timely disclosures that enable shareholders to evaluate executive pay practices fully and fairly;
5. Avoid inappropriate pay to non-executive directors: This principle recognizes the interests of shareholders in ensuring that compensation to outside directors does not compromise their independence and ability to make appropriate judgments in overseeing managers' pay and performance. At the market level, it may incorporate a variety of generally accepted best practices.

Advisory Votes on Executive Compensation—Management Proposals (Management Say-on-Pay) Vote CASE-BY-CASE on ballot items related to executive pay and practices, as well as certain aspects of outside director compensation.

Vote AGAINST Advisory Votes on Executive Compensation (Management Say-on-Pay—MSOP) if:

- There is a significant misalignment between CEO pay and company performance (pay for performance);
- The company maintains significant problematic pay practices;
- The board exhibits a significant level of poor communication and responsiveness to shareholders.

Vote AGAINST or WITHHOLD from the members of the Compensation Committee and potentially the full board if:

- There is no MSOP on the ballot, and an AGAINST vote on an MSOP is warranted due to pay for performance misalignment, problematic pay practices, or the lack of adequate responsiveness on compensation issues raised previously, or a combination thereof;
- The board fails to respond adequately to a previous MSOP proposal that received less than 70 percent support of votes cast;
- The company has recently practiced or approved problematic pay practices, including option repricing or option backdating; or
- The situation is egregious.

Vote AGAINST an equity plan on the ballot if:

- A pay for performance misalignment is found, and a significant portion of the CEO's misaligned pay is attributed to non-performance-based equity awards, taking into consideration:
 - Magnitude of pay misalignment;
 - Contribution of non-performance-based equity grants to overall pay; and
 - The proportion of equity awards granted in the last three fiscal years concentrated at the named executive officer (NEO) level.

Primary Evaluation Factors for Executive Pay

Pay-for-Performance Evaluation

ISS annually conducts a pay-for-performance analysis to identify strong or satisfactory alignment between pay and performance over a sustained period. With respect to companies in the Russell 3000 index, this analysis considers the following:

1. Peer Group¹² Alignment:

- The degree of alignment between the company's TSR rank and the CEO's total pay rank within a peer group, as measured over one-year and three-year periods (weighted 40/60);
- The multiple of the CEO's total pay relative to the peer group median;

¹² The revised peer group is generally comprised of 14-24 companies that are selected using market cap, revenue (or assets for certain financial firms), GICS industry group and company's selected peers' GICS industry group with size constraints, via a process designed to select peers that are closest to the subject company in terms of revenue/assets and industry and also within a market cap bucket that is reflective of the company's.

2. Absolute Alignment – the absolute alignment between the trend in CEO pay and company TSR over the prior five fiscal years – i.e., the difference between the trend in annual pay changes and the trend in annualized TSR during the period.

If the above analysis demonstrates significant unsatisfactory long-term pay-for-performance alignment or, in the case of non-Russell 3000 index companies, misaligned pay and performance are otherwise suggested, our analysis may include any of the following qualitative factors, if they are relevant to the analysis to determine how various pay elements may work to encourage or to undermine long-term value creation and alignment with shareholder interests:

- The ratio of performance- to time-based equity awards;
- The overall ratio of performance-based compensation;
- The completeness of disclosure and rigor of performance goals;
- The company's peer group benchmarking practices;
- Actual results of financial/operational metrics, such as growth in revenue, profit, cash flow, etc., both absolute and relative to peers;
- Special circumstances related to, for example, a new CEO in the prior FY or anomalous equity grant practices (e.g., bi-annual awards);
- Realizable pay compared to grant pay; and
- Any other factors deemed relevant.

Problematic Pay Practices

The focus is on executive compensation practices that contravene the global pay principles, including:

- Problematic practices related to non-performance-based compensation elements;
- Incentives that may motivate excessive risk-taking; and
- Options Backdating.

Problematic Pay Practices related to Non-Performance-Based Compensation Elements

Pay elements that are not directly based on performance are generally evaluated CASE-BY-CASE considering the context of a company's overall pay program and demonstrated pay-for-performance philosophy. Please refer to ISS' Compensation FAQ document for detail on specific pay practices that have been identified as potentially problematic and may lead to negative recommendations if they are deemed to be inappropriate or unjustified relative to executive pay best practices. The list below highlights the problematic practices that carry significant weight in this overall consideration and may result in adverse vote recommendations:

- Repricing or replacing of underwater stock options/SARS without prior shareholder approval (including cash buyouts and voluntary surrender of underwater options);
- Excessive perquisites or tax gross-ups, including any gross-up related to a secular trust or restricted stock vesting;
- New or extended agreements that provide for:
 - CIC payments exceeding 3 times base salary and average/target/most recent bonus;
 - CIC severance payments without involuntary job loss or substantial diminution of duties ("single" or modified single" triggers);
 - CIC payments with excise tax gross-ups (including "modified" gross-ups).

Incentives that may Motivate Excessive Risk-Taking

- Multi-year guaranteed bonuses;
- A single or common performance metric used for short- and long-term plans;
- Lucrative severance packages;
- High pay opportunities relative to industry peers;

- Disproportionate supplemental pensions; or
- Mega annual equity grants that provide unlimited upside with no downside risk.

Factors that potentially mitigate the impact of risky incentives include rigorous claw-back provisions and robust stock ownership/holding guidelines.

Options Backdating

The following factors should be examined CASE-BY-CASE to allow for distinctions to be made between “sloppy” plan administration versus deliberate action or fraud:

- Reason and motive for the options backdating issue, such as inadvertent vs. deliberate grant date changes;
- Duration of options backdating;
- Size of restatement due to options backdating;
- Corrective actions taken by the board or compensation committee, such as canceling or re-pricing backdated options, the recouping of option gains on backdated grants; and
- Adoption of a grant policy that prohibits backdating, and creates a fixed grant schedule or window period for equity grants in the future.

Board Communications and Responsiveness

Consider the following factors CASE-BY-CASE when evaluating ballot items related to executive pay on the board’s responsiveness to investor input and engagement on compensation issues:

- Failure to respond to majority-supported shareholder proposals on executive pay topics; or
- Failure to adequately respond to the company's previous say-on-pay proposal that received the support of less than 70 percent of votes cast, taking into account:
 - The company's response, including:
 - Disclosure of engagement efforts with major institutional investors regarding the issues that contributed to the low level of support;
 - Specific actions taken to address the issues that contributed to the low level of support;
 - Other recent compensation actions taken by the company;
 - Whether the issues raised are recurring or isolated;
 - The company's ownership structure; and
 - Whether the support level was less than 50 percent, which would warrant the highest degree of responsiveness.

Frequency of Advisory Vote on Executive Compensation ("Say When on Pay")

Vote FOR annual advisory votes on compensation, which provide the most consistent and clear communication channel for shareholder concerns about companies' executive pay programs.

Voting on Golden Parachutes in an Acquisition, Merger, Consolidation, or Proposed Sale

Vote CASE-BY-CASE on say on Golden Parachute proposals, including consideration of existing change-in-control arrangements maintained with named executive officers rather than focusing primarily on new or extended arrangements.

Features that may result in an AGAINST recommendation include one or more of the following, depending on the number, magnitude, and/or timing of issue(s):

- Single- or modified-single-trigger cash severance;
- Single-trigger acceleration of unvested equity awards;
- Excessive cash severance (>3x base salary and bonus);
- Excise tax gross-ups triggered and payable (as opposed to a provision to provide excise tax gross-ups);

- Excessive golden parachute payments (on an absolute basis or as a percentage of transaction equity value); or
- Recent amendments that incorporate any problematic features (such as those above) or recent actions (such as extraordinary equity grants) that may make packages so attractive as to influence merger agreements that may not be in the best interests of shareholders; or
- The company's assertion that a proposed transaction is conditioned on shareholder approval of the golden parachute advisory vote.

Recent amendment(s) that incorporate problematic features will tend to carry more weight on the overall analysis. However, the presence of multiple legacy problematic features will also be closely scrutinized.

In cases where the golden parachute vote is incorporated into a company's advisory vote on compensation (management say-on-pay), ISS will evaluate the say-on-pay proposal in accordance with these guidelines, which may give higher weight to that component of the overall evaluation.

Equity-Based and Other Incentive Plans

Vote CASE-BY-CASE on equity-based compensation plans. Vote AGAINST the equity plan if any of the following factors apply:

- The total cost of the company's equity plans is unreasonable;
- The plan expressly permits repricing;
- A pay-for-performance misalignment is found;
- The company's three year burn rate exceeds the burn rate cap of its industry group;
- The plan has a liberal change-of-control definition; or
- The plan is a vehicle for problematic pay practices.

Social/Environmental Issues

Global Approach

Issues covered under the policy include a wide range of topics, including consumer and product safety, environment and energy, labor standards and human rights, workplace and board diversity, and corporate political issues. While a variety of factors goes into each analysis, the overall principle guiding all vote recommendations focuses on how the proposal may enhance or protect shareholder value in either the short term or long-term.

Generally vote CASE-BY-CASE, taking into consideration whether implementation of the proposal is likely to enhance or protect shareholder value, and in addition the following will also be considered:

- If the issues presented in the proposal are more appropriately or effectively dealt with through legislation or government regulation;
- If the company has already responded in an appropriate and sufficient manner to the issue(s) raised in the proposal;
- Whether the proposal's request is unduly burdensome (scope, timeframe, or cost) or overly prescriptive;
- The company's approach compared with any industry standard practices for addressing the issue(s) raised by the proposal;
- If the proposal requests increased disclosure or greater transparency, whether or not reasonable and sufficient information is currently available to shareholders from the company or from other publicly available sources; and
- If the proposal requests increased disclosure or greater transparency, whether or not implementation would reveal proprietary or confidential information that could place the company at a competitive disadvantage.

Political Spending & Lobbying Activities

Generally vote AGAINST proposals asking the company to affirm political nonpartisanship in the workplace so long as:

- There are no recent, significant controversies, fines or litigation regarding the company's political contributions or trade association spending; and
- The company has procedures in place to ensure that employee contributions to company-sponsored political action committees (PACs) are strictly voluntary and prohibit coercion.

Vote AGAINST proposals to publish in newspapers and other media the company's political contributions. Such publications could present significant cost to the company without providing commensurate value to shareholders.

Generally vote FOR proposals requesting greater disclosure of a company's political contributions and trade association spending policies and activities. However, the following will be considered:

- The company's current disclosure of policies and oversight mechanisms related to its direct political contributions and payments to trade associations or other groups that may be used for political purposes, including information on the types of organizations supported and the business rationale for supporting these organizations; and
- Recent significant controversies, fines, or litigation related to the company's political contributions or political activities.

Vote AGAINST proposals barring the company from making political contributions. Businesses are affected by legislation at the federal, state, and local level; barring political contributions can put the company at a competitive disadvantage.

Vote AGAINST proposals asking for a list of company executives, directors, consultants, legal counsels, lobbyists, or investment bankers that have prior government service and whether such service had a bearing on the business of the company. Such a list would be burdensome to prepare without providing any meaningful information to shareholders.

Vote CASE-BY-CASE on proposals requesting information on a company's lobbying (including direct, indirect, and grassroots lobbying) activities, policies, or procedures, considering:

- The company's current disclosure of relevant policies and oversight mechanisms;
- Recent significant controversies, fines, or litigation regarding the company's lobbying-related activities; and
- The impact that the public policy issues in question may have on the company's business operations, if specific public policy issues are addressed.

Foreign Private Issuers Listed on U.S. Exchanges

Vote AGAINST (or WITHHOLD from) non-independent director nominees at companies which fail to meet the following criteria: a majority-independent board, and the presence of an audit, a compensation, and a nomination committee, each of which is entirely composed of independent directors.

Where the design and disclosure levels of equity compensation plans are comparable to those seen at U.S. companies, U.S. compensation policy will be used to evaluate the compensation plan proposals. In all other cases, equity compensation plans will be evaluated according to ISS International Proxy Voting Guidelines.

All other voting items will be evaluated using ISS International Proxy Voting Guidelines.

Neuberger Berman Fixed Income LLC

Neuberger Berman has implemented written Proxy Voting Policies and Procedures (Proxy Voting Policy) that are designed to reasonably ensure that Neuberger Berman votes proxies prudently and in the best interest of its advisory clients for whom Neuberger Berman has voting authority. The Proxy Voting Policy also describes how Neuberger Berman addresses any conflicts that may arise between its interests and those of its clients with respect to proxy voting.

Neuberger Berman's Proxy Committee is responsible for developing, authorizing, implementing and updating the Proxy Voting Policy, overseeing the proxy voting process, and engaging and overseeing any independent third-party vendors as voting delegate to review, monitor and/or vote proxies. In order to apply the Proxy Voting Policy noted above in a timely and consistent manner, Neuberger Berman utilizes Glass, Lewis & Co. LLC (Glass Lewis) to vote proxies in accordance with Neuberger Berman's voting guidelines.

For socially responsive clients, Neuberger Berman has adopted socially responsive voting guidelines. For non-socially responsive clients, Neuberger Berman's guidelines adopt the voting recommendations of Glass Lewis. Neuberger Berman retains final authority and fiduciary responsibility for proxy voting. Neuberger Berman believes that this process is reasonably designed to address material conflicts of interest that may arise between Neuberger Berman and a client as to how proxies are voted.

In the event that an investment professional at Neuberger Berman believes that it is in the best interest of a client or clients to vote proxies in a manner inconsistent with Neuberger Berman's proxy voting guidelines or in a manner inconsistent with Glass Lewis recommendations, the Proxy Committee will review information submitted by the investment professional to determine that there is no material conflict of interest between Neuberger Berman and the client with respect to the voting of the proxy in that manner.

If the Proxy Committee determines that the voting of a proxy as recommended by the investment professional presents a material conflict of interest between Neuberger Berman and the client or clients with respect to the voting of the proxy, the Proxy Committee shall: (i) take no further action, in which case Glass Lewis shall vote such proxy in accordance with the proxy voting guidelines or as Glass Lewis recommends; (ii) disclose such conflict to the client or clients and obtain written direction from the client as to how to vote the proxy; (iii) suggest that the client or clients engage another party to determine how to vote the proxy; or (iv) engage another independent third party to determine how to vote the proxy.

Neuberger Berman Management LLC

Neuberger Berman has implemented written Proxy Voting Policies and Procedures (Proxy Voting Policy) that are designed to reasonably ensure that Neuberger Berman votes proxies prudently and in the best interest of its advisory clients for whom Neuberger Berman has voting authority. The Proxy Voting Policy also describes how Neuberger Berman addresses any conflicts that may arise between its interests and those of its clients with respect to proxy voting.

Neuberger Berman's Proxy Committee is responsible for developing, authorizing, implementing and updating the Proxy Voting Policy, overseeing the proxy voting process, and engaging and overseeing any independent third-party vendors as voting delegate to review, monitor and/or vote proxies. In order to apply the Proxy Voting Policy noted above in a timely and consistent manner, Neuberger Berman utilizes Glass, Lewis & Co. LLC (Glass Lewis) to vote proxies in accordance with Neuberger Berman's voting guidelines.

For socially responsive clients, Neuberger Berman has adopted socially responsive voting guidelines. For non-socially responsive clients, Neuberger Berman's guidelines adopt the voting recommendations of Glass Lewis. Neuberger Berman retains final authority and fiduciary responsibility for proxy voting. Neuberger Berman believes that this process is reasonably designed to address material conflicts of interest that may arise between Neuberger Berman and a client as to how proxies are voted.

In the event that an investment professional at Neuberger Berman believes that it is in the best interest of a client or clients to vote proxies in a manner inconsistent with Neuberger Berman's proxy voting guidelines or in a manner inconsistent with Glass Lewis recommendations, the Proxy Committee will review information submitted by the investment professional to determine that there is no material conflict of interest between Neuberger Berman and the client with respect to the voting of the proxy in that manner.

If the Proxy Committee determines that the voting of a proxy as recommended by the investment professional presents a material conflict of interest between Neuberger Berman and the client or clients with respect to the voting of the proxy, the proxy Committee shall: (i) take no further action, in which case Glass Lewis shall vote such proxy in accordance with the proxy voting guidelines or as Glass Lewis recommends; (ii) disclose such conflict to the client or clients and obtain written direction from the client as to how to vote the proxy; (iii) suggest that the client or clients engage another party to determine how to vote the proxy; or (iv) engage another independent third party to determine how to vote the proxy.

OppenheimerFunds, Inc.

Portfolio Proxy Voting. With respect to each fund for which OppenheimerFunds, Inc. serves as subadviser (the "Fund"), the Fund has adopted Portfolio Proxy Voting Policies and Procedures, which include Proxy Voting Guidelines, under which the Fund votes proxies relating to securities held by the Fund ("portfolio proxies"). OppenheimerFunds, Inc. (the "Manager") generally undertakes to vote portfolio proxies with a view to enhancing the value of the company's stock held by the Fund. The Fund has retained an independent, third party proxy voting agent to vote portfolio proxies in accordance with the Fund's Proxy Voting Guidelines and to maintain records of such portfolio proxy voting. The Manager's internal Proxy Voting Committee is responsible for monitoring the third party proxy voting agent.

The Portfolio Proxy Voting Policies and Procedures include provisions to address conflicts of interest that may arise between the Fund and the Manager or the Manager's affiliates or business relationships. Such a conflict of interest may arise, for example, where the Manager or an affiliate of the Manager manages or administers the assets of a pension plan or other investment account of the portfolio company soliciting the proxy or seeks to serve in that capacity. The Manager and its affiliates generally seek to avoid such material conflicts of interest by maintaining separate investment decision making processes to prevent the sharing of business objectives with respect to proposed or actual actions regarding portfolio proxy voting decisions. Additionally, the Manager employs the following procedures, as long as OFI determines that the course of action is consistent with the best interests of the Fund and its shareholders:

If the proposal that gives rise to the conflict is specifically addressed in the Proxy Voting Guidelines, the Manager will vote the portfolio proxy in accordance with the Proxy Voting Guidelines.

- If such proposal is not specifically addressed in the Proxy Voting Guidelines, or if the Proxy Voting Guidelines provide discretion to the Manager on how to vote (i.e., on a case-by-case basis), the Manager will vote in accordance with the third-party proxy voting agent's general recommended guidelines on the proposal provided that the Manager has reasonably determined that there is no conflict of interest on the part of the proxy voting agent.
- With respect to such proposal where a portfolio manager has requested that the Manager vote (i) in a manner inconsistent with the Proxy Voting Guidelines, or (ii) if such proposal is not specifically addressed in the Proxy Voting Guidelines, in a manner inconsistent with the third-party proxy voting agent's general recommended guidelines, the Proxy Voting Committee may determine that such a request is in the best interests of the Fund (and, if applicable, its shareholders) and does not pose an actual material conflict of interest. In making its determination, the Proxy Voting Committee may consider, among other things, whether the portfolio manager is aware of the business relationship with the company, and/or is sufficiently independent from the business relationship, and to the Proxy Voting Committee's knowledge, whether the Manager has been contacted or influenced by the company in connection with the proposal.

If none of the previous procedures provides an appropriate voting recommendation, the Proxy Voting Committee may: (i) determine how to vote on the proposal; (ii) recommend that the Manager retain an independent fiduciary to advise the Manager on how to vote the proposal; or (iii) determine that voting on the particular proposal is impracticable and/or is outweighed by the cost of voting and direct the Manager to abstain from voting.

The Proxy Voting Guidelines' provisions with respect to certain routine and non-routine proxy proposals are summarized below:

- The Fund evaluates director nominees on a case-by-case basis, examining the following factors, among others: composition of the board and key board committees, experience and qualifications, attendance at board meetings, corporate governance provisions and takeover activity, long-term company performance, the nominee's investment in the company, and whether the company or nominee is targeted in connection with public "vote no" campaigns.
- The Fund generally supports proposals requiring the position of chairman to be filled by an independent director unless there are compelling reasons to recommend against the proposal such as a counterbalancing governance structure.
- The Fund generally supports proposals asking that a majority of directors be independent. The Fund generally supports proposals asking that a board audit, compensation, and/or nominating committee be composed exclusively of independent directors.
- The Fund generally votes against shareholder proposals to require a company to nominate more candidates than the number of open board seats.
- The Fund generally supports shareholder proposals to reduce a super-majority vote requirement, and opposes management proposals to add a super-majority vote requirement.
- The Fund generally supports proposals to allow shareholders the ability to call special meetings.
- The Fund generally votes for proposals that remove restrictions on or provide the right of shareholders to act by written consent independently of management taking into account the company's specific governance provisions including right to call special meetings, poison pills, vote standards, etc. on a case-by-case basis.
- The Fund generally votes against proposals to create a new class of stock with superior voting rights.
- The Fund generally votes against proposals to classify a board.
- The Fund generally supports proposals to eliminate cumulative voting.
- The Fund generally votes against proposals to establish a new board committee.
- The Fund generally votes on management proposals seeking approval to exchange/reprice options on a case-by-case basis.
- The Fund votes on qualified employee stock purchase plans on a case-by-case basis. The Fund generally supports non-qualified employee stock purchase plans that feature broad-based participation, limits on employee contribution, company matching up to 25%, and no discount on the stock price on the date of purchase.
- The Fund generally supports transfer stock option ("TSO") programs, if executive officers and non-employee directors are excluded from participating, if stock options are purchased from third-party financial institutions at a discount to their fair value using option pricing models, and if there is a two-year

minimum holding period for sale proceeds. The Fund generally votes against equity plan proposals if the details of ongoing TSO programs are not provided to shareholders.

- The Fund generally supports proposals to require majority voting for the election of directors.
- The Fund generally supports proposals seeking additional disclosure of executive and director pay information.
- The Fund generally supports proposals seeking disclosure regarding the company's, board's or committee's use of compensation consultants.
- The Fund generally supports "pay-for-performance" and "pay-for-superior-performance standard" proposals that align a significant portion of total compensation of senior executives to company performance, and generally supports an annual frequency for advisory votes on executive compensation.
- The Fund generally supports having shareholder votes on poison pills.
- The Fund generally supports proposals calling for companies to adopt a policy of not providing tax gross-up payments.
- The Fund votes case-by-case on bonus banking/bonus banking "plus" proposals.
- The Fund generally supports proposals calling for companies to adopt a policy of obtaining shareholder approval for golden coffins/executive death benefits. This would not apply to any benefit programs or equity plan proposals for which the broad-based employee population is eligible.
- The Fund generally supports proposals to eliminate accelerated vesting of unvested equity awards to senior executives in the event of change in control (except for pro rata vesting considering the time elapsed and attainment of any related performance goals between the award date and the change in control).
- In the case of social, political and environmental responsibility issues, the Fund will generally abstain where there could be a detrimental impact on share value or where the perceived value if the proposal was adopted is unclear or unsubstantiated.
- The Fund generally supports proposals that would clearly have a discernible positive impact on short- or long-term share value, or that would have a presently indiscernible impact on short- or long-term share value but promotes general long-term interests of the company and its shareholders.

Putnam Investment Management, LLC

Introduction and Summary

Many of Putnam's investment management clients have delegated to Putnam the authority to vote proxies for shares held in the client accounts Putnam manages. Putnam believes that the voting of proxies can be an important tool for institutional investors to promote best practices in corporate governance and votes all proxies in the best interests of its clients as investors. In Putnam's view, strong corporate governance policies, most notably oversight of management by an independent board of qualified directors, best serve investors' interests. Putnam will vote proxies and maintain records of voting of shares for which Putnam has proxy voting authority in accordance with its fiduciary obligations and applicable law.

In order to implement these objectives Putnam has adopted a set of procedures and guidelines which are summarized below. The guidelines and procedures cover all accounts for which Putnam has proxy voting authority. Putnam does not have voting authority for the Putnam Funds which maintain their own separate proxy procedures and guidelines.

Similarly, other clients may from time to time elect to vote their own proxies by retaining the right to vote in the investment management agreement rather than giving Putnam authority to do so.

Procedures

Putnam has a Proxy Committee composed of senior investment professionals. The Proxy Committee is responsible for setting general policy as to proxy voting. The Committee reviews procedures and the guidelines annually, approves any amendments considered to be advisable and considers special proxy issues as they may from time to time arise. The proxy guidelines and procedures are administered through a proxy-voting manager in Putnam's Legal and Compliance Department. Under the supervision of senior members of the Legal and Compliance Department the Proxy Manager:

- coordinates the Proxy Committee's review of any new or unusual proxy issues,
- manages the process of referring issues to portfolio managers for voting instructions,
- oversees the work of any third party vendor hired to process proxy votes,
- coordinates responses to investment professionals' questions on proxy issues and proxy policies,
- maintains required records of proxy votes on behalf of the appropriate Putnam client accounts, and
- prepares and distributes reports required by Putnam clients.

Putnam has engaged a third party service, Glass Lewis & Co. ("Glass Lewis"), to process proxy votes for its client accounts. Although Glass Lewis may supply proxy related research to Putnam, Glass Lewis does not make any decisions on how to vote client proxies.

Proxy Voting Guidelines

Putnam maintains written voting guidelines ("Guidelines") setting forth voting positions determined by the Proxy Committee on those issues believed most likely to arise day to day. The Guidelines may call for votes normally to be cast in favor of or opposed to a matter or may deem the matter an item to be referred to investment professionals on a case by case basis. The Guidelines are summarized below.

Putnam will normally vote all proxies in accordance with the Guidelines except in limited circumstances, such as when client securities are on loan under a securities lending arrangement. However, if the portfolio managers of client accounts holding the relevant stock believe that following the Guidelines in a specific case would not be in clients' best interests, they may request that the Proxy Manager not follow the Guidelines in that case. The request must be in writing and include an explanation of the rationale for doing so. The Proxy Manager will review the request with a senior member of the Legal and Compliance Department prior to implementing it.

Some clients wish to have Putnam vote proxies under proxy guidelines which vary from the Guidelines, or may wish to direct Putnam's vote in a particular solicitation. There may be legal limits on a client's ability to direct Putnam as to proxy voting and on Putnam's ability to follow such instructions. Putnam may accept instructions to vote proxies under client specific guidelines subject to review and acceptance by the portfolio management team involved and the Legal and Compliance Department.

Conflicts of Interest

A potential conflict of interest may arise when voting proxies of an issuer which has a significant business relationship with Putnam. Putnam's policy is to vote proxies based solely on the investment merits of the proposal. In order to guard against conflicts Putnam has adopted a number of procedures designed to ensure that the proxy voting process is insulated from these conflicts. For example, the Proxy Committee is composed solely of professionals in Putnam's Investment Division while proxy administration is in the Legal and Compliance Department. Neither the Investment Division nor the Legal and Compliance Department reports to Putnam's marketing businesses. In addition, there are limits on the ability of Putnam employees who are not investment professionals to contact portfolio managers voting proxies. Investment professionals responding to referral requests must disclose any contacts with third parties other than normal contact with proxy solicitation firms. In addition, the

Proxy Manager reviews all known Putnam business relationships with companies that have voting items referred to any portfolio management team to consider any potential conflicts and, where appropriate, discusses relevant conflicts with a senior member of the Legal and Compliance Department.

The Guidelines may only be overridden with the written recommendation of the Investment Division, approval of the Proxy Committee or its Chair, and concurrence of the Legal and Compliance Department.

Summary of Proxy Voting Guidelines

The Guidelines summarize Putnam's positions on various issues of concern to investors and indicate how client portfolio securities will be voted on proposals dealing with a particular issue. The summary below does not address all topics covered by the Guidelines and is qualified by reference to the actual procedures and Guidelines, which are available to clients from Putnam on request.

The guidelines focus on board governance issues. Normally, if a board meets current best practices such as the maintenance of a majority of independent directors and the independence of key committees such as audit, compensation and nomination, Putnam will support the board's proposals. Boards which do not meet these standards will have their proposals subjected to higher scrutiny. There are a number of exceptions to this approach. With respect to some major business transactions such as mergers, proposals will be reviewed on a case by case basis. In a number of areas, such as the introduction of anti-takeover devices, the Guidelines will normally provide for voting against the introduction of anti-takeover devices whether or not supported by an independent board. The central provisions of the Guidelines are set forth below:

Board of Directors

Proxies will normally be voted for the election of the company's nominees for directors and for board-approved proposals on other matters relating to the board of directors (provided that such nominees and other matters have been approved by an independent nominating committee), except that Putnam will withhold votes for the entire board of directors if

- The board does not have a majority of independent directors;
- The board does not have nominating, audit and compensation committees composed solely of independent directors; or
- The board has more than nineteen members or fewer than five members, absent special circumstances

Putnam will withhold votes from incumbent nominees to the board if

The board has not acted to implement a policy requested in a shareholder proposal that received the support of a majority of the shares of the votes actually cast on the matter at its previous two annual meetings, or

The board adopted or renewed a shareholder rights plan (commonly referred to as a "poison pill") without shareholder approval during the current or prior calendar year.

If the board does not meet these standards Putnam may refer items that would normally be supported for case-by-case review. Putnam may withhold votes for directors under other circumstances such as when a director who is considered an independent director by the company receives compensation from the company other than for service as a director (such as investment banking, consulting, legal or financial advisory fees) or when a director attends less than 75% of board and committee meetings without valid reasons for the absences (that is, illness, personal emergency, etc.). In addition, Putnam will withhold votes:

- for any nominee for director of a public company (Company A) who is employed as a senior executive of another public company (Company B) if a director of Company B serves as a senior executive of Company A (these arrangements are commonly referred to as "interlocking directorates");

- for any nominee serves on more than five (5) unaffiliated public company boards (boards of affiliated registered investment companies are counted as one board).

Board independence depends not only on its members' individual relationships, but also the board's overall attitude toward management. Putnam believes that independent boards generally are committed to good corporate governance practices and, by providing objective independent judgment, enhance shareholder value. Putnam may withhold votes on a case-by-case basis from some or all directors that, through their lack of independence, have failed to observe good corporate governance practices or, through specific corporate action, have demonstrated a disregard for the interest of shareholders.

Putnam will normally vote on a case-by-case basis in contested elections of directors.

Executive Compensation

Putnam will normally vote on a case by case basis on proposals relating to executive compensation. However where the board of directors meets appropriate independence standards, Putnam will vote for stock option and restricted stock plans that will result in an average annual dilution of 1.67% or less (based on the disclosed term of the plan and including all equity-based plans). Putnam will vote against stock option and restricted stock plans that will result in an average annual dilution of greater than 1.67% (based on the disclosed term of the plan and including all equity plans). Putnam will vote against any stock option or restricted stock plan where the company's actual grants of stock options and restricted stock under all equity-based compensation plans during the prior three (3) fiscal years have resulted in an average annual dilution of greater than 1.67%. Putnam may review plans on a case-by-case basis where average annual dilution cannot be calculated. Whatever, the composition of the board, Putnam will review proposals to reprice options on a case by case basis if specific criteria are met. Putnam will vote against stock option plans that permit replacing or repricing of underwater options and will vote against stock option plans that permit issuance of options with an exercise price below the stock's current market price. Putnam may vote against executive compensation proposals on a case-by-case basis where compensation is excessive by reasonable corporate standards, where a company fails to provide transparent disclosure of executive compensation, or where Putnam would otherwise be withholding votes for the entire board of directors. In voting on proposals relating to executive compensation, Putnam will consider whether the proposal has been approved by an independent compensation committee of the board. Additionally, Putnam will generally vote in favor of the annual presentation of advisory votes on executive compensation ("say on pay"). Putnam will generally vote for advisory votes on executive compensation, but will generally vote against an advisory vote if the company fails to effectively link executive compensation to company performance according to benchmarking performed by the independent proxy voting service provider.

Acquisitions, Mergers and Similar Transactions

Putnam will normally evaluate business transactions such as acquisitions, mergers, reorganizations involving business combinations, liquidations and sale of all or substantially all of a company's assets, on a case by case basis. Putnam will vote on a case-by-case basis on proposals seeking to change a company's state of incorporation.

Anti-Takeover Provisions

Putnam will normally vote against proposals to adopt anti-takeover measures such as, supermajority voting provisions, issuance of blank check preferred stock (except for REITs, where measures will be voted on a case by case basis), and the creation of a separate class of stock with disparate voting rights. However, Putnam will vote on a case by case basis on proposals to ratify or approve shareholder rights plans (commonly referred to as "poison pills") and on proposals to adopt fair price provisions. Putnam will normally oppose classified boards except in special circumstances where having such a board would be in shareholders' best interests.

Shareholder Proposals

As noted above, the focus of Putnam's proxy voting policies is to encourage and support good corporate governance practices rather than to dictate to boards on specific business management issues. Although many shareholder proposals are intended to foster such practices, others may be intended more to further a larger political or social aim rather than to directly serve shareholder interests. Accordingly, Putnam will normally vote in accordance with the recommendation of the company's board of directors on shareholder proposals unless the proposal reflects specific policies enumerated in the Guidelines. For example, Putnam will normally vote in favor of shareholder proposals to declassify a company's board, require shareholder approval of shareholder rights plans or require that the Chairman's position be filled by an independent director.

Non-US Companies

Putnam recognizes that the laws governing non-US issuers will vary significantly from US law and from jurisdiction to jurisdiction. It may not be possible or even advisable to apply the Guidelines mechanically to non-US issuers. However, Putnam believes that shareholders of all companies are protected by the existence of a sound corporate governance and disclosure framework. Accordingly, Putnam will seek to vote proxies of non-US issuers in accordance with the Guidelines where applicable.

Many non-US jurisdictions impose significant burdens on voting proxies. For example, some jurisdictions require that shares must be frozen for specified periods of time to vote via proxy ("share blocking") or that shares must be reregistered out of the name of the local custodian or nominee into the name of the client for the meeting and then reregistered back.

Putnam's policy is to weigh the benefits to clients from voting in these jurisdictions against the detriments of doing so. For example, in a share blocking jurisdiction, it will normally not be in a client's interest to freeze shares simply to participate in a non-contested routine meeting. More specifically, Putnam will normally not vote shares in non-US jurisdictions imposing burdensome proxy voting requirements except in significant votes (such as contested elections and major corporate transactions) where directed by portfolio managers. Putnam maintains additional policies for specific non-U.S. markets such as Japan, Korea, Hong Kong, the U.K., Canada and France.

In rare cases, Putnam's voting rights may also be directly limited by non-U.S. law. For example, some countries limit aggregate foreign ownership of companies in particular industries (such as aviation or energy) due to economic or security concerns. Where this limit is exceeded, shares held by foreign investors, including Putnam, may not carry voting rights.

More Information

Putnam will make its best efforts to vote all proxies except when impeded by circumstances that are reasonably beyond its control and responsibility. This may happen when the custodian makes an error or the client has not established robust custodial proxy voting services. Putnam also does not recall shares on loan to vote proxies.

Clients who want more information about Putnam's proxy voting policies, including a copy of the Guidelines and related policies or a statement of how proxies were voted for the client's account, should contact their Putnam account executive or client service manager.

Pyramis Global Advisors, LLC

Proxy Voting

When authorized by clients, Pyramis or its affiliates generally cast votes on behalf of client accounts by proxy at shareholder meetings of issuers in which Pyramis invests client assets. Pyramis and its affiliates have established formal written proxy voting guidelines (the “Guidelines”) which are designed to ensure that proxies are voted in accordance with the best interests of clients as determined by Pyramis’ or its affiliates’ sole judgment. Pyramis has also adopted these Guidelines as part of its proxy voting policies and procedures in accordance with Rule 206(4)-6 under the Advisers Act. FMR provides proxy voting services to Pyramis and its affiliates.

Except as set out in the Guidelines, Pyramis or its affiliates generally vote in favor of routine management proposals, and evaluate shareholder proposals by their likelihood to enhance the economic returns or profitability of the portfolio company or to maximize shareholder value.

Non-routine proposals not covered by the Guidelines or involving other special circumstances will be evaluated on a case-by-case basis with input from the appropriate analyst or portfolio manager, as applicable, subject to review by an attorney within the General Counsel’s office and a member of senior management within Investment Proxy Research Group (IPR).

Proposals Relating to Director Elections

Pyramis or its affiliates will generally withhold authority for the election of all directors or directors on responsible committees if; a poison pill or other anti-takeover provision was adopted or extended without shareholder approval; options were repriced without shareholder approval; the board is not composed of a majority of independent directors; the director attended less than 75% of the aggregate number of board or committee meetings during the company’s prior fiscal year; or executive compensation appears misaligned with shareholder interests or is otherwise problematic, taking into account those factors identified in “Proposals Relating to Executive Compensation”. Pyramis and its affiliates will generally support proposals calling for directors to be elected by a majority of votes cast, provided that the proposal allows for plurality voting standard in the case of contested elections. Pyramis and its affiliates may consider voting against such shareholder proposals where a company has adopted an alternative measure, such as a director resignation policy, that provides a meaningful alternative to the majority voting standard and appropriately addresses situations where an incumbent director fails to receive the support of a majority of the votes cast in an uncontested election.

Proposals Relating to Executive Compensation

Pyramis or its affiliates will consider withholding authority for the election of directors and voting against management proposals on stock-based compensation plans or other compensation plans based on whether the proposals are consistent with the interests of shareholders, taking into account such factors as (i) whether the company has an independent compensation committee, and (ii) whether the compensation committee has authority to engage independent compensation consultants; (iii) whether, in the case of stock awards, the restriction period was less than three years for non-performance-based awards, and less than one year for performance-based awards; (iv) whether the compensation committee has lapsed or waived equity vesting restrictions; and (v) whether the company has adopted or extended a golden parachute without shareholder approval. Pyramis and its affiliates will generally support an annual frequency for advisory votes on executive compensation.

Proposals Relating to Equity-Based Compensation Plans

The Guidelines generally oppose plans or amendments to plans that: have option exercise prices less than 100% of fair market value on the date of grant, include an evergreen provision, provide for the acceleration of vesting of equity awards even though an actual change in control may not occur; give the ability to re-price outstanding stock options without shareholder approval; or cause excessive dilution to shareholders by considering the average three-

year burn rate, based on the company's market capitalization. Large-capitalization companies are those included in the Russell 1000® Index or the Russell Global ex-U.S. Large Cap Index; small-capitalization companies are those not included in the Russell 1000® Index or the Russell Global ex-U.S. Large Cap Index that is not a micro-capitalization company; and micro-capitalization companies are those with a market capitalization under US \$300 million.

Proposals Relating to Changes in Corporate Control

The Guidelines generally oppose measures that are designed to prevent or obstruct corporate takeovers. Such measures include fair price amendments, classified boards, "blank check" preferred stock, executive "golden parachutes," shareholder rights plans ("poison pills"), restricting shareholders' right to call special meetings or to set board size, supermajority provisions and any other provision that eliminates or limits shareholder rights.

Proposals Relating to Shareholder Rights

The Guidelines generally (i) support simple majority voting, (ii) oppose cumulative voting, (iii) support confidential voting, and (iv) oppose new classes of stock with differential voting rights.

Conflicts of Interest

The Guidelines have been designed so that proxies are voted in the best interest of Pyramis' and its affiliates' clients, as determined by Pyramis' or its affiliates' sole judgment, and to resolve potential conflicts of interest. Potential conflicts generally may arise in connection with business arrangements of Pyramis or its affiliates. For example, Pyramis' affiliates may manage or administer employee benefit plans, or provide brokerage, underwriting, insurance, or banking services to a company whose management is soliciting proxies. Pyramis or its affiliates may also have business or personal relationships with participants in proxy contests, corporate directors or candidates for directorships. Pyramis or its affiliates vote shares in a manner consistent with the Guidelines and without regard to any other relationship, business or otherwise, that Pyramis or its affiliates may have with companies in which Pyramis invests client assets.

IPR, which is part of Pyramis' or its affiliates' Investment Services department, is charged with administering the Guidelines provided to it by Pyramis. IPR votes proxies without regard to any other Pyramis companies' relationship, business or otherwise, with that portfolio company and without giving effect to any potential conflict of interest, material or otherwise. Like Pyramis employees, IPR employees have a fiduciary duty to never place their own personal interest ahead of the interests of fund shareholders, and are instructed to avoid actual and apparent conflicts of interest. In the event of a conflict of interest, IPR employees, like Pyramis employees, will escalate to their managers or the Ethics Office, as appropriate, in accordance with Fidelity's corporate policy on conflicts of interest.

Clients may not direct Pyramis' vote if Pyramis has been given proxy voting authority.

Templeton Investment Counsel, LLC

Proxy Voting Policies and Procedures

The board of trustees of the Fund has delegated the authority to vote proxies related to the portfolio securities held by the Fund to the Fund's sub-adviser, Templeton Investment Counsel, LLC, in accordance with the Proxy Voting Policies and Procedures (Policies) adopted by the investment manager.

The investment manager has delegated its administrative duties with respect to the voting of proxies to the Proxy Group within Franklin Templeton Companies, LLC (Proxy Group), an affiliate and wholly owned subsidiary of Franklin Resources, Inc. All proxies received by the Proxy Group will be voted based upon the investment manager's instructions and/or policies. The investment manager votes proxies solely in the best interests of the Fund and its shareholders.

To assist it in analyzing proxies, Investment Manager subscribes to Institutional Shareholder Services Inc. ("ISS"), an unaffiliated third party corporate governance research service that provides in-depth analyses of shareholder meeting agendas and vote recommendations. In addition, the Investment Manager subscribes to ISS's Proxy Voting Service and Vote Disclosure Service. These services include receipt of proxy ballots, custodian bank relations, account maintenance, vote execution, ballot reconciliation, vote record maintenance, comprehensive reporting capabilities and vote disclosure services. In addition, the investment manager subscribes to Glass, Lewis & Co., LLC (Glass Lewis), an unaffiliated third-party analytical research firm, to receive analyses and vote recommendations on the shareholder meetings of publicly held U.S. companies, as well as a limited subscription to its international research. Although ISS' and/or Glass Lewis' analyses are thoroughly reviewed and considered in making a final voting decision, the investment manager does not consider recommendations from ISS, Glass Lewis or any other third party to be determinative of the investment manager's ultimate decision. Rather, Investment Manager exercises its independent judgment in making voting decisions. As a matter of policy, the officers, directors/trustees and employees of the investment manager and the Proxy Group will not be influenced by outside sources whose interests conflict with the interests of the Fund and its shareholders. Efforts are made to resolve all conflicts in the best interests of the investment manager's clients. Material conflicts of interest are identified by the Proxy Group based upon analyses of client, distributor, broker-dealer and vendor lists, information periodically gathered from directors and officers, and information derived from other sources, including public filings. In situations where a material conflict of interest is identified, the Proxy Group may defer to the voting recommendation of ISS, Glass Lewis or those of another independent third-party provider of proxy services; or send the proxy directly to the Fund's board or a committee of the board with the investment manager's recommendation regarding the vote for approval.

Where a material conflict of interest has been identified, but the items on which the investment manager's vote recommendations differ from Glass Lewis, ISS, or another independent third-party provider of proxy services relate specifically to (1) shareholder proposals regarding social or environmental issues, (2) "Other Business" without describing the matters that might be considered, or (3) items the investment manager wishes to vote in opposition to the recommendations of an issuer's management, the Proxy Group may defer to the vote recommendations of the investment manager rather than sending the proxy directly to the Fund's board or a board committee for approval.

To avoid certain potential conflicts of interest, the investment manager will employ echo voting, if possible, in the following instances: (1) when the Fund invests in an underlying fund in reliance on any one of Sections 12(d) (1) (E), (F), or (G) of the 1940 Act, the rules thereunder, or pursuant to a SEC exemptive order thereunder; (2) when the Fund invests uninvested cash in affiliated money market funds pursuant to the rules under the 1940 Act or any exemptive orders thereunder ("cash sweep arrangement"); or (3) when required pursuant to the Fund's governing documents or applicable law. Echo voting means that the investment manager will vote the shares in the same proportion as the vote of all of the other holders of the Fund's shares.

The recommendation of management on any issue is a factor that the investment manager considers in determining how proxies should be voted. However, the investment manager does not consider recommendations from management to be determinative of the investment manager's ultimate decision. As a matter of practice, the votes

with respect to most issues are cast in accordance with the position of the company's management. Each issue, however, is considered on its own merits, and the investment manager will not support the position of the company's management in any situation where it deems that the ratification of management's position would adversely affect the investment merits of owning that company's shares.

Investment manager's proxy voting policies and principles The investment manager has adopted general proxy voting guidelines, which are summarized below. These guidelines are not an exhaustive list of all the issues that may arise and the investment manager cannot anticipate all future situations. In all cases, each proxy will be considered based on the relevant facts and circumstances.

Board of directors. The investment manager supports an independent board of directors, and prefers that key committees such as audit, nominating, and compensation committees be comprised of independent directors. The investment manager will generally vote against management efforts to classify a board and will generally support proposals to declassify the board of directors. The investment manager will consider withholding votes from directors who have attended less than 75% of meetings without a valid reason. The investment manager will review the issue of separating Chairman and CEO positions as well as proposals to restore or provide for cumulative voting on a case-by-case basis, taking into consideration factors such as the company's corporate governance guidelines or provisions and performance. The investment manager generally will support non-binding shareholder proposals to require a majority vote standard for the election of directors; however, if these proposals are binding, the investment manager will give careful review on a case-by-case basis of the potential ramifications of such implementation.

In the event of a contested election, the investment manager will review a number of factors in making a decision including management's track record, the company's financial performance, qualifications of candidates on both slates, and the strategic plan of the dissidents.

Ratification of auditors of portfolio companies. The investment manager will closely scrutinize the independence, role and performance of auditors. On a case-by-case basis, the investment manager will examine proposals relating to non-audit relationships and non-audit fees. The investment manager will also consider, on a case-by-case basis, proposals to rotate auditors, and will vote against the ratification of auditors when there is clear and compelling evidence of a lack of independence, accounting irregularities or negligence. The investment manager may also consider whether the ratification of auditors has been approved by an appropriate audit committee that meets applicable composition and independence requirements.

Management and director compensation. A company's equity-based compensation plan should be in alignment with the shareholders' long-term interests. The investment manager believes that executive compensation should be directly linked to the performance of the company. The investment manager evaluates plans on a case-by-case basis by considering several factors to determine whether the plan is fair and reasonable, including the ISS quantitative model utilized to assess such plans and/or the Glass Lewis evaluation of the plans. The investment manager will generally oppose plans that have the potential to be excessively dilutive, and will almost always oppose plans that are structured to allow the repricing of underwater options, or plans that have an automatic share replenishment "evergreen" feature. The investment manager will generally support employee stock option plans in which the purchase price is at least 85% of fair market value, and when potential dilution is [10][5]% or less.

Severance compensation arrangements will be reviewed on a case-by-case basis, although the investment manager will generally oppose "golden parachutes" that are considered to be excessive. The investment manager will normally support proposals that require a percentage of directors' compensation to be in the form of common stock, as it aligns their interests with those of shareholders.

The investment manager will review non-binding say-on-pay proposals on a case-by-case basis, and will generally vote in favor of such proposals unless compensation is misaligned with performance and/or shareholders' interests, the company has not provided reasonably clear disclosure regarding its compensation practices, or there are concerns with the company's remuneration practices.

Anti-takeover mechanisms and related issues. The investment manager generally opposes anti-takeover measures since they tend to reduce shareholder rights. However, as with all proxy issues, the investment manager conducts an independent review of each anti-takeover proposal. On occasion, the investment manager may vote with management when the research analyst has concluded that the proposal is not onerous and would not harm the Fund or its shareholders' interests. The investment manager generally supports proposals that require shareholder rights' plans ("poison pills") to be subject to a shareholder vote and will closely evaluate such plans on a case-by-case basis to determine whether or not they warrant support. In addition, the investment manager will generally vote against any proposal to issue stock that has unequal or subordinate voting rights. The investment manager generally opposes any supermajority voting requirements as well as the payment of "greenmail." The investment manager generally supports "fair price" provisions and confidential voting. The investment manager will review a company's proposal to reincorporate to a different state or country on a case-by-case basis taking into consideration financial benefits such as tax treatment as well as comparing corporate governance provisions and general business laws that may result from the change in domicile.

Changes to capital structure. The investment manager realizes that a company's financing decisions have a significant impact on its shareholders, particularly when they involve the issuance of additional shares of common or preferred stock or the assumption of additional debt. The investment manager will review, on a case-by-case basis, proposals by companies to increase authorized shares and the purpose for the increase. The investment manager will generally not vote in favor of dual-class capital structures to increase the number of authorized shares where that class of stock would have superior voting rights. The investment manager will generally vote in favor of the issuance of preferred stock in cases where the company specifies the voting, dividend, conversion and other rights of such stock and the terms of the preferred stock issuance are deemed reasonable. The investment manager will review proposals seeking preemptive rights on a case-by-case basis.

Mergers and corporate restructuring. Mergers and acquisitions will be subject to careful review by the research analyst to determine whether they would be beneficial to shareholders. The investment manager will analyze various economic and strategic factors in making the final decision on a merger or acquisition. Corporate restructuring proposals are also subject to a thorough examination on a case-by-case basis.

Environment, social and governance issues. The investment manager will generally give management discretion with regard to social, environmental and ethical issues. The investment manager may vote in favor of those that are believed to have significant economic benefits or implications for the Fund and its shareholders. The investment manager generally supports the right of shareholders to call special meetings and act by written consent. However, the investment manager will review such shareholder proposals on a case-by-case basis in an effort to ensure that such proposals do not disrupt the course of business or require a disproportionate or inappropriate use of company resources. The investment manager will consider supporting a shareholder proposal seeking disclosure and greater board oversight of lobbying and corporate political contributions if investment manager believes that there is evidence of inadequate oversight by the company's board, if the company's current disclosure is significantly deficient, or if the disclosure is notably lacking in comparison to the company's peers. The investment manager will consider on a case-by-case basis any well-drafted and reasonable proposals for proxy access considering such factors as the size of the company, ownership thresholds and holding periods, responsiveness of management, intentions of the shareholder proponent, company performance, and shareholder base.

Global corporate governance. Many of the tenets discussed above are applied to the investment manager's proxy voting decisions for international investments. However, the investment manager must be flexible in these worldwide markets. Principles of good corporate governance may vary by country, given the constraints of a country's laws and acceptable practices in the markets. As a result, it is on occasion difficult to apply a consistent set of governance practices to all issuers. As experienced money managers, the investment manager's analysts are skilled in understanding the complexities of the regions in which they specialize and are trained to analyze proxy issues germane to their regions.

The investment manager will generally attempt to process every proxy it receives for all domestic and foreign securities. However, there may be situations in which the investment manager may be unable to vote a proxy, or may choose not to vote a proxy, such as where: (i) the proxy ballot was not received from the custodian bank; (ii) a meeting notice was received too late; (iii) there are fees imposed upon the exercise of a vote and it is determined that such fees outweigh the benefit of voting; (iv) there are legal encumbrances to voting, including blocking restrictions in certain markets that preclude the ability to dispose of a security if the investment manager votes a proxy or where the investment manager is prohibited from voting by applicable law or other regulatory or market requirements, including but not limited to, effective Powers of Attorney; (v) the investment manager held shares on the record date but has sold them prior to the meeting date; (vi) proxy voting service is not offered by the custodian in the market; (vii) the investment manager believes it is not in the best interest of the Fund or its shareholders to vote the proxy for any other reason not enumerated herein; or (viii) a security is subject to a securities lending or similar program that has transferred legal title to the security to another person. In some foreign jurisdictions, even if Investment Manager uses reasonable efforts to vote a proxy on behalf of its Advisory Clients, such vote or proxy may be rejected because of (a) operational or procedural issues experienced by one or more third parties involved in voting proxies in such jurisdictions; (b) changes in the process or agenda for the meeting by the issuer for which Investment Manager does not have sufficient notice; and (c) the exercise by the issuer of its discretion to reject the vote of Investment Manager. The investment manager or its affiliates may, on behalf of one or more of the proprietary registered investment companies advised by the investment manager or its affiliates, determine to use its best efforts to recall any security on loan where the investment manager or its affiliates (a) learn of a vote on a material event that may affect a security on loan and (b) determine that it is in the best interests of such proprietary registered investment companies to recall the security for voting purposes.

Shareholders may view the complete Policies online at franklintempleton.com. Alternatively, shareholders may request copies of the Policies free of charge by calling the Proxy Group collect at (954)527-7678 or by sending a written request to: Franklin Templeton Companies, LLC, 300 S.E. 2nd Street, Fort Lauderdale, FL 33301-1923, Attention: Proxy Group. Copies of the Fund's proxy voting records are available online at franklintempleton.com and posted on the SEC website at www.sec.gov. The proxy voting records are updated each year by August 31 to reflect the most recent 12-month period ended June 30.

The Boston Company Asset Management, LLC

The Boston Company Asset Management, LLC ("TBCAM") through its participation on BNY Mellon's Proxy Policy Committee ("PPC"), has adopted a Proxy Voting Policy, related procedures, and voting guidelines which are applied to those client accounts over which it has been delegated the authority to vote proxies. TBCAM recognizes that stock ownership rights must be exercised for the exclusive benefit of our clients for whom the stock is held. TBCAM utilizes the services of Institutional Shareholder Services (ISS), to provide proxy-voting services for clients. ISS votes proxies according to standing guidelines as instructed. TBCAM has adopted the BNY Mellon Proxy Voting Guidelines for domestic securities and follows the Global Proxy Voting Guidelines issued by ISS for international securities (the "Guidelines").

1. **Fiduciary Duty** - We recognize that an investment adviser is a fiduciary that owes its clients a duty of utmost good faith and full and fair disclosure of all material facts. We further recognize that the right to vote proxies is an asset, just as the economic investment represented by the shares is an asset. An investment adviser's duty of loyalty precludes the adviser from subrogating its clients' interests to its own. Accordingly, in voting proxies, we will seek to act solely in the best financial and economic interests of our clients, including the Funds and their shareholders, and for the exclusive benefit of pension and other employee benefit plan participants. With regard to voting proxies of foreign companies, a Subsidiary weighs the cost of voting, and potential inability to sell, the shares against the benefit of voting the shares to determine whether or not to vote.
2. **Long-Term Perspective** - We recognize that management of a publicly-held company may need protection from the market's frequent focus on short-term considerations, so as to be able to concentrate on such long-term goals as productivity and development of competitive products and services.

3. **Limited Role of Shareholders** - We believe that a shareholder's role in the governance of a publicly-held company is generally limited to monitoring the performance of the company and its managers and voting on matters which properly come to a shareholder vote. We will carefully review proposals that would limit shareholder control or could affect shareholder values.
4. **Anti-takeover Proposals** - We generally will oppose proposals that seem designed to insulate management unnecessarily from the wishes of a majority of the shareholders and that would lead to a determination of a company's future by a minority of its shareholders. We will generally support proposals that seem to have as their primary purpose providing management with temporary or short-term insulation from outside influences so as to enable them to bargain effectively with potential suitors and otherwise achieve identified long-term goals to the extent such proposals are discrete and not bundled with other proposals.
5. **"Social" Issues** - On questions of social responsibility where economic performance does not appear to be an issue, we will attempt to ensure that management reasonably responds to the social issues. Responsiveness will be measured by management's efforts to address the particular social issue including, where appropriate, assessment of the implications of the proposal to the ongoing operations of the company. We will pay particular attention to repeat issues where management has failed in the intervening period to take actions previously committed to.

With respect to clients having investment policies that require proxies to be cast in a certain manner on particular social responsibility issues, proposals relating to such issues will be evaluated and voted separately by the client's portfolio manager in accordance with such policies, rather than pursuant to the procedures set forth in section 6.

6. **Proxy Voting Process** - Every voting proposal is reviewed, categorized and analyzed in accordance with our written guidelines in effect from time to time. Our guidelines are reviewed periodically and updated as necessary to reflect new issues and any changes in our policies on specific issues. Items that can be categorized will be voted in accordance with any applicable guidelines or referred to the BNY Mellon Proxy Policy Committee (the "Committee"), if the applicable guidelines so require. Proposals, for which a guideline has not yet been established, for example, new proposals arising from emerging economic or regulatory issues, will be referred to the Committee for discussion and vote. Additionally, the Committee may elect to review any proposal where it has identified a particular issue for special scrutiny in light of new information. The Committee will also consider specific interests and issues raised by a Subsidiary to the Committee, which interests and issues may require that a vote for an account managed by a Subsidiary be cast differently from the collective vote in order to act in the best interests of such account's beneficial owners.
7. **Material Conflicts of Interest** - We recognize our duty to vote proxies in the best interests of our clients. We seek to avoid material conflicts of interest through the establishment of our Committee structure, which applies detailed, pre-determined proxy voting guidelines in an objective and consistent manner across client accounts, based on internal and external research and recommendations provided by a third party vendor, and without consideration of any client relationship factors. Further, we engage a third party as an independent fiduciary to vote all proxies for BNY Mellon securities and Fund securities, and may engage an independent fiduciary to vote proxies of other issuers in our discretion.
8. **Securities Lending** - We seek to balance the economic benefits of engaging in lending securities against the inability to vote on proxy proposals to determine whether to recall shares, unless a plan fiduciary retains the right to direct us to recall shares.
9. **Recordkeeping** - We will keep, or cause our agents to keep, the records for each voting proposal required by law.
10. **Disclosure** - We will furnish a copy of this Proxy Voting Policy and any related procedures, or a description thereof, to investment advisory clients as required by law. In addition, we will furnish a copy of this Proxy Voting Policy, any related procedures, and our voting guidelines to investment advisory clients upon request.

The Funds shall disclose their proxy voting policies and procedures and their proxy votes as required by law. We recognize that the applicable trust or account document, the applicable client agreement, the Employee Retirement Income Security Act of 1974 (ERISA) and certain laws may require disclosure of other information relating to proxy voting in certain circumstances. This information will only be disclosed to those who have an interest in the account for which shares are voted, and after the shareholder meeting has concluded.

11. **Charter** – We maintain a Charter which lists the Committee’s responsibilities and duties, membership, voting and non-voting members, quorum, meeting schedule and oversight mapping to the BNY Mellon Fiduciary Risk Management Committee.

Thompson, Siegel & Walmsley LLC

Thompson, Siegel & Walmsley LLC (TS&W) acknowledges it has a fiduciary obligation to its clients that requires it to monitor corporate events and vote client proxies. TS&W has adopted and implemented written policies and procedures reasonably designed to ensure that proxies for domestic and foreign stock holdings are voted in the best interest of our clients on a best efforts basis. TS&W recognizes that it (i) has a fiduciary responsibility under the Employee Retirement Income Securities Act (ERISA) to vote proxies prudently and solely in the best interest of plan participants and beneficiaries (ii) will vote stock proxies in the best interest of the client (non-ERISA) when directed (together, our “clients”). TS&W has developed its policy to be consistent with, wherever possible, enhancing long-term shareholder value and leading corporate governance practices. TS&W has retained the services of Institutional Shareholder Services (ISS). ISS is a Registered Investment Adviser under the Investment Advisers Act of 1940. As a leading provider of proxy voting and corporate governance services with 20+ years of experience, ISS serves more than 1,700 institutions. ISS’s core business is to analyze proxies and issue informed research and objective vote recommendations for more than 38,000 companies across 115 markets worldwide. ISS provides TS&W proxy proposal research and voting recommendations and votes accounts on TS&W’s behalf under the guidance of ISS’s standard voting guidelines which include:

- Operational Issues
- Board of Directors
- Proxy Contests
- Anti-takeover Defenses and Voting Related Issues
- Mergers and Corporate Restructurings
- State of Incorporation
- Capital Structure
- Executive & Director Compensation
 - Equity Compensation Plans
 - Specific Treatment of Certain Award Types in Equity Plan Evaluations
 - Other Compensation Proposals & Policies
 - Shareholder Proposals on Compensation
- Corporate Responsibility
 - Consumer Issues and Public Safety
 - Environment and Energy
 - General Corporate Issues
 - Labor Standards and Human Rights
 - Military Business
 - Workplace Diversity
- Mutual Fund Proxies

TS&W’s proxy coordinator is responsible for monitoring ISS’s voting procedures on an ongoing basis. TS&W’s general policy regarding the voting of proxies is as follows:

Proxy Voting Guidelines:

Routine and/or non-controversial, general corporate governance issues are normally voted with management; this would include the Approval of Independent Auditors.

Occasionally, ISS may vote against management’s proposal on a particular issue; such issues would generally be those deemed likely to reduce shareholder control over management, entrench management at the expense of shareholders, or in some way diminish shareholders’ present or future value. From time to time TS&W will receive and act upon the client’s specific instructions regarding proxy proposals. TS&W reserves the right to vote against any proposals motivated by political, ethical or social concerns. TS&W and ISS will examine each issue solely from an economic perspective.

A complete summary of ISS's voting guidelines, domestic & foreign, are available at:
<http://www.issgovernance.com/policy>

Conflicts of Interest:

Occasions may arise during the voting process in which the best interests of the clients conflicts with TS&W's interests. Conflicts of interest generally include (i) business relationships where TS&W has a substantial business relationship with, or is actively soliciting business from, a company soliciting proxies (ii) personal or family relationships whereby an employee of TS&W has a family member or other personal relationship that is affiliated with a company soliciting proxies, such as a spouse who serves as a director of a public company. A conflict could also exist if a substantial business relationship exists with a proponent or opponent of a particular initiative. If TS&W determines that a material conflict of interest exists, TS&W will instruct ISS to vote using ISS's standard policy guidelines which are derived independently from TS&W.

Proxy Voting Process:

- Upon timely receipt of proxy materials, ISS will automatically release vote instructions on client's behalf as soon as custom research is completed. TS&W retains authority to override the votes (before cut-off date) if they disagree with the vote recommendation.
- The Proxy Coordinator will monitor the voting process at ISS via Proxy Exchange website (ISS's online voting and research platform). Records of which accounts are voted, how accounts are voted, and how many shares are voted are kept electronically with ISS.
- For proxies not received at ISS, TS&W and ISS will make a best efforts attempt to receive ballots from the clients' custodian.
- TS&W will be responsible for account maintenance – opening and closing of accounts, transmission of holdings and account environment monitoring.
- Associate Portfolio Manager (proxy oversight representative) will keep abreast of any critical or exceptional events or events qualifying as a conflict of interest via ISS Proxy Exchange website and email. TS&W has the ability to override vote instructions, and the Associate Portfolio Manager will consult with TS&W's Investment Policy Committee or product managers in these types of situations.
- All proxies are voted solely in the best interest of clients.
- Proactive communication takes place via regular meetings with ISS's Client Relations Team.

Practical Limitations Relating to Proxy Voting:

While TS&W uses its best efforts to vote proxies, in certain circumstances it may be impractical or impossible for TS&W to do so. Identifiable circumstances include:

- **Limited Value.** TS&W may abstain from voting in those circumstances where it has concluded to do so would have no identifiable economic benefit to the client-shareholder.
- **Unjustifiable Cost.** TS&W may abstain from voting when the costs of or disadvantages resulting from voting, in TS&W's judgment, outweigh the economic benefits of voting.
- **Securities Lending.** Certain of TS&W's clients engage in securities lending programs under which shares of an issuer could be on loan while that issuer is conducting a proxy solicitation. As part of the securities lending program, if the securities are on loan at the record date, the client lending the security cannot vote

that proxy. Because TS&W generally is not aware of when a security may be on loan, it does not have an opportunity to recall the security prior to the record date. Therefore, in most cases, those shares will not be voted and TS&W may not be able fully to reconcile the securities held at record date with the securities actually voted.

- **Failure to Receive Proxy Statements.** TS&W may not be able to vote proxies in connection with certain holdings, most frequently for foreign securities, if it does not receive the account's proxy statement in time to vote the proxy.

Proxy Voting Records & Reports:

- The proxy information is maintained by ISS on TS&W's behalf and includes the following: (i) name of the issuer, (ii) the exchange ticker symbol, (iii) the CUSIP number, (iv) the shareholder meeting date, (v) a brief description of the matter brought to vote; (vi) whether the proposal was submitted by management or a shareholder, (vii) how the proxy was voted (for, against, abstained), (viii) whether the proxy was voted for or against management, and (ix) documentation materials to make the decision. TS&W's Proxy Coordinator coordinates retrieval and report production as required or requested.
- Clients will be notified annually of their ability to request a copy of our proxy policies and procedures. A copy of how TS&W voted on securities held is available free of charge upon request from our clients or by calling us toll free at (800) 697-1056.

WEDGE Capital Management L.L.P. ("WEDGE")

WEDGE established this policy to comply with Rule 206(4)-6 under the Investment Advisers Act of 1940 and, as a fiduciary to ERISA clients, proxy voting responsibilities promulgated by the Department of Labor. This policy applies to accounts in which WEDGE has voting authority. WEDGE's authority to vote client proxies is established by an advisory contract or a comparable document.

Voting Guidelines

The analyst who recommends the security for the WEDGE portfolio has voting responsibility for that security. If the security is held in multiple traditional products, the analyst who holds the most shares in his or her portfolio is responsible for voting. Securities held in both a quantitative product and a traditional product are voted by the traditional portfolio analyst.

WEDGE casts votes in the best economic interest of shareholders. Therefore, the vote for each security held in a traditional product is cast on a case-by-case basis. Each analyst may conduct his or her own research and/or use the information provided by Glass Lewis & Co., LLC ("Glass Lewis"). (Glass Lewis provides proxy analyses containing research and objective vote recommendations on each proposal.) If an analyst chooses to vote against management's recommended vote, a reason must be provided on the voting materials and recorded in the vote management software.

Votes should be cast either "For" or "Against." In very limited instances an abstention may be appropriate, in which case, the analyst should document why he or she abstained. This will be documented in the vote management software by the proxy department.

Conflicts of Interest

All conflicts of interest are to be resolved in the best interest of our clients.

To alleviate potential conflicts of interest or the appearance of conflicts, WEDGE does not allow any associate or his or her spouse to sit on the board of directors of any public company without Management Committee approval, and all associates have to affirm quarterly that they are in compliance with this requirement.

All associates must adhere to the CFA Institute Code of Ethics and Standards of Professional Conduct, which requires specific disclosure of conflicts of interest and strict adherence to independence and objectivity standards. Situations that may create a conflict or the appearance of a conflict include but are not limited to the following:

1. An analyst has a financial interest in the company or in a company which may be involved in a merger or acquisition with the company in question.
2. An analyst has a personal relationship with someone (*e.g.*, a close friend or family member) who is employed by the company in question or by a company which may be involved in a merger or acquisition with the company in question.
3. The company in question is a client or prospective client of the firm.

If any of the three criteria listed above is met, or if the analyst feels a potential conflict of interest exists for any reason, he or she should complete a Potential Conflict of Interest Form (“PCIF”). The PCIF identifies the potential conflict of interest and is used to document the review of the vote.

For items 1 and 2 above, the voting analyst is required to consult with an analyst who does not have a potential conflict of interest. If the consulting analyst disagrees with the voting analyst’s vote recommendation, a Management Committee member must be consulted. For item 3 above (or any other potential conflict not identified above), two of the three Management Committee members must review and agree with the recommended vote. The completed PCIF is attached to the voting materials and reviewed by the proxy department for accurate completion prior to being recorded in the vote management software.

Due to the importance placed on Glass Lewis recommended votes, it is important that Glass Lewis has procedures in place to mitigate any potential conflicts of interest. The independence of Glass Lewis will be reviewed during each audit of the proxy process.

Proxy Voting Records

As required by Rule 204-2 under the Investment Advisers Act of 1940, WEDGE will maintain the following records:

1. The Proxy Policy
2. Record of each vote cast on behalf of WEDGE's clients
3. Documents prepared by WEDGE that were material to making a proxy voting decision, including PCIFs
4. Each written client request for proxy voting records and WEDGE’s written response to any written or oral client request

Policy Disclosure

On an annual basis, WEDGE will send Form ADV Part 2 to all clients to disclose how they can obtain a copy of the Proxy Policy and/or information on how their securities were voted. Clients may request a copy of the Proxy Policy and voting decisions at any time by contacting WEDGE at the address below.

Wellington Management Company, LLP

The Funds for which Wellington Management Company LLP (“Wellington Management”) serves as subadviser have granted to Wellington Management the authority to vote proxies on their behalf with respect to the assets managed by Wellington Management. Wellington Management votes proxies in what it believes are the best economic interests of its clients and in accordance with its Global Proxy Policy and Procedures. Wellington Management’s Corporate Governance Committee is responsible for the review and oversight of the firm’s Global Proxy Policy and Procedures. The Corporate Governance Group within Wellington Management’s Investment Services Department is responsible for the day-to-day administration of the proxy voting process. Although Wellington Management may utilize the services of various external resources in analyzing proxy issues and has established its own Global Proxy Voting Guidelines setting forth general guidelines for voting proxies, Wellington Management personnel analyze all proxies and vote proxies based on their assessment of the merits of each proposal. Each Fund’s portfolio manager has the authority to determine the final vote for securities held in the Fund, unless the portfolio manager is determined to have a material conflict of interest related to that proxy vote.

Wellington Management maintains procedures designed to identify and address material conflicts of interest in voting proxies. Its Corporate Governance Committee sets standards for identifying material conflicts based on client, vendor and lender relationships. Proxy votes for which Wellington Management identifies a material conflict are reviewed by designated members of its Corporate Governance Committee or by the entire committee in some cases to resolve the conflict and direct the vote.

Wellington Management may be unable to vote or may determine not to vote a proxy on behalf of a Fund due to securities lending, share blocking and re-registration requirements, lack of adequate information, untimely receipt of proxy materials, immaterial impact of the vote, and/or excessive costs.

Wells Capital Management, Inc.

Pursuant to Rule 206(4)-6 under the Advisers Act, WellsCap has adopted Proxy Voting Policies and Procedures that it believes are reasonably designed to ensure that proxies are voted in the best interest of shareholders. WellsCap exercises its voting responsibility, as a fiduciary, with the goal of maximizing value to shareholders consistent with the governing laws and investment policies of each portfolio. While securities are not purchased to exercise control or to seek to effect corporate change through share ownership, WellsCap supports sound corporate governance practices within companies in which they invest.

WellsCap utilizes an independent third-party (“Third-Party”), currently RiskMetrics Group, for voting proxies and proxy voting analysis and research. The Third-Party votes proxies in accordance with RiskMetrics’ published Proxy Guidelines. In addition, clients may elect to have WellsCap vote proxies in accordance with guidelines established pursuant to platforms, e.g., Taft-Hartley, to meet their specific business requirements.

To fulfill its fiduciary duties with respect to proxy voting, WellsCap has designated an officer to administer and oversee the proxy voting process and to monitor the Third-Party to ensure its compliance with the Proxy Guidelines.

WellsCap believes that, in most instances, material conflicts of interest can be minimized through a strict and objective application by the Third-Party of the Proxy Guidelines. In cases where WellsCap is aware of a material conflict of interest regarding a matter that would otherwise require its vote, it will defer to the Third-Party as to how to vote on such matter in accordance with RiskMetrics’ guidelines. In addition, WellsCap will seek to avoid any undue influence as a result of any material conflict of interest that may exist between the interests of a client and WellsCap or any of its affiliates. To this end, for any Wells Fargo proxy, shares will be voted as directed by an independent fiduciary engaged by Wells Fargo and Company.

Winslow Capital Management, LLC

Winslow Capital, pursuant to Rule 206(4)-6 under the Investment Advisers Act of 1940, has adopted Proxy Voting Policies and Procedures pursuant to which Winslow Capital has undertaken to vote all proxies or other beneficial interests in an equity security prudently and solely in the best long-term economic interest of its advisory clients and their beneficiaries, considering all relevant factors and without undue influence from individuals or groups who may have an economic interest in the outcome of a proxy vote.

Winslow Capital will vote all proxies appurtenant to shares of corporate stock held by a plan or account with respect to which Winslow Capital serves as investment manager, unless the investment management contract expressly precludes Winslow Capital, as investment manager, from voting such proxy.

Winslow Capital has delegated the authority to vote proxies in accordance with its Proxy Voting Policies and Procedures to Institutional Shareholder Services (ISS), a third party proxy voting agency. Winslow Capital subscribes to ISS' Implied Consent service feature. As ISS research is completed, ISS' Vote Execution team executes the ballots according to the vote recommendations and consistent with the ISS Standard Proxy Voting Guidelines.

Winslow Capital retains the ability to override any vote if it disagrees with ISS' vote recommendation, and always maintains the option to review and amend votes before they are cast, except in the case of a conflict of interest. When there is an apparent conflict of interest, or the appearance of a conflict of interest, e.g., where Winslow Capital may receive fees from a company for advisory or other services at the same time that Winslow Capital has investments in the stock of that company, Winslow Capital will follow the vote recommendation of ISS. Winslow Capital retains documentation of all amended votes.

APPENDIX C – PORTFOLIO MANAGERS

Information as of December 31, 2013

INVESTMENTS IN EACH FUND

Name of Portfolio Manager	Fund Name	Dollar Range of Investments in Each Fund¹
<i>American Century Investment Management, Inc.</i>

¹ This column reflects investments in a variable insurance contract, owned directly by a portfolio manager or beneficially owned by a portfolio manager (as determined pursuant to Rule 16a-1(a)(2) under the Securities Exchange Act of 1934), that has been allocated to subaccounts that have purchased shares of the Funds. A portfolio manager is presumed to be the beneficial owner of subaccount securities that are held by his or her immediate family members that share the same household as the portfolio manager.

² Mr. Shah's dollar range of investments in each fund is as of February 28, 2014.

DESCRIPTION OF COMPENSATION STRUCTURE

American Century Investment Management, Inc.

Compensation

American Century portfolio manager compensation is structured to align the interests of portfolio managers with those of the shareholders whose assets they manage. As of December 31, 2013, it included the components described below, each of which is determined with reference to a number of factors such as overall performance, market competition, and internal equity. Compensation is not directly tied to the value of assets held in client portfolios.

Base Salary

Portfolio managers receive base pay in the form of a fixed annual salary.

Bonus

A significant portion of portfolio manager compensation takes the form of an annual incentive bonus tied to performance. Bonus payments are determined by a combination of factors. One factor is fund investment performance. For most American Century mutual funds, investment performance is generally measured by a

combination of one-, three- and five-year pre-tax performance relative to various benchmarks and/or internally-customized peer groups. The performance comparison periods may be adjusted based on a fund's inception date or a portfolio manager's tenure on the fund. Custom peer groups are constructed using all the funds in the indicated categories as a starting point. Funds are then eliminated from the peer group based on a standardized methodology designed to result in a final peer group that is both more stable over the long term (i.e., has less peer turnover) and that more closely represents the fund's true peers based on internal investment mandates.

Portfolio managers may have responsibility for multiple American Century mutual funds. In such cases, the performance of each is assigned a percentage weight appropriate for the portfolio manager's relative levels of responsibility.

Portfolio managers also may have responsibility for portfolios that are managed in a fashion similar to that of other American Century mutual funds. This is the case for the American Century NVIT Growth Fund, American Century NVIT Multi-Cap Value Fund and the American Century-advised portions of the NVIT Multi-Manager Mid Cap Value Fund and NVIT Multi-Manager International Growth Fund. If the performance of a similarly managed account is considered for purposes of compensation, it is either measured in the same way as a comparable American Century mutual fund (i.e., relative to the performance of a benchmark and/or peer group) or relative to the performance of such mutual fund. Performance of the American Century NVIT Growth Fund, American Century NVIT Multi Cap Value Fund and the American Century-advised portions of the NVIT Multi-Manager Mid Cap Value Fund and NVIT Multi-Manager International Growth Fund are not separately considered in determining portfolio manager compensation.

A second factor in the bonus calculation relates to the performance of a number of American Century funds managed according to one of the following investment styles: U.S. growth, U.S. value, quantitative, international and fixed-income. Performance is measured for each product individually as described above and then combined to create an overall composite for the product group. These composites may measure one-year performance (equal weighted) or a combination of one- three- and five-year performance (equal or asset weighted) depending on the portfolio manager's responsibilities and products managed. This feature is designed to encourage effective teamwork among portfolio management teams in achieving long-term investment success for similarly styled portfolios.

A portion of portfolio managers' bonuses may be tied to individual performance goals, such as research projects and the development of new products.

Restricted Stock Plans

Portfolio managers are eligible for grants of restricted stock of ACC. These grants are discretionary, and eligibility and availability can vary from year to year. The size of an individual's grant is determined by individual and product performance as well as other product-specific considerations. Grants can appreciate/depreciate in value based on the performance of the ACC stock during the restriction period (generally three to four years).

Deferred Compensation Plans

Portfolio managers are eligible for grants of deferred compensation. These grants are used in very limited situations, primarily for retention purposes. Grants are fixed and can appreciate/depreciate in value based on the performance of the American Century mutual funds in which the portfolio manager chooses to invest them.

Portfolio Manager Compensation Overview

The discussion below describes the portfolio managers' compensation as of December 31, 2013.

BlackRock's financial arrangements with its portfolio managers, its competitive compensation and its career path emphasis at all levels reflect the value senior management places on key resources. Compensation may include a variety of components and may vary from year to year based on a number of

factors. The principal components of compensation include a base salary, a performance-based discretionary bonus, participation in various benefits programs and one or more of the incentive compensation programs established by BlackRock.

Base compensation. Generally, portfolio managers receive base compensation based on their position with the firm.

Discretionary Incentive Compensation

Messrs. Bliss and Savage

Discretionary incentive compensation is a function of several components: the performance of BlackRock, Inc., the performance of the portfolio manager's group within BlackRock, the investment performance, including risk-adjusted returns, of the firm's assets under management or supervision by that portfolio manager relative to predetermined benchmarks, and the individual's performance and contribution to the overall performance of these portfolios and BlackRock. In most cases, these benchmarks are the same as the benchmark or benchmarks against which the performance of the Funds or other accounts managed by the portfolio managers are measured. Among other things, BlackRock's Chief Investment Officers make a subjective determination with respect to each portfolio manager's compensation based on the performance of the Funds and other accounts managed by each portfolio manager relative to the various benchmarks. Performance of fixed income and multi-asset class funds is measured on a pre-tax and/or after-tax basis over various time periods including 1-, 3- and 5- year periods, as applicable. Performance of index funds is based on the performance of such funds relative to pre-determined tolerance bands around a benchmark, as applicable. The performance of Messrs. Bliss and Savage is not measured against a specific benchmark.

Discretionary Incentive Compensation

Mr. Mason

Discretionary incentive compensation is a function of several components: the performance of BlackRock, Inc., the performance of the portfolio manager's group within BlackRock, the investment performance, including risk-adjusted returns, of the firm's assets under management or supervision by that portfolio manager, and the individual's performance and contribution to the overall performance of these portfolios and BlackRock. Among other things, BlackRock's Chief Investment Officers make a subjective determination with respect to each portfolio manager's compensation based on the performance of the Funds and other accounts managed by each portfolio manager. Performance of multi-asset class funds is generally measured on a pre-tax basis over various time periods including 1-, 3- and 5- year periods, as applicable. The performance of Mr. Mason is not measured against a specific benchmark.

Discretionary Incentive Compensation

Mr. Radell and Ms. Uyehara

Discretionary incentive compensation is a function of several components: the performance of BlackRock, Inc., the performance of the portfolio manager's group within BlackRock, the investment performance, including risk-adjusted returns, of the firm's assets under management or supervision by that portfolio manager relative to predetermined benchmarks, and the individual's performance and contribution to the overall performance of these portfolios and BlackRock. In most cases, these benchmarks are the same as the benchmark or benchmarks against which the performance of the Funds or other accounts managed by the portfolio managers are measured. Among other things, BlackRock's Chief Investment Officers make a subjective determination with respect to each portfolio manager's compensation based on the performance of the Funds and other accounts managed by each portfolio manager relative to the various benchmarks. Performance of fixed income funds is measured on a pre-tax

and/or after-tax basis over various time periods including 1-, 3- and 5- year periods, as applicable. With respect to these portfolio managers, such benchmarks for the Fund and other accounts are: a combination of market-based indices (e.g., Barclays U.S. Aggregate Bond Index), certain customized indices and certain fund industry peer groups.

Distribution of Discretionary Incentive Compensation. Discretionary incentive compensation is distributed to portfolio managers in a combination of cash and BlackRock, Inc. restricted stock units which vest ratably over a number of years. For some portfolio managers, discretionary incentive compensation is also distributed in deferred cash awards that notionally track the returns of select BlackRock investment products they manage and that vest ratably over a number of years. The BlackRock, Inc. restricted stock units, upon vesting, will be settled in BlackRock, Inc. common stock. Typically, the cash portion of the discretionary incentive compensation, when combined with base salary, represents more than 60% of total compensation for the portfolio managers. Paying a portion of discretionary incentive compensation in BlackRock, Inc. stock puts compensation earned by a portfolio manager for a given year “at risk” based on BlackRock’s ability to sustain and improve its performance over future periods. Providing a portion of discretionary incentive compensation in deferred cash awards that notionally track the BlackRock investment products they manage provides direct alignment with investment product results.

Long-Term Incentive Plan Awards — From time to time long-term incentive equity awards are granted to certain key employees to aid in retention, align their interests with long-term shareholder interests and motivate performance. Equity awards are generally granted in the form of BlackRock, Inc. restricted stock units that, once vested, settle in BlackRock, Inc. common stock. Messrs. Bliss, Mason, Radell and Savage have unvested long-term incentive awards.

Deferred Compensation Program — A portion of the compensation paid to eligible United States-based BlackRock employees may be voluntarily deferred at their election for defined periods of time into an account that tracks the performance of certain of the firm’s investment products. Any portfolio manager who is either a managing director or director at BlackRock is eligible to participate in the deferred compensation program.

Other compensation benefits. In addition to base compensation and discretionary incentive compensation, portfolio managers may be eligible to receive or participate in one or more of the following:

Incentive Savings Plans — BlackRock, Inc. has created a variety of incentive savings plans in which BlackRock employees are eligible to participate, including a 401(k) plan, the BlackRock Retirement Savings Plan (RSP), and the BlackRock Employee Stock Purchase Plan (ESPP). The employer contribution components of the RSP include a company match equal to 50% of the first 8% of eligible pay contributed to the plan capped at \$5,000 per year, and a company retirement contribution equal to 3-5% of eligible compensation up to the Internal Revenue Service limit (\$255,000 for 2013). The RSP offers a range of investment options, including registered investment companies and collective investment funds managed by the firm. BlackRock contributions follow the investment direction set by participants for their own contributions or, absent participant investment direction, are invested into a target date fund that corresponds to, or is closest to, the year in which the participant attains age 65. The ESPP allows for investment in BlackRock common stock at a 5% discount on the fair market value of the stock on the purchase date. Annual participation in the ESPP is limited to the purchase of 1,000 shares of common stock or a dollar value of \$25,000 based on its fair market value on the purchase date. All of the eligible portfolio managers are eligible to participate in these plans.

Brookfield Investment Management Inc.

Brookfield's investment personnel are incentivized to exceed client objectives of funds or strategies. The desire is to provide these individuals with an attractive compensation package, properly aligning interests with that of clients, Brookfield, and its key professionals. Typically compensation packages will include an appropriate balance of current salary, bonus compensation and incentive-oriented compensation tied to client generated performance fees. In addition, key personnel are also eligible for Brookfield's Long Term Incentive Plan, with compensation invested in Brookfield's private funds and a multi-year vesting schedule.

In addition to financial compensation, Brookfield strongly believes its culture is the key to recruiting and retaining personnel. Brookfield fosters an environment where people are empowered to contribute to the organization. They work in teams composed of competent people, and are given the tools and resources they need to succeed. Brookfield's culture fosters a flexible business model which allows nimble decision-making and limits layers of bureaucracy.

Dimensional Fund Advisors LP

Portfolio managers receive a base salary and bonus. Compensation of a portfolio manager is determined at the discretion of Dimensional and is based on a portfolio manager's experience, responsibilities, the perception of the quality of his or her work efforts, and other subjective factors. The compensation of portfolio managers is not directly based upon the performance of a fund or other accounts that the portfolio managers manage. Dimensional reviews the compensation of each portfolio manager annually and may make modifications in compensation as the Compensation Committee deems necessary to reflect changes in the market. Each portfolio manager's compensation consists of the following:

- **Base salary.** Each portfolio manager is paid a base salary. The Subadviser considers the factors described above to determine each portfolio manager's base salary.
- **Semi-Annual Bonus.** Each portfolio manager may receive a semi-annual bonus. The amount of the bonus paid to each portfolio manager is based upon the factors described above.

Portfolio managers may be awarded the right to purchase restricted stock of Dimensional as determined from time to time by the Board of Directors of Dimensional or its delegees. Portfolio managers also participate in benefit and retirement plans and other programs available generally to all employees. In addition, portfolio managers may be given the option of participating in Dimensional's Long Term Incentive Plan. The level of participation for eligible employees may be dependent on overall level of compensation, among other considerations. Participation in this program is not based on or related to the performance of any individual strategies or any particular client accounts.

Epoch Investment Partners, Inc. ("Epoch")

Epoch compensates its portfolio managers with a fixed annual salary plus a discretionary bonus determined by its Operating Committee, a portion of which is deferred and vests over time. Epoch's portfolio managers do not receive compensation that is solely based upon the Fund's, any other commingled accounts, or any private account's pre- or after-tax performance, or the value of the assets held by such entities. Epoch's portfolio managers do not receive any special or additional compensation from Epoch for their services as Portfolio Managers.

Federated Investment Management Company

Mark Durbiano is paid a fixed base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager's experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. (Federated). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

IPP is measured on a rolling 1, 3, and 5 calendar year pre-tax gross total return basis vs. the Fund's benchmark (i.e., Barclays U.S. Corporate High Yield 2% Issuer Capped Index), and vs. the Fund's designated peer group of comparable accounts. Performance periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one-year of performance history under a portfolio manager may be excluded. As noted herein, Mr. Durbiano is also the portfolio manager for other accounts in addition to the Fund. Such other accounts may have different benchmarks. The performance of certain of these accounts is excluded when calculating IPP. Within each performance measurement period, IPP is calculated with an equal weighting of each included account managed by the portfolio manager. In addition, Mr. Durbiano serves on one or more Investment Teams that establish guidelines on various performance drivers (e.g., currency, duration, sector, volatility, and/or yield curve) for taxable fixed income funds. A portion of the IPP score is based on Federated's senior management's assessment of team contributions. A portion of the bonus tied to the IPP score may be adjusted based on management's assessment of overall contributions to fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager's bonus, in part, to Federated's overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

HighMark Capital Management, Inc. ("HighMark")

Each of the portfolio managers for each Fund subadvised by HighMark receives a salary from HighMark and participates in HighMark's incentive compensation plan, which is an annual plan that pays a cash bonus. The portfolio managers are also eligible to participate in HighMark's long-term incentive compensation plan. A portfolio manager's bonus is generally a percentage of his or her salary and is based on (1) an evaluation of the manager's investment performance, (2) achievement of budgeted financial goals and (3) meeting of business objectives determined by a portfolio manager's direct supervisor. In evaluating investment performance, HighMark generally considers the one- and three-year (or shorter period if applicable) performance of mutual funds and other accounts under a portfolio manager's oversight relative, solely or in part, to the peer groups and/or market indices noted below. To encourage exchange of information and support, a part of a portfolio manager's investment performance evaluation is also based on the performance of other Funds or other accounts that the portfolio manager does not manage. A portfolio manager may also be compensated for providing securities/quantitative analysis for certain Funds, where applicable.

Portfolio Manager	Peer Group
Derek Izuel	Morningstar Large Blend Category and S&P 500 Index (with respect to the NVIT Nationwide Fund)
Jeffrey Klein	Morningstar General Intermediate Term Bond Category and Barclays U.S. Aggregate Bond Index (with respect to Nationwide HighMark Bond Fund and the fixed-income portion of Nationwide HighMark Balanced Fund); Morningstar Short Term Bond Category and Barclays 1-3 Year U.S. Government/ Credit Index (with respect to Nationwide HighMark Short Term Bond Fund); Morningstar Muni California Intermediate Category and Barclays 7-Year Municipal Bond Index (with respect to Nationwide HighMark California Intermediate Tax-Free Bond Fund); Morningstar Muni National Intermediate Category and Barclays 7-Year Municipal Bond Index (with respect to Nationwide HighMark National Intermediate Tax-Free Bond Fund)

David Wines	Morningstar Muni California Intermediate Category and Barclays 7-Year Municipal Bond Index (with respect to Nationwide HighMark California Intermediate Tax-Free Bond Fund); Morningstar Muni National Intermediate Category and Barclays 7 Year Municipal Bond Index (with respect to Nationwide HighMark National Intermediate Tax-Free Bond Fund); Morningstar General Intermediate Term Bond Category and Barclays U.S. Aggregate Bond Index (with respect to Nationwide HighMark Bond Fund and the fixed-income portion of HighMark Balanced Fund); Morningstar Short Term Bond Category and Barclays 1-3 Year U.S. Government/Credit Index (with respect to Nationwide HighMark Short Term Bond Fund); Citigroup 3 Month Treasury Bill Index (with respect to HighMark Cash Composite); and Merrill Lynch 1-3 Year US Treasuries Index (with respect to HighMark Limited Maturity Composite)

Invesco Advisers, Inc.

Invesco seeks to maintain a compensation program that is competitively positioned to attract and retain high-caliber investment professionals. Portfolio managers receive a base salary, an incentive bonus opportunity and an equity compensation opportunity. Portfolio manager compensation is reviewed and may be modified each year as appropriate to reflect changes in the market, as well as to adjust the factors used to determine bonuses to promote competitive fund performance. Invesco evaluates competitive market compensation by reviewing compensation survey results conducted by an independent third party of investment industry compensation. Each portfolio manager's compensation consists of the following three elements:

- **Base salary.** Each portfolio manager is paid a base salary. In setting the base salary, Invesco's intention is to be competitive in light of the particular portfolio manager's experience and responsibilities.
- **Annual bonus.** The portfolio managers are eligible, along with other employees of Invesco, to participate in a discretionary year-end bonus pool. The Compensation Committee of Invesco Ltd. reviews and approves the amount of the bonus pool available considering investment performance and financial results in its review. In addition, while having no direct impact on individual bonuses, assets under management are considered when determining the starting bonus funding levels. Each portfolio manager is eligible to receive an annual cash bonus which is based on quantitative (i.e. investment performance) and non-quantitative factors (which may include, but are not limited to, individual performance, risk management and teamwork).

Each portfolio manager's compensation is linked to the pre-tax investment performance of the funds/accounts managed by the portfolio manager as described in Table 1 below.

Table 1

Sub-Advisor	Performance time period¹
Invesco ²	One-, Three- and Five-year performance against Fund peer group.

1 Rolling time periods based on calendar year-end.

2 Portfolio Managers may be granted a short-term award that vests on a pro-rata basis over a four year period and final payments are based on the performance of eligible funds selected by the manager at the time the award is granted.

High investment performance (against applicable peer group and/or benchmarks) would deliver compensation generally associated with top pay in the industry (determined by reference to the third-party provided compensation survey information) and poor investment performance (versus applicable peer group) would result in low bonus compared to the applicable peer group or no bonus at all. These decisions are reviewed and approved collectively by senior leadership which has responsibility for executing the compensation approach across the organization.

- **Deferred/Long Term Compensation.** Portfolio managers may be granted an annual deferral award that allows them to select receipt of shares of certain Invesco Funds with a vesting period as well as common shares and/or restricted shares of Invesco Ltd. stock from pools determined from time to time by the Compensation Committee of Invesco Ltd.'s Board of Directors. Awards of deferred/long term compensation typically vest over time, so as to create incentives to retain key talent.

Portfolio managers also participate in benefit plans and programs available generally to all employees.

J.P. Morgan Investment Management Inc.

J.P. Morgan Investment Management Inc.'s ("JP Morgan") Portfolio managers participate in a competitive compensation program that is designed to attract and retain outstanding people and closely link the performance of investment professionals to client investment objectives. The total compensation program includes a base salary fixed from year to year and a variable performance bonus consisting of cash incentives and restricted stock and may include mandatory notional investments (as described below) in selected mutual funds advised by JP Morgan. These elements reflect individual performance and the performance of JP Morgan's business as a whole.

Each portfolio manager's performance is formally evaluated annually based on a variety of factors including the aggregate size and blended performance of the portfolios such portfolio manager manages. Individual contribution relative to client goals carries the highest impact. Portfolio manager compensation is primarily driven by meeting or exceeding clients' risk and return objectives, relative performance to competitors or competitive indices and compliance with firm policies and regulatory requirements. In evaluating each portfolio manager's performance with respect to the mutual funds he or she manages, the funds' pre-tax performance is compared to the appropriate market peer group and to each fund's benchmark index listed in the fund's prospectus over one, three and five year periods (or such shorter time as the portfolio manager has managed the fund). Investment performance is generally more heavily weighted to the long term.

Awards of restricted stock are granted as part of an employee's annual performance bonus and comprise from 0% to 40% of a portfolio manager's total bonus. As the level of incentive compensation increases, the percentage of compensation awarded in restricted stock also increases. Up to 50% of the restricted stock portion of a portfolio manager's bonus may instead be subject to a mandatory notional investment in selected mutual funds advised by JP Morgan or its affiliates. When these awards vest over time, the portfolio manager receives cash equal to the market value of the notional investment in the selected mutual funds.

Lazard Asset Management LLC ("Lazard")

Lazard compensates key investment personnel by a competitive salary and bonus structure, which is determined both quantitatively and qualitatively.

The quantitative compensation factors include:

- Performance relative to benchmark
- Performance relative to applicable peer group
- Absolute return
- Assets under management

The qualitative compensation factors include:

- Leadership
- Mentoring
- Teamwork

Incentives

Lazard promotes an atmosphere that is conducive to the development of the investment professional's skills and talents. Portfolio manager/analysts and research analysts are expected to continuously augment their skills and expertise. The Firm actively supports external development efforts, including attendance of conferences and seminars that build upon their existing core of knowledge, coursework to develop incremental skills, as well as travel to meet with companies, competitors, suppliers, regulators, and related experts. With increased knowledge and skills the managers can take on higher levels of responsibilities and are recognized and rewarded accordingly. Key professionals are likely to be attracted to and remain with the firm because Lazard's compensation structure amply rewards professionals for good performance. Significant energy is devoted to ensuring Lazard attracts, develops, and retains the best available talent to the benefit of clients.

Long Term Incentives

Certain employees of Lazard are eligible to receive restricted stock units of Lazard Ltd. through the Lazard Ltd. Equity Incentive Plan, and restricted interests in shares of certain funds managed by Lazard and its affiliates, each subject to a multi-year vesting schedule and restrictive covenants. These incentive arrangements have broad participation of most professionals and represent an excellent opportunity for employees to share in the continued success of the firm, aligning their interest and performance even more closely with those of our clients.

Employment Contract

Each member of the LQE team has an employment contract which governs their employment terms with Lazard. The contracts are open-ended and contain terms relating to incentive compensation as well as termination of employment.

Logan Circle Partners, L.P.

Logan Circle's compensation program is structured to align the firm's compensation and incentive programs with the interests of our clients. The program is a combination of short and long term elements to compensate investment professionals, and non-investment professionals, based on the overall financial success of Logan Circle, their contribution towards team objectives and their ability to generate long-term investment success for the firm's clients. Logan Circle believes that these financial incentives, and the Logan Circle cultural environment, create an organization that will be highly successful in attracting and retaining high-caliber investment professionals. The incentive program is primarily comprised of four elements:

(i) *Fixed base salary*: This is generally the smallest portion of compensation and is generally within a similar range for all investment professionals. The base salary does not change significantly from year-to-year and hence, is not particularly sensitive to performance.

(ii) *Discretionary incentive compensation in the form of an annual cash bonus*: Logan Circle's overall profitability determines the total amount of incentive compensation available to investment professionals. This portion of compensation is determined subjectively based on qualitative and quantitative factors. In evaluating this component of an investment professional's compensation, Logan Circle considers the contribution to his/her team or discipline, as well as his/her contribution to the overall firm. Quantitative factors considered include, among other things, relative investment performance (e.g., by comparison to competitor or peer group Fund or similar styles of investments, and appropriate, broad-based or specific market indices), and consistency of performance. There are no specific formulas used to determine this part of an investment professional's compensation and the compensation is not tied to any pre-determined or specified level of performance.

(iii) *Long-Term Incentive Plan ("LTIP")*: As a long-term incentive and performance bonus, Logan Circle and Fortress Investment Group LLC ("FIG"), Logan Circle's parent company, have structured a Long-Term Incentive Plan ("LTIP"). Shares of this economic interest are distributed to Logan Circle's key investment and non-investment personnel as a means of incentive and retention.

(iv) *Contributions under the FIG 401(k) Plan*: The contributions are based on the overall profitability of FIG. The amount and allocation of the contributions are determined at the sole discretion of FIG.

Massachusetts Financial Services Company

Portfolio manager compensation is reviewed annually. As of December 31, 2012, portfolio manager total cash compensation is a combination of base salary and performance bonus:

Base Salary – Base salary represents a smaller percentage of portfolio manager total cash compensation than performance bonus.

Performance Bonus – Generally, the performance bonus represents more than a majority of portfolio manager total cash compensation.

The performance bonus is based on a combination of quantitative and qualitative factors, generally with more weight given to the former and less weight given to the latter.

The quantitative portion is based on the pre-tax performance of assets managed by the portfolio manager over one-, three-, and five-year periods relative to peer group universes and/or indices (“benchmarks”). As of December 31, 2012, the following benchmarks were used to measure the following portfolio manager’s performance for the following Funds:

Fund	Portfolio Manager	Benchmark(s)
NVIT Multi-Manager Large Cap Growth Fund	Matthew W. Krummell	Russell 1000 Growth Index
NVIT Multi-Manager Large Cap Value Fund	Jonathan W. Sage	Russell 1000 Value Index

Additional or different benchmarks, including versions of indices, custom indices, and linked indices that combine performance of different indices for different portions of the time period, may also be used. Primary weight is given to portfolio performance over a three-year time period with lesser consideration given to portfolio performance over one- and five-year periods (adjusted as appropriate if the portfolio manager has served for less than five years).

The qualitative portion is based on the results of an annual internal peer review process (conducted by other portfolio managers, analysts, and traders) and management’s assessment of overall portfolio manager contributions to investor relations and the investment process (distinct from fund and other account performance). This performance bonus may be in the form of cash and/or a deferred cash award, at the discretion of management. A deferred cash award is issued for a cash value and becomes payable over a three-year vesting period if the portfolio manager remains in the continuous employ of MFS or its affiliates. During the vesting period, the value of the unfunded deferred cash award will fluctuate as though the portfolio manager had invested the cash value of the award in an MFS Fund(s) selected by the portfolio manager. A selected fund may be, but is not required to be, a fund that is managed by the portfolio manager.

Portfolio managers also typically benefit from the opportunity to participate in the MFS Equity Plan. Equity interests and/or options to acquire equity interests in MFS or its parent company are awarded by management, on a discretionary basis, taking into account tenure at MFS, contribution to the investment process, and other factors.

Finally, portfolio managers also participate in benefit plans (including a defined contribution plan and health and other insurance plans) and programs available generally to other employees of MFS. The percentage such benefits represent of any portfolio manager’s compensation depends upon the length of the individual’s tenure at MFS and salary level, as well as other factors.

Morgan Stanley Investment Management Inc.

Portfolio Manager Compensation Structure

Morgan Stanley's compensation structure is based on a total reward system of base salary and Incentive Compensation which is paid partially as a cash bonus and partially as mandatory deferred compensation. Deferred compensation may be granted as deferred cash under the Adviser's Investment Management Alignment Plan ("IMAP"), as an equity-based awards or it may be granted under other plans as determined annually by Morgan Stanley's Compensation, Management Development and Succession Committee subject to vesting and other conditions.

Base salary compensation. Generally, portfolio managers receive base salary compensation based on the level of their position with the Adviser.

Incentive compensation. In addition to base compensation, portfolio managers may receive discretionary year-end compensation.

Incentive compensation may include:

- Cash Bonus.
- Deferred Compensation:
 - A mandatory program that defers a portion of incentive compensation into restricted stock units or other awards based on Morgan Stanley common stock or other plans that are subject to vesting and other conditions.
 - IMAP is a mandatory program that defers a portion of incentive compensation and notionally invests it in designated funds advised by the Adviser or its affiliates. The award is subject to vesting and other conditions. Portfolio managers must notionally invest a minimum of 25% to a maximum of 100% of their IMAP deferral account into a combination of the designated funds they manage that are included in the IMAP fund menu, which may or may not include one of the Portfolios.
 - All deferred compensation awards are subject to clawback provisions where awards can be cancelled, in whole or in part, if an employee takes any action, or omits to take any action which; causes a restatement of Morgan Stanley's consolidated financial results; constitutes a violation by the portfolio manager of Morgan Stanley's Global Risk Management Principles, Policies and Standards; or constitutes violation of internal risk and control policies involving a subsequent loss.

Several factors determine discretionary compensation, which can vary by portfolio management team and circumstances. These factors include:

- Revenues generated by the investment companies, pooled investment vehicles and other accounts managed by the portfolio manager.
- The investment performance of the funds/accounts managed by the portfolio manager.
- Contribution to the business objectives of the Adviser.
- The dollar amount of assets managed by the portfolio manager.
- Market compensation survey research by independent third parties.
- Other qualitative factors, such as contributions to client objectives.
- Performance of Morgan Stanley and Morgan Stanley Investment Management, and the overall performance of the investment team(s) of which the portfolio manager is a member.

Nationwide Asset Management, LLC

NWAM's compensation program consists of base salary, annual incentives and long-term incentives; hereby known as "Compensation Structure." Annually, the "Compensation Structure" is reviewed for competitiveness by using the McLagan Compensation surveys.

The "Compensation Structure" is designed to motivate and reward individual and team actions and behaviors that drive a high performance organization and deliver risk-adjusted investment returns that are aligned with the strategy of Nationwide and our business partners.

- Align interests of NWAM and business partners and foster collaboration
- Base a substantial portion of NWAM compensation directly on NWAM
- Recognize qualitative and well as quantitative performance
- Encourage a higher level of intelligent investment risk taking and entrepreneurial attitudes and behaviors
- Provide a high degree of "line of sight" for NWAM participants and other business partners
- Attract and retain individuals with skills critical to the NWAM strategy
- Target median total compensation for the industry
- Utilize variable compensation (annual and long term) to close compensation market gaps.

Neuberger Berman Fixed Income LLC

Our compensation philosophy is one that focuses on rewarding performance and incentivizing our employees. We consider a variety of factors in determining fixed and variable compensation for employees, including firm performance, individual performance, overall contribution to the team, collaboration with colleagues across the firm, effective partnering with clients to achieve goals, risk management and the overall investment performance. It is our foremost goal to create a compensation process that is fair, transparent, and competitive with the market.

Neuberger Berman investment professionals on portfolio management teams receive a fixed salary and are eligible for an annual bonus. The annual bonus for an individual investment professional is paid from a "bonus pool" made available to the portfolio management team with which the investment professional is associated. The amount available in the bonus pool is determined based on a number of factors including the revenue that is generated by that particular portfolio management team, less certain adjustments. Once the final size of the available bonus pool is determined, individual bonuses are determined based on a number of factors including, but not limited to, the aggregate investment performance of all strategies managed by the individual, utilization of central resources, business building to further the longer term sustainable success of the investment team, effective team/people management, and overall contribution to the success of Neuberger Berman. In some cases, bonus pools may be subject to a hold-back applied to revenues. Research Analysts who are embedded within portfolio management teams participate in a similar compensation structure established for their respective teams, at the discretion of their group heads, thereby aligning them with the long-term performance of their respective teams.

Incentive Structure

As a firm, we believe that providing our employees with appropriate incentives, a positive work environment and an inclusive and collaborative culture is critical to our success in retaining employees.

The terms of our long-term retention incentives are as follows:

- **Employee-Owned Equity.** An integral part of our management buyout was the implementation of an equity ownership structure which embodies the importance of incentivizing and retaining key investment professionals. Investment professionals have received a majority of the common equity units owned by all employees. Employee equity is generally. These units are subject to vesting (generally 25% vests each year at the 2nd, 3rd, 4th and 5th anniversaries of the grant).

- In addition, currently certain employees may elect to have a portion of their compensation delivered in the form of equity, which, in certain instances, is vested upon issuance. In implementing this program, Neuberger Berman established additional ways to expand employee-owned equity.

- **Contingent Compensation.** Neuberger Berman established the Neuberger Berman Group Contingent Compensation Plan (the "CCP") to serve as a means to further align the interests of our employees with the success of the firm and the interests of our clients, and to reward continued employment. Under the CCP, a percentage of a participant's total compensation is contingent and tied to the performance of a portfolio of Neuberger Berman investment strategies as specified by the firm on an employee-by-employee basis. By having a participant's contingent compensation be tied to Neuberger Berman investment strategies, each employee is given further incentive to operate as a prudent risk manager and to collaborate with colleagues to maximize performance across all business areas. In the case of Portfolio Managers, the CCP is currently structured so that such employees have exposure to the investment strategies of their respective teams as well as the broader Neuberger Berman portfolio. In addition, certain CCP Participants who are also current equity holders may make an election to direct receive a portion of future Contingent Amounts into a program involving cash, equity or other property their contingent compensation in the form of equity, subject to vesting provisions and other provisions generally consistent with those of the traditional CCP. Subject to satisfaction of certain conditions of the CCP (including conditions relating to continued employment), contingent compensation amounts will vest after over three years. Neuberger Berman determines annually which employees participate in the program based on total compensation for the applicable year.

- **Restrictive Covenants.** Most investment professionals who have received equity grants have agreed are subject to notice periods and restrictive covenants which may include non-compete and non-solicit restrictions. In addition, depending on participation. levels, certain senior professionals who have received equity grants have also agreed to additional notice and transition periods and, in some cases, non-compete restrictions.

Putnam Investment Management, LLC

In order to attract and retain top talent, Putnam offers competitive compensation packages. Our total compensation program, which includes base salary, incentive pay, and other retirement and benefit perquisites, compares favorably with other firms in the industry. Putnam's Human Resources Department periodically conducts reviews to ensure that our compensation packages remain competitive.

While there is no guarantee that investment objectives will be met, our investment compensation program aligns manager goals with the firm's chief objective – delivering strong performance versus peers or performance ahead of benchmark, depending on the product, over a rolling three-year period. It emphasizes long-term performance goals and does not offer any extra incentives for outperforming by a wide margin over short-term periods. Incentive targets are set on an individual basis for investment staff. These targets are based on the top quartile of the market and are designed to reward performance at this level with the primary bonus driver being fund performance against the market over three years. In particular:

- Portfolio managers who achieve top-quartile returns, consistent with fund mandates and strong risk controls, are eligible for full bonuses
- Portfolio managers who deliver median performance will receive 50% of their target bonus
- Portfolio managers who deliver bottom-quartile performance will typically receive no bonus

In addition to their individual performance, evaluations take into account the performance of their group and a subjective component. Actual incentive compensation may be higher or lower than the target, based on individual, group, and subjective performance, and may also reflect the performance of Putnam as a firm. As well as incentive

compensation, investment team members receive annual salaries that are typically based on seniority and experience.

Pyramis Global Advisors, LLC

Stephen Balter and Christopher Galizio are the portfolio managers of the Pyramis Focused Large Cap Growth strategy and receive compensation for their services. As of December 31, 2013, portfolio managers compensation generally consists of a fixed base salary determined periodically (typically annually), a bonus, in certain cases, participation in several types of equity-based compensation plans, and, if applicable, relocation plan benefits. A portion of each portfolio manager's compensation may be deferred based on criteria established by Pyramis or at the election of the portfolio manager.

The portfolio manager's base salary is determined by level of responsibility and experience at FMR, Pyramis or its affiliates. The primary components of the portfolio manager's bonus are based on (i) the pre-tax investment performance of the portfolio manager's fund(s) and account(s) measured against a benchmark index and within a defined peer group assigned to each fund or account, and (ii) the investment performance of other Pyramis equity funds and accounts. The pre-tax investment performance of the portfolio manager's fund(s) and account(s) is weighted according to the portfolio manager's tenure on those fund(s) and account(s) and the average asset size of those fund(s) and account(s) over the portfolio manager's tenure. Each component is calculated separately over the portfolio manager's tenure on those fund(s) and account(s) over a measurement period that initially is contemporaneous with the portfolio manager's tenure, but that eventually encompasses rolling periods of up to five years for the comparison to a benchmark index, and peer group. A smaller, subjective component of the portfolio manager's bonus is based on the portfolio manager's overall contribution to and leadership within the Pyramis investment platform. The portion of the portfolio manager's bonus that is linked to the investment performance of Pyramis Focused Large Cap Growth strategy is based on the pre-tax investment performance of the strategy measured against the Russell 1000 Growth Index, and the pre-tax investment performance of the strategy within the eVestment Alliance Large Cap Growth Equity. The portfolio manager also is compensated under equity-based compensation plans linked to increases or decreases in the net asset value of the stock of Pyramis Global Advisors Holdings Corp., Pyramis' parent company. If requested to relocate their primary residence, portfolio managers also may be eligible to receive benefits, such as home sale assistance and payment of certain moving expenses, under relocation plans for most full-time employees of Pyramis and its affiliates.

Templeton Investment Counsel, LLC

The investment manager seeks to maintain a compensation program that is competitively positioned to attract, retain and motivate top-quality investment professionals. Portfolio managers receive a base salary, a cash incentive bonus opportunity, an equity compensation opportunity, and a benefits package. Portfolio manager compensation is reviewed annually and the level of compensation is based on individual performance, the salary range for a portfolio manager's level of responsibility and Franklin Templeton guidelines. Portfolio managers are provided no financial incentive to favor one fund or account over another. Each portfolio manager's compensation consists of the following three elements:

Base salary Each portfolio manager is paid a base salary.

Annual bonus Annual bonuses are structured to align the interests of the portfolio manager with those of the Fund's shareholders. Each portfolio manager is eligible to receive an annual bonus. Bonuses generally are split between cash (50% to 65%) and restricted shares of Resources stock (17.5% to 25%) and mutual fund shares (17.5% to 25%). The deferred equity-based compensation is intended to build a vested interest of the portfolio manager in the financial performance of both Resources and mutual funds advised by the investment manager. The bonus plan is intended to provide a competitive level of annual bonus compensation that is tied to the portfolio manager achieving consistently strong investment performance, which aligns the financial incentives of the portfolio manager and Fund shareholders. The Chief Investment Officer of the investment manager and/or other officers of the investment manager, with responsibility for the Fund, have discretion in the granting

of annual bonuses to portfolio managers in accordance with Franklin Templeton guidelines. The following factors are generally used in determining bonuses under the plan:

- *Investment performance.* Primary consideration is given to the historic investment performance over the 1, 3 and 5 preceding years of all accounts managed by the portfolio manager. The pre-tax performance of each fund managed is measured relative to a relevant peer group and/or applicable benchmark as appropriate.
- *Research.* Where the portfolio management team also has research responsibilities, each portfolio manager is evaluated on the number and performance of recommendations over time, productivity and quality of recommendations, and peer evaluation.
- *Non-investment performance.* For senior portfolio managers, there is a qualitative evaluation based on leadership and the mentoring of staff.
- *Responsibilities.* The characteristics and complexity of funds managed by the portfolio manager are factored in the investment manager's appraisal.

Additional long-term equity-based compensation Portfolio managers may also be awarded restricted shares or units of Resources stock or restricted shares or units of one or more mutual funds. Awards of such deferred equity-based compensation typically vest over time, so as to create incentives to retain key talent.

Portfolio managers also participate in benefit plans and programs available generally to all employees of the investment manager.

The Boston Company Asset Management, LLC

Our rewards program was designed to foster a culture of individual excellence and teamwork and to reward efforts toward these goals accordingly. The primary mission of our firm is to deliver alpha utilizing a fundamental investment research and portfolio management approach, while being diligent risk managers. We believe our rewards program provides the appropriate incentives to give us the ability to consistently deliver on that commitment to our clients.

Portfolio Managers: With the exception of the most senior portfolio managers in the firm (described separately below), the portfolio managers' compensation is comprised primarily of a market-based salary and incentive compensation, including both annual cash and long-term incentive awards. Portfolio managers are eligible to receive annual cash bonus awards, and annual incentive opportunities are pre-established for each individual based upon competitive industry compensation benchmarks. Additionally, most portfolio managers are also eligible to participate in any Franchise Dividend Pool (described separately below) created by their team. Actual individual awards are determined based on The Boston Company's financial performance, individual investment performance, individual contribution and other qualitative factors.

Select Senior Portfolio Managers: Select senior portfolio managers participate in a more formal structured compensation plan. This plan is designed to compensate our top investment professionals for superior investment performance and business results. The base incentive is a two stage model: an opportunity range is determined based on the level of current business (AUM, revenue) and an assessment of long-term business value (growth, retention, development). A significant portion of the opportunity awarded is structured and based upon the one-year, three-year and five-year (three-year and five-year weighted more heavily) pre-tax performance of the portfolio manager's accounts relative to the performance of the appropriate peer groups. Other factors considered in determining the award are individual qualitative performance based on seven discretionary factors (e.g. leadership, teamwork, etc.) and the asset size and revenue growth or retention of the products managed. In addition to the base incentive, the senior portfolio managers and their teams are eligible for a Franchise Dividend award, whereby if the team meets a pre-established contribution margin, any excess contribution is shared between the team and The Boston Company

and is paid out in both cash and long-term incentives. Lastly, awards for portfolio managers that manage alternative strategies are partially based on a portion of the fund's realized performance fee.

Research Analysts: For research analysts and other investment professionals, incentive pools are distributed to the respective product teams (in the aggregate) based upon product performance relative to firm-wide performance measured on the same basis as described above. Further allocations are made to specific team members by the product portfolio manager based upon sector contribution and other qualitative factors. Additionally, most research analysts are also eligible to participate in any Franchise Dividend Pool (described separately above) created by their team.

Incentive compensation awards are generally subject to management discretion and pool funding availability. Funding for The Boston Company Annual Incentive Plan and Long-Term Retention Incentive Plan is through a pre-determined fixed percentage of overall Boston Company profitability. Awards are paid in cash on an annual basis; however, some portfolio managers may receive a portion of their annual incentive award in deferred vehicles. Long-Term Retention Incentive Plan: All portfolio managers and analysts are also eligible to participate in The Boston Company Long-Term Retention Incentive Plan. This plan provides for an annual award, payable in deferred cash and/or BNY Mellon restricted stock and/or Boston Company restricted shares (three-year cliff vesting period for all). The final value of the deferred cash portion of the award will be determined by reference to the investment results of select Boston Company products (the "Measurement Funds"). The final award payment will include any appreciation/depreciation of the principal award over the measurement period. The appreciation/depreciation will be determined by reference to the investment results of the Measurement Funds.

The final value of The Boston Company restricted shares will be based on any appreciation/depreciation of the fair value of The Boston Company over the measurement period, as determined by a third-party provider using both income and market approaches. The valuation is based on input and information provided to them by The Boston Company and BNY Mellon Asset Management as well as the provider's assessment of the firm's growth, risk and profitability in relation to The Boston Company's industry peer group. Providing this diverse group of "currencies" within our long-term incentive plan allows for The Boston Company's professionals to be best aligned with our clients, our parent and all of their Boston Company colleagues.

All incentive awards made under our rewards program are subject to standard forfeiture and clawback provisions.

Thompson, Siegel & Walmsley LLC

TS&W believes the firm's compensation structure is competitive within the industry. The Portfolio Manager for the TS&W Mid Cap Value strategy is Brett P. Hawkins, CFA. He is considered a key employee and is subject to the following compensation description:

TS&W's compensation strategy is to provide competitive base salaries commensurate with an individual's responsibility and provide incentive bonus awards that may significantly exceed base salary. Annually, the TS&W Remuneration Committee is responsible for determining the discretionary bonus, utilizing an analytical and qualitative assessment process. While it is not a formulaic decision, factors used to determine compensation are commitment to TS&W's core values (Focus, Integrity, Teamwork and Excellence), long-term performance, the product's strategic position in the overall success of TS&W, and support of marketing/client service commitments. Some key associates may be awarded cash bonuses and deferred TS&W equity grants. All qualified employees participate in the TS&W Employees' Retirement Plan.

Brett P. Hawkins, CFA also serves as a Co-Portfolio Manager on TS&W's SMID strategy team. . TS&W does not consider any material conflicts arising as a result of his additional portfolio manager responsibilities.

WEDGE Capital Management, L.L.P (“WEDGE”)

WEDGE structures its incentive compensation plans to reward all professionals for their contribution to the growth and profitability of the firm. Compensation is not directly tied to fund performance or growth in assets for any fund or other account managed by a portfolio manager. General Partners, including Paul VeZolles and John Norman, are compensated via a percentage of the firm’s net profitability following a peer review, which focuses on performance in their specific area of responsibility, as well as their contribution to the general management of the firm, and their importance to the firm in the future. Other investment professionals, including John Carr, receive a competitive salary and bonus based on the firm’s investment and business success and their specific contribution to that record. Measurements are based on both quantitative and qualitative statistics. WEDGE employees are not subject to employment contracts but the firm’s eight General Partners must abide by the Partnership Agreement, which, among many provisions, includes non-compete clauses and required minimum years of service.

Wellington Management Company, LLP

Wellington Management receives a fee based on the assets under management of the NVIT Multi-Manager Large Cap Value Fund and the NVIT Multi-Manager Small Cap Growth Fund (the “Funds”) as set forth in the Subadvisory Agreement between Wellington Management, Nationwide Variable Insurance Trust and Nationwide Fund Advisors on behalf of each Fund. Wellington Management pays its investment professionals out of its total revenues, including the advisory fees earned with respect to the Funds. The following information is as of December 31, 2013.

Wellington Management’s compensation structure is designed to attract and retain high-caliber investment professionals necessary to deliver high quality investment management services to its clients. Wellington Management’s compensation of each Fund’s managers listed in the prospectus who are primarily responsible for the day-to-day management of the Funds (“Portfolio Managers”) includes a base salary and incentive components. The base salary for each Portfolio Manager who is a partner of Wellington Management is generally a fixed amount that is determined by the Managing Partners of the firm. The base salary for the other Portfolio Manager is determined by the Portfolio Manager’s experience and performance in his role as a Portfolio Manager. Base salaries for Wellington Management’s employees are reviewed annually and may be adjusted based on the recommendation of a Portfolio Manager’s manager, using guidelines established by Wellington Management’s Compensation Committee, which has final oversight responsibility for base salaries of employees of the firm. Each Portfolio Manager is eligible to receive an incentive payment based on the revenues earned by Wellington Management from the Fund managed by the Portfolio Manager and generally each other account managed by such Portfolio Manager. Each Portfolio Manager’s incentive payment relating to the relevant Fund is linked to the gross pre-tax performance of the portion of the Fund managed by the Portfolio Manager compared to the benchmark index and/or peer group identified below over one and three year periods, with an emphasis on three year results. In 2012, Wellington Management began placing increased emphasis on long-term performance and is phasing in a five-year performance comparison period, which will be fully implemented by December 31, 2016. Wellington Management applies similar incentive compensation structures (although the benchmarks or peer groups, time periods and rates may differ) to other accounts managed by the Portfolio Managers, including accounts with performance fees.

Portfolio-based incentives across all accounts managed by an investment professional can, and typically do, represent a significant portion of an investment professional’s overall compensation; incentive compensation varies significantly by individual and can vary significantly from year to year. The Portfolio Managers may also be eligible for bonus payments based on his overall contribution to Wellington Management’s business operations. Senior management at Wellington Management may reward individuals as it deems appropriate based on other factors. Each partner of Wellington Management is eligible to participate in a partner-funded tax qualified retirement plan, the contributions to which are made pursuant to an actuarial formula. Mr. Palmer is a partner of the firm.

Fund	Benchmark Index and/or Peer Group for Incentive Period
NVIT Multi-Manager Large Cap Value Fund	Russell 1000 Value Index
NVIT Multi-Manager Small Cap Growth Fund	Russell 2000 Growth Index

Wells Capital Management, Inc.

The compensation structure for Wells Capital Management's Portfolio Managers includes a competitive fixed base salary plus variable incentives (Wells Capital Management utilizes investment management compensation surveys as confirmation). Incentive bonuses are typically tied to investment performance of all accounts under his or her management within acceptable risk parameters. Relative investment performance is generally evaluated for 1-3, and 3-5 year performance results, with a predominant weighting on the 3- and 5- year time periods, versus the relevant benchmarks and/or peer groups consistent with the investment style. This evaluation takes into account relative performance of the accounts to each account's individual benchmark and/or the relative composite performance of all accounts to one or more relevant benchmarks consistent with the overall investment style. In the case of each Fund, the benchmark(s) against which the performance of the Fund's portfolio may be compared for these purposes generally are indicated in the "Performance" sections of the Prospectuses.

Winslow Capital Management, LLC

In an effort to retain key personnel, Winslow Capital has structured compensation plans for portfolio managers and other key personnel that it believes are competitive with other investment management firms. The compensation plan is determined by the Winslow Capital Operating Committee and is designed to align manager compensation with investors' goals by rewarding portfolio managers who meet the long-term objective of consistent, superior investment results, measured by the performance of the product. The portfolio managers have long-term employment agreements and are subject to non-competition/non-solicitation restrictions.

The Operating Committee establishes salaries at competitive levels, verified through industry surveys, to attract and maintain the best professional and administrative personnel. Portfolio manager compensation packages are independent of advisory fees collected on any given client account under management. In addition, an incentive bonus is paid annually to the employees based upon each individual's performance, client results and the profitability of the firm. Finally employees of Winslow Capital, including the portfolio managers, have received profit interests in the firm which entitle their holders to participate in the firm's growth over time.

OTHER MANAGED ACCOUNTS
(As of December 31, 2013)

The following chart summarizes information regarding accounts for which each portfolio manager has day-to-day management responsibilities. Accounts are grouped into the following three categories: (1) mutual funds; (2) other pooled investment vehicles; and (3) other accounts. To the extent that any of these accounts pay advisory fees that are based on account performance (“performance-based fees”), information on those accounts is provided separately.

Name of Portfolio Manager	Managed by Each Portfolio Manager and Total Assets by Category <i>(As of December 31, 2013)</i>
<i>American Century Investment Management, Inc.</i>	
Phillip N. Davidson	Mutual Funds: 12 accounts, \$22.160 billion total assets (0 accounts, \$0 total assets for which the advisory fee is based on performance)
	Other Pooled Investment Vehicles: 5 accounts, \$1.521 billion total assets (0 accounts, \$0 total assets for which the advisory fee is based on performance)

POTENTIAL CONFLICTS OF INTEREST

American Century Investment Management, Inc.

Certain conflicts of interest may arise in connection with the management of multiple portfolios. Potential conflicts include, for example, conflicts among investment strategies, such as one portfolio buying or selling a security while another portfolio has a differing, potentially opposite position in such security. This may include one portfolio taking a short position in the security of an issuer that is held long in another portfolio (or vice versa). Other potential conflicts may arise with respect to the allocation of investment opportunities. American Century has adopted policies and procedures that are designed to minimize the effects of these conflicts.

Responsibility for managing American Century client portfolios is organized according to investment discipline. Investment disciplines include, for example, quantitative equity, U.S. growth small- and mid-cap, U.S. growth large-cap, value, global and non-U.S., fixed income and asset allocation. Within each discipline are one or more portfolio teams responsible for managing specific client portfolios. Generally, client portfolios with similar strategies are managed by the same team using the same objective, approach, and philosophy. Accordingly, portfolio holdings, position sizes, and industry and sector exposures tend to be similar across similar portfolios, which minimizes the potential for conflicts of interest. In addition, American Century Investments maintains an ethical wall around each of its equity investment disciplines (U.S. growth large-cap, U.S. growth mid-and small-cap, value, quantitative equity and global and non-U.S.), meaning that access to information regarding any portfolio's transactional activities is only available to team members of the investment discipline that manages such portfolio. The ethical wall is intended to aid in preventing the misuse of portfolio holdings information and trading activity in other disciplines.

For each investment strategy, one portfolio is generally designated as the "policy portfolio." Other portfolios with similar investment objectives, guidelines and restrictions are referred to as "tracking portfolios." When managing policy and tracking portfolios, a portfolio team typically purchases and sells securities across all portfolios that the team manages. American Century's trading systems include various order entry programs that assist in the management of multiple portfolios, such as the ability to purchase or sell the same relative amount of one security across several funds. In some cases a tracking portfolio may have additional restrictions or limitations that cause it to be managed separately from the policy portfolio. Portfolio managers make purchase and sale decisions for such portfolios alongside the policy portfolio to the extent the overlap is appropriate, and separately, if the overlap is not.

American Century may aggregate orders to purchase or sell the same security for multiple portfolios when it believes such aggregation is consistent with its duty to seek best execution on behalf of its clients. Orders of certain client portfolios may, by investment restriction or otherwise, be determined not available for aggregation. American Century has adopted policies and procedures to minimize the risk that a client portfolio could be systematically advantaged or disadvantaged in connection with the aggregation of orders. To the extent equity trades are aggregated, shares purchased or sold are generally allocated to the participating portfolios *pro rata* based on order size. Because initial public offerings (IPOs) are usually available in limited supply and in amounts too small to permit across-the-board *pro rata* allocations, American Century has adopted special procedures designed to promote a fair and equitable allocation of IPO securities among clients over time. Fixed income securities transactions are not executed through a centralized trading desk. Instead, portfolio teams are responsible for executing trades with broker/dealers in a predominantly dealer marketplace. Trade allocation decisions are made by the portfolio manager at the time of trade execution and orders entered on the fixed income order management system.

Finally, investment of American Century's corporate assets in proprietary accounts may raise additional conflicts of interest. To mitigate these potential conflicts of interest, American Century has adopted policies and procedures intended to provide that trading in proprietary accounts is performed in a manner that does not give improper advantage to American Century to the detriment of client portfolios.

BlackRock Investment Management, LLC (“BlackRock”)

BlackRock has built a professional working environment, firm-wide compliance culture and compliance procedures and systems designed to protect against potential incentives that may favor one account over another. BlackRock has adopted policies and procedures that address the allocation of investment opportunities, execution of portfolio transactions, personal trading by employees and other potential conflicts of interest that are designed to ensure that all client accounts are treated equitably over time. Nevertheless, BlackRock furnishes investment management and advisory services to numerous clients in addition to the Fund, and BlackRock may, consistent with applicable law, make investment recommendations to other clients or accounts (including accounts which are hedge funds or have performance or higher fees paid to BlackRock, or in which portfolio managers have a personal interest in the receipt of such fees), which may be the same as or different from those made to the Fund. In addition, BlackRock, its affiliates and significant shareholders and any officer, director, shareholder or employee may or may not have an interest in the securities whose purchase and sale BlackRock recommends to the Fund. BlackRock, or any of its affiliates or significant shareholders, or any officer, director, shareholder, employee or any member of their families may take different actions than those recommended to the Fund by BlackRock with respect to the same securities. Moreover, BlackRock may refrain from rendering any advice or services concerning securities of companies of which any of BlackRock’s (or its affiliates’ or significant shareholders’) officers, directors or employees are directors or officers, or companies as to which BlackRock or any of its affiliates or significant shareholders or the officers, directors and employees of any of them has any substantial economic interest or possesses material non-public information. Certain portfolio managers also may manage accounts whose investment strategies may at times be opposed to the strategy utilized for a fund. It should also be noted that Mr. Radell and Ms. Uyehara may be managing hedge fund and/or long only accounts, or may be part of a team managing hedge fund and/or long only accounts, subject to incentive fees. Mr. Radell and Ms. Uyehara may therefore be entitled to receive a portion of any incentive fees earned on such accounts.

As a fiduciary, BlackRock owes a duty of loyalty to its clients and must treat each client fairly. When BlackRock purchases or sells securities for more than one account, the trades must be allocated in a manner consistent with its fiduciary duties. BlackRock attempts to allocate investments in a fair and equitable manner among client accounts, with no account receiving preferential treatment. To this end, BlackRock has adopted policies that are intended to ensure reasonable efficiency in client transactions and provide BlackRock with sufficient flexibility to allocate investments in a manner that is consistent with the particular investment discipline and client base, as appropriate.

Brookfield Investment Management Inc. (“Brookfield”)

Brookfield has adopted compliance policies and procedures that are reasonably designed to address the various conflicts of interest that may arise for Brookfield and its employees. In the course of our normal business, Brookfield or its employees may encounter situations where we face a conflict of interest or could be perceived to be in a conflict of interest situation. A conflict of interest occurs whenever the interests of Brookfield or its employees diverge from those of a client or when Brookfield or its employees have obligations to more than one party whose interests are different. In order to preserve our reputation and comply with applicable legal and regulatory requirements, we believe managing perceived conflicts is as important as managing actual conflicts.

Dimensional Fund Advisors LP (“Dimensional”)

Actual or apparent conflicts of interest may arise when a portfolio manager has the primary day-to-day responsibilities with respect to more than one fund and other accounts. Other accounts include registered mutual funds (other than the NVIT Multi-Manager International Value Fund), other unregistered pooled investment vehicles, and other accounts managed for organizations and individuals (collectively, “Accounts”). An Account may have similar investment objectives to the NVIT Multi-Manager International Value Fund, or may purchase, sell, or hold securities that are eligible to be purchased, sold, or held by the NVIT Multi-Manager International Value Fund. Actual or apparent conflicts of interest include:

- Time Management. The management of multiple Accounts may result in a portfolio manager devoting unequal time and attention to the management of each fund and/or Account. Dimensional seeks to manage such competing interests for the time and attention of portfolio managers by having portfolio managers focus on a particular investment discipline. Certain Accounts managed by a portfolio manager are managed using the same investment models that are used in connection with the management of the NVIT Multi-Manager International Value Fund.
- Investment Opportunities. It is possible that at times identical securities will be held by more than one Account. However, positions in the same security may vary and the length of time that any Account may choose to hold its investment in the same security may likewise vary. If a portfolio manager identifies a limited investment opportunity that may be suitable for more than one Account, the NVIT Multi-Manager International Value Fund may not be able to take full advantage of that opportunity due to an allocation of filled purchase or sale orders across all eligible Accounts. To deal with these situations, Dimensional has adopted procedures for allocating portfolio transactions across multiple Accounts.
- Broker Selection. With respect to securities transactions for the NVIT Multi-Manager International Value Fund, Dimensional determines which broker to use to execute each order, consistent with Dimensional's duty to seek best execution of the transaction. However, with respect to certain Accounts (such as separate accounts), Dimensional may be limited by the client with respect to the selection of brokers or may be instructed to direct trades through a particular broker. In these cases, Dimensional or its affiliates may place separate, non-simultaneous, transactions for NVIT Multi-Manager International Value Fund and another Account that may temporarily affect the market price of the security or the execution of the transaction, or both, to the detriment of the NVIT Multi-Manager International Value Fund or the Account.
- Performance-Based Fees. For some Accounts, Dimensional may be compensated based on the profitability of the Account, such as by a performance-based management fee. These incentive compensation structures may create a conflict of interest for Dimensional with regard to Accounts where Dimensional is paid based on a percentage of assets because the portfolio manager may have an incentive to allocate securities preferentially to the Accounts where Dimensional might share in investment gains.
- Investment in a fund or Account. A portfolio manager or his/her relatives may invest in an Account that he or she manages and a conflict may arise where he or she may therefore have an incentive to treat the Account in which the portfolio manager or his/her relatives invest preferentially as compared to NVIT Multi-Manager International Value Fund or other Accounts for which he or she has portfolio management responsibilities.

Dimensional has adopted certain compliance procedures that are reasonably designed to address these types of conflicts. However, there is no guarantee that such procedures will detect each and every situation in which a conflict arises.

Epoch Investment Partners, Inc. ("Epoch")

Epoch's solitary line of business is investment management; therefore, Epoch believes it would not have any significant conflicts of interest in the management of the Fund other than those conflicts of interest that are customary in asset management. For example, as an asset manager to multiple accounts, Epoch faces conflicts of interest related to the allocation of securities, the sequencing of transactions, fee arrangements, the use of brokerage activity to acquire research or brokerage services, and proxy voting. Epoch faces other conflicts of interest related to the personal trading activities of its employees as well as the corporate investment activities of Epoch itself. Each portfolio manager and analyst at Epoch provides portfolio services to either separately managed accounts or other pooled investment vehicles, including hedge funds.

Federated Investment Management Company (“Federated”)

As a general matter, certain conflicts of interest may arise in connection with a portfolio manager's management of a fund's investments, on the one hand, and the investments of other accounts for which the portfolio manager is responsible, on the other. For example, it is possible that the various accounts managed could have different investment strategies that, at times, might conflict with one another to the possible detriment of the Fund.

Alternatively, to the extent that the same investment opportunities might be desirable for more than one account, possible conflicts could arise in determining how to allocate them. Other potential conflicts might include conflicts created by specific portfolio manager compensation arrangements, and conflicts relating to selection of brokers or dealers to execute fund portfolio trades and/or specific uses of commissions from Fund portfolio trades (for example, research, or “soft dollars”). Federated has adopted policies and procedures and has structured the portfolio managers' compensation in a manner reasonably designed to safeguard the Fund from being negatively affected as a result of any such potential conflicts.

HighMark Capital Management, Inc. (“HighMark”)

Like other investment professionals with multiple clients, a portfolio manager for a Fund may face certain potential conflicts of interest in connection with managing both the Fund and other accounts at the same time. The paragraphs below describe some of these potential conflicts, which HighMark believes are faced by investment professionals at most major financial firms. HighMark has adopted compliance policies and procedures that attempt to address certain of these potential conflicts.

The management of accounts with different advisory fee rates and/or fee structures, including accounts that pay advisory fees based on account performance (“performance fee accounts”), may raise potential conflicts of interest by creating an incentive to favor higher-fee accounts. These potential conflicts may include, among others:

- The most attractive investments could be allocated to higher-fee accounts or performance fee accounts.
- The trading of higher-fee accounts could be favored as to timing and/or execution price. For example, higher-fee accounts could be permitted to sell securities earlier than other accounts when a prompt sale is desirable or to buy securities at an earlier and more opportune time.
- The trading of other accounts could be used to benefit higher-fee accounts (front- running).
- The investment management team could focus their time and efforts primarily on higher-fee accounts due to a personal stake in compensation.

Invesco Advisers, Inc. (“Invesco”)

Actual or apparent conflicts of interest may arise when a portfolio manager has day-to-day management responsibilities with respect to more than one Fund or other account. More specifically, portfolio managers who manage multiple Funds and /or other accounts may be presented with one or more of the following potential conflicts:

- The management of multiple Funds and/or other accounts may result in a portfolio manager devoting unequal time and attention to the management of each Fund and/or other account. Invesco seeks to manage such competing interests for the time and attention of portfolio managers by having portfolio managers focus on a particular investment discipline. Most other accounts managed by a portfolio manager are managed using the same investment models that are used in connection with the management of the Funds.
- If a portfolio manager identifies a limited investment opportunity which may be suitable for more than one Fund or other account, a Fund may not be able to take full advantage of that opportunity due to an allocation of filled purchase or sale orders across all eligible Funds and other accounts. To deal with these situations, Invesco and the Funds have adopted procedures for allocating portfolio transactions across multiple accounts.

- Invesco determines which broker to use to execute each order for securities transactions for the Funds, consistent with its duty to seek best execution of the transaction. However, for certain other accounts (such as mutual funds for which Invesco or an affiliate acts as sub-advisor, other pooled investment vehicles that are not registered mutual funds, and other accounts managed for organizations and individuals), Invesco may be limited by the client with respect to the selection of brokers or may be instructed to direct trades through a particular broker. In these cases, trades for a Fund in a particular security may be placed separately from, rather than aggregated with, such other accounts. Having separate transactions with respect to a security may temporarily affect the market price of the security or the execution of the transaction, or both, to the possible detriment of the Fund or other account(s) involved.
- Finally, the appearance of a conflict of interest may arise where Invesco has an incentive, such as a performance-based management fee, which relates to the management of one Fund or account but not all Funds and accounts with respect to which a portfolio manager has day-to-day management responsibilities.

Invesco and the Funds have adopted certain compliance procedures which are designed to address these types of conflicts. However, there is no guarantee that such procedures will detect each and every situation in which a conflict arises.

J.P. Morgan Investment Management Inc.

The potential for conflicts of interest exists when portfolio managers manage other accounts with similar investment objectives and strategies as the Fund ("Similar Accounts"). Potential conflicts may include, for example, conflicts between investment strategies and conflicts in the allocation of investment opportunities.

Responsibility for managing J.P. Morgan Investment Management Inc. (JPMorgan)'s and its affiliates clients' portfolios is organized according to investment strategies within asset classes. Generally, client portfolios with similar strategies are managed by portfolio managers in the same portfolio management group using the same objectives, approach and philosophy. Underlying sectors or strategy allocations within a larger portfolio are likewise managed by portfolio managers who use the same approach and philosophy as similarly managed portfolios. Therefore, portfolio holdings, relative position sizes and industry and sector exposures tend to be similar across similar portfolios and strategies, which minimize the potential for conflicts of interest.

JP Morgan and/or its affiliates may receive more compensation with respect to certain Similar Accounts than that received with respect to the Fund or may receive compensation based in part on the performance of certain Similar Accounts. This may create a potential conflict of interest for JP Morgan and its affiliates or its portfolio managers by providing an incentive to favor these Similar Accounts when, for example, placing securities transactions. In addition, JP Morgan or its affiliates could be viewed as having a conflict of interest to the extent that JP Morgan or an affiliate has a proprietary investment in Similar Accounts, the portfolio managers have personal investments in Similar Accounts or the Similar Accounts are investment options in JP Morgan's or its affiliate's employee benefit plans. Potential conflicts of interest may arise with both the aggregation and allocation of securities transactions and allocation of investment opportunities because of market factors or investment restrictions imposed upon JP Morgan and its affiliates by law, regulation, contract or internal policies. Allocations of aggregated trades, particularly trade orders that were only partially completed due to limited availability and allocation of investment opportunities generally, could raise a potential conflict of interest, as JP Morgan or its affiliates may have an incentive to allocate securities that are expected to increase in value to favored accounts. Initial public offerings, in particular, are frequently of very limited availability. JP Morgan and its affiliates may be perceived as causing accounts they manage to participate in an offering to increase JP Morgan's or its affiliates' overall allocation of securities in that offering.

A potential conflict of interest also may be perceived to arise if transactions in one account closely follow related transactions in a different account, such as when a purchase increases the value of securities previously purchased by another account, or when a sale in one account lowers the sale price received in a sale by a second account. If JP

Morgan or its affiliates manage accounts that engage in short sales of securities of the type in which the Fund invests, JP Morgan or its affiliates could be seen as harming the performance of the Fund for the benefit of the accounts engaging in short sales if the short sales cause the market value of the securities to fall.

As an internal policy matter, JP Morgan may from time to time maintain certain overall investment limitations on the securities positions or positions in other financial instruments JP Morgan or its affiliates will take on behalf of its various clients due to, among other things, liquidity concerns and regulatory restrictions. Such policies may preclude a Fund from purchasing particular securities or financial instruments, even if such securities or financial instruments would otherwise meet the Fund's objectives.

The goal of JP Morgan and its affiliates is to meet their fiduciary obligation with respect to all clients. JP Morgan and its affiliates have policies and procedures that seek to manage conflicts. JP Morgan and its affiliates monitor a variety of areas, including compliance with fund guidelines, review of allocation decisions and compliance with JP Morgan's Codes of Ethics and JPMC's Code of Conduct. With respect to the allocation of investment opportunities, JP Morgan and its affiliates also have certain policies designed to achieve fair and equitable allocation of investment opportunities among its clients over time. For example:

Orders for the same equity security are aggregated on a continual basis throughout each trading day consistent with JP Morgan's duty of best execution for its clients. If aggregated trades are fully executed, accounts participating in the trade will be allocated their pro rata share on an average price basis. Partially completed orders generally will be allocated among the participating accounts on a pro-rata average price basis, subject to certain limited exceptions. For example, accounts that would receive a de minimis allocation relative to their size may be excluded from the order. Another exception may occur when thin markets or price volatility require that an aggregated order be completed in multiple executions over several days. If partial completion of the order would result in an uneconomic allocation to an account due to fixed transaction or custody costs, JP Morgan or its affiliates may exclude small orders until 50% of the total order is completed. Then the small orders will be executed. Following this procedure, small orders will lag in the early execution of the order, but will be completed before completion of the total order.

Purchases of money market instruments and fixed income securities cannot always be allocated pro rata across the accounts with the same investment strategy and objective. However, JP Morgan and its affiliates attempt to mitigate any potential unfairness by basing non-pro rata allocations traded through a single trading desk or system upon objective predetermined criteria for the selection of investments and a disciplined process for allocating securities with similar duration, credit quality and liquidity in the good faith judgment of JP Morgan or its affiliates so that fair and equitable allocation will occur over time.

Lazard Asset Management LLC ("Lazard")

Although the potential for conflicts of interest exist when an investment adviser and portfolio managers manage other accounts that invest in securities in which a Portfolio may invest or that may pursue a strategy similar to one of the Portfolio's component strategies (collectively, "Similar Accounts"), Lazard has procedures in place that are designed to ensure that all accounts are treated fairly and that the Portfolio is not disadvantaged, including procedures regarding trade allocations and "conflicting trades" (e.g., long and short positions in the same security, as described below). In addition, each Portfolio, as a series of a registered investment company, is subject to different regulations than certain of the Similar Accounts, and, consequently, may not be permitted to engage in all the investment techniques or transactions, or to engage in such techniques or transactions to the same degree, as the Similar Accounts. Potential conflicts of interest may arise because of Lazard's management of a Portfolio and Similar Accounts, including the following:

1. Conflicts of interest may arise with both the aggregation and allocation of securities transactions and allocation of limited investment opportunities, as the Lazard may be perceived as causing accounts it manages to participate in an offering to increase the Lazard overall allocation of securities in that offering, or to increase the Lazard's ability to participate in future offerings by the same underwriter or issuer. Allocations of bunched trades, particularly trade orders that were only partially filled due to limited availability, and allocation of investment opportunities generally, could raise a potential conflict of interest,

as Lazard may have an incentive to allocate securities that are expected to increase in value to preferred accounts. Initial public offerings, in particular, are frequently of very limited availability. A potential conflict of interest may be perceived to arise if transactions in one account closely follow related transactions in a different account, such as when a purchase increases the value of securities previously purchased by the other account, or when a sale in one account lowers the sale price received in a sale by a second account. These potential allocation and trading conflicts are relevant primarily for all portfolio managers of the Portfolios focusing on small capitalization companies, whose shares tend to have more limited and volatile trading than those of companies with larger market capitalizations (Small-Mid Cap and International Small Cap Portfolios).

2. Portfolio managers may be perceived to have a conflict of interest because of the large number of Similar Accounts, in addition to the Portfolios, that they are managing on behalf of Lazard. Although Lazard does not track each individual portfolio manager's time dedicated to each account, Lazard periodically reviews each portfolio manager's overall responsibilities to ensure that he or she is able to allocate the necessary time and resources to effectively manage a Portfolio. As illustrated in the table below, most of the portfolio managers of the Portfolios manage a significant number of Similar Accounts (10 or more) in addition to the Portfolio(s) managed by them.
3. Generally, Lazard and/or some or all of a Portfolio's portfolio managers have investments in Similar Accounts. This could be viewed as creating a potential conflict of interest, since certain of the portfolio managers do not invest in the Portfolios.
4. The portfolio managers manage Similar Accounts with respect to which the advisory fee is based on the performance of the account, which could give the portfolio managers and Lazard an incentive to favor such Similar Accounts over the corresponding Portfolios. In addition, certain hedge funds managed by Lazard (but not the Portfolios' portfolio managers) may also be permitted to sell securities short. When Lazard engages in short sales of securities of the type in which a Portfolio invests, Lazard could be seen as harming the performance of the Portfolio for the benefit of the account engaging in short sales if the short sales cause the market value of the securities to fall. As described above, Lazard has procedures in place to address these conflicts.

Logan Circle Partners, L.P. (“Logan Circle”)

The portfolio managers each manage assets for other accounts such as investment companies, pooled investment vehicles, proprietary accounts and other separate accounts. The side-by-side management of the Fund and these other accounts may raise potential conflicts of interest relating to the aggregation and allocation of securities transactions and allocation of investment opportunities. In addition, Logan Circle and/or its affiliates may receive fees from certain accounts that are higher than the fee it receives from the Fund, including performance-based fees, and Logan Circle or its affiliates may have proprietary investments in certain accounts. In those instances, such conflicts of interests are increased to the extent that a portfolio manager has a financial incentive to favor one account over another.

Although Logan Circle has adopted procedures that it believes are reasonably designed to detect and prevent violations of the federal securities laws and to mitigate the potential for conflicts of interest to affect portfolio management decisions, there can be no assurance that all conflicts will be identified or that all procedures will be effective in mitigating the potential for such risks. Potential conflicts of interest may arise with both the aggregation and allocation of securities transactions and allocation of investment opportunities because of market factors or investment restrictions. The performance of the Fund's investments could be adversely affected by the manner in which the Logan Circle enters particular orders for all such accounts. Allocations of aggregated trades, particularly trade orders that were only partially completed due to limited supply and allocation of investment opportunities generally, could raise a potential conflict of interest, as Logan Circle may have an incentive to allocate securities that are expected to increase in value to favored accounts. Orders for the same security on the same day are generally aggregated consistent with Logan Circle's duty of best execution; however, purchases of fixed income securities cannot always be allocated pro rata across all client accounts with similar investment strategies and

objectives. Logan Circle will attempt to mitigate any potential unfairness using an objective methodology that in the good faith judgment of Logan Circle permits a fair and equitable allocation over time. A potential conflict of interest also may be perceived to arise if transactions in one account closely follow related transactions in a different account, such as when a purchase increases the value of securities previously purchased by another account, or when a sale in one account lowers the sale price received in a sale by a second account. The less liquid the market for the security or the greater the percentage that the proposed aggregate purchases or sales represent of average daily trading volume, the greater the potential for accounts that make subsequent purchases or sales to receive a less favorable price.

Conflicts of interest also could arise if different client accounts have materially and potentially conflicting investment objectives or strategies. Logan Circle will manage the Fund and other client accounts in accordance with their respective investment objectives and guidelines. As a result, Logan Circle may give advice, and take action with respect to any current or future other client accounts that may compete or conflict with the advice Logan Circle may give to the Fund, or may involve a different timing or nature of action than with respect to the Fund. For example, if a portfolio manager manages accounts that engage in short sales of securities of the type in which the Fund invests, it could be seen as harming the performance of the Fund for the benefit of the accounts engaging in short sales if the short sales cause the market value of the securities to fall. Where a portfolio manager is responsible for accounts with differing investment objectives and policies, it is possible that the portfolio manager will conclude that it is in the best interest of one account to sell a portfolio security while another account continues to hold or increases the holding in such security. The results of the investment activities of the Fund may differ significantly from the results achieved by Logan Circle for other client accounts.

Massachusetts Financial Services Company (“MFS”)

MFS seeks to identify potential conflicts of interest resulting from a portfolio manager’s management of both the Fund and other accounts, and has adopted policies and procedures designed to address such potential conflicts.

The management of multiple funds and accounts (including proprietary accounts) gives rise to potential conflicts of interest if the funds and accounts have different objectives and strategies, benchmarks, time horizons and fees as a portfolio manager must allocate his or her time and investment ideas across multiple funds and accounts. In certain instances there are securities which are suitable for the Fund’s portfolio as well as for accounts of MFS or its subsidiaries with similar investment objectives. MFS trade allocation policies may give rise to conflicts of interest if the Fund’s orders do not get fully executed or are delayed in getting executed due to being aggregated with those of other accounts of MFS or its subsidiaries. A portfolio manager may execute transactions for another fund or account that may adversely affect the value of the Fund’s investments. Investments selected for funds or accounts other than the Fund may outperform investments selected for the Fund.

When two or more clients are simultaneously engaged in the purchase or sale of the same security, the securities are allocated among clients in a manner believed by MFS to be fair and equitable to each. It is recognized that in some cases this system could have a detrimental effect on the price or volume of the security as far as the Fund is concerned. In most cases, however, MFS believes that the Fund’s ability to participate in volume transactions will produce better executions for the Fund.

MFS and/or a portfolio manager may have a financial incentive to allocate favorable or limited opportunity investments or structure the timing of investments to favor accounts other than the Fund, for instance, those that pay a higher advisory fee and/or have a performance adjustment and/or include an investment by the portfolio manager.

Morgan Stanley Investment Management Inc.

Because the portfolio managers may manage assets for other investment companies, pooled investment vehicles and/or other accounts (including institutional clients, pension plans and certain high net worth individuals), there may be an incentive to favor one client over another resulting in conflicts of interest. For instance, the Investment Adviser may receive fees from certain accounts that are higher than the fee it receives from the Fund, or it may receive a performance-based fee on certain accounts. In those instances, the portfolio managers may have an incentive to favor the higher and/or performance-based fee accounts over the Fund. In addition, a conflict of interest could exist to the extent the Investment Adviser has proprietary investments in certain accounts, where portfolio managers have personal investments in certain accounts or when certain accounts are investment options in the Investment Adviser's employee benefits and/or deferred compensation plans. The portfolio manager may have an incentive to favor these accounts over others. If the Investment Adviser manages accounts that engage in short sales of securities of the type in which the Fund invests, the Investment Adviser could be seen as harming the performance of the Fund for the benefit of the accounts engaging in short sales if the short sales cause the market value of the securities to fall. The Investment Adviser has adopted trade allocation and other policies and procedures that it believes are reasonably designed to address these and other conflicts of interest.

Nationwide Asset Management, LLC ("NWAM")

It is possible that conflicts of interest may arise in connection with the portfolio managers' management of the Funds on the one hand and other accounts for which the portfolio manager is responsible on the other. For example, a portfolio manager may have conflicts of interest in allocating management time, resources and investment opportunities among the Fund and other accounts she advises. In addition, due to differences in the investment strategies or restrictions between the Fund and the other accounts, a portfolio manager may take action with respect to another account that differs from the action taken with respect to the Fund. In some cases, another account managed by the same portfolio manager may compensate NWAM or its affiliate based on the performance of the portfolio held by that account. The existence of such a performance-based fee may create additional conflicts of interest for the portfolio manager in the allocation of management time, resources and investment opportunities. Whenever conflicts of interest arise, the portfolio manager will endeavor to exercise her discretion in a manner that she believes is equitable to all interested persons. NWAM has adopted policies that are designed to eliminate or minimize conflicts of interest, although there is no guarantee that procedures adopted under such policies will detect each and every situation in which a conflict arises.

Neuberger Berman Fixed Income LLC ("NBFI")

NBFI's portfolio managers are often responsible for managing multiple accounts (including proprietary accounts), which may include separately managed advisory accounts (managed on behalf of institutions such as pension and other retirement plans, corporations, insurance companies, foundations, endowments, trusts, and individuals), mutual funds, various pooled investment vehicles and wrap fee programs. Actual or potential conflicts of interest may arise between a portfolio manager's management of the investments in the Fund and the management of other accounts. As a result, NBFI and its affiliates have adopted policies and procedures designed to mitigate and manage these conflicts.

Accounts other than the Fund may or may not have similar investment objectives and strategies, benchmarks and time horizons as the Fund. Generally, portfolios in a particular product strategy with similar strategies and objectives are managed similarly. However, portfolio managers make investment decisions for each portfolio based on the investment objectives, policies, and other relevant investment considerations that the managers believe are applicable to that portfolio. Consequently, portfolio managers may take actions on behalf of the Fund that may differ from the timing or nature of action taken with respect to other accounts. For instance, portfolio managers may purchase or sell certain securities for one account and not another. Securities purchased in one account may perform better than the securities purchased in another. Similarly, the sale of securities from one account may cause that account to perform better than others if the value of those securities still held in the other accounts decline. Furthermore, a portfolio manager managing more than one account could take positions in certain accounts that

appear inconsistent. A portfolio manager may take a short position in a security that may be held long in another account he manages. For instance, where a portfolio manager wants to take a short position in an account that prohibits shorting, a similar effect may be accomplished by holding the security long but underweighting its position relative to a benchmark. Additional reasons for such portfolio positionings may include, but are not limited to, suitability, capital structure arbitrage, model driven trading, hedging, and client direction. NBFI has policies and procedures in place that seek to manage and monitor this conflict.

Neuberger Berman has implemented policies and procedures (“MNPI Procedures”) that are reasonably designed to prevent the misuse by Neuberger Berman and its personnel of material information regarding issuers of securities that has not been publicly disseminated (“material nonpublic information”). In general, under the MNPI Procedures and applicable law, when Neuberger Berman is in possession of material non-public information related to a publicly-traded security or the issuer of such security, whether acquired unintentionally or otherwise, neither Neuberger Berman nor its personnel are permitted to render investment advice as to, or otherwise trade or recommend a trade in, the securities of such issuer until such time as the information that Neuberger Berman has is no longer deemed to be material non-public information.

In the ordinary course of operations, certain businesses within Neuberger Berman may seek access to material non-public information. For instance, the loan and distressed debt businesses within NBFI may utilize material non-public information in purchasing loans and other debt instruments. The MNPI Procedures address the process by which material non-public information may be acquired intentionally by Neuberger Berman. When considering whether to acquire material non-public information, Neuberger Berman will attempt to balance the interests of all clients, taking into consideration relevant factors. The intentional acquisition of material non-public information may give rise to a potential conflict of interest since NBFI may be prohibited from rendering investment advice to clients regarding the public securities of such issuer and thereby potentially limiting the universe of public securities that NBFI may purchase or potentially limiting the ability of NBFI to sell such securities.

Potential conflicts of interest may also arise when aggregating and/or allocating trades. NBFI will frequently aggregate trades (both buys and sells) for a client with other NBFI clients when it is determined that such aggregation should result in a more favorable trade execution for such client. NBFI has also adopted trade allocation policies and procedures that seek to treat all clients fairly and equitably when there is a limited investment opportunity that may be suitable for more than one portfolio. NBFI’s trade allocation procedures seek to ensure that no client is favored over another. However, there are numerous factors that might affect whether a particular account participates in a trade allocation or be allocated a different amount than other accounts. Such factors include, but are not limited to, client guidelines, suitability, cash flows, strategy or product specific considerations, issuer or sector exposure considerations and de minimis allocations.

The fees charged to advisory clients by NBFI may differ depending upon a number of factors, including but not limited to, the particular strategy, the size of the portfolio being managed and the investment vehicle. In addition, certain accounts are subject to performance based fees. These differences may give rise to a potential conflict that a portfolio manager may favor the higher fee-paying account over others. To address this conflict, NBFI, as discussed above, has adopted allocation policies that are intended to fairly allocate investment opportunities among client accounts.

Neuberger Berman Management LLC (“NB”)

Actual or apparent conflicts of interest may arise when a Portfolio Manager has day-to-day management responsibilities with respect to more than one Fund or other account. The management of multiple funds and accounts (including proprietary accounts) may give rise to potential conflicts of interest if the funds and accounts have different or similar objectives, benchmarks, time horizons, and fees as the Portfolio Manager must allocate his time and investment ideas across multiple funds and accounts. The Portfolio Manager may execute transactions for another fund or account that may adversely impact the value of securities held by the fund. Moreover, if a Portfolio Manager identifies a limited investment opportunity that may be suitable for more than one fund or other account, a Fund may not be able to take full advantage of that opportunity. Securities selected for funds or accounts other than

the fund may outperform the securities selected for the fund. NB Management, Neuberger Berman and each Fund have adopted certain compliance procedures which are designed to address these types of conflicts. However, there is no guarantee that such procedures will detect each and every situation in which a conflict arises.

OppenheimerFunds, Inc.

A portfolio manager may manage other funds and accounts. At different times, a portfolio manager may manage other funds or accounts with investment objectives and strategies similar to, or different from, those of NVIT Multi-Manager Small Cap Growth Fund or NVIT Multi-Manager Small Company Fund (each, a “NVIT Fund”). At times, those responsibilities could potentially conflict with the interests of the NVIT Funds. That may occur whether the investment objectives and strategies of the other funds and accounts are the same as, or different from, a NVIT Fund’s investment objectives and strategies. For example, a portfolio manager may need to allocate investment opportunities between a NVIT Fund and another fund or account having similar objectives or strategies, or may need to execute transactions for another fund or account that could have a negative impact on the value of securities held by the NVIT Fund. Not all funds and accounts advised by OppenheimerFunds, Inc. (the “Sub-Adviser”) have the same management fee. If the management fee structure of another fund or account is more advantageous to the Sub-Adviser than the fee structure of a NVIT Fund, the Sub-Adviser could have an incentive to favor the other fund or account. However, the Sub-Adviser’s compliance procedures and Code of Ethics recognize the Sub-Adviser’s obligation to treat all of its clients, including each NVIT Fund, fairly and equitably, and are designed to preclude a portfolio manager from favoring one client over another. It is possible, of course, that those compliance procedures and the Code of Ethics may not always be adequate to do so.

Putnam Investment Management, LLC (“Putnam”)

Putnam seeks to treat clients fairly and equitably in line with the firm’s fiduciary obligations and client investment objectives. Putnam takes all reasonable steps to identify, record and manage on an ongoing basis any conflicts of interest in accordance with the firm’s policies and procedures. Putnam may, from time to time, implement additional controls in respect of the management of conflicts of interest where necessary. While Putnam is not aware of any particular conflicts of interest specific to the management of the client’s account, there are potential conflicts of interest inherent in the asset management industry. Like other investment managers managing accounts for multiple clients with differing objectives and fee structures, we face various potential conflicts of interest as part of our business – for example, in areas such as trade allocation, portfolio trading, employees’ personal trading, political and lobbying activities, and distribution activities. Putnam seeks to address these potential conflicts, which we believe are also present for our competitors, through specific policies and procedures that relate to individual areas of potential conflict, rather than by means of an overall principle-based or ad hoc approach. Our compliance policies consist of a limited number of general statements, combined with a large number of policies with detailed provisions. The philosophy has been to prepare policies which in a concrete way set forth requirements, procedures and responsibilities. Policies and procedures relating to each conflict of interest are reviewed, tested for effectiveness, and updated periodically, with the goal of having each policy subject to review, testing and updating at least annually.

Notwithstanding that each identified conflict of interest is addressed by means of specific policies, a key function of the Compliance Department, working with management, is to monitor new areas in which conflicts may arise or the nature of conflicts may change over time. This function is addressed through the systematic annual process of updating and reviewing the compliance program, discussed above, as well as by periodic overall “risk map” assessments of areas of risk (including compliance risks) for the firm.

The below summary of potential conflicts is not inclusive of all potential conflicts that may exist between the adviser and the client. Please see Putnam’s Form ADV Part 2 for further disclosures regarding potential conflicts of interest.

1. Fairness of trading allocation and order priority amongst Clients

Putnam maintains trading aggregation, allocation and best execution policies and procedures that seek to ensure that all trades are treated on a fair and equitable basis. Trade aggregation and allocation procedures are reviewed regularly. Generally, the purchases and sales of securities by Putnam on behalf of clients are effected on an aggregated basis. Subject to the overriding requirements to seek most favorable price and execution under the circumstances, Putnam receives brokerage and research products and services from broker dealers, including from broker dealers with which Putnam places its clients' portfolio transactions (so-called proprietary research) and from third-party brokers.

2. Soft Dollars

Putnam may allocate trades to generate "soft dollar credits" for brokerage services and trading systems and investment research reports and other research products and services from third-party providers when, in Putnam's judgment, trading through the firm generating the research would not be feasible or in the account's best interest. Some of these products and services are of value to Putnam and its affiliates in advising several of their clients, although not all of these services are necessarily useful and of value in managing any particular account. Clients do not receive a direct monetary benefit, however, although brokerage and research products and services so obtained may be useful to Putnam in providing investment advice to all of the clients it advises.

3. The Use of Sensitive Client Data and Non-Public Information

Putnam has a number of policies and procedures to protect the confidentiality of our client information, and in particular, not to sell information about clients or their accounts to outside marketing firms. We have safeguards in place designed to prevent unauthorized access to our computer systems and procedures to protect personal information from unauthorized use.

4. Information barriers between Putnam and its affiliates/subsidiaries

To help ensure that sensitive decision information cannot be used to disadvantage clients, Putnam has established, on its own behalf and for each of its subsidiaries, information barrier (or so-called "Chinese Wall" procedures) regarding portfolio holdings information. The investment management and trading functions at Putnam and its subsidiaries and the investment management subsidiaries of its parent company, Power Corporation of Canada, are autonomous and operate separately from each other. These functions include all decision-making on what, how and when to buy, sell or hold specific securities in client portfolios and the trading related to implementation of these decisions. Information barrier policies are intended to permit the investment management and trading functions of each firm to operate without regard to or interference from the other and to provide reasonable assurances that sensitive investment management and trading information will not be shared between Putnam and the other Power business units.

5. Code of Ethics

Putnam maintains a Code of Ethics, which applies to all employees of Putnam, that regulates the personal securities trading activities of these employees and the trading activity of certain family members and entities (such as corporations, trusts, or partnerships) that employees may be deemed to control or influence. The Code of Ethics imposes limits on activities of employees of Putnam and the Putnam investment advisers where the activity may conflict with the interests of clients of Putnam or the Putnam investment advisers. These include certain personal trading restrictions, prohibitions against the buying and selling of any security while either Putnam or the employee is in possession of material, non-public information (inside information) concerning the security or the issuer, and limits on the receipt and solicitation of gifts and on service as a fiduciary for a person or entity outside of Putnam. As a condition of employment, every employee accepts the obligation to comply with the letter and the spirit of the Code.

Pyramis Global Advisors, LLC

The portfolio manager's compensation plan may give rise to potential conflicts of interest. Although investors in the fund may invest through either tax-deferred accounts or taxable accounts, the portfolio manager's compensation is linked to the pre-tax performance of the fund, rather than its after-tax performance. The portfolio manager's base pay tends to increase with additional and more complex responsibilities that include increased assets under management and a portion of the bonus relates to marketing efforts, which together indirectly link compensation to sales. When a portfolio manager takes over a fund or an account, the time period over which performance is measured may be adjusted to provide a transition period in which to assess the portfolio. The management of multiple funds and accounts (including proprietary accounts) may give rise to potential conflicts of interest if the funds and accounts have different objectives, benchmarks, time horizons, and fees as the portfolio manager must allocate his time and investment ideas across multiple funds and accounts. In addition, a fund's trade allocation policies and procedures may give rise to conflicts of interest if the fund's orders do not get fully executed due to being aggregated with those of other accounts managed by FMR Co. or an affiliate. The portfolio manager may execute transactions for another fund or account that may adversely impact the value of securities held by a fund. Securities selected for other funds or accounts may outperform the securities selected for the fund. Portfolio managers may be permitted to invest in the funds they manage, even if a fund is closed to new investors. Trading in personal accounts, which may give rise to potential conflicts of interest, is restricted by a fund's Code of Ethics.

Templeton Investment Counsel, LLC

The management of multiple funds, including the Fund, and accounts may also give rise to potential conflicts of interest if the funds and other accounts have different objectives, benchmarks, time horizons, and fees as the portfolio manager must allocate his or her time and investment ideas across multiple funds and accounts. The investment manager seeks to manage such competing interests for the time and attention of portfolio managers by having portfolio managers focus on a particular investment discipline. Most other accounts managed by a portfolio manager are managed using the same investment strategies that are used in connection with the management of the Fund. Accordingly, portfolio holdings, position sizes, and industry and sector exposures tend to be similar across similar portfolios, which may minimize the potential for conflicts of interest. As noted above, the separate management of the trade execution and valuation functions from the portfolio management process also helps to reduce potential conflicts of interest. However, securities selected for funds or accounts other than the Fund may outperform the securities selected for the Fund. Moreover, if a portfolio manager identifies a limited investment opportunity that may be suitable for more than one fund or other account, the Fund may not be able to take full advantage of that opportunity due to an allocation of that opportunity across all eligible funds and other accounts. The investment manager seeks to manage such potential conflicts by using procedures intended to provide a fair allocation of buy and sell opportunities among funds and other accounts.

The structure of a portfolio manager's compensation may give rise to potential conflicts of interest. A portfolio manager's base pay and bonus tend to increase with additional and more complex responsibilities that include increased assets under management. As such, there may be an indirect relationship between a portfolio manager's marketing or sales efforts and his or her bonus.

Finally, the management of personal accounts by a portfolio manager may give rise to potential conflicts of interest. While the funds and the investment manager have adopted a code of ethics which they believe contains provisions reasonably necessary to prevent a wide range of prohibited activities by portfolio managers and others with respect to their personal trading activities, there can be no assurance that the code of ethics addresses all individual conduct that could result in conflicts of interest.

The investment manager and the Fund have adopted certain compliance procedures that are designed to address these, and other, types of conflicts. However, there is no guarantee that such procedures will detect each and every situation where a conflict arises.

The Boston Company Asset Management, LLC

Introduction

A conflict of interest is generally defined as a single person or entity having two or more interests that are inconsistent. The Boston Company Asset Management, LLC (“TBCAM”) has implemented various policies and procedures that are intended to address the conflicts of interest that may exist or be perceived to exist at TBCAM.

These conflicts may include, but are not limited to when a portfolio manager is responsible for the management of more than one account; the potential arises for the portfolio manager to favor one account over another. Generally, the risk of such conflicts of interest could increase if a portfolio manager has a financial incentive to favor one account over another.

This disclosure statement is not intended to cover all of the conflicts that exist within TBCAM, but rather to highlight the general categories of conflicts and the associated mitigating controls. Other conflicts are addressed within the policies of TBCAM. Further, the Chief Compliance Officer of TBCAM shall maintain a Conflicts Matrix that further defines the conflicts specific to TBCAM.

New Investment Opportunities

Potential Conflict: A portfolio manager could favor one account over another in allocating new investment opportunities that have limited supply, such as initial public offerings and private placements. If, for example, an initial public offering that was expected to appreciate in value significantly shortly after the offering was allocated to a single account, that account may be expected to have better investment performance than other accounts that did not receive an allocation.

- TBCAM has policies that require a portfolio manager to allocate such investment opportunities in an equitable manner and generally to allocate such investments proportionately among all accounts with similar investment objectives.

Compensation

Potential Conflict: A portfolio manager may favor an account if the portfolio manager’s compensation is tied to the performance of that account rather than all accounts managed by the portfolio manager. If, for example, the portfolio manager receives a bonus based upon the performance of certain accounts relative to a benchmark while other accounts are disregarded for this purpose, the portfolio manager will have a financial incentive to seek to have the accounts that determine the bonus achieve the best possible performance to the possible detriment of other accounts. Similarly, if TBCAM receives a performance-based advisory fee, the portfolio manager may favor that account, regardless of whether the performance of that account directly determines the portfolio manager’s compensation.

- Portfolio managers’ cash compensation is comprised primarily of a market-based salary and incentive compensation (annual and long term retention incentive awards). Funding for the TBCAM Annual Incentive Plan and Long Term Retention Incentive Plan is through a pre-determined fixed percentage of overall TBCAM profitability. In general, bonus awards are based initially on TBCAM’s financial performance. However, awards for select senior portfolio managers are based initially on their individual investment performance (one, three, and five-year weighted). In addition, awards for portfolio managers that manage alternative strategies are partially based on a portion of the fund’s realized performance fee.

Investment Objectives

Potential Conflict: Where different accounts managed by the same portfolio manager have materially and potentially conflicting investment objectives or strategies, a conflict of interest may arise. For example, if a portfolio manager

purchases a security for one account and sells the same security short for another account, such a trading pattern could potentially disadvantage either account.

- To mitigate the conflict in this scenario TBCAM has in places a restriction in the order management system and requires a written explanation from the portfolio manager before determining whether to lift the restriction. However, where a portfolio manager is responsible for accounts with differing investment objectives and policies, it is possible that the portfolio manager will conclude that it is in the best interest of one account to sell a portfolio security while another account continues to hold or increase the holding in such security.

Trading

Potential Conflict: A portfolio manager could favor one account over another in the allocation of shares or price in a block trade. Particularly in cases when a portfolio manager buys or sells a security for a group of accounts in an aggregate amount that may influence the market price of the stock, certain portfolios could receive a more favorable price on earlier executions than accounts that participate subsequent fills. The less liquid the market for the security or the greater the percentage that the proposed aggregate purchases or sales represent of average daily trading volume, the greater the potential for accounts that make subsequent purchases or sales to receive a less favorable price.

- When a portfolio manager intends to trade the same security for more than one account, TBCAM policy generally requires that such orders be “bunched,” which means that the trades for the individual accounts are aggregated and each portfolio receives the same average price. Some accounts may not be eligible for bunching for contractual reasons (such as directed brokerage arrangements). Circumstances may also arise where the trader believes that bunching the orders may not result in the best possible price. Where those accounts or circumstances are involved, TBCAM will place the order in a manner intended to result in as favorable a price as possible for such client.
- To ensure that trades are being allocated in a fair and equitable manner consistent with our policies, performance dispersion among portfolios in all of TBCAM’s investment strategies is reviewed on a monthly basis. While it is not practicable to examine each individual trade allocation, this performance analysis for strategy-specific portfolio groups provides a reasonable basis to confirm adherence to policy or to highlight potential outliers.

Personal Interest

Potential Conflict: A portfolio manager may favor an account if the portfolio manager has a beneficial interest in the account, in order to benefit a large client or to compensate a client that had poor returns. For example, if the portfolio manager held an interest in a mutual fund that was one of the accounts managed by the portfolio manager, the portfolio manager would have an economic incentive to favor the account in which the portfolio manager held an interest.

- All accounts with the same or similar investment objectives are part of a trading group. All accounts in a particular trading group are managed and traded identically taking into account client imposed restrictions or cash flows. As a result of this management and trading style an account in a trading group cannot be treated any differently than any other account in that trading group.

Outside Affiliations and Directorship

Potential Conflict: Employees may serve as directors, officers or general partners of certain outside entities after obtaining the appropriate approvals in compliance with the Code of Conduct and BNY Mellon’s Corporate Policy on Outside Directorships and Offices ([Policy I-A.022](#)). However, in view of the potential conflicts of interest and the possible liability for TBCAM, its affiliates and its employees, employees are urged to be cautious when considering serving as directors, officers, or general partners of outside entities.

- In addition to completing the reporting requirements set forth in the BNY Mellon corporate policies, employees should ensure that their service as an outside director, officer or general partner does not interfere with the discharge of their job responsibilities and must recognize that their primary obligation is to complete their assigned responsibilities at TBCAM in a timely manner.

Proxy Voting

Potential Conflict: Whenever TBCAM owns the securities of client or prospective client in fiduciary accounts there is a potential conflict between the interests of the firm and the interests of the beneficiaries of our client accounts.

- Material conflicts of interest are addressed through the establishment of our parent company's Proxy Committee structure. It applies detailed, pre-determined proxy voting guidelines in an objective and consistent manner across client accounts, based on internal and external research and recommendations provided by a third party vendor, and without consideration of any client relationship factors. Further, we engage a third party as an independent fiduciary to vote all proxies for BNY Mellon securities and Fund securities.

Personal Trading

Potential Conflict: There is an inherent conflict where a portfolio manager manages personal accounts alongside client accounts. Further, there is a conflict where other employees in the firm know of portfolio decisions in advance of trade execution and could potentially use this information to their advantage and to the disadvantage of TBCAM's clients.

- Subject to the personal Securities Trading Policy, employees of TBCAM may buy and sell securities which are recommended to its clients; however, no employee is permitted to do so (a) where such purchase or sale would affect the market price of such securities, or (b) in anticipation of the effect of such recommendation on the market price.
- Consistent with the Securities Trading Policy relating to Investment Employees (which includes all Access Persons), approval will be denied for sales/purchases of securities for which investment transactions are pending and, at minimum, for two business days after transactions for the security were completed for client accounts. Portfolio managers are prohibited from trading in a security for seven days before and after transactions in that security are completed for client accounts managed by that Portfolio Manager.

Client Commission Arrangements

Potential Conflict: Use of client commissions to pay for services that benefit TBCAM and not client accounts.

- It is the policy of TBCAM to enter into client commission arrangements in a manner which will ensure the availability of the safe harbor provided by Section 28(e) of the Securities Exchange Act of 1934 and which will ensure that the firm meets its fiduciary obligations for seeking to obtain best execution for its clients. Client commissions may be used for services that qualify as "research" or brokerage". All 3rd Party Commission services are justified in writing by the user specifically noting how the service will assist in the investment decision making process and approved by the Brokerage Practices Committee.

Consultant Business

Potential Conflict: Many of our clients retain consulting firms to assist them in selecting investment managers. Some of these consulting firms provide services to both those who hire investment managers (i.e. clients) and to investment management firms. TBCAM may pay to attend conferences sponsored by consulting firms and/or purchase services from consulting firms where it believes those services will be useful to it in operating its investment management business.

- TBCAM does not pay referral fees to consultants.

Gifts

Potential Conflict: Where investment personnel are offered gifts or entertainment by business associates that assist them in making or executing portfolio decisions or recommendations for client accounts a potential conflict exists. The Code of Conduct sets forth broad requirements for accepting gifts and entertainment. TBCAM's Gift Policy supplements the Code of Conduct and provides further clarification for TBCAM employees.

- TBCAM has established a Gift Policy that supplements the BNY Mellon Code of Conduct and which requires certain reporting and/or prior approval when accepting gifts and entertainment valued in excess of predetermined ranges. On a quarterly basis TBCAM Compliance Personnel review the gifts and entertainment accepted by TBCAM Employees to ensure compliance with the BNY Mellon Code of Conduct and the TBCAM Gift Policy.

Affiliated Brokerage

Potential Conflict: TBCAM is affiliated with certain BNY Mellon affiliated broker dealers.

- TBCAM does not execute brokerage transactions directly with BNY Mellon affiliated brokers. An exception to this prohibition is where a client has provided affirmative written direction to TBCAM to execute trades through a BNY Mellon affiliated broker as part of a directed brokerage arrangement that the client has with such affiliated broker. TBCAM also maintains Affiliated Brokerage and Underwriting Policy and Procedures.

Thompson, Siegel & Walmsley LLC ("TS&W")

TS&W has identified a number of real, potential or perceived conflicts of interest and adopted various procedures and internal controls to review, monitor and ensure the possible effects of conflicts are minimized. Conflicts of interest:

- A portfolio manager managing multiple accounts or strategies may result in them devoting unequal time and attention to the management of each account. The use of a common investment process across all investment strategies, including this Fund, assists in addressing this conflict.
- Portfolio managers may identify securities that are appropriate investments for more than one account and/or strategy. Whenever decisions are made to buy or sell securities for the Fund and one or more other accounts or strategies simultaneously, TS&W may aggregate the purchases and sales. It will allocate the executions in a manner, typically pro rata or in a manner that TS&W believes equitable under the circumstances, typically on a pro-rata basis. As a result, there may be instances where the Fund will not participate in a transaction that is allocated among other accounts. TS&W feels its allocation procedures appropriately address this potential conflict arising from simultaneous transactions.
- TS&W's Code of Ethics is designed to detect and prevent conflicts of interest when its portfolio managers and other TS&W personnel, own, buy or sell securities that may be owned, bought or sold by the Fund or other TS&W clients. TS&W's Code of Ethics addresses this potential conflict by maintaining specific pre-clearance procedures, including blackout dates and restricted lists.

- The simultaneous management of long and short portfolios may create a conflict including the risk that the short sale activity could adversely affect the market value of long position and vice versa. TS&W has adopted procedures it believes are reasonably designed to mitigate this potential conflict. TS&W has one strategy that may short securities, which is permitted to short securities held in a TS&W primary strategy only if the security exceeds \$10 billion in market capitalization.
- TS&W may trade its proprietary account in conjunction with other client accounts. TS&W addresses this conflict by identifying that this practice may exist in its Form ADV Part 2A, and that trading in proprietary accounts is to be performed in a manner that does not give an improper advantage to TS&W's proprietary account to the detriment of any client account.

WEDGE Capital Management L.L.P. (“WEDGE”)

During the normal course of managing assets for multiple clients of varying types and asset levels, WEDGE will inevitably encounter conflicts of interest that could, if not properly addressed, be harmful to one or more of its clients. Those of a material nature that are encountered most frequently surround security selection, brokerage selection, employee personal securities trading, proxy voting and the allocation of securities. WEDGE is therefore forced to consider the possible personal conflicts that occur for an analyst and portfolio manager as well as those for the firm when a security is recommended for purchase or sale. When trading securities, WEDGE must address the issues surrounding the selection of brokers to execute trades considering the personal conflicts of the trader and the firm's conflict to obtain best execution of client transactions versus offsetting the cost of research or enhancing its relationship with a broker for potential future gain. And finally, WEDGE must consider the implications that a limited supply or demand for a particular security poses on the allocation of that security across accounts.

To mitigate these conflicts and ensure its clients are not negatively impacted by the adverse actions of WEDGE or its employees, WEDGE has implemented a series of policies including its Personal Security Trading Policy, Proxy Voting Policy, Equity Trading Policy, Trading Error Policy, and others designed to prevent and detect conflicts when they occur. WEDGE reasonably believes that these and other policies combined with the periodic review and testing performed by its compliance professionals adequately protects the interests of its clients.

Wellington Management Company, LLP (“Wellington Management”)

Individual investment professionals at Wellington Management manage multiple accounts for multiple clients. These accounts may include mutual funds, separate accounts (assets managed on behalf of institutions, such as pension funds, insurance companies, foundations, or separately managed account programs sponsored by financial intermediaries), bank common trust accounts, and hedge funds. Each Fund's manager listed in the prospectus who is primarily responsible for the day-to-day management of the Fund (“Portfolio Manager”) generally manages accounts in several different investment styles. These accounts may have investment objectives, strategies, time horizons, tax considerations, and risk profiles that differ from those of the Fund. The Portfolio Manager makes investment decisions for each account, including the Fund, based on the investment objectives, policies, practices, benchmarks, cash flows, tax and other relevant investment considerations applicable to that account. Consequently, the Portfolio Manager may purchase or sell securities, including IPOs, for one account and not another account, and the performance of securities purchased for one account may vary from the performance of securities purchased for other accounts. Alternatively, these accounts may be managed in a similar fashion to the relevant Fund and thus the accounts may have similar, and in some cases nearly identical, objectives, strategies, and/or holdings to that of the relevant Fund.

The Portfolio Manager or other investment professionals at Wellington Management may place transactions on behalf of other accounts that are directly or indirectly contrary to investment decisions made on behalf of the relevant Fund, or make investment decisions that are similar to those made for the Fund, both of which have the potential to adversely impact the relevant Fund depending on market conditions. For example, an investment professional may purchase a security in one account while appropriately selling that same security in another account. Similarly, the Portfolio Manager may purchase the same security for the relevant Fund and one or more other accounts at or about the same time. In those instances the other accounts will have access to their respective holdings prior to the public disclosure of the relevant Fund's holdings. In addition, some of these accounts have fee structures, including performance fees, which are or have the potential to be higher, in some cases significantly higher, than the fees Wellington Management receives for managing the Fund. Mr. Palmer also manages accounts which pay performance allocations to Wellington Management or its affiliates. Because incentive payments paid by Wellington Management to the Portfolio Manager are tied to revenues earned by Wellington Management, and, where noted, to the performance achieved by the manager in each account, the incentives associated with any given account may be significantly higher or lower than those associated with other accounts managed by the Portfolio Manager. Finally, the Portfolio Manager may hold shares or investments in the other pooled investment vehicles and/or other accounts identified above.

Wellington Management's goal is to meet its fiduciary obligation to treat all clients fairly and provide high quality investment services to all of its clients. Wellington Management has adopted and implemented policies and procedures, including brokerage and trade allocation policies and procedures, which it believes address the conflicts associated with managing multiple accounts for multiple clients. In addition, Wellington Management monitors a variety of areas, including compliance with primary account guidelines, the allocation of IPOs, and compliance with the firm's Code of Ethics, and places additional investment restrictions on investment professionals who manage hedge funds and certain other accounts. Furthermore, senior investment and business personnel at Wellington Management periodically review the performance of Wellington Management's investment professionals. Although Wellington Management does not track the time an investment professional spends on a single account, Wellington Management does periodically assess whether an investment professional has adequate time and resources to effectively manage the investment professional's various client mandates.

Wells Capital Management, Inc. (“Wells Capital Management”)

Wells Capital Management’s Portfolio Managers often provide investment management for separate accounts advised in the same or similar investment style as that provided to mutual funds. While management of multiple accounts could potentially lead to conflicts of interest over various issues such as trade allocation, fee disparities and research acquisition, Wells Capital Management has implemented policies and procedures for the express purpose of ensuring that clients are treated fairly and that potential conflicts of interest are minimized.

Winslow Capital Management, LLC (“Winslow Capital”)

A portfolio manager who makes investment decisions with respect to multiple funds and/or other accounts may be presented with one or more of the following potential conflicts:

- The management of multiple funds and/or accounts may result in the portfolio manager devoting unequal time and attention to the management of each fund and/or account;
- If a portfolio manager identifies a limited investment opportunity which may be suitable for more than one fund or account managed by the portfolio manager, a fund may not be able to take full advantage of that opportunity due to an allocation of filled purchase or sale orders across all eligible funds and accounts managed by the portfolio manager; and
- An apparent conflict may arise where an adviser receives higher fees from certain funds or accounts that it manages than from others, or where an adviser receives a performance-based fee

from certain funds or accounts that it manages and not from others. In these cases, there may be an incentive for a portfolio manager to favor the higher and/or performance-based fee funds or accounts over other funds or accounts managed by the portfolio manager.

To address potential conflicts of interest, Winslow Capital has adopted various policies and procedures to provide for equitable treatment of trading activity and to ensure that investment opportunities are allocated in a fair and appropriate manner. In addition, Winslow Capital has adopted a Code of Ethics that recognizes the manager's obligation to treat all of its clients, including the Fund, fairly and equitably. These policies, procedures and the Code of Ethics are designed to restrict the portfolio manager from favoring one client over another. There is no guarantee that the policies, procedures and the Code of Ethics will be successful in every instance, however because Winslow Capital offers only one investment product: Large Cap Growth, and all accounts are managed essentially identically, Winslow Capital does not believe any material conflicts of interest exist between the investment strategy of the Fund and the investment strategy of the other accounts managed by the portfolio managers, nor in allocation of investment opportunities.

Description of the Trust

Shares of Transamerica Series Trust (the “Trust”), an open-end management investment company that is registered under the Investment Company Act of 1940, as amended (the “1940 Act”) are currently divided into separate series (each, a “portfolio” or together, the “portfolios”) described herein. The Trust may create additional series and classes from time to time.

The Trust was organized as a Delaware statutory trust on April 21, 2005. The Trust is the successor to a corporation formed under the laws of the State of Maryland in 1985. Prior to May 1, 2008 the Trust’s name was AEGON/Transamerica Series Trust.

Each portfolio is classified as diversified under the 1940 Act, except for Transamerica BlackRock Global Allocation Managed Risk – Balanced VP, Transamerica BlackRock Global Allocation Managed Risk – Growth VP, Transamerica Clarion Global Real Estate Securities VP, Transamerica Market Participation Strategy VP, Transamerica PineBridge Inflation Opportunities VP and Transamerica ProFund UltraBear VP, which are classified as non-diversified.

Transamerica Asset Management, Inc. (“TAM” or the “Investment Adviser”) is the investment adviser for each portfolio.

The Trust is intended to be sold to the separate accounts of life insurance companies to fund benefits under variable life policies (“Policies”) or variable annuity contracts (“Contracts”) (collectively, the “Separate Accounts”) (owners of the Separate Accounts, the “Policyowners”) issued by Transamerica Life Insurance Company (“Transamerica”), Transamerica Financial Life Insurance Company (“TFLIC”), Transamerica Premier Life Insurance Company (“TPLIC”) and Transamerica Advisors Life Insurance Company (“TALIC”) (the “Life Companies”), and to Transamerica Asset Allocation – Conservative VP, Transamerica Asset Allocation – Growth VP, Transamerica Asset Allocation – Moderate Growth VP, Transamerica Asset Allocation – Moderate VP, Transamerica International Moderate Growth VP and Transamerica BlackRock Tactical Allocation VP (the “Asset Allocation Portfolios”) as underlying portfolios in which the Asset Allocation Portfolios may invest. As such, WRL, Transamerica, TFLIC, TPLIC, TALIC, and the Asset Allocation Portfolios are the only shareholders of the investment portfolios offered by TST. If a Life Company offers a portfolio of TST in its respective products, and you own a Policy or a Contract of one of those Life Companies, you should consult with your Life Company about its voting policies. Shares may be offered to other life insurance companies in the future.

For the purposes of this SAI, the term “shareholder” (when used to refer to the beneficial holder of ownership interests in a portfolio) shall also be deemed to include Policyowners.

During the last five years, the name of certain portfolios have changed as follows:

Investment Objectives, Policies, Practices and Associated Risk Factors

The investment objective of each portfolio and the strategies each portfolio employs to achieve its objective are described in each portfolio's prospectus. There can be no assurance that a portfolio will achieve its objective.

State insurance laws and regulations may impose additional limitations on the portfolio's investments, including the portfolio's ability to borrow, lend and use options, futures and other derivative instruments. In addition, such laws and regulations may require that a portfolio's investments meet additional diversification or other requirements.

As indicated in the portfolios' prospectus in the section entitled "Investment Policy and Other Changes", each portfolio's investment objective and, unless otherwise noted, its investment policies and techniques may be changed by the portfolios' Board of Trustees without approval of shareholders. A change in the investment objective or policies of a portfolio may result in the portfolio having an investment objective or policies different from those which a shareholder deemed appropriate at the time of investment.

Investment Policies

Fundamental Investment Policies

Fundamental investment policies of each portfolio may not be changed without the vote of a majority of the outstanding voting securities of the portfolio, defined under the 1940 Act as the lesser of (a) 67% or more of the voting securities of the portfolio present at a shareholder meeting, if the holders of more than 50% of the outstanding voting securities of the portfolio are present or represented by proxy, or (b) more than 50% of the outstanding voting securities of the portfolio.

Each portfolio has adopted, except as otherwise noted, the following fundamental policies:

1. Borrowing

The portfolio may not borrow money, except as permitted under the 1940 Act, and as interpreted, modified or otherwise permitted by regulatory authority having jurisdiction.

2. Underwriting Securities

The portfolio may not engage in the business of underwriting the securities of other issuers except as permitted by the 1940 Act.

3. Making Loans

The portfolio may make loans only as permitted under the 1940 Act, and as interpreted, modified or otherwise permitted by regulatory authority having jurisdiction, from time to time.

4. Senior Securities

The portfolio may not issue any senior security, except as permitted under the 1940 Act, and as interpreted, modified or otherwise permitted from time to time by regulatory authority having jurisdiction.

5. Real Estate

The portfolio may not purchase or sell real estate except as permitted by the 1940 Act.

6. Commodities

The portfolio may not purchase physical commodities or contracts relating to physical commodities, except as permitted from time to time under the 1940 Act, and as interpreted, modified or otherwise permitted by regulatory authority having jurisdiction.

7. Concentration of Investments

The portfolio may not make any investment if, as a result, the portfolio's investments will be concentrated in any one industry, as the relevant terms are used in the 1940 Act, as interpreted or modified by regulatory authority having jurisdiction, from time to time.

The fundamental policy above relating to concentration does not pertain to Transamerica Clarion Global Real Estate Securities VP.

The following fundamental policy pertains to Transamerica Clarion Global Real Estate Securities VP:

The portfolio may not make any investment if, as a result, the portfolio's investments will be concentrated in any one industry, as the relevant terms are used in the 1940 Act, as interpreted or modified by regulatory authority having jurisdiction, from time to time; except that the portfolio will concentrate in securities of issuers in the real estate industry.

Solely for purposes of the above fundamental investment policies, the "1940 Act" shall mean the Investment Company Act of 1940 and the rules and regulations thereunder, all as amended from time to time, or other successor law governing the regulation of investment companies, or interpretations or modifications thereof by the U.S. Securities and Exchange Commission (the "SEC"), SEC staff or other authority, or exemptive or other relief or permission from the SEC, SEC staff or other authority.

Additional Information about Fundamental Investment Policies

The following provides additional information about each portfolio's fundamental investment policies. This information does not form part of the portfolios' fundamental investment policies.

With respect to the fundamental policy relating to borrowing money set forth in (1) above, the 1940 Act permits a portfolio to borrow money in amounts of up to one-third of the portfolio's total assets from banks for any purpose, and to borrow up to 5% of the portfolio's total assets from banks or other lenders for temporary purposes (the portfolio's total assets include the amounts being borrowed). To limit the risks attendant to borrowing, the 1940 Act requires the portfolio to maintain at all times an "asset coverage" of at least 300% of the amount of its borrowings. Asset coverage means the ratio that the value of the portfolio's total assets (including amounts borrowed), minus liabilities other than borrowings, bears to the aggregate amount of all borrowings.

With respect to the fundamental policy relating to underwriting set forth in (2) above, the 1940 Act does not prohibit a portfolio from engaging in the underwriting business or from underwriting the securities of other issuers; in fact, the 1940 Act permits a portfolio to have underwriting commitments of up to 25% of its assets under certain circumstances. Those circumstances currently are that the amount of the portfolio's underwriting commitments, when added to the value of the portfolio's investments in issuers where the portfolio owns more than 10% of the outstanding voting securities of those issuers, cannot exceed the 25% cap. A portfolio engaging in transactions involving the acquisition or disposition of portfolio securities may be considered to be an underwriter under the Securities Act of 1933, as amended (the "1933 Act"). Under the 1933 Act, an underwriter may be liable for material omissions or misstatements in an issuer's registration statement or prospectus. Securities purchased from an issuer and not registered for sale under the 1933 Act are considered restricted securities. If these securities are registered under the 1933 Act, they may then be eligible for sale but participating in the sale may subject the seller to underwriter liability. Although it is not believed that the application of the 1933 Act provisions described above would cause a portfolio to be engaged in the business of underwriting, the policy in (2) above will be interpreted not to prevent the portfolio from engaging in transactions involving the acquisition or disposition of portfolio securities, regardless of whether the portfolio may be considered to be an underwriter under the 1933 Act.

With respect to the fundamental policy relating to lending set forth in (3) above, the 1940 Act does not prohibit a portfolio from making loans; however, SEC staff interpretations currently prohibit funds from lending more than one-third of their total assets. Each portfolio will be permitted by this policy to make loans of money, including to other funds, portfolio securities or other assets. A portfolio would have to obtain exemptive relief from the SEC to make loans of money to other portfolios.

With respect to the fundamental policy relating to issuing senior securities set forth in (4) above, "senior securities" are defined as fund obligations that have a priority over the portfolio's shares with respect to the payment of dividends or the distribution of portfolio assets. The 1940 Act prohibits a portfolio from issuing senior securities, except that the portfolio may borrow money in amounts of up to one-third of the fund's total assets from banks for any purpose. A portfolio also may borrow up to 5% of the portfolio's total assets from banks or other lenders for temporary purposes, and these borrowings are not considered senior securities. The issuance of senior securities by a portfolio can increase the speculative character of the fund's outstanding shares through leveraging.

With respect to the fundamental policy relating to real estate set forth in (5) above, the 1940 Act does not prohibit a portfolio from owning real estate; however, a portfolio is limited in the amount of illiquid assets it may purchase. To the extent that investments in real estate are considered illiquid, the current SEC staff position generally limits a portfolio's purchases of illiquid securities to 15% of net assets. The policy in (5) above will be interpreted not to prevent a portfolio from investing in real estate-related companies, companies whose businesses consist in whole or in part of investing in real estate, MBS instruments (like mortgages) that are secured by real estate or interests therein, or real estate investment trust securities. Investing in real estate may involve risks, including that real estate is generally considered illiquid and may be difficult to value and sell. In addition, owners of real estate may be subject to various liabilities, including environmental liabilities.

With respect to the fundamental policy relating to commodities set forth in (6) above, the 1940 Act does not prohibit a portfolio from owning commodities, whether physical commodities and contracts related to physical commodities (such as oil or grains and related futures contracts), or financial commodities and contracts related to financial commodities (such as currencies and, possibly, currency futures). However, a portfolio is limited in the amount of illiquid assets it may purchase. To the extent that investments in commodities are considered illiquid, the current SEC staff position generally limits a portfolio's purchases of illiquid securities to 15% of net assets.

With respect to the fundamental policy relating to concentration set forth in (7) above, the 1940 Act does not define what constitutes "concentration" in an industry. The SEC staff has taken the position that investment of 25% or more of a portfolio's total assets in one or more issuers conducting their principal activities in the same industry or group of industries constitutes concentration. It is possible that interpretations of concentration could change in the future. The policy in (7) above will be interpreted to refer to concentration as that term may be interpreted from time to time. The policy also will be interpreted to permit investment without limit in the following: securities of the U.S. government and its agencies or instrumentalities; securities of state, territory, possession or municipal governments and their authorities, agencies, instrumentalities or political subdivisions; securities of foreign governments; repurchase agreements collateralized by any such obligations; and counterparties in foreign currency transactions. Accordingly, issuers of the foregoing securities will not be considered to be members of any industry. Under the policy, Transamerica Aegon Money Market VP may invest without limitation in obligations issued by banks. There also will be no limit on investment in issuers domiciled in a single jurisdiction or country. A type of investment will not be considered to be an industry under the policy. The policy also will be interpreted to give broad authority to a portfolio as to how to classify issuers within or among industries.

The portfolios' fundamental policies are written and will be interpreted broadly. For example, the policies will be interpreted to refer to the 1940 Act and the related rules as they are in effect from time to time, and to interpretations and modifications of or relating to the 1940 Act by the SEC, its staff and others as they are given from time to time. When a policy provides that an investment practice may be conducted as permitted by the 1940 Act, the practice will be considered to be permitted if either the 1940 Act permits the practice or the 1940 Act does not prohibit the practice.

Except for the fundamental policy on borrowing set forth in (1) above, if any percentage restriction described above is complied with at the time of an investment, a later increase or decrease in the percentage resulting from a change in values or assets will not constitute a violation of such restriction.

The investment practices described above involve risks. Please see your portfolio's prospectus and this SAI for a description of certain of these risks.

Non-Fundamental Policies

Certain portfolios have adopted the following non-fundamental policies, which may be changed by the Board of Trustees of the Trust without shareholder approval.

Transamerica Aegon High Yield Bond VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees, as permitted under the 1940 Act.

(B) The portfolio may not invest in companies for the purpose of exercising control or management.

(C) The portfolio may not purchase securities on margin, except (i) for use of short-term credit necessary for clearance of purchases of portfolio securities; and (ii) it may make margin deposits in connection with futures contracts or other permissible investments.

(D) The portfolio may not mortgage, pledge, hypothecate or, in any manner, transfer any security owned by the portfolio as security for indebtedness except as may be necessary in connection with permissible borrowings or investments, provided, however, that such mortgaging, pledging or hypothecating may not exceed 33 $\frac{1}{3}$ % of the portfolio's total assets at the time of borrowing or investment.

(E) The portfolio may not sell securities short, except short sales "against the box."

(F) Under normal circumstances, the portfolio will invest at least 80% of its assets (defined as net assets plus the amount of any borrowing for investment purposes) in certain securities as indicated in the current prospectus. (See the prospectus for a detailed discussion of the portfolio's investments.) Shareholders will be provided with at least 60 days' prior written notice of any changes in the 80% investment policy. Such notice will comply with the conditions set forth in any applicable SEC rule then in effect.

Transamerica Aegon Money Market VP

(A) The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio's net assets, provided that this limitation does not apply to reverse repurchase agreements or the segregation of assets in connection with such transactions.

(B) The portfolio may not sell securities short, unless it owns or has the right to obtain securities equivalent in kind and amount to the securities sold short.

(C) The portfolio may not purchase securities on margin, except that the portfolio may obtain such short-term credits as are necessary for the clearance of transactions.

(D) The portfolio may not invest more than 5% of its total assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any securities for which the Board of Trustees or the Sub-Adviser has made a determination of liquidity, as permitted under the 1940 Act.

(E) The portfolio may not (i) purchase securities of other investment companies, except in the open market where no commission except the ordinary broker's commission is paid, or (ii) purchase or retain securities issued by other open-end investment companies. Restrictions (i) and (ii) do not apply to securities received as dividends, through offers to exchange, or as a result of reorganization, consolidation, or merger.

(F) The portfolio may not invest in companies for the purpose of exercising control or management.

(G) The portfolio may not invest in oil, gas or other mineral exploration or development programs, although it may invest in the marketable securities of companies that invest in or sponsor such programs.

Except with respect to borrowing money, if a percentage limitation set forth above in the investment restrictions for each portfolio is complied with at the time of the investment, a subsequent change in the percentage resulting from any change in value of a portfolio's net assets will not result in a violation of such restriction. State laws and regulations may impose additional limitations on borrowing, lending, and the use of options, futures, and other derivative instruments. In addition, such laws and regulations may require a portfolio's investments in foreign securities to meet additional diversification and other requirements.

Transamerica Aegon U.S. Government Securities VP

- (A)** The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees, as permitted under the 1940 Act.
- (B)** The portfolio may not invest in companies for the purpose of exercising control or management.
- (C)** The portfolio may not purchase securities on margin, except (i) for use of short-term credit necessary for clearance of purchases of portfolio securities; and (ii) it may make margin deposits in connection with futures contracts or other permissible investments.
- (D)** The portfolio may not mortgage, pledge, hypothecate or, in any manner, transfer any security owned by the portfolio as security for indebtedness except as may be necessary in connection with permissible borrowings or investments, provided, however, that such mortgaging, pledging or hypothecating may not exceed 33⅓% of the portfolio's total assets at the time of borrowing or investment.
- (E)** The portfolio may not sell securities short, except short sales "against the box."

Transamerica AllianceBernstein Dynamic Allocation VP

- (A)** The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.
- (B)** The portfolio may not sell securities short, except short sales "against the box" which includes underlying stocks of convertible securities.
- (C)** The portfolio may not invest in interests in oil, gas or other mineral development or exploration programs although it may invest in the marketable securities of companies that invest in or sponsor such programs.
- (D)** The portfolio may not invest for purposes of exercising control or management.
- (E)** The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio's net assets, provided that this limitation does not apply to reverse repurchase agreements or the segregation of assets in connection with such transactions.

Transamerica Asset Allocation – Conservative VP

- (A)** The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.
- (B)** The portfolio may not sell securities short, except short sales "against the box."
- (C)** The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.
- (D)** The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio's net assets, provided that this limitation does not apply to reverse repurchase agreements or in the case of assets deposited to provide margin or guarantee positions in options, futures contracts, swaps, forward contracts or other derivative instruments or the segregation of assets in connection with such transactions.
- (E)** The portfolio may not invest for purposes of exercising control or management.
- (F)** The portfolio may not invest in interests in oil, gas or other mineral development or exploration programs although it may invest in the marketable securities of companies that invest in or sponsor such programs.

Transamerica Asset Allocation – Growth VP

- (A)** The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.
- (B)** The portfolio may not sell securities short, except short sales "against the box."
- (C)** The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.
- (D)** The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio's net assets, provided that this limitation does not apply to reverse repurchase agreements or in the case of assets deposited to provide margin or guarantee positions in options, futures contracts, swaps, forward contracts or other derivative instruments or the segregation of assets in connection with such transactions.
- (E)** The portfolio may not invest for purposes of exercising control or management.

(F) The portfolio may not invest in interests in oil, gas or other mineral development or exploration programs although it may invest in the marketable securities of companies that invest in or sponsor such programs.

Transamerica Asset Allocation – Moderate Growth VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.

(B) The portfolio may not sell securities short, except short sales “against the box.”

(C) The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.

(D) The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio’s net assets, provided that this limitation does not apply to reverse repurchase agreements or in the case of assets deposited to provide margin or guarantee positions in options, futures contracts, swaps, forward contracts or other derivative instruments or the segregation of assets in connection with such transactions.

(E) The portfolio may not invest for purposes of exercising control or management.

(F) The portfolio may not invest in interests in oil, gas or other mineral development or exploration programs although it may invest in the marketable securities of companies that invest in or sponsor such programs.

Transamerica Asset Allocation – Moderate VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.

(B) The portfolio may not sell securities short, except short sales “against the box.”

(C) The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.

(D) The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio’s net assets, provided that this limitation does not apply to reverse repurchase agreements or in the case of assets deposited to provide margin or guarantee positions in options, futures contracts, swaps, forward contracts or other derivative instruments or the segregation of assets in connection with such transactions.

(E) The portfolio may not invest for purposes of exercising control or management.

(F) The portfolio may not invest in interests in oil, gas or other mineral development or exploration programs although it may invest in the marketable securities of companies that invest in or sponsor such programs.

Transamerica Barrow Hanley Dividend Focused VP

(A) The portfolio may not purchase on margin or sell short.

(B) The portfolio may not invest more than an aggregate of 15% of the net assets of the portfolio, determined at the time of investment, in illiquid securities, subject to legal or contractual restrictions on resale or securities for which there are no readily available markets.

(C) The portfolio may not invest in companies for the purpose of exercising control or management.

(D) The portfolio may not pledge, mortgage or hypothecate any of its assets to an extent greater than 10% of its total assets at fair market value.

In addition, the portfolio may invest up to 10% of its assets in securities of companies organized under the laws of countries other than the United States that are traded on foreign securities exchanges or in the foreign over-the-counter markets, including securities of foreign issuers that are represented by American Depositary Receipts (ADRs). Securities of foreign issuers that are represented by ADRs or that are listed on a U.S. over-the-counter market are considered “foreign securities” for the purpose of the portfolio’s investment allocations. The portfolio generally limits its foreign securities investments to ADRs of issuers in developed countries.

Transamerica Clarion Global Real Estate Securities VP

(A) The portfolio may not (i) enter into any futures contracts or options on futures contracts for purposes other than bona fide hedging transactions within the meaning of Commodity Futures Trading Commission regulations if the aggregate initial margin deposits and premiums required to establish positions in futures contracts and related options that do not fall within the definition of bona fide hedging

transactions would exceed 5% of the fair market value of the portfolio's net assets, after taking into account unrealized profits and losses on such contracts it has entered into and (ii) enter into any futures contracts or options on futures contracts if the aggregate amount of the portfolio's commitments under outstanding futures contracts positions and options on futures contracts would exceed the market value of its total assets.

(B) The portfolio may not sell securities short, unless it owns or has the right to obtain securities equivalent in kind and amount to the securities sold short and provided that transactions in options, futures contracts, swaps, forward contracts and other derivative instruments are not deemed to constitute selling securities short.

(C) The portfolio may not purchase securities on margin, except that the portfolio may obtain such short-term credits as are necessary for the clearance of transactions, provided that margin payments and other deposits in connection with transactions in options, futures contracts, swaps and forward contracts and other derivative instruments shall not be deemed to constitute purchasing securities on margin.

(D) The portfolio may not purchase securities of other investment companies, other than a security acquired in connection with a merger, consolidation, acquisition, reorganization or offer of exchange and except as otherwise permitted under the 1940 Act.

(E) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees, as permitted under the 1940 Act.

(F) The portfolio may not invest in companies for the purpose of exercising control or management.

(G) Under normal circumstances, the portfolio will invest at least 80% of its assets (defined as net assets plus the amount of any borrowings for investment purposes) in certain securities as indicated in the current prospectus. (See the prospectus for a detailed discussion of the portfolio's investments.) Shareholders will be provided with at least 60 days' prior written notice of any changes in the 80% investment policy. Such notice will comply with the conditions set forth in any applicable SEC rule then in effect.

Transamerica International Moderate Growth VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.

(B) The portfolio may not sell securities short, except short sales "against the box."

(C) The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.

(D) The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio's net assets, provided that this limitation does not apply to reverse repurchase agreements or in the case of assets deposited to provide margin or guarantee positions in options, futures contracts, swaps, forward contracts or other derivative instruments or the segregation of assets in connection with such transactions.

(E) The portfolio may not invest for purposes of exercising control or management.

Transamerica Jennison Growth VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees, as permitted under the 1940.

(B) The portfolio may not invest in companies for the purpose of exercising control or management.

(C) The portfolio may not purchase securities on margin, except (i) for use of short-term credit necessary for clearance of purchases of portfolio securities; and (ii) it may make margin deposits in connection with futures contracts or other permissible investments.

(D) The portfolio may not mortgage, pledge, hypothecate or, in any manner, transfer any security owned by the portfolio as security for indebtedness except as may be necessary in connection with permissible borrowings or investments, provided, however, that such mortgaging, pledging or hypothecating may not exceed 33⅓% of the portfolio's total assets at the time of borrowing or investment.

Transamerica JPMorgan Core Bond VP

(A) The portfolio may not, as a matter of non-fundamental policy: (i) enter into any futures contracts or options on futures contracts for purposes other than bona fide hedging transactions within the meaning of Commodity Futures Trading Commission regulations if the aggregate initial margin deposits and premiums required to establish positions in futures contracts and related options that do not fall within the definition of bona fide hedging transactions would exceed 5% of the fair market value of the portfolio's net assets, after taking into account unrealized profits and losses on such contracts it has entered into and (ii) enter into any futures contracts or options on futures contracts if the aggregate amount of the portfolio's commitments under outstanding futures contracts positions and options on futures contracts would exceed the market value of its total assets.

(B) The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio's net assets, provided that this limitation does not apply to reverse repurchase agreements or in the case of assets deposited to provide margin or guarantee positions in options, futures contracts, swaps, forward contracts or other derivative instruments or the segregation of assets in connection with such transactions.

(C) The portfolio may not sell securities short, unless it owns or has the right to obtain securities equivalent in kind and amount to the securities sold short, and provided that transactions in options, futures contracts, swaps, forward contracts and other derivative instruments are not deemed to constitute selling securities short.

(D) The portfolio may not purchase securities on margin, except that a portfolio may obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments and other deposits made in connection with transactions in options, futures contracts, swaps, forward contracts, and other derivative instruments shall not be deemed to constitute purchasing securities on margin.

(E) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any securities for which the Board of Trustees or the Sub-Adviser has made a determination of liquidity, as permitted under the 1940 Act.

(F) The portfolio may not (i) purchase securities of other investment companies, except in the open market where no commission except the ordinary broker's commission is paid, or (ii) purchase or retain securities issued by other open-end investment companies. Restrictions (i) and (ii) do not apply to money market portfolios or to securities received as dividends, through offers to exchange, or as a result of reorganization, consolidation, or merger. If the portfolio invests in a money market portfolio, the Investment Adviser will reduce its advisory fee by the amount of any investment advisory or administrative service fees paid to the investment manager of the money market portfolio.

(G) The portfolio may not invest more than 25% of its net assets at the time of purchase in the securities of foreign issuers and obligors.

(H) The portfolio may not invest in companies for the purpose of exercising control or management.

(I) Under normal circumstances, the portfolio will invest at least 80% of its assets (defined as net assets plus the amount of any borrowings for investment purposes) in certain securities as indicated in the current prospectus. (See the prospectus for a detailed discussion of the portfolio's investments.) Shareholders will be provided with at least 60 days' prior written notice of any changes in the 80% investment policy. Such notice will comply with the conditions set forth in any applicable SEC rule then in effect.

Transamerica JPMorgan Enhanced Index VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees, as permitted under the 1940 Act.

(B) The portfolio may not invest in companies for the purpose of exercising control or management.

(C) The portfolio may not purchase securities on margin, except (i) for use of short-term credit necessary for clearance of purchases of portfolio securities; and (ii) it may make margin deposits in connection with futures contracts or other permissible investments.

(D) The portfolio may not mortgage, pledge, hypothecate or, in any manner, transfer any security owned by the portfolio as security for indebtedness except as may be necessary in connection with permissible borrowings or investments and then such mortgaging, pledging or hypothecating may not exceed 33 $\frac{1}{3}$ % of the portfolio's total assets at the time of borrowing or investment.

(E) The portfolio may not sell securities short, except short sales "against the box."

Transamerica JPMorgan Mid Cap Value VP

(A) The portfolio shall not sell securities short, unless it owns or has the right to obtain securities equivalent in kind and amount to the securities sold short, and provided that transactions in futures contracts and options are not deemed to constitute selling short.

(B) The portfolio shall not purchase securities on margin, except that the portfolio may obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.

(C) The portfolio will invest no more than 15% of the value of its net assets in illiquid securities, including repurchase agreements with remaining maturities in excess of seven days, time deposits with maturities in excess of seven days and other securities which are not readily marketable. For purposes of this limitation, illiquid securities shall not include Section 4(2) paper and securities which may be resold under Rule 144A under the Securities Act, provided the Board of Trustees, or its delegate, determines that such securities are liquid based upon the trading market for the specific security.

(D) The portfolio may not invest in securities of other investment companies, except as they may be acquired as part of a merger, consolidation or acquisition of assets and except to the extent otherwise permitted by the 1940 Act.

(E) Under normal circumstances, the portfolio will invest at least 80% of its assets (defined as net assets plus the amount of any borrowings for investment purposes) in certain securities as indicated in the current prospectus. (See the prospectus for a detailed discussion of the portfolio's investments.) Shareholders will be provided with at least 60 days' prior written notice of any changes in the 80% investment policy. Such notice will comply with the conditions set forth in any applicable SEC rule then in effect.

Transamerica MFS International Equity VP

- (A)** The portfolio may not purchase additional investment securities at any time during which outstanding borrowings exceed 5% of the total assets of the portfolio.
- (B)** The portfolio may not purchase any security or enter into a repurchase agreement if, as a result, more than 15% of its net assets would be invested in illiquid securities. Illiquid securities include repurchase agreements not entitling the holder to payment of principal and interest within seven days, and securities that are illiquid by virtue of legal or contractual restrictions on resale or the absence of a readily available market.
- (C)** The portfolio may not sell securities short, except short sales “against the box.”
- (D)** The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts shall not constitute purchasing securities on margin.
- (E)** The portfolio may enter into futures contracts and write and buy put and call options relating to futures contracts. The portfolio may not, however, enter into leveraged futures transactions if it would be possible for the portfolio to lose more money than it invested.
- (F)** The portfolio may invest a portion of its assets in the securities of issuers with limited operating histories. An issuer is considered to have a limited operating history if that issuer has a record of less than three years of continuous operation. Periods of capital formation, incubation, consolidations, and research and development may be considered in determining whether a particular issuer has a record of three years of continuous operation.
- (G)** The portfolio may not invest for purposes of exercising control.

Transamerica Morgan Stanley Mid-Cap Growth VP

- (A)** The portfolio may not sell securities short, unless it owns or has the right to obtain securities equivalent in kind and amount to the securities sold short, provided that margin payments and other deposits in connection with transactions in options, futures contracts and options on futures contracts shall not be deemed to constitute selling securities short.
- (B)** The portfolio may not purchase securities on margin, except that the portfolio may obtain such short-term credits as are necessary for the clearance of transactions and that margin payments and other deposits in connection with transactions in options, futures contracts and options on futures contracts shall not be deemed to constitute purchasing securities on margin.
- (C)** The portfolio may not (i) purchase securities of other investment companies, except in the open market where no commission except the ordinary broker’s commission is paid, or (ii) purchase or retain securities issued by other open-end investment companies. Limitations (i) and (ii) do not apply to money market funds or to securities received as dividends, through offers of exchange, or as a result of a consolidation, merger or other reorganization.
- (D)** The portfolio may not mortgage or pledge any securities owned or held by the portfolio in amounts that exceed, in the aggregate, 15% of the portfolio’s net assets, provided that this limitation does not apply in the case of assets deposited to provide margin or guarantee positions in options, futures contracts and options on futures contracts or the segregation of assets in connection with such contracts.
- (E)** The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which the Board of Trustees has made a determination as to liquidity, as permitted under the 1940 Act.
- (F)** The portfolio may not invest in companies for the purpose of exercising control or management.
- (G)** The portfolio may not invest in securities of foreign issuers denominated in foreign currency and not publicly traded in the United States if at the time of acquisition more than 25% of the portfolio’s total assets would be invested in such securities.

Transamerica PIMCO Total Return VP

- (A)** The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act. A sub-adviser determines whether a particular security is deemed to be liquid based on the trading markets for the specific security and other factors.
- (B)** The portfolio may not sell securities short, except short sales “against the box.”
- (C)** The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.
- (D)** The portfolio may enter into futures contracts and write and buy put and call options relating to futures contracts.
- (E)** The portfolio may not invest in interests in oil, gas or other mineral development or exploration programs although it may invest in the marketable securities of companies that invest in or sponsor such programs.
- (F)** The portfolio may not invest for purposes of exercising control or management.

Transamerica PineBridge Inflation Opportunities VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act. A sub-adviser determines whether a particular security is deemed to be liquid based on the trading markets for the specific security and other factors.

(B) The portfolio may not sell securities short, except short sales “against the box.”

(C) The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.

(D) The portfolio may not invest in interests in oil, gas or other mineral development or exploration programs although it may invest in the marketable securities of companies that invest in or sponsor such programs.

(E) The portfolio may not invest for purposes of exercising control or management.

Transamerica T. Rowe Price Small Cap VP

(A) The portfolio may not purchase additional securities when money borrowed exceeds 5% of its total assets. This restriction shall not apply to temporary borrowings until the portfolio’s net assets exceed \$40,000,000.

(B) The portfolio may not purchase a futures contract or an option thereon, if, with respect to positions in futures or options on futures that do not represent bona fide hedging, the aggregate initial margin and premiums on such options would exceed 5% of the portfolio’s net asset value.

(C) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees, as permitted under the 1940 Act.

(D) The portfolio may not invest in companies for the purpose of exercising control or management.

(E) The portfolio may not purchase securities of open-end or closed-end investment companies except (i) in compliance with the 1940 Act; or (ii) securities of the T. Rowe Price Reserve Investment or Government Reserve Investment Funds.

(F) The portfolio may not purchase securities on margin, except (i) for use of short-term credit necessary for clearance of purchases of portfolio securities; and (ii) it may make margin deposits in connection with futures contracts or other permissible investments.

(G) The portfolio may not mortgage, pledge, hypothecate or, in any manner, transfer any security owned by the portfolio as security for indebtedness except as may be necessary in connection with permissible borrowings or investments, provided, however, that such mortgaging, pledging or hypothecating may not exceed 33 $\frac{1}{3}$ % of the portfolio’s total assets at the time of borrowing or investment.

(H) The portfolio may not sell securities short, except short sales “against the box.”

(I) Under normal circumstances, the portfolio will invest at least 80% of its assets (defined as net assets plus the amount of any borrowings for investment purposes) in certain securities as indicated in the current prospectus. (See the prospectus for a detailed discussion of the portfolio’s investments.) Shareholders will be provided with at least 60 days’ prior written notice of any changes in the 80% investment policy. Such notice will comply with the conditions set forth in any applicable SEC rule then in effect.

Transamerica Torray Concentrated Growth VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees, as permitted under the 1940 Act.

(B) The portfolio may not invest in companies for the purpose of exercising control or management.

(C) The portfolio may not purchase securities on margin, except (i) for use of short-term credit necessary for clearance of purchases of portfolio securities; and (ii) it may make margin deposits in connection with futures contracts or other permissible investments.

(D) The portfolio may not sell securities short, except short sales “against the box.”

Transamerica TS&W International Equity VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees, as permitted under the 1940 Act.

(B) The portfolio may not invest in companies for the purpose of exercising control or management.

(C) The portfolio may not purchase securities on margin, except (i) for use of short-term credit necessary for clearance of purchases of portfolio securities; and (ii) it may make margin deposits in connection with futures contracts or other permissible investments.

(D) The portfolio may not sell securities short, except short sales “against the box.”

Transamerica Vanguard ETF Portfolio - Balanced VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.

(B) The portfolio may not sell securities short, except short sales “against the box.”

(C) The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.

Transamerica Vanguard ETF Portfolio - Conservative VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.

(B) The portfolio may not sell securities short, except short sales “against the box.”

(C) The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.

Transamerica Vanguard ETF Portfolio - Growth VP

(A) The portfolio may not invest more than 15% of its net assets in illiquid securities. This does not include securities eligible for resale pursuant to Rule 144A under the Securities Act or any other securities as to which a determination as to liquidity has been made pursuant to guidelines adopted by the Board of Trustees as permitted under the 1940 Act.

(B) The portfolio may not sell securities short, except short sales “against the box.”

(C) The portfolio may not purchase securities on margin, except to obtain such short-term credits as are necessary for the clearance of transactions, and provided that margin payments in connection with futures contracts and options on futures contracts shall not constitute purchasing securities on margin.

Transamerica WMC US Growth VP

(A) The portfolio may not purchase securities of other investment companies, other than a security acquired in connection with a merger, consolidation, acquisition, reorganization or offer of exchange and except as permitted under the 1940 Act if as a result of the purchase: (a) more than 10% of the value of the portfolio’s total assets would be invested in the securities of investment companies; (b) more than 5% of the value of the portfolio’s total assets would be invested in the securities of any one investment company; or (c) the portfolio would own more than 3% of the total outstanding voting securities of any investment company.

(B) The portfolio may not invest in companies for the purposes of exercising control or management.

(C) Under normal circumstances, the portfolio will invest at least 80% of its assets (defined as net assets plus the amount of any borrowings for investment purposes) in certain securities as indicated in the current prospectus. (See the prospectus for a detailed discussion of the portfolio’s investments.) Shareholders will be provided with at least 60 days’ prior written notice of any changes in the 80% investment policy. Such notice will comply with the conditions set forth in any applicable SEC rule then in effect.

(D) Make short sales of securities or maintain a short position unless, at all times when a short position is open, the portfolio owns an equal amount of the securities or securities convertible into or exchangeable for, without payment of any further consideration, securities of the same issue as, and equal in amount to, the securities sold short.

(E) Purchase securities on margin, except that the portfolio may obtain any short-term credits necessary for the clearance of purchases and sales of securities. For purposes of this restriction, the deposit or payment of initial or variation margin in connection with futures contracts, financial futures contracts or related options, and options on securities, and options on securities indexes will not be deemed to be a purchase of securities on margin by the portfolio.

In addition to the above, as a fundamental policy, the portfolio may, notwithstanding any other investment policy or limitation (whether or not fundamental), invest all of its assets in the securities of a single open-end management investment company with substantially the same fundamental investment objectives, policies and limitations as such portfolio (which might result in duplication of certain fees and expenses).

Transamerica WMC US Growth II VP

(A) The portfolio may not purchase securities of other investment companies, other than a security acquired in connection with a merger, consolidation, acquisition, reorganization or offer of exchange and except as permitted under the 1940 Act if as a result of the purchase: (a)

more than 10% of the value of the portfolio's total assets would be invested in the securities of investment companies; (b) more than 5% of the value of the portfolio's total assets would be invested in the securities of any one investment company; or (c) the portfolio would own more than 3% of the total outstanding voting securities of any investment company.

(B) The portfolio may not invest in companies for the purposes of exercising control or management.

(C) Under normal circumstances, the portfolio will invest at least 80% of its assets (defined as net assets plus the amount of any borrowings for investment purposes) in certain securities as indicated in the current prospectus. (See the prospectus for a detailed discussion of the portfolio's investments.) Shareholders will be provided with at least 60 days' prior written notice of any changes in the 80% investment policy. Such notice will comply with the conditions set forth in any applicable SEC rule then in effect.

(D) Make short sales of securities or maintain a short position unless, at all times when a short position is open, the portfolio owns an equal amount of the securities or securities convertible into or exchangeable for, without payment of any further consideration, securities of the same issue as, and equal in amount to, the securities sold short.

(E) Purchase securities on margin, except that the portfolio may obtain any short-term credits necessary for the clearance of purchases and sales of securities. For purposes of this restriction, the deposit or payment of initial or variation margin in connection with futures contracts, financial futures contracts or related options, and options on securities, and options on securities indexes will not be deemed to be a purchase of securities on margin by the portfolio.

In addition to the above, as a fundamental policy, the portfolio may, notwithstanding any other investment policy or limitation (whether or not fundamental), invest all of its assets in the securities of a single open-end management investment company with substantially the same fundamental investment objectives, policies and limitations as such portfolio (which might result in duplication of certain fees and expenses).

Additional Information Regarding Investment Practices

Each portfolio's principal investment strategies are set forth in its prospectus.

This section further explains policies and strategies utilized by the portfolios. Please refer to each portfolio's prospectus and investment restrictions for the policies and strategies pertinent to a particular portfolio.

Each portfolio also has its own fees and expenses. Please refer to your specific portfolio's prospectus and this SAI for the information concerning your portfolio.

Unless otherwise indicated, all limitations applicable to portfolio investments (as stated in the prospectus and elsewhere in this SAI) apply only at the time a transaction is entered into. If a percentage limitation is complied with at the time of an investment, any subsequent change in percentage resulting from a change in values or assets, or a change in credit quality, will not constitute a violation of that limitation. There is no limit on the ability of a portfolio to make any type of investment or to invest in any type of security, except as expressly stated in the prospectus or in this SAI or as imposed by law.

Recent Market Events

The global financial crisis that began in 2008 has caused a significant decline in the value and liquidity of many securities and unprecedented volatility in the markets. Some events that have contributed to ongoing and systemic market risks include: the falling values of some sovereign debt and related investments, scarcity of credit and high public debt. Governmental and nongovernmental issuers (notably in Europe) have defaulted on, or been forced to restructure their debts; and many other issuers have faced difficulties obtaining credit or refinancing existing obligations. These market conditions may continue, worsen or spread, including in the United States, Europe and elsewhere. Further defaults or restructurings by governments and others of their debt could have additional adverse effects on economies, financial markets and asset valuations around the world.

In response to the crisis, the U.S. government and the Federal Reserve, as well as certain foreign governments and their central banks have taken steps to support financial markets, including by keeping interest rates low. The withdrawal of this support, failure of efforts in response to the crisis, or investor perception that such efforts are not succeeding could negatively affect financial markets generally as well as reduce the value and liquidity of certain securities. This environment could make identifying investment risks and opportunities especially difficult for the Investment Adviser, sub-adviser and/or Portfolio Construction Manager. Whether or not the portfolio invests in securities of issuers located in or with significant exposure to countries experiencing economic or financial difficulties, the value and liquidity of the portfolio's investments may be negatively affected. In addition, policy and legislative changes within the United States and in other countries are affecting many aspects of financial regulation. The impact of these changes on the market participants may not be fully known for some time.

Europe: A number of countries in Europe have experienced severe economic and financial difficulties. Many non-governmental issuers, and even certain governments, have defaulted on, or been forced to restructure, their debts; many other issuers have faced difficulties obtaining credit or refinancing existing obligations; financial institutions have in many cases required government or central bank support, have needed to raise capital, and/or have been impaired in their ability to extend credit; and financial markets in Europe and elsewhere have experienced extreme volatility and declines in asset values and liquidity. These difficulties may continue, worsen or spread within and without Europe. Responses to the financial problems by European governments, central banks and others, including austerity measures and reforms, may not work, may result in social unrest and may limit future growth and economic recovery or have other unintended consequences. Further defaults or restructurings by governments and others of their debt could have additional adverse effects on economies, financial markets and asset valuations around the world. In addition, one or more countries may abandon the euro, the common currency of the European Union, and/or withdraw from the European Union. The impact of these actions, especially if they occur in a disorderly fashion, is not clear but could be significant and far-reaching. Whether or not a portfolio invests in securities of issuers located in Europe or with significant exposure to European issuers or countries, these events could negatively affect the value and liquidity of the portfolio's investments.

Debt Securities and Fixed-Income Investing

Debt securities include securities such as corporate bonds and debentures; commercial paper; trust preferreds, debt securities issued by the U.S. government, its agencies and instrumentalities; or foreign governments; asset-backed securities; collateralized-mortgage obligations ("CMOs"); zero coupon bonds; floating rate, inverse floating rate and index obligations; "strips"; structured notes; and pay-in-kind and step securities.

Fixed-income investing is the purchase of a debt security that maintains a level of income that does not change, at least for some period of time. When a debt security is purchased, the portfolio owns "debt" and becomes a creditor to the company or government.

Consistent with each portfolio's investment policies, a portfolio may invest in debt securities, which may be referred to as fixed income instruments. These may include securities issued by the U.S. government, its agencies or government-sponsored enterprises; corporate debt securities of U.S. and non-U.S. issuers, including convertible securities and corporate commercial paper; mortgage-backed and other asset-backed securities; inflation-indexed bonds issued both by governments and corporations; structured notes, including hybrid or "indexed" securities, event-linked bonds and loan participations; delayed funding loans and revolving credit facilities; bank certificates of deposit ("CDs"), fixed time deposits and bankers' acceptances; repurchase agreements and reverse repurchase agreements; debt securities issued by state or local governments and their agencies, authorities and other government-sponsored enterprises; obligations of non-U.S. governments or their subdivisions, agencies and government-sponsored enterprises; and obligations of international agencies or supranational entities. Consistent with its investment policies, a portfolio may invest in derivatives based on fixed income instruments.

Maturity and Duration: The maturity of a fixed income security is a measure of the time remaining until the final payment on the security is due. For simple fixed income securities, duration indicates the average time at which the security's cash flows are to be received. For simple fixed income securities with interest payments occurring prior to the payment of principal, duration is always less than maturity. For example, a current coupon bullet bond with a maturity of 3.5 years will have a duration of approximately three years. In general, the lower the stated or coupon rate of interest of a fixed income security, the closer its duration will be to its final maturity; conversely, the higher the stated or coupon rate of interest of a fixed income security, the shorter its duration will be compared to its final maturity. The determination of duration becomes more complex when fixed income securities with features like floating coupon payments, optionality, prepayments, and structuring are evaluated. There are differing methodologies for computing effective duration prevailing in the industry. As a result, different investors may estimate duration differently.

Debt and fixed-income securities share three principal risks. First, the level of interest income generated by a portfolio's fixed income investments may decline due to a decrease in market interest rates. If rates decline, when a portfolio's fixed income securities mature or are sold, they may be replaced by lower-yielding investments. Second, the values of fixed income securities fluctuate with changes in interest rates. A decrease in interest rates will generally result in an increase in the value of a portfolio's fixed income investments. Conversely, during periods of rising interest rates, the value of a portfolio's fixed income investments will generally decline. However, a change in interest rates will not have the same impact on all fixed rate securities. For example, the magnitude of these fluctuations will generally be greater when a portfolio's duration or average maturity is longer. Third, certain fixed income securities are subject to credit risk, which is the risk that an issuer of securities will be unable to pay principal and interest when due, or that the value of the security will suffer because investors believe the issuer is unable to pay.

Mortgage-Backed Securities

Mortgage-backed securities may be issued or guaranteed by the U.S. government, its agencies or instrumentalities, or private issuers such as banks, insurance companies, and savings and loans. Some of these securities, such as Government National Mortgage Association ("GNMA") certificates, are backed by the full faith and credit of the U.S. Treasury while others, such as Federal Home Loan Mortgage Corporation ("Freddie Mac") and Federated National Mortgage Association ("Fannie Mae") certificates, are not. The U.S. government has provided recent financial support to Fannie Mae and Freddie Mac, but there can be no assurance that it will support these or other government-sponsored entities in the future.

Mortgage-backed securities represent interests in a pool of mortgages. Principal and interest payments made on the mortgages in the underlying mortgage pool are passed through to the portfolio. These securities are often subject to more rapid repayment than their stated maturity dates would indicate as a result of principal prepayments on the underlying loans. This can result in significantly greater price and yield volatility than with traditional fixed-income securities. During periods of declining interest rates, prepayments can be expected to accelerate which will shorten these securities' weighted average life and may lower their return. Conversely, in a rising interest rate environment, a declining prepayment rate will extend the weighted average life of these securities which generally would cause their values to fluctuate more widely in response to changes in interest rates.

The value of these securities also may change because of changes in the market's perception of the creditworthiness of the federal agency or private institution that issued or guarantees them. In addition, the mortgage securities market in general may be adversely affected by changes in governmental regulation or tax policies.

Mortgage-backed securities that are issued or guaranteed by the U.S. government, its agencies or instrumentalities, are not subject to the portfolios' industry concentration restrictions, by virtue of the exclusion from that test available to all U.S. government securities. In the case of privately issued mortgage-related securities, the portfolios take the position that mortgage-related securities do not represent interests in any particular "industry" or group of industries.

As noted above, there are a number of important differences among the agencies and instrumentalities of the U.S. government that issue mortgage related securities and among the securities that they issue. Mortgage-related securities issued by GNMA include GNMA Mortgage Pass-Through Certificates (also known as "Ginnie Maes") which are guaranteed as to the timely payment of principal and interest by GNMA and such guarantee is backed by the full faith and credit of the United States. GNMA is a wholly owned U.S. government corporation within the Department of Housing and Urban Development. GNMA certificates also are supported by the authority of GNMA to borrow funds from the U.S. Treasury to make payments under its guarantee. Mortgage-related securities issued by Fannie Mae include Fannie Mae Guaranteed Mortgage Pass-Through Certificates (also known as "Fannie Maes") which are solely the obligations of Fannie Mae and are not backed by or entitled to the full faith and credit of the United States. Fannie Mae is a government-sponsored organization owned entirely by private stockholders. Fannie Maes are guaranteed as to the timely payment of the principal and interest by Fannie Mae. Mortgage-related securities issued by Freddie Mac include Freddie Mac Mortgage Participation Certificates (also known as "Freddie Maes" or "PCs"). Freddie Mac is a corporate instrumentality of the United States, created pursuant to an Act of Congress, which is owned entirely by Federal Home Loan Banks. Freddie Maes are not guaranteed by the United States or by any Federal Home Loan Banks and do not constitute a debt or obligation of the United States or of any Federal Home Loan Bank. Freddie Maes entitle the holder to the timely payment of interest, which is guaranteed by Freddie Mac. Freddie Mac guarantees either ultimate collection or the timely payment of all principal payments on the underlying mortgage loans. When Freddie Mac does not guarantee timely payment of principal, Freddie Mac may remit the amount due on account of its guarantee of ultimate payment of principal at any time after default on an underlying mortgage, but in no event later than one year after it becomes payable.

CMOs, which are debt obligations collateralized by mortgage loans or mortgage pass-through securities, provide the holder with a specified interest in the cash flow of a pool of underlying mortgages or other mortgage-backed securities. Issuers of CMOs frequently elect to be taxed as pass-through entities known as real estate mortgage investment conduits. CMOs are issued in multiple classes, each with a specified fixed or floating interest rate and a final distribution date. The relative payment rights of the various CMO classes may be structured in many ways. In most cases, however, payments of principal are applied to the CMO classes in the order of their respective stated maturities, so that no principal payments will be made on a CMO class until all other classes having an earlier stated maturity date are paid in full. The classes may include accrual certificates (also known as “Z-Bonds”), which only accrue interest at a specified rate until other specified classes have been retired and are converted thereafter to interest-paying securities. They may also include planned amortization classes which generally require, within certain limits, that specified amounts of principal be applied on each payment date, and generally exhibit less yield and market volatility than other classes. In many cases, CMOs are issued or guaranteed by the U.S. government or its agencies or instrumentalities or may be collateralized by a portfolio of mortgages or mortgage-related securities guaranteed by such an agency or instrumentality. Certain CMOs in which a portfolio may invest are not guaranteed by the U.S. government or its agencies or instrumentalities.

Stripped Mortgage-Backed Securities (“SMBS”) are derivative multi-class mortgage securities. SMBS may be issued by agencies or instrumentalities of the U.S. government, or by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks and special purpose entities of the foregoing.

SMBS are usually structured with two classes that receive different proportions of the interest and principal distributions on a pool of mortgage assets. A common type of SMBS will have one class receiving some of the interest and most of the principal from the mortgage assets, while the other class will receive most of the interest and the remainder of the principal. In the most extreme case, one class will receive all of the interest (the “IO” class), while the other class will receive all of the principal (the principal-only or “PO” class). The yield to maturity on an IO class is extremely sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets, and a rapid rate of principal payments may have a material adverse effect on a portfolio’s yield to maturity from these securities. If the underlying mortgage assets experience greater than anticipated prepayments of principal, a portfolio may fail to recoup some or all of its initial investment in these securities even if the security is in one of the highest rating categories.

The repayment of certain mortgage-related securities depends primarily on the cash collections received from the issuer’s underlying asset portfolio and, in certain cases, the issuer’s ability to issue replacement securities (such as asset-backed commercial paper). As a result, a portfolio could experience losses in the event of credit or market value deterioration in the issuer’s underlying portfolio, mismatches in the timing of the cash flows of the underlying asset interests and the repayment obligations of maturing securities, or the issuer’s inability to issue new or replacement securities. This is also true for other asset-backed securities. Upon the occurrence of certain triggering events or defaults, the investors in a security held by a portfolio may become the holders of underlying assets at a time when those assets may be difficult to sell or may be sold only at a loss. If mortgage-backed securities or asset-backed securities are bought at a discount, however, both scheduled payments of principal and unscheduled prepayments will increase current and total returns and will accelerate the recognition of income which, when distributed to taxable shareholders, will be taxable as ordinary income.

Unlike mortgage-backed securities issued or guaranteed by the U.S. government or one of its sponsored entities, mortgage-backed securities issued by private issuers do not have a government or government-sponsored entity guarantee, but may have credit enhancement provided by external entities such as banks or financial institutions or achieved through the structuring of the transaction itself. Examples of such credit support arising out of the structure of the transaction include the issue of senior and subordinated securities (e.g., the issuance of securities by a special purpose vehicle in multiple classes or “tranches,” with one or more classes being senior to other subordinated classes as to the payment of principal and interest, with the result that defaults on the underlying mortgage loans are borne first by the holders of the subordinated class); creation of “reserve funds” (in which case cash or investments, sometimes funded from a portion of the payments on the underlying mortgage loans, are held in reserve against future losses); and “over-collateralization” (in which case the scheduled payments on, or the principal amount of, the underlying mortgage loans exceeds that required to make payment of the securities and pay any servicing or other fees). However, there can be no guarantee that credit enhancements, if any, will be sufficient to prevent losses in the event of defaults on the underlying mortgage loans. A portfolio may also buy mortgage-backed securities without insurance or guarantees.

If a portfolio purchases subordinated mortgage-backed securities, the payments of principal and interest on the portfolio’s subordinated securities generally will be made only after payments are made to the holders of securities senior to the portfolio’s securities. Therefore, if there are defaults on the underlying mortgage loans, a portfolio will be less likely to receive payments of principal and interest, and will be more likely to suffer a loss. Privately issued mortgage-backed securities are not traded on an exchange and there may be a limited market for the securities, especially when there is a perceived weakness in the mortgage and real estate market sectors. Without an active trading market, mortgage-backed securities held in a portfolio may be particularly difficult to value because of the complexities involved in assessing the value of the underlying mortgage loans.

In addition, mortgage-backed securities that are issued by private issuers are not subject to the underwriting requirements for the underlying mortgages that are applicable to those mortgage-backed securities that have a government or government-sponsored entity guarantee. As a result, the mortgage loans underlying private mortgage-backed securities may, and frequently do, have less favorable collateral, credit risk or other underwriting characteristics than government or government-sponsored mortgage-backed securities and have wider variances in a number of terms including interest rate, term, size, purpose and borrower characteristics. Privately issued pools more frequently include second mortgages, high loan-to-value mortgages and manufactured housing loans. The coupon rates and maturities of the underlying mortgage loans in a private-label mortgage-backed securities pool may vary to a greater extent than those included in a government

guaranteed pool, and the pool may include subprime mortgage loans. Subprime loans refer to loans made to borrowers with weakened credit histories or with a lower capacity to make timely payments on their loans. For these reasons, the loans underlying these securities have had, in many cases, higher default rates than those loans that meet government underwriting requirements.

The risk of non-payment is greater for mortgage-backed securities that are backed by mortgage pools that contain subprime loans, but a level of risk exists for all loans. Market factors adversely affecting mortgage loan repayments may include a general economic turndown, high unemployment, a general slowdown in the real estate market, a drop in the market prices of real estate, or an increase in interest rates resulting in higher mortgage payments by holders of adjustable rate mortgages.

Asset-Backed Securities

Asset-backed securities are generally issued as pass-through certificates, which represent undivided fractional ownership interests in the underlying pool of assets, or as debt instruments, which are generally issued as the debt of a special purpose entity organized solely for the purpose of owning such assets and issuing such debt. The pool of assets generally represents the obligations of a number of different parties.

Asset-backed securities have many of the same characteristics and risks as the mortgage-backed securities described above, except that asset-backed securities may be backed by non-real-estate loans, leases or receivables such as auto, credit card or home equity loans.

Non-mortgage asset-backed securities are not issued or guaranteed by the U.S. government or its agencies or government-sponsored entities; however, the payment of principal and interest on such obligations may be guaranteed up to certain amounts and for a certain time period by a letter of credit issued by a financial institution (such as a bank or insurance company) which may be affiliated or unaffiliated with the issuers of such securities. In addition, such securities generally will have remaining estimated lives at the time of purchase of five years or less.

Asset-backed securities frequently carry credit protection in the form of extra collateral, subordinated certificates, cash reserve accounts, letters of credit or other enhancements. For example, payments of principal and interest may be guaranteed up to certain amounts and for a certain time period by a letter of credit or other enhancement issued by a financial institution. Assets which, to date, have been used to back asset-backed securities include motor vehicle installment sales contracts or installment loans secured by motor vehicles, and receivables from revolving credit (credit card) agreements. Other types of asset-backed securities include those that represent interest in pools of corporate bonds (such as collateralized bond obligations or “CBOs”), bank loans (such as collateralized loan obligations or “CLOs”) and other debt obligations (such as collateralized debt obligations or “CDOs”).

Asset-backed security values may also be affected by factors such as changes in interest rates, the availability of information concerning the pool and its structure, the creditworthiness of the servicing agent for the loan pool, the originator of the loans, or the financial institution providing any credit enhancement and the exhaustion of any credit enhancement. The risks of investing in asset-backed securities depend upon payment of the underlying loans by the individual borrowers (i.e., the backing asset). In its capacity as purchaser of an asset-backed security, a portfolio would generally have no recourse to the entity that originated the loans in the event of default by the borrower. If a letter of credit or other form of credit enhancement is exhausted or otherwise unavailable, holders of asset-backed securities may experience delays in payments or losses if the full amounts due on underlying assets are not realized. Asset-backed securities may also present certain additional risks related to the particular type of collateral. For example, credit card receivables are generally unsecured and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which give such debtors the right to set off certain amounts owed on the credit cards, thereby reducing the balance due. Asset-backed securities are also subject to prepayment risk, which may shorten the weighted average life of such securities and may lower their return. In addition, asset backed securities are subject to risks similar to those associated with mortgage-backed securities, as well as additional risks associated with the nature of the assets and the servicing of those assets.

Asset-backed securities may be subject to greater risk of default during periods of economic downturn than other securities, which could result in possible losses to a portfolio. In addition, the secondary market for asset-backed securities may not be as liquid as the market for other securities which may result in a portfolio’s experiencing difficulty in selling or valuing asset-backed securities.

Corporate Debt Securities

Corporate debt securities exist in great variety, differing from one another in quality, maturity, and call or other provisions. Lower-grade bonds, whether rated or unrated, usually offer higher interest income, but also carry increased risk of default. Corporate bonds may be secured or unsecured, senior to or subordinated to other debt of the issuer, and, occasionally, may be guaranteed by another entity. In addition, they may carry other features, such as those described under “Convertible Securities” and “Variable or Floating Rate Securities,” or have special features such as the right of the holder to shorten or lengthen the maturity of a given debt instrument, rights to purchase additional securities, rights to elect from among two or more currencies in which to receive interest or principal payments, or provisions permitting the holder to participate in earnings of the issuer or to participate in the value of some specified commodity, financial index, or other measure of value.

Commercial Paper

Commercial paper refers to short-term unsecured promissory notes issued by commercial and industrial corporations to finance their current operations. Commercial paper may be issued at a discount and redeemed at par, or issued at par with interest added at maturity. The interest or discount rate depends on general interest rates, the credit standing of the issuer, and the maturity of the note, and generally moves in tandem with rates on large certificates of deposits (“CDs”) and Treasury bills. An established secondary market exists for commercial paper,

particularly that of stronger issuers which are rated by Moody's and S&P. Investments in commercial paper are subject to the risks that general interest rates will rise, that the credit standing or rating of the issuer will fall, or that the secondary market in the issuer's notes will become too limited to permit their liquidation at a reasonable price.

Commercial paper includes asset-backed commercial paper ("ABCP") that is issued by structured investment vehicles or other conduits. These conduits may be sponsored by mortgage companies, investment banking firms, finance companies, hedge funds, private equity firms and special purpose finance entities. ABCP typically refers to a debt security with an original term to maturity of up to 270 days, the payment of which is supported by cash flows from underlying assets, or one or more liquidity or credit support providers, or both. Assets backing ABCP, which may be included in revolving pools of assets with large numbers of obligors, include credit card, car loan and other consumer receivables and home or commercial mortgages, including subprime mortgages. The repayment of ABCP issued by a conduit depends primarily on the cash collections received from the conduit's underlying asset portfolio and the conduit's ability to issue new ABCP. Therefore, there could be losses to a portfolio investing in ABCP in the event of credit or market value deterioration in the conduit's underlying portfolio, mismatches in the timing of the cash flows of the underlying asset interests and the repayment obligations of maturing ABCP, or the conduit's inability to issue new ABCP. To protect investors from these risks, ABCP programs may be structured with various protections, such as credit enhancement, liquidity support, and commercial paper stop-issuance and wind-down triggers. However, there can be no guarantee that these protections will be sufficient to prevent losses to investors in ABCP.

Some ABCP programs provide for an extension of the maturity date of the ABCP if, on the related maturity date, the conduit is unable to access sufficient liquidity through the issue of additional ABCP. This may delay the sale of the underlying collateral, and a portfolio may incur a loss if the value of the collateral deteriorates during the extension period. Alternatively, if collateral for ABCP deteriorates in value, the collateral may be required to be sold at inopportune times or at prices insufficient to repay the principal and interest on the ABCP. ABCP programs may provide for the issuance of subordinated notes as an additional form of credit enhancement. The subordinated notes are typically of a lower credit quality and have a higher risk of default. A portfolio purchasing these subordinated notes will therefore have a higher likelihood of loss than investors in the senior notes.

Bank Obligations

Bank obligations include dollar-denominated CDs, time deposits and bankers' acceptances and other short-term debt obligations issued by domestic banks, foreign subsidiaries or foreign branches of domestic banks, domestic and foreign branches of foreign banks, domestic savings and loan associations and other banking institutions. CDs are short-term, unsecured, negotiable obligations of commercial banks. Time deposits are non-negotiable deposits maintained in banks for specified periods of time at stated interest rates. Bankers' acceptances are negotiable time drafts drawn on commercial banks usually in connection with international transactions.

Domestic commercial banks organized under federal law are supervised and examined by the Comptroller of the Currency and are required to be members of the Federal Reserve System and to be insured by the Federal Deposit Insurance Corporation ("FDIC"). Domestic banks organized under state law are supervised and examined by state banking authorities, but are members of the Federal Reserve System only if they elect to join. Most state institutions are insured by the FDIC (although such insurance may not be of material benefit to a portfolio, depending upon the principal amount of obligations of each held by the portfolio) and are subject to federal examination and to a substantial body of federal law and regulation. As a result of federal and state laws and regulations, domestic banks are, among other things, generally required to maintain specified levels of reserves and are subject to other supervision and regulation designed to promote financial soundness. However, not all of such laws and regulations apply to the foreign branches of domestic banks.

Obligations of foreign branches and subsidiaries of domestic banks and domestic and foreign branches of foreign banks, such as CDs and time deposits, may be general obligations of the parent bank in addition to the issuing branch, or may be limited by the terms of a specific obligation and governmental regulation. Such obligations are subject to different risks than are those of domestic banks or domestic branches of foreign banks. These risks include foreign economic and political developments, foreign governmental restrictions that may adversely affect payment of principal and interest on the obligations, foreign exchange controls and foreign withholding and other taxes on interest income. Foreign branches of domestic banks and foreign branches of foreign banks are not necessarily subject to the same or similar regulatory requirements that apply to domestic banks, such as mandatory reserve requirements, loan limitations and accounting, auditing and financial recordkeeping requirements. In addition, less information may be publicly available about a foreign branch of a domestic bank or about a foreign bank than about a domestic bank.

Obligations of domestic branches of foreign banks may be general obligations of the parent bank, in addition to the issuing branch, or may be limited by the terms of a specific obligation and by state and federal regulation as well as governmental action in the country in which the foreign bank has its head office. A domestic branch of a foreign bank with assets in excess of \$1 billion may or may not be subject to reserve requirements imposed by the Federal Reserve System or by the state in which the branch is located if the branch is licensed in that state. In addition, branches licensed by the Comptroller of the Currency and branches licensed by certain states ("State Branches") may or may not be required to: (i) pledge to the regulator, by depositing assets with a designated bank within the state; and (ii) maintain assets within the state in an amount equal to a specified percentage of the aggregate amount of liabilities of the foreign bank payable at or through all of its agencies or branches within the state. The deposits of State Branches may not necessarily be insured by the FDIC. In addition, there may be less publicly available information about a domestic branch of a foreign bank than about a domestic bank.

The portfolios have established certain minimum credit quality standards for bank obligations in which they invest.

Bank Capital Securities: Bank capital securities are issued by banks to help fulfill their regulatory capital requirements. There are two common types of bank capital: Tier I and Tier II. Bank capital is generally, but not always, of investment grade quality. Tier I securities often take the form of trust preferred securities. Tier II securities are commonly thought of as hybrids of debt and preferred stock, are often perpetual (with no maturity date), callable and, under certain conditions, allow for the issuer bank to withhold payment of interest until a later date.

Collateralized Debt Obligations

Collateralized debt obligations (“CDOs”) include collateralized bond obligations (“CBOs”), collateralized loan obligations (“CLOs”) and other similarly structured securities. CBOs and CLOs are types of asset-backed securities. A CBO is a trust or other special purpose entity (“SPE”) which is typically backed by a diversified pool of fixed income securities (which may include high-risk, below-investment-grade securities). A CLO is a trust or other SPE that is typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. Although certain CDOs may receive credit enhancement in the form of a senior-subordinate structure, over-collateralization or bond insurance, such enhancement may not always be present, and may fail to protect a portfolio against the risk of loss on default of the collateral. Certain CDOs may use derivatives contracts to create “synthetic” exposure to assets rather than holding such assets directly. CDOs may charge management fees and administrative expenses, which are in addition to those of a portfolio.

For both CBOs and CLOs, the cashflows from the SPE are split into two or more portions, called tranches, varying in risk and yield. The riskiest portion is the “equity” tranche, which bears the first loss from defaults from the bonds or loans in the SPE and serves to protect the other, more senior tranches from default (though such protection is not complete). Since it is partially protected from defaults, a senior tranche from a CBO trust or CLO trust typically has higher ratings and lower yields than its underlying securities, and can be rated investment grade. Despite the protection from the equity tranche, CBO or CLO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of subordinate tranches, market anticipation of defaults, as well as investor aversion to CBO or CLO securities as a class. Interest on certain tranches of a CDO may be paid in kind (paid in the form of obligations of the same type rather than cash), which involves continued exposure to default risk with respect to such payments.

The risks of an investment in a CDO depend largely on the type of the collateral securities and the class of the CDO in which a portfolio invests. Normally, CBOs, CLOs and other CDOs are privately offered and sold, and thus, are not registered under the securities laws. As a result, investments in CDOs may be characterized by a portfolio as illiquid securities. However, an active dealer market may exist for CDOs allowing a CDO to qualify for Rule 144A transactions. In addition to the risks typically associated with fixed income securities discussed elsewhere in this SAI and a portfolio’s prospectus (e.g., interest rate risk and credit risk), CDOs carry additional risks including, but not limited to: (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (ii) the collateral may decline in value or default; (iii) a portfolio may invest in tranches of CDOs that are subordinate to other tranches; (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results; and (v) the CDO’s manager may perform poorly.

Zero Coupon, Step Coupon, Deferred Payment, Stripped and Pay-In-Kind Securities

Zero coupon bonds are issued and traded at a discount from their face values. They do not entitle the holder to any periodic payment of interest prior to maturity. Step coupon bonds are issued and trade at a discount from their face values and pay coupon interest. The coupon rate typically is low for an initial period and then increases to a higher coupon rate thereafter. Deferred payment securities are securities that remain zero coupon securities until a predetermined date, at which time the stated coupon rate becomes effective and interest becomes payable at regular intervals. The discount from the face amount or par value depends on the time remaining until cash payments begin, prevailing interest rates, liquidity of the security and the perceived credit quality of the issuer. Stripped securities are securities that are stripped of their interest after the securities are issued, but otherwise are comparable to zero coupon bonds. Pay-in-kind securities may pay all or a portion of their interest or dividends in the form of additional securities. Upon maturity, the holder is entitled to receive the aggregate par value of the securities.

Federal income tax law requires holders of zero coupon, step coupon and deferred payment securities to report the portion of the original issue discount on such securities that accrues that year as interest income, even if prior to the receipt of the corresponding cash payment. In order to avoid a tax on the portfolio, each portfolio must distribute each year substantially all of its taxable income, including original issue discount accrued on zero coupon, step coupon or deferred payment securities. Because a portfolio may not receive full or even any cash payments on a current basis in respect of accrued original-issue discount on zero coupon, step coupon or deferred payment securities, in some years a portfolio may have to distribute cash obtained from other sources in order to satisfy those distribution requirements. A portfolio might obtain such cash from selling other portfolio holdings. These actions may reduce the assets to which a portfolio’s expenses could be allocated and may reduce the rate of return for the portfolio. In some circumstances, such sales might be necessary in order to satisfy cash distribution requirements even though investment considerations might otherwise make it undesirable for the portfolio to sell the securities at the time.

Generally, the market prices of zero coupon, step coupon, deferred payment, stripped and pay-in-kind securities are more volatile than the prices of securities that pay interest periodically and in cash and are likely to respond to changes in interest rates to a greater degree than other types of debt securities having similar maturities and credit quality. Investments in zero coupon and step coupon bonds may be more speculative and subject to greater fluctuations in value because of changes in interest rates than bonds that pay interest currently.

Repurchase Agreements

In a repurchase agreement, a portfolio purchases a security and simultaneously commits to resell that security to the seller at an agreed-upon price on an agreed-upon date within a number of days (usually not more than seven) from the date of purchase. The resale price reflects the purchase price plus an agreed-upon incremental amount which typically is unrelated to the coupon rate or maturity of the purchased security and represents compensation to the seller for use of the purchased security. A repurchase agreement involves the obligation of the seller to pay the agreed-upon price, which obligation is in effect secured by the value (at least equal to the amount of the agreed-upon resale price and marked-to-market daily) of the underlying security or collateral. All repurchase agreements entered into by a portfolio are fully collateralized at all times during the period of the agreement.

Repurchase agreements involve the risk that the seller will fail to repurchase the security, as agreed. In that case, a portfolio will bear the risk of market value fluctuations until the security can be sold and may encounter delays and incur costs in liquidating the security. Repurchase agreements involve risks in the event of default or insolvency of the other party, including possible delays or restrictions upon a portfolio's ability to dispose of the underlying securities, the risk of a possible decline in the value of the underlying securities during the period in which the portfolio seeks to assert its right to them, the risk of incurring expenses associated with asserting those rights and the risk of losing all or part of the income from the agreement.

A portfolio may, together with other registered investment companies managed by the portfolio's sub-adviser or its affiliates, transfer uninvested cash balances into a single joint account, the daily aggregate balance of which will be invested in one or more repurchase agreements, including tri-party subcustody repurchase arrangements.

Convertible Securities

Convertible securities are fixed income securities that may be converted at either a stated price or stated rate into underlying shares of common stock. Convertible securities have general characteristics similar to both fixed income and equity securities. Although to a lesser extent than with fixed income securities generally, the market value of convertible securities tends to decline as interest rates increase and, conversely, tends to increase as interest rates decline. In addition, because of the conversion feature, the market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stocks and, therefore, also will react to variations in the general market for equity securities. A significant feature of convertible securities is that as the market price of the underlying common stock declines, convertible securities tend to trade increasingly on a yield basis, and so they may not experience market value declines to the same extent as the underlying common stock. When the market price of the underlying common stock increases, the prices of the convertible securities tend to rise as a reflection of the value of the underlying common stock.

As fixed income securities, convertible securities provide for a stream of income. The yields on convertible securities generally are higher than those of common stocks. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality. However, a convertible security offers the potential for capital appreciation through the conversion feature, enabling the holder to benefit from increases in the market price of the underlying common stock.

Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer, although convertible bonds, as corporate debt obligations, enjoy seniority in right of payment to all equity securities, and convertible preferred stock is senior to common stock of the same issuer. Because of the subordination feature, however, convertible securities typically have lower ratings than similar non-convertible securities.

DECS ("Dividend Enhanced Convertible Stock," or "Debt Exchangeable for Common Stock" when-issued as a debt security) offer a substantial dividend advantage with the possibility of unlimited upside potential if the price of the underlying common stock exceeds a certain level. DECS convert to common stock at maturity. The amount received is dependent on the price of the common stock at the time of maturity. DECS contain two call options at different strike prices. The DECS participate with the common stock up to the first call price. They are effectively capped at that point unless the common stock rises above a second price point, at which time they participate with unlimited upside potential.

PERCS ("Preferred Equity Redeemable Stock," convert into an equity issue that pays a high cash dividend, has a cap price and mandatory conversion to common stock at maturity) offer a substantial dividend advantage, but capital appreciation potential is limited to a predetermined level. PERCS are less risky and less volatile than the underlying common stock because their superior income mitigates declines when the common stock falls, while the cap price limits gains when the common stock rises.

In evaluating investment in a convertible security, primary emphasis will be given to the attractiveness of the underlying common stock. The convertible debt securities in which a portfolio may invest are subject to the same rating criteria as the portfolio's investment in non-convertible debt securities.

Unlike a convertible security which is a single security, a synthetic convertible security is comprised of two distinct securities that together resemble convertible securities in certain respects. Synthetic convertible securities are created by combining non-convertible bonds or preferred shares with common stocks, warrants or stock call options. The options that will form elements of synthetic convertible securities will be listed on a securities exchange or on NASDAQ. The two components of a synthetic convertible security, which will be issued with respect to the same entity, generally are not offered as a unit, and may be purchased and sold by a portfolio at different times. Synthetic convertible securities differ from convertible securities in certain respects, including that each component of a synthetic convertible security has a separate market value and responds differently to market fluctuations. Investing in synthetic convertible securities involves the risk normally involved in holding the securities comprising the synthetic convertible security.

High Yield Securities

Debt securities rated below investment grade (lower than Baa as determined by Moody's, lower than BBB as determined by S&P or Fitch, Inc.) or, if unrated, determined to be below investment grade by a portfolio's sub-adviser, are commonly referred to as "lower grade debt securities" or "junk bonds." Generally, such securities offer a higher current yield than is offered by higher rated securities, but also are predominantly speculative with respect to the issuer's capacity to pay interest and repay principal in accordance with the terms of the obligations. The market values of certain of these securities also tend to be more sensitive to individual corporate developments and changes in economic conditions than higher quality bonds. In addition, medium and lower rated securities and comparable unrated securities generally present a higher degree of credit risk. Lower grade debt securities generally are unsecured and frequently subordinated to the prior payment of senior indebtedness. In addition, the market value of securities in lower rated categories is more volatile than that of higher quality securities, and the markets in which medium and lower rated securities are traded are more limited than those in which higher rated securities are traded. The existence of limited markets may make it more difficult for a portfolio to obtain accurate market quotations for purposes of valuing its securities and calculating its net asset value. Moreover, the lack of a liquid trading market may restrict the availability of securities for a portfolio to purchase and may also have the effect of limiting the ability of a portfolio to sell securities at their fair value either to meet redemption requests or to respond to changes in the economy or the financial markets.

Lower rated debt securities also present risks based on payment expectations. If an issuer calls the obligation for redemption, a portfolio may have to replace the security with a lower yielding security, resulting in a decreased return for investors. Also, the principal value of bonds moves inversely with movements in interest rates; in the event of rising interest rates, the value of the securities held by a portfolio may decline more than a portfolio consisting of higher rated securities. If a portfolio experiences unexpected net redemptions, it may be forced to sell its higher rated bonds, resulting in a decline in the overall credit quality of the securities held by the portfolio and increasing the exposure of the portfolio to the risks of lower rated securities.

Subsequent to its purchase by a portfolio, an issue of securities may cease to be rated or its rating may be reduced below the minimum required for purchase by a portfolio. Neither event will require sale of these securities by a portfolio, but a sub-adviser will consider the event in determining whether the portfolio should continue to hold the security.

Distressed Debt Securities

Distressed debt securities are debt securities that are purchased in the secondary market and are the subject of bankruptcy proceedings or otherwise in default as to the repayment of principal and/or interest at the time of acquisition by a portfolio or are rated in the lower rating categories (Ca or lower by Moody's and CC or lower by S&P) or which, if unrated, are in the judgment of a sub-adviser of equivalent quality. Investment in distressed debt securities is speculative and involves significant risk. The risks associated with high-yield securities are heightened by investing in distressed debt securities.

A portfolio will generally make such investments only when the portfolio's sub-adviser believes it is reasonably likely that the issuer of the distressed debt securities will make an exchange offer or will be the subject of a plan of reorganization pursuant to which the portfolio will receive new securities (e.g., equity securities). However, there can be no assurance that such an exchange offer will be made or that such a plan of reorganization will be adopted. In addition, a significant period of time may pass between the time at which a portfolio makes its investment in distressed debt securities and the time that any such exchange offer or plan of reorganization is completed. During this period, it is unlikely that the portfolio will receive any interest payments on the distressed debt securities, the portfolio will be subject to significant uncertainty as to whether or not the exchange offer or plan will be completed and the portfolio may be required to bear certain extraordinary expenses to protect or recover its investment. Even if an exchange offer is made or plan of reorganization is adopted with respect to the distressed debt securities held by a portfolio, there can be no assurance that the securities or other assets received by the portfolio in connection with such exchange offer or plan of reorganization will not have a lower value or income potential than may have been anticipated when the investment was made. Moreover, any securities received by the portfolio upon completion of an exchange offer or plan of reorganization may be restricted as to resale. As a result of a portfolio's participation in negotiations with respect to any exchange offer or plan of reorganization with respect to an issuer of distressed debt securities, the portfolio may be restricted from disposing of such securities.

Defaulted Securities

Defaulted securities are debt securities on which the issuer is not currently making interest payments. Generally, a portfolio will invest in defaulted securities only when its sub-adviser believes, based upon analysis of the financial condition, results of operations and economic outlook of an issuer, that there is potential for resumption of income payments, that the securities offer an unusual opportunity for capital appreciation or that other advantageous developments appear likely in the future. Notwithstanding a sub-adviser's belief as to the resumption of income payments, however, the purchase of any security on which payment of interest or dividends is suspended involves a high degree of risk. Such risk includes, among other things, the following:

Investments in securities that are in default involve a high degree of financial and market risks that can result in substantial, or at times even total, losses. Issuers of defaulted securities may have substantial capital needs and may become involved in bankruptcy or reorganization proceedings. Among the problems involved in investments in such issuers is the fact that it may be difficult to obtain information about the condition of such issuers. The market prices of such securities also are subject to abrupt and erratic movements and above average price volatility, and the spread between the bid and asked prices of such securities may be greater than normally expected.

The funds will limit holdings of any such securities to amounts that their respective sub-advisers believes could be readily sold, and its holdings of such securities would, in any event, be limited so as not to limit the funds' ability to readily dispose of securities to meet redemptions.

Structured Notes and Related Instruments

“Structured” notes and other related instruments are privately negotiated debt obligations where the principal and/or interest is determined by reference to the performance of a benchmark asset, market or interest rate (an “embedded index”), such as selected securities, an index of securities or specified interest rates, or the differential performance of two assets or markets, such as indexes reflecting bonds. Structured instruments may be issued by corporations, including banks, as well as by governmental agencies and frequently are assembled in the form of medium-term notes, but a variety of forms is available and may be used in particular circumstances. The terms of such structured instruments normally provide that their principal and/or interest payments are to be adjusted upwards or downwards (but ordinarily not below zero) to reflect changes in the embedded index while the instruments are outstanding. As a result, the interest and/or principal payments that may be made on a structured product may vary widely, depending on a variety of factors, including the volatility of the embedded index and the effect of changes in the embedded index on principal and/or interest payments. The rate of return on structured notes may be determined by applying a multiplier to the performance or differential performance of the referenced index(es) or other asset(s). Application of a multiplier involves leverage that will serve to magnify the potential for gain and the risk of loss. Investment in indexed securities and structured notes involves certain risks, including the credit risk of the issuer and the normal risks of price changes in response to changes in interest rates. Further, in the case of certain indexed securities or structured notes, a decline in the reference instrument may cause the interest rate to be reduced to zero, and any further declines in the reference instrument may then reduce the principal amount payable on maturity. Finally, these securities may be less liquid than other types of securities, and may be more volatile than their underlying reference instruments.

U.S. Government Securities

U.S. Government obligations generally include direct obligations of the U.S. Treasury (such as U.S. Treasury bills, notes, and bonds) and obligations issued or guaranteed by U.S. Government agencies or instrumentalities. Examples of the types of U.S. Government securities that a portfolio may hold include the Federal Housing Administration, Small Business Administration, General Services Administration, Federal Farm Credit Banks, Federal Intermediate Credit Banks, and Maritime Administration. U.S. Government securities may be supported by the full faith and credit of the U.S. Government (such as securities of the Small Business Administration); by the right of the issuer to borrow from the U.S. Treasury (such as securities of the Federal Home Loan Bank); by the discretionary authority of the U.S. Government to purchase the agency's obligations (such as securities of the Federal National Mortgage Association); or only by the credit of the issuing agency.

Examples of agencies and instrumentalities which may not always receive financial support from the U.S. Government are: Federal Land Banks; Central Bank for Cooperatives; Federal Intermediate Credit Banks; Federal Home Loan Banks; Farmers Home Administration; and Federal National Mortgage Association.

Obligations guaranteed by U.S. government agencies or government-sponsored entities include issues by non-government-sponsored entities (like financial institutions) that carry direct guarantees from U.S. government agencies as part of government initiatives in response to the market crisis or otherwise. In the case of obligations not backed by the full faith and credit of the United States, a portfolio must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment and may not be able to assert a claim against the United States itself in the event the agency or instrumentality does not meet its commitments. Neither the U.S. government nor any of its agencies or instrumentalities guarantees the market value of the securities they issue. Therefore, the market value of such securities will fluctuate in response to changes in interest rates.

On August 5, 2011, S&P lowered the long-term sovereign credit rating assigned to the United States to AA+ with a negative outlook. On June 10, 2013, S&P revised the negative outlook to a stable outlook. The long-term impact of the downgrade or the impact of any potential future downgrades are unknown and could negatively impact the portfolios.

Variable and Floating Rate Securities

Variable and floating rate securities provide for a periodic adjustment in the interest rate paid on the obligations. The terms of such obligations provide that interest rates are adjusted periodically based upon an interest rate adjustment index as provided in the respective obligations. The adjustment intervals may be regular, and range from daily up to annually, or may be event-based, such as based on a change in the prime rate.

The interest rate on a floating rate debt instrument (a “floater”) is a variable rate which is tied to another interest rate, such as a corporate bond index or Treasury bill rate. The interest rate on a floater resets periodically, typically every six months. Because of the interest rate reset feature, floaters may provide a portfolio with a certain degree of protection against rising interest rates, although a portfolio will participate in any declines in interest rates as well. A credit spread trade is an investment position relating to a difference in the prices or interest rates of two bonds or other securities or currencies, where the value of the investment position is determined by movements in the difference between the prices or interest rates, as the case may be, of the respective securities or currencies.

The interest rate on an inverse floating rate debt instrument (an “inverse floater”) resets in the opposite direction from the market rate of interest to which the inverse floater is indexed. An inverse floating rate security may exhibit greater price volatility than a fixed rate obligation of similar credit quality.

A floater may be considered to be leveraged to the extent that its interest rate varies by a magnitude that exceeds the magnitude of the change in the index rate of interest. The higher degree of leverage inherent in some floaters is associated with greater volatility in their market values.

Such instruments may include variable amount master demand notes that permit the indebtedness thereunder to vary in addition to providing for periodic adjustments in the interest rate. The absence of an active secondary market with respect to particular variable and floating rate instruments could make it difficult for a portfolio to dispose of a variable or floating rate note if the issuer defaulted on its payment obligation or during periods that a portfolio is not entitled to exercise its demand rights, and a portfolio could, for these or other reasons, suffer a loss with respect to such instruments. In determining average-weighted portfolio maturity, an instrument will be deemed to have a maturity equal to either the period remaining until the next interest rate adjustment or the time a portfolio involved can recover payment of principal as specified in the instrument, depending on the type of instrument involved.

Variable rate master demand notes are unsecured commercial paper instruments that permit the indebtedness thereunder to vary and provide for periodic adjustment in the interest rate. Because variable rate master demand notes are direct lending arrangements between a portfolio and the issuer, they are not normally traded.

Although no active secondary market may exist for these notes, a portfolio may demand payment of principal and accrued interest at any time or may resell the note to a third party. While the notes are not typically rated by credit rating agencies, issuers of variable rate master demand notes must satisfy a sub-adviser that the ratings are within the two highest ratings of commercial paper.

In addition, when purchasing variable rate master demand notes, a sub-adviser will consider the earning power, cash flows, and other liquidity ratios of the issuers of the notes and will continuously monitor their financial status and ability to meet payment on demand.

In the event an issuer of a variable rate master demand note defaulted on its payment obligations, a portfolio might be unable to dispose of the note because of the absence of a secondary market and could, for this or other reasons, suffer a loss to the extent of the default.

All portfolios (except Transamerica JPMorgan Core Bond VP) will not invest more than 5% of their assets in inverse floaters. Transamerica JPMorgan Core Bond VP will not invest more than 10% of its assets in inverse floaters.

Municipal Securities

Municipal securities generally include debt obligations (bonds, notes or commercial paper) issued by or on behalf of any of the 50 states and their political subdivisions, agencies and public authorities, certain other governmental issuers (such as Puerto Rico, the U.S. Virgin Islands and Guam) or other qualifying issuers, participation or other interests in these securities and other related investments. Although the interest paid on municipal securities is generally excluded from gross income, a portfolio's distributions of interest paid on municipal securities will be subject to tax when distributed to taxable shareholders unless the portfolio reports the distributions as exempt-interest dividends. None of the funds expects to be eligible to distribute exempt-interest dividends. Exempt-interest dividends may be taken into account for purposes of the federal individual and corporate alternative minimum tax ("AMT").

Municipal securities are issued to obtain funds for various public purposes, including the construction of a wide range of public facilities, such as airports, bridges, highways, housing, hospitals, mass transportation, schools, streets, water and sewer works, gas, and electric utilities. They may also be issued to refund outstanding obligations, to obtain funds for general operating expenses, or to obtain funds to loan to other public institutions and facilities and in anticipation of the receipt of revenue or the issuance of other obligations.

The two principal classifications of municipal securities are "general obligation" securities and "limited obligation" or "revenue" securities. General obligation securities are secured by a municipal issuer's pledge of its full faith, credit, and taxing power for the payment of principal and interest. Accordingly, the capacity of the issuer of a general obligation bond as to the timely payment of interest and the repayment of principal when due is affected by the issuer's maintenance of its tax base. Revenue securities are payable only from the revenues derived from a particular facility or class of facilities or, in some cases, from the proceeds of a special excise tax or other specific revenue source. Accordingly, the timely payment of interest and the repayment of principal in accordance with the terms of the revenue security is a function of the economic viability of the facility or revenue source. Revenue securities include private activity bonds (described below) which are not payable from the unrestricted revenues of the issuer. Consequently, the credit quality of private activity bonds is usually directly related to the credit standing of the corporate user of the facility involved. Municipal securities may also include "moral obligation" bonds, which are normally issued by special purpose public authorities. If the issuer of moral obligation bonds is unable to meet its debt service obligations from current revenues, it may draw on a reserve fund the restoration of which is a moral commitment but not a legal obligation of the state or municipality which created the issuer.

Private Activity Bonds: Private activity bonds are issued by or on behalf of public authorities to provide funds, usually through a loan or lease arrangement, to a private entity for the purpose of financing construction of privately operated industrial facilities, such as warehouse, office, plant and storage facilities and environmental and pollution control facilities. Such bonds are secured primarily by revenues derived from loan repayments or lease payments due from the entity, which may or may not be guaranteed by a parent company or otherwise secured. Private activity bonds generally are not secured by a pledge of the taxing power of the issuer of such bonds. Therefore, repayment of such bonds generally depends on the revenue of a private entity. The continued ability of an entity to generate sufficient revenues for the payment of principal and interest on such bonds will be affected by many factors, including the size of the entity, its capital structure, demand for its products or services, competition, general economic conditions, government regulation and the entity's dependence on revenues for the operation of the particular facility being financed.

Interest income on certain types of private activity bonds issued after August 7, 1986 to finance non-governmental activities is a specific tax preference item for purposes of the AMT. Bonds issued in 2009 and 2010 generally are not treated as private activity bonds, and interest earned on such bonds generally is not treated as a tax preference item. Individual and corporate shareholders may be subject to a federal AMT to the extent that a portfolio's exempt-interest dividends are derived from interest on private activity bonds. Although exempt-interest dividends derived from interest income on tax-exempt municipal obligations are generally a component of the "current earnings" adjustment item for purposes of the federal corporate AMT, exempt-interest dividends derived from interest income on municipal obligations issued in 2009 and 2010 generally are not included in the current earnings adjustment.

Industrial Development Bonds: Industrial development bonds ("IDBs") are issued by public authorities to obtain funds to provide financing for privately-operated facilities for business and manufacturing, housing, sports, convention or trade show facilities, airport, mass transit, port and parking facilities, air or water pollution control facilities, and certain facilities for water supply, gas, electricity or sewerage or solid waste disposal. Although IDBs are issued by municipal authorities, the payment of principal and interest on IDBs is dependent solely on the ability of the user of the facilities financed by the bonds to meet its financial obligations and the pledge, if any, of the real and personal property being financed as security for such payments. IDBs are considered municipal securities if the interest paid is exempt from regular federal income tax. Interest earned on IDBs may be subject to the federal AMT.

Municipal Notes: Municipal notes are short-term debt obligations issued by municipalities which normally have a maturity at the time of issuance of six months to three years. Such notes include tax anticipation notes, bond anticipation notes, revenue anticipation notes and project notes. Notes sold in anticipation of collection of taxes, a bond sale or receipt of other revenues are normally obligations of the issuing municipality or agency.

Municipal Commercial Paper: Municipal commercial paper is short-term debt obligations issued by municipalities. Although done so infrequently, municipal commercial paper may be issued at a discount (sometimes referred to as Short-Term Discount Notes). These obligations are issued to meet seasonal working capital needs of a municipality or interim construction financing and are paid from a municipality's general revenues or refinanced with long-term debt. Although the availability of municipal commercial paper has been limited, from time to time the amounts of such debt obligations offered have increased, and this increase may continue.

Participation Interests: A participation interest in municipal obligations (such as private activity bonds and municipal lease obligations) gives a portfolio an undivided interest in the municipal obligation in the proportion that the portfolio's participation interest bears to the total principal amount of the municipal obligation. Participation interests in municipal obligations may be backed by an irrevocable letter of credit or guarantee of, or a right to put to, a bank (which may be the bank issuing the participation interest, a bank issuing a confirming letter of credit to that of the issuing bank, or a bank serving as agent of the issuing bank with respect to the possible repurchase of the participation interest) or insurance policy of an insurance company. A portfolio has the right to sell the participation interest back to the institution or draw on the letter of credit or insurance after a specified period of notice, for all or any part of the full principal amount of the portfolio's participation in the security, plus accrued interest. Purchase of a participation interest may involve the risk that a portfolio will not be deemed to be the owner of the underlying municipal obligation for purposes of the ability to claim tax exemption of interest paid on that municipal obligation.

Variable Rate Obligations: The interest rate payable on a variable rate municipal obligation is adjusted either at predetermined periodic intervals or whenever there is a change in the market rate of interest upon which the interest rate payable is based. A variable rate obligation may include a demand feature pursuant to which a portfolio would have the right to demand prepayment of the principal amount of the obligation prior to its stated maturity. The issuer of the variable rate obligation may retain the right to prepay the principal amount prior to maturity.

Municipal Lease Obligations: Municipal lease obligations may take the form of a lease, an installment purchase or a conditional sales contract. Municipal lease obligations are issued by state and local governments and authorities to acquire land, equipment and facilities such as state and municipal vehicles, telecommunications and computer equipment, and other capital assets. Interest payments on qualifying municipal leases are exempt from federal income taxes. A portfolio may purchase these obligations directly, or they may purchase participation interests in such obligations. Municipal leases are generally subject to greater risks than general obligation or revenue bonds. State laws set forth requirements that states or municipalities must meet in order to issue municipal obligations; and such obligations may contain a covenant by the issuer to budget for, appropriate, and make payments due under the obligation. However, certain municipal lease obligations may contain "non-appropriation" clauses which provide that the issuer is not obligated to make payments on the obligation in future years unless funds have been appropriated for this purpose each year. Accordingly, such obligations are subject to "non-appropriation" risk. While municipal leases are secured by the underlying capital asset, it may be difficult to dispose of such assets in the event of non-appropriation or other default.

Residual Interest Bonds: Residual Interest Bonds (sometimes referred to as inverse floaters) ("RIBs") are created by brokers by depositing a Municipal Bond in a trust. The trust in turn issues a variable rate security and RIBs. The interest rate on the short-term component is reset by an index or auction process normally every seven to 35 days, while the RIB holder receives the balance of the income from the underlying Municipal Bond less an auction fee. Therefore, rising short-term interest rates result in lower income for the RIB, and vice versa. An investment in RIBs typically will involve greater risk than an investment in a fixed rate bond. RIBs have interest rates that bear an inverse relationship to the interest rate on another security or the value of an index. Because increases in the interest rate on the other security or index reduce the residual interest paid on a RIB, the value of a RIB is generally more volatile than that of a fixed rate bond. RIBs have interest rate adjustment formulas that generally reduce or, in the extreme, eliminate the interest paid to a portfolio when short-term

interest rates rise, and increase the interest paid to the funds when short-term interest rates fall. RIBs have varying degrees of liquidity that approximate the liquidity of the underlying bond(s), and the market price for these securities is volatile. RIBs can be very volatile and may be less liquid than other Municipal Bonds of comparable maturity. These securities will generally underperform the market of fixed rate bonds in a rising interest rate environment, but tend to outperform the market of fixed rate bonds when interest rates decline or remain relatively stable.

Tax-Exempt Commercial Paper: Tax-exempt commercial paper is a short-term obligation with a stated maturity of 270 days or less. It is issued by state and local governments or their agencies to finance seasonal working capital needs or as short term financing in anticipation of longer term financing. While tax-exempt commercial paper is intended to be repaid from general revenues or refinanced, it frequently is backed by a letter of credit, lending arrangement, note repurchase agreement or other credit facility agreement offered by a bank or financial institution.

Custodial Receipts and Certificates: Custodial receipts or certificates underwritten by securities dealers or banks evidence ownership of future interest payments, principal payments or both on certain municipal obligations. The underwriter of these certificates or receipts typically purchases municipal obligations and deposits the obligations in an irrevocable trust or custodial account with a custodian bank, which then issues receipts or certificates that evidence ownership of the periodic unmatured coupon payments and the final principal payment on the obligations. Although under the terms of a custodial receipt, a portfolio would be typically authorized to assert its rights directly against the issuer of the underlying obligation, a portfolio could be required to assert through the custodian bank those rights as may exist against the underlying issuer. Thus, in the event the underlying issuer fails to pay principal and/or interest when due, the portfolio may be subject to delays, expenses and risks that are greater than those that would have been involved if the portfolio had purchased a direct obligation of the issuer. In addition, in the event that the trust or custodial account in which the underlying security has been deposited is determined to be an association taxable as a corporation, instead of a non-taxable entity, the yield on the underlying security would be reduced in recognition of any taxes paid.

Stand-By Commitments: Under a stand-by commitment a dealer agrees to purchase, at the portfolio's option, specified municipal obligations held by the portfolio at a specified price and, in this respect, stand-by commitments are comparable to put options. A stand-by commitment entitles the holder to achieve same day settlement and to receive an exercise price equal to the amortized cost of the underlying security plus accrued interest, if any, at the time of exercise. The portfolio will be subject to credit risk with respect to an institution providing a stand-by commitment and a decline in the credit quality of the institution could cause losses to the portfolio.

Tender Option Bonds: A tender option bond is a municipal bond (generally held pursuant to a custodial arrangement) having a relatively long maturity and bearing interest at a fixed rate substantially higher than prevailing short-term tax-exempt rates, that has been coupled with the agreement of a third party, such as a financial institution, pursuant to which such institution grants the security holders the option, at periodic intervals, to tender their securities to the institution and receive the face value thereof. As consideration for providing the option, the institution generally receives periodic fees equal to the difference between the municipal bond's fixed coupon rate and the rate, as determined by a remarketing or similar agent, that would cause the securities, coupled with the tender option, to trade at par. Thus, after payment of this fee, the security holder would effectively hold a demand obligation that bears interest at the prevailing short-term tax-exempt rate.

Loan Participations and Assignments

Loan participations typically represent direct participation in a loan to a corporate borrower, and generally are offered by banks or other financial institutions or lending syndicates. A portfolio may participate in such syndications, or can buy part of a loan, becoming a lender. A portfolio's investment in a loan participation typically will result in the portfolio having a contractual relationship only with the lender and not with the borrower. A portfolio will have the right to receive payments of principal, interest and any fees to which it is entitled only from the lender selling the participation and only upon receipt by the lender of the payments from the borrower. In connection with purchasing a participation, a portfolio generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any right of set-off against the borrower, and the portfolio may not directly benefit from any collateral supporting the loan in which it has purchased the participation. As a result, a portfolio may be subject to the credit risk of both the borrower and the lender that is selling the participation. In the event of the insolvency of the lender selling a participation, a portfolio may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower. Some loans may be secured in whole or in part by assets or other collateral. In other cases, loans may be unsecured or may become undersecured by declines in the value of assets or other collateral securing such loan.

When a portfolio purchases a loan assignment from lenders, it will acquire direct rights against the borrowers on the loan. Because assignments are arranged through private negotiations between potential assignees and potential assignors, however, the rights and obligations acquired by a portfolio as the purchaser of an assignment may differ from, and be more limited than, those held by the assigning lender.

Certain of the participations or assignments acquired by a portfolio may involve unfunded commitments of the lenders or revolving credit facilities under which a borrower may from time to time borrow and repay amounts up to the maximum amount of the facility. In such cases, the portfolio would have an obligation to advance its portion of such additional borrowings upon the terms specified in the loan documentation. A portfolio may acquire loans of borrowers that are experiencing, or are more likely to experience, financial difficulty, including loans of borrowers that have filed for bankruptcy protection. Although loans in which a portfolio may invest generally will be

secured by specific collateral, there can be no assurance that liquidation of such collateral would satisfy the borrower's obligation in the event of nonpayment of scheduled interest or principal, or that such collateral could be readily liquidated. In the event of bankruptcy of a borrower, a portfolio could experience delays or limitations with respect to its ability to realize the benefits of the collateral securing a senior loan.

Because there is no liquid market for commercial loans, the portfolios anticipate that such securities could be sold only to a limited number of institutional investors. The lack of a liquid secondary market may have an adverse impact on the value of such securities and a portfolio's ability to dispose of particular assignments or participations when necessary to meet redemptions of fund shares, to meet the portfolio's liquidity needs or when necessary in response to a specific economic event, such as deterioration in the creditworthiness of the borrower. The lack of a liquid secondary market also may make it more difficult for a portfolio to assign a value to those securities for purposes of valuing the portfolio's investments and calculating its net asset value.

Investments in loans through a direct assignment of the financial institution's interests with respect to the loan may involve additional risks to a portfolio. For example, if a loan is foreclosed, a portfolio could become part owner of any collateral, and would bear the costs and liabilities associated with owning and disposing of the collateral. In addition, it is conceivable that under emerging legal theories of lender liability, a portfolio could be held liable as co-lender. It is unclear whether loans and other forms of direct indebtedness offer securities law protections against fraud and misrepresentation. In the absence of definitive regulatory guidance, a portfolio relies on its sub-adviser's research in an attempt to avoid situations where fraud or misrepresentation could adversely affect the portfolio.

Subordinated Securities

Subordinated securities are subordinated or "junior" to more senior securities of the issuer, or which represent interests in pools of such subordinated or junior securities. Such securities may include so-called "high yield" or "junk" bonds (i.e., bonds that are rated below investment grade by a rating agency or that are determined by a portfolio's sub-adviser to be of equivalent quality) and preferred stock. Under the terms of subordinated securities, payments that would otherwise be made to their holders may be required to be made to the holders of more senior securities, and/or the subordinated or junior securities may have junior liens, if they have any rights at all, in any collateral (meaning proceeds of the collateral are required to be paid first to the holders of more senior securities). As a result, subordinated or junior securities will be disproportionately adversely affected by a default or even a perceived decline in creditworthiness of the issuer.

Participation Interests

A participation interest gives a portfolio an undivided interest in the security in the proportion that the portfolio's participation interest bears to the total principal amount of the security. These instruments may have fixed, floating or variable rates of interest, with remaining maturities of 13 months or less. If the participation interest is unrated, or has been given a rating below that which is permissible for purchase by a portfolio, the participation interest will be backed by an irrevocable letter of credit or guarantee of a bank, or the payment obligation otherwise will be collateralized by U.S. government securities, or, in the case of unrated participation interests, the portfolio's sub-adviser must have determined that the instrument is of comparable quality to those instruments in which the portfolio may invest. For certain participation interests, a portfolio will have the right to demand payment, on not more than seven days' notice, for all or any part of the portfolio's participation interest in the security, plus accrued interest. As to these instruments, a portfolio intends to exercise its right to demand payment only upon a default under the terms of the security, as needed to provide liquidity to meet redemptions, or to maintain or improve the quality of its investment portfolio.

Unsecured Promissory Notes

A portfolio also may purchase unsecured promissory notes which are not readily marketable and have not been registered under the 1933 Act, provided such investments are consistent with the portfolio's investment objective.

Guaranteed Investment Contracts

A portfolio may invest in guaranteed investment contracts ("GICs") issued by insurance companies. Pursuant to such contracts, a portfolio makes cash contributions to a deposit portfolio of the insurance company's general account. The insurance company then credits to the portfolio guaranteed interest. The GICs provide that this guaranteed interest will not be less than a certain minimum rate. The insurance company may assess periodic charges against a GIC for expenses and service costs allocable to it, and the charges will be deducted from the value of the deposit portfolio. Because a portfolio may not receive the principal amount of a GIC from the insurance company on seven days' notice or less, the GIC is considered an illiquid investment. In determining average weighted portfolio maturity, a GIC will be deemed to have a maturity equal to the longer of the period of time remaining until the next readjustment of the guaranteed interest rate or the period of time remaining until the principal amount can be recovered from the issuer through demand.

Credit-Linked Securities

Credit-linked securities are issued by a limited purpose trust or other vehicle that, in turn, invests in a basket of derivative instruments, such as credit default swaps, interest rate swaps and other securities, in order to provide exposure to certain high yield or other fixed income markets. For example, a portfolio may invest in credit-linked securities as a cash management tool in order to gain exposure to the high yield markets and/or to remain fully invested when more traditional income producing securities are not available. Like an investment in a bond, investments in credit-linked securities represent the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on the trust's receipt of payments from, and the trust's potential obligations to, the counterparties to the derivative instruments and other securities in which the trust invests. For instance, the trust may sell one or more credit default swaps, under which the trust would receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a

default occurs, the stream of payments may stop and the trust would be obligated to pay the counterparty the par (or other agreed upon value) of the referenced debt obligation. This, in turn, would reduce the amount of income and principal that a portfolio would receive as an investor in the trust. A portfolio's investments in these instruments are indirectly subject to the risks associated with derivative instruments, including, among others, credit risk, default or similar event risk, counterparty risk, interest rate risk, leverage risk and management risk. It is expected that the securities will be exempt from registration under the 1933 Act. Accordingly, there may be no established trading market for the securities and they may constitute illiquid investments.

Certain issuers of structured products may be deemed to be investment companies as defined in the 1940 Act. As a result, the portfolios' investments in these structured products may be subject to limits applicable to investments in investment companies and may be subject to restrictions contained in the 1940 Act.

Event-Linked Bonds

A portfolio may invest a portion of its net assets in "event-linked bonds," which are fixed income securities for which the return of principal and payment of interest is contingent on the non-occurrence of specific "trigger" event, such as a hurricane, earthquake, or other physical or weather-related phenomenon. Some event-linked bonds are commonly referred to as "catastrophe bonds." If a trigger event causes losses exceeding a specific amount in the geographic region and time period specified in a bond, a portfolio investing in the bond may lose a portion or all of its principal invested in the bond. If no trigger event occurs, the portfolio will recover its principal plus interest. For some event-linked bonds, the trigger event or losses may be based on company-wide losses, index-portfolio losses, industry indices, or readings of scientific instruments rather than specified actual losses. Often the event-linked bonds provide for extensions of maturity that are mandatory, or optional at the discretion of the issuer, in order to process and audit loss claims in those cases where a trigger event has, or possibly has, occurred. An extension of maturity may increase volatility. In addition to the specified trigger events, event-linked bonds also may expose a portfolio to certain unanticipated risks including but not limited to issuer risk, credit risk, counterparty risk, adverse regulatory or jurisdictional interpretations, liquidity risk, and adverse tax consequences.

Certain portfolios may invest up to 5% of its net assets in "event-linked bonds."

Equity Securities and Related Investments

Equity securities, such as common stock, generally represent an ownership interest in a company. While equity securities have historically generated higher average returns than fixed income securities, equity securities have also experienced significantly more volatility in those returns. An adverse event, such as an unfavorable earnings report, may depress the value of a particular equity security held by a portfolio. Also, the prices of equity securities, particularly common stocks, are sensitive to general movements in the stock market. A drop in the stock market may depress the price of equity securities held by a portfolio.

Holders of equity securities are not creditors of the issuer. As such, if an issuer liquidates, holders of equity securities are entitled to their pro rata share of the issuer's assets, if any, after creditors (including the holders of fixed income securities and senior equity securities) are paid.

There may be little trading in the secondary market for particular equity securities, which may adversely affect a portfolio's ability to value accurately or dispose of such equity securities. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the value and/or liquidity of equity securities.

Common Stocks: Common stocks are the most prevalent type of equity security. Common stockholders receive the residual value of the issuer's earnings and assets after the issuer pays its creditors and any preferred stockholders. As a result, changes in an issuer's earnings directly influence the value of its common stock.

Preferred Stocks: A portfolio may purchase preferred stock. Preferred stock pays dividends at a specified rate and has preference over common stock in the payment of dividends and the liquidation of an issuer's assets but is junior to the debt securities of the issuer in those same respects. Preferred stock generally pays quarterly dividends. Preferred stocks may differ in many of their provisions. Among the features that differentiate preferred stocks from one another are the dividend rights, which may be cumulative or non-cumulative and participating or non-participating, redemption provisions, and voting rights. Such features will establish the income return and may affect the prospects for capital appreciation or risks of capital loss.

The market prices of preferred stocks are subject to changes in interest rates and are more sensitive to changes in an issuer's creditworthiness than are the prices of debt securities. Shareholders of preferred stock may suffer a loss of value if dividends are not paid. Under ordinary circumstances, preferred stock does not carry voting rights.

Investments in Initial Public Offerings: A portfolio may invest in initial public offerings of equity securities. The market for such securities may be more volatile and entail greater risk of loss than investments in more established companies. Investments in initial public offerings may represent a significant portion of a portfolio's investment performance. A portfolio cannot assure that investments in initial public offerings will continue to be available to the fund or, if available, will result in positive investment performance. In addition, as a portfolio's portfolio grows in size, the impact of investments in initial public offerings on the overall performance of the portfolio is likely to decrease.

Warrants and Rights

A portfolio may invest in warrants and rights. A warrant is a type of security that entitles the holder to buy a given number of common stock at a specified price, usually higher than the market price at the time of issuance, for a period of years or to perpetuity. The purchaser of a

warrant expects the market price of the security will exceed the purchase price of the warrant plus the exercise price of the warrant, thus resulting in a profit. Of course, because the market price may never exceed the exercise price before the expiration date of the warrant, the purchaser of the warrant risks the loss of the entire purchase price of the warrant. In contrast, rights, which also represent the right to buy common shares, normally have a subscription price lower than the current market value of the common stock and are offered during a set subscription period.

Warrants and rights are subject to the same market risks as common stocks, but may be more volatile in price. An investment in warrants or rights may be considered speculative. In addition, the value of a warrant or right does not necessarily change with the value of the underlying securities and a warrant or right ceases to have value if it is not exercised prior to its expiration date.

Derivatives

The following investments are subject to limitations as set forth in each portfolio's investment restrictions and policies.

A portfolio may utilize options, futures contracts (sometimes referred to as "futures"), options on futures contracts, forward contracts, swaps, swaps on futures contracts, caps, floors, collars, indexed securities, various mortgage-related obligations, structured or synthetic financial instruments and other derivative instruments (collectively, "Financial Instruments"). A portfolio may use Financial Instruments for any purpose, including as a substitute for other investments, to attempt to enhance its portfolio's return or yield and to alter the investment characteristics of its portfolio (including to attempt to mitigate risk of loss in some fashion, or "hedge"). A portfolio may choose not to make use of derivatives for a variety of reasons, and no assurance can be given that any derivatives strategy employed will be successful.

The U.S. government is in the process of adopting and implementing regulations governing derivatives markets, including mandatory clearing and on-facility execution of certain derivatives, margin and reporting requirements. These and other regulations could adversely affect the value, availability and performance of derivative instruments, may make them more costly, and may limit or restrict their use by a portfolio.

The use of Financial Instruments may be limited by applicable law and any applicable regulations of the SEC, the Commodity Futures Trading Commission (the "CFTC"), or the exchanges on which some Financial Instruments may be traded. (Note, however, that some Financial Instruments that a portfolio may use may not be listed on any exchange and may not be regulated by the SEC or the CFTC.) In addition, a portfolio's ability to use Financial Instruments may be limited by tax considerations.

In addition to the instruments and strategies discussed in this section, a sub-adviser may discover additional opportunities in connection with Financial Instruments and other similar or related techniques. These opportunities may become available as a sub-adviser develops new techniques, as regulatory authorities broaden the range of permitted transactions and as new Financial Instruments or other techniques are developed. A sub-adviser may utilize these opportunities and techniques to the extent that they are consistent with a portfolio's investment objective and permitted by its investment limitations and applicable regulatory authorities. These opportunities and techniques may involve risks different from or in addition to those summarized herein.

This discussion is not intended to limit a portfolio's investment flexibility, unless such a limitation is expressly stated, and therefore will be construed by a portfolio as broadly as possible. Statements concerning what a portfolio may do are not intended to limit any other activity. Also, as with any investment or investment technique, even when the prospectus or this discussion indicates that a portfolio may engage in an activity, it may not actually do so for a variety of reasons, including cost considerations.

The use of Financial Instruments involves special considerations and risks, certain of which are summarized below, and may result in losses to a portfolio. In general, the use of Financial Instruments may increase the volatility of a portfolio and may involve a small investment of cash relative to the magnitude of the risk or exposure assumed. Even a small investment in derivatives may magnify or otherwise increase investment losses to a portfolio. As noted above, there can be no assurance that any derivatives strategy will succeed.

- Financial Instruments are subject to the risk that the market value of the derivative itself or the market value of underlying instruments will change in a way adverse to a portfolio's interest. Many Financial Instruments are complex, and successful use of them depends in part upon the sub-adviser's ability to forecast correctly future market trends and other financial or economic factors or the value of the underlying security, index, interest rate or currency. Even if a sub-adviser's forecasts are correct, other factors may cause distortions or dislocations in the markets that result in unsuccessful transactions. Financial Instruments may behave in unexpected ways, especially in abnormal or volatile market conditions.
- A portfolio may be required to maintain assets as "cover," maintain segregated accounts, post collateral or make margin payments when it takes positions in Financial Instruments. Assets that are segregated or used as cover, margin or collateral may be required to be in the form of cash or liquid securities, and typically may not be sold while the position in the Financial Instrument is open unless they are replaced with other appropriate assets. If markets move against a portfolio's position, the portfolio may be required to maintain or post additional assets and may have to dispose of existing investments to obtain assets acceptable as collateral or margin. This may prevent it from pursuing its investment objective. Assets that are segregated or used as cover, margin or collateral typically are invested, and these investments are subject to risk and may result in losses to a portfolio. These losses may be substantial, and may be in addition to losses incurred by using the Financial Instrument in question. If a portfolio is unable to close out its positions, it may be required to continue to maintain such assets or accounts or make such payments until the positions expire or mature, and the portfolio will continue to be subject to investment risk on the assets. Segregation, cover, margin and collateral requirements may impair a portfolio's ability to sell a portfolio security or make an investment at a time when it would otherwise be favorable to do so, or require the portfolio to sell a portfolio security or close out a derivatives position at a disadvantageous time or price.

- A portfolio's ability to close out or unwind a position in a Financial Instrument prior to expiration or maturity depends on the existence of a liquid market or, in the absence of such a market, the ability and willingness of the other party to the transaction (the "counterparty") to enter into a transaction closing out the position. If there is no market or a portfolio is not successful in its negotiations, a portfolio may not be able to sell or unwind the derivative position at a particular time or at an anticipated price. This may also be the case if the counterparty to the Financial Instrument becomes insolvent. A portfolio may be required to make delivery of portfolio securities or other assets underlying a Financial Instrument in order to close out a position or to sell portfolio securities or assets at a disadvantageous time or price in order to obtain cash to close out the position. While the position remains open, a portfolio continues to be subject to investment risk on the Financial Instrument. A portfolio may or may not be able to take other actions or enter into other transactions, including hedging transactions, to limit or reduce its exposure to the Financial Instrument.
- Certain Financial Instruments transactions may have a leveraging effect on a portfolio, and adverse changes in the value of the underlying security, index, interest rate, currency or other instrument or measure can result in losses substantially greater than the amount invested in the Financial Instrument itself. When a portfolio engages in transactions that have a leveraging effect, the value of the portfolio is likely to be more volatile and all other risks also are likely to be compounded. This is because leverage generally magnifies the effect of any increase or decrease in the value of an asset and creates investment risk with respect to a larger pool of assets than a portfolio would otherwise have. Certain Financial Instruments have the potential for unlimited loss, regardless of the size of the initial investment.
- Many Financial Instruments may be difficult to value or may be valued subjectively. Inaccurate valuations can result in increased payment requirements to counterparties or a loss of value to a portfolio.
- Liquidity risk exists when a particular Financial Instrument is difficult to purchase or sell. If a derivative transaction is particularly large or if the relevant market is illiquid, a portfolio may be unable to initiate a transaction or liquidate a position at an advantageous time or price. Certain Financial Instruments, including certain over-the-counter (or "OTC") options and swaps, may be considered illiquid and therefore subject to a portfolio's limitation on investments in illiquid securities.
- In a hedging transaction there may be imperfect correlation, or even no correlation, between the identity, price or price movements of a Financial Instrument and the identity, price or price movements of the investments being hedged. This lack of correlation may cause the hedge to be unsuccessful and may result in a portfolio incurring substantial losses and/or not achieving anticipated gains.
- Hedging strategies can reduce opportunity for gain by offsetting the positive effect of favorable price movements. Even if the strategy works as intended, a portfolio might be in a better position had it not attempted to hedge at all.
- Financial Instruments transactions used for non-hedging purposes may result in losses which would not be offset by increases in the value of portfolio securities or declines in the cost of securities to be acquired. In the event that a portfolio enters into a derivatives transaction as an alternative to purchasing or selling other investments or in order to obtain desired exposure to an index or market, the portfolio will be exposed to the same risks as are incurred in purchasing or selling the other investments directly, as well as the risks of the derivatives transaction itself.
- Certain Financial Instruments transactions involve the risk of loss resulting from the insolvency or bankruptcy of the counterparty or the failure by the counterparty to make required payments or otherwise comply with the terms of the contract. In the event of default by a counterparty, a portfolio may have contractual remedies pursuant to the agreements related to the transaction, which may be limited by applicable law in the case of the counterparty's bankruptcy.
- Certain Financial Instruments transactions, including certain options, swaps, forward contracts, and certain options on foreign currencies, are not entered into or traded on exchanges or in markets regulated by the CFTC or the SEC. Instead, such OTC derivatives are entered into directly by the counterparties and may be traded only through financial institutions acting as market makers. Many of the protections afforded to exchange participants will not be available to participants in OTC derivatives transactions. For example, OTC derivatives transactions are not subject to the guarantee of an exchange or clearinghouse and as a result a portfolio bears greater risk of default by the counterparties to such transactions. Information available on counterparty creditworthiness may be incomplete or outdated, thus reducing the ability to anticipate counterparty defaults.
- Swap contracts involve special risks. Swaps may in some cases be illiquid. In the absence of a central exchange or market for swap transactions, they may be difficult to trade or value, especially in the event of market disruptions. The Dodd-Frank Act established a comprehensive new regulatory framework for swaps. Under this framework, regulation of the swap market is divided between the SEC and the CFTC. The SEC and CFTC have approved a number of rules and interpretations as part of the establishment of this new regulatory regime. It is possible that developments in the swap market, including these new or additional regulations, could adversely affect a portfolio's ability to terminate existing swap agreements or to realize amounts to be received under such agreements. Credit default swaps involve additional risks. For example, credit default swaps increase credit risk since a portfolio has exposure to both the issuer of the referenced obligation (typically a debt obligation) and the counterparty to the credit default swap.
- Certain derivatives, such as interest rate swaps and credit default swaps that are based on an index, are required under applicable law to be cleared by a regulated clearinghouse. Swaps subject to this requirement are typically submitted for clearing through brokerage firms that are members of the clearinghouse. A portfolio would establish an account with a brokerage firm to facilitate clearing such a swap, and the clearinghouse would become the portfolio's counterparty. A brokerage firm would guarantee the portfolio's performance on the swap to the clearinghouse. The portfolio would be exposed to the credit risk of the clearinghouse and the brokerage firm that holds the

cleared swap. The brokerage firm also would impose margin requirements with respect to open cleared swap positions held by the portfolio, and the brokerage firm would be able to require termination of those positions in certain circumstances. These margin requirements and termination provisions may adversely affect the portfolio's ability to trade cleared swaps. In addition, the portfolio may not be able to recover the full amount of its margin from a brokerage firm if the firm were to go into bankruptcy. It is also possible that the portfolio would not be able to enter into a swap transaction that is required to be cleared if no clearinghouse will accept the swap for clearing.

- Swaps that are required to be cleared must be traded on a regulated execution facility or contract market that makes them available for trading. The transition from trading swaps bilaterally to trading them on such a facility or market may not result in swaps being easier to trade or value and may present certain execution risks if these facilities and markets do not operate properly. On-facility trading of swaps is also expected to lead to greater standardization of their terms. It is possible that a portfolio may not be able to enter into swaps that fully meet its investment needs, or that the costs of entering into customized swaps, including any applicable margin requirements, will be significant.
- Financial Instruments involve operational risk. There may be incomplete or erroneous documentation or inadequate collateral or margin, or transactions may fail to settle. The risk of operational failures may be higher for OTC derivatives transactions. For derivatives not guaranteed by an exchange, a portfolio may have only contractual remedies in the event of a counterparty default, and there may be delays, costs, disagreements as to the meaning of contractual terms and litigation, in enforcing those remedies.
- Financial Instruments transactions conducted outside the United States may not be conducted in the same manner as those entered into on U.S. exchanges, and may be subject to different margin, exercise, settlement or expiration procedures. Many of the risks of OTC derivatives transactions are also applicable to derivatives transactions conducted outside the United States. Derivatives transactions conducted outside the United States also are subject to the risks affecting foreign securities, currencies and other instruments.
- Financial Instruments involving currency are subject to additional risks. Currency related transactions may be negatively affected by government exchange controls, blockages, and manipulations. Exchange rates may be influenced by factors extrinsic to a country's economy. Also, there is no systematic reporting of last sale information with respect to foreign currencies. As a result, the information on which trading in currency derivatives is based may not be as complete as, and may be delayed beyond, comparable data for other transactions.
- Use of Financial Instruments involves transaction costs, which may be significant. Use of Financial Instruments also may increase the amount of income that would be subject to tax when distributed by a portfolio to taxable shareholders.

Hedging: As stated above, the term "hedging" often is used to describe a transaction or strategy that is intended to mitigate risk of loss in some fashion. Hedging strategies can be broadly categorized as "short hedges" and "long hedges." A short hedge is a purchase or sale of a Financial Instrument intended partially or fully to offset potential declines in the value of one or more investments held in a portfolio's portfolio. In a short hedge, a portfolio takes a position in a Financial Instrument whose price is expected to move in the opposite direction of the price of the investment being hedged.

Conversely, a long hedge is a purchase or sale of a Financial Instrument intended partially or fully to offset potential increases in the acquisition cost of one or more investments that a portfolio intends to acquire. Thus, in a long hedge, a portfolio takes a position in a Financial Instrument whose price is expected to move in the same direction as the price of the prospective investment being hedged. A long hedge is sometimes referred to as an anticipatory hedge. In an anticipatory hedge transaction, a portfolio does not own a corresponding security and, therefore, the transaction does not relate to the portfolio security that a portfolio owns. Rather, it relates to a security that a portfolio intends to acquire. If a portfolio does not complete the hedge by purchasing the security it anticipated purchasing, the effect on the portfolio's portfolio is the same as if the transaction were entered into for speculative purposes.

In hedging transactions, Financial Instruments on securities (such as options and/or futures) generally are used to attempt to hedge against price movements in one or more particular securities positions that a portfolio owns or intends to acquire. Financial Instruments on indices, in contrast, generally are used to attempt to hedge against price movements in market sectors in which a portfolio has invested or expects to invest. Financial Instruments on debt securities generally are used to hedge either individual securities or broad debt market sectors.

Options – Generally: A call option gives the purchaser the right to buy, and obligates the writer to sell, the underlying investment at the agreed-upon price during the option period. A put option gives the purchaser the right to sell, and obligates the writer to buy, the underlying investment at the agreed-upon price during the option period. Purchasers of options pay an amount, known as a premium, to the option writer in exchange for the right under the option contract.

Exchange-traded options in the United States are issued by a clearing organization affiliated with the exchange on which the option is listed that, in effect, guarantees completion of every exchange-traded option transaction. In contrast, OTC options are contracts between a portfolio and its counterparty (usually a securities dealer or a bank) with no clearing organization guarantee. Unlike exchange-traded options, which are standardized with respect to the underlying instrument, expiration date, contract size, and strike price, the terms of OTC options generally are established through negotiation with the other party to the option contract. When a portfolio purchases an OTC option, it relies on the counterparty from whom it purchased the option to make or take delivery of the underlying investment upon exercise of the option. Failure by the counterparty to do so would result in the loss of any premium paid by a portfolio as well as the loss of any expected benefit of the transaction.

Writing put or call options can enable a portfolio to enhance income or yield by reason of the premiums paid by the purchasers of such options. However, a portfolio may also suffer a loss. For example, if the market price of the security underlying a put option written by a portfolio declines to less than the exercise price of the option, minus the premium received, it can be expected that the option will be exercised and a portfolio would be required to purchase the security at more than its market value. If a security appreciates to a price higher than the exercise price of a call option written by a portfolio, it can be expected that the option will be exercised and a portfolio will be obligated to sell the security at less than its market value.

The value of an option position will reflect, among other things, the current market value of the underlying investment, the time remaining until expiration, the relationship of the exercise price to the market price of the underlying investment, the historical price volatility of the underlying investment and general market conditions. Options purchased by a portfolio that expire unexercised have no value, and the portfolio will realize a loss in the amount of the premium paid and any transaction costs. If an option written by a portfolio expires unexercised, the portfolio realizes a gain equal to the premium received at the time the option was written. Transaction costs must be included in these calculations.

A portfolio may effectively terminate its right or obligation under an option by entering into a closing transaction. For example, a portfolio may terminate its obligation under a call or put option that it had written by purchasing an identical call or put option; this is known as a closing purchase transaction. Conversely, a portfolio may terminate a position in a put or call option it had purchased by writing an identical put or call option; this is known as a closing sale transaction. Closing transactions permit a portfolio to realize profits or limit losses on an option position prior to its exercise or expiration. There can be no assurance that it will be possible for a portfolio to enter into any closing transaction.

A type of put that a portfolio may purchase is an “optional delivery standby commitment,” which is entered into by parties selling debt securities to a portfolio. An optional delivery standby commitment gives a portfolio the right to sell the security back to the seller on specified terms. This right is provided as an inducement to purchase the security.

Options on Indices: Puts and calls on indices are similar to puts and calls on securities (described above) or futures contracts (described below) except that all settlements are in cash and gain or loss depends on changes in the index in question rather than on price movements in individual securities or futures contracts. When a portfolio writes a call on an index, it receives a premium and agrees that, prior to the expiration date, the purchaser of the call, upon exercise of the call, will receive from a portfolio an amount of cash if the closing level of the index upon which the call is based is greater than the exercise price of the call. The amount of cash is equal to the difference between the closing price of the index and the exercise price of the call times a specified multiple (“multiplier”), which determines the total dollar value for each point of such difference. When a portfolio buys a call on an index, it pays a premium and has the same rights as to such call as are indicated above. When a portfolio buys a put on an index, it pays a premium and has the right, prior to the expiration date, to require the seller of the put, upon the portfolio’s exercise of the put, to deliver to the portfolio an amount of cash if the closing level of the index upon which the put is based is less than the exercise price of the put, which amount of cash is determined by the multiplier, as described above for calls. When a portfolio writes a put on an index, it receives a premium and the purchaser of the put has the right, prior to the expiration date, to require the portfolio to deliver to it an amount of cash equal to the difference between the closing level of the index and exercise price times the multiplier if the closing level is less than the exercise price.

Options on indices may, depending on the circumstances, involve greater risk than options on securities. Because index options are settled in cash, when a portfolio writes a call on an index it may not be able to provide in advance for its potential settlement obligations by acquiring and holding the underlying securities.

Futures Contracts and Options on Futures Contracts: A financial futures contract sale creates an obligation by the seller to deliver the type of Financial Instrument or, in the case of index and similar futures, cash, called for in the contract in a specified delivery month for a stated price. A financial futures contract purchase creates an obligation by the purchaser to take delivery of the asset called for in the contract in a specified delivery month at a stated price. Options on futures give the purchaser the right to assume a position in a futures contract at the specified option exercise price at any time during the period of the option.

Futures strategies can be used to change the duration of a portfolio’s portfolio. If a sub-adviser wishes to shorten the duration of the portfolio’s portfolio, a portfolio may sell a debt futures contract or a call option thereon, or purchase a put option on that futures contract. If a sub-adviser wishes to lengthen the duration of a portfolio’s portfolio, the portfolio may buy a debt futures contract or a call option thereon, or sell a put option thereon.

Futures contracts may also be used for other purposes, such as to simulate full investment in underlying securities while retaining a cash balance for portfolio management purposes, as a substitute for direct investment in a security, to facilitate trading, to reduce transaction costs, or to seek higher investment returns when a futures contract or option is priced more attractively than the underlying security or index.

No price is paid upon entering into a futures contract. Instead, at the inception of a futures contract a portfolio is required to deposit “initial margin.” Margin must also be deposited when writing a call or put option on a futures contract, in accordance with applicable exchange rules. Under certain circumstances, such as periods of high volatility, a portfolio may be required by an exchange to increase the level of its initial margin payment, and initial margin requirements might be increased generally in the future by regulatory action.

Subsequent “variation margin” payments are made to and from the futures broker daily as the value of the futures position varies, a process known as “marking-to-market.” Daily variation margin calls could be substantial in the event of adverse price movements. If a portfolio has insufficient cash to meet daily variation margin requirements, it might need to sell securities at a disadvantageous time or price.

Although some futures and options on futures call for making or taking delivery of the underlying securities, currencies or cash, generally those contracts are closed out prior to delivery by offsetting purchases or sales of matching futures or options (involving the same index, currency or underlying security and delivery month). If an offsetting purchase price is less than the original sale price, a portfolio realizes a gain, or if it is more, a portfolio realizes a loss. If an offsetting sale price is more than the original purchase price, a portfolio realizes a gain, or if it is less, a portfolio realizes a loss. A portfolio will also bear transaction costs for each contract, which will be included in these calculations. Positions in futures and options on futures may be closed only on an exchange or board of trade that provides a secondary market. However, there can be no assurance that a liquid secondary market will exist for a particular contract at a particular time. In such event, it may not be possible to close a futures contract or options position.

Under certain circumstances, futures exchanges may establish daily limits on the amount that the price of a futures contract or an option on a futures contract can vary from the previous day's settlement price; once that limit is reached, no trades may be made that day at a price beyond the limit. Daily price limits do not limit potential losses because prices could move to the daily limit for several consecutive days with little or no trading, thereby preventing liquidation of unfavorable positions.

If a portfolio were unable to liquidate a futures contract or an option on a futures position due to the absence of a liquid secondary market, the imposition of price limits or otherwise, it could incur substantial losses. A portfolio would continue to be subject to market risk with respect to the position. In addition, except in the case of purchased options, a portfolio would continue to be required to make daily variation margin payments and might be required to maintain the position being hedged by the future or option or to maintain cash or securities in a segregated account.

If an index future is used for hedging purposes the risk of imperfect correlation between movements in the price of index futures and movements in the price of the securities that are the subject of the hedge increases as the composition of a portfolio's portfolio diverges from the securities included in the applicable index. The price of the index futures may move more than or less than the price of the securities being hedged. To compensate for the imperfect correlation of movements in the price of the securities being hedged and movements in the price of the index futures, a portfolio may buy or sell index futures in a greater dollar amount than the dollar amount of the securities being hedged if the historical volatility of the prices of such securities being hedged is more than the historical volatility of the prices of the securities included in the index. It is also possible that, where a portfolio has sold index futures contracts to hedge against a decline in the market, the market may advance and the value of the securities held in the portfolio may decline. If this occurred, a portfolio would lose money on the futures contract and also experience a decline in value of its portfolio securities.

Where index futures are purchased to hedge against a possible increase in the price of securities before a portfolio is able to invest in them in an orderly fashion, it is possible that the market may decline instead. If a sub-adviser then concludes not to invest in them at that time because of concern as to possible further market decline or for other reasons, a portfolio will realize a loss on the futures contract that is not offset by a reduction in the price of the securities it had anticipated purchasing.

Non-U.S. Currency Strategies: A portfolio may invest in securities that are denominated in non-U.S. currencies and may engage in a variety of non-U.S. currency exchange transactions to protect against uncertainty in the level of future exchange rates or to earn additional income. A portfolio may use options and futures contracts, swaps and indexed notes relating to non-U.S. currencies and forward currency contracts to attempt to hedge against movements in the values of the non-U.S. currencies in which the portfolio's securities are denominated or to attempt to enhance income or yield. Currency hedges can protect against price movements in a security that a portfolio owns or intends to acquire that are attributable to changes in the value of the currency in which it is denominated. Such hedges do not, however, protect against price movements in the securities that are attributable to other causes.

The value of Financial Instruments on non-U.S. currencies depends on the value of the underlying currency relative to the U.S. dollar. Because non-U.S. currency transactions occurring in the interbank market might involve substantially larger amounts than those involved in the use of such Financial Instruments, a portfolio could be disadvantaged by having to deal in the odd lot market (generally consisting of transactions of less than \$1 million) for the underlying non-U.S. currencies at prices that are less favorable than for round lots.

There is no systematic reporting of last sale information for non-U.S. currencies or any regulatory requirement that quotations available through dealers or other market sources be firm or revised on a timely basis. Quotation information generally is representative of very large transactions in the interbank market and thus might not reflect odd-lot transactions where rates might be less favorable. The interbank market in non-U.S. currencies is a global, round-the-clock market. To the extent the U.S. options or futures markets are closed while the markets for the underlying currencies remain open, significant price and rate movements might take place in the underlying markets that cannot be reflected in the markets for the Financial Instruments until they reopen.

Settlement of transactions involving non-U.S. currencies might be required to take place within the country issuing the underlying currency. Thus, a portfolio might be required to accept or make delivery of the underlying non-U.S. currency in accordance with any U.S. or non-U.S. regulations regarding the maintenance of non-U.S. banking arrangements by U.S. residents and might be required to pay any fees, taxes and charges associated with such delivery assessed in the issuing country.

Generally, OTC non-U.S. currency options used by a portfolio are European-style options. This means that the option is only exercisable immediately prior to its expiration. This is in contrast to American-style options, which are exercisable at any time prior to the expiration date of the option.

Forward Currency Contracts: A portfolio may enter into forward currency contracts to purchase or sell non-U.S. currencies for a fixed amount of U.S. dollars or another non-U.S. currency. A forward currency contract involves an obligation to purchase or sell a specific

currency at a future date, which may be any fixed number of days (term) from the date of the forward currency contract agreed upon by the parties, at a price set at the time of the forward currency contract. These forward currency contracts are traded directly between currency traders (usually large commercial banks) and their customers.

The cost to a portfolio of engaging in forward currency contracts varies with factors such as the currency involved, the length of the contract period and the market conditions then prevailing. Because forward currency contracts are usually entered into on a principal basis, no fees or commissions are involved. When a portfolio enters into a forward currency contract, it relies on the counterparty to make or take delivery of the underlying currency at the maturity of the contract. Failure by the counterparty to do so would result in the loss of any expected benefit of the transaction.

As is the case with futures contracts, parties to forward currency contracts can enter into offsetting closing transactions, similar to closing transactions on futures contracts, by selling or purchasing, respectively, an instrument identical to the instrument purchased or sold. Secondary markets generally do not exist for forward currency contracts, with the result that closing transactions generally can be made for forward currency contracts only by negotiating directly with the counterparty.

If a portfolio engages in a forward currency contract with respect to particular securities, the precise matching of forward currency contract amounts and the value of the securities involved generally will not be possible because the value of such securities, measured in the non-U.S. currency, will change after the forward currency contract has been established. Thus, a portfolio might need to purchase or sell non-U.S. currencies in the spot (cash) market to the extent such non-U.S. currencies are not covered by forward currency contracts.

Swaps, Caps, Floors and Collars: A portfolio may enter into swaps, caps, floors and collars to preserve a return or a spread on a particular investment or portion of its portfolio, to protect against any increase in the price of securities the portfolio anticipates purchasing at a later date, to attempt to enhance yield or total return, or as a substitute for other investments. A swap typically involves the exchange by a portfolio with another party of their respective commitments to pay or receive cash flows, e.g., an exchange of floating rate payments for fixed-rate payments. The purchase of a cap entitles the purchaser, to the extent that a specified index exceeds a predetermined value, to receive payments on a notional principal amount from the party selling the cap. The purchase of a floor entitles the purchaser, to the extent that a specified index falls below a predetermined value, to receive payments on a notional principal amount from the party selling the floor. A collar combines elements of a cap and a floor.

Swap agreements, including caps, floors and collars, can be individually negotiated and structured to include exposure to a variety of different types of investments or market factors. Depending on their structure, swap agreements may increase or decrease the overall volatility of a portfolio's investments and its share price and yield because, and to the extent, these agreements affect a portfolio's exposure to long- or short-term interest rates, non-U.S. currency values, mortgage-backed or other security values, corporate borrowing rates or other factors such as security prices or inflation rates.

Swap agreements will tend to shift a portfolio's investment exposure from one type of investment to another. Caps and floors have an effect similar to buying or writing options.

If a counterparty's creditworthiness declines, the value of the agreement would be likely to decline, potentially resulting in losses.

A portfolio may enter into credit default swap contracts for investment purposes. As the seller in a credit default swap contract, a portfolio would be required to pay the par (or other agreed-upon) value of a referenced debt obligation to the counterparty in the event of a default by a third party, such as a U.S. or a non-U.S. corporate issuer, on the debt obligation. In return, a portfolio would receive from the counterparty a periodic stream of payments over the term of the contract provided that no event of default has occurred. If no default occurs, a portfolio would keep the stream of payments and would have no payment obligations. As the seller, a portfolio would be subject to investment exposure on the notional amount of the swap which may be significantly larger than a portfolio's cost to enter into the credit default swap.

A portfolio may purchase credit default swap contracts in order to hedge against the risk of default of debt securities held in its portfolio, in which case a portfolio would function as the counterparty referenced in the preceding paragraph. This would involve the risk that the investment may expire worthless and would only generate income in the event of an actual default by the issuer of the underlying obligation (or, as applicable, a credit downgrade or other indication of financial instability). It would also involve credit risk – that the seller may fail to satisfy its payment obligations to a portfolio in the event of a default.

The net amount of the excess, if any, of a portfolio's obligations over its entitlements with respect to each swap will be accrued on a daily basis, depending on whether a threshold amount (if any) is exceeded, and an amount of cash or liquid assets having an aggregate net asset value approximately equal to the accrued excess will be earmarked or set aside as cover, as described below. A portfolio will also maintain collateral with respect to its total obligations under any swaps that are not entered into on a net basis, including segregating assets to cover any potential obligation under a credit default swap sold by it, and will maintain cover as required by SEC guidelines from time to time with respect to caps and floors written by a portfolio.

Combined Positions: A portfolio may purchase and write options in combination with each other, or in combination with other Financial Instruments, to adjust the risk and return characteristics of its overall position. Because combined options positions involve multiple trades, they result in higher transaction costs and may be more difficult to open and close out.

Cover: Transactions using Financial Instruments may involve obligations which if not covered could be construed as "senior securities." A portfolio will comply with SEC guidelines regarding cover for these instruments and will, if the guidelines so require, segregate, set aside or earmark on its books cash or liquid assets in the prescribed amount as determined daily. A portfolio may cover such transactions using other

methods permitted under the 1940 Act, orders or releases issued by the SEC thereunder, or no-action letters or other guidance of the SEC staff. Although SEC guidelines on cover are designed to limit the transactions involving Financial Instruments that a portfolio may be engaged in at any time, the segregation of assets does not reduce the risks to a portfolio of entering into transactions in Financial Instruments.

Turnover: A portfolio's derivatives activities may affect its turnover rate and brokerage commission payments. The exercise of calls or puts written by a portfolio, and the sale or purchase of futures contracts, may cause it to sell or purchase related investments, thus increasing its turnover rate. Once a portfolio has received an exercise notice on an option it has written, it cannot effect a closing transaction in order to terminate its obligation under the option and must deliver or receive the underlying securities at the exercise price. The exercise of puts purchased by a portfolio may also cause the sale of related investments, also increasing turnover; although such exercise is within a portfolio's control, holding a protective put might cause it to sell the related investments for reasons that would not exist in the absence of the put. A portfolio will pay a brokerage commission each time it buys or sells a put or call or purchases or sells a futures contract. Such commissions may be higher than those that would apply to direct purchases or sales.

Foreign Securities

The following investments are subject to limitations as set forth in each portfolio's investment restrictions and policies.

A portfolio may invest in foreign securities through the purchase of securities of foreign issuers or of American Depositary Receipts ("ADRs"), European Depositary Receipts ("EDRs"), Global Depositary Receipts ("GDRs") and Fiduciary Depositary Receipts ("FDRs") or other securities representing underlying shares of foreign companies.

The risks of investing in securities of non-U.S. issuers or issuers with significant exposure to non-U.S. markets may be related, among other things, to (i) differences in size, liquidity and volatility of, and the degree and manner of regulation of, the securities markets of certain non-U.S. markets compared to the securities markets in the U.S.; (ii) economic, political and social factors; and (iii) foreign exchange matters, such as restrictions on the repatriation of capital, fluctuations in exchange rates between the U.S. dollar and the currencies in which a portfolio's portfolio securities are quoted or denominated, exchange control regulations and costs associated with currency exchange. The political and economic structures in certain foreign countries, particularly emerging markets and frontier markets, are expected to undergo significant evolution and rapid development, and such countries may lack the social, political and economic stability characteristic of more developed countries.

Unanticipated political or social developments may affect the values of a portfolio's investments in such countries. The economies and securities and currency markets of many emerging markets have experienced significant disruption and declines. There can be no assurances that these economic and market disruptions will not continue.

Securities of some foreign companies are less liquid, and their prices are more volatile, than securities of comparable domestic companies. Certain foreign countries are known to experience long delays between the trade and settlement dates of securities purchased or sold resulting in increased exposure of a portfolio to market and foreign exchange fluctuations brought about by such delays, and to the corresponding negative impact on fund liquidity.

The interest payable on a portfolio's foreign securities may be subject to foreign withholding taxes, which will reduce the portfolio's return on its investments. In addition, the operating expenses of a portfolio making such investment can be expected to be higher than those of an investment company investing exclusively in U.S. securities, since the costs of investing in foreign securities, such as custodial costs, valuation costs and communication costs, are higher than the costs of investing exclusively in U.S. securities.

There may be less publicly available information about non-U.S. markets and issuers than is available with respect to U.S. securities and issuers. Non-U.S. companies generally are not subject to accounting, auditing and financial reporting standards, practices and requirements comparable to those applicable to U.S. companies. The trading markets for most non-U.S. securities are generally less liquid and subject to greater price volatility than the markets for comparable securities in the U.S. The markets for securities in frontier markets and certain emerging markets are in the earliest stages of their development. Even the markets for relatively widely traded securities in certain non-U.S. markets, including emerging countries, may not be able to absorb, without price disruptions, a significant increase in trading volume or trades of a size customarily undertaken by institutional investors in the U.S. In addition, market making and arbitrage activities are generally less extensive in such markets, which may contribute to increased volatility and reduced liquidity. The less liquid a market, the more difficult it may be for a portfolio to accurately price its portfolio securities or to dispose of such securities at the times determined by a sub-advisor to be appropriate. The risks associated with reduced liquidity may be particularly acute in situations in which a portfolio's operations require cash, such as in order to meet redemptions and to pay its expenses.

A portfolio may invest in securities of emerging market and frontier market countries. Emerging market countries typically have economic and political systems that are less fully developed, and that can be expected to be less stable. Frontier market countries generally have smaller economies and even less developed capital markets than emerging markets countries. These securities may be U.S. dollar denominated or non-U.S. dollar denominated and include: (a) debt obligations issued or guaranteed by foreign national, provincial, state, municipal or other governments with taxing authority or by their agencies or instrumentalities, including Brady Bonds; (b) debt obligations of supranational entities; (c) debt obligations (including dollar and non-dollar denominated) and other debt securities of foreign corporate issuers; and (d) non-dollar denominated debt obligations of U.S. corporate issuers. A portfolio may also invest in securities denominated in currencies of emerging market or frontier market countries. There is no minimum rating criteria for a portfolio's investments in such securities.

Certain non-U.S. countries, including emerging markets and frontier markets, may be subject to a greater degree of economic, political and social instability. Such instability may result from, among other things: (i) authoritarian governments or military involvement in political and

economic decision making; (ii) popular unrest associated with demands for improved economic, political and social conditions; (iii) internal insurgencies; (iv) hostile relations with neighboring countries; and (v) ethnic, religious and racial disaffection and conflict. Such economic, political and social instability could significantly disrupt the financial markets in such countries and the ability of the issuers in such countries to repay their obligations. In addition, it may be difficult for the fund to pursue claims against a foreign issuer in the courts of a foreign country. Investing in emerging countries also involves the risk of expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and on repatriation of capital invested. In the event of such expropriation, nationalization or other confiscation in any emerging country, a portfolio could lose its entire investment in that country. Certain emerging market countries restrict or control foreign investment in their securities markets to varying degrees. These restrictions may limit a portfolio's investment in those markets and may increase the expenses of a portfolio. In addition, the repatriation of both investment income and capital from certain markets in the region is subject to restrictions such as the need for certain governmental consents. Even where there is no outright restriction on repatriation of capital, the mechanics of repatriation may affect certain aspects of a portfolio's operation. Economies in individual non-U.S. countries may differ favorably or unfavorably from the U.S. economy in such respects as growth of gross domestic product, rates of inflation, currency valuation, capital reinvestment, resource self-sufficiency and balance of payments positions. Many non-U.S. countries have experienced substantial, and in some cases extremely high, rates of inflation for many years. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, very negative effects on the economies and securities markets of certain emerging countries. Economies in emerging countries generally are dependent heavily upon international trade and, accordingly, have been and may continue to be affected adversely by trade barriers, exchange controls, managed adjustments in relative currency values and other protectionist measures imposed or negotiated by the countries with which they trade. These economies also have been, and may continue to be, affected adversely and significantly by economic conditions in the countries with which they trade.

Custodian services and other costs relating to investment in international securities markets generally are more expensive than in the U.S. Such markets have settlement and clearance procedures that differ from those in the U.S. In certain markets there have been times when settlements have been unable to keep pace with the volume of securities transactions, making it difficult to conduct such transactions. The inability of a portfolio to make intended securities purchases because of settlement problems could cause a portfolio to miss attractive investment opportunities. Inability to dispose of a portfolio security caused by settlement problems could result either in losses to a portfolio because of a subsequent decline in value of the portfolio security or could result in possible liability to the portfolio. In addition, security settlement and clearance procedures in some emerging countries may not fully protect a portfolio against loss or theft of its assets.

A portfolio may be subject to taxes, including withholding taxes imposed by certain non-U.S. countries on income (possibly including, in some cases, capital gains) earned with respect to the portfolio's investments in such countries. These taxes will reduce the return achieved by a portfolio. Treaties between the U.S. and such countries may reduce the otherwise applicable tax rates.

The value of the securities quoted or denominated in foreign currencies may be adversely affected by fluctuations in the relative currency exchange rates and by exchange control regulations. A portfolio's investment performance may be negatively affected by a devaluation of a currency in which the portfolio's investments are quoted or denominated. Further, a portfolio's investment performance may be significantly affected, either positively or negatively, by currency exchange rates because the U.S. dollar value of securities quoted or denominated in another currency will increase or decrease in response to changes in the value of such currency in relation to the U.S. dollar.

The rate of exchange between the U.S. dollar and other currencies is determined by the forces of supply and demand in the foreign exchange markets. Changes in the exchange rate may result over time from the interaction of many factors directly or indirectly affecting economic conditions and political developments in other countries. Of particular importance are rates of inflation, interest rate levels, the balance of payments and the extent of government surpluses or deficits in the United States and the particular foreign country. All these factors are in turn sensitive to the monetary, fiscal and trade policies pursued by the governments of the United States and other foreign countries important to international trade and finance. Government intervention may also play a significant role. National governments rarely voluntarily allow their currencies to float freely in response to economic forces. Sovereign governments use a variety of techniques, such as intervention by a country's central bank or imposition of regulatory controls or taxes, to affect the exchange rates of their currencies.

ADRs, EDRs and GDRs: A portfolio may also purchase ADRs, American Depositary Debentures, American Depositary Notes, American Depositary Bonds, EDRs, GDRs and FDRs, or other securities representing underlying shares of foreign companies. ADRs are publicly traded on exchanges or over-the-counter in the United States and are issued through "sponsored" or "unsponsored" arrangements. In a sponsored ADR arrangement, the foreign issuer assumes the obligation to pay some or all of the depository's transaction fees, whereas under an unsponsored arrangement, the foreign issuer assumes no obligation and the depository's transaction fees are paid by the ADR holders. In addition, less information is available in the United States about an unsponsored ADR than about a sponsored ADR, and the financial information about a company may not be as reliable for an unsponsored ADR as it is for a sponsored ADR. A portfolio may invest in ADRs through both sponsored and unsponsored arrangements. EDRs and GDRs are securities that are typically issued by foreign banks or foreign trust companies, although U.S. banks or U.S. trust companies may issue them. EDRs and GDRs are structured similarly to the arrangements of ADRs. EDRs, in bearer form, are designed for use in European securities markets.

Eurodollar or Yankee Obligations: Eurodollar bank obligations are dollar denominated debt obligations issued outside the U.S. capital markets by foreign branches of U.S. banks and by foreign banks. Yankee obligations are dollar denominated obligations issued in the U.S. capital markets by foreign issuers. Eurodollar (and to a limited extent, Yankee) obligations are subject to certain sovereign risks. One such risk is the possibility that a foreign government might prevent dollar denominated funds from flowing across its borders. Other risks include: adverse political and economic developments in a foreign country; the extent and quality of government regulation of financial markets and institutions; the imposition of foreign withholding taxes; and expropriation or nationalization of foreign issuers.

Sovereign Government and Supranational Debt: A portfolio may invest in all types of debt securities of governmental issuers in all countries, including emerging markets. These sovereign debt securities may include: debt securities issued or guaranteed by governments, governmental agencies or instrumentalities and political subdivisions located in emerging market countries; debt securities issued by government owned, controlled or sponsored entities located in emerging market countries; interests in entities organized and operated for the purpose of restructuring the investment characteristics of instruments issued by any of the above issuers; Brady Bonds, which are debt securities issued under the framework of the Brady Plan as a means for debtor nations to restructure their outstanding external indebtedness; participations in loans between emerging market governments and financial institutions; or debt securities issued by supranational entities such as the World Bank or the European Economic Community. A supranational entity is a bank, commission or company established or financially supported by the national governments of one or more countries to promote reconstruction or development.

Sovereign debt is subject to risks in addition to those relating to non-U.S. investments generally. As a sovereign entity, the issuing government may be immune from lawsuits in the event of its failure or refusal to pay the obligations when due. The debtor's willingness or ability to repay in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its non-U.S. reserves, the availability of sufficient non-U.S. exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward principal international lenders and the political constraints to which the sovereign debtor may be subject. Sovereign debtors may also be dependent on disbursements or assistance from foreign governments or multinational agencies, the country's access to trade and other international credits, and the country's balance of trade. Assistance may be dependent on a country's implementation of austerity measures and reforms, which measures may limit or be perceived to limit economic growth and recovery. Some sovereign debtors have rescheduled their debt payments, declared moratoria on payments or restructured their debt to effectively eliminate portions of it, and similar occurrences may happen in the future. There is no bankruptcy proceeding by which sovereign debt on which governmental entities have defaulted may be collected in whole or in part.

Russian Securities

A portfolio may invest directly in the securities of Russian issuers or may have indirect exposure to Russian securities through its investment in one or more funds with direct investments in Russia. Investment in those securities presents many of the same risks as investing in the securities of emerging country issuers, as described above. The social, political, legal, and operational risks of investing in Russian issuers, and of having assets held in custody within Russia, however, may be particularly pronounced relative to investments in more developed countries. Russia's system of share registration and custody creates certain risks of loss (including the risk of total loss) that are not normally associated with investments in other securities markets.

A risk of particular note with respect to direct investment in Russian securities results from the way in which ownership of shares of companies is normally recorded. Ownership of shares (except where shares are held through depositories that meet the requirements of the 1940 Act) is defined according to entries in the company's share register and normally evidenced by "share extracts" from the register or, in certain circumstances, by formal share certificates. However, there is no central registration system for shareholders and these services are carried out by the companies themselves or by registrars located throughout Russia. The share registrars are controlled by the issuer of the security, and investors are provided with few legal rights against such registrars. These registrars are not necessarily subject to effective state supervision, nor are they licensed with any governmental entity. It is possible for a portfolio to lose its registration through fraud, negligence, or even mere oversight. Each applicable portfolio will endeavor to ensure that its interest is appropriately recorded, which may involve a custodian or other agent inspecting the share register and obtaining extracts of share registers through regular confirmations. However, these extracts have no legal enforceability and it is possible that a subsequent illegal amendment or other fraudulent act may deprive a portfolio of its ownership rights or improperly dilute its interests. In addition, while applicable Russian regulations impose liability on registrars for losses resulting from their errors, it may be difficult for a portfolio to enforce any rights it may have against the registrar or issuer of the securities in the event of a loss of share registration. Further, significant delays or problems may occur in registering the transfer of securities, which could cause a portfolio to incur losses due to a counterparty's failure to pay for securities the portfolio has delivered or the portfolio's inability to complete its contractual obligations because of theft or other reasons.

Also, although a Russian public enterprise having a certain minimum number of shareholders is required by law to contract out the maintenance of its shareholder register to an independent entity that meets certain criteria, this regulation has not always been strictly enforced in practice. Because of this lack of independence, management of a company may be able to exert considerable influence over who can purchase and sell the company's shares by illegally instructing the registrar to refuse to record transactions in the share register.

Other Investments

Illiquid Securities

An illiquid security is any security which may not be sold or disposed of in the ordinary course of business within seven days at approximately the value at which the security is being carried on the portfolio's books. Illiquid securities may be difficult to value, and a portfolio may have difficulty disposing of such securities promptly.

Certain restricted securities can be traded freely among qualified purchasers in accordance with Rule 144A under the 1933 Act. The SEC has stated that an investment company's board of directors, or its investment adviser acting under authority delegated by the board, may determine that a security eligible for trading under this rule is "liquid." The Board has delegated to the portfolios' sub-advisers authority to determine whether particular securities eligible for trading under Rule 144A are and continue to be "liquid." Investing in these restricted securities could have the effect of increasing a portfolio's illiquidity, however, if qualified purchasers become uninterested in buying these securities.

The sale of illiquid securities often requires more time and results in higher brokerage charges or dealer discounts and other selling expenses than does the sale of securities eligible for trading on national securities exchanges or in the OTC markets. A portfolio may be restricted in its ability to sell such securities at a time when a portfolio's sub-adviser deems it advisable to do so. In addition, in order to meet redemption requests, a portfolio may have to sell other assets, rather than such illiquid securities, at a time that is not advantageous.

Investments in the Real Estate Industry and Real Estate Investment Trusts (“REITs”)

REITs are pooled investment vehicles which invest primarily in income producing real estate, or real estate related loans or interests. REITs are generally classified as equity REITs, mortgage REITs or a combination of equity and mortgage REITs. Equity REITs invest the majority of their assets directly in real property and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of interest payments. REITs are not taxed on income distributed to shareholders provided they comply with the applicable requirements of the Internal Revenue Code of 1986, as amended (the “Code”). Debt securities issued by REITs, for the most part, are general and unsecured obligations and are subject to risks associated with REITs.

Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. An equity REIT may be affected by changes in the value of the underlying properties owned by the REIT. A mortgage REIT may be affected by changes in interest rates and the ability of the issuers of its portfolio mortgages to repay their obligations. REITs are dependent upon the skills of their managers and are not diversified. REITs are generally dependent upon maintaining cash flows to repay borrowings and to make distributions to shareholders and are subject to the risk of default by lessees or borrowers. REITs whose underlying assets are concentrated in properties used by a particular industry, such as health care, are also subject to industry related risks.

REITs (especially mortgage REITs) are also subject to interest rate risk. When interest rates decline, the value of a REIT's investment in fixed rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT's investment in fixed rate obligations can be expected to decline. If the REIT invests in adjustable rate mortgage loans the interest rates on which are reset periodically, yields on a REIT's investments in such loans will gradually align themselves to reflect changes in market interest rates. This causes the value of such investments to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed rate obligations. REITs may have limited financial resources, may trade less frequently and in a limited volume and may be subject to more abrupt or erratic price movements than larger company securities. Historically, REITs have been more volatile in price than the larger capitalization stocks included in S&P 500 Index.

Certain portfolios may invest in foreign real estate companies, which are similar to entities organized and operated as REITs in the United States. Foreign real estate companies may be subject to laws, rules and regulations governing those entities and their failure to comply with those laws, rules and regulations could negatively impact the performance of those entities. In addition, investments in REITs and foreign real estate companies may involve duplication of management fees and certain other expenses, and a portfolio indirectly bears its proportionate share of any expenses paid by REITs and foreign real estate companies in which it invests.

Commodities and Natural Resources

Commodities may include, among other things, oil, gas, timber, farm products, minerals, precious metals, for example, gold, silver, platinum, and palladium, and other natural resources. Certain portfolios may invest in companies (such as mining, dealing or transportation companies) with substantial exposure to, or instruments that result in exposure to, commodities markets. Commodities generally and particular commodities have, at times been subject to substantial price fluctuations over short periods of time and may be affected by unpredictable monetary and political policies such as currency devaluations or revaluations, economic and social conditions within a country, trade imbalances, or trade or currency restrictions between countries. The prices of commodities may be, however, less subject to local and company-specific factors than securities of individual companies. As a result, commodity prices may be more or less volatile in price than securities of companies engaged in commodity-related businesses. Investments in commodities can present concerns such as delivery, storage and maintenance, possible illiquidity, and the unavailability of accurate market valuations.

Commodity-Linked Investments

A portfolio may seek to provide exposure to the investment returns of real assets that trade in the commodity markets through investments in commodity-linked investments, including commodities futures contracts, commodity-linked derivatives, and commodity-linked notes. Real assets are assets such as oil, gas, industrial and precious metals, livestock, and agricultural or meat products, or other items that have tangible properties, as compared to stocks or bonds, which are financial instruments. The value of commodity-linked investments held by a portfolio may be affected by a variety of factors, including, but not limited to, overall market movements and other factors affecting the value of particular industries or commodities, such as weather, disease, embargoes, acts of war or terrorism, or political and regulatory developments.

The prices of commodity-linked investments may move in different directions than investments in traditional equity and debt securities when the value of those traditional securities is declining due to adverse economic conditions. As an example, during periods of rising inflation, debt securities have historically tended to decline in value due to the general increase in prevailing interest rates. Conversely, during those same periods of rising inflation, the prices of certain commodities, such as oil and metals, have historically tended to increase. Of course, there cannot be any guarantee that these investments will perform in that manner in the future, and at certain times the price movements of commodity-linked investments have been parallel to those of debt and equity securities. Commodities have historically tended to increase and

decrease in value during different parts of the business cycle than financial assets. Nevertheless, at various times, commodities prices may move in tandem with the prices of financial assets and thus may not provide overall portfolio diversification benefits. Under favorable economic conditions, a portfolio's commodity-linked investments may be expected to underperform an investment in traditional securities.

Transamerica BlackRock Global Allocation VP may also gain exposure to the commodity markets through investments in its wholly-owned subsidiary organized under the laws of the Cayman Islands (the "Subsidiary").

Hybrid Instruments

Hybrid instruments combine the elements of futures contracts or options with those of debt, preferred equity or a depository instrument. Often these hybrid instruments are indexed to the price of a commodity, particular currency, or a domestic or foreign debt or equity securities index. Hybrid instruments may take a variety of forms, including, but not limited to, debt instruments with interest or principal payments or redemption terms determined by reference to the value of a currency or commodity or securities index at a future point in time, preferred stock with dividend rates determined by reference to the value of a currency, or convertible securities with the conversion terms related to a particular commodity. Hybrid instruments may bear interest or pay dividends at below-market (or even relatively nominal) rates. Under certain conditions, the redemption value of such an instrument could be zero. Hybrid instruments are normally at the bottom of an issuer's debt capital structure. As such, they may be more sensitive to economic changes than more senior debt securities. These securities may also be viewed as more equity-like by the market when the issuer or its parent company experience financial problems. Hybrid instruments can have volatile prices and limited liquidity, and their use may not be successful.

Trade Claims

Trade claims are non-securitized rights of payment arising from obligations that typically arise when vendors and suppliers extend credit to a company by offering payment terms for products and services. If the company files for bankruptcy, payments on these trade claims stop and the claims are subject to compromise along with the other debts of the company. Trade claims may be purchased directly from the creditor or through brokers. There is no guarantee that a debtor will ever be able to satisfy its trade claim obligations. Trade claims are speculative and are subject to the risks associated with low-quality obligations.

Passive Foreign Investment Companies

Certain foreign investment funds or trusts called passive foreign investment companies have been the only or primary way to invest in certain countries. In addition to bearing their proportionate share of a portfolio's expenses (management fees and operating expenses), shareholders will also indirectly bear similar expenses of such trusts. Capital gains on the sale of such holdings are considered ordinary income regardless of how long the portfolio held its investment. In addition, the portfolio may be subject to corporate income tax and an interest charge on certain dividends and capital gains earned from these investments, regardless of whether such income and gains are distributed to shareholders.

To avoid such tax and interest, each portfolio intends to treat these securities as sold on the last day of its fiscal year and recognize any gains for tax purposes at that time; deductions for losses are allowable only to the extent of any gains resulting from these deemed sales for prior taxable years. Such gains and losses will be treated as ordinary income. A portfolio will be required to distribute each year any resulting income even though it has not actually sold the security and received cash to pay such distributions. A portfolio might obtain such cash from selling other portfolio holdings. These actions are likely to reduce the assets to which a portfolio's expenses could be allocated and to reduce the rate of return for the portfolio. In some circumstances, such sales might be necessary in order to satisfy cash distribution requirements even though investment considerations might otherwise make it undesirable for a portfolio to sell the securities at the time.

Master Limited Partnerships

Master Limited Partnership ("MLPs") are limited partnerships whose shares (or units) are listed and traded on a U.S. securities exchange, just like common stock. To qualify for tax treatment as a partnership, an MLP must receive at least 90% of its income from qualifying sources such as natural resource activities. Natural resource activities include the exploration, development, mining, production, processing, refining, transportation, storage and marketing of mineral or natural resources. MLPs generally have two classes of owners, the general partner and limited partners. The general partner, which is generally a major energy company, investment fund or the management of the MLP, typically controls the MLP through a 2% general partner equity interest in the MLP plus common units and subordinated units. Limited partners own the remainder of the partnership, through ownership of common units, and have a limited role in the partnership's operations and management.

MLPs are typically structured such that common units have first priority to receive quarterly cash distributions up to an established minimum quarterly dividend ("MQD"). Common units also accrue arrearages in distributions to the extent the MQD is not paid. Once common units have been paid, subordinated units receive distributions of up to the MQD, but subordinated units do not accrue arrearages. Distributable cash in excess of the MQD paid to both common and subordinated units is distributed to both common and subordinated units generally on a pro rata basis. The general partner is also eligible to receive incentive distributions if the general partner operates the business in a manner which maximizes value to unit holders. As the general partner increases cash distributions to the limited partners, the general partner receives an increasingly higher percentage of the incremental cash distributions. A common arrangement provides that the general partner can reach a tier where the general partner is receiving 50% of every incremental dollar paid to common and subordinated unit holders. By providing for incentive distributions the general partner is encouraged to streamline costs and acquire assets in order to grow the partnership, increase the partnership's cash flow, and raise the quarterly cash distribution in order to reach higher tiers. Such results benefit all security holders of the MLP.

MLP I-Shares: I-Shares represent an ownership interest issued by an affiliated party of an MLP. The MLP affiliate issuing the I-Shares is structured as a corporation for federal income tax purposes. I-Shares are traded on the New York Stock Exchange and the NYSE AMEX. The MLP affiliate uses the proceeds from the sale of I-Shares to purchase limited partnership interests in the MLP in the form of i-units. i-units generally receive no allocations of income, gain, loss or deduction unless and until the MLP is liquidated. In addition, rather than receiving cash distributions, the MLP affiliate receives additional i-units based on a formula. Similarly, holders of I-Shares will receive additional I-Shares, in the same proportion as the MLP affiliates' receipt of i-units, rather than cash distributions. Distributions of additional i-units and of additional I-Shares generally are not taxable events for the MLP affiliate and the holder of the I-Shares, respectively. I-Shares themselves have limited voting rights which are similar to those applicable to MLP common units.

Energy Infrastructure Companies: Companies engaged in the energy infrastructure sector principally include publicly-traded MLPs and limited liability companies taxed as partnerships, MLP affiliates, Canadian income trusts and their successor companies, pipeline companies, utilities, and other companies that derive a substantial portion of their revenues from operating or providing services in support of infrastructure assets such as pipelines, power transmission and petroleum and natural gas storage in the petroleum, natural gas and power generation industries (collectively, "Energy Infrastructure Companies").

Energy Infrastructure Companies may be directly affected by energy commodity prices, especially those Energy Infrastructure Companies which own the underlying energy commodity. Commodity prices fluctuate for several reasons, including changes in market and economic conditions, the impact of weather on demand, levels of domestic production and imported commodities, energy conservation, domestic and foreign governmental regulation and taxation and the availability of local, intrastate and interstate transportation systems.

A decrease in the production or availability of natural gas, natural gas liquids, crude oil, coal or other energy commodities or a decrease in the volume of such commodities available for transportation, processing, storage or distribution may adversely impact the financial performance of Energy Infrastructure Companies. In addition, Energy Infrastructure Companies engaged in the production of natural gas, natural gas liquids, crude oil, refined petroleum products or coal are subject to the risk that their commodity reserves naturally deplete over time.

Energy Infrastructure Companies are subject to significant federal, state and local government regulation in virtually every aspect of their operations, including how facilities are constructed, maintained and operated, environmental and safety controls, and the prices they may charge for products and services. Various governmental authorities have the power to enforce compliance with these regulations and the permits issued under them and violators are subject to administrative, civil and criminal penalties, including civil fines, injunctions or both. Stricter laws, regulations or enforcement policies could be enacted in the future which would likely increase compliance costs and may adversely affect the financial performance of Energy Infrastructure Companies.

Natural disasters, such as hurricanes in the Gulf of Mexico, also may impact Energy Infrastructure Companies.

Other Investment Companies

Subject to applicable statutory and regulatory limitations, a portfolio may invest in shares of other investment companies, including shares of other mutual funds, closed-end funds, and unregistered investment companies. Pursuant to an exemptive order obtained from the SEC or under a statutory exemption or an exemptive rule adopted by the SEC, a portfolio may invest in other investment companies beyond the statutory limits prescribed by the 1940 Act.

Investments in other investment companies are subject to the risk of the securities in which those investment companies invest. In addition, to the extent a portfolio invests in securities of other investment companies, portfolio shareholders would indirectly pay a portion of the operating costs of such companies in addition to the expenses of a portfolio's own operation. These costs include management, brokerage, shareholder servicing and other operational expenses.

Certain sub-advisers have received an exemptive order from the SEC permitting funds that are sub-advised by the sub-adviser to invest in affiliated registered money market funds and ETFs, and in an affiliated private investment company; provided however, that, among other limitations, in all cases the portfolio's aggregate investment of cash in shares of such investment companies shall not exceed 25% of its total assets at any time.

Exchange-Traded Funds ("ETFs"): ETFs are typically registered investment companies whose securities are traded over an exchange at their market price. ETFs generally represent a portfolio of securities designed to track a particular market index or other group of securities. Other ETFs are actively managed and seek to achieve a stated objective by investing in a portfolio of securities and other assets. A portfolio may purchase an ETF to temporarily gain exposure to a portion of the U.S. or a foreign market pending the purchase of individual securities. The risks of owning an ETF generally reflect the risks of owning the underlying securities, although the potential lack of liquidity of an ETF could result in it being more volatile. There is also a risk that the general level of securities prices may decline, thereby adversely affecting the value of ETFs invested in by a portfolio. Moreover, a portfolio's investments in index-based ETFs may not exactly match the performance of a direct investment in the respective indices or portfolios of securities to which they are intended to correspond due to the temporary unavailability of certain index securities in the secondary market or other factors, such as discrepancies with respect to the weighting of securities. Additionally, ETFs have management fees which increase their costs.

Unlike shares of typical mutual funds or unit investment trusts, shares of ETFs are designed to be traded throughout a trading day, bought and sold based on market values and not at net asset value. For this reason, shares could trade at either a premium or discount to net asset value. However, the portfolios held by index-based ETFs are publicly disclosed on each trading day, and an approximation of actual net asset value is disseminated throughout the trading day. Because of this transparency, the trading prices of index based ETFs tend to closely track the

actual net asset value of the underlying portfolios and a portfolio will generally gain or lose value depending on the performance of the index. However, gains or losses on a portfolio's investment in ETFs will ultimately depend on the purchase and sale price of the ETF. A portfolio may invest in ETFs that are actively managed. Actively managed ETFs do not have the transparency of index-based ETFs, and also therefore, are more likely to trade at a discount or premium to actual net asset values.

Exchange-Traded Notes ("ETNs")

ETNs are generally notes representing debt of the issuer, usually a financial institution. ETNs combine both aspects of bonds and ETFs. An ETN's returns are based on the performance of one or more underlying assets, reference rates or indexes, minus fees and expenses. Similar to ETFs, ETNs are listed on an exchange and traded in the secondary market. However, unlike an ETF, an ETN can be held until the ETN's maturity, at which time the issuer will pay a return linked to the performance of the specific asset, index or rate ("reference instrument") to which the ETN is linked minus certain fees. Unlike regular bonds, ETNs do not make periodic interest payments, and principal is not protected. ETNs are not registered or regulated as investment companies under the 1940 Act.

The value of an ETN may be influenced by, among other things, time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in underlying markets, changes in the applicable interest rates, the performance of the reference instrument, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the reference instrument. An ETN that is tied to a reference instrument may not replicate the performance of the reference instrument. ETNs also incur certain expenses not incurred by their applicable reference instrument. Some ETNs that use leverage can, at times, be relatively illiquid and, thus, they may be difficult to purchase or sell at a fair price. Levered ETNs are subject to the same risk as other instruments that use leverage in any form. While leverage allows for greater potential return, the potential for loss is also greater. Finally, additional losses may be incurred if the investment loses value because, in addition to the money lost on the investment, the loan still needs to be repaid.

Because the return on the ETN is dependent on the issuer's ability or willingness to meet its obligations, the value of the ETN may change due to a change in the issuer's credit rating, despite no change in the underlying reference instrument. The market value of ETN shares may differ from the value of the reference instrument. This difference in price may be due to the fact that the supply and demand in the market for ETN shares at any point in time is not always identical to the supply and demand in the market for the assets underlying the reference instrument that the ETN seeks to track.

There may be restrictions on a portfolio's right to redeem its investment in an ETN, which are generally meant to be held until maturity. The portfolio's decision to sell its ETN holdings may be limited by the availability of a secondary market. An investor in an ETN could lose some or all of the amount invested. The timing and character of income and gains derived from ETNs is under consideration by the U.S. Treasury and Internal Revenue Service and may also be affected by future legislation.

Dollar Roll Transactions

"Dollar roll" transactions consist of the sale by a portfolio to a bank or broker-dealer (the "counterparty") of Ginnie Mae certificates or other mortgage-backed securities together with a commitment to purchase from the counterparty similar, but not identical, securities at a future date. The counterparty receives all principal and interest payments, including prepayments, made on the security while it is the holder. A portfolio receives a fee from the counterparty as consideration for entering into the commitment to purchase. Dollar rolls may be renewed over a period of several months with a different repurchase price and a cash settlement made at each renewal without physical delivery of securities. Moreover, the transaction may be preceded by a firm commitment agreement pursuant to which a portfolio agrees to buy a security on a future date.

A portfolio will not use such transactions for leveraging purposes and will segregate liquid assets in an amount sufficient to meet its purchase obligations under the transactions.

The entry into dollar rolls involves potential risks of loss that are different from those related to the securities underlying the transactions. For example, if the counterparty becomes insolvent, a portfolio's right to purchase from the counterparty might be restricted. In addition, the value of such securities may change adversely before a portfolio is able to purchase them. Similarly, a portfolio may be required to purchase securities in connection with a dollar roll at a higher price than may otherwise be available on the open market. Since, as noted above, the counterparty is required to deliver a similar, but not identical, security to a portfolio, the security that the portfolio is required to buy under the dollar roll may be worth less than an identical security. Finally, there can be no assurance that a portfolio's use of the cash that it receives from a dollar roll will provide a return that exceeds the transaction costs.

Transamerica Aegon U.S. Government Securities VP will also maintain asset coverage of at least 300% for all outstanding firm commitments, dollar rolls and other borrowings.

Short Sales

In short selling transactions, a portfolio sells a security it does not own in anticipation that the price of the security will decline. The portfolio must borrow the same security and deliver it to the buyer to complete the sale. The portfolio will incur a profit or a loss, depending upon whether the market price of the security decreases or increases between the date of the short sale and the date on which the portfolio must replace the borrowed security. Unlike taking a long position in a security by purchasing the security, where potential losses are limited to the purchase price, possible losses from short sales may, theoretically, be unlimited (e.g., if the price of a stock sold short rises) and a portfolio may be unable to replace a borrowed security sold short. A portfolio also may be unable to close out an established short position at an acceptable price and may have to sell long positions at disadvantageous times to cover its short positions.

Short sales also involve other costs. A portfolio may have to pay a fee to borrow particular securities and is often obligated to turn over any payments received on such borrowed securities to the lender of the securities. A portfolio secures its obligation to replace the borrowed security by depositing collateral with the lender or its custodian or qualified sub-custodian, usually in cash, U.S. government securities or other liquid securities similar to those borrowed. All short sales will be fully collateralized.

A portfolio may sell securities “short against the box.” In short sales “against the box,” the portfolio, at all times when the short position is open, owns an equal amount of the securities sold short or has the right to obtain, at no added cost, securities identical to those sold short. When selling short against the box, if the price of such securities were to increase rather than decrease, the portfolio would forgo the potential realization of the increased value of the shares sold short.

Certain portfolios may sell securities short only against the box; Transamerica Jennison Growth VP is not limited to short sales against the box.

International Agency Obligations

Bonds, notes or Eurobonds of international agencies include securities issued by the Asian Development Bank, the European Economic Community, and the European Investment Bank. A portfolio may also purchase obligations of the International Bank for Reconstruction and Development which, while technically not a U.S. government agency or instrumentality, has the right to borrow from the participating countries, including the United States.

When-Issued, Delayed Settlement and Forward Delivery Securities

Securities may be purchased and sold on a “when-issued,” “delayed settlement” or “forward (delayed) delivery” basis. “When-issued” or “forward delivery” refers to securities whose terms are available, and for which a market exists, but which are not available for immediate delivery. When-issued or forward delivery transactions may be expected to occur a month or more before delivery is due.

A portfolio may engage in when-issued or forward delivery transactions to obtain what is considered to be an advantageous price and yield at the time of the transaction. When a portfolio engages in when-issued or forward delivery transactions, it will do so consistent with its investment objective and policies and not for the purpose of investment leverage (although leverage may result).

“Delayed settlement” is a term used to describe settlement of a securities transaction in the secondary market that will occur sometime in the future. No payment or delivery is made by a portfolio until it receives payment or delivery from the other party to any of the above transactions. A portfolio will segregate with its custodian cash, U.S. government securities or other liquid assets at least equal to the value or purchase commitments (alternatively, liquid assets may be earmarked on the portfolio’s records) until payment is made. Typically, no income accrues on securities purchased on a delayed delivery basis prior to the time delivery of the securities is made, although a portfolio may earn income on securities it has segregated to collateralize its delayed delivery purchases.

New issues of stocks and bonds, private placements and U.S. government securities may be sold in this manner.

At the time of settlement, the market value and/or the yield of the security may be more or less than the purchase price. A portfolio bears the risk of such market value fluctuations. These transactions also involve the risk that the other party to the transaction may default on its obligation to make payment or delivery. As a result, a portfolio may be delayed or prevented from completing the transaction and may incur additional costs as a consequence of the delay.

Additional Information

Temporary Defensive Position

At times a portfolio’s sub-adviser may judge that conditions in the securities markets make pursuing the portfolio’s typical investment strategy inconsistent with the best interest of its shareholders. At such times, a sub-adviser may temporarily use alternative strategies, primarily designed to reduce fluctuations in the value of the portfolio’s assets. In implementing these defensive strategies, a portfolio may invest without limit in securities that a sub-adviser believes present less risk to a portfolio, including equity securities, debt and fixed income securities, preferred stocks, U.S. government and agency obligations, cash or money market instruments, CDs, demand and time deposits, bankers’ acceptance or other securities a sub-adviser considers consistent with such defensive strategies, such as, but not limited to, options, futures, warrants or swaps. During periods in which such strategies are used, the duration of a portfolio may diverge from the duration range for that portfolio disclosed in its prospectus (if applicable). It is impossible to predict when, or for how long, a portfolio will use these alternative strategies. As a result of using these alternative strategies, a portfolio may not achieve its investment objective.

Borrowings

A portfolio may engage in borrowing transactions as a means of raising cash to satisfy redemption requests, for other temporary or emergency purposes or, to the extent permitted by its investment policies, to raise additional cash to be invested by the portfolio’s portfolio managers in other securities or instruments in an effort to increase the portfolio’s investment returns.

When a portfolio invests borrowing proceeds in other securities, the portfolio will bear the risk that the market value of the securities in which the proceeds are invested goes down and is insufficient to repay borrowed proceeds. Like other leveraging risks, this makes the value of an investment in a portfolio more volatile and increases the portfolio’s overall investment exposure. In addition, if a portfolio’s return on its investment of the borrowing proceeds does not equal or exceed the interest that a portfolio is obligated to pay under the terms of a borrowing, engaging in these transactions will lower the portfolio’s return.

A portfolio may be required to liquidate portfolio securities at a time when it would be disadvantageous to do so in order to make payments with respect to its borrowing obligations. This could adversely affect the portfolio managers' strategy and result in lower portfolio returns. Interest on any borrowings will be a portfolio expense and will reduce the value of a portfolio's shares.

A portfolio may borrow on a secured or on an unsecured basis. If a portfolio enters into a secured borrowing arrangement, a portion of the portfolio's assets will be used as collateral. During the term of the borrowing, the portfolio will remain at risk for any fluctuations in the market value of these assets in addition to any securities purchased with the proceeds of the loan. In addition, a portfolio may be unable to sell the collateral at a time when it would be advantageous to do so, which could adversely affect the portfolio managers' strategy and result in lower portfolio returns. The portfolio would also be subject to the risk that the lender may file for bankruptcy, become insolvent, or otherwise default on its obligations to return the collateral to the portfolio. In the event of a default by the lender, there may be delays, costs and risks of loss involved in a portfolio's exercising its rights with respect to the collateral or those rights may be limited by other contractual agreements or obligations or by applicable law.

The 1940 Act requires the portfolio to maintain at all times an "asset coverage" of at least 300% of the amount of its borrowings. Asset coverage means the ratio that the value of the portfolio's total assets, minus liabilities other than borrowings, bears to the aggregate amount of all borrowings. Although complying with this guideline would have the effect of limiting the amount that the portfolio may borrow, it does not otherwise mitigate the risks of entering into borrowing transactions.

Reverse Repurchase Agreements: A reverse repurchase agreement has the characteristics of a secured borrowing and creates leverage. In a reverse repurchase transaction, a portfolio sells a portfolio instrument to another person, such as a financial institution or broker/dealer, in return for cash. At the same time, a portfolio agrees to repurchase the instrument at an agreed-upon time and at a price that is greater than the amount of cash that the portfolio received when it sold the instrument, representing the equivalent of an interest payment by the portfolio for the use of the cash. During the term of the transaction, a portfolio will continue to receive any principal and interest payments (or the equivalent thereof) on the underlying instruments.

A portfolio may engage in reverse repurchase agreements as a means of raising cash to satisfy redemption requests or for other temporary or emergency purposes. Unless otherwise limited in its prospectus or this SAI, a portfolio may also engage in reverse repurchase agreements to the extent permitted by its fundamental investment policies in order to raise additional cash to be invested by the portfolio's portfolio managers in other securities or instruments in an effort to increase the portfolio's investment returns.

During the term of the transaction, a portfolio will remain at risk for any fluctuations in the market value of the instruments subject to the reverse repurchase agreement as if it had not entered into the transaction. When a portfolio reinvests the proceeds of a reverse repurchase agreement in other securities, the portfolio will bear the risk that the market value of the securities in which the proceeds are invested goes down and is insufficient to satisfy the portfolio's obligations under the reverse repurchase agreement. Like other leveraging risks, this makes the value of an investment in a portfolio more volatile and increases the portfolio's overall investment exposure. This could also result in the portfolio having to dispose of investments at inopportune times and at disadvantageous amounts. In addition, if a portfolio's return on its investment of the proceeds of the reverse repurchase agreement does not equal or exceed the implied interest that it is obligated to pay under the reverse repurchase agreement, engaging in the transaction will lower the portfolio's return.

When a portfolio enters into a reverse repurchase agreement, it is subject to the risk that the buyer under the agreement may file for bankruptcy, become insolvent, or otherwise default on its obligations to the portfolio. In the event of a default by the counterparty, there may be delays, costs and risks of loss involved in a portfolio's exercising its rights under the agreement, or those rights may be limited by other contractual agreements or obligations or by applicable law.

In addition, a portfolio may be unable to sell the instruments subject to the reverse repurchase agreement at a time when it would be advantageous to do so, or may be required to liquidate portfolio securities at a time when it would be disadvantageous to do so in order to make payments with respect to its obligations under a reverse repurchase agreement. This could adversely affect the portfolio managers' strategy and result in losses. At the time a portfolio enters into a reverse repurchase agreement, the portfolio is required to set aside or earmark on its books cash or other appropriate liquid securities in the amount of the portfolio's obligation under the reverse repurchase agreement or take certain other actions in accordance with SEC guidelines, which may affect a portfolio's liquidity and ability to manage its assets. Although complying with SEC guidelines would have the effect of limiting the amount of portfolio assets that may be committed to reverse repurchase agreements and other similar transactions at any time, it does not otherwise mitigate the risks of entering into reverse repurchase agreements.

Lending

Consistent with applicable regulatory requirements and the limitations as set forth in each portfolio's investment restrictions and policies, the portfolio may lend portfolio securities to brokers, dealers and other financial organizations meeting capital and other credit requirements or other criteria established by the Board. Loans of securities will be secured continuously by collateral in cash, cash equivalents, or U.S. government obligations maintained on a current basis at an amount at least equal to the market value of the securities loaned. Cash collateral received by a portfolio will be invested in high quality short-term instruments, or in one or more funds maintained by the lending agent for the purpose of investing cash collateral. During the term of the loan, a portfolio will continue to have investment risk with respect to the security loaned, as well as risk with respect to the investment of the cash collateral. Either party has the right to terminate a loan at any time on customary industry settlement notice (which will not usually exceed three business days). During the existence of a loan, a portfolio will continue to receive the equivalent of the interest or dividends paid by the issuer on the securities loaned and, with respect to cash collateral, will receive any income generated by the portfolio's investment of the collateral (subject to a rebate payable to the borrower and a percentage

of the income payable to the lending agent). Where the borrower provides a portfolio with collateral other than cash, the borrower is also obligated to pay the portfolio a fee for use of the borrowed securities. A portfolio does not have the right to vote any securities having voting rights during the existence of the loan, but would retain the right to call the loan in anticipation of an important vote to be taken among holders of the securities or of the giving or withholding of their consent on a material matter affecting the investment. As with other extensions of credit, there are risks of delay in recovery or even loss of rights in the collateral should the borrower fail financially. In addition, a portfolio could suffer loss if the loan terminates and the portfolio is forced to liquidate investments at a loss in order to return the cash collateral to the buyer.

Voluntary Actions

From time to time, a portfolio may voluntarily participate in actions (for example, rights offerings, conversion privileges, exchange offers, credit event settlements, etc.) where the issuer or counterparty offers securities or instruments to holders or counterparties, such as a portfolio, and the acquisition is determined to be beneficial to portfolio shareholders (“Voluntary Action”). Notwithstanding any percentage investment limitation listed under this section or any percentage investment limitation of the 1940 Act or rules thereunder, if a portfolio has the opportunity to acquire a permitted security or instrument through a Voluntary Action, and the portfolio will exceed a percentage investment limitation following the acquisition, it will not constitute a violation if, after announcement of the offering, but prior to the receipt of the securities or instruments, the portfolio sells an offsetting amount of assets that are subject to the investment limitation in question at least equal to the value of the securities or instruments to be acquired.

Money Market Reserves

It is expected that Transamerica T. Rowe Price Small Cap VP will invest its cash reserves primarily in a money market fund established for the exclusive use of the T. Rowe Price family of mutual funds and other clients of T. Rowe Price and its affiliates. The T. Rowe Price Reserve Investment Fund (“RIF”) and T. Rowe Price Government Reserve Investment Fund (“GRIF”) are series of T. Rowe Price Reserve Investment Funds, Inc. Additional series may be created in the future. These funds were created and operate under an Exemptive Order issued by the Securities and Exchange Commission (Investment Company Act Release No. IC-22770, July 29, 1997).

The funds must comply with the requirements of Rule 2a-7 under the 1940 Act, governing money market funds. The RIF invests at least 97% of its total assets in prime money market instruments receiving the highest credit rating. The GRIF invests primarily in a portfolio of U.S. Government-backed securities, primarily U.S. Treasuries, and repurchase agreements thereon.

T. Rowe Price believes that RIF and GRIF provide very efficient means of managing the cash reserves of the portfolio. While the funds do not pay an advisory fee to T. Rowe Price, they will incur other expenses. However, the RIF and GRIF are expected by T. Rowe Price to operate at very low expense ratios. The portfolio will only invest in RIF or GRIF to the extent it is consistent with its objectives and programs.

The RIF and GRIF are not insured or guaranteed by the U.S. government, and there is no assurance they will maintain a stable net asset value of \$1.00 per share.

Special Considerations (Transamerica ProFund UltraBear VP Only)

Transamerica ProFund UltraBear VP presents certain risks, some of which are further described below.

Correlation and Tracking: A number of factors may affect the ability of Transamerica ProFund UltraBear VP (the “ProFund”) to achieve inverse correlation with its benchmark. Among these factors are: (1) the ProFund’s expenses, including brokerage (which may be increased by high portfolio turnover) and the costs associated with the use of derivatives; (2) less than all of the securities in the ProFund’s benchmark being held by the ProFund and/or securities not included in the benchmark being held by the ProFund; (3) an imperfect correlation between the performance of instruments held by the ProFund, such as futures contracts and options, and the performance of the underlying securities in a benchmark; (4) bid-ask spreads (the effect of which may be increased by portfolio turnover); (5) holding instruments traded in a market that has become illiquid or disrupted; (6) the ProFund’s share prices being rounded to the nearest cent; (7) changes to the benchmark that are not disseminated in advance; (8) the need to conform the ProFund’s portfolio holdings to comply with investment restrictions or policies or regulatory or tax law requirements; (9) limit up or limit down trading halts on options or futures contracts which may prevent the ProFund from purchasing or selling options or futures contracts; (10) early and unanticipated closings of the markets on which the holdings of the ProFund trade, resulting in the inability of the ProFund to execute intended portfolio transactions; and (11) fluctuations in currency exchange rates. Furthermore, because ProFund rebalances its benchmark exposure at the end of each trading day, disparities between estimated and actual purchases and redemptions of the ProFund may cause the ProFund to be over- or underexposed to its benchmark. This may result in greater tracking and correlation error.

The ProFund has an investment objective before fees and expenses to match twice the inverse (-2x) performance of the benchmark on a single day. A “single day” is measured from the time the ProFund calculates its NAV to the time of the ProFund’s next NAV calculation. The ProFund is subject to the correlation risks described above. In addition, while a close inverse correlation of the ProFund to its benchmark may be achieved on any single trading day, over time the cumulative percentage increase or decrease in the NAV of the shares of the ProFund may diverge, in some cases, significantly from the cumulative percentage decrease or increase in the benchmark due to a compounding effect as further described in the Prospectus.

Leverage: The ProFund intends to use, on a regular basis, leveraged investment techniques in pursuing its investment objective. Utilization of leverage involves special risks and should be considered to be speculative. Leverage exists when the ProFund achieves the right to a return

on a capital base that exceeds the amount the ProFund has invested. Leverage creates the potential for greater gains to shareholders of the ProFund during favorable market conditions and the risk of magnified losses during adverse market conditions. Leverage is likely to cause higher volatility of the NAVs of the ProFund's shares. Leverage may involve the creation of a liability that does not entail any interest costs or the creation of a liability that requires the ProFund to pay interest which would decrease the ProFund's total return to shareholders. If the ProFund achieves its investment objectives, during adverse market conditions, shareholders should experience a loss greater than they would have incurred had the ProFund not been leveraged.

Special Note Regarding the Correlation Risks of Leveraged, Inverse, or Inverse Leveraged Funds: As a result of compounding, for periods greater than a single day, the use of leverage tends to cause the performance of the ProFund to vary from its benchmark performance times the stated multiple (-2x) in the portfolio's investment objective before accounting for fees and fund expenses. Compounding affects all investments, but has a more significant impact on inverse leveraged funds. Four factors significantly affect how close daily compounded returns are to longer-term benchmark returns times the portfolio's multiple: the length of the holding period, benchmark volatility, whether the multiple is positive or inverse, and its leverage level. Longer holding periods, higher benchmark volatility, inverse exposure and greater leverage each can lead to returns farther from the multiple times the benchmark return. As the table below shows, particularly during periods of higher benchmark volatility, compounding will cause longer term results to vary from the benchmark performance times the stated multiple in the ProFund's investment objective. This effect becomes more pronounced as volatility increases.

A leveraged fund's return for periods longer than one day is primarily a function of the following:

- a) benchmark performance;
- b) benchmark volatility;
- c) period of time;
- d) financing rates associated with leverage or inverse exposure;
- e) other fund expenses; and
- f) dividends or interest paid with respect to securities included in the benchmark.

The fund performance for a leveraged, inverse or inverse leveraged fund can be estimated given any set of assumptions for the factors described above. The tables below illustrates the impact of two factors, benchmark volatility and benchmark performance, on an inverse leveraged fund. Benchmark volatility is a statistical measure of the magnitude of fluctuations in the returns of a benchmark and is calculated as the standard deviation of the natural logarithms of one plus the benchmark return (calculated daily), multiplied by the square root of the number of trading days per year (assumed to be 252). The tables show estimated fund returns for a number of combinations of benchmark performance and benchmark volatility over a one-year period. Assumptions used in the table include: a) no dividends paid with regard to the equity securities included in the benchmark; b) no fund expenses; and c) borrowing/lending rates (to obtain leverage or inverse exposure) of zero percent. If fund expenses and/or actual borrowing/lending rates were reflected, the fund's performance would be different than shown.

The table below shows an example in which a leveraged fund that has an investment objective to correspond to twice the inverse (-2x) of the daily performance of a benchmark. The leveraged fund could be expected to achieve a -20% return on a yearly basis if the benchmark performance was 10%, absent any costs or the correlation risk or other factors described above and in the Prospectus under "Correlation Risk." However, as the table shows, with a benchmark volatility of 20%, such a fund would return -26.7%, again absent any costs or other factors described above and in the Prospectus under "Correlation Risk." In the chart below, areas shaded darker represent those scenarios where the fund will underperform (i.e., return less than) the benchmark performance times the stated multiple in the fund's investment objective (-2x).

Estimated Fund Return Over One Year When the Fund Objective is to Seek Daily Investment Results, Before Fees and Expenses, that Correspond to Twice the Inverse (-2x) of the Daily Performance of an Benchmark.

The foregoing table is intended to isolate the effect of benchmark volatility and benchmark performance on the return of an inverse leveraged fund. The ProFund's actual returns may be significantly greater or less than the returns shown above as a result of any of the factors discussed above or under "Correlation Risk" in the Prospectus.

Investments in the Subsidiary – Transamerica BlackRock Global Allocation VP

The portfolio may invest up to 25% of its total assets in its Subsidiary. Investments in the Subsidiary are expected to provide the portfolio with exposure to the commodity markets. The principal purpose of investment in the Subsidiary is to allow the portfolio to gain exposure to the commodity markets within the limitations of the federal tax law requirements applicable to regulated investment companies. The portfolio, as a regulated investment company under the tax rules, is generally required to realize at least 90 percent of its annual gross income from certain investment-related sources, specifically, from dividends, interest, payments with respect to certain securities loans, gains from the sales of stock, securities and foreign currencies, other income (including, but not limited to, gains from options, futures, or forward contracts) derived with respect to its business of investing in such stock, securities or currencies, and net income derived from certain types of publicly traded partnerships (referred to as qualifying income). Direct investments by a regulated investment company in commodity-related instruments generally do not, under published IRS rulings, produce qualifying income. However, in a series of private letter rulings, the IRS has indicated income derived by a regulated investment company from a wholly-owned subsidiary invested in commodity and financial futures and option contracts, forward contracts, swaps on commodities or commodities indexes, commodity-linked notes and fixed income securities serving as collateral for the contracts would constitute qualifying income. The portfolio has not received a private letter ruling from the IRS confirming that income derived from the Subsidiary will constitute qualifying income to the portfolio. The IRS is no longer issuing private letter rulings to that effect, and is reportedly reexamining its position with respect to structures of this kind.

The Subsidiary is a company organized under the laws of the Cayman Islands, and is overseen by its own board of directors. Although the Subsidiary has its own board of directors, the Subsidiary is wholly-owned and controlled by the portfolio'.

The Subsidiary (unlike the portfolio) may invest without limit in commodities, commodity-linked derivatives, ETFs, leveraged or unleveraged commodity-linked notes and other investments that provide exposure to commodities. Although the portfolio may to some extent invest directly in commodity-linked derivative instruments and other investments that provide exposure to commodities, the portfolio may also gain exposure to these derivative instruments indirectly by investing in the Subsidiary. The Subsidiary also may invest in other instruments, including fixed income securities, cash and cash equivalents and U.S. government securities, either as investments or to serve as margin or collateral for the Subsidiary's derivatives positions. To the extent that the portfolio invests in the Subsidiary, it may be subject to the risks associated with those derivative instruments and other securities, which are discussed elsewhere in the prospectus and this SAI.

The Subsidiary is advised by TAM and sub-advised by the portfolio's sub-adviser. The Subsidiary (unlike the portfolio) may invest without limitation in commodities, commodity index-linked securities and other commodity-linked securities and derivative instruments. However, to the extent applicable to the investment activities of the Subsidiary, the Subsidiary otherwise is subject to the portfolio's investment restrictions and other policies. The portfolio and its Subsidiary test for compliance with the portfolio's investment restrictions on a consolidated basis. However, unlike the portfolio, the Subsidiary will not seek to qualify as a regulated investment company under Subchapter M of the Code.

The Subsidiary will not be subject to U.S. federal income tax. It will, however, be considered a controlled foreign corporation, and the portfolio will be required to include as income annually investment income earned by the Subsidiary during that year regardless of whether that income is distributed to the portfolio. Furthermore, the portfolio will be subject to generally applicable regulated investment company distribution requirements on any such income, whether or not the Subsidiary makes a distribution to the portfolio during the taxable year. The Subsidiary is not an investment company registered under the 1940 Act and, unless otherwise noted in the prospectus or this SAI, is not subject to all of the investor protections of the 1940 Act and other U.S. regulations. Changes in the laws of the United States and/or the Cayman Islands could affect the ability of the portfolio and/or the Subsidiary to operate as described in the prospectus and this SAI and could negatively affect the portfolio and its shareholders.

Portfolio Turnover

Portfolio turnover rate is, in general, the percentage calculated by taking the lesser of purchases or sales of portfolio securities (excluding short-term securities) for a year and dividing it by the monthly average of the market value of such securities held during the year.

Changes in security holdings are made by a portfolio's sub-adviser when it is deemed necessary. Such changes may result from: liquidity needs; securities having reached a price or yield objective; anticipated changes in interest rates or the credit standing of an issuer; or developments not foreseen at the time of the investment decision.

A sub-adviser may engage in a significant number of short-term transactions if such investing serves a portfolio's objective. The rate of portfolio turnover will not be a limiting factor when such short-term investing is considered appropriate. Increased turnover results in higher brokerage costs or mark-up charges for a portfolio, these charges are ultimately borne by the policyowners.

In computing the portfolio turnover rate, securities whose maturities or expiration dates at the time of acquisition are one year or less are excluded. Subject to this exclusion, the turnover rate for a portfolio is calculated by dividing (a) the lesser of purchases or sales of portfolio securities for the fiscal year by (b) the monthly average of portfolio securities owned by the portfolio during the fiscal year.

There are no fixed limitations regarding the portfolio turnover rates of the portfolios. Portfolio turnover rates are expected to fluctuate under constantly changing economic conditions and market circumstances. Higher turnover rates tend to result in higher brokerage fees. Securities initially satisfying the basic policies and objective of each portfolio may be disposed of when they are no longer deemed suitable.

Historical turnover rates are included in the Financial Highlights tables in the prospectus.

The following portfolios had a significant variation in their portfolio turnover rates over the two most recently completed fiscal years.

Transamerica Torray Concentrated Growth VP and Transamerica TS&W International Equity VP underwent sub adviser changes in 2013, leading to a higher turnover rate for that year.

Transamerica Legg Mason Dynamic Allocation - Balanced VP and Transamerica Legg Mason Dynamic Allocation - Growth VP have lower turnover in 2013 as the strategy employed remains relatively static because the NAV of the equity portion did not drop below a certain threshold. In 2013 this threshold was never breached as equity markets rallied which resulted in the lower turnover rate.

Transamerica Madison Balanced Allocation VP and Transamerica Madison Conservative Allocation VP have higher turnover rates as the list of underlying mutual fund options widened in 2013 and some underlying mutual funds were replaced with different options causing turnover to rise. Volatility guidelines also caused turnover within the portfolio.

Transamerica PIMCO Tactical - Balanced VP, Transamerica PIMCO Tactical - Conservative VP and Transamerica PIMCO Tactical - Growth VP underwent sub advisory changes in September of 2012. The new sub adviser has much more holdings and moves them less than the previous sub adviser which resulted in a lower turnover rate for 2013.

Transamerica PIMCO Total Return VP increase in turnover rate for 2013 is largely attributed to the sub adviser's mid-year shift in duration exposure from intermediate term maturities to short term maturities.

Transamerica PineBridge Inflation Opportunities VP had large inflows in 2012, which resulted in portfolio turnover rate being higher as compared to 2013. Net inflows were lower in 2013 and trading was modestly lower due to limited opportunities and higher market volatility.

Disclosure of Portfolio Holdings

It is the policy of the portfolios to protect the confidentiality of their holdings and prevent the selective disclosure of non-public information about portfolio holdings. The portfolios' service providers are required to comply with this policy. No non-public information concerning the portfolio holdings may be disclosed to any unaffiliated third party, except as provided below. The Board of Trustees has adopted formal procedures governing compliance with these policies.

The portfolios believe the policy is in the best interests of each portfolio and its shareholders and that it strikes an appropriate balance between the desire of investors for information about portfolio holdings and the need to protect portfolios from potentially harmful disclosures. Any conflicts of interest between the interests of portfolio shareholders and those of Transamerica or its affiliates are addressed in a manner that places the interests of portfolio shareholders first.

The portfolios, or their duly authorized service providers, may publicly disclose holdings in accordance with regulatory requirements, such as periodic portfolio disclosure in filings with the SEC. A summary or list of a portfolio's completed purchases and sales may only be made available after the public disclosure of portfolio holdings.

The portfolios publish all holdings on their website at www.transamericaseriestrust.com approximately 25 days after the end of each calendar quarter. Such information generally remains online for 6 months, or as otherwise consistent with applicable regulations. The day following such publication, the information is deemed to be publicly disclosed for the purposes of the policies and procedures adopted by the portfolios. The portfolios may then forward the information to investors and consultants requesting it.

Transamerica Aegon Money Market VP files monthly a schedule of portfolio holdings with the SEC on Form N-MFP. The information filed on Form N-MFP is made available to the public by the SEC 60 days after the end of the month to which the information pertains. A schedule of portfolio holdings for Transamerica Aegon Money Market VP is posted each month to the portfolio's website in accordance with Rule 2a-7(c)(12) under the 1940 Act.

There are numerous mutual fund evaluation services and due diligence departments of broker-dealers and wirehouses that regularly analyze the holdings of mutual funds and portfolios in order to monitor and report on various attributes including style, capitalization, maturity, yield, beta, etc. These services and departments then distribute the results of their analysis to the public, paid subscribers and/or in-house brokers. In order to facilitate the review of the funds and portfolios by these services and departments, the portfolios may distribute (or authorize their service providers to distribute) holdings to such services and departments before their public disclosure is required or authorized provided that: (i) the recipient does not distribute the holdings or results of the analysis to third parties, other departments or persons who are likely to use the information for purposes of purchasing or selling the portfolios before the holdings or results of the analysis become public information; and (ii) the recipient signs a written confidentiality agreement. Persons and entities unwilling to execute an acceptable confidentiality agreement may only receive portfolio holdings information that has otherwise been publicly disclosed. Neither the portfolios nor their service providers receive any compensation from such services and departments. Subject to such departures as the portfolios' investment adviser and compliance department believe reasonable and consistent with reasonably protecting the confidentiality of the portfolio information, each confidentiality agreement should provide that, among other things: the portfolio information is the confidential property of the portfolios (and their service providers, if applicable) and may not be shared or used directly or indirectly for any purpose except as expressly provided in the confidentiality agreement. The recipient of the portfolio information agrees to limit access to the portfolio information to its employees (and agents) who, on a need to know basis, are (1) authorized to have access to the portfolio information and (2) subject to a duty of confidentiality, including duties not to share the non-public information with an unauthorized source and not to trade on non-public information. Upon written request, the recipient agrees to promptly return or destroy, as directed, the portfolio information.

The portfolios (or their authorized service providers) may disclose portfolio information before their public disclosure based on the criteria described above. The frequency with which such information may be disclosed, and the length of the lag, if any, between the disclosure date of the information and the date on which the information is publicly disclosed, varies based on the terms of the applicable confidentiality agreement. The portfolios currently provide portfolio information to the following third parties at the stated frequency as part of ongoing arrangements that include the release of portfolio holdings information in accordance with the policy:

<u>Name</u>	<u>Frequency</u>
Advent Software, Inc.	Daily
Evare	Daily
Morningstar Associates, LLC	Daily
StarCompliance	Daily
Lipper, Inc.	Quarterly
Thompson Financial, Ltd.	Quarterly
Bloomberg	Quarterly

Portfolio holdings information may also be provided at any time (and as frequently as daily) to the portfolios' service providers and others who generally need access to such information in the performance of their contractual duties and responsibilities, such as TAM, the sub-advisers, the custodian, administrator, sub-administrator, independent public accountants, attorneys, and the portfolios' officers and trustees, subject to a duty of confidentiality with respect to any portfolio holdings information. TAM also receives portfolio holdings information to assist in the selection of underlying portfolios for certain asset allocation portfolios.

In addition to these ongoing arrangements, the policy permits the release by the portfolios (or their authorized service providers) of the following information concerning a portfolio, provided that the information has been publicly disclosed (via the portfolios' website or otherwise):

- **Top Ten Holdings** – A portfolio's top ten holdings and the total percentage of the portfolio such aggregate holdings represent.
- **Sector Holdings** – A portfolio's sector information and the total percentage of the portfolio held in each sector.

- **Other Portfolio Characteristic Data** – Any other analytical data with respect to a portfolio that does not identify any specific portfolio holding.
- **Funds of ETFs and Funds of Funds** – For any portfolio whose investments (other than cash alternatives) consist solely of shares of ETFs or other Funds, no sooner than 10 days after the end of a month the names of the ETFs or Funds held as of the end of that month and the percentage of the portfolio’s net assets held in each ETF or Fund as of the end of that month.

The Board and an appropriate officer of the Investment Adviser’s compliance department or the Trust’s Chief Compliance Officer (“CCO”) may, on a case-by-case basis, impose additional restrictions on the dissemination of portfolio information and waive certain requirements. Any exceptions to the policy must be consistent with the purposes of the policy. The CCO reports to the Board material compliance violations of the portfolios’ policies and procedures on disclosure of portfolio holdings.

The Investment Adviser and Morningstar Associates, LLC, receives portfolio holdings information to assist in the selection of underlying funds for certain asset allocation funds. The Investment Adviser and Morningstar Associates, LLC, may utilize this information solely in selection of underlying funds and will not use the information to trade individual securities or instruments. Information concerning the portfolio holdings of certain portfolios may be disclosed to the risk assessment department of affiliated insurance companies to hedge their obligations under variable annuity products. The affiliated insurance companies will only purchase and/or sell index contracts in mitigating financial risks to which they are subject by virtue of the variable annuity contracts.

In addition, separate account and unregistered product clients of TAM, the sub-advisers of the portfolios, or their respective affiliates generally have access to information regarding the portfolio holdings of their own accounts. Prospective clients may also have access to representative portfolio holdings. These clients and prospective clients are not subject to the portfolio holdings disclosure policies described above. Some of these separate accounts and unregistered product clients have substantially similar or identical investment objectives and strategies to certain portfolios, and therefore may have substantially similar or nearly identical portfolio holdings as those portfolios.

Certain information in the above section may not apply to all of the Trusts managed by the Investment Adviser.

Commodity Exchange Act Registration

TAM has registered as a “commodity pool operator” (“CPO”) under the Commodity Exchange Act (“CEA”) with respect to its service as investment adviser to Transamerica ProFund UltraBear VP, Transamerica BlackRock Global Allocation Managed Risk – Balanced VP and Transamerica BlackRock Global Allocation Managed Risk – Growth VP. Compliance with applicable Commodity Futures Trading Commission (“CFTC”) disclosure, reporting and recordkeeping regulations is expected to increase portfolio expenses.

The Investment Adviser relies on CFTC Rule 4.12(c)(3) with respect to Transamerica ProFund UltraBear VP, Transamerica BlackRock Global Allocation Managed Risk – Balanced VP and Transamerica BlackRock Global Allocation Managed Risk – Growth VP, which relieves the Investment Adviser from certain CFTC recordkeeping, reporting and disclosure requirements.

The remaining portfolios are operated by the Investment Adviser pursuant to an exclusion from registration as a CPO with respect to such portfolios under the CEA, and therefore, are not subject to registration or regulation with respect to the portfolios under the CEA. These portfolios are limited in their ability to enter into commodity interests positions subject to CFTC jurisdiction.

The portfolios and the Investment Adviser are continuing to analyze the effect of these rules changes on the portfolios.

Management of the Trust

Board Members and Officers

The Board Members and executive officers of the Trust are listed below.

Interested Board Member means a board member who may be deemed an “interested person” (as that term is defined in the 1940 Act) of the Trust because of his current or former service with TAM or an affiliate of TAM. Interested Board Members may also be referred to herein as “Interested Trustees.” Independent Board Member means a Board Member who is not an “interested person” (as defined under the 1940 Act) of the Trust and may also be referred to herein as an “Independent Trustee.”

The Board governs each portfolio and is responsible for protecting the interests of the shareholders. The Board Members are experienced executives who meet periodically throughout the year to oversee the business affairs of each portfolio and the operation of each portfolio by its officers. The Board also reviews the management of each portfolio’s assets by the investment adviser and its respective sub-adviser.

The portfolios are among the portfolios advised and sponsored by TAM (collectively, “Transamerica Mutual Funds”). The Transamerica Mutual Funds consist of Transamerica Funds, Transamerica Series Trust (“TST”), Transamerica Income Shares, Inc. (“TIS”), Transamerica Partners Funds Group (“TPFG”), Transamerica Partners Funds Group II (“TPFG II”), Transamerica Partners Portfolios (“TPP”) and Transamerica Asset Allocation Variable Funds (“TAAVF”) and consists of 171 funds as of the date of this SAI.

The mailing address of each Board Member is c/o Secretary, 570 Carillon Parkway, St. Petersburg, Florida 33716.

The Board Members, their year of birth, their positions with the Trust, and their principal occupations for the past five years (their titles may have varied during that period), the number of funds in Transamerica Mutual Funds the Board oversees, and other board memberships they hold are set forth in the table below.

Scott M. Lenhart (1961)	Chief Compliance Officer and Anti-Money Laundering Officer	Since 2014	Chief Compliance Officer and Anti-Money Laundering Officer, Transamerica Funds, TST, TIS, TPP, TPF, TPF II and TAAVF (2014 – present); Chief Compliance Officer and Anti-Money Laundering Officer (2014 – present), Senior Compliance Officer (2008-2014), TAM; Vice President and Chief Compliance Officer, TFS (2014 – present); Director of Compliance, Transamerica Investments & Retirement (2014 – present); Vice President and Chief Compliance Officer, Transamerica Financial Advisors, Inc. (1999-2006); and Assistant Chief Compliance Officer, Raymond James Financial, Inc., Robert Thomas Securities, Inc. (1989-1998).

* Elected and serves at the pleasure of the Board of the Trust.

If an officer has held offices for different portfolios for different periods of time, the earliest applicable date is shown. No officer of the Trust, except for the Chief Compliance Officer, receives any compensation from the Trust.

Each of the Board Members, other than Mr. Jennings, Mr. Smit and Mr. Warrick, previously served as a trustee or director of the TAM, Diversified or Premier fund family, and each Board Member was thus initially selected by the board of the applicable predecessor fund family. In connection with the consolidation of all “manager of managers” investment advisory services within Transamerica in 2007, a single board was established to oversee the TAM and Diversified fund families, and each of the Board Members, other than Ms. Bane, Mr. Jennings and Mr. Warrick, joined the Board at that time. The Board was established with a view both to ensuring continuity of representation by board members of the TAM and Diversified fund families on the Board and in order to establish a Board with experience in and focused on overseeing various types of funds, which experience would be further developed and enhanced over time. Ms. Bane joined the Board in 2008 when the Premier fund family was consolidated into Transamerica Mutual Funds. Mr. Jennings joined the Board in 2009. Mr. Warrick joined the Board in 2012. Mr. Smit joined the Board in 2014.

The Board believes that each Board Member’s experience, qualifications, attributes or skills on an individual basis and in combination with those of the other Board Members lead to the conclusion that the Board possesses the requisite skills and attributes. The Board believes that the Board Members’ ability to review critically, evaluate, question and discuss information provided to them, to interact effectively with TAM, the sub-advisers, other services providers, counsel and independent auditors, and to exercise effective business judgment in the performance of their duties, support this conclusion. The Board also has considered the following experience, qualifications, attributes and/or skills, among others, of its members in reaching its conclusion: his or her character and integrity; such person’s service as a board member of a predecessor fund family (other than Mr. Jennings, Mr. Smit and Mr. Warrick); such person’s willingness to serve and willingness and ability to commit the time necessary to perform the duties of a Board Member; the fact that such person’s service would be consistent with the requirements of the retirement policies of the Trust; as to each Board Member other than Mr. Smit and Mr. Warrick, his or her status as not being an “interested person” as defined in the 1940 Act; as to Mr. Smit, his status as a representative of TAM; and, as to Mr. Warrick, his former service in various executive positions for certain affiliates of TAM. In addition, the following specific experience, qualifications, attributes and/or skills apply as to each Board Member: Ms. Bane, accounting experience and experience as a board member of multiple organizations; Mr. Hill, financial and entrepreneurial experience as an executive, owner and consultant; Mr. Jennings, investment management experience as an executive of investment management organizations and portfolio manager; Mr. Kimball, business experience as an executive; Mr. Mannella, accounting and fund administration experience, investment management industry experience as an executive and consultant; Mr. Nielsen, academic leadership, insurance, business development and board experience; Ms. Norden, non-profit executive experience and extensive board and academic leadership; Ms. Sawyer, management consulting and board experience; Mr. Waechter, securities industry and fund accounting and fund compliance experience, legal experience and board experience; Mr. Smit, investment management and insurance experience as an executive and leadership roles with TAM and affiliated entities; and Mr. Warrick, financial services industry experience as an executive and consultant with various TAM affiliates and other entities. References to the qualifications, attributes and skills of Board Members are pursuant to requirements of the SEC, do not constitute holding out of the Board or any Board Member as having any special expertise or experience, and shall not impose any greater responsibility or liability on any such person or on the Board by reason thereof.

The Board is responsible for overseeing the management and operations of the portfolios. As a result of the recent resignation of the Chairman, the Board currently does not have a Chair, although it expects to appoint a new Chair at a later date. As noted above, the Board has a Lead Independent Board Member. Independent Board Members constitute more than 75% of the Board.

Board Committees

The Board has two standing committees: the Audit Committee and Nominating Committee. Both the Audit Committee and Nominating Committee are chaired by an Independent Board Member and composed of all of the Independent Board Members. In addition, the Board has a Lead Independent Board Member.

The Lead Independent Board Member and the chairs of the Audit and Nominating Committees work with the Chairman to set the agendas for Board and committee meetings. The Lead Independent Board Member also serves as a key point person for dealings between management and the Independent Board Members. Through the portfolios’ board committees, the Independent Board Members consider and address important matters involving the portfolios, including those presenting conflicts or potential conflicts of interest for management, and they believe they can act independently and effectively. The Board believes that its leadership structure is appropriate and facilitates the orderly and efficient flow of information to the Independent Board Members from management.

The Audit Committee, among other things, oversees the accounting and reporting policies and practices and internal controls of the Trust, oversees the quality and integrity of the financial statements of the Trust, approves, prior to appointment, the engagement of the Trust’s independent registered public accounting firm, reviews and evaluates the independent registered public accounting firm’s qualifications, independence and performance, and approves the compensation of the independent registered public accounting firm.

The Audit Committee also approves all audit and permissible non-audit services provided to each portfolio by the independent registered public accounting firm and all permissible non-audit services provided by each portfolio’s independent registered public accounting firm to TAM and any affiliated service providers if the engagement relates directly to each portfolio’s operations and financial reporting.

The Nominating Committee is a forum for identifying, considering, selecting and nominating, or recommending for nomination by the Board, candidates to fill vacancies on the Board. The Nominating Committee may consider diversity in identifying potential candidates, including differences of viewpoint, professional experience and skill, as well as such other individual qualities and attributes as it may deem relevant. The Nominating Committee has not adopted a formal procedure for the implementation, or for assessing the effectiveness, of its policy with regard to the consideration of diversity in identifying potential candidates.

When addressing vacancies, the Nominating Committee sets any necessary standards or qualifications for service on the Board and may consider nominees recommended by any source it deems appropriate, including management and shareholders. Shareholders who wish to recommend a nominee should send recommendations to the Trust's Secretary that include all information relating to such person that is required to be disclosed in solicitations of proxies for the election of Board Members. A recommendation must be accompanied by a written consent of the individual to stand for election if nominated by the Board and to serve if elected by the shareholders.

The Nominating Committee also identifies potential nominees through its network of contacts and may also engage, if it deems appropriate, a professional search firm. The committee meets to discuss and consider such candidates' qualifications and then chooses a candidate by majority vote. The committee does not have specific, minimum qualifications for nominees, nor has it established specific qualities or skills that it regards as necessary for one or more of the Board Members to possess (other than any qualities or skills that may be required by applicable law, regulation or listing standard). The committee has, however, established (and reviews from time to time as it deems appropriate) certain desired qualities and qualifications for nominees, including certain personal attributes and certain skills and experience.

Risk Oversight

Through its oversight of the management and operations of the portfolios, the Board also has a risk oversight function, which includes (without limitation) the following: (i) requesting and reviewing reports on the operations of the portfolios (such as reports about the performance of the portfolios); (ii) reviewing compliance reports and approving compliance policies and procedures of the portfolios and their service providers; (iii) meeting with management to consider areas of risk and to seek assurances that adequate resources are available to address risks; (iv) meeting with service providers, including portfolio auditors, to review portfolio activities; and (v) meeting with the Chief Compliance Officer and other officers of the portfolios and their service providers to receive information about compliance, and risk assessment and management matters. Such oversight is exercised primarily through the Board and its Audit Committee but, on an ad hoc basis, also can be exercised by the Independent Board Members during executive sessions. The Board has emphasized to TAM and the sub-advisers the importance of maintaining vigorous risk management.

The Board recognizes that not all risks that may affect the portfolios can be identified, that it may not be practical or cost-effective to eliminate or mitigate certain risks, that it may be necessary to bear certain risks (such as investment-related risks) to achieve the portfolios' goals, and that the processes, procedures and controls employed to address certain risks may be limited in their effectiveness. Moreover, reports received by the Board Members as to risk management matters are typically summaries of the relevant information. Most of the portfolios' investment management and business affairs are carried out by or through TAM, its affiliates, the sub-advisers and other service providers each of which has an independent interest in risk management but whose policies and the methods by which one or more risk management functions are carried out may differ from the portfolios' and each other's in the setting of priorities, the resources available or the effectiveness of relevant controls. As a result of the foregoing and other factors, the Board's risk management oversight is subject to substantial limitations. In addition, some risks may be beyond the reasonable control of the Board, the portfolios, TAM, its affiliates, the sub-advisers or other service providers.

In addition, it is important to note that each portfolio is designed for investors that are prepared to accept investment risk, including the possibility that as yet unforeseen risks may emerge in the future.

Additional Information about the Committees of the Board

Both the Audit Committee and Nominating Committee are composed of all of the Independent Board Members. For the fiscal year ended December 31, 2013, the Audit Committee met 6 times and the Nominating Committee did not meet.

Trustee Ownership of Equity Securities

As of December 31, 2013, none of the Board Members owned equity securities in the TST portfolios.

Transamerica Mutual Funds	
Trustee	Aggregate Dollar Range of Equity Securities
Interested Trustees	
Marijn P. Smit*	Over \$100,000
Alan F. Warrick	None
Independent Trustees	
Sandra N. Bane	None
Leo J. Hill	Over \$100,000
David W. Jennings	None
Russell A. Kimball, Jr.	Over \$100,000
Eugene M. Mannella	None
Norman R. Nielsen	\$10,001-\$50,000
Joyce G. Norden	\$50,001-\$100,000
Patricia L. Sawyer	Over \$100,000
John W. Waechter	Over \$100,000

* As of July 31, 2014.

As of December 31, 2013, none of the Independent Board Members or their immediate family members owned beneficially or of record any securities of the Adviser, sub-advisers or Distributor of the portfolios, or in a person (other than a registered investment company) directly or indirectly controlling, controlled by or under common control with the Adviser, sub-advisers or Distributor of the portfolios.

Trustee Compensation

As of January 1, 2014, Independent Board compensation is determined as follows: Independent Board Members receive a total annual retainer fee of \$135,000 from the funds/portfolios that make up the Transamerica Mutual Funds, as well as \$9,000 for each regularly scheduled meeting attended and each special meeting requiring an in-person quorum (whether attended in-person or telephonically). The Independent Board Members receive \$2,500 for each telephonic meeting attended. Additionally, each member of the Audit Committee and Nominating Committee receives a total annual retainer fee of \$25,000.

The Trust pays a pro rata share of these fees allocable to each series of the Trust based on the relative assets of the series.

The Lead Independent Trustee of the Board also receives an additional retainer of \$40,000 per year. The Audit Committee Chairperson receives an additional retainer of \$20,000 per year. The Trust also pays a pro rata share allocable to each series of Transamerica Series Trust based on the relative assets of the series for the Lead Independent Trustee and Audit Committee Chairperson retainers. Any fees and expenses paid to an Interested Trustee and officers are paid by TAM or an affiliate and not by the Trust, except for the Chief Compliance Officer.

Under a non-qualified deferred compensation plan effective January 1, 1996, as amended and restated January 1, 2010 (the “Deferred Compensation Plan”), available to the Board Members, compensation may be deferred that would otherwise be payable by the Trust to an Independent Board Member on a current basis for services rendered as a Board Member. Deferred compensation amounts will accumulate based on the value of Class A (or comparable) shares of a series of Transamerica Funds (without imposition of sales charge), as elected by the Board Members.

Amounts deferred and accrued under the Deferred Compensation Plan are unfunded and unsecured claims against the general assets of the Trust.

Compensation Table

The following table provides compensation amounts paid by the portfolios to the Independent Trustees for the fiscal year ended December 31, 2013. Interested Trustees are not compensated by the portfolios. Mr. Warrick is compensated for his Board service by TAM or an affiliate of TAM.

Shareholder Communication Procedures with the Board of Trustees

The Board of Trustees (the “Board”) of the Trust has adopted these procedures by which shareholders of the Trust may send written communications to the Board. Shareholders may mail written communications to the Board, addressed to the care of the Secretary of the Trust (“Secretary”), as follows:

Board of Trustees
Transamerica Series Trust
c/o Secretary
570 Carillon Parkway
St. Petersburg, Florida 33716

Each shareholder communication must (i) be in writing and be signed by the shareholder, (ii) identify the underlying series of the Trust to which it relates, and (iii) identify the class (if applicable) held by the shareholder. The Secretary is responsible for collecting, reviewing and organizing all properly submitted shareholder communications. Usually, with respect to each properly submitted shareholder communication, the Secretary shall either (i) provide a copy of the communication to the Board at the next regularly scheduled Board meeting or (ii) if the Secretary determines that the communication requires more immediate attention, forward the communication to the Board promptly after receipt. The Secretary may, in good faith, determine that a shareholder communication should not be provided to the Board because the communication (i) does not reasonably relate to a series of the Trust or its operation, management, activities, policies, service providers, Board, officers, shareholders or other matters relating to an investment in the Trust, or (ii) is ministerial in nature (such as a request for Trust literature, share data or financial information). These Procedures shall not apply to (i) any communication from an officer or Trustee of the Trust, (ii) any communication from an employee or agent of the Trust, unless such communication is made solely in such employee’s or agent’s capacity as a shareholder, (iii) any shareholder proposal submitted pursuant to Rule 14a-8 under the Securities Exchange Act of 1934 (“Exchange Act”) or any communication made in connection with such a proposal, or (iv) any communication that reasonably may be considered to be a complaint regarding the Trust or shareholder services, which complaint shall instead be promptly forwarded to the Trust’s Chief Compliance Officer. The Trustees are not required to attend the Trust’s shareholder meetings, if any, or to otherwise make themselves available to shareholders for communications, other than pursuant to these Procedures.

Code of Ethics

The Trust, TAM, each sub-adviser and TCI have each adopted a Code of Ethics as required by applicable law, which is designed to prevent affiliated persons of the Trust, TAM, each sub-adviser and TCI from engaging in deceptive, manipulative, or fraudulent activities in connection with securities held or to be acquired by the portfolios (which may also be held by persons subject to a code of ethics). There can be no assurance that the codes of ethics will be effective in preventing such activities.

Pursuant to Rule 17j-1 under the 1940 Act, the portfolios, TAM, the sub-advisers and the distributor each have adopted a code of ethics that permits their personnel to invest in securities for their own accounts, including securities that may be purchased or held by a portfolio. All personnel must place the interests of clients first, must not act upon non-public information, must not take inappropriate advantage of their positions, and are required to fulfill their fiduciary obligations. All personal securities transactions by employees must adhere to the requirements of the codes of ethics and must be conducted in such a manner as to avoid any actual or potential conflict of interest, the appearance of such a conflict, or the abuse of an employee’s position of trust and responsibility.

Proxy Voting Policies and Procedures

The Trust uses the proxy voting policies of the respective sub-advisers to determine how to vote proxies relating to securities in their portion of the portfolio. The proxy voting policies and procedures of TAM and the sub-advisers are attached hereto as Appendix A.

TAM’s proxy voting policy and procedures address material conflicts of interest that may arise between TAM or its affiliates and the funds by either: (i) providing for voting in accordance with the recommendation of an independent third party or the Board; or (ii) obtaining the consent of the Board (or a Board Committee) with full disclosure of the conflict.

The Trust files SEC Form N-PX, with the complete proxy voting records of the portfolios for the 12 months ended June 30th, no later than August 31st of each year. The Form is available without charge: (1) upon request by calling 1-888-233-4339; and (2) on the SEC’s website at www.sec.gov.

Proxy Voting Policies and Procedures

I. Statement of Principle

The portfolios seek to assure that proxies received by the portfolios are voted in the best interests of the portfolios’ stockholders and have accordingly adopted these procedures.

II. Delegation of Proxy Voting/Adoption of Adviser and Sub-Adviser Policies

Each portfolio delegates the authority to vote proxies related to portfolio securities to TAM (the “Adviser”), as investment adviser to each portfolio, which in turn delegates proxy voting authority for most portfolios of the Trust to the Sub-Adviser retained to provide day-to-day portfolio management for that portfolio. The Board of Trustees (“Board”) of each portfolio adopts the proxy voting policies and procedures of the Adviser and Sub-Advisers as the proxy voting policies and procedures (each a “Proxy Voting Policy”) that will be used by each of these respective entities when exercising voting authority on behalf of the portfolio. These policies and procedures are herein.

III. Annual Review of Proxy Voting Policies of Adviser and Sub-Advisers

No less frequently than once each calendar year, the Proxy Voting Administrator will request each Sub-Adviser to provide a current copy of its Proxy Voting Policy, or certify that there have been no material changes to its Proxy Voting Policy or that all material changes have been previously provided for review, and verify that such Proxy Voting Policy is consistent with those of the portfolios and Adviser. Any inconsistency between the Sub-Adviser's Proxy Voting Policy and that of the portfolios or Adviser shall be reconciled by the Proxy Voting Administrator before presentation for approval by the Board.

The Proxy Voting Administrator will provide an electronic copy of each Board approved Proxy Voting Policy to the legal department for inclusion in applicable SEC filings.

IV. Securities on Loan

The Board has authorized the Adviser, in conjunction with State Street Bank and Trust Company ("State Street"), located at One Lincoln Street, Boston, MA 02111, to lend portfolio securities on behalf of the portfolios. Securities on loan generally are voted by the borrower of such securities. Should a Sub-Adviser to the portfolio wish to exercise its vote for a particular proxy, the Adviser will immediately contact State Street and terminate the loan.

Investment Advisory and Other Services

The Investment Adviser

Transamerica Asset Management, Inc. ("TAM" or the "Investment Adviser"), located at 4600 S. Syracuse Street, Suite 1100, Denver, CO 80237, serves as investment adviser for Transamerica Series Trust. TAM provides continuous and regular investment advisory services to the funds. For each of the portfolios, TAM currently acts as a "manager of managers" and hires investment sub-advisers to furnish investment advice and recommendations and has entered into a sub-advisory agreement with each portfolio's sub-adviser. In acting as a manager of managers, the Investment Adviser provides investment advisory services that include proactive oversight of sub-advisers, daily monitoring of the sub-advisers' buying and selling of securities for the portfolios and regular review of sub-adviser performance. More information on the investment advisory services rendered by TAM is included in the SAI. TAM is paid investment advisory fees for its service as investment adviser to each portfolio. These fees are calculated on the average daily net assets of each portfolio. For each of the portfolios, TAM currently acts as a "manager of managers" and hires sub-advisers to furnish day-to-day investment advice and recommendations. TAM may, in the future, determine to provide the day-to-day management of any such portfolio without the use of a sub-adviser.

TAM provides continuous and regular investment advisory services to the portfolios. When acting as a manager of managers, TAM provides advisory services that include, without limitation, the design and development of each portfolio and its investment strategy and the ongoing review and evaluation of that investment strategy including recommending changes in strategy where it believes appropriate or advisable; the selection of one or more sub-advisers for each portfolio employing a combination of quantitative and qualitative screens, research, analysis and due diligence; oversight and monitoring of sub-advisers and recommending changes to sub-advisers where it believes appropriate or advisable; recommending portfolio combinations and liquidations where it believes appropriate or advisable; regular supervision of the portfolios' investments; regular review of sub-adviser performance and holdings; ongoing trade oversight and analysis; regular monitoring to ensure adherence to investment process; risk management oversight and analysis; design, development, implementation and regular monitoring of the valuation process; design, development, implementation and regular monitoring of the compliance process; review of proxies voted by sub-advisers; oversight of preparation, and review, of materials for meetings of the portfolios' Board of Trustees, participation in these meetings and preparation of regular communications with the Board; oversight of preparation, and review, of prospectuses, shareholder reports and other disclosure materials and regulatory filings for the portfolios; oversight of other service providers to the portfolios, such as the custodian, the transfer agent, the portfolios' independent accounting firm and legal counsel; supervision of the performance of recordkeeping and shareholder relations functions for the portfolios; and ongoing cash management services. TAM uses a variety of quantitative and qualitative tools to carry out its investment advisory services.

TAM is directly owned by Transamerica Premier Life Insurance Company ("TPLIC") (77%) and AUSA Holding Company (23%) ("AUSA"), both of which are indirect, wholly owned subsidiaries of Aegon NV. TPLIC is owned by Commonwealth General Corporation ("Commonwealth") (87.72%) and Aegon USA, LLC ("Aegon USA") (12.28%). Commonwealth and AUSA are wholly owned by Aegon USA. Aegon USA is wholly owned by Aegon US Holding Corporation, which is wholly owned by Transamerica Corporation (DE). Transamerica Corporation (DE) is wholly owned by The Aegon Trust, which is wholly owned by Aegon International B.V., which is wholly owned by Aegon NV, a Netherlands corporation, and a publicly traded international insurance group.

Advisory Agreement

TAM has agreed, under each portfolio's Advisory Agreement, to regularly provide the portfolio with investment advisory services, including management, supervision and investment research and advice and shall furnish a continuous investment program for the portfolio's portfolio of securities and other investments consistent with the portfolio's investment objectives, policies and restrictions, as stated in the portfolio's prospectus and SAI. TAM is permitted to enter into contracts with sub-advisers, subject to the Board's approval. TAM has entered into sub-advisory agreements, as described below.

As compensation for services performed, each portfolio pays TAM a fee computed daily at an annual rate of the portfolio's average daily net assets as described below. TAM bears all expenses incurred by it in the performance of its duties under each portfolio's Advisory Agreement. A portfolio bears all expenses not expressly assumed by TAM incurred in the operation of the portfolio and the offering of its shares.

The Advisory Agreement for a portfolio will terminate, unless sooner terminated as set forth therein, two years from its effective date, and will continue in effect from year to year thereafter, if continuance is specifically approved at least annually by (i) the vote of a majority of the Board Members who are not parties thereto or interested persons of any party thereto, cast in person at a meeting called for the purpose of voting on the approval of the terms of renewal, and by (ii) either the Board or the affirmative vote of a majority of the outstanding voting securities of that portfolio.

Each Advisory Agreement provides that TAM may render services to others. Under each portfolio's Advisory Agreement, TAM assumes no responsibility other than to render the services called for by the Advisory Agreement in good faith, and TAM and its affiliates will not be liable for any error of judgment or mistake of law, or for any loss arising out of any investment or for any act or omission in the execution of securities transactions for the portfolio. TAM and its affiliates are not protected, however, against any liability to a portfolio to which TAM or an affiliate would otherwise be subject by reason of willful misfeasance, bad faith, or gross negligence in the performance of its duties or by reason of its reckless disregard of its obligations and duties under the Advisory Agreement.

Each Advisory Agreement provides that it may be terminated with respect to any portfolio at any time, without the payment of any penalty, upon 60 days' written notice to TAM, or by TAM upon 60 days' written notice to the portfolio. A portfolio may effect termination by action of the Board or by vote of a majority of the outstanding voting securities of the portfolio, accompanied by appropriate notice. The Advisory Agreement terminates automatically in the event of its "assignment" (as defined in the 1940 Act).

Investment Adviser Compensation

TAM receives compensation calculated daily and paid monthly from the portfolios, at the annual rates indicated below. The advisory fees each portfolio paid during the fiscal year ended December 31, 2013, as a percentage of the portfolio's average daily net assets, are included in the portfolio's prospectus.

Portfolio Name	Percentage of Average Daily Net Assets

Expense Limitation

TAM has entered into an expense limitation agreement with the Trust on behalf of certain portfolios, pursuant to which TAM has agreed to reimburse a portfolio's expenses or waive fees, or both, whenever, in any fiscal year, the total cost to a portfolio of normal operating expenses chargeable to the portfolio, including the investment advisory fee but excluding, as applicable, 12b-1 fees, acquired fund fees and expenses, interest, taxes, brokerage commissions, dividend and interest expenses on securities sold short, extraordinary expenses and other expenses not incurred in the ordinary course of the portfolio's business) exceed a certain percentage of the portfolio's average daily net assets ("expense cap"). The portfolios may, at a later date, reimburse TAM for operating expenses previously paid on behalf of such portfolios during the previous 36 months (36-month reimbursement), but only if, after such reimbursement, the portfolios' expense ratios do not exceed the expense cap. The agreement continues automatically for one-year terms unless TAM provides written notice to the Trust prior to the end of the then-current term. In addition, the agreement will terminate upon termination of the Advisory Agreement.

Currently, each portfolio is included in the 36-month reimbursement arrangement.

In addition, TAM or any of its affiliates may waive fees or reimburse expenses of one or more classes of the Transamerica Aegon Money Market VP portfolio in order to avoid a negative yield. Any such waiver or expense reimbursement would be voluntary, could be discontinued at any time, and is subject in certain circumstances to reimbursement by the portfolio to TAM or its affiliates. There is no guarantee that the portfolio will be able to avoid a negative yield.

The applicable expense caps for each of the portfolios are listed in the following table.

Portfolio Name	Expense Cap	Expiration Date of Expense Cap
Transamerica Aegon Active Asset Allocation – Conservative VP	0.61%	May 1, 2015
Transamerica Aegon Active Asset Allocation – Moderate Growth VP	0.67%	May 1, 2015

Advisory Fees Paid by the Portfolios

The following table sets forth the total amounts the portfolios paid to TAM (after waivers/expense reimbursements), and Advisory Fees Waived/Expenses Reimbursed by TAM to the portfolios, if any, for the last three fiscal years.

Transamerica BlackRock Global Allocation VP: TAM's advisory fee was waived for the periods shown.

"N/A" in the table below indicates that the portfolio was not in operation during the relevant fiscal year and, accordingly, no advisory fees are shown.

Organization and Management of the Subsidiary (Transamerica BlackRock Global Allocation VP)

As discussed in “Other Investment Policies and Practices of the Portfolios” above, Transamerica BlackRock Global Allocation VP may invest up to 25% of its total assets in its Subsidiary. The Subsidiary is a company organized under the laws of the Cayman Islands, whose registered office is located at the offices of Maples Corporate Services Limited, Cayman Islands. The Subsidiary’s affairs are overseen by a board consisting of one director, Marijn P. Smit. Mr. Smit is also a trustee and his biography is listed above.

The Subsidiary has entered into a separate investment advisory agreement with TAM, and TAM has entered into a sub-advisory agreement with the applicable sub-adviser. Each advisory and sub-advisory agreement will continue in effect for two years, and thereafter shall continue in effect from year to year provided such continuance is specifically approved at least annually (i) by the Trustees of the portfolio or by a majority of the outstanding voting securities of the portfolio (as defined in the 1940 Act), and (ii) in either event, by a majority of the Independent Trustees of the portfolio, with such Independent Trustees casting votes in person at a meeting called for such purpose. The Trustees’ approval of and the terms, continuance and termination of the advisory and sub-advisory agreements are governed by the 1940 Act.

Under its investment advisory agreement, the Subsidiary will pay an advisory fee to TAM with respect to the assets invested in the Subsidiary that is the same, as a percentage of net assets, as the advisory fee paid by its parent fund. Under the sub-advisory agreement, TAM will pay the sub-adviser a sub-advisory fee with respect to the assets invested in the Subsidiary that is the same, as a percentage of net assets, as the sub-advisory fee paid by TAM with respect to the parent fund. TAM has contractually agreed to waive its advisory fee with respect to the portfolio in an amount equal to the advisory fee paid by the Subsidiary.

Conflicts of Interest

TAM and its affiliates, directors, officers, employees and personnel (collectively, for purposes of this section, “Transamerica”), including the entities and personnel who may be involved in the management, operations or distribution of the portfolios are engaged in a variety of businesses and have interests other than that of managing the portfolios. The broad range of activities and interests of Transamerica gives rise to actual, potential and perceived conflicts of interest that could affect the portfolios and their shareholders.

Transamerica manages or advises other funds and products in addition to the portfolios (collectively, the “Other Accounts”). In some cases Transamerica oversees sub-advisers who perform the day-to-day management of the Other Accounts, and in other cases Transamerica itself performs the day-to-day management. Certain Other Accounts have investment objectives similar to those of the portfolios and/or engage in transactions in the same types of securities and instruments as the portfolios. Such transactions could affect the prices and availability of the securities and instruments in which a portfolio invests, and could have an adverse impact on the portfolio’s performance. Other Accounts may buy or sell positions while the portfolios are undertaking the same or a differing, including potentially opposite, strategy, which could disadvantage the portfolios. A position taken by Transamerica, on behalf of one or more Other Accounts, may be contrary to a position taken on behalf of a portfolio or may be adverse to a company or issuer in which the portfolio has invested.

The results of the investment activities of the portfolios may differ significantly from the results achieved for Other Accounts. Transamerica may give advice, and take action, with respect to any current or future Other Accounts that may compete or conflict with advice TAM may give to, or actions TAM may take for, the portfolios. Transamerica may receive more compensation with respect to certain Other Accounts than that received with respect to the portfolios or may receive compensation based on the performance of certain Other Accounts. Transamerica personnel may have greater economic and other interests in certain Other Accounts promoted or managed by such personnel as compared to the portfolios.

Transamerica and other financial service providers have conflicts associated with their promotion of the portfolios or other dealings with the portfolios that would create incentives for them to promote the portfolios. Transamerica may directly or indirectly receive a portion of the fees and commissions charged to the portfolios or their shareholders. Transamerica will also benefit from increased amounts of assets under management. This differential in compensation may create a financial incentive on the part of Transamerica to recommend the portfolios over other accounts or products or to effect transactions differently in the portfolios as compared to other accounts or products. Transamerica has an interest in increasing portfolio assets, including in circumstances when that may not be in the portfolios’ or their shareholders’ interests.

Transamerica and/or the portfolios’ sub-advisers (or their affiliates), out of their past profits and other available sources, provide cash payments or non-cash compensation to brokers and other financial intermediaries to promote the distribution of the portfolios and Other Accounts or the variable insurance contracts that invest in certain Other Accounts. These arrangements are sometimes referred to as “revenue sharing” arrangements. The amount of revenue sharing payments is substantial and may be substantial to any given recipient. The presence of these payments and the basis on which an intermediary compensates its registered representatives or salespersons may create an incentive for a particular intermediary, registered representative or salesperson to highlight, feature or recommend the portfolios or Other Accounts, at least in part, based on the level of compensation paid. Revenue sharing payments benefit Transamerica to the extent the payments result in more assets being invested in the portfolios and Other Accounts on which fees are being charged.

The portfolios are offered as investment options through variable insurance contracts offered and sold by Transamerica insurance companies. TAM also acts as an investment adviser with respect to an asset allocation program offered for use in certain variable insurance contracts issued by Transamerica insurance companies. The performance of the portfolios and/or asset allocation models may impact Transamerica's financial exposure under guarantees that the Transamerica insurance companies provide as issuers of the variable insurance contracts. TAM's investment decisions and the design of the portfolios and asset allocation models may be influenced by these factors. For example, the portfolios or the models being managed or designed in a more conservative fashion may help reduce potential losses and/or mitigate financial risks to the Transamerica insurance companies that provide the guarantees, and facilitate the provision of those guaranteed benefits, including by making more predictable the costs of the guarantees and by reducing the capital needed to provide them. In addition, certain asset allocation models may include portfolios as investment options, and Transamerica will receive more revenue if TAM selects such portfolios to be included in the models.

TAM serves as investment adviser to certain funds of funds that invest in affiliated underlying funds, unaffiliated underlying funds, or a combination of both, including certain of the portfolios, and TAM is subject to conflicts of interest in allocating the funds of fund's assets among the underlying funds. These portfolios are underlying investment options for Transamerica insurance products. TAM will receive more revenue when it selects an affiliated fund rather than an unaffiliated fund for inclusion in a fund of funds. This conflict may provide an incentive for TAM to include affiliated funds as investment options for funds of funds and to cause investments by funds of funds in affiliated funds that perform less well than unaffiliated funds. The inclusion of affiliated funds will also permit TAM and/or the sub-adviser to make increased revenue sharing payments, including to Transamerica.

The affiliates of certain underlying funds, including those advised by the sub-adviser to the investing portfolio, may make revenue sharing payments to Transamerica. These payments may be based on the amount of portfolio assets invested in an underlying fund. Such payments are generally made in exchange for distribution services provided to the fund of funds, but may also be compensation for services provided to investors. In addition, TAM may have an incentive to allocate the fund of funds' assets to those underlying funds for which the net advisory fees payable to TAM are higher than the fees payable by other underlying funds or to those underlying funds for which an affiliate of TAM serves as the sub-adviser.

TAM may have a financial incentive to implement certain changes to the portfolios or Other Accounts. TAM may, from time to time, recommend a change in sub-adviser or a fund combination. Transamerica will benefit to the extent that an affiliated sub-adviser replaces an unaffiliated sub-adviser or additional assets are combined into a portfolio or Other Account having a higher net advisory fee payable to TAM and/or that is sub-advised by an affiliate of TAM. TAM will also benefit to the extent that it replaces a sub-adviser with a new sub-adviser with a lower sub-advisory fee.

TAM has a fiduciary duty to act in the best interests of a portfolio and its shareholders when recommending to the Board the appointment of or continued service of an affiliated sub-adviser for a portfolio or a portfolio combination. Moreover, TAM's "manager of managers" exemptive order from the SEC requires portfolio shareholder approval of any sub-advisory agreement appointing an affiliated sub-adviser as the sub-adviser to a portfolio (in the case of a new fund, the initial sole shareholder of the fund, typically an affiliate of Transamerica, may provide this approval).

Sub-Advisers

Each sub-adviser listed below serves, pursuant to a respective Sub-Advisory Agreement between TAM and such respective sub-adviser, on behalf of each portfolio. Pursuant to the Sub-Advisory Agreements, each sub-adviser carries out and effectuates the investment strategy designed for the portfolios by TAM. Subject to review by the Investment Adviser and the Board of Trustees, the sub-advisers are responsible for the day-to-day management of the portfolio(s) the Investment Adviser assigns to them and for making decisions to buy, sell or hold a particular security. Each sub-adviser bears all of its expenses in connection with the performance of its services under its Sub-Advisory Agreement such as compensating its officers and employees connected with investment and economic research, trading and investment management of the respective portfolio(s) and furnishing them office space.

Each sub-advisory agreement will terminate, unless sooner terminated as set forth therein, two years from its effective date, and will continue in effect from year to year thereafter, if continuance is specifically approved at least annually by (i) the vote of a majority of the Board Members who are not parties thereto or interested persons of any party thereto, cast in person at a meeting called for the purpose of voting on the approval of the terms of renewal, and by (ii) either the Board or the affirmative vote of a majority of the outstanding voting securities of the particular portfolio.

Each of the sub-advisers also serves as investment adviser or sub-adviser to other funds and/or private accounts that may have investment objectives identical or similar to those of the portfolios. Securities frequently meet the investment objectives of one or all of these portfolios, the other funds and the private accounts. In such cases, a sub-adviser's decision to recommend a purchase to one fund or account rather than another is based on a number of factors as set forth in the sub-advisers' allocation procedures. The determining factors in most cases are the amounts available for investment by each fund or account, the amount of securities of the issuer then outstanding, the value of those securities and the market for them. Another factor considered in the investment recommendations is other investments which each fund or account presently has in a particular industry.

It is possible that at times identical securities will be held by more than one fund or account. However, positions in the same issue may vary and the length of time that any fund or account may choose to hold its investment in the same issue may likewise vary. To the extent that more than one of the funds or private accounts served by a sub-adviser seeks to acquire or sell the same security at about the same time, either the price obtained by the funds or the amount of securities that may be purchased or sold by a fund at one time may be adversely affected. On the other hand, if the same securities are bought or sold at the same time by more than one fund or account, the resulting participation in volume transactions could produce better executions for the funds. In the event more than one fund or account purchases or sells the same security on a given date, the purchase and sale transactions are allocated among the portfolio(s), the other funds and the private accounts in a manner believed by the sub-advisers to be equitable to each.

Each sub-adviser is a registered investment adviser under the Investment Advisers Act of 1940.

Aegon USA Investment Management, LLC, located at 4333 Edgewood Road NE, Cedar Rapids, IA 52499, is a registered investment adviser. Aegon USA Investment Management, LLC is a wholly owned, indirect subsidiary of Aegon NV, a Netherlands corporation and publicly traded international insurance group, and is an affiliate of TAM. Aegon USA Investment Management, LLC is also an affiliate of Transamerica Aegon Active Asset Allocation – Conservative VP, Transamerica Aegon Active Asset Allocation – Moderate Growth VP, Transamerica Asset Active Asset Allocation – Moderate VP, Transamerica Aegon High Yield Bond VP, Transamerica Aegon Money Market VP, Transamerica Aegon U.S. Government Securities VP, Transamerica Asset Allocation – Conservative VP, Transamerica Asset Allocation – Growth VP, Transamerica Asset Allocation – Moderate Growth VP, Transamerica Asset Allocation – Moderate VP, Transamerica International Moderate Growth VP, Transamerica Vanguard ETF Portfolio – Balanced VP, Transamerica Vanguard ETF Portfolio – Conservative VP, Transamerica Vanguard ETF Portfolio – Growth VP, Transamerica Voya Balanced Allocation VP, Transamerica Voya Conservative Allocation VP, and Transamerica Voya Moderate Growth Allocation VP.

TAM, not the portfolios, pays the sub-advisers for their services.

Each sub-adviser receives monthly compensation from TAM at the annual rate of a specified percentage, indicated below, of a portfolio's average daily net assets:

Portfolio	Sub-Adviser	Sub-Advisory Fee

The Sub Sub-Adviser

Western Asset Management Company (“Western Asset”) serves as sub sub-adviser to Transamerica Legg Mason Dynamic Allocation – Balanced VP and Transamerica Legg Mason Dynamic Allocation – Growth VP. Western Asset, located at 385 East Colorado Boulevard, Pasadena, CA 91101, is a registered investment adviser. Western Asset is a wholly owned subsidiary of Legg Mason, Inc. Western Asset serves pursuant to a Sub-Advisory Agreement dated May 1, 2012 between Western Asset and LMGAA. The agreement continues for an initial period of two years and then remains in effect from year to year if approved annually by the Trust’s Board of Trustees.

Portfolio Manager Information

Information regarding other accounts for which any portfolio manager is primarily responsible for the day-to-day management, a description of any material conflict of interest that may arise in connection with the portfolio manager’s management of the portfolio’s investments, the structure of, and method used to determine, the compensation of each portfolio manager and the dollar range of equity securities in the portfolio beneficially owned by each portfolio manager are provided in Appendix B of this SAI.

Administrative and Transfer Agency Services

The Trust has entered into an Administrative Services Agreement (“Administration Agreement”) with Transamerica Fund Services, Inc. (“TFS”), 570 Carillon Parkway, St. Petersburg, FL 33716, an affiliate of TAM.

TFS provides supervisory and administrative services to each portfolio. TFS’s supervisory and administrative services include performing certain administrative services for the portfolios and supervising and overseeing the administrative, clerical, recordkeeping and bookkeeping services provided for the portfolio by State Street Bank and Trust Company (“State Street”), to whom TFS has outsourced the provision of certain services as described below; to the extent agreed upon by TFS and the portfolio from time to time, monitoring and verifying the custodian’s daily calculation of net asset values; shareholder relations functions; compliance services; valuation services; assisting in due diligence and in oversight and monitoring of certain activities of sub-advisers and certain aspects of portfolio investments; assisting with portfolio combinations and liquidations; oversight of the preparation and filing, and review, of all returns and reports, in connection with federal, state and local taxes; oversight and review of regulatory reporting; supervising and coordinating the portfolio’s custodian and its dividend disbursing agent and monitoring their services to the portfolio; assisting the portfolio in preparing reports to shareholders; acting as liaison with the portfolio’s independent public accountants and providing, upon request, analyses, fiscal year summaries and other audit related services; assisting in the preparation of agendas and supporting documents for and minutes of meetings of Trustees and committees of Trustees; assisting in the preparation of regular communications with the Trustees; and providing personnel and office space, telephones and other office equipment as necessary in order for TFS to perform supervisory and administrative services to the portfolio. TFS pays all expenses it incurs in connection with providing these services with the exception of the costs of certain services specifically assumed by the portfolios in the Administration Agreement.

State Street performs back office services to support TFS, including furnishing financial and performance information about the portfolios for inclusion in regulatory filings and Trustee and shareholder reports; preparing drafts of regulatory filings, Trustee materials, tax returns, and reports and budgets; tax testing; and maintaining books and records. State Street's address is One Lincoln Street, Boston, MA 02111.

Under the Administrative Agreement, TFS also furnishes the Trust with transfer agency services to assist the Trust in carrying out certain of its functions and operations.

TFS has agreed to render in good faith the services specified in the Administration Agreement and is not liable for any error of judgment or mistake of law, or for any act or omission in the performance of those services, provided that nothing in the Agreement protects TFS against any liability to a portfolio to which TFS otherwise would be subject by reason of willful misfeasance, bad faith or gross negligence in the performance of its duties or by reason of its reckless disregard of its obligations and duties under the Agreement. The Administration Agreement provides that it may be terminated with respect to any portfolio at any time, without the payment of any penalty, upon 60 days' written notice to TFS, or by TFS upon 60 days' written notice to the portfolio.

The portfolios each pay 0.025% of their daily net assets to TFS for such administrative services. Transamerica Asset Allocation – Conservative VP, Transamerica Asset Allocation – Growth VP, Transamerica Asset Allocation – Moderate Growth VP, Transamerica Asset Allocation – Moderate VP, Transamerica International Moderate Growth VP and Transamerica Multi-Manager Alternative Strategies VP each pay 0.0175% of their daily net assets to TFS for such services.

TFS provides transfer agency services under the Administrative Agreement and is compensated for such services under that agreement.

The portfolios paid administrative services fees in the following amounts for the last three fiscal years:

“N/A” in the table below indicates that the portfolio was not in operation during the relevant fiscal year and, accordingly, no administrative service fees are shown.”

Transfer Agent

TFS furnishes the Trust with transfer agency services under the Administrative Agreement. TFS is directly owned by TPLIC (44%) and AUSA (56%), both of which are indirect, wholly owned subsidiaries of Aegon N.V.; and thus TFS is an affiliate of TAM. The Transfer Agent maintains an account for each shareholder of a portfolio and performs other transfer agency functions. TFS has outsourced the provision of certain transfer agency services to Boston Financial Data Services, Inc., located at 2000 Crown Colony Drive, Quincy, Massachusetts 02169.

Custodian

State Street, located at One Lincoln Street, Boston, MA 02111, serves as the Trust's Custodian and Dividend Disbursing Agent.

State Street, among other things, maintains a custody account or accounts in the name of each portfolio, receives and delivers all assets for the portfolios upon purchase and upon sale or maturity, collects and receives all income and other payments and distributions on account of the assets of the portfolios and makes disbursements on behalf of the portfolios. State Street neither determines the portfolios' investment policies nor decides which securities the portfolios will buy or sell. For its services, State Street receives a monthly fee based upon the daily average market value of securities held in custody and also receives securities transaction charges, including out-of-pocket expenses. The portfolios may also periodically enter into arrangements with other qualified custodians with respect to certain types of securities or other transactions such as repurchase agreements or derivatives transactions. State Street may also act as the portfolios' securities lending agent and in that case would receive a share of the income generated by such activities.

Independent Registered Public Accounting Firm

Ernst and Young LLP, located at 200 Clarendon Street, Boston, MA 02116, serves as the Trust's independent registered public accounting firm.

Distributor and Distribution Plan

Distributor

Under the Underwriting Agreement, Transamerica Capital, Inc. (“TCI”), located at 4600 South Syracuse Street, Suite 1100, Denver, CO 80237, is appointed as principal underwriter and distributor in connection with the offering and sale of shares of each portfolio. TCI is an affiliate of TAM. TCI offers the shares on an agency or “best efforts” basis under which a portfolio issues only the number of shares actually sold. Shares of each portfolio are continuously offered by TCI.

The Underwriting Agreement is renewable from year to year with respect to a portfolio if approved (a) by the Board or by a vote of a majority of the portfolio’s outstanding voting securities, and (b) by the affirmative vote of a majority of Trustees who are not parties to such agreement or interested persons of any party by votes cast in person at a meeting called for such purpose.

The Underwriting Agreement is terminable with respect to any portfolio without penalty by the Board or by vote of a majority of the outstanding voting securities of the portfolio, or by TCI, on not less than 60 days’ written notice to the other party (unless the notice period is waived by mutual consent). The Underwriting Agreement will automatically and immediately terminate in the event of its assignment.

Distribution Plan

The Trust adopted a distribution plan (“Distribution Plan”) pursuant to Rule 12b-1 under the 1940 Act.

Each portfolio’s 12b-1 Distribution Plan permits the portfolio to pay fees to TCI and others as compensation for their services, not as reimbursement for specific expenses incurred. Thus, even if their expenses exceed the fees provided for by the 12b-1 Distribution Plan, the portfolio would not be obligated to pay more than those fees and, if their expenses are less than the fees paid to them, they will realize a profit. Under each 12b-1 Distribution Plan, a portfolio may pay the fees to the Distributor and others until the 12b-1 Distribution Plan is terminated or not renewed.

The 12b-1 Distribution Plan will remain in effect for successive one year periods, so long as such continuance is approved annually by vote of the portfolio’s Trustees, including a majority of the Independent Trustees, cast in person at a meeting called for the purpose of voting on such continuance. For so long as the 12b-1 Distribution Plan is in effect, selection and nomination of the Trustees who are not interested persons of the portfolio shall be committed to the discretion of the Trustees who are not interested persons of the portfolio.

The 12b-1 Distribution Plan may be amended by vote of the Trustees, including a majority of the Independent Trustees of the portfolio that have no direct or indirect financial interest in the operation of the 12b-1 Distribution Plan or any agreement relating thereto, cast in person at a meeting called for that purpose. Any amendment of the 12b-1 Distribution Plan that would materially increase the costs to a portfolio requires approval by the shareholders of that portfolio. Any amendment of the 12b-1 Distribution Plan that would materially increase the costs to a particular class of shares of a portfolio also requires approval by the shareholders of that class.

A 12b-1 Distribution Plan may be terminated as to a class of shares of a fund at any time by vote of a majority of the Independent Trustees, or by vote of a majority of the outstanding voting securities of the applicable class.

Under the Distribution Plan for Initial Class shares, a portfolio may pay TCI and/or financial intermediaries annual distribution and service fees of up to 0.15% of the average daily net assets of the portfolio’s Initial Class shares. As of the date of this prospectus, the Trust has not paid any distribution fees under the Plan with respect to Initial Class shares, and does not intend to do so for Initial Class shares before May 1, 2015. You will receive written notice prior to the payment of any fees under the Plan relating to Initial Class shares.

For Service Class shares, a portfolio may pay TCI and/or financial intermediaries annual distribution and service fees of up to 0.25% of the average daily net assets of a portfolio’s Service Class shares.

Because the Trust pays these fees out of its assets on an ongoing basis, over time these fees will increase the cost of your investment and may cost you more than paying other types of sales charges. Financial Intermediaries that receive distribution and/or service fees may in turn pay and/or reimburse all or a portion of these fees to their customers. The prospectus contains a description of distribution and service fees payable under the 12b-1 Distribution Plan with respect to the shares offered in that prospectus.

TCI may use the fees payable under the Plan as it deems appropriate to pay for activities or expenses primarily intended to result in the sale of Initial Class or Service Class shares, or in personal service to and/or maintenance of these shareholder accounts.

More specifically, these fees may be used by TCI or a financial intermediary for expenses related to a portfolio, including: costs of printing and distributing the portfolio prospectuses, statements of additional information and reports to prospective investors in the portfolio; costs involved in preparing, printing and distributing sales literature pertaining to the portfolio and reports for persons other than existing shareholders; an allocation of overhead and other branch office distribution-related expenses of TCI or a financial intermediary; payments made to, and expenses of, a TCI or a financial intermediary and other persons who provide support or personal services to shareholders in

connection with the distribution of the portfolio's shares; and interest-related expenses, or the cost of capital associated with, the financing of any of the foregoing. In the case of funds or classes of shares that are closed to new investors or investments, TCI also may use the fees payable under the 12b-1 Distribution Plan to make payments to brokers and other financial intermediaries for past sales and distribution efforts.

In the case of a portfolio or a class of shares that is closed to new investors or investments, the fees are paid for services to and for maintenance of existing shareholder accounts and compensation of broker-dealers or other intermediaries for past sales and distribution efforts.

In determining whether to approve the 12b-1 Distribution Plan and the Distribution Agreements, the Trustees considered the anticipated benefits to shareholders from adopting the 12b-1 Distribution Plans and Distribution Agreements. The Trustees were informed by representatives of TCI that payments of distribution-related expenses by the portfolios under the 12b-1 Distribution Plans would provide incentives to TCI to establish and maintain an enhanced distribution system whereby new investors will be attracted to the portfolios. The Trustees believe the 12b-1 Distribution Plan will enable each portfolio to promote sales of its shares and provide personal service and maintenance with respect to shareholder accounts as appropriate for the portfolio. In turn, these promotion efforts are expected to result in increased sales and lead to an increase in a portfolio's net asset levels, which should enable the portfolios to achieve economies of scale and lower their per-share operating expenses. In addition, higher net asset levels could enhance the investment management of the portfolios, for net inflows of cash from new sales may enable a portfolio's investment adviser and sub-adviser to take advantage of attractive investment opportunities. Finally, reduced redemptions could eliminate the potential need to liquidate attractive securities positions in order to raise the capital necessary to meet redemption requests.

The 12b-1 Distribution Plan requires that at least quarterly the Trust and the Distributor shall provide to the Board of Trustees and the Board of Trustees shall review a written report of the amounts expended (and the purposes therefor) under the 12b-1 Distribution Plan.

Distribution Fees Paid Under the 12b-1 Distribution Plan

For the fiscal year ended December 31, 2013, Service Class Shares of the Trust paid \$57,240,893 to certain life insurance companies.

Purchase, Redemption and Pricing of Shares

Shares of the portfolios are currently sold only to the separate accounts to fund the benefits under the policies and the annuity contracts. The portfolios may, in the future, offer their shares to other insurance company separate accounts. The separate accounts invest in shares of a portfolio in accordance with the allocation instructions received from holders of the policies and the annuity contracts. Such allocation rights are further described in the prospectuses and disclosure documents for the policies and the annuity contracts. Shares of the portfolios are sold and redeemed at their respective net asset values as described in the prospectus.

Shareholder Accounts

Detailed information about general procedures for Shareholder Accounts and specific types of accounts is set forth in each portfolio's prospectus.

Net Asset Valuation ("NAV") Determination

How Share Price Is Determined

The price at which shares are purchased or redeemed is the NAV that is next calculated following receipt and acceptance of a purchase order in good order or receipt of a redemption request by the portfolios' distributor (or other agent).

When Share Price Is Determined

The NAV of all portfolios (or class thereof) is determined on each day the New York Stock Exchange ("NYSE") is open for business. The NAV is not determined on days when the NYSE is closed (generally New Year's Day, Martin Luther King Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving and Christmas). Foreign securities may trade in their primary markets on weekends or other days when a portfolio does not price its shares (therefore, the value of a portfolio's foreign securities may change on days when shareholders will not be able to buy or sell shares of the portfolios).

Purchase orders received in good order and accepted, and redemption orders received in good order, before the close of business of the NYSE, usually 4:00 p.m. Eastern Time, receive the NAV determined as of the close of the NYSE that day. Purchase and redemption requests received after the NYSE is closed receive the NAV determined as of the close of the NYSE the next day the NYSE is open.

Purchase orders for shares of the asset allocation portfolios that are received in good order and accepted before the close of business of the NYSE receive the NAV determined as of the close of the NYSE that day. For direct purchases of the asset allocation portfolios sub-advised by AUIM, corresponding orders for shares of the underlying constituent portfolios are placed on the same day (and such asset allocation portfolio receives that day's price for shares of the underlying portfolios). For purchases of shares of the asset allocation portfolios sub-advised by AUIM through the National Securities Clearing Corporation ("NSCC"), orders for shares of the underlying constituent

portfolios will be placed after the receipt and acceptance of the settled purchase order for shares of the asset allocation portfolios. For purchases of the asset allocation portfolios sub-advised by Madison, orders for shares of the underlying constituent portfolios will be placed as determined by the portfolio's sub-adviser (and such asset allocation portfolio will receive the price for shares of the underlying portfolios on the day the order is placed).

How NAV Is Calculated

The NAV of each portfolio (or class thereof) is calculated by taking the value of its net assets and dividing by the number of shares of the portfolio (or class) that are then outstanding.

The Board of Trustees has approved procedures to be used to value the portfolios' securities for the purpose of determining the portfolios' NAV. The valuation of the securities of the portfolios is determined in good faith by or under the direction of the Board. The Board has delegated certain valuation functions for the portfolios to TAM.

In general, securities and other investments (including shares of ETFs) are valued based on market prices at the close of regular trading on the NYSE. Portfolio securities (including shares of ETFs) listed or traded on domestic securities exchanges or the NASDAQ/NMS, including dollar-denominated foreign securities or ADRs, are valued at the closing price on the exchange or system where the security is principally traded. With respect to securities traded on the NASDAQ/NMS, such closing price may be the last reported sale price or the NASDAQ Official Closing Price ("NOCP"). If there have been no sales for that day on the exchange or system where the security is principally traded, then the value should be determined with reference to the last sale price, or the NOCP, if applicable, on any other exchange or system. If there have been no sales for that day on any exchange or system, a security is valued at the closing bid quotes on the exchange or system where the security is principally traded, or at the NOCP, if applicable. Foreign securities traded on U.S. exchanges are generally priced using last sale price regardless of trading activity. Securities traded over-the-counter are valued at the last bid price. The market price for debt obligations is generally the price supplied by an independent third party pricing service, which may use market prices or quotations or a variety of fair value techniques and methodologies. Short-term debt obligations that will mature in 60 days or less are valued at amortized cost, unless it is determined that using this method would not reflect an investment's fair value. The prices that the portfolio uses may differ from the amounts that would be realized if the investments were sold and the differences could be significant, particularly for securities that trade in relatively thin markets and/or markets that experience extreme volatility. Foreign securities generally are valued based on quotations from the primary market in which they are traded, and are converted from the local currency into U.S. dollars using current exchange rates. Market quotations for securities prices may be obtained from automated pricing services. Shares of open-end funds (other than ETF shares) are generally valued at the NAV reported by that investment company. ETF shares are valued at the most recent sale price or official closing price on the exchange on which they are traded.

When a market quotation for a security is not readily available (which may include closing prices deemed to be unreliable because of the occurrence of a subsequent event), a valuation committee appointed by the Board of Trustees may, in good faith, establish a value for the security in accordance with fair valuation procedures adopted by the Board. The types of securities for which such fair value pricing may be required include, but are not limited to: foreign securities, where a significant event occurs after the close of the foreign market on which such security principally trades that is likely to have changed the value of such security, or the closing value is otherwise deemed unreliable; securities of an issuer that has entered into a restructuring; securities whose trading has been halted or suspended; fixed-income securities that have gone into default and for which there is no current market value quotation; and securities that are restricted as to transfer or resale. The portfolios use a fair value model developed by an independent third party pricing service to price foreign equity securities on days when there is a certain percentage change in the value of a domestic equity security index, as such percentage may be determined by TAM from time to time.

Valuing securities in accordance with fair value procedures involves greater reliance on judgment than valuing securities based on readily available market quotations. The valuation committee makes fair value determinations in good faith in accordance with the portfolios' valuation procedures. Fair value determinations can also involve reliance on quantitative models employed by a fair value pricing service. There can be no assurance that a portfolio could obtain the fair value assigned to a security if it were to sell the security at approximately the time at which the portfolio determines its NAV.

Brokerage

Subject to policies established by the Board of Trustees and TAM, the sub-advisers are responsible for placement of the portfolios' securities transactions. In placing orders, it is the policy of a portfolio to seek to obtain the most favorable price and execution available, except to the extent it may be permitted to pay higher brokerage commissions as described below. In seeking the most favorable price and execution, TAM or the sub-adviser, as applicable, having in mind the portfolio's best interests, considers all factors it deems relevant, including: the size of the transaction; the nature of the market for the security; the amount of the commission; the timing of the transaction taking into account market prices and trends; the reputation, experience and financial stability of the broker-dealer involved and the quality of service rendered by the broker-dealer in that or other transactions; trade confidentiality including anonymity; and research products and services provided, which include: (i) furnishing advice, either directly or through publications or writings, as to the value of securities, the advisability of purchasing or selling specific securities and the availability of securities or purchasers or sellers of securities and (ii) furnishing analyses and reports

concerning issuers, industries, securities, economic factors and trends and portfolio strategy and products and other services (such as third party publications, reports and analyses, and computer and electronic access, equipment, software, information and accessories) that assist each sub-adviser in carrying out its responsibilities

Decisions as to the selection of broker-dealers and the assignment of portfolio brokerage business for a portfolio and negotiation of its commission rates are made by TAM or the sub-adviser, as applicable, whose policy is to seek to obtain “best execution” (prompt and reliable execution at the most favorable security price) of all portfolio transactions. In doing so, a portfolio may pay higher commission rates than the lowest available when its sub-adviser believes it is reasonable to do so in light of the value of the brokerage and research services provided by the broker effecting the transaction, as discussed below.

There is generally no stated commission in the case of fixed-income securities and other securities traded on a principal basis in the over-the-counter markets, but the price paid by a portfolio usually includes an undisclosed dealer commission or mark-up. In underwritten offerings, the price paid by a portfolio includes a disclosed, fixed commission or discount retained by the underwriter or dealer. Transactions on U.S. stock exchanges and other agency transactions involve the payment by a portfolio of negotiated brokerage commissions. Such commissions vary among different brokers. Also, a particular broker may charge different commissions according to such factors as the difficulty and size of the transaction. Transactions in foreign securities generally involve the payment of fixed brokerage commissions, which are generally higher than those in the United States.

It has for many years been a common practice in the investment advisory business for advisers of investment companies and other institutional investors to receive research and brokerage products and services (together, “services”) from broker-dealers that execute portfolio transactions for the clients of such advisers. Consistent with this practice, the sub-advisers may receive services from many broker-dealers with which the sub-advisers place the portfolio’s portfolio transactions. These services, which in some cases may also be purchased for cash, may include, among other things, such items as general economic and security market reviews, industry and company reviews, evaluations of securities, recommendations as to the purchase and sale of securities, and services related to the execution of securities transactions. The services obtained through brokers or dealers will be in addition to, and not in lieu of, the services required to be performed by a sub-adviser. The expenses of a sub-adviser will not necessarily be reduced as a result of the receipt of such supplemental information. A sub-adviser may use such services in servicing other accounts in addition to the respective portfolio. Conversely, services provided to a sub-advisers by broker-dealers in connection with trades executed on behalf of other clients of the sub-adviser may be useful to the sub-adviser in managing the portfolio, although not all of these services may be necessarily useful and of value to the sub-adviser in managing such other clients. The receipt of such services enables a sub-adviser to avoid the additional expenses that might otherwise be incurred if it were to attempt to develop comparable information through its own staff.

In reliance on the “safe harbor” provided by Section 28(e) of the 1934 Act and the SEC’s interpretive guidance thereunder, a sub-adviser may cause a portfolio to pay a broker-dealer that provides “brokerage and research services” (as defined for purposes of Section 28(e)) to the Sub-Adviser an amount of commission for effecting a securities transaction for the portfolio in excess of the commission that another broker-dealer would have charged for effecting that transaction if the sub-adviser determines in good faith that the commission is reasonable in relation to the value of the brokerage and research services provided by the broker-dealer. If a sub-adviser determines that any research product or service has a mixed use, such that it also serves functions that do not assist in the investment decision-making process, the sub-adviser will allocate the costs of such service or product accordingly. The portion of the product or service that a sub-adviser determines will assist it in the investment decision-making process may be paid for in brokerage commission dollars. Such allocation may create a conflict of interest for the sub-adviser. Conversely, such supplemental information obtained by the placement of business for a sub-adviser will be considered by and may be useful to the sub-adviser in carrying out its obligations to a portfolio.

A sub-adviser may place transactions for the purchase or sale of portfolio securities with affiliates of TAM or the sub-adviser. A sub-adviser may place transactions with a broker-dealer that is an affiliate of TAM or the sub-adviser where, in the judgment of the sub-adviser, such firm will be able to obtain a price and execution at least as favorable as other qualified broker-dealers. Pursuant to rules of the SEC, a broker-dealer that is an affiliate of TAM or the sub-adviser may receive and retain compensation for effecting portfolio transactions for the portfolio on a securities exchange if the commissions paid to such an affiliated broker-dealer by the portfolio do not exceed “usual and customary brokerage commissions.” The rules define “usual and customary” commissions to include amounts that are “reasonable and fair compared to the commission, fee or other remuneration received by other brokers in connection with comparable transactions involving similar securities being purchased or sold on a securities exchange during a comparable period of time.”

Securities held by a portfolio may also be held by other separate accounts, mutual funds or other accounts for which TAM or a sub-adviser serves as an adviser, or held by TAM or a sub-adviser for their own accounts. Because of different investment objectives or other factors, a particular security may be bought by TAM or a sub-adviser for one or more clients when one or more clients are selling the same security. If purchases or sales of securities for a portfolio or other entities for which they act as investment adviser or for their advisory clients arise for consideration at or about the same time, transactions in such securities will be made, insofar as feasible, for the respective entities and clients in a manner deemed equitable to all. To the extent that transactions on behalf of more than one client of TAM or a sub-adviser during the same period may increase the demand for securities being purchased or the supply of securities being sold, there may be an adverse effect on price.

On occasions when TAM or a sub-adviser deems the purchase or sale of a security to be in the best interests of a portfolio as well as other accounts or companies, it may to the extent permitted by applicable laws and regulations, but will not be obligated to, aggregate the securities to be sold or purchased for the portfolio with those to be sold or purchased for such other accounts or companies in order to obtain favorable execution and lower brokerage commissions. In that event, allocation of the securities purchased or sold, as well as the expenses incurred in the transaction, will be made by TAM or the sub-adviser in the manner it considers to be most equitable and consistent with its fiduciary obligations to the portfolio and to such other accounts or companies. In some cases this procedure may adversely affect the size of the position obtainable for a portfolio.

The Board of Trustees of the Trust reviews on a quarterly basis the brokerage placement practices of each sub-adviser on behalf of the portfolios, and reviews the prices and commissions, if any, paid by the portfolios to determine if they were reasonable.

Brokerage Commissions Paid

The following portfolios paid the aggregate brokerage commissions indicated for the last three fiscal years:

“N/A” in the table below indicates that the portfolio was not in operation during the relevant fiscal year and, accordingly, no commissions are shown.

Directed Brokerage

A sub-adviser to a portfolio, to the extent consistent with the best execution and with TAM's usual commission rate policies and practices, may place portfolio transactions with broker/dealers with which the Trust has established a Directed Brokerage Program. A Directed Brokerage Program is any arrangement under which a broker/dealer applies a portion of the commissions received by such broker/dealer on the portfolio transactions to the payment of operating expenses that would otherwise be borne by the portfolio.

Under a Directed Brokerage Program, the commissions paid by a portfolio shall be applied to the payment only of expenses that would otherwise be borne by the portfolio paying the commission. In no event will commissions paid by a portfolio be used to pay expenses that would otherwise be borne by any other portfolio in the Trust, or by any other party. In the case of any portfolio that is the subject of a contractual expense reduction arrangement with TAM (or a comparable agreement with any "affiliate" of TAM or the Trust, as such term is defined in the 1940 Act) pursuant to which TAM (or its affiliates) has agreed to waive amounts otherwise payable by the portfolio to TAM (or affiliate) under the expense reduction arrangement, but shall instead be used solely to reduce expenses borne by the portfolio to a lower level than the portfolio would have borne after giving full effect to the expense reduction arrangement. These commissions are not used for promoting or selling portfolio shares or otherwise related to the distribution of portfolio shares.

The following table provides brokerage commissions that were directed to brokers for a Directed Brokerage Program during the fiscal year ended December 31, 2013.

"N/A" in the table below indicates that the portfolio was not in operation during the relevant fiscal year and, accordingly, no commissions are shown.

* Amount does not include \$28,384 attributable to Transamerica Third Avenue Value VP, which merged with the portfolio effective May 1, 2013.

The amounts shown above for brokerage commissions directed to brokers for brokerage and research services are based upon custody data provided to CAPIS and were calculated using the following methodology: Total Commissions minus transactions executed at discounted rates and/or directed to the funds' commission recapture program equals total research commissions. USD transactions executed at \$.02 and below and non-USD transactions executed at 8 basis points and below are considered to be executed at discounted rates. For example, Commission paid on USD transactions at rates greater than \$.02 per share and not directed for commission recapture are assumed to be paid to brokers that provide research and brokerage services within the scope of Section 28(e) of the Exchange Act. Commissions paid on fixed price offerings and transactions in futures and options are not included in this analysis.

Securities of Regular Broker Dealers

During the fiscal year ended December 31, 2013, the portfolios purchased securities issued by the following regular broker-dealers of the portfolios, which had the following values as of December 31, 2013.

Control Persons

Any shareholder who holds beneficially 25% or more of a portfolio may be deemed to control the portfolio until such time as it holds beneficially less than 25% of the outstanding common shares of the portfolio. Any shareholder controlling a portfolio may be able to determine the outcome of issues that are submitted to shareholders for vote, and may be able to take action regarding the portfolio without the consent or approval of the other shareholders.

As of October 15, 2014, the shareholders who held beneficially 25% or more of a portfolio were as follows:

Transamerica Life Insurance Company is organized in Iowa and is wholly owned by Transamerica International Holdings, Inc., which is wholly owned by Aegon USA, LLC, which is wholly owned by Aegon U.S. Holding Corporation, which is wholly owned by Transamerica Corporation, which is wholly owned by The Aegon Trust.

Transamerica Premier Life Insurance Company is organized in Iowa and is owned by Commonwealth General Corporation (87.72%) and Aegon USA, LLC (12.28%). Commonwealth General Corporation is wholly owned by Aegon USA, LLC, which is wholly owned by Aegon U.S. Holding Corporation, which is wholly owned by Transamerica Corporation, which is wholly owned by The Aegon Trust.

The asset allocation portfolios are series of the Trust.

Management Ownership

As of October 15, 2014, the Trustees and officers as a group owned less than 1% of any class of each portfolio's outstanding shares.

Further Information About the Trust and Portfolio Shares

Transamerica Series Trust is governed by an Amended and Restated Agreement and Declaration of Trust ("Declaration of Trust") dated November 1, 2007.

Because Trust shares are sold to Separate Accounts established to receive and invest premiums received under Policies and purchase payments received under the Contracts, it is conceivable that, in the future, it may become disadvantageous for variable life insurance Separate Accounts of the Life Companies to invest in the Trust simultaneously. Neither the Life Companies nor the Trust currently foresees any such disadvantages or conflicts. Any Life Company may notify the Trust's Board of a potential or existing conflict. The Trust's Board will then determine if a material conflict exists and what action, if any, is needed.

Such action could include the sale of Trust shares by one or more of the Separate Accounts, which could have adverse consequences. Material conflicts could result from, for example, (1) changes in state insurance laws, (2) changes in federal income tax laws, or (3) differences in voting instructions between those given by the Policyowners. The Trust's Board might conclude that separate portfolios should be established under the Separate Accounts. If this happens, the affected Life Companies will bear the attendant expenses of establishing separate portfolios. As a result, Policyowners would no longer have the economies of scale typically resulting from a larger combined portfolio.

The Trust offers shares of each portfolio. All shares of a portfolio have equal voting rights, but only shares of a particular portfolio are entitled to vote on matters concerning only that portfolio. Each of the issued and outstanding shares of a portfolio is entitled to one vote and to participate equally in dividends and distributions declared by the portfolio and, upon liquidation or dissolution, to participate equally in the net assets of the portfolio remaining after satisfaction of outstanding liabilities. The shares of a portfolio, when issued, will be fully paid and nonassessable, have no preferences, preemptive, conversion, exchange or similar rights, and will be freely transferable. Shares do not have cumulative voting rights.

Only the Separate Accounts of the Life Companies may hold shares of the Trust and are entitled to exercise the rights directly as described above. To the extent required by law, the Life Companies will vote the Trust's shares held in the Separate Accounts, including Trust shares which are not attributable to Policyowners, at meetings of the Trust, in accordance with instructions received from persons having voting interests in the corresponding sub-accounts of the Separate Accounts. The Life Companies will vote portfolio shares held in the Separate Accounts for which no timely instructions are received from the Policyowners, as well as shares they own, in the same proportion as those shares for which such Life Company receives voting instructions, thus a small number of Policyowners could determine the outcome of a vote. A portfolio is not required to hold an annual meeting of shareholders, but a portfolio will call special meetings of shareholders whenever required by the 1940 Act, or by the terms of the Declaration. If the 1940 Act or any regulation thereunder should be amended, or if present interpretation thereof should change, and as a result it is determined that the Life Companies are permitted to vote the Trust's shares in their own right, they may elect to do so. The rights of Policyowners are described in more detail in the prospectuses or disclosure documents for the policies and the annuity contracts, respectively.

Taxes

Shares of the portfolios are offered only to the Separate Accounts, which fund the Policies and Contracts, and to the Asset Allocation Portfolios and to other portfolios. See the respective prospectuses for the Policies and Contracts for a discussion of the special taxation of insurance companies with respect to the Separate Accounts and of the Policies, the Contracts and the holders thereof.

Each portfolio has either qualified, and expects to continue to qualify, or will qualify in its initial year, and expects thereafter to continue to qualify, for treatment as a regulated investment company (a "RIC") under the Internal Revenue Code of 1986, as amended (the "Code"). In order to qualify for that treatment, a portfolio must distribute to its stockholders for each taxable year at least the sum of 90% of its investment company taxable income, computed without regard to the dividends-paid deduction, and 90% of its net exempt-interest income, if

any. Each portfolio must also meet several other requirements. These requirements include the following: (1) the portfolio must derive at least 90% of its gross income each taxable year from dividends, interest, payments with respect to certain securities loans, gains from the sale or other disposition of stock, securities or foreign currencies, other income (including gains from options, futures or forward contracts) derived with respect to its business of investing in such stock, securities or currencies, and net income derived from an interest in a qualified publicly traded partnership (the "Income Requirement"); (2) at the close of each quarter of the portfolio's taxable year, at least 50% of the value of its total assets must be represented by cash and cash items, U.S. Government securities, securities of other RICs, and other securities (limited in respect of any one issuer of such other securities to an amount not greater than 5% of the value of the portfolio's total assets and to not more than 10% of the outstanding voting securities of the issuer); and (3) at the close of each quarter of the portfolio's taxable year, not more than 25% of the value of its total assets may be invested in securities (other than U.S. Government securities or the securities of other RICs) of any one issuer, in those of two or more issuers that the portfolio controls and that are engaged in the same or similar trade or business, or in those of one or more qualified publicly traded partnerships. If each portfolio qualifies as a RIC and timely distributes to its shareholders substantially all of its net income and net capital gain, then each portfolio should have little or no income taxable to it under the Code.

As noted in the prospectus, certain separate accounts are required to meet diversification requirements under Section 817(h) of the Code and the regulations thereunder in order for the Policies and Contracts funded by those separate accounts to qualify for their expected tax treatment. Such requirements place certain limitations on the proportion of a separate account's assets that may be represented by any four or fewer investments. Specifically, such a separate account must in general diversify its holdings so that on the last day of each calendar quarter (or within 30 days after such last day) no more than 55% of its assets are represented by any one investment, no more than 70% by any two investments, no more than 80% by any three investments, and no more than 90% by any four investments. For purposes of Section 817(h) of the Code, all securities of the same issuer are treated as a single investment, all interests in the same real property project are treated as a single investment, and all interests in the same commodity are treated as a single investment. In addition, each U.S. government agency or instrumentality is treated as a separate issuer, while the securities of any particular foreign government and its agencies, instrumentalities and political subdivisions all will be considered securities issued by the same issuer.

If a portfolio qualifies as a RIC and its shares are held only by certain tax-exempt trusts and separate accounts and certain other permitted investors (including the Asset Allocation Portfolios and certain other portfolios if they are themselves only owned by those permitted investors), the Section 817(h) diversification requirements will be applied by looking through to the assets of the portfolio, rather than treating the interest in the portfolio as a separate investment of each separate account investing in the portfolio. Each portfolio intends to comply with the Section 817(h) diversification requirements so that, assuming such look-through treatment is available, any separate account invested wholly in that portfolio would satisfy those diversification requirements.

If a portfolio fails to qualify for treatment as a RIC, the portfolio will be subject to federal corporate taxes on its taxable income and gains (without any deduction for its distributions to its shareholders), and distributions to its shareholders will constitute ordinary income to the extent of such portfolio's available earnings and profits. In addition, if a portfolio fails to qualify as a RIC, fails to comply with the diversification requirements of Section 817(h) of the Code and the regulations thereunder, or fails to limit the holding of portfolio shares to the permitted investors described above, then Policies and Contracts funded by that portfolio (or by any Asset Allocation Portfolio or other portfolio invested in that portfolio) might not qualify as life insurance policies or annuity contracts under the Code, and Policyowners could be currently taxed on all investment earnings under their Policies and Contracts that have accrued during or prior to the year in which the failure occurs. In such a case, current taxation could also be required in all future taxable periods. For additional information concerning the consequences of failure to meet the requirements of Section 817(h), see the prospectuses for the Policies or the Contracts. Under certain circumstances, a portfolio may be able to cure a failure to meet the requirements for qualification as a RIC, but in order to do so, the portfolio may incur significant portfolio-level taxes and may be forced to dispose of certain assets.

For a Policy or a Contract to qualify for tax-favored treatment, assets in the Separate Accounts supporting the Policy or Contract must be considered to be owned by the insurance company and not by the Policyowner. Under U.S. tax law, if a policyowner has excessive control over the investments made by a separate account, the owner will be taxed currently on income and gains from the account or portfolio.

Generally, according to the IRS, there are two ways that impermissible investor control may exist. The first relates to the design of the policy or contract or the relationship between the policy or contract and a separate account or underlying portfolio. For example, at various times, the IRS has focused on, among other factors, the number and type of investment choices available pursuant to a given variable policy or contract, whether the policy or contract offers access to portfolios that are available to the general public, the number of transfers that a policy or contract owner may make from one investment option to another, and the degree to which a policy or contract owner may select or control particular investments.

With respect to this first aspect of investor control, the relationship between the portfolios and the Policies and Contracts is designed to satisfy the current expressed view of the IRS on this subject, such that the investor control doctrine should not apply. However, because of some uncertainty with respect to this subject and because the IRS may issue further guidance on this subject, the portfolios reserve the right to make such changes as are deemed necessary or appropriate to reduce the risk that a Policy or Contract might be subject to current taxation because of investor control.

The second way that impermissible investor control might exist concerns actions of Policyowners. Under the IRS pronouncements, a Policyowner may not select or control particular investments, other than choosing among broad investment choices such as selecting a particular portfolio. A Policyowner thus may not select or direct the purchase or sale of a particular investment of the portfolios. All investment decisions concerning the portfolios must be made by the portfolio managers in their sole and absolute discretion, and not by a Policyowner.

Furthermore, under the IRS pronouncements, a Policyowner may not communicate directly or indirectly with such portfolio managers or any related investment officers concerning the selection, quality, or rate of return of any specific investment or group of investments held by the portfolios.

The IRS may issue additional guidance on the investor control doctrine, which might further restrict Policyowners' actions or features of Policies or Contracts. Such guidance could be applied retroactively. If any of the rules outlined above are not complied with, the IRS may seek to tax Policyowners currently on income and gains from the portfolios such that Policyowners would not derive the tax benefits normally associated with variable life insurance or variable annuities. Such an event may have an adverse impact on the Policies and Contracts.

Under the Code, RICs are generally subject to a nondeductible 4% federal excise tax on a portion of their undistributed ordinary income and capital gain net income if they fail to meet certain distribution requirements. However, the Code includes an exception for certain RICs held only by segregated asset accounts of life insurance companies in connection with variable contracts and by certain other holders, including other RICs that would themselves qualify for the exception. The portfolios intend to qualify for this exception and accordingly do not expect to be subject to the excise tax. To the extent they do not qualify for the exception, the portfolios intend to make any required distributions in a timely manner.

If a portfolio invests in certain pay-in-kind securities, zero coupon securities, deferred interest securities or, in general, any other securities with original issue discount (or with market discount if the portfolio elects to include market discount in income currently), the portfolio will accrue income on such investments for each taxable year, prior to the receipt of corresponding cash payments. However, the portfolio must distribute to its shareholders, at least annually, all or substantially all of its investment company taxable income (determined without regard to the deduction for dividends paid), including such accrued income, to qualify for treatment as a RIC under the Code and avoid U.S. federal income and excise taxes. Therefore, the portfolio may have to dispose of portfolio securities, potentially under disadvantageous circumstances, to generate cash, or may have to borrow the cash, to satisfy distribution requirements. Such a disposition of securities may potentially result in additional taxable gain or loss to the portfolio.

The use of hedging strategies, such as writing (selling) and purchasing options and futures contracts and entering into forward contracts, involves complex rules that will determine for income tax purposes the character and timing of recognition of the income received in connection therewith by the portfolios. Income from the disposition of foreign currencies, and income from transactions in options, futures, and forward contracts derived by a portfolio with respect to its business of investing in securities or foreign currencies, generally will qualify as permissible income for purposes of the Income Requirement.

Portfolios investing in foreign securities or currencies may be required to pay withholding, income or other taxes to foreign governments or U.S. possessions. The investment yield of any portfolio that invests in foreign securities or currencies would be reduced by any such foreign taxes. Policyowners investing in such portfolios indirectly bear the cost of any foreign taxes but will not be able to claim a foreign tax credit or deduction for these foreign taxes. Tax conventions between certain countries and the United States may reduce or eliminate these foreign taxes.

If a portfolio acquires stock in certain foreign corporations that receive at least 75% of their annual gross income from passive sources (such as interest, dividends, rents, royalties, or capital gain) or that hold at least 50% of their average total assets over the taxable year in investments that produce (or that are held for the production of) such passive income ("passive foreign investment companies"), that portfolio could be subject to federal income tax and additional interest charges on "excess distributions" received from such companies and gain from the sale of stock in such companies, even if all income or gain actually received by the portfolio is timely distributed to its shareholders. The portfolio would not be able to pass through to its shareholders any credit or deduction for such a tax. As a result, Policyowners of Policies and Contracts investing in such portfolios ultimately would bear the cost of these taxes and interest charges. Certain elections may ameliorate these adverse tax consequences. Any such election, however, may require the applicable portfolio to recognize taxable income or gain without the concurrent receipt of cash, and the portfolio must distribute to its shareholders, at least annually, all or substantially all of its investment company taxable income (determined without regard to the deduction for dividends paid), including such accrued income, to qualify for treatment as a RIC under the Code and avoid U.S. federal income and excise taxes. Therefore, the portfolio may have to dispose of portfolio securities, potentially under disadvantageous circumstances, to generate cash, or may have to borrow the cash, to satisfy distribution requirements. Such a disposition of securities may potentially result in additional taxable gain or loss to the portfolio. Any portfolio that acquires stock in foreign corporations may limit and/or manage its holdings in passive foreign investment companies to minimize or reduce its tax liability.

Certain portfolios may invest in ETFs and ETNs. Depending on an ETF's structure and its underlying investments, an ETF may produce income that is not permissible income for purposes of the Income Requirement. Any portfolio that invests in ETFs will limit and/or manage its holdings of ETFs with a view to complying with the requirements for qualification as a RIC. For tax purposes, ETNs are generally treated as debt obligations of the issuer, which generally produce permissible income for purposes of the Income Requirement.

Each portfolio (other than the Transamerica Aegon Money Market VP) will report to the IRS the amount of sale proceeds that a shareholder receives from a sale or exchange of portfolio shares. For sales or exchanges of shares acquired on or after January 1, 2012, each portfolio (other than the Transamerica Aegon Money Market VP) will also report the shareholder's basis in those shares and the character of any gain or loss that the shareholder realizes on the sale or exchange (i.e., short-term or long-term). If a shareholder has a different basis for different shares of a portfolio in the same account (e.g., if a shareholder purchased portfolio shares in the same account when the shares were at different prices), the portfolio or the shareholder's service agent (banks, brokers, dealers, insurance companies, investment advisers, financial consultants or advisers, mutual fund supermarkets and other financial intermediaries that have entered into an agreement with the portfolios' distributor to sell shares of the applicable portfolio), as applicable, will calculate the basis of the shares sold using its default method unless the shareholder has properly elected to use a different method. The portfolio's default method for calculating basis will be the average cost method. A shareholder may elect, on an account-by-account basis, to use a method other than average cost by following procedures established by the portfolio or the shareholder's service agent, as applicable. For purposes of calculating and reporting basis, shares acquired prior to January 1, 2012 and shares acquired on or after January 1, 2012 will be treated as held in separate accounts. If a shareholder elects to use a different method of basis calculation, the application of that method will depend on whether shares in an account have already been sold or exchanged. For information regarding available methods for calculating cost basis and procedures for electing a method other than the average cost method, shareholders who hold their shares directly with a portfolio may call the portfolio at 1-888-233-4339 Monday through Friday between 8:00 a.m. and 7:00 p.m. (Eastern Time). Shareholders who hold shares through a service agent should contact the service agent for information concerning the service agent's default method for calculating basis and procedures for electing to use an alternative method. Shareholders should consult their tax advisers concerning the tax consequences of applying the average cost method or electing another method of basis calculation.

The foregoing is only a general summary of some of the important federal income tax considerations generally affecting the portfolios and their shareholders. No attempt is made to present a complete explanation of the federal tax treatment of the portfolios' activities, and this discussion and the discussion in the prospectuses and/or statements of additional information for the Policies and Contracts are not intended as a substitute for careful tax planning. Accordingly, potential investors are urged to consult their own tax advisers for more detailed information and for information regarding any state, local, or foreign taxes applicable to the Policies, the Contracts and the Policyowners.

Financial Statements

The audited financial statements and financial highlights for the Trust as of December 31, 2013 have been filed with the SEC as part of the annual reports of the Trust (SEC Accession #0001193125-14-091110), and are hereby incorporated by reference into this SAI.

Appendix A – Proxy Voting Policies

Aegon USA Investment Management, LLC

Compliance Manual Securities Voting Policy

1. INTRODUCTION

Aegon USA Investment Management, LLC (“AUIM”) votes on behalf of all client accounts for which it has the requisite discretionary authority except for situations in which any client notifies AUIM in writing that it has retained, and intends to exercise, the authority to vote their own securities. Clients may also ask AUIM to vote their securities in accordance with specific guidelines furnished by the client, in which case AUIM will vote such securities within the parameters of such guidelines.

AUIM primarily manages client portfolios of debt securities and does not function to a significant extent, as a manager of equity securities. For most clients, the issues with respect to which AUIM votes client securities generally involve amendments to loan documentation, borrower compliance with financial covenants, registration rights, prepayments, and insolvency and other distressed credit situations, rather than issues more commonly voted upon by holders or managers of equity securities, e.g. board of directors matters, general matters of corporate governance, choice of auditors and corporate social and environmental positions. Occasionally, however, AUIM’s fixed income invested clients receive equity securities resulting from the restructure of debt security investments or other special situations. In addition, AUIM does manage several mutual funds, the investment strategy of which involves investments in exchange traded funds (“ETFs”). These ETFs are equity securities and have traditional proxies associated with them.

2. STATEMENT OF POLICY

It is the policy of AUIM to vote client securities in the best interest of its clients at all times. In general, votes will be determined on a case-by-case basis, after taking into consideration all factors relevant to the issues presented.

Because the issues on which AUIM votes client debt securities are unique to each particular borrower and relevant fact situation, and do not lend themselves to broad characterization as do many issues associated with the voting of equity security proxies, AUIM does not maintain voting policy guidelines regarding categories of issues that may come before debt security holders from time to time. AUIM, however, has adopted such guidelines for use in situations in which AUIM votes client equity securities. These guidelines provide a roadmap for arriving at voting decisions and are not meant to be exhaustive of all issues that may be raised in any or all proxy ballots or other voting opportunities. The guidelines are attached to this Policy as Appendix A. To the extent relevant and appropriate, AUIM will consider these guidelines when voting client debt securities.

It is the responsibility of each AUIM personnel with authority to vote client securities to be aware of and vote client securities in accordance with this Policy. The Chief Compliance Officer and/or his designee is responsible for monitoring compliance with this Policy. At the discretion of the Chief Compliance Officer, issues related to this Policy may be raised to the level of the Risk and Control Committee (as that term is defined in the Code of Ethics) for their consideration.

3. USE OF INDEPENDENT THIRD PARTY

Because of the expertise of its staff with the issues upon which it votes client debt securities generally, AUIM will not maintain the services of a qualified independent third party (an “Independent Third Party”) to provide guidance on such matters. Nevertheless, in appropriate situations AUIM will consider retaining the services of an Independent Third Party (either directly or via similar engagements made by affiliates) to assist with voting issues associated with client equity securities. In any such case, AUIM considers the research provided by the Independent Third Party when making voting decisions; however, the final determination on voting rests with AUIM.

4. CONFLICTS OF INTEREST BETWEEN AUIM AND CLIENTS

AUIM recognizes the potential for material conflicts that may arise between its own interests and those of its clients. To address these concerns, AUIM takes one of the following steps to avoid any impropriety or the appearance of impropriety in any situation involving a conflict of interest:

- a. Vote in accordance with the recommendation of the Independent Third Party;
- b. Obtain the guidance of the client(s) whose account(s) is/are involved in the conflict;
- c. Obtain the review of the General Counsel of AUIM, or
- d. Vote in strict accordance with the Guidelines.

5. PROVISION OF THE POLICY TO CLIENTS

AUIM will make available to all clients a copy of its Policy. A copy of the Policy will be mailed, either electronically or through the postal service, to any client at any time upon request.

At a client’s request, AUIM will make available information with respect to how AUIM voted that particular client’s securities.

Effective: October 5, 2004

Revised: January 31, 2008

Revised: February 3, 2010

Aegon USA Investment Management, LLC

Securities Voting Policy

Appendix A

Securities Voting Policy Guidelines

The following is a concise summary of AUIM's securities voting policy guidelines.

1. AUDITORS

Vote FOR proposals to ratify auditors, unless any of the following apply:

- An auditor has a financial interest in or association with the company, and is therefore not independent,
- Fees for non-audit services are excessive, or
- There is reason to believe that the independent auditor has rendered an opinion that is neither accurate nor indicative of the company's financial position.

2. BOARD OF DIRECTORS

Voting on Director Nominees in Uncontested Elections

Votes on director nominees should be made on a CASE-BY-CASE basis, examining the following factors: independence of the board and key board committees, attendance at board meetings, corporate governance provisions and takeover activity, long-term company performance, responsiveness to shareholder proposals, any egregious board actions, and any excessive non-audit fees or other potential auditor conflicts.

Classification/Declassification of the Board

Vote AGAINST proposals to classify the board.

Vote FOR proposals to repeal classified boards and to elect all directors annually.

Independent Chairman (Separate Chairman/CEO)

Vote on a CASE-BY-CASE basis shareholder proposals requiring that the positions of chairman and CEO be held separately. Because some companies have governance structures in place that counterbalance a combined position, certain factors should be taken into account in determining whether the proposal warrants support. These factors include the presence of a lead director, board and committee independence, governance guidelines, company performance, and annual review by outside directors of CEO pay.

Majority of Independent Directors/Establishment of Committees

Vote FOR shareholder proposals asking that a majority or more of directors be independent unless the board composition already meets the proposed threshold by AUIM's definition of independence.

Vote FOR shareholder proposals asking that board audit, compensation, and/or nominating committees be composed exclusively of independent directors if they currently do not meet that standard.

3. SHAREHOLDER RIGHTS

Shareholder Ability to Act by Written Consent

Vote AGAINST proposals to restrict or prohibit shareholder ability to take action by written consent.

Vote FOR proposals to allow or make easier shareholder action by written consent.

Shareholder Ability to Call Special Meetings

Vote AGAINST proposals to restrict or prohibit shareholder ability to call special meetings.

Vote FOR proposals that remove restrictions on the right of shareholders to act independently of management.

Supermajority Vote Requirements

Vote AGAINST proposals to require a supermajority shareholder vote.

Vote FOR proposals to lower supermajority vote requirements.

Cumulative Voting

Vote AGAINST proposals to eliminate cumulative voting.

Vote proposals to restore or permit cumulative voting on a CASE-BY-CASE basis relative to the company's other governance provisions.

Confidential Voting

Vote FOR shareholder proposals requesting that corporations adopt confidential voting, use independent vote tabulators and use independent inspectors of election, as long as the proposal includes a provision for proxy contests as follows: In the case of a contested election, management should be permitted to request that the dissident group honor its confidential voting policy. If the dissidents agree, the policy remains in place. If the dissidents will not agree, the confidential voting policy is waived.

Vote FOR management proposals to adopt confidential voting.

4. PROXY CONTESTS

Voting for Director Nominees in Contested Elections

Votes in a contested election of directors must be evaluated on a CASE-BY-CASE basis, considering the factors that include the long-term financial performance, management's track record, qualifications of director nominees (both slates), and an evaluation of what each side is offering shareholders.

5. POISON PILLS

Vote FOR shareholder proposals that ask a company to submit its poison pill for shareholder ratification. Review on a CASE-BY-CASE basis shareholder proposals to redeem a company's poison pill and management proposals to ratify a poison pill.

6. MERGERS AND CORPORATE RESTRUCTURINGS

Vote CASE-BY-CASE on mergers and corporate restructurings based on such features as the fairness opinion, pricing, strategic rationale, and the negotiating process.

7. REINCORPORATION PROPOSALS

Proposals to change a company's state of incorporation should be evaluated on a CASE-BY-CASE basis, giving consideration to both financial and corporate governance concerns, including the reasons for reincorporating, a comparison of the governance provisions, and a comparison of the jurisdictional laws. Vote FOR reincorporation when the economic factors outweigh any neutral or negative governance changes.

8. CAPITAL STRUCTURE

Common Stock Authorization

Votes on proposals to increase the number of shares of common stock authorized for issuance are determined on a CASE-BY-CASE basis.

Vote on proposals at companies with dual-class capital structures to increase the number of authorized shares of the class of stock that has superior voting rights on a CASE-BY-CASE basis.

Vote on proposals to approve increases beyond the allowable increase when a company's shares are in danger of being delisted or if a company's ability to continue to operate as a going concern is uncertain on a CASE-BY-CASE basis.

Dual-class Stock

Vote on proposals to create a new class of common stock with superior voting rights on a CASE-BY-CASE basis.

Vote on proposals to create a new class of nonvoting or subvoting common stock on a CASE-BY-CASE basis, reviewing in particular if:

- It is intended for financing purposes with minimal or no dilution to current shareholders
- It is not designed to preserve the voting power of an insider or significant shareholder

9. EXECUTIVE AND DIRECTOR COMPENSATION

Votes with respect to compensation plans should be determined on a CASE-BY-CASE basis. AUIM reviews Executive and Director compensation plans (including broad-based option plans) in the context of the transfer of shareholder wealth. This review encompasses not only a comparison of a plan relative to peer companies, but also on an absolute basis, considering the cost of the plan vs. the operating income and overall profitability of the firm in question.

Vote AGAINST equity plans that explicitly permit repricing or where the company has a history of repricing without shareholder approval.

Management Proposals Seeking Approval to Reprice Options

Vote AGAINST proposals by management seeking approval to reprice options.

Employee Stock Purchase Plans

Votes on employee stock purchase plans should be determined on a CASE-BY-CASE basis.

Vote FOR employee stock purchase plans where all of the following apply:

- Purchase price is at least 85 percent of fair market value
- Offering period is 27 months or less, and

- Potential voting power dilution (VPD) is ten percent or less.

Vote AGAINST employee stock purchase plans where any of the opposite conditions apply.

Shareholder Proposals on Compensation

Vote on a CASE-BY-CASE basis for all other shareholder proposals regarding executive and director pay, taking into account company performance, pay level versus peers, pay level versus industry, and long term corporate outlook.

10. SOCIAL AND ENVIRONMENTAL ISSUES

These issues cover a wide range of topics, including consumer and public safety, environment and energy, general corporate issues, labor standards and human rights, military business, and workplace diversity.

In general, vote CASE-BY-CASE. While a wide variety of factors goes into each analysis, the overall principal guiding all vote recommendations focuses on how the proposal will enhance the economic value of the company.

AllianceBernstein L.P.

Statement of Policies and Procedures for Proxy Voting

1. INTRODUCTION

As a registered investment adviser, AllianceBernstein L.P. (“AllianceBernstein”, “we” or “us”) has a fiduciary duty to act solely in the best interests of our clients. We recognize that this duty requires us to vote client securities in a timely manner and make voting decisions that are intended to maximize long-term shareholder value. Generally, our clients’ objective is to maximize the financial return of their portfolios within appropriate risk parameters. We have long recognized that environmental, social and governance (“ESG”) issues can impact the performance of investment portfolios. Accordingly, we have sought to integrate ESG factors into our investment process to the extent that the integration of such factors is consistent with our fiduciary duty to help our clients achieve their investment objectives and protect their economic interests. Our Statement of Policy Regarding Responsible Investment (“RI Policy”) is attached to this Statement as an Exhibit.

We consider ourselves shareholder advocates and take this responsibility very seriously. Consistent with our commitments, we will disclose our clients’ voting records only to them and as required by mutual fund vote disclosure regulations. In addition, our Proxy Committee may, after careful consideration, choose to respond to surveys so long as doing so does not compromise confidential voting.

This statement is intended to comply with Rule 206(4)-6 of the Investment Advisers Act of 1940. It sets forth our policies and procedures for voting proxies for our discretionary investment advisory clients, including investment companies registered under the Investment Company Act of 1940. This statement applies to AllianceBernstein’s investment groups investing on behalf of clients in both U.S. and non-U.S. securities.

2. PROXY POLICIES

Our proxy voting policies are principle-based rather than rules-based. We adhere to a core set of principles that are described in this Statement and in our Proxy Voting Manual. We assess each proxy proposal in light of those principles. Our proxy voting “litmus test” will always be what we view as most likely to maximize long-term shareholder value. We believe that authority and accountability for setting and executing corporate policies, goals and compensation should generally rest with the board of directors and senior management. In return, we support strong investor rights that allow shareholders to hold directors and management accountable if they fail to act in the best interests of shareholders. In addition, if we determine that ESG issues that arise with respect to an issuer’s past, current or anticipated behaviors are, or are reasonably likely to become, material to its future earnings, we address these concerns in our proxy voting and engagement.

This statement is designed to be responsive to the wide range of proxy voting subjects that can have a significant effect on the investment value of the securities held in our clients’ accounts. These policies are not exhaustive due to the variety of proxy voting issues that we may be required to consider. AllianceBernstein reserves the right to depart from these guidelines in order to make voting decisions that are in our clients’ best interests. In reviewing proxy issues, we will apply the following general policies:

2.1 Corporate Governance

We recognize the importance of good corporate governance in our proxy voting policies and engagement practices in ensuring that management and the board of directors fulfill their obligations to shareholders. We favor proposals promoting transparency and accountability within a company. We support the appointment of a majority of independent directors on boards and key committees. Because we believe that good corporate governance requires shareholders to have a meaningful voice in the affairs of the company, we generally will support shareholder proposals which request that companies amend their by-laws to provide that director nominees be elected by an affirmative vote of a majority of the votes cast. Furthermore, we have written to the SEC in support of shareholder access to corporate proxy statements under specified conditions with the goal of serving the best interests of all shareholders.

2.2 Elections of Directors

Unless there is a proxy fight for seats on the Board or we determine that there are other compelling reasons to oppose directors, we will vote in favor of the management proposed slate of directors. That said, we believe that directors have a duty to respond to shareholder actions that have received significant shareholder support. Therefore, we may vote against directors (or withhold votes for directors where plurality voting applies) who fail to act on key issues such as failure to implement proposals to declassify the board, failure to implement a majority

vote requirement, failure to submit a rights plan to a shareholder vote or failure to act on tender offers where a majority of shareholders have tendered their shares. In addition, we will vote against directors who fail to attend at least seventy-five percent of board meetings within a given year without a reasonable excuse, and we may abstain or vote against directors of non-U.S. issuers where there is insufficient information about the nominees disclosed in the proxy statement. Also, we will generally not oppose directors who meet the definition of independence promulgated by the primary exchange on which the company's shares are traded or set forth in the code we determine to be best practice in the country where the subject company is domiciled. Finally, because we believe that cumulative voting in single shareholder class structures provides a disproportionately large voice to minority shareholders in the affairs of a company, we will generally vote against such proposals and vote for management proposals seeking to eliminate cumulative voting. However, in dual class structures (such as A&B shares) where the shareholders with a majority economic interest have a minority voting interest, we will generally vote in favor of cumulative voting.

2.3 Appointment of Auditors

AllianceBernstein believes that the company is in the best position to choose its auditors, so we will generally support management's recommendation. However, we recognize that there are inherent conflicts when a company's independent auditor performs substantial non-audit services for the company. The Sarbanes-Oxley Act of 2002 prohibits certain categories of services by auditors to U.S. issuers, making this issue less prevalent in the U.S. Nevertheless, in reviewing a proposed auditor, we will consider the fees paid for non-audit services relative to total fees and whether there are other reasons for us to question the independence or performance of the auditors.

2.4 Changes in Legal and Capital Structure

Changes in a company's charter, articles of incorporation or by-laws are often technical and administrative in nature. Absent a compelling reason to the contrary, AllianceBernstein will cast its votes in accordance with management's recommendations on such proposals. However, we will review and analyze on a case-by-case basis any non-routine proposals that are likely to affect the structure and operation of the company or have a material economic effect on the company. For example, we will generally support proposals to increase authorized common stock when it is necessary to implement a stock split, aid in a restructuring or acquisition, or provide a sufficient number of shares for an employee savings plan, stock option plan or executive compensation plan. However, a satisfactory explanation of a company's intentions must be disclosed in the proxy statement for proposals requesting an increase of greater than 100% of the shares outstanding. We will oppose increases in authorized common stock where there is evidence that the shares will be used to implement a poison pill or another form of anti-takeover device. We will support shareholder proposals that seek to eliminate dual class voting structures.

2.5 Corporate Restructurings, Mergers and Acquisitions

AllianceBernstein believes proxy votes dealing with corporate reorganizations are an extension of the investment decision. Accordingly, we will analyze such proposals on a case-by-case basis, weighing heavily the views of our research analysts that cover the company and our investment professionals managing the portfolios in which the stock is held.

2.6 Proposals Affecting Shareholder Rights

AllianceBernstein believes that certain fundamental rights of shareholders must be protected. We will generally vote in favor of proposals that give shareholders a greater voice in the affairs of the company and oppose any measure that seeks to limit those rights. However, when analyzing such proposals we will weigh the financial impact of the proposal against the impairment of shareholder rights.

2.7 Anti-Takeover Measures

AllianceBernstein believes that measures that impede corporate transactions (such as takeovers) or entrench management not only infringe on the rights of shareholders but may also have a detrimental effect on the value of the company. Therefore, we will generally oppose proposals, regardless of whether they are advanced by management or shareholders, when their purpose or effect is to entrench management or excessively or inappropriately dilute shareholder ownership. Conversely, we support proposals that would restrict or otherwise eliminate anti-takeover or anti-shareholder measures that have already been adopted by corporate issuers. For example, we will support shareholder proposals that seek to require the company to submit a shareholder rights plan to a shareholder vote. We will evaluate, on a case-by-case basis, proposals to completely redeem or eliminate such plans. Furthermore, we will generally oppose proposals put forward by management (including the authorization of blank check preferred stock, classified boards and supermajority vote requirements) that appear to be anti-shareholder or intended as management entrenchment mechanisms.

2.8 Executive Compensation

AllianceBernstein believes that company management and the compensation committee of the board of directors should, within reason, be given latitude to determine the types and mix of compensation and benefits offered to company employees. Whether proposed by a shareholder or management, we will review proposals relating to executive compensation plans on a case-by-case basis to ensure that the long-term interests of management and shareholders are properly aligned. In general, we will analyze the proposed plan to ensure that shareholder equity will not be excessively diluted taking into account shares available for grant under the proposed plan as well as other existing plans. We generally will oppose plans that allow stock options to be granted with below market value exercise prices on the date of issuance or permit re-pricing of underwater stock options without shareholder approval. Other factors such as the company's performance and industry practice will generally be factored into our analysis. In markets where remuneration reports or advisory votes on executive compensation are not required for all companies, we will generally support shareholder proposals asking the board to adopt a policy (i.e., "say on pay") that the company's shareholders be given the opportunity to vote on an advisory resolution to approve the compensation practices of the company. Although "say on pay" votes are by nature only broad indications of shareholder views, they do lead to more

compensation-related dialogue between management and shareholders and help ensure that management and shareholders meet their common objective: maximizing the value of the company. In markets where votes to approve remuneration reports or advisory votes on executive compensation are required, we review the compensation practices on a case-by-case basis. With respect to companies that have received assistance through government programs such as TARP, we will generally oppose shareholder proposals that seek to impose greater executive compensation restrictions on subject companies than are required under the applicable program because such restrictions could create a competitive disadvantage for the subject company. We believe the U.S. Securities and Exchange Commission (“SEC”) took appropriate steps to ensure more complete and transparent disclosure of executive compensation when it issued modified executive compensation and corporate governance disclosure rules in 2006 and February 2010. Therefore, while we will consider them on a case-by-case basis, we generally vote against shareholder proposals seeking additional disclosure of executive and director compensation, including proposals that seek to specify the measurement of performance-based compensation, if the company is subject to SEC rules. We will support requiring a shareholder vote on management proposals to provide severance packages that exceed 2.99 times the sum of an executive officer’s base salary plus bonus that are triggered by a change in control. Finally, we will support shareholder proposals requiring a company to expense compensatory employee stock options (to the extent the jurisdiction in which the company operates does not already require it) because we view this form of compensation as a significant corporate expense that should be appropriately accounted for.

2.9 ESG

We are appointed by our clients as an investment manager with a fiduciary responsibility to help them achieve their investment objectives over the long term. Generally, our clients’ objective is to maximize the financial return of their portfolios within appropriate risk parameters. We have long recognized that ESG issues can impact the performance of investment portfolios. Accordingly, we have sought to integrate ESG factors into our investment and proxy voting processes to the extent that the integration of such factors is consistent with our fiduciary duty to help our clients achieve their investment objectives and protect their economic interests. For additional information regarding our approach to incorporating ESG issues in our investment and decision-making processes, please refer to our RI Policy, which is attached to this Statement as an Exhibit.

Shareholder proposals relating to environmental, social (including political) and governance issues often raise complex and controversial issues that may have both a financial and non-financial effect on the company. And while we recognize that the effect of certain policies on a company may be difficult to quantify, we believe it is clear that they do affect the company’s long-term performance. Our position in evaluating these proposals is founded on the principle that we are a fiduciary. As such, we carefully consider any factors that we believe could affect a company’s long-term investment performance (including ESG issues) in the course of our extensive fundamental, company-specific research and engagement, which we rely on in making our investment and proxy voting decisions. Maximizing long-term shareholder value is our overriding concern when evaluating these matters, so we consider the impact of these proposals on the future earnings of the company. In so doing, we will balance the assumed cost to a company of implementing one or more shareholder proposals against the positive effects we believe implementing the proposal may have on long-term shareholder value.

3 PROXY VOTING PROCEDURES

3.1 Engagement

In evaluating proxy issues and determining our votes, we welcome and seek out the points of view of various parties. Internally, the Proxy Committee may consult chief investment officers, directors of research, research analysts across our value and growth equity platforms, portfolio managers in whose managed accounts a stock is held and/or other Investment Policy Group members. Externally, the Proxy Committee may consult company management, company directors, interest groups, shareholder activists and research providers. If we believe an ESG issue is, or is reasonably likely to become, material, we engage a company’s management to discuss the relevant issues.

3.2 Conflicts of Interest

AllianceBernstein recognizes that there may be a potential conflict of interest when we vote a proxy solicited by an issuer whose retirement plan we manage or administer, who distributes AllianceBernstein-sponsored mutual funds, or with whom we have, or one of our employees has, a business or personal relationship that may affect (or may be reasonably viewed as affecting) how we vote on the issuer’s proxy. Similarly, AllianceBernstein may have a potentially material conflict of interest when deciding how to vote on a proposal sponsored or supported by a shareholder group that is a client. We believe that centralized management of proxy voting, oversight by the Proxy Committee and adherence to these policies ensures that proxies are voted based solely on our clients’ best interests. Additionally, we have implemented procedures to ensure that our votes are not the product of a material conflict of interest, including: (i) on an annual basis, the Proxy Committee taking reasonable steps to evaluate (A) the nature of AllianceBernstein’s and our employees’ material business and personal relationships (and those of our affiliates) with any company whose equity securities are held in client accounts and (B) any client that has sponsored or has a material interest in a proposal upon which we will be eligible to vote; (ii) requiring anyone involved in the decision making process to disclose to the Chair of the Proxy Committee any potential conflict that he or she is aware of (including personal relationships) and any contact that he or she has had with any interested party regarding a proxy vote; (iii) prohibiting employees involved in the decision making process or vote administration from revealing how we intend to vote on a proposal in order to reduce any attempted influence from interested parties; and (iv) where a material conflict of interests exists, reviewing our proposed vote by applying a series of objective tests and, where necessary, considering the views of third party research services to ensure that our voting decision is consistent with our clients’ best interests.

Because under certain circumstances AllianceBernstein considers the recommendation of third party research services, the Proxy Committee takes reasonable steps to verify that any third party research service is, in fact, independent taking into account all of the relevant facts and

circumstances. This includes reviewing the third party research service's conflict management procedures and ascertaining, among other things, whether the third party research service (i) has the capacity and competency to adequately analyze proxy issues, and (ii) can make recommendations in an impartial manner and in the best interests of our clients.

3.3 Proxies of Certain Non-U.S. Issuers

Proxy voting in certain countries requires "share blocking." Shareholders wishing to vote their proxies must deposit their shares shortly before the date of the meeting with a designated depository. During this blocking period, shares that will be voted at the meeting cannot be sold until the meeting has taken place and the shares are returned to the clients' custodian banks. Absent compelling reasons to the contrary, AllianceBernstein believes that the benefit to the client of exercising the vote is outweighed by the cost of voting (i.e., not being able to sell the shares during this period). Accordingly, if share blocking is required we generally choose not to vote those shares.

AllianceBernstein seeks to vote all proxies for securities held in client accounts for which we have proxy voting authority. However, in non-US markets, administrative issues beyond our control may at times prevent AllianceBernstein from voting such proxies. For example, AllianceBernstein may receive meeting notices after the cut-off date for voting or without sufficient time to fully consider the proxy. As another example, certain markets require periodic renewals of powers of attorney that local agents must have from our clients prior to implementing AllianceBernstein's voting instructions.

3.4 Loaned Securities

Many clients of AllianceBernstein have entered into securities lending arrangements with agent lenders to generate additional revenue. AllianceBernstein will not be able to vote securities that are on loan under these types of arrangements. However, under rare circumstances, for voting issues that may have a significant impact on the investment, we may request that clients recall securities that are on loan if we determine that the benefit of voting outweighs the costs and lost revenue to the client or fund and the administrative burden of retrieving the securities.

3.5 Proxy Committee

Our growth and value investment groups have formed a Proxy Committee to establish general proxy policies for AllianceBernstein and consider specific proxy voting matters as necessary. The Proxy Committee periodically reviews these policies and new types of environmental, social and governance issues, and decides how we should vote on proposals not covered by these policies. When a proxy vote cannot be clearly decided by an application of our stated policy, the Proxy Committee will evaluate the proposal. In addition, the Proxy Committee, in conjunction with the analyst that covers the company, may contact corporate management, interested shareholder groups and others as necessary to discuss proxy issues.

Different investment philosophies may occasionally result in different conclusions being drawn regarding certain proposals and, in turn, may result in the Proxy Committee making different voting decisions on the same proposal for value and growth holdings. Nevertheless, the Proxy Committee always votes proxies with the goal of maximizing the value of the securities in client portfolios.

It is the responsibility of the Proxy Committee to evaluate and maintain proxy voting procedures and guidelines, to evaluate proposals and issues not covered by these guidelines, to evaluate proxies where we face a potential conflict of interest (as discussed in section 3.2), to consider changes in policy and to review the Proxy Voting Statement and the Proxy Voting Manual no less frequently than annually. In addition, the Proxy Committee meets as necessary to address special situations.

Members of the Proxy Committee include senior investment personnel and representatives of the Legal and Compliance Department. The Committee is chaired by Linda Giuliano, Senior Vice President and Chief Administrative Officer-Equities.

3.6 Proxy Voting Records

You may obtain information regarding how the Fund voted proxies relating to portfolio securities during the most recent 12-month period ended June 30, without charge. Simply visit AllianceBernstein's web site at www.alliancebernstein.com, go to the Securities and Exchange Commission's web site at www.sec.gov or call AllianceBernstein at (800) 227-4618.

Barrow, Hanley, Mewhinney & Strauss, LLC

Proxy Voting

For clients who so elect, BHMS has the responsibility to vote proxies for portfolio securities consistent with the best economic interests of the beneficial owners. BHMS maintains written policies and procedures as to the handling, research, voting, and reporting of proxy voting and makes appropriate disclosures about the Firm's proxy policies and procedures to clients. BHMS provides information to clients about how their proxies were voted and retains records related to proxy voting.

To assist in the proxy voting process, BHMS retains the services of Glass Lewis & Co. Glass Lewis provides research on corporate governance, financial statements, business, legal and accounting risk and supplies proxy voting recommendations. Glass Lewis also provides proxy execution, record keeping, and reporting services.

Proxy Oversight Committee

- BHMS' Proxy Oversight Committee reviews and evaluates the data and recommendations provided by the proxy service along with its own internal research on each company to ensure that votes are consistent with the Firm's policies and are in the best interest of the beneficial owners. Proxy votes must be approved by BHMS before submitting to the proxy service provider.
- The Proxy Oversight Committee includes four portfolio managers, three research analysts, and three proxy coordinators. Research analysts participate based on industry coverage.
- Domestic ballots and research recommendations are reviewed by the Proxy Coordinators and referred to analysts, portfolio managers or members of the proxy committee if the Glass Lewis recommendations are against management.

Types of Accounts

- *U.S. Equity Accounts*

The proxy coordinators review proposals and evaluate the proxy service provider's recommendations. If further research is required, the proxy coordinators will direct the proxy service provider's research to the analyst following the security. For Small Cap Value portfolios, the portfolio managers will review and make the voting decision. Generally, proposals are voted in accordance with the proxy service provider's recommendations unless BHMS overrides a specific issue. The proxy coordinators approve voting decisions through the proxy service provider's secure, proprietary, online system.

- *Non-US Value and Diversified Small Cap Value Accounts*

Proxies are voted uniformly in accordance with the proxy service provider's recommendations. The proxy service provider verifies that votes are received, voted, and recorded.

Conflicts of Interest

- BHMS seeks to avoid conflicts of interest and proxies are voted uniformly in accordance with the Firm's policies, including proxies of companies that are also clients.
- If a material conflict of interest exists, the proxy coordinators will determine whether it is appropriate to disclose the conflict with the affected clients, to give the clients an opportunity to vote the proxies themselves, or to address the voting issue through other objective means, such as voting in a manner consistent with a predetermined voting policy or receiving an independent third party voting recommendation.

Policies and Procedures

The Director of Equity Operations, who serves as proxy coordinator, is responsible for implementing and monitoring BHMS' proxy voting policy, procedures, disclosures and recordkeeping, including outlining our voting guidelines in our procedures. The Proxy Oversight Committee conducts regular reviews to monitor and ensure that the Firm's policy is observed, implemented properly, and amended or updated, as appropriate.

- BHMS sends a daily electronic transfer of stock positions to the proxy service provider.
- The proxy service provider identifies accounts eligible to vote for each security and posts the proposals and research on its secure, proprietary online system.
- New or controversial issues are presented to the Proxy Oversight Committee for evaluation.
- BHMS sends a proxy report to clients at least annually (or as requested by client), listing the number of shares voted and disclosing how proxies were voted.
- Voting records are retained on the network, which is backed up daily. The proxy service provider retains records for seven years.
- BHMS' guidelines addressing specific issues are available upon request by calling 214-665-1900 or by e-mailing: clientservices@barrowhanley.com.
- The proxy coordinators retains the following proxy records in accordance with the SEC's five-year retention requirement:

- These policies and procedures and any amendments;
- A record of each vote cast; and
- Any document BHMS created that was material to making a decision on how to vote proxies, or that memorializes that decision.

Revised December 31, 2013

BlackRock Fund Advisors and BlackRock Financial Management, Inc.

Summary of Proxy Voting Policy

BlackRock's Corporate Governance Committee (the "Committee"), addresses proxy voting issues on behalf of BlackRock and its clients, including the Funds. The Committee is comprised of senior members of BlackRock's Portfolio Management and Administration Groups and is advised by BlackRock's Legal and Compliance Department.

BlackRock votes (or refrains from voting) proxies for each Fund in a manner that BlackRock, in the exercise of its independent business judgment, concludes are in the best economic interests of such Fund. In some cases, BlackRock may determine that it is in the best economic interests of a Fund to refrain from exercising the Fund's proxy voting rights (such as, for example, proxies on certain non-U.S. securities that might impose costly or time-consuming in-person voting requirements). With regard to the relationship between securities lending and proxy voting, BlackRock's approach is also driven by our clients' economic interests. The evaluation of the economic desirability of recalling loans involves balancing the revenue producing value of loans against the likely economic value of casting votes. Based on our evaluation of this relationship, BlackRock believes that the likely economic value of casting a vote generally is less than the securities lending income, either because the votes will not have significant economic consequences or because the outcome of the vote would not be affected by BlackRock recalling loaned securities in order to ensure they are voted. Periodically, BlackRock analyzes the process and benefits of voting proxies for securities on loan, and will consider whether any modification of its proxy voting policies or procedures are necessary in light of any regulatory changes.

BlackRock will normally vote on specific proxy issues in accordance with BlackRock's proxy voting guidelines. BlackRock's proxy voting guidelines provide detailed guidance as to how to vote proxies on certain important or commonly raised issues. BlackRock may, in the exercise of its business judgment, conclude that the proxy voting guidelines do not cover the specific matter upon which a proxy vote is requested, or that an exception to the proxy voting guidelines would be in the best economic interests of a Fund. BlackRock votes (or refrains from voting) proxies without regard to the relationship of the issuer of the proxy (or any shareholder of such issuer) to the Fund, the Fund's affiliates (if any), BlackRock or BlackRock's affiliates. When voting proxies, BlackRock attempts to encourage companies to follow practices that enhance shareholder value and increase transparency and allow the market to place a proper value on their assets.

A full listing of BlackRock's proxy voting policies and guidelines can be found at www.blackrock.com.

CBRE Clarion Securities LLC

Proxy Voting Policies and Procedures

As of December 31, 2011

POLICY

Proxy voting is an important right of shareholders, and reasonable care and diligence must be undertaken to ensure that such rights are properly and timely exercised. When CBRE Clarion has discretion to vote the proxies of its clients, it will vote those proxies in the best interest of its clients and in accordance with this policy and procedures.

For the accounts over which CBRE Clarion maintains proxy voting authority, CBRE Clarion will vote proxies in accordance with its proxy voting guidelines. CBRE Clarion may, in certain circumstances, voluntarily adhere to guidelines established by its clients if doing so can be accomplished within the proxy voting process established with the proxy voting administrator. Otherwise, CBRE Clarion will not accept proxy voting authority to the extent clients wish to impose voting guidelines different from those of CBRE Clarion. As the responsibility for proxy voting is defined at the outset of the client relationship (and documented in the Investment Management Agreement), CBRE Clarion does not anticipate any confusion on the part of its clients in this respect.

PROCEDURES AND CONTROLS

Proxy Voting Process and Administration

CBRE Clarion has engaged ISS (formerly Risk Metrics Group) to provide proxy voting administration services, including the tracking of proxies received for clients, providing notice to CBRE Clarion concerning dates votes are due, the actual casting of ballots and recordkeeping. It is important to recognize that the ability of ISS and CBRE Clarion to process proxy voting decisions in a timely manner is contingent in large part on the custodian banks holding securities for CBRE Clarion clients. On a daily basis, CBRE Clarion provides ISS with a list of securities held in each account over which CBRE Clarion has voting authority.

CBRE Clarion established its own proxy voting guidelines based on a template provided by ISS. Proxy voting guidelines are reviewed and approved by designated Senior Global Portfolio Managers initially and annually thereafter. The approved proxy voting guidelines are provided to ISS to facilitate processing proxy voting.

Voting decisions remain within the discretion of CBRE Clarion. On a daily basis, CBRE Clarion Securities Operations group reviews an online system maintained by ISS in order to monitor for upcoming votes. When a pending vote is identified, the Securities Operations team will forward the ballot to the appropriate Portfolio Manager or Investment Analyst for review, along with any supplemental information about the ballots provided by ISS and – if available – other research vendors to which CBRE Clarion subscribes. The Portfolio Manager or Investment Analyst determines the voting decision and communicates the vote to the Securities Operations group. If the voting decision is in contravention of the CBRE Clarion proxy voting guidelines, the Portfolio Manager or Investment Analyst’s decision must be approved by a Senior Global Portfolio Manager. Specifically, the Portfolio Manager or Investment Analyst must complete a Proxy Voting Form explaining the rationale for voting against the established guidelines. The Proxy Voting Form is reviewed by a Senior Global Portfolio Manager and the Chief Compliance Officer (or General Counsel), evidenced by signature.

Conflicts of Interest

CBRE Clarion will identify any conflicts that exist between the interests of CBRE Clarion and its clients as it relates to proxy voting. As noted in the Code of Ethics, CBRE Clarion obtains information from all employees regarding outside business activities and personal relationships with companies within the investable universe of real estate securities, such as serving as board members or executive officers of an issuer. Additionally, CBRE Clarion will consider the conflicts associated with any ballot which identifies a relationship to CBRE Global Investors or another affiliate within CBRE Group. Lastly, CBRE Clarion will consider any ballot which identifies a client of CBRE Clarion as a potential conflict of interest.

If a material conflict is identified for a particular ballot, CBRE Clarion will refer the ballot and conflict to the CBRE Clarion Risk & Control Committee for review. In such situations, CBRE Clarion will generally defer the vote either to the recommendation provided by ISS (not based on the CBRE Clarion guidelines) or to the affected client(s) so that the client may determine its voting decision.

Proxy Voting Records

Except as otherwise noted, the proxy voting process is coordinated by the Securities Operations group. Compliance is responsible for oversight of and testing of the process. As noted above, ISS provides recordkeeping services, including retaining a copy of each proxy statement received and each vote cast. This information is available to CBRE Clarion upon request.

CBRE Clarion will maintain files relating to its proxy voting procedures in an easily accessible place. Records will be maintained and preserved for five years from the end of the fiscal year during which the last entry was made on a record, with records for the first two years kept on site. These files will include:

- (1) copies of the proxy voting policies and procedures and any amendments thereto,
- (2) a copy of any document CBRE Clarion created that was material to making a decision how to vote proxies or that memorializes that decision, and
- (3) a copy of each written client request for information on how CBRE Clarion voted such client’s proxies and a copy of any written response to any (written or oral) client request for information on how CBRE Clarion voted its proxies.

Clients may contact the Compliance Department at (610) 995-2500 to obtain a copy of these policies and procedures (and, if desired, the firm’s proxy voting guidelines) or to request information on the voting of such client’s proxies. A written response will list, with respect to each voted proxy that the client has inquired about:

- (1) the name of the issuer,
- (2) the proposal voted upon, and
- (3) how CBRE Clarion voted the client’s proxy.

Janus Capital Management LLC Janus Capital Singapore Pte. Limited Perkins Investment Management LLC

Janus Proxy Voting Guidelines

The Janus Proxy Voting Guidelines (the “Guidelines”) below summarize Janus Capital Management LLC’s (“Janus”) positions on various issues of concern to investors and are intended to provide a general indication of how portfolio securities may be voted on proposals dealing with particular issues. The Guidelines, together with the Janus Proxy Voting Procedures (the “Procedures”), will be used for voting proxies on behalf of all Janus clients (including mutual funds) for which Janus has voting authority, except as noted below. Subject to specific provisions in a client’s account documentation related to exception voting, Janus only accepts direction from a client to vote proxies for that client’s account pursuant to: 1) the Guidelines; 2) the Benchmark Policy recommendations of Institutional Shareholder Services Inc. (“ISS”) (the “Proxy Voting Service”); or 3) upon request by a client as set forth in a client’s investment management agreement, the ISS Taft-Hartley voting guidelines (“Taft-Hartley Guidelines”). Janus Capital Singapore Pte. Limited and Perkins Investment Management LLC have each adopted the Guidelines.

Janus has retained the services of the Proxy Voting Service, an industry expert in proxy issues and corporate governance matters. The Proxy Voting Service provides Janus with in-depth analysis and recommendations on complex proxy issues. While Janus attempts to apply the

following Guidelines to proxy proposals, Janus reserves the right to use the Proxy Voting Service's expertise and recommendations on a variety of proxy voting issues, including: executive compensation, foreign issuer proxies, and proposals that may not otherwise be addressed by the Guidelines. The Proxy Voting Service is instructed to vote all proxies relating to portfolio securities in accordance with these Guidelines, except as otherwise instructed by Janus. The Proxy Voting Service, may not, in all instances, have or provide research, analysis and recommendations on proxy issues. For example, the Proxy Voting Service may not provide such analysis and research for privately held companies. In such instances, the Proxy Administrator shall refer such proxy proposal to the portfolio manager.

The Guidelines are not exhaustive and do not include all potential voting issues. Because proxy issues and the circumstances of individual companies are so varied, there may be instances when Janus may not vote in strict adherence to the Guidelines. In addition, Janus portfolio managers, assistant portfolio managers, and analysts covering specific companies are responsible for monitoring significant corporate developments, including proxy proposals submitted to shareholders and notifying the Proxy Administrator in Securities Operations of circumstances where the interests of Janus' clients may warrant a vote contrary to the Guidelines. In such instances, the portfolio manager, assistant portfolio manager or analyst will submit a written rationale to the Proxy Administrator. The Proxy Voting Committee periodically reviews rationales provided to determine: i) whether the rationales appear reasonable; and ii) whether any business relationship with the issuer of the proxy could have created a conflict of interest influencing the votes (see Procedures for additional Conflicts of Interest details).

In many foreign markets, shareholders who vote proxies for shares of a foreign issuer are not able to trade in that company's stock within a given period of time on or around the shareholder meeting date. This practice is known as "share blocking." In countries where share blocking is practiced, Janus will only vote proxies if the portfolio manager or assistant portfolio manager determines that the shareholder benefit of voting the proxies outweighs the risk of not being able to sell the securities. In addition, international issuers may be subject to corporate governance standards and a proxy solicitation process that substantially differs from domestic standards and practices. Janus will generally vote international issuer proxies using the Guidelines unless the application of the Guidelines is inconsistent with corporate governance standards and practices in the foreign market, in which case Janus may refer to the research, analysis and recommendations provided by the Proxy Voting Service.

The Janus funds may participate in a securities lending program under which shares of an issuer may be on loan while that issuer is conducting a proxy solicitation. Generally, if shares of an issuer are on loan during a proxy solicitation, a fund cannot vote the shares. Janus fund managers have discretion to instruct the Proxy Administrator to pull back lent shares before proxy record dates and vote proxies.

In circumstances where the Janus funds held a security as of record date, but Janus sells its holdings prior to the shareholder meeting, Janus will abstain from voting that proxy.

The following guidelines are grouped according to the types of proposals generally presented to shareholders.

BOARD OF DIRECTORS ISSUES

The quality of management is a key consideration in the decision to invest in a company. Because management is in the best possible position to evaluate the qualifications and needs of a particular board, Janus considers the recommendation of management to be an important factor in making these decisions.

1. For domestic market and applicable foreign market issuers, Janus will generally vote in favor of slates of director candidates that have a majority of independent directors (as determined by the Proxy Voting Service) and oppose slates of director candidates that do not have a majority of independent directors.
2. After taking into consideration country-specific practices, Janus will generally vote in favor of uncontested director candidates, unless they:
 - attend less than 75% of the board and committee meetings without a valid excuse;
 - ignore or otherwise fail to support shareholder proposals as determined by the proxy voting service;
 - are not responsive to advisory votes on executive compensation matters (as determined by the proxy voting service);
 - fail to provide appropriate oversight of company's risk management practices (as determined by the proxy voting service);
 - are non-independent directors and sit on the audit, compensation or nominating committees;
 - are non-independent directors and the board does not have an audit, compensation, or nominating committees;
 - are audit committee members and the non-audit fees paid to the auditor are excessive (as determined by the Proxy Voting Service);
 - are audit committee members and poor accounting practices rise to a level of serious concern, or other serious issues surrounding the audit process or arrangement exist (as determined by the Proxy Voting Service);
 - serve as directors on an excessive number of boards ("Overboarded") (as determined by the Proxy Voting Service);
 - are compensation committee members and the company has poor compensation practices (as determined by the Proxy Voting Service); or adopt a long-term poison pill without shareholder approval or make material adverse changes to an existing poison pill (as determined by the Proxy Voting Service).

3. Janus will evaluate proposals relating to contested director candidates and/or contested slates of directors on case-by-case basis.*
4. Janus will generally vote in favor of proposals to increase the minimum number of independent directors.
5. Janus believes that attracting qualified director candidates is important to overall company success and effective corporate governance. As such, Janus will generally vote in favor of proposals regarding director indemnification arrangements.
6. Janus will generally vote in favor of proposals to increase the size of a board of directors so long as the board has a majority of independent directors.
7. If the purpose of the proposal is to promote anti-takeover measures, Janus will generally vote against proposals relating to decreasing the size of a board of directors.
8. Janus will generally vote against proposals advocating classified or staggered boards of directors.
9. Janus will generally vote with management regarding proposals to declassify a board.
10. Janus will generally vote in favor of proposals to separate the role of the Chairman from the role of the CEO.

AUDITORS

1. Janus will vote in favor of proposals asking for approval of auditors, unless: (1) an auditor has a financial interest in or association with the company, and is therefore not independent; (2) fees for non-audit services are excessive (as determined by the Proxy Voting Service); or (3) there is reason to believe that the independent auditor has rendered an opinion, which is neither accurate nor indicative of the company's financial position.
2. Janus will evaluate proposals relating to contested auditors on a case-by-case basis.*
3. Janus will generally vote in favor of proposals to appoint internal statutory auditors.

EQUITY BASED COMPENSATION PLANS

Equity based compensation plans are important tools in attracting and retaining desirable employees. Janus believes these plans should be carefully applied with the intention of maximizing shareholder value. With this in mind, Janus will evaluate proposals relating to executive and director compensation plans on a case-by-case basis, utilizing the research of the Proxy Voting Service.

Janus will assess the potential cost of an equity based compensation plan using the research provided by the Proxy Voting Service. The research is designed to estimate the total cost of a proposed plan and identify factors that demonstrate good stewardship of investors' interests regarding executive compensation. The Proxy Voting Service evaluates whether the estimated cost is reasonable by comparing the cost to an allowable cap. The allowable cap is industry-specific, market cap-based, and pegged to the average amount paid by companies performing in the top quartile of their peer groups. If the proposed cost is above the allowable cap, Janus will generally vote against the plan.

In addition, Janus will generally oppose plans that:

- provide for re-pricing of underwater options;
- provide for automatic replenishment ("evergreen") or reload options;
- create an inconsistent relationship between long term share performance and compensation increases; and/or
- are proposed by management and do not demonstrate good stewardship of investors' interests regarding executive compensation or are a vehicle for poor compensation practices (as determined by the Proxy Voting Service).

OTHER COMPENSATION RELATED PROPOSALS

1. Janus will generally vote in favor of proposals relating to ESPPs – so long as shares purchased through plans are priced no less than 15% below market value.
2. Janus will generally vote in favor of proposals requiring the expensing of options.
3. Janus will generally oppose proposals requesting approval to make material amendments to equity based compensation plans without shareholder approval.
4. Janus will generally oppose proposals regarding the re-pricing of underwater options.
5. Janus will generally oppose proposals requesting approval of loans to officers, executives and board members of an issuer.
6. Janus will generally oppose proposals requesting approval of automatic share replenishment ("evergreen") features of equity based compensation plans.
7. Janus will generally oppose the issuance of reload options (stock option that is automatically granted if an outstanding stock option is exercised during a window period).
8. Janus will generally vote in favor of annual advisory votes on executive compensation (say-on-frequency).

9. Janus will generally vote in favor with regard to advisory votes on executive compensation (say-on-pay), unless problematic pay practices are maintained (as determined by the Proxy Voting Service);
10. Janus will vote in favor of proposals to require golden parachutes or executive severance agreements to be submitted for shareholder approval, unless the proposal requires shareholder approval *prior* to entering into employment contracts.
11. Janus will vote on a case-by-case basis on proposals to approve or cancel golden or tin parachutes.* An acceptable parachute should include the following:
 - The parachute should be less attractive than an ongoing employment opportunity with the firm;
 - The triggering mechanism should be beyond the control of management; and
 - The amount should not exceed three times base salary plus guaranteed benefits.
12. Janus will generally vote in favor of proposals intended to increase long-term stock ownership by executives, officers and directors. These may include:
 - requiring executive officers and directors to hold a minimum amount of stock in the company;
 - requiring stock acquired through exercised options to be held for a certain period of time; and
 - using restricted stock grants instead of options.

OTHER CORPORATE MATTERS

Janus will generally vote in favor of proposals relating to the issuance of dividends.

1. Janus will evaluate proposals relating to stock splits on a case-by-case basis.*
2. Janus will generally vote against proposals regarding supermajority voting rights (for example to approve acquisitions or mergers).
3. Janus will generally oppose proposals for different classes of stock with different voting rights.
4. Janus will evaluate proposals relating to issuances with and without preemptive rights on a case-by-case basis. For foreign issuer proxies, Janus will solicit research from the Proxy Voting Service.*
5. Janus will generally vote against proposals seeking to implement measures designed to prevent or obstruct corporate takeovers (includes poison pills), unless such measures are designed primarily as a short-term means to protect a tax benefit.
6. Janus will evaluate proposals seeking to increase the number of shares of common or preferred stock authorized for issue on a case-by-case basis. For domestic issuers, Janus will use quantitative criteria provided by the Proxy Voting Service to measure the reasonableness of the proposed share increase as compared against a measure of industry peers. For foreign issuer proxies, Janus will solicit research from the Proxy Voting Service.*
7. Janus will evaluate proposals regarding the issuance of debt, including convertible debt, on a case-by-case basis.*
8. Janus will generally vote in favor of proposals regarding the authorization of the issuer's Board of Directors to repurchase shares.
9. Janus will evaluate plans of reorganization on a case-by-case basis.*
10. Janus will generally vote in favor of proposals regarding changes in the state of incorporation of an issuer.
11. Janus will generally vote in favor of proposals regarding changes in company name.
12. Janus will evaluate proposals relating to the continuance of a company on a case-by-case basis.*
13. Janus will evaluate proposals regarding acquisitions, mergers, tender offers or changes in control on a case-by-case basis, including any related advisory votes on golden parachutes.*
14. Janus will generally oppose proposals to authorize preferred stock whose voting, conversion, dividend and other rights are determined at the discretion of the Board of Directors when the stock is issued ("blank check stock").
15. Janus will generally vote in favor of proposals to lower the barriers to shareholder action (i.e., limited rights to call special meetings, limited rights to act by written consents) and against proposals restricting or prohibiting the ability to act by written consent.
16. Janus will generally vote in favor of proposals to adopt cumulative voting unless otherwise recommended by the Proxy Voting Service.
17. Janus will generally vote in favor of proposals to require that voting be confidential.
18. Janus will generally oppose proposals requesting authorization of political contributions (mainly foreign), except for proposals designed to insure that the charitable giving does not violate laws on political contributions.
19. Janus will generally vote in favor of proposals relating to the administration of an annual shareholder meeting.
20. Janus will generally vote against proposals to approve "other business" when it appears as a voting item.

21. Janus will evaluate proposals related to proxy access on a case-by-case basis.*

Shareholder Proposals

Janus is primarily concerned with the economic impact of shareholder proposals on a company's short and long-term share value. Janus will generally apply the Guidelines to shareholder proposals while weighing the following considerations:

1. Janus will generally abstain from voting on shareholder proposals that relate to social, moral or ethical issues, or issues that place arbitrary constraints on the board or management of a company.
2. For shareholder proposals outside the scope of the Guidelines, Janus will solicit additional research and a recommendation from the Proxy Voting Service. Janus will always reserve the right to over-ride a recommendation provided by the Proxy Voting Service.*

JANUS CAPITAL MANAGEMENT LLC JANUS CAPITAL SINGAPORE PTE. LIMITED PERKINS INVESTMENT MANAGEMENT LLC

Proxy Voting Procedures

February 2014

The following represents the Proxy Voting Procedures ("Procedures") for Janus Capital Management LLC ("Janus") with respect to the voting of proxies on behalf of all clients, including mutual funds advised by Janus, for which Janus has voting responsibility and the keeping of records relating to proxy voting. Janus Capital Singapore Pte. Limited ("Janus Singapore"), and Perkins Investment Management LLC ("Perkins") have each adopted the Procedures.

General Policy. Janus seeks to vote proxies in the best interest of its clients. Janus will not accept direction as to how to vote individual proxies for which it has voting responsibility from any other person or organization (other than the research and information provided by the Proxy Voting Service (as hereinafter defined)). Subject to specific provisions in a client's account documentation related to exception voting, Janus only accepts direction from a client to vote proxies for that client's account pursuant to: 1) the Janus Capital Management LLC Proxy Voting Guidelines ("Guidelines"); 2) the Benchmark Policy recommendations of Institutional Shareholder Services Inc. ("ISS") (the "Proxy Voting Service"); or 3) upon request by a client as set forth in a client's investment management agreement, the ISS Taft-Hartley voting guidelines ("Taft-Hartley Guidelines").

ERISA Plan Policy. On behalf of client accounts subject to ERISA, Janus seeks to discharge its fiduciary duty by voting proxies solely in the best interest of the participants and beneficiaries of such plans. Janus recognizes that the exercise of voting rights on securities held by ERISA plans for which Janus has voting responsibility is a fiduciary duty that must be exercised with care, skill, prudence and diligence. In voting proxies for ERISA accounts, Janus will exercise its fiduciary responsibility to vote all proxies for shares for which it has investment discretion as investment manager unless the power to vote such shares has been retained by the appointing fiduciary as set forth in the documents in which the named fiduciary has appointed Janus as investment manager.

Proxy Voting Committee. The Janus Proxy Voting Committee (the "Committee") develops Janus' positions on all major corporate issues, creates guidelines and oversees the voting process. The Committee is comprised of a Vice President of Investment Accounting, a representative from Compliance, and one or more portfolio management representatives (or their respective designees) who provide input on behalf of the portfolio management team. Internal legal counsel serves as a consultant to the Committee and is a non-voting member. A quorum is required for all Committee meetings. In formulating proxy voting recommendations, the Committee analyzes proxy proposals from the Proxy Voting Service from the prior year, and evaluates whether those proposals would adversely or beneficially affect shareholders' interests. The Committee also reviews policy rationale provided by the Proxy Voting Service related to voting recommendations for the upcoming proxy season. Once the Committee establishes its recommendations and revises the Guidelines, they are distributed to Janus' portfolio managers¹ for review and implementation. While the Committee sets the Guidelines and serves as a resource for Janus portfolio management, it does not have proxy voting authority for any proprietary or non-proprietary mutual fund or any investment advisory client. The portfolio managers are responsible for proxy votes on securities they own in the portfolios they manage. Most portfolio managers vote consistently with the Guidelines. However, a portfolio manager may choose to vote contrary to the Guidelines. When portfolio managers cast votes which are contrary to the Guidelines, the manager is required to document the reasons in writing for the Committee. In many cases, a security may be held by multiple portfolio managers. Portfolio managers are not required to cast consistent votes. Annually the Janus Funds Board of Trustees, or a committee thereof, will review Janus' proxy voting process, policies and voting records.

Securities Operations Group. The Securities Operations Group is responsible for administering the proxy voting process as set forth in these procedures, the Guidelines, and as applicable, the Taft-Hartley Guidelines. The Proxy Administrator in the Securities Operations Group works with the Proxy Voting Service and is responsible for ensuring that all meeting notices are reviewed against the Guidelines, and as applicable, the Taft-Hartley Guidelines, and proxy matters are communicated to the portfolio managers and analysts for consideration pursuant to the Guidelines.

*All discretionary votes of this nature are cast solely in the interests of shareholders and without regard to any other Janus relationship, business or otherwise.

¹ All references to portfolio managers include assistant portfolio managers.

Voting and Use of Proxy Voting Service. Janus has engaged an independent proxy voting service, the Proxy Voting Service, to assist in the voting of proxies. The Proxy Voting Service is responsible for coordinating with the clients' custodians to ensure that all proxy materials received by the custodians relating to the clients' portfolio securities are processed in a timely fashion. In addition, the Proxy Voting Service is responsible for maintaining copies of all proxy statements received by issuers and to promptly provide such materials to Janus upon request.

To the extent applicable, the Proxy Voting Service will process all proxy votes in accordance with the Guidelines. Portfolio managers may decide to vote their proxies consistent with the Guidelines and instruct the Proxy Administrator to vote all proxies accordingly. He or she may also request to review all vote recommendations prior to the meeting cut-off date, or may choose to review only those votes to be cast against management. Notwithstanding the above, with respect to clients who have instructed Janus to vote proxies in accordance with the Taft-Hartley Guidelines, the Proxy Voting Service will process all proxy votes in strict accordance with the Taft-Hartley Guidelines. In all cases, the portfolio managers receive a monthly report summarizing all proxy votes in his or her client accounts. The Proxy Administrator is responsible for maintaining this documentation.

The Proxy Voting Service will refer proxy questions to the Proxy Administrator for instructions under circumstances where: (1) the application of the Guidelines is unclear; (2) the proxy question relates to a company and/or issue in which the Proxy Voting Services does not have research, analysis and/or a recommendation available, or (3) the Guidelines call for Janus portfolio manager input. The Proxy Administrator solicits feedback from the Portfolio Manager or the Committee as required. Janus also utilizes research services relating to proxy questions provided by the Proxy Voting Service.

Procedures for Proxy Issues Outside the Guidelines. In situations where the Proxy Voting Service refers a proxy question to the Proxy Administrator, the Proxy Administrator will consult with the portfolio manager regarding how the shares will be voted. The Proxy Administrator will refer such questions, through a written request, to the portfolio manager(s) who hold(s) the security for a voting recommendation. The Proxy Administrator may also refer such questions, through a written request to any member of the Committee, but the Committee cannot direct the Proxy Administrator how to vote. If the proxy issue raises a conflict of interest (see Conflict of Interest discussion below), the portfolio manager will document how the proxy should be voted and the rationale for such recommendation. If the portfolio manager has had any contact with persons outside of Janus (excluding routine communications with proxy solicitors) regarding the proxy issue, the portfolio manager will disclose that contact to the Committee. In such cases, the Committee will review the portfolio manager's voting recommendation. If the Committee believes a conflict exists and that the portfolio manager's voting recommendation is not in the best interests of the shareholders, the Committee will refer the issue to the appropriate Chief Investment Officer(s) (or the Director of Research in his/her absence) to determine how to vote.

Procedures for Voting Janus "Fund of Funds". Janus advises certain portfolios or "fund of funds" that invest in other Janus funds. From time to time, a fund of funds may be required to vote proxies for the underlying Janus funds in which it is invested. Accordingly, if an underlying Janus fund submits a matter to a vote of its shareholders, votes for and against such matters on behalf of the owner fund of funds will be cast in the same proportion as the votes of the other shareholders in the underlying fund (also known as "echo-voting").

Conflicts of Interest. The Committee is responsible for monitoring and resolving possible material conflicts with respect to proxy voting. Because the Guidelines are pre-determined and designed to be in the best interests of shareholders, application of the Guidelines to vote client proxies should, in most cases, adequately address any possible conflicts of interest. On a quarterly basis, the Committee reviews records of votes that were cast inconsistently with the Guidelines and the related rationale for such votes. Additionally, and in instances where a portfolio manager has discretion to vote differently than the Guidelines and proposes to vote a proxy inconsistent with the Guidelines and a potential conflict of interest is identified, the Committee will review the proxy votes to determine whether the portfolio manager's voting rationale appears reasonable and no material conflict exists. Similarly, the Taft-Hartley Guidelines are pre-determined, so application of the Taft-Hartley Guidelines to vote client proxies should, in most cases, adequately address any possible conflicts of interest. In the unusual circumstance that the Proxy Voting Service seeks direction on any matter, the matter shall be handled in accordance with the *Procedures for Proxy Issues Outside the Guidelines* set forth above, and reviewed by the Committee.

A conflict of interest may exist, for example, if Janus has a business relationship with (or is actively soliciting business from) either the company soliciting the proxy or a third party that has a material interest in the outcome of a proxy vote or that is actively lobbying for a particular outcome of a proxy vote. In addition, any portfolio manager with knowledge of a personal conflict of interest (i.e., a family member in a company's management) relating to a particular referral item shall disclose that conflict to the Committee and may be required to recuse himself or herself from the proxy voting process. Issues raising possible conflicts of interest are referred by the Proxy Administrator to the Committee for resolution. If the Committee does not agree that the portfolio manager's rationale is reasonable, the Committee will refer the matter to the appropriate Chief Investment Officer(s) (or the Director of Research) to vote the proxy.

If a matter is referred to the Chief Investment Officer(s) (or the Director of Research) the decision made and basis for the decision will be documented by the Committee.

Reporting and Record Retention. Upon request, on an annual basis, Janus will provide its non-mutual fund clients with the proxy voting record for that client's account.

On an annual basis, Janus will provide its proxy voting record for each proprietary mutual fund for the one-year period ending on June 30th on Janus' website at www.janus.com/proxyvoting. Such voting record, on Form N-PX, is also available on the SEC's website at <http://www.sec.gov>. A complete copy of Janus Capital's proxy voting policies and procedures, including specific guidelines, is available at www.janus.com/proxyvoting.

Janus retains proxy statements received regarding client securities, records of votes cast on behalf of clients, records of client requests for proxy voting information and all documents prepared by Janus regarding votes cast in contradiction to the Janus Guidelines. In addition, any document prepared by Janus that is material to a proxy voting decision such as the Guidelines, Proxy Voting Committee materials and other internal research relating to voting decisions will be kept. Proxy statements received from issuers are either available on the SEC's EDGAR database or are kept by a third party voting service and are available on request. All proxy voting materials and supporting documentation are retained for a minimum of 6 years.

Jennison Associates LLC

Proxy Voting Policy Summary

Conflicts of interest may also arise in voting proxies. Jennison Associates LLC ("Jennison") has adopted a proxy voting policy to address these conflicts.

Jennison actively manages publicly traded equity securities and fixed income securities. It is the policy of Jennison that where proxy voting authority has been delegated to and accepted by Jennison, all proxies shall be voted by investment professionals in the best interest of the client without regard to the interests of Jennison or other related parties, based on recommendations as determined by pre-established guidelines either adopted by Jennison or provided by the client. Secondary consideration is permitted to be given to the public and social value of each issue. For purposes of this policy, the "best interests of clients" shall mean, unless otherwise specified by the client, the clients' best economic interests over the long term – that is, the common interest that all clients share in seeing the value of a common investment increase over time. Any vote that represents a potential material conflict is reviewed by Jennison Compliance and referred to the Proxy Voting Committee to determine how to vote the proxy if Compliance determines that a material conflict exists.

In voting proxies for international holdings, which we vote on a best efforts basis, we will generally apply the same principles as those for U.S. holdings. However, in some countries, voting proxies result in additional restrictions that have an economic impact or cost to the security, such as "share blocking", where Jennison would be restricted from selling the shares of the security for a period of time if Jennison exercised its ability to vote the proxy. As such, we consider whether the vote, either itself or together with the votes of other shareholders, is expected to have an effect on the value of the investment that will outweigh the cost of voting. Our policy is to not vote these types of proxies when the costs outweigh the benefit of voting, as in share blocking.

In an effort to discharge its responsibility, Jennison has examined third-party services that assist in the researching and voting of proxies and development of voting guidelines. After such review, Jennison has selected an independent third party proxy voting vendor to assist it in researching and voting proxies. Jennison will utilize the research and analytical services, operational implementation and recordkeeping and reporting services provided by the proxy voting vendor. The proxy voting vendor will research each proxy and provide a recommendation to Jennison as to how best to vote on each issue based on its research of the individual facts and circumstances of the proxy issue and its application of its research findings. It is important to note while Jennison may review the research and analysis provided by the vendor, the vendor's recommendation does not dictate the actual voting instructions nor Jennison's Guidelines. The proxy voting vendor will cast votes in accordance with Jennison's Guidelines, unless instructed otherwise by a Jennison Investment Professional, as set forth below, or if Jennison has accepted direction from a Client, in accordance with the Client's Guidelines.

In voting proxies for quantitatively derived holdings and Jennison Managed Accounts (i.e., "wrap") where the securities are not held elsewhere in the firm, Jennison has established a custom proxy voting policy with respect to the voting of these proxies. Proxies received in these circumstances will be voted utilizing the Jennison's guidelines. Additionally, in those circumstances where no specific Jennison guideline exists, Jennison will vote using the recommendations of the proxy voting vendor.

For securities on loan pursuant to a client's securities lending arrangement, Jennison will work with either custodian banks or the proxy voting vendor to monitor upcoming meetings and call stock loans, if possible, in anticipation of an important vote to be taken among holders of the securities or of the giving or withholding of their consent on a material matter affecting the investment. In determining whether to call stock loans, the relevant investment professional shall consider whether the benefit to the client in voting the matter outweighs the benefit to the client in keeping the stock on loan. It is important to note that in order to recall securities on loan in time to vote, the process must be initiated PRIOR to the record date of the proxy. This is extremely difficult to accomplish as Jennison is rarely made aware of the record date in advance.

It is further the policy of Jennison that complete and accurate disclosure concerning its proxy voting policies and procedures and proxy voting records, as required by the Advisers Act, is to be made available to clients.

These procedures are intended to provide Jennison with the reasonable assurance that all clients' accounts are being treated fairly so that no one client's account is systematically advantaged.

J.P. Morgan Investment Management Inc.

Proxy Voting Procedures and Guidelines

PART I: JPMORGAN ASSET MANAGEMENT GLOBAL

PROXY VOTING PROCEDURES

A. Objective

As an investment adviser within JPMorgan Asset Management, each of the entities listed on Exhibit A attached hereto (each referred to individually as a “JPMAM Entity” and collectively as “JPMAM”) may be granted by its clients the authority to vote the proxies of the securities held in client portfolios. In such cases, JPMAM’s objective is to vote proxies in the best interests of its clients. To further that objective, JPMAM adopted these Procedures.¹

These Procedures incorporate detailed guidelines for voting proxies on specific types of issues (the “Guidelines”). The Guidelines have been developed and approved by the relevant Proxy Committee (as defined below) with the objective of encouraging corporate action that enhances shareholder value. Because proxy proposals and individual company facts and circumstances may vary, JPMAM may not always vote proxies in accordance with the Guidelines.

B. Proxy Committee

To oversee the proxy-voting process on an ongoing basis, a Proxy Committee has been established for each global location where proxy-voting decisions are made. Each Proxy Committee is composed of a Proxy Administrator (as defined below) and senior officers from among the Investment, Legal, Compliance and Risk Management Departments. The primary functions of each Proxy Committee are to periodically review general proxy-voting matters; to determine the independence of any third-party vendor which it has delegated proxy voting responsibilities and to conclude that there are no conflicts of interest that would prevent such vendor from providing such proxy voting services prior to delegating proxy responsibilities; review and approve the Guidelines annually; and provide advice and recommendations on general proxy-voting matters as well as on specific voting issues to be implemented by the relevant JPMAM Entity. The Proxy Committee may delegate certain of its responsibilities to subgroups composed of 13 Proxy Committee members. The Proxy Committee meets at least semi-annually, or more frequently as circumstances dictate.

C. The Proxy Voting Process

JPMAM investment professionals monitor the corporate actions of the companies held in their clients’ portfolios. To assist JPMAM investment professionals with public companies’ proxy voting proposals, a JPMAM Entity may, but shall not be obligated to, retain the services of an independent proxy voting service (“Independent Voting Service”). The Independent Voting Service is assigned responsibility for various functions, which may include one or more of the following: coordinating with client custodians to ensure that all proxy materials are processed in a timely fashion; providing JPMAM with a comprehensive analysis of each proxy proposal and providing JPMAM with recommendations on how to vote each proxy proposal based on the Guidelines or, where no Guideline exists or where the Guidelines require a case-by-case analysis, on the Independent Voting Service’s analysis; and executing the voting of the proxies in accordance with Guidelines and its recommendation, except when a recommendation is overridden by JPMAM, as described below. If those functions are not assigned to an Independent Voting Service, they are performed or coordinated by a Proxy Administrator (as defined below). The Proxy Voting Committee has adopted procedures to identify significant proxies and to recall shares on loan.²

Situations often arise in which more than one JPMAM client invests in the same company or in which a single client may invest in the same company but in multiple accounts. In those situations, two or more clients, or one client with different accounts, may be invested in strategies having different investment objectives, investment styles, or portfolio managers. As a result, JPMAM may cast different votes on behalf of different clients or on behalf of the same client with different accounts.

Each JPMAM Entity appoints a JPMAM professional to act as a proxy administrator (“Proxy Administrator”) for each global location of such entity where proxy-voting decisions are made. The Proxy Administrators are charged with oversight of these Procedures and the entire proxy-voting process. Their duties, in the event an Independent Voting Service is retained, include the following: evaluating the quality of services provided by the Independent Voting Service; escalating proposals identified by the Independent Voting Service as non-routine, but for which a Guideline exists (including, but not limited to, compensation plans, anti-takeover proposals, reincorporation, mergers, acquisitions and proxy-voting contests) to the attention of the appropriate investment professionals and confirming the Independent Voting Service’s recommendation with the appropriate JPMAM investment professional (documentation of those confirmations will be retained by the appropriate Proxy Administrator); escalating proposals identified by the Independent Voting Service as not being covered by the Guidelines (including proposals requiring a case-by-case determination under the Guidelines) to the appropriate investment professional and obtaining a recommendation with respect thereto; reviewing recommendations of JPMAM investment professionals with respect to proposals not covered by the Guidelines (including proposals requiring a case-by-case determination under the Guidelines) or to override the

¹ Proxies for the JPMorgan Value Opportunities Fund are voted in accordance with the Fund’s proxy voting policies and not the policies of JPMAM. The Undiscovered Managers Behavioral Growth Fund, and Undiscovered Managers Behavioral Value Fund, the JPMorgan Access Growth Fund and the JPMorgan Access Balanced Fund vote proxies in accordance with the voting policies of their subadvisers other than J.P. Morgan Private Investments, Inc. and not the policies of JPMAM.

² The Proxy Voting Committee may determine: (a) not to recall securities on loan if, in its judgment, the negative consequences to clients of recalling the loaned securities would outweigh the benefits of voting in the particular instance or (b) not to vote certain foreign securities positions if, in its judgment, the expense and administrative inconvenience or other burdens outweigh the benefits to clients of voting the securities.

Guidelines (collectively, “Overrides”); referring investment considerations regarding Overrides to the Proxy Committee, if necessary; determining, in the case of Overrides, whether a material conflict, as described below, exists; escalating material conflicts to the Proxy Committee; and maintaining the records required by these Procedures.

In the event investment professionals are charged with recommending how to vote the proxies, the Proxy Administrator’s duties include the following: reviewing recommendations of investment professionals with respect to Overrides; referring investment considerations regarding such Overrides to the Proxy Committee, if necessary; determining, in the case of such Overrides, whether a material conflict, as described below, exists; escalating material conflicts to the Proxy Committee; and maintaining the records required by these Procedures.

In the event a JPMAM investment professional makes a recommendation in connection with an Override, the investment professional must provide the appropriate Proxy Administrator with a written certification (“Certification”) which shall contain an analysis supporting his or her recommendation and a certification that he or she (A) received no communication in regard to the proxy that would violate either the J.P. Morgan Chase (“JPMC”) Safeguard Policy (as defined below) or written policy on information barriers, or received any communication in connection with the proxy solicitation or otherwise that would suggest the existence of an actual or potential conflict between JPMAM’S interests and that of its clients and (B) was not aware of any personal or other relationship that could present an actual or potential conflict of interest with the clients’ interests.

D. Material Conflicts of Interest

The U.S. Investment Advisers Act of 1940 requires that the proxy-voting procedures adopted and implemented by a U.S. investment adviser include procedures that address material conflicts of interest that may arise between the investment adviser’s interests and those of its clients. To address such material potential conflicts of interest, JPMAM relies on certain policies and procedures. In order to maintain the integrity and independence of JPMAM’s investment processes and decisions, including proxy-voting decisions, and to protect JPMAM’s decisions from influences that could lead to a vote other than in its clients’ best interests, JPMC (including JPMAM) adopted a Safeguard Policy, and established formal informational barriers designed to restrict the flow of information from JPMC’s securities, lending, investment banking and other divisions to JPMAM investment professionals. The information barriers include, where appropriate: computer firewalls; the establishment of separate legal entities; and the physical separation of employees from separate business divisions. Material conflicts of interest are further avoided by voting in accordance with JPMAM’s predetermined Guidelines. When an Override occurs, any potential material conflict of interest that may exist is analyzed in the process outlined in these Procedures.

Examples of such material conflicts of interest that could arise include circumstances in which: (i) management of a JPMAM investment management client or prospective client, distributor or prospective distributor of its investment management products, or critical vendor, is soliciting proxies and failure to vote in favor of management may harm JPMAM’s relationship with such company and materially impact JPMAM’s business; or (ii) a personal relationship between a JPMAM officer and management of a company or other proponent of a proxy proposal could impact JPMAM’s voting decision.

E. Escalation of Material Conflicts of Interest

When an Override occurs, the investment professional must complete the Certification and the Proxy Administrator will review the circumstances surrounding such Certification. When a potential material conflict of interest has been identified, the Proxy Administrator, in consultation with a subgroup of the Proxy Committee, will evaluate the potential conflict and determine whether an actual material conflict of interest exists. That subgroup shall include a Proxy Committee member from the Investment Department and one or more Proxy Committee members from the Legal, Compliance or Risk Management Departments. In the event that the Proxy Administrator and the subgroup of the Proxy Committee determine that an actual material conflict of interest exists, they shall make a recommendation on how the relevant JPMAM Entity shall vote the proxy. Sales and marketing professionals will be precluded from participating in the decision-making process.

Depending upon the nature of the material conflict of interest, JPMAM, in the course of addressing the material conflict, may elect to take one or more of the following measures, or other appropriate action:

- removing certain JPMAM personnel from the proxy voting process;
- “walling off” personnel with knowledge of the material conflict to ensure that such personnel do not influence the relevant proxy vote;
- voting in accordance with the applicable Guidelines, if any, if the application of the Guidelines would objectively result in the casting of a proxy vote in a predetermined manner; or
- deferring the vote to the Independent Voting Service, if any, which will vote in accordance with its own recommendation.

The resolution of all potential and actual material conflict issues will be documented in order to demonstrate that JPMAM acted in the best interests of its clients.

F. Recordkeeping

JPMAM is required to maintain in an easily accessible place for seven (7) years all records relating to the proxy voting process. Those records include the following:

- a copy of the JPMAM Proxy Voting Procedures and Guidelines;
- a copy of each proxy statement received on behalf of JPMAM clients;

- a record of each vote cast on behalf of JPMAM client holdings;
- a copy of all documents created by JPMAM personnel that were material to making a decision on the voting of client securities or that memorialize the basis of the decision;
- a copy of the documentation of all dialogue with issuers and JPMAM personnel created by JPMAM personnel prior to the voting of client securities; and
- a copy of each written request by a client for information on how JPMAM voted proxies on behalf of the client, as well as a copy of any written response by JPMAM to any request by a JPMAM client for information on how JPMAM voted proxies on behalf of our client.

It should be noted that JPMAM reserves the right to use the services of the Independent Voting Service to maintain certain required records in accordance with all applicable regulations.

Part II: Proxy Voting Guidelines

JPMAM is a global asset management organization with the capabilities to invest in securities of issuers located around the globe. Because the regulatory framework and the business cultures and practices vary from region to region, our proxy voting guidelines have been customized for each region to take into account such variations.

JPMAM currently has four sets of proxy voting guidelines covering the regions of (1) North America, (2) Europe, Middle East, Africa, Central America and South America (3) Asia (ex-Japan) and (4) Japan, respectively. Notwithstanding the variations among the guidelines, all of these guidelines have been designed with the uniform objective of encouraging corporate action that enhances shareholder value. As a general rule, in voting proxies of a particular security, each JPMAM Entity will apply the guidelines of the region in which the issuer of such security is organized.

In March 2007, JPMAM signed the Principles for Responsible Investment, an initiative of the UN Secretary-General.

Part II.A: North America Proxy Voting

1. Uncontested Director Elections

Votes on director nominees should be made on a case-by-case (for) basis. Votes generally will be WITHHELD from directors who:

- 1) attend less than 75 percent of the board and committee meetings without a valid excuse for the absences; or
- 2) adopt or renew a poison pill without shareholder approval, does not commit to putting it to shareholder vote within 12 months of adoption (or in the case of an newly public company, do not commit to put the pill to a shareholder vote within 12 months following the IPO), or reneges on a commitment to put the pill to a vote, and has not yet received a withhold recommendation for this issue.
- 3) are inside or affiliated outside directors and sit on the audit, compensation, or nominating Committees. For purposes of defining affiliation we will apply either the NYSE listing rule for companies listed on that exchange or the Nasdaq listing rule for all other companies; or
- 4) ignore a shareholder proposal that is approved by a i) majority of the shares outstanding, or ii) majority of the votes cast for two consecutive years; or
- 5) are inside or affiliated outside directors and the full board serves as the audit, compensation, or nominating committee or the company does not have one of these committees; or
- 6) WITHHOLD votes from insiders and affiliated outsiders on boards that are not at least majority independent; or
- 7) WITHHOLDING from directors who are CEOs of publicly-traded companies who serve on more than three public boards and all other directors who serve on more than four public company boards.

- 8) WITHHOLD votes from compensation committee members where there is a pay-for performance disconnect for Russell 3000 companies. (See 9a – Stock-Based Incentive Plans, last paragraph). WITHHOLD votes from compensation committee members if the company does not submit one-time transferable stock options to shareholders for approval.
- 9) WITHHOLD votes from audit committee members in circumstances in which there is evidence (such as audit reports or reports mandated under the Sarbanes Oxley Act) that there exists material weaknesses in the company’s internal controls.
- 10) WITHHOLD votes from compensation committee members who were present at the time of the grant of backdated options or options the pricing or the timing of which we believe may have been manipulated to provide additional benefits to executives.
- 11) Generally vote for shareholder proposals requesting companies to amend their bylaws in order to create access to the proxy so as to nominate candidates for directors as long as the minimum threshold of share ownership is 5% and the minimum holding period of share ownership is 3 years.

We recognize the importance of shareholder access to the ballot process as a means to ensure that boards do not become self-perpetuating and self-serving. However, we are also aware that some proposals may promote certain interest groups and could be disruptive to the nomination process.

2. Proxy Contests

2a. Election of Directors

Votes in a contested election of directors must be evaluated on a case-by-case basis, considering the following factors: long-term financial performance of the subject company relative to its industry; management’s track record; background to the proxy contest; qualifications of director nominees (both slates); evaluation of what each side is offering shareholders as well as the likelihood that the proposed objectives and goals can be met; and stock ownership positions.

2b. Reimburse Proxy Solicitation Expenses

Decisions to provide full reimbursement for dissidents waging a proxy contest should be made on a case by-case basis.

3. Ratification of Auditors

Vote for proposals to ratify auditors, unless an auditor has a financial interest in or association with the company, and is therefore not independent; or there is reason to believe that the independent auditor has rendered an opinion that is neither accurate nor indicative of the company’s financial position.

Generally vote against auditor ratification and withhold votes from Audit Committee members if non-audit fees exceed audit fees.

Vote case-by-case on auditor Rotation Proposals: tenure of Audit Firm; establishment and disclosure of a renewal process whereby the auditor is regularly evaluated for both audit quality and competitive price; length of the rotation period advocated in the proposal; significant audit related issues; and number of annual Audit Committee meetings held and the number of financial experts that serve on the Audit Committee.

Generally vote against auditor indemnification and limitation of liability; however we recognize there may be situations where indemnification and limitations on liability may be appropriate.

4. Proxy Contest Defenses

4a. Board Structure: Staggered vs. Annual Elections

Proposals regarding classified boards will be voted on a case-by-case basis. Classified boards normally will be supported if the company’s governing documents contain each of the following provisions:

- 1) Majority of board composed of independent directors,
- 2) Nominating committee composed solely of independent directors,
- 3) Do not require more than a two-thirds shareholders’ vote to remove a director, revise any bylaw or revise any classified board provision,
- 4) Confidential voting (however, there may be a provision for suspending confidential voting during proxy contests),
- 5) Ability of shareholders to call special meeting or to act by written consent with 90 days’ notice,
- 6) Absence of superior voting rights for one or more classes of stock,
- 7) Board does not have the sole right to change the size of the board beyond a stated range that has been approved by shareholders, and
- 8) Absence of shareholder rights plan that can only be removed by the incumbent directors (dead-hand poison pill).

4b. Shareholder Ability to Remove Directors

Vote against proposals that provide that directors may be removed only for cause.

Vote for proposals to restore shareholder ability to remove directors with or without cause.

Vote against proposals that provide that only continuing directors may elect replacements to fill board vacancies.

Vote for proposals that permit shareholders to elect directors to fill board vacancies.

4c. Cumulative Voting

Cumulative voting proposals will be voted on a case-by-case basis. If there are other safeguards to ensure that shareholders have reasonable access and input into the process of nominating and electing directors, cumulative voting is not essential. Generally, a company's governing documents must contain the following provisions for us to vote against restoring or providing for cumulative voting:

- 1) Annually elected board,
- 2) Majority of board composed of independent directors,
- 3) Nominating committee composed solely of independent directors,
- 4) Confidential voting (however, there may be a provision for suspending confidential voting during proxy contests),
- 5) Ability of shareholders to call special meeting or to act by written consent with 90 days' notice,
- 6) Absence of superior voting rights for one or more classes of stock,
- 7) Board does not have the sole right to change the size of the board beyond a stated range that has been approved by shareholders, and
- 8) Absence of shareholder rights plan that can only be removed by the incumbent directors (dead-hand poison pill).

4d. Shareholder Ability to Call Special Meeting

Vote against proposals to restrict or prohibit shareholder ability to call special meetings so long as the ability to call special meetings requires the affirmative vote of less than 15% of the shares outstanding. The ability to call special meetings enables shareholders to remove directors or initiate a shareholder resolution without having to wait for the next scheduled meeting, should require more than a de minimus number of shares to call the meeting and subject the company to the expense of a shareholder meeting.

Vote for proposals that remove restrictions on the right of shareholders to act independently of management.

4e. Shareholder Ability to Act by Written Consent

We generally vote for proposals to restrict or prohibit shareholder ability to take action by written consent. The requirement that all shareholders be given notice of a shareholders' meeting and matters to be discussed therein seems to provide a reasonable protection of minority shareholder rights.

We generally vote against proposals to allow or facilitate shareholder action by written consent.

4f. Shareholder Ability to Alter the Size of the Board

Vote for proposals that seek to fix the size of the board.

Vote against proposals that give management the ability to alter the size of the board without shareholder approval.

5. Tender Offer Defenses

5a. Poison Pills

Vote for shareholder proposals that ask a company to submit its poison pill for shareholder ratification.

Review on a case-by-case basis shareholder proposals to redeem a company's poison pill. Studies indicate that companies with a rights plan secure higher premiums in hostile takeover situations.

Review on a case-by-case basis management proposals to ratify a poison pill. We generally look for shareholder friendly features including a two- to three-year sunset provision, a permitted bid provision, a 20 percent or higher flip-in provision, and the absence of dead-hand features.

If the board refuses to redeem the pill 90 days after an offer is announced, ten percent of the shares may call a special meeting or seek a written consent to vote on rescinding the pill.

5b. Fair Price Provisions

Vote proposals to adopt fair price provisions on a case-by-case basis, evaluating factors such as the vote required to approve the proposed acquisition, the vote required to repeal the fair price provision, and the mechanism for determining the fair price.

Generally, vote against fair price provisions with shareholder vote requirements greater than a majority of disinterested shares.

5c. Greenmail

Vote for proposals to adopt antigreenmail charter or bylaw amendments or otherwise restrict a company's ability to make greenmail payments.

5d. Unequal Voting Rights

Generally, vote against dual-class recapitalizations as they offer an effective way for a firm to thwart hostile takeovers by concentrating voting power in the hands of management or other insiders.

Vote for dual-class recapitalizations when the structure is designed to protect economic interests of investors.

5e. Supermajority Shareholder Vote Requirement to Amend Charter or Bylaws

Vote against management proposals to require a supermajority shareholder vote to approve charter and bylaw amendments. Supermajority provisions violate the principle that a simple majority of voting shares should be all that is necessary to effect change regarding a company.

Vote for shareholder proposals to lower supermajority shareholder vote requirements for charter and bylaw amendments.

5f. Supermajority Shareholder Vote Requirement to Approve Mergers

Vote against management proposals to require a supermajority shareholder vote to approve mergers and other significant business combinations. Supermajority provisions violate the principle that a simple majority of voting shares should be all that is necessary to effect change regarding a company.

Vote for shareholder proposals to lower supermajority shareholder vote requirements for mergers and other significant business combinations.

6. Miscellaneous Board Provisions

6a. Separate Chairman and CEO Positions

We will generally vote for proposals looking to separate the CEO and Chairman roles unless the company has governance structures in place that can satisfactorily counterbalance a combined chairman and CEO/president post. Such a structure should include most or all of the following:

- Designated lead director, appointed from the ranks of the independent board members with clearly delineated duties. At a minimum these should include:
 - (1) Presides at all meetings of the board at which the chairman is not present, including executive sessions of the independent directors,
 - (2) Serves as liaison between the chairman and the independent directors,
 - (3) Approves information sent to the board,
 - (4) Approves meeting agendas for the board,
 - (5) Approves meeting schedules to assure that there is sufficient time for discussion of all agenda items,
 - (6) Has the authority to call meetings of the independent directors, and
 - (7) If requested by major shareholders, ensures that he is available for consultation and direct communication;
- 2/3 of independent board;
- All-independent key committees;
- Committee chairpersons nominated by the independent directors;
- CEO performance is reviewed annually by a committee of outside directors; and
- Established governance guidelines.

Additionally, the company should not have underperformed its peers and index on a one-year and three-year basis, unless there has been a change in the Chairman/CEO position within that time. Performance will be measured according to shareholder returns against index and peers.

6b. Lead Directors and Executive Sessions

In cases where the CEO and Chairman roles are combined, we will vote for the appointment of a “lead” (non-insider) director and for regular “executive” sessions (board meetings taking place without the CEO/Chairman present).

6c. Majority of Independent Directors

We generally vote for proposals that call for the board to be composed of a majority of independent directors. We believe that a majority of independent directors can be an important factor in facilitating objective decision making and enhancing accountability to shareholders.

Vote for shareholder proposals requesting that the board’s audit, compensation, and/or nominating committees include independent directors exclusively.

Generally vote for shareholder proposals asking for a 2/3 independent board.

6d. Stock Ownership Requirements

Vote for shareholder proposals requiring directors to own a minimum amount of company stock in order to qualify as a director or to remain on the board, so long as such minimum amount is not excessive or unreasonable. We support full disclosure of the policies of the company regarding pledging and/or hedging of company stocks by executives and board directors. We will vote FOR shareholder proposals which ask for disclosure of this policy. We will vote Case by Case for directors if it is determined that hedging and /or pledging of securities has occurred.

6e. Term of Office

Vote against shareholder proposals to limit the tenure of outside directors. Term limits pose artificial and arbitrary impositions on the board and could harm shareholder interests by forcing experienced and knowledgeable directors off the board.

6f. Director and Officer Indemnification and Liability Protection

Proposals concerning director and officer indemnification and liability protection should be evaluated on a case-by-case basis.

Vote against proposals to limit or eliminate director and officer liability for monetary damages for violating the relevant duty of care.

Vote against indemnification proposals that would expand coverage beyond legal expenses to acts, such as negligence, that are more serious violations of fiduciary obligations than mere carelessness.

Vote for proposals that provide such expanded coverage in cases when a director's or officer's legal defense was unsuccessful only if: (1) the director was found to have acted in good faith and in a manner that he reasonably believed was in the company's best interests, and (2) the director's legal expenses would be covered.

6g. Board Size

Vote for proposals to limit the size of the board to 15 members.

6h. Majority Vote Standard

We would generally vote for proposals asking for the board to initiate the appropriate process to amend the company's governance documents (certificate of incorporation or bylaws) to provide that director nominees shall be elected by the affirmative vote of the majority of votes cast at an annual meeting of shareholders. We would generally review on a case-by-case basis proposals that address alternative approaches to a majority vote requirement.

7. Miscellaneous Governance Provisions

7a. Independent Nominating Committee

Vote for the creation of an independent nominating committee.

7b. Confidential Voting

Vote for shareholder proposals requesting that companies adopt confidential voting, use independent tabulators, and use independent inspectors of election as long as the proposals include clauses for proxy contests as follows: In the case of a contested election, management should be permitted to request that the dissident group honor its confidential voting policy. If the dissidents agree, the policy remains in place. If the dissidents do not agree, the confidential voting policy is waived.

Vote for management proposals to adopt confidential voting.

7c. Equal Access

Vote for shareholder proposals that would give significant company shareholders equal access to management's proxy material in order to evaluate and propose voting recommendations on proxy proposals and director nominees and to nominate their own candidates to the board.

7d. Bundled Proposals

Review on a case-by-case basis bundled or "conditioned" proxy proposals. In the case of items that are conditioned upon each other, examine the benefits and costs of the packaged items. In instances where the joint effect of the conditioned items is not in shareholders' best interests, vote against the proposals. If the combined effect is positive, support such proposals.

7e. Charitable Contributions

Vote against shareholder proposals regarding charitable contributions. In the absence of bad faith, self-dealing, or gross negligence, management should determine which contributions are in the best interests of the company.

7f. Date/Location of Meeting

Vote against shareholder proposals to change the date or location of the shareholders' meeting. No one site will meet the needs of all shareholders.

7g. Include Nonmanagement Employees on Board

Vote against shareholder proposals to include nonmanagement employees on the board. Constituency representation on the board is not supported, rather decisions are based on director qualifications.

7h. Adjourn Meeting if Votes are Insufficient

Vote for proposals to adjourn the meeting when votes are insufficient. Management has additional opportunities to present shareholders with information about its proposals.

7i. Other Business

Vote for proposals allowing shareholders to bring up “other matters” at shareholder meetings.

7j. Disclosure of Shareholder Proponents

Vote for shareholder proposals requesting that companies disclose the names of shareholder proponents. Shareholders may wish to contact the proponents of a shareholder proposal for additional information.

7k. Exclusive Venue

Generally, vote for management proposals which seek shareholder approval to make the state of incorporation the exclusive forum for disputes, if the company is a Delaware corporation; otherwise, vote on a case-by-case basis on management proposals which seek shareholder approval to make the state of incorporation, or another state, the exclusive forum for disputes.

8. Capital Structure

8a. Common Stock Authorization

Review proposals to increase the number of shares of common stock authorized for issue on a case-by-case basis.

Vote against proposals to increase the number of authorized shares of a class of stock that has superior voting rights in companies that have dual-class capital structure.

8b. Stock Distributions: Splits and Dividends

Vote for management proposals to increase common share authorization for a stock split, provided that the increase in authorized shares would not result in an excessive number of shares available for issuance given a company’s industry and performance as measured by total shareholder returns.

8c. Reverse Stock Splits

Vote for management proposals to implement a reverse stock split that also reduces the number of authorized common shares to a level where the number of shares available for issuance is not excessive given a company’s industry and performance in terms of shareholder returns.

Vote case-by-case on proposals to implement a reverse stock split that does not proportionately reduce the number of shares authorized for issue.

8d. Blank Check Preferred Authorization

Vote against proposals authorizing the creation of new classes of preferred stock with unspecified voting, conversion, dividend distribution, and other rights (“blank check” preferred stock).

Vote for proposals to create “blank check” preferred stock in cases when the company expressly states that the stock will not be used as a takeover device.

Vote for proposals to authorize preferred stock in cases when the company specifies voting, dividend, conversion, and other rights of such stock and the terms of the preferred stock appear reasonable.

Vote case-by-case on proposals to increase the number of blank check preferred shares after analyzing the number of preferred shares available for issue given a company’s industry and performance as measured by total shareholder returns.

8e. Shareholder Proposals Regarding Blank Check Preferred Stock

Vote for shareholder proposals to have blank check preferred stock placements, other than those shares issued for the purpose of raising capital or making acquisitions in the normal course of business, submitted for shareholder ratification.

8f. Adjustments to Par Value of Common Stock

Vote for management proposals to reduce the par value of common stock. The purpose of par value is to establish the maximum responsibility of a shareholder in the event that a company becomes insolvent.

8g. Restructurings/Recapitalizations

Review proposals to increase common and/or preferred shares and to issue shares as part of a debt restructuring plan or if the company is in danger of being delisted on a case-by-case basis. Consider the following issues:

- **Dilution** – How much will ownership interest of existing shareholders be reduced, and how extreme will dilution to any future earnings be?
- **Change in Control** – Will the transaction result in a change in control of the company?

- **Bankruptcy** – Generally, approve proposals that facilitate debt restructurings unless there are clear signs of self-dealing or other abuses.

8h. Share Repurchase Programs

Vote for management proposals to institute open-market share repurchase plans in which all shareholders may participate on equal terms.

8i. Targeted Share Placements

These shareholder proposals ask companies to seek stockholder approval before placing 10% or more of their voting stock with a single investor. The proposals are in reaction to the placement by various companies of a large block of their voting stock in an ESOP, parent capital fund or with a single friendly investor, with the aim of protecting themselves against a hostile tender offer. These proposals are voted on a case by case basis after reviewing the individual situation of the company receiving the proposal.

9. Execute and Director Compensation

9a. Stock-based Incentive Plans

Votes with respect to compensation plans should be determined on a case-by-case basis. The analysis of compensation plans focuses primarily on the transfer of shareholder wealth (the dollar cost of pay plans to shareholders). Other matters included in our analysis are the amount of the company's outstanding stock to be reserved for the award of stock options, whether the exercise price of an option is less than the stock's fair market value at the date of the grant of the options, and whether the plan provides for the exchange of outstanding options for new ones at lower exercise prices. Every award type is valued. An estimated dollar cost for the proposed plan and all continuing plans is derived. This cost, dilution to shareholders' equity, will also be expressed as a percentage figure for the transfer of shareholder wealth and will be considered along with dilution to voting power.

Once the cost of the plan is estimated, it is compared to a company-specific dilution cap. The allowable cap is industry-specific, market cap-based, and pegged to the average amount paid by companies performing in the top quartile of their peer groupings. To determine allowable caps, companies are categorized according to standard industry code (SIC) groups. Top quartile performers for each group are identified on the basis of five-year total shareholder returns. Industry-specific cap equations are developed using regression analysis to determine those variables that have the strongest correlation to shareholder value transfer. Industry equations are used to determine a company-specific allowable cap; this is accomplished by plugging company specific data into the appropriate industry equation to reflect size, performance, and levels of cash compensation.

Votes are primarily determined by this quantitative analysis. If the proposed plan cost is above the allowable cap, an against vote is indicated. If the proposed cost is below the allowable cap, a vote for the plan is indicated unless the plan violates the repricing guidelines. If the company has a history of repricing options or has the express ability to reprice underwater stock options without first securing shareholder approval under the proposed plan, the plan receives an against vote—even in cases where the plan cost is considered acceptable based on the quantitative analysis.

We vote against equity plans that have high average three year burn rates, unless the company has publicly committed to reduce the burn rate to a rate that is comparable to its peer group (as determined by JPMAM). JPMAM defines high average three-year burn rate as the following: the company's most recent three-year burn rate exceeds one standard deviation by Russell 3000 index and non-Russell 3000 index; the company's most recent three-year burn rate exceeds two percent of common shares outstanding.

Review case by case stock based plans for companies which rely heavily upon stock for incentive compensation. These companies include high growth and financial services companies where threshold tests fall within 5% of either threshold test (burn rate and /or shareholder transfer value tests).

9a. Stock-based Incentive Plans

For companies in the Russell 3000 we will generally vote against a plan and/or withhold from members of the compensation committee, when there is a disconnect between the CEO's pay and performance (an increase in pay and a decrease in performance), the main source for the pay increase is equity-based, and the CEO participates in the plan being voted on. Specifically, if the company has negative one- and three-year total shareholder returns, and its CEO also had an increase in total direct compensation from the prior year, it would signify a disconnect in pay and performance. If more than half of the increase in total direct compensation is attributable to the equity component, we would generally recommend against the equity plan in which the CEO participates.

9b. Approval of Cash or Cash-and-Stock Bonus Plans

Vote for cash or cash-and-stock bonus plans to exempt the compensation from limits on deductibility under the provisions of Section 162(m) of the Code.

9c. Shareholder Proposals to Limit Executive and Director Pay

Generally, vote for shareholder proposals that seek additional disclosure of executive and director pay information.

Review on a case-by-case basis all other shareholder proposals that seek to limit executive and director pay.

Review on a case-by-case basis shareholder proposals for performance pay such as indexed or premium priced options if a company has a history of oversized awards and one-, two- and three-year returns below its peer group.

9d. Say on Pay – Advisory Vote

Generally, review on a case-by-case basis executive pay and practices as well as certain aspects of outside director compensation.

Where the company's Say on Pay proposal received 60% or less support on its previous Say on Pay proposal, WITHHOLD votes for the compensation committee and or vote against the current Say on Pay proposal unless the company has demonstrated active engagement with shareholders to address the issue as well as the specific actions taken to address the low level of support.

Say on Pay – Frequency

JPMAM will review compensation versus long/term performance on an annual basis.

9e. Golden and Tin Parachutes

Review on a case-by-case basis all proposals to ratify or cancel golden or tin parachutes. Favor golden parachutes that limit payouts to two times base salary, plus guaranteed retirement and other benefits.

Change-in-control payments should only be made when there is a significant change in company ownership structure, and when there is a loss of employment or substantial change in job duties associated with the change in company ownership structure ("double-triggered"). Change-in-control provisions should exclude excise tax gross-up and eliminate the acceleration of vesting of equity awards upon a change in control unless provided under a double-trigger scenario.

Generally vote case-by-case for proposals calling companies to adopt a policy of obtaining shareholder approval for any future agreements and corporate policies that could oblige the company to make payments or awards following the death of a senior executive in the form of unearned salary or bonuses, accelerated vesting or the continuation in force of unvested equity grants, perquisites and other payments or awards made in lieu of compensation. This would not apply to any benefit programs or equity plan proposals for which the broad-based employee population is eligible.

9f. 401(k) Employee Benefit Plans

Vote for proposals to implement a 401(k) savings plan for employees.

9g. Employee Stock Purchase Plans

Vote for qualified employee stock purchase plans with the following features: the purchase price is at least 85 percent of fair market value; the offering period is 27 months or less; and potential voting power dilution (shares allocated to the plan as a percentage of outstanding shares) is ten percent or less.

Vote for nonqualified employee stock purchase plans with the following features: broad-based participation (i.e., all employees of the company with the exclusion of individuals with five percent or more of beneficial ownership of the company); limits on employee contribution, which may be a fixed dollar amount or expressed as a percentage of base salary; company matching contribution up to 25 percent of the employee's contribution, which is effectively a discount of 20 percent from market value; and no discount on the stock price on the date of purchase since there is a company matching contribution

9h. Option Expensing

Generally, vote for shareholder proposals to expense fixed-price options.

9i. Option Repricing

In most cases, we take a negative view of option repricings and will, therefore, generally vote against such proposals. We do, however, consider the granting of new options to be an acceptable alternative and will generally support such proposals.

9j. Stock Holding Periods

Generally vote against all proposals requiring executives to hold the stock received upon option exercise for a specific period of time.

9k. Transferable Stock Options

Review on a case-by-case basis proposals to grant transferable stock options or otherwise permit the transfer of outstanding stock options, including cost of proposal and alignment with shareholder interests.

9l. Recoup Bonuses

Vote case-by-case on shareholder proposals to recoup unearned incentive bonuses or other incentive payments made to senior executives if it is later determined that fraud, misconduct, or negligence significantly contributed to a restatement of financial results that led to the awarding of unearned incentive compensation.

9m. Two Tiered Compensation

Vote against proposals to adopt a two tiered compensation structure for board directors.

10. Incorporation

10a. Reincorporation Outside of the United States

Review on a case-by-case basis proposals to reincorporate the company outside of the U.S.

10b. Voting on State Takeover Statutes

Review on a case-by-case basis proposals to opt in or out of state takeover statutes (including control share acquisition statutes, control share cash-out statutes, freezeout provisions, fair price provisions, stakeholder laws, poison pill endorsements, severance pay and labor contract provisions, antitakeover provisions, and disgorgement provisions).

10c. Voting on Reincorporation Proposals

Proposals to change a company's state of incorporation should be examined on a case-by-case basis. Review management's rationale for the proposal, changes to the charter/bylaws, and differences in the state laws governing the companies.

11. Mergers and Corporate Restructurings

11a. Mergers and Acquisitions

Votes on mergers and acquisitions should be considered on a case-by-case basis, taking into account factors including the following: anticipated financial and operating benefits; offer price (cost vs. premium); prospects of the combined companies; how the deal was negotiated; and changes in corporate governance and their impact on shareholder rights.

11b. Nonfinancial Effects of a Merger or Acquisition

Some companies have proposed a charter provision which specifies that the board of directors may examine the nonfinancial effect of a merger or acquisition on the company. This provision would allow the board to evaluate the impact a proposed change in control would have on employees, host communities, suppliers and/or others. We generally vote against proposals to adopt such charter provisions. We feel it is the directors' fiduciary duty to base decisions solely on the financial interests of the shareholders.

11c. Corporate Restructuring

Votes on corporate restructuring proposals, including minority squeezeouts, leveraged buyouts, "going private" proposals, spin-offs, liquidations, and asset sales, should be considered on a case-by-case basis.

11d. Spin-offs

Votes on spin-offs should be considered on a case-by-case basis depending on the tax and regulatory advantages, planned use of sale proceeds, market focus, and managerial incentives.

11e. Asset Sales

Votes on asset sales should be made on a case-by-case basis after considering the impact on the balance sheet/working capital, value received for the asset, and potential elimination of diseconomies.

11f. Liquidations

Votes on liquidations should be made on a case-by-case basis after reviewing management's efforts to pursue other alternatives, appraisal value of assets, and the compensation plan for executives managing the liquidation.

11g. Appraisal Rights

Vote for proposals to restore, or provide shareholders with, rights of appraisal. Rights of appraisal provide shareholders who are not satisfied with the terms of certain corporate transactions the right to demand a judicial review in order to determine a fair value for their shares.

11h. Changing Corporate Name

Vote for changing the corporate name.

12. Social and Environmental Issues

We believe that a company's environmental policies may have a long-term impact on the company's financial performance. We believe that good corporate governance policies should consider the impact of company operations on the environment and the cost of compliance with laws and regulations relating to environmental matters, physical damage to the environment (including the costs of clean-ups and repairs), consumer preferences and capital investments related to climate change. Furthermore, we believe that corporate shareholders have a legitimate need for information to enable them to evaluate the potential risks and opportunities that climate change and other environmental matters pose to the company's operations, sales and capital investments. We acknowledge that many companies disclose their practices relating to social and environmental issues and that disclosure is improving over time. We generally encourage a level of reporting that is not unduly costly or burdensome and which does not place the company at a competitive disadvantage, but which provides sufficient information to enable shareholders to evaluate the company's environmental policies and performance. In general we support management disclosure practices except for those companies that have been involved in controversies, fines or litigation.

12a. Military Business

Vote **case-by-case** on defense issue proposals.

Vote **case-by-case** on disclosure reports that seek additional information on military-related operations.

12b. International Labor Organization Code of Conduct

Vote **case-by-case** on proposals to endorse international labor organization code of conducts.

Vote **case-by-case** on disclosure reports that seek additional information on company activities in this area.

12c. Promote Human Rights in China, Nigeria, the Sudan and Burma

Vote **case-by-case** on proposals to promote human rights in countries such as China, Nigeria, the Sudan and Burma.

Vote **case-by-case** on disclosure reports that seek additional information on company activities regarding human rights.

12d. Equal Employment Opportunity and Discrimination

Vote **case-by-case** on proposals regarding equal employment opportunities and discrimination.

Vote **case-by-case** on disclosure reports that seek additional information about affirmative action efforts, particularly when it appears that companies have been unresponsive to shareholder requests.

12e. Animal Rights

Vote **case-by-case on** proposals that deal with animal rights.

12f. Product Integrity and Marketing

Vote **case-by-case on** proposals that ask companies to end their production of legal, but socially questionable, products.

Vote **case-by-case** on disclosure reports that seek additional information regarding product integrity and marketing issues.

Vote **case-by-case** on resolutions requesting the disclosure and implementation of Internet privacy and censorship policies and procedures.

Vote **case-by-case** on proposals requesting the company to report on its policies, initiatives/procedures, oversight mechanisms related to toxic materials, including certain product line toxicities, and/or product safety in its supply chain.

12g. Human Resources Issues

Vote **case-by-case** on proposals regarding human resources issues.

Vote **case-by-case** on disclosure reports that seek additional information regarding human resources issues.

12h. Link Executive Pay with Social and/or Environmental Criteria

Vote **case-by-case** on proposals to link executive pay with the attainment of certain social and/or environmental criteria.

Vote **case-by-case** on disclosure reports that seek additional information regarding this issue.

12i. High Risk Markets

Vote **case-by-case** on requests for the company to review and report on the financial and reputation risks associated with operations in “high risk” markets, such as a terrorism-sponsoring state or otherwise.

12j. Political Contribution

Generally vote against proposals asking the company to affirm political non-partisanship in the workplace.

Vote against proposals to publish the company’s political contributions taking into consideration recent, significant controversies, fines or litigation regarding the company’s political contributions or trade association spending.

13. Foreign Proxies

Responsibility for voting non-U.S. proxies rests with our Proxy Voting Committee located in London. The Proxy Committee is composed of senior analysts and portfolio managers and officers of the Legal and Compliance Department. It is chaired by a Managing Director of the Firm. A copy of our policy for voting international proxies can be provided upon request.

14. Pre-Solicitation Contact

From time to time, companies will seek to contact analysts, portfolio managers and others in advance of the formal proxy solicitation to solicit support for certain contemplated proposals. Such contact can potentially result in the recipient receiving material non-public information and result in the imposition of trading restrictions. Accordingly, pre-solicitation contact should occur only under very limited circumstances and only in accordance with the terms set forth herein.

What is material non-public information?

The definition of material non-public information is highly subjective. The general test, however, is whether or not such information would reasonably affect an investor’s decision to buy, sell or hold securities, or whether it would be likely to have a significant market impact. Examples of such information include, but are not limited to:

- a pending acquisition or sale of a substantial business;
- financial results that are better or worse than recent trends would lead one to expect;

- major management changes;
- an increase or decrease in dividends;
- calls or redemptions or other purchases of its securities by the company;
- a stock split, dividend or other recapitalization; or
- financial projections prepared by the Company or the Company’s representatives.

What is pre-solicitation contact?

Pre-solicitation contact is any communication, whether oral or written, formal or informal, with the Company or a representative of the Company regarding proxy proposals prior to publication of the official proxy solicitation materials. This contact can range from simply polling investors as to their reaction to a broad topic, e.g., “How do you feel about dual classes of stock?”, to very specific inquiries, e.g., “Here’s a term sheet for our restructuring. Will you vote to approve this?”

Determining the appropriateness of the contact is a factual inquiry which must be determined on a case-by-case basis. For instance, it might be acceptable for us to provide companies with our general approach to certain issues. Promising our vote, however, is prohibited under all circumstances. Likewise, discussion of our proxy guidelines, in whole or in part, with a company or others is prohibited. In the event that you are contacted in advance of the publication of proxy solicitation materials, please notify the Legal/Compliance Department immediately. The Company or its representative should be instructed that all further contact should be with the Legal/Compliance Department.

It is also critical to keep in mind that as a fiduciary, we exercise our proxies solely in the best interests of our clients. Outside influences, including those from within J.P. Morgan Chase should not interfere in any way in our decision making process. Any calls of this nature should be referred to the Legal/Compliance Department for response.

QS Legg Mason Global Asset Allocation, LLC

Proxy Voting Policy

May 5, 2014

Introduction

Legg Mason Global Asset Allocation, LLC (“LMGAA”) has adopted and implemented policies and procedures, which it believes are reasonably designed to ensure that proxies are voted in the best economic interest of its clients and in accordance with its fiduciary duties and applicable regulations. This Policy shall apply to all accounts managed by LMGAA. In addition, LMGAA’s Proxy Policy reflects the fiduciary standards and responsibilities for ERISA accounts managed by LMGAA.

Responsibilities

Proxy votes are the property of LMGAA’s advisory clients.¹ As such, LMGAA’s authority and responsibility to vote such proxies depends upon its contractual relationships with its clients. LMGAA has delegated responsibility for effecting its advisory clients’ proxy votes to Institutional Shareholder Services (“ISS”), an independent third-party proxy voting specialist. ISS votes LMGAA’s advisory clients’ proxies in accordance with their (ISS’s) proxy guidelines or, in extremely limited circumstances, LMGAA’s specific instructions. Where a client has given specific instructions as to how a proxy should be voted, LMGAA will notify and direct ISS to carry out those instructions. Where no specific instruction exists, LMGAA will follow the procedures set forth in this document and vote such proxies in accordance with ISS’s guidelines. Certain Taft-Hartley clients may direct LMGAA to have ISS vote their proxies in accordance with ISS’s (or other specific) Taft Hartley voting Guidelines.

Alternatively, clients may elect to retain proxy voting authority and responsibility. These and other proxy-related instructions must be outlined in the investment management agreement or other contractual arrangements with each client.

Clients may in certain instances contract with their custodial agent and notify LMGAA that they wish to engage in securities lending transactions. LMGAA will not vote proxies relating to securities in client accounts that are on loan. In such cases, it is the responsibility of the custodian to deduct the number of shares that are on loan to ensure they are not voted by multiple parties.

¹ For purposes of these Policies and Procedures, “clients” refers to persons or entities: for which LMGAA serves as investment adviser or sub-adviser; for which LMGAA votes proxies; and that have an economic or beneficial ownership interest in the portfolio securities of issuers soliciting such proxies.

Policies

Proxy voting activities are conducted in the best economic interest of clients.

LMGAA works with ISS to ensure that all proxies are voted in accordance with what we believe to be the best economic interest of LMGAA’s clients. In addition to proxy voting services provided by ISS, LMGAA has also contracted with ISS to provide proxy advisory services. These services include research and other activities designed to gain insight into ballot decisions and make informed voting recommendations consistent with our fiduciary duty to our clients. ISS has developed and maintains Proxy Voting Guidelines (the

“Guidelines”) consisting of standard voting positions on a comprehensive list of common proxy voting matters. ISS updates these Guidelines based on consideration of current corporate governance principles, industry standards, client feedback, and a number of other relevant factors. Changes to these Guidelines are communicated to LMGAA upon implementation.

While ISS has been instructed to vote our clients’ proxies in accordance with the Guidelines, LMGAA and our clients retain the right to instruct ISS to vote differently.

Underlying Funds

Certain LMGAA client accounts, including clients that are “Funds of Funds,” invest in underlying investment funds, including U.S. registered investment companies (“Underlying Funds”). Proxy voting with respect to shares, units or interests in Underlying Funds present diverse and complex policy issues that make the establishment of standard proxy voting guidelines impractical. To the extent that LMGAA has proxy voting authority with respect to shares, units or interests in Underlying Funds, LMGAA shall vote such shares, units or interests in the best interest of client accounts and subject to the general fiduciary principles set forth above rather than in accordance with the Guidelines.

LMGAA’s proxy voting authority on behalf of client accounts (including a Fund of Funds) with respect to shares, units or interests in Underlying Funds is subject to the provisions below in *Proxy Voting of Underlying Funds*,

MANAGER OF MANAGER ARRANGEMENTS

LMGAA advises certain client accounts that are structured as “Manager of Managers” arrangements in which various segments of the accounts are individually managed by a number of underlying investment advisers (“Underlying Managers”). In such arrangements, LMGAA generally does not exercise any proxy voting authority with respect to securities held in the client’s account. Proxy voting authority in such arrangements is typically assigned to the Underlying Managers.

Management Oversight

Management is responsible for overseeing LMGAA’s proxy voting activities, including reviewing and monitoring the Guidelines that provide how ISS will generally vote proxies on behalf of LMGAA clients no less frequently than annually. Compliance is responsible for coordinating with ISS to administer the proxy voting process and overseeing ISS’s proxy responsibilities. Compliance monitors voting activity to ensure that votes are cast in accordance with the Guidelines or client-specific guidelines and/or any applicable regulatory requirements.

Availability of Proxy Voting Policies and Procedures and Proxy Voting Record

Copies of this Policy, as it may be updated from time to time, are made available to clients as required by law and otherwise at LMGAA’s discretion. Clients may also obtain information on how their proxies were voted by LMGAA as required by law and otherwise at LMGAA’s discretion; however, LMGAA must not selectively disclose its investment company clients’ proxy voting records. The Firm will make proxy voting reports available to advisory clients upon request.

ISS’s current Guidelines, summaries, amendments, and other pertinent information can be accessed by visiting their website at the following address: <http://www.issgovernance.com/policy>.

Procedures

Proxy Voting Guidelines

LMGAA will review ISS’s Guidelines as necessary to support the best economic interests of LMGAA’s clients but generally no less frequently than annually. The Firm will choose to re-adopt or amend portions of or the entirety of the Guidelines, whether as a result of the annual review or otherwise, taking solely into account the best economic interests of LMGAA’s clients. Before re-adopting or amending the Guidelines, Compliance, in consultation with Management, will thoroughly review and evaluate the proposed change(s) and rationale to evaluate potential conflicts with client or employee interests. Rationale for any decisions not to re-adopt ISS’s Guidelines will be fully documented.

Proxy Voting of Underlying Funds

Proxy Voting of Affiliated Funds

With respect to proxy voting for a client account (including a Fund of Funds) investing in shares, units or interests of Underlying Funds advised by LMGAA or an affiliate of LMGAA (including ETFs, open-end mutual funds and closed-end investment companies), proxies relating to any of such affiliated Underlying Funds generally will be voted in accordance with an echo voting procedure under which such proxies are voted in the same proportion as the votes from other shareholders of such affiliated Underlying Fund. LMGAA may vote such proxies in accordance with other voting procedures approved by Management and Compliance, provided such procedures comply with applicable law and/or regulatory requirements.

Proxy Voting of Unaffiliated Funds

With respect to proxy voting for a client account (including a Fund of Funds) investing in shares, units or interests of an Underlying Fund advised by an adviser which is unaffiliated with LMGAA (including ETFs, open-end mutual funds and closed-end investment companies), LMGAA will vote such proxies in accordance with the general fiduciary principles set forth above; provided that LMGAA: (i) will vote proxies relating to shares of ETFs in accordance with an echo voting procedure to the extent required by LMGAA’s Procedures Relating to

Compliance with ETF Exemptive Orders under Section 12(d)(1) of the Investment Company Act of 1940, and (ii) will vote proxies relating to shares of open-end mutual funds and closed-end investment companies in accordance with an echo voting procedure to the extent required in order to comply with Section 12(d)(1) under the Investment Company Act of 1940 and rules thereunder. Voting procedures are intended to be in the best interest of client accounts and subject to the general fiduciary principles set forth above, and such procedures are subject to review by Management and Compliance.

Specific proxy voting decisions made by Management

Proxy proposals (i) that are not covered by specific client instructions or the Guidelines; or (ii) that, according to the Guidelines, should be evaluated and voted on a case-by-case basis will be referred to Management and Portfolio Management for review and to provide a voting instruction.

Certain proxy votes may not be cast

In extremely limited cases, LMGAA may determine that it is in the best economic interests of its clients not to vote certain proxies. LMGAA will abstain from voting if:

Neither the Guidelines nor specific client instructions cover an issue;

ISS does not make a recommendation on the issue; and

LMGAA cannot make a good faith determination as to what would be in the client's best interest (e.g., material conflict cannot be mitigated).

In other cases, it may not be possible to vote certain proxies, despite good faith efforts to do so. Examples may include:

Proxy ballot was not received from the custodian;

Meeting notice was not received with adequate time for processing; or

Legal restrictions, including share blocking, that may restrict liquidity or otherwise limit trading.

ISS will coordinate with Compliance regarding any specific proxies and any categories of proxies that will not or cannot be voted. The reasons for not voting any proxy shall be documented.

Conflict of Interest Procedures

LMGAA seeks to mitigate conflicts inherent in proxy voting and maintain independence by partnering with ISS for voting and administration of all client ballots. These conflicts may include:

The issuer is a client of LMGAA;

The issuer is a material business partner of LMGAA; or

An employee, or an immediate family member of an employee, of LMGAA serves as an officer or director of the issuer.

LMGAA believes that this Policy and our reliance on ISS for independent proxy decision-making reasonably ensure that these and other potential material conflicts are minimized, consistent with our fiduciary duty. Accordingly, proxies that will be voted in accordance with the Guidelines or in accordance with specific client instructions are not subject to the conflicts of interest procedures described below for items that are referred to LMGAA by ISS.

As a general matter, LMGAA takes the position that relationships between a non-LMGAA Legg Mason business unit and an issuer do not present a conflict of interest for LMGAA in voting proxies with respect to such issuer because LMGAA operates as an independent business unit from other Legg Mason business units and because of the existence of informational barriers between LMGAA and such business units.

Procedures to Address Conflicts of Interest and Improper Influence

Note: This section addresses the limited circumstances in which items that are referred to LMGAA by ISS.

Overriding Principle: ISS will vote all proxies in accordance with the Guidelines. In the limited circumstances where ISS refers items to LMGAA for input or a voting decision, LMGAA will vote those proxies in accordance with what it, in good faith, determines to be the best economic interests of LMGAA's clients.¹

¹ Any contact from external parties interested in a particular vote that attempts to exert improper pressure or influence shall be reported to Compliance

Independence: Compensation for all employees, particularly those with the ability to influence proxy voting in these limited circumstances, cannot be based upon their contribution to any business activity outside of LMGAA without prior approval from Management. Furthermore, they may not discuss proxy votes with any person outside of LMGAA (and within LMGAA only on a need to know basis).

Conflict Review Procedures: For items that are referred to LMGAA from ISS, Compliance will monitor for potential material conflicts of interest in connection with proxy proposals. Promptly upon a determination that a conflict exists in connection with a proxy proposal, the vote shall be escalated to Management. Management will collect and review any information deemed reasonably appropriate to evaluate, in

its reasonable judgment, if LMGAA or any person participating in the proxy voting process has, or has the appearance of, a material conflict of interest. For the purposes of this policy, a conflict of interest shall be considered “material” to the extent that a reasonable person could expect the conflict to influence, or appear to influence, LMGAA’s decision on the particular vote at issue.

The information considered may include without limitation information regarding (i) client relationships; (ii) any relevant personal conflict known or brought to their attention; (iii) and any communications with members of the Firm and any person or entity outside of the organization that identifies itself as a LMGAA advisory client regarding the vote at issue.

If notified that LMGAA has a material conflict of interest, the Firm will obtain instructions as to how the proxies should be voted, if time permits, from the affected clients. If notified that certain individuals should be recused from the proxy vote at issue, LMGAA shall do so in accordance with the procedures set forth below.

Note: Any LMGAA employee who becomes aware of a potential material conflict of interest in respect of any proxy vote to be made on behalf of clients shall notify Management and Compliance to evaluate such conflict and determine a recommended course of action.

At the beginning of any discussion regarding how to vote any proxy, Compliance will inquire as to whether any employee or any person participating in the proxy voting process has a personal conflict of interest or has actual knowledge of an actual or apparent conflict that has not been reported to Management and/or Compliance.

Compliance also will inquire of these same parties whether they have actual knowledge regarding whether any director, officer or employee outside of LMGAA that identifies itself as a LMGAA advisory client, has: (i) requested that LMGAA vote a particular proxy in a certain manner; (ii) attempted to influence LMGAA in connection with proxy voting activities; or (iii) otherwise communicated with the Firm regarding the particular proxy vote at issue, and which incident has not yet been reported to management and/or Compliance.

Compliance will determine whether anyone should be recused from the proxy voting process, or whether LMGAA should seek instructions as to how to vote the proxy at issue if time permits, from the affected clients. These inquiries and discussions will be properly documented.

Duty to Report: Any LMGAA employee that is aware of any actual or apparent conflict of interest relevant to, or any attempt by any person outside of organization or any entity that identifies itself as a LMGAA advisory client to influence, how LMGAA votes its proxies has a duty to disclose the existence of the situation to their manager and the details of the matter to Compliance. In the case of any person participating in the deliberations on a specific vote, such disclosure should be made before engaging in any activities or participating in any discussion pertaining to that vote.

Recusal of Members: Compliance will recuse any employee from participating in a specific proxy vote referred to LMGAA if he/she (i) is personally involved in a material conflict of interest; or (ii) as determined by Management and Compliance, has actual knowledge of a circumstance or fact that could affect their independent judgment, in respect of such vote. Management will also exclude from consideration the views of any person (whether requested or volunteered) if Management knows, or if Compliance has determined that such other person has a material conflict of interest with respect to the particular proxy, or has attempted to influence the vote in any manner prohibited by these policies.

Other Procedures That Limit Conflicts of Interest

LMGAA has adopted a number of policies, procedures and internal controls that are designed to avoid various conflicts of interest, including those that may arise in connection with proxy voting, including but not limited to the *Confidential Information Policy* and the *Code of Ethics*. The Firm expects that these policies, procedures and internal controls will greatly reduce the chance that the Firm (or, its employees) would be involved in, aware of or influenced by, an actual or apparent conflict of interest.

RECORDKEEPING

LMGAA will retain records of client requests for proxy voting information and any written responses thereto provided by LMGAA, and will retain any documents the Firm or Compliance prepared that were material to making a voting decision or that memorialized the basis for a proxy voting decision.

LMGAA also will create and maintain appropriate records documenting its compliance with this Policy, including records of its deliberations and decisions regarding conflicts of interest and their resolution.

With respect to LMGAA’s investment company clients, ISS will create and maintain such records as are necessary to allow such investment company clients to comply with their recordkeeping, reporting and disclosure obligations under applicable law.

LMGAA will also maintain the following records relating to proxy voting:

- The name of the issuer of the portfolio security;
- The exchange ticker symbol of the portfolio security (if symbol is available through reasonably practicable means);
- The Council on Uniform Securities Identification Procedures number for the portfolio security (if the number is available through reasonably practicable means);
- The shareholder meeting date;
- A copy of each proxy statement received by LMGAA;

- A brief identification of the matter voted on;
- Whether the matter was proposed by the issuer or by a security holder;
- Whether LMGAA cast its vote on the matter;
- How LMGAA cast its vote (e.g., for or against proposal, or abstain; for or withhold regarding election of directors); and
- Whether LMGAA cast its vote for or against management.

In lieu of keeping copies of proxy statements, LMGAA may rely on proxy statements filed on the EDGAR system. LMGAA also may rely on third party records of proxy statements and votes cast by LMGAA if the third party provides an undertaking to LMGAA to provide such records promptly upon request.

* * *

Madison Asset Management, LLC

Proxy Voting Policies and Procedures

Madison's policies regarding voting the proxies of securities held in client accounts depend on the nature of its relationship to the client. When Madison is an ERISA fiduciary of an account, there are additional considerations and procedures than for all other (regular) accounts. In all cases, when Madison votes client proxies, it must do so in the client's best interests as described below by these policies.

REGULAR ACCOUNTS

Madison does not assume the role of an active shareholder when managing client accounts. If Madison is dissatisfied with the performance of a particular company, it will generally reduce or terminate the fund's position in the company rather than attempt to force management changes through shareholder activism.

MAKING THE INITIAL DECISION ON HOW TO VOTE THE PROXY

As stated above, Madison's goal and intent is to vote all proxies in the client's best interests. For practical purposes, unless Madison makes an affirmative decision to the contrary, when it votes a proxy as the board of directors of a company recommends, it means Madison agrees with the board that voting in such manner is in the interests of its clients as shareholders of the company for the reasons stated by the board. However, if Madison believes that voting as the board of directors recommends would not be in a client's best interests, then Madison must vote against the board's recommendation.

As a matter of standard operating procedure, all proxies received shall be voted (by telephone or Internet or through a proxy voting service), unless Madison is not authorized to vote proxies. When the client has reserved the right to vote proxies in his/her/its account, Madison must make arrangements for proxies to be delivered directly to such client from its custodian and, to the extent any such proxies are received by Madison inadvertently, promptly forward them to the client.

DOCUMENTING MADISON'S DECISIONS

In cases where a proxy will NOT be voted or, as described below, voted against the board of directors recommendation, Madison's policy is to make a notation to the file containing the records for such security (e.g., Corporation X research file, because Madison may receive numerous proxies for the same company and it is impractical to keep such records in the file of each individual client) explaining Madison's action or inaction, as the case may be.

Alternatively, or in addition to such notation, Madison may include a copy of the rationale for such decision in the appropriate equity correspondence file.

WHY WOULD VOTING AS THE BOARD RECOMMENDS NOT BE IN THE CLIENT'S BEST INTERESTS?

Portfolio management must, at a minimum, consider the following questions before voting any proxy:

1. Is the board of directors recommending an action that could dilute or otherwise diminish the value of the client's position? (This question is more complex than it looks: Madison must consider the time frames involved for both the client and the issuer. For example, if the board of directors is recommending an action that might initially cause the position to lose value but will increase the value of the position in the long-term, Madison would vote as the board recommended for if Madison is holding the security for clients as a long-term investment. However, if the investment is close to Madison's valuation limits and Madison is anticipating eliminating the position in the short-term, then it would be in its clients' best interests to vote against management's recommendation.)
2. If so, would Madison be unable to liquidate the affected securities without incurring a loss that would not otherwise have been recognized absent management's proposal?
3. Is the board of directors recommending an action that could cause the securities held to lose value, rights or privileges and there are no comparable replacement investments readily available on the market? (For example, a company can be uniquely positioned in the market because of its valuation compared with otherwise comparable securities such that it would not be readily replaceable if Madison were to liquidate the position. In such a situation, Madison might vote against management's recommendation if Madison believe a "No" vote could help prevent future share price depreciation resulting from management's proposal or if Madison believe

the value of the investment will appreciate if management's proposal fails. A typical recent example of this type of decision is the case of a board recommendation not to expense stock options, where Madison would vote against management's recommendation because Madison believes expensing such options will do more to enhance shareholder value going forward.)

4. Would accepting the board of directors recommendation cause Madison to violate its client's investment guidelines? (For example, a board may recommend merging the company into one that is not permitted by client investment guidelines, e.g. a tobacco product company, a foreign security that is not traded on any U.S. exchange or in U.S. dollars, etc., restrictions often found in client investment guidelines. This would be an unusual situation and it is possible Madison would, nevertheless, vote in favor of a board's recommendation in anticipation of selling the investment prior to the date any vote would effectively change the nature of the investment as described. Moreover, this does not mean Madison will consider any client-provided proxy voting guidelines. Madison's policy is that client investment guidelines may not include proxy voting guidelines if Madison will vote account proxies. Rather, Madison will only vote client proxies in accordance with these guidelines. Clients who wish their account proxies to be voted in accordance with their own proxy voting guidelines must retain proxy voting authority for themselves.)

Essentially, Madison must "second guess" the board of directors to determine if their recommendation is in the best interests of its clients, regardless of whether the board thinks its recommendation is in the best interests of shareholders in general. The above questions should apply no matter the type of action subject to the proxy. For example, changes in corporate governance structures, adoption or amendments to compensation plans (including stock options) and matters involving social issues or corporate responsibility should all be reviewed in the context of how it will affect Madison's clients' investment.

In making its decisions, to the extent Madison relies on any analysis outside of the information contained in the proxy statements, Madison must retain a record of such information in the same manner as other books and records (two years in the office, five years in an easily accessible place). Also, if a proxy statement is NOT available on the SEC's EDGAR database, Madison must keep a copy of the proxy statement.

ADDRESSING CONFLICTS OF INTEREST

Although it is not likely, in the event there is a conflict of interest between Madison and its client in connection with a material proxy vote (for example, (1) the issuer or an affiliate of the issuer is also a client or is actively being sought as a client or (2) Madison has a significant business relationship with the issuer such that voting in a particular manner could jeopardize this client and/or business relationship), Madison's policy is to alert affected client(s) of the conflict before voting and indicate the manner in which Madison will vote. In such circumstances, Madison's client(s) may instruct it to vote in a different manner. In any case, Madison must obtain client consent to vote the proxy when faced with a conflict of interest. If the conflict involves a security held by a mutual fund Madison manages, then Madison must present the material conflict to the board of the applicable fund for consent or direction to vote the proxies. If the conflict involves a security held by wrap accounts, then Madison may present the conflict to the wrap sponsor, as its agent, to obtain wrap client consent or direction to vote the proxies. Note that no conflict generally exists for routine proxy matters such as approval of the independent auditor (unless, of course, the auditor in question is a client, Madison is seeking the auditor as a client or Madison has a significant business relationship with the auditor), electing an uncontested board of directors, etc.

In the event it is impractical to obtain client consent to vote a proxy when faced with a conflict of interest, or at the request of the applicable fund board, Madison will employ the services of an independent third party "proxy services firm" to make the proxy voting decision in accordance with Rule 206(4)-6 under the Investment Advisors Act of 1940, as amended.

Once any member of the relevant portfolio management team determines that it would be in Madison's clients' best interests to vote AGAINST management recommendations (or, for Madison Scottsdale and Concord Asset Management, any particular portfolio manager makes such determination), then the decision should be brought to the attention of the Investment Committee, or any subcommittee appointed by the Investment Committee from among its members (such subcommittee may be a single person), to ratify the decision to stray from Madison's general policy of voting with management. Such ratification need not be in writing.

The Investment Committee or any subcommittee appointed by the Investment Committee from among its members (such subcommittee may be a single person) shall monitor potential conflicts of interest between Madison and clients that would affect the manner by which Madison votes a proxy. Madison maintains a "conflicted list" for proxy voting purposes.

As of January 1, 2004, Jay Sekelsky represents the Investment Committee subcommittee described above.

VOTING PROXIES OF SECURITIES NO LONGER OWNED

We may be entitled to vote a proxy because a security was held in a client portfolio on the record date but have subsequently sold the security from the client's account prior to the meeting date to which the proxy relates. In such situations, our vote has no economic value to the client who is not a shareholder of the company soliciting the proxy vote. Therefore, our policy is to vote proxies of securities no longer owned in accordance with management recommendation or, if practical, not vote them at all.

SPECIAL CONSIDERATIONS FOR MEMBERS MUTUAL FUNDS AND ULTRA SERIES FUND

The proxy voting policy and procedures of MEMBERS Mutual Funds and the Ultra Series Fund, (the "Trusts"), reflect the policies and procedures of the Trust's investment advisor, Madison Asset Management, LLC ("Madison") and are incorporated into the Madison

Investment Advisors, Inc. written compliance and procedures manual. In addition, the Trusts' policies incorporate the proxy voting policies and procedures of Madison's current subadvisers: Shenkman Capital Management, Inc., Lazard Asset Management LLC, and Wellington Management Company, LLP.

With respect to the proxy voting function relative to the Trusts, each Trust's Board of Trustees has delegated this function to Madison. In general, with respect to proxies to be voted on behalf of the Trusts' sub-advised funds, or portions of such funds, Madison currently intends to delegate its voting responsibilities hereunder, such that that the respective subadvisers of such funds, or portions of such funds, will vote such proxies in accordance with their own proxy voting policies and procedures. Notwithstanding the foregoing, Madison reserves the right at any time to reassume the responsibility of voting proxies relative to one or more of the sub-advised portfolios of the Trusts. Madison currently intends to monitor, by requesting periodic certifications from each of the subadvisers, the voting of each of the subadvisers to confirm consistency with each such subadviser's proxy voting policies and procedures and to seek assurance that conflicts of interest have been adequately monitored and resolved. Madison will use reasonable efforts to ensure that each Trust's Board of Trustees is timely notified of any material changes to the proxy voting policies and procedures of each of the subadvisers as the relevant subadvisers have specifically brought to the attention of Madison, if, in Madison's judgment, such notification is necessary for the Board's fulfillment of its responsibilities hereunder.

Madison recognizes that there may be instances where the responsibility for voting proxies with respect to a single security is vested in two or more subadvisers (e.g., when more than one fund, or two managed portions of the same fund, hold voting securities of a single issuer). Under these circumstances, there is the possibility that the application of relevant proxy voting policies will result in proxies being voted inconsistently. It is Madison's position that such circumstances will not be deemed to suggest improper action on the part of any subadviser, and that neither Madison nor the Trusts will be required to take any action with respect to such instances, in the absence of other compelling factors that would necessitate such action.

ERISA FIDUCIARY ACCOUNTS

As a general rule, an ERISA plan Trustee is required to vote proxies. However, the fiduciary act of managing plan assets includes the responsibility to vote proxies on plan-owned stock when the named fiduciary has delegated management responsibility to an investment manager. Therefore, unless another named fiduciary (Trustee, another investment manager, consultant, plan administrator, employer, etc.) for any ERISA client expressly reserves the right to vote proxies, Madison is required to do so. In most cases, the plan document will specify who is required to vote proxies.

It is important that Madison's investment management agreement (or the ERISA client's plan document) (collectively, the "Contracts") address the issue of who is responsible for voting proxies.

1. If the Contracts expressly preclude Madison from voting proxies, then the Trustee must vote proxies attributable to its ERISA client's accounts.
2. On the other hand, if the Contracts are silent or simply state that Madison "may" vote proxies, then it is its fiduciary duty to affirmatively vote under ERISA.

ERISA requires Madison, when it is responsible for voting proxies:

1. To maintain voting records for review by the named fiduciary of the plan; and
2. Ensure that the custodian (or plan Trustee, as the case may be) forwards to Madison all proxies received so that Madison may vote them in a timely manner.

Madison's general policy is to vote all ERISA plan proxies received in the same manner as Madison vote non-ERISA plan proxies described above. Again, as a matter of standard operating procedure, all proxies received shall be voted (by telephone or Internet).

ADDITIONAL RECORDKEEPING RULES RELATED TO PROXY VOTING

Madison must keep any written documents (including email) Madison prepared that were material to making a decision on how to vote a proxy (or that memorialized the basis for its decision). As noted above, Madison need not keep a copy of the actual proxy statements Madison received if they are available on the SEC's EDGAR database.

Madison must keep in the applicable client file records of written client requests for proxy voting information. Madison must, of course, also keep a copy in the client file of any of its written responses to clients who asked for such information either in writing or orally.

Madison retained the services of ProxyEdge to maintain the records of the proxy votes Madison cast on behalf of clients. To the extent Madison votes any proxies outside of this service (for example, for logistical purposes, certain Madison Scottsdale proxies may not be maintained by this service), then copies of the voted proxy must be maintained in the applicable client or research file, as the case may be.

Last updated July 2010

Milliman Financial Risk Management LLC

PROXY VOTING POLICY

Milliman Financial Risk Management LLC ("Milliman"), as a matter of policy and as a fiduciary, has responsibility for voting proxies for portfolio securities consistent with the best economic interests of Investment Companies for which it is the primary investment adviser. Our

firm maintains written policies and procedures as to the handling, research, voting and reporting of proxy voting and makes appropriate disclosures about our firm's proxy policies and practices. Our policy and practice includes the responsibility to monitor corporate actions, receive and vote client proxies and disclose any potential conflicts of interest as well as making information available to clients about the voting of proxies for their portfolio securities and maintaining relevant and required records.

BACKGROUND

Proxy voting is an important right of shareholders and reasonable care and diligence must be undertaken to ensure that such rights are properly and timely exercised.

Investment advisers registered with the SEC, and which exercise voting authority with respect to client securities, are required by Rule 206(4)-6 of the Advisers Act to (a) adopt and implement written policies and procedures that are reasonably designed to ensure that client securities are voted in the best interests of clients, which must include how an adviser addresses material conflicts that may arise between an adviser's interests and those of its Funds, Portfolios and clients; (b) to disclose to Funds, Portfolios and clients how they may obtain information from the adviser with respect to the voting of proxies for their securities; (c) to describe to clients a summary of its proxy voting policies and procedures and, upon request, furnish a copy to its clients; and (d) maintain certain records relating to the adviser's proxy voting activities when the adviser does have proxy voting authority.

RESPONSIBILITY

Susan Puz and Cassandra Becker have the responsibility for the implementation and monitoring of our proxy voting policy, practices, disclosures and record keeping, including outlining our voting guidelines in our procedures.

DISCLOSURE

Milliman will provide conspicuously displayed information in its Form ADV Part 2A summarizing this proxy voting policy and procedures, including a statement that clients may request information regarding how Milliman voted a client's proxies, and that clients may request a copy of these policies and procedures.

PROCEDURES

Milliman has adopted procedures to implement the firm's policy and reviews to monitor and insure the firm's policy is observed, implemented properly and amended or updated, as appropriate, which include the following voting procedures:

1. Introduction. Milliman has adopted proxy voting policies and procedures as required by Rule 206(4)-6 of the Investment Advisers Act of 1940. These policies and procedures are effective as of March 1, 2012.
2. Principals and Guidelines.
 - a. Principles. Milliman's primary purpose and fiduciary responsibility is to maximize shareholder value, which is defined as share price and dividend appreciation. Milliman will vote proxies in the best interests of Investment Companies for which it is the primary adviser and will *generally* vote for, against, consider on a case-by-case basis, or abstain from voting as indicated below. Because of the extenuating circumstances associated with specific proxy issues, Milliman's votes may differ from time to time from the indications noted. In addition, the list may not include all proxies on which Milliman votes. Milliman will also act, in our best judgment, on behalf of the Investment Companies for which it is the primary adviser on certain corporate actions that impact shareholder value, such as tender offers and bankruptcy proceedings.
 - b. Voting Guidelines for Mutual Funds of Funds. Milliman serves as investment adviser to certain investment companies under the Northern Lights Fund Trust. These funds invest in other investment companies that are not affiliated ("Underlying Funds") and are required by the Investment Company Act of 1940, as amended (the "1940 Act") Act to handle proxies received from Underlying Funds in a certain manner. Notwithstanding the guidelines provided in these procedures, it is the policy of Milliman to vote all proxies received from the Underlying Funds in the same proportion that all shares of the Underlying Funds are voted, or in accordance with instructions received from fund shareholders, pursuant to Section 12(d)(1)(F) of the 1940 Act.
3. Obtaining More Information. Investment Companies for which Milliman is the primary adviser may obtain a record of Milliman's proxy voting, free of charge, by calling (312) 726-0677.
4. Voting Procedures. Milliman employs a third party proxy voting provider to effectuate voting and the receipt of records related to voting.

Revision date 10.31.2014

MFS[®] Investment Management Massachusetts Financial Services Company Proxy Voting Policies and Procedures

February 1, 2014

Massachusetts Financial Services Company, MFS Institutional Advisors, Inc., MFS International (UK) Limited, MFS Heritage Trust Company, MFS Investment Management (Canada) Limited, MFS Investment Management Company (Lux) S.à r.l., MFS International Singapore Pte. Ltd., and MFS' other subsidiaries that perform discretionary investment management activities (collectively, "MFS") have

adopted proxy voting policies and procedures, as set forth below (“MFS Proxy Voting Policies and Procedures”), with respect to securities owned by the clients for which MFS serves as investment adviser and has the power to vote proxies, including the pooled investment vehicles sponsored by MFS (the “MFS Funds”). References to “clients” in these policies and procedures include the MFS Funds and other clients of MFS, such as funds organized offshore, sub-advised funds and separate account clients, to the extent these clients have delegated to MFS the responsibility to vote proxies on their behalf under the MFS Proxy Voting Policies and Procedures.

The MFS Proxy Voting Policies and Procedures include:

- A. Voting Guidelines;
- B. Administrative Procedures;
- C. Records Retention; and
- D. Reports.

A. VOTING GUIDELINES

1. General Policy; Potential Conflicts of Interest

MFS’ policy is that proxy voting decisions are made in what MFS believes to be the best long-term economic interests of MFS’ clients, and not in the interests of any other party or in MFS’ corporate interests, including interests such as the distribution of MFS Fund shares and institutional client relationships.

MFS reviews corporate governance issues and proxy voting matters that are presented for shareholder vote by either management or shareholders of public companies. Based on the overall principle that all votes cast by MFS on behalf of its clients must be in what MFS believes to be the best long-term economic interests of such clients, MFS has adopted proxy voting guidelines, set forth below, that govern how MFS generally will vote on specific matters presented for shareholder vote.

As a general matter, MFS votes consistently on similar proxy proposals across all shareholder meetings. However, some proxy proposals, such as certain excessive executive compensation, environmental, social and governance matters, are analyzed on a case-by-case basis in light of all the relevant facts and circumstances of the proposal. Therefore, MFS may vote similar proposals differently at different shareholder meetings based on the specific facts and circumstances of the issuer or the terms of the proposal. In addition, MFS also reserves the right to override the guidelines with respect to a particular proxy proposal when such an override is, in MFS’ best judgment, consistent with the overall principle of voting proxies in the best long-term economic interests of MFS’ clients.

MFS also generally votes consistently on the same matter when securities of an issuer are held by multiple client accounts, unless MFS has received explicit voting instructions to vote differently from a client for its own account. From time to time, MFS may also receive comments on the MFS Proxy Voting Policies and Procedures from its clients. These comments are carefully considered by MFS when it reviews these guidelines and revises them as appropriate.

These policies and procedures are intended to address any potential material conflicts of interest on the part of MFS or its subsidiaries that are likely to arise in connection with the voting of proxies on behalf of MFS’ clients. If such potential material conflicts of interest do arise, MFS will analyze, document and report on such potential material conflicts of interest (see Sections B.2 and D below), and shall ultimately vote the relevant proxies in what MFS believes to be the best long-term economic interests of its clients. The MFS Proxy Voting Committee is responsible for monitoring and reporting with respect to such potential material conflicts of interest.

MFS is also a signatory to the United Nations Principles for Responsible Investment. In developing these guidelines, MFS considered environmental, social and corporate governance issues in light of MFS’ fiduciary obligation to vote proxies in the best long-term economic interest of its clients.

B. ADMINISTRATIVE PROCEDURES

1. MFS Proxy Voting Committee

The administration of these MFS Proxy Voting Policies and Procedures is overseen by the MFS Proxy Voting Committee, which includes senior personnel from the MFS Legal and Global Investment Support Departments. The Proxy Voting Committee does not include individuals whose primary duties relate to client relationship management, marketing, or sales. The MFS Proxy Voting Committee:

- a. Reviews these MFS Proxy Voting Policies and Procedures at least annually and recommends any amendments considered to be necessary or advisable;
- b. Determines whether any potential material conflict of interest exists with respect to instances in which MFS (i) seeks to override these MFS Proxy Voting Policies and Procedures; (ii) votes on ballot items not governed by these MFS Proxy Voting Policies and Procedures; (iii) evaluates an excessive executive compensation issue in relation to the election of directors; or (iv) requests a vote recommendation from an MFS portfolio manager or investment analyst (e.g. mergers and acquisitions); and
- c. Considers special proxy issues as they may arise from time to time.

2. Potential Conflicts of Interest

The MFS Proxy Voting Committee is responsible for monitoring potential material conflicts of interest on the part of MFS or its subsidiaries that could arise in connection with the voting of proxies on behalf of MFS' clients. Due to the client focus of our investment management business, we believe that the potential for actual material conflict of interest issues is small. Nonetheless, we have developed precautions to assure that all proxy votes are cast in the best long-term economic interest of shareholders.⁽¹⁾ Other MFS internal policies require all MFS employees to avoid actual and potential conflicts of interests between personal activities and MFS' client activities. If an employee (including investment professionals) identifies an actual or potential conflict of interest with respect to any voting decision (including the ownership of securities in their individual portfolio), then that employee must recuse himself/herself from participating in the voting process. Any significant attempt by an employee of MFS or its subsidiaries to unduly influence MFS' voting on a particular proxy matter should also be reported to the MFS Proxy Voting Committee.

In cases where proxies are voted in accordance with these MFS Proxy Voting Policies and Procedures, no material conflict of interest will be deemed to exist. In cases where (i) MFS is considering overriding these MFS Proxy Voting Policies and Procedures, (ii) matters presented for vote are not governed by these MFS Proxy Voting Policies and Procedures, (iii) MFS evaluates a potentially excessive executive compensation issue in relation to the election of directors or advisory pay or severance package vote, (iv) a vote recommendation is requested from an MFS portfolio manager or investment analyst (e.g. mergers and acquisitions), or (v) MFS evaluates a director nominee who also serves as a director of the MFS Funds (collectively, "Non-Standard Votes"); the MFS Proxy Voting Committee will follow these procedures:

- a. Compare the name of the issuer of such proxy against a list of significant current (i) distributors of MFS Fund shares, and (ii) MFS institutional clients (the "MFS Significant Distributor and Client List");
- b. If the name of the issuer does not appear on the MFS Significant Distributor and Client List, then no material conflict of interest will be deemed to exist, and the proxy will be voted as otherwise determined by the MFS Proxy Voting Committee;
- c. If the name of the issuer appears on the MFS Significant Distributor and Client List, then the MFS Proxy Voting Committee will be apprised of that fact and each member of the MFS Proxy Voting Committee will carefully evaluate the proposed vote in order to ensure that the proxy ultimately is voted in what MFS believes to be the best long-term economic interests of MFS' clients, and not in MFS' corporate interests; and
- d. For all potential material conflicts of interest identified under clause (c) above, the MFS Proxy Voting Committee will document: the name of the issuer, the issuer's relationship to MFS, the analysis of the matters submitted for proxy vote, the votes as to be cast and the reasons why the MFS Proxy Voting Committee determined that the votes were cast in the best long-term economic interests of MFS' clients, and not in MFS' corporate interests. A copy of the foregoing documentation will be provided to MFS' Conflicts Officer.

The members of the MFS Proxy Voting Committee are responsible for creating and maintaining the MFS Significant Distributor and Client List, in consultation with MFS' distribution and institutional business units. The MFS Significant Distributor and Client List will be reviewed and updated periodically, as appropriate.

If an MFS client has the right to vote on a matter submitted to shareholders by Sun Life Financial, Inc. or any of its affiliates (collectively "Sun Life"), MFS will cast a vote on behalf of such MFS client pursuant to the recommendations of Institutional Shareholder Services, Inc.'s ("ISS") benchmark policy, or as required by law.

Except as described in the MFS Fund's prospectus, from time to time, certain MFS Funds (the "top tier fund") may own shares of other MFS Funds (the "underlying fund"). If an underlying fund submits a matter to a shareholder vote, the top tier fund will generally vote its shares in the same proportion as the other shareholders of the underlying fund. If there are no other shareholders in the underlying fund, the top tier fund will vote in what MFS believes to be in the top tier fund's best long-term economic interest. If an MFS client has the right to vote on a matter submitted to shareholders by a pooled investment vehicle advised by MFS, MFS will cast a vote on behalf of such MFS client in the same proportion as the other shareholders of the pooled investment vehicle.

3. Gathering Proxies

Most proxies received by MFS and its clients originate at Broadridge Financial Solutions, Inc. ("Broadridge"). Broadridge and other service providers, on behalf of custodians, send proxy related material to the record holders of the shares beneficially owned by MFS' clients, usually to the client's proxy voting administrator or, less commonly, to the client itself. This material will include proxy ballots reflecting the shareholdings of Funds and of clients on the record dates for such shareholder meetings, as well as proxy materials with the issuer's explanation of the items to be voted upon.

MFS, on behalf of itself and certain of its clients (including the MFS Funds) has entered into an agreement with an independent proxy administration firm pursuant to which the proxy administration firm performs various proxy vote related administrative services such as vote processing and recordkeeping functions. Except as noted below, the proxy administration firm for MFS and its clients, including the MFS Funds, is ISS. The proxy administration firm for MFS Development Funds, LLC is Glass, Lewis & Co., Inc. ("Glass Lewis"; Glass Lewis and ISS are each hereinafter referred to as the "Proxy Administrator").

The Proxy Administrator receives proxy statements and proxy ballots directly or indirectly from various custodians, logs these materials into its database and matches upcoming meetings with MFS Fund and client portfolio holdings, which are input into the Proxy Administrator's system by an MFS holdings data-feed. Through the use of the Proxy Administrator system, ballots and proxy material summaries for all upcoming shareholders' meetings are available on-line to certain MFS employees and members of the MFS Proxy Voting Committee.

It is the responsibility of the Proxy Administrator and MFS to monitor the receipt of ballots. When proxy ballots and materials for clients are received by the Proxy Administrator, they are input into the Proxy Administrator's on-line system. The Proxy Administrator then reconciles a list of all MFS accounts that hold shares of a company's stock and the number of shares held on the record date by these accounts with the Proxy Administrator's list of any upcoming shareholder's meeting of that company. If a proxy ballot has not been received, the Proxy Administrator contacts the custodian requesting the reason as to why a ballot has not been received.

4. Analyzing Proxies

Proxies are voted in accordance with these MFS Proxy Voting Policies and Procedures. The Proxy Administrator, at the prior direction of MFS, automatically votes all proxy matters that do not require the particular exercise of discretion or judgment with respect to these MFS Proxy Voting Policies and Procedures as determined by MFS. With respect to proxy matters that require the particular exercise of discretion or judgment, the MFS Proxy Voting Committee considers and votes on those proxy matters. MFS also receives research and recommendations from the Proxy Administrator which it may take into account in deciding how to vote. MFS uses the research of ISS to identify (i) circumstances in which a board may have approved excessive executive compensation, (ii) environmental and social proposals that warrant further consideration or (iii) circumstances in which a non-U.S. company is not in compliance with local governance or compensation best practices. In those situations where the only MFS fund that is eligible to vote at a shareholder meeting has Glass Lewis as its Proxy Administrator, then we will utilize research from Glass Lewis to identify such issues. MFS analyzes such issues independently and does not necessarily vote with the ISS or Glass Lewis recommendations on these issues. MFS may also use other research tools in order to identify the circumstances described above. Representatives of the MFS Proxy Voting Committee review, as appropriate, votes cast to ensure conformity with these MFS Proxy Voting Policies and Procedures.

As a general matter, portfolio managers and investment analysts have little involvement in most votes taken by MFS. This is designed to promote consistency in the application of MFS' voting guidelines, to promote consistency in voting on the same or similar issues (for the same or for multiple issuers) across all client accounts, and to minimize the potential that proxy solicitors, issuers, or third parties might attempt to exert inappropriate influence on the vote. In limited types of votes (e.g. mergers and acquisitions, capitalization matters, potentially excessive executive compensation issues, or shareholder proposals relating to environmental and social issues), a representative of MFS Proxy Voting Committee may consult with or seek recommendations from MFS portfolio managers or investment analysts¹. However, the MFS Proxy Voting Committee would ultimately determine the manner in which all proxies are voted.

As noted above, MFS reserves the right to override the guidelines when such an override is, in MFS' best judgment, consistent with the overall principle of voting proxies in the best long-term economic interests of MFS' clients. Any such override of the guidelines shall be analyzed, documented and reported in accordance with the procedures set forth in these policies.

5. Voting Proxies

In accordance with its contract with MFS, the Proxy Administrator also generates a variety of reports for the MFS Proxy Voting Committee, and makes available on-line various other types of information so that the MFS Proxy Voting Committee or proxy team may review and monitor the votes cast by the Proxy Administrator on behalf of MFS' clients.

For those markets that utilize a "record date" to determine which shareholders are eligible to vote, MFS generally will vote all eligible shares pursuant to these guidelines regardless of whether all (or a portion of) the shares held by our clients have been sold prior to the meeting date

6. Securities Lending

From time to time, the MFS Funds or other pooled investment vehicles sponsored by MFS may participate in a securities lending program. In the event MFS or its agent receives timely notice of a shareholder meeting for a U.S. security, MFS and its agent will attempt to recall any securities on loan before the meeting's record date so that MFS will be entitled to vote these shares. However, there may be instances in which MFS is unable to timely recall securities on loan for a U.S. security, in which cases MFS will not be able to vote these shares. MFS will report to the appropriate board of the MFS Funds those instances in which MFS is not able to timely recall the loaned securities. MFS generally does not recall non-U.S. securities on loan because there may be insufficient advance notice of proxy materials, record dates, or vote cut-off dates to allow MFS to timely recall the shares in certain markets on an automated basis. As a result, non-U.S. securities that are on loan will not generally be voted. If MFS receives timely notice of what MFS determines to be an unusual, significant vote for a non-U.S. security whereas MFS shares are on loan, and determines that voting is in the best long-term economic interest of shareholders, then MFS will attempt to timely recall the loaned shares.

7. Engagement

The MFS Proxy Voting Policies and Procedures are available on www.mfs.com and may be accessed by both MFS' clients and the companies in which MFS' clients invest. From time to time, MFS may determine that it is appropriate and beneficial for representatives from the MFS Proxy Voting Committee to engage in a dialogue or written communication with a company or other shareholders regarding certain matters on the company's proxy statement that are of concern to shareholders, including environmental, social and governance matters. A company or shareholder may also seek to engage with representatives of the MFS Proxy Voting Committee in advance of the company's formal proxy solicitation to review issues more generally or gauge support for certain contemplated proposals.

C. RECORDS RETENTION

MFS will retain copies of these MFS Proxy Voting Policies and Procedures in effect from time to time and will retain all proxy voting reports submitted to the Board of Trustees of the MFS Funds for the period required by applicable law. Proxy solicitation materials, including electronic versions of the proxy ballots completed by representatives of the MFS Proxy Voting Committee, together with their respective notes and comments, are maintained in an electronic format by the Proxy Administrator and are accessible on-line by the MFS Proxy Voting Committee. All proxy voting materials and supporting documentation, including records generated by the Proxy Administrator's system as to proxies processed, including the dates when proxy ballots were received and submitted, and the votes on each company's proxy issues, are retained as required by applicable law.

D. REPORTS

U.S. Registered MFS Funds

MFS publicly discloses the proxy voting records of the U.S. registered MFS Funds on a quarterly basis. MFS will also report the results of its voting to the Board of Trustees of the U.S. registered MFS Funds. These reports will include: (i) a summary of how votes were cast (including advisory votes on pay and "golden parachutes"); (ii) a summary of votes against management's recommendation; (iii) a review of situations where MFS did not vote in accordance with the guidelines and the rationale therefore; (iv) a review of the procedures used by MFS to identify material conflicts of interest and any matters identified as a material conflict of interest; (v) a review of these policies and the guidelines; (vi) a review of our proxy engagement activity; (vii) a report and impact assessment of instances in which the recall of loaned securities of a U.S. issuer was unsuccessful; and (viii) as necessary or appropriate, any proposed modifications thereto to reflect new developments in corporate governance and other issues. Based on these reviews, the Trustees of the U.S. registered MFS Funds will consider possible modifications to these policies to the extent necessary or advisable.

Other MFS Clients

MFS may publicly disclose the proxy voting records of certain other clients (including certain MFS Funds) or the votes it casts with respect to certain matters as required by law. A report can also be printed by MFS for each client who has requested that MFS furnish a record of votes cast. The report specifies the proxy issues which have been voted for the client during the year and the position taken with respect to each issue and, upon request, may identify situations where MFS did not vote in accordance with the MFS Proxy Voting Policies and Procedures.

Except as described above, MFS generally will not divulge actual voting practices to any party other than the client or its representatives because we consider that information to be confidential and proprietary to the client. However, as noted above, MFS may determine that it is appropriate and beneficial to engage in a dialogue with a company regarding certain matters. During such dialogue with the company, MFS may disclose the vote it intends to cast in order to potentially effect positive change at a company in regards to environmental, social or governance issues.

⁽¹⁾ From time to time, due to travel schedules and other commitments, an appropriate portfolio manager or research analyst may not be available to provide a vote recommendation. If such a recommendation cannot be obtained within a reasonable time prior to the cut-off date of the shareholder meeting, the MFS Proxy Voting Committee may determine to abstain from voting.

Morgan Stanley Investment Management Inc.

October 3, 2013

MORGAN STANLEY INVESTMENT MANAGEMENT PROXY VOTING POLICY AND PROCEDURES

I. POLICY STATEMENT

Morgan Stanley Investment Management's ("MSIM") policy and procedures for voting proxies ("Policy") with respect to securities held in the accounts of clients applies to those MSIM entities that provide discretionary investment management services and for which an MSIM entity has authority to vote proxies. This Policy is reviewed and updated as necessary to address new and evolving proxy voting issues and standards.

The MSIM entities covered by this Policy currently include the following: Morgan Stanley AIP GP LP, Morgan Stanley Investment Management Inc., Morgan Stanley Investment Management Limited, Morgan Stanley Investment Management Company, Morgan Stanley Investment Management (Japan) Co., Limited, Morgan Stanley Investment Management Private Limited and Private Investment Partners Inc. (each an "MSIM Affiliate" and collectively referred to as the "MSIM Affiliates" or as "we" below).

Each MSIM Affiliate will use its best efforts to vote proxies as part of its authority to manage, acquire and dispose of account assets. With respect to the MSIM registered management investment companies ("MSIM Funds"), each MSIM Affiliate will vote proxies under this Policy pursuant to authority granted under its applicable investment advisory agreement or, in the absence of such authority, as authorized by the Board of Directors/Trustees of the MSIM Funds. An MSIM Affiliate will not vote proxies unless the investment management or investment advisory agreement explicitly authorizes the MSIM Affiliate to vote proxies.

MSIM Affiliates will vote proxies in a prudent and diligent manner and in the best interests of clients, including beneficiaries of and participants in a client's benefit plan(s) for which the MSIM Affiliates manage assets, consistent with the objective of maximizing long-term investment returns ("Client Proxy Standard"). In addition to voting proxies at portfolio companies, MSIM routinely engages with the

management and may also engage with the board of companies in which we invest on a range of governance issues. Governance is a window into or proxy for management and board quality. MSIM engages with companies where we have larger positions, voting issues are material or where we believe we can make a positive impact on the governance structure. MSIM's engagement process, through private communication with companies, allows us to understand the governance structures at investee companies and better inform our voting decisions. In certain situations, a client or its fiduciary may provide an MSIM Affiliate with a proxy voting policy. In these situations, the MSIM Affiliate will comply with the client's policy.

Proxy Research Services - ISS and Glass Lewis (together with other proxy research providers as we may retain from time to time, the "Research Providers") are independent advisers that specialize in providing a variety of fiduciary-level proxy-related services to institutional investment managers, plan sponsors, custodians, consultants, and other institutional investors. The services provided include in-depth research, global issuer analysis, and voting recommendations. While we may review and utilize the recommendations of one or more Research Providers in making proxy voting decisions, we are in no way obligated to follow such recommendations. In addition to research, ISS provides vote execution, reporting, and recordkeeping services.

Voting Proxies for Certain Non-U.S. Companies - Voting proxies of companies located in some jurisdictions may involve several problems that can restrict or prevent the ability to vote such proxies or entail significant costs. These problems include, but are not limited to: (i) proxy statements and ballots being written in a language other than English; (ii) untimely and/or inadequate notice of shareholder meetings; (iii) restrictions on the ability of holders outside the issuer's jurisdiction of organization to exercise votes; (iv) requirements to vote proxies in person; (v) the imposition of restrictions on the sale of the securities for a period of time in proximity to the shareholder meeting; and (vi) requirements to provide local agents with power of attorney to facilitate our voting instructions. As a result, we vote clients' non-U.S. proxies on a best efforts basis only, after weighing the costs and benefits of voting such proxies, consistent with the Client Proxy Standard. ISS has been retained to provide assistance in connection with voting non-U.S. proxies.

II. GENERAL PROXY VOTING GUIDELINES

To promote consistency in voting proxies on behalf of its clients, we follow this Policy (subject to any exception set forth herein). The Policy addresses a broad range of issues, and provides general voting parameters on proposals that arise most frequently. However, details of specific proposals vary, and those details affect particular voting decisions, as do factors specific to a given company. Pursuant to the procedures set forth herein, we may vote in a manner that is not in accordance with the following general guidelines, provided the vote is approved by the Proxy Review Committee (see Section III for description) and is consistent with the Client Proxy Standard. Morgan Stanley AIP GP LP will follow the procedures as described in Appendix A.

We endeavor to integrate governance and proxy voting policy with investment goals, using the vote to encourage portfolio companies to enhance long-term shareholder value and to provide a high standard of transparency such that equity markets can value corporate assets appropriately.

We seek to follow the Client Proxy Standard for each client. At times, this may result in split votes, for example when different clients have varying economic interests in the outcome of a particular voting matter (such as a case in which varied ownership interests in two companies involved in a merger result in different stakes in the outcome). We also may split votes at times based on differing views of portfolio managers.

We may abstain on matters for which disclosure is inadequate.

A. Routine Matters.

We generally support routine management proposals. The following are examples of routine management proposals:

- Approval of financial statements and auditor reports if delivered with an unqualified auditor's opinion.
- General updating/corrective amendments to the charter, articles of association or bylaws, unless we believe that such amendments would diminish shareholder rights.
- Most proposals related to the conduct of the annual meeting, with the following exceptions. We generally oppose proposals that relate to "the transaction of such other business which may come before the meeting," and open-ended requests for adjournment. However, where management specifically states the reason for requesting an adjournment and the requested adjournment would facilitate passage of a proposal that would otherwise be supported under this Policy (i.e. an uncontested corporate transaction), the adjournment request will be supported.

We generally support shareholder proposals advocating confidential voting procedures and independent tabulation of voting results.

B. Board of Directors.

1. Election of directors: Votes on board nominees can involve balancing a variety of considerations. In vote decisions, we may take into consideration whether the company has a majority voting policy in place that we believe makes the director vote more meaningful. In the absence of a proxy contest, we generally support the board's nominees for director except as follows:

- a. We consider withholding support from or voting against a nominee if we believe a direct conflict exists between the interests of the nominee and the public shareholders, including failure to meet fiduciary standards of care and/or loyalty. We may oppose directors where we conclude that actions of directors are unlawful, unethical or negligent. We consider opposing individual board members or

an entire slate if we believe the board is entrenched and/or dealing inadequately with performance problems; if we believe the board is acting with insufficient independence between the board and management; or if we believe the board has not been sufficiently forthcoming with information on key governance or other material matters.

- b. We consider withholding support from or voting against interested directors if the company's board does not meet market standards for director independence, or if otherwise we believe board independence is insufficient. We refer to prevalent market standards as promulgated by a stock exchange or other authority within a given market (e.g., New York Stock Exchange or Nasdaq rules for most U.S. companies, and The Combined Code on Corporate Governance in the United Kingdom). Thus, for an NYSE company with no controlling shareholder, we would expect that at a minimum a majority of directors should be independent as defined by NYSE. Where we view market standards as inadequate, we may withhold votes based on stronger independence standards. Market standards notwithstanding, we generally do not view long board tenure alone as a basis to classify a director as non-independent.
 - i. At a company with a shareholder or group that controls the company by virtue of a majority economic interest in the company, we have a reduced expectation for board independence, although we believe the presence of independent directors can be helpful, particularly in staffing the audit committee, and at times we may withhold support from or vote against a nominee on the view the board or its committees are not sufficiently independent. In markets where board independence is not the norm (e.g. Japan), however, we consider factors including whether a board of a controlled company includes independent members who can be expected to look out for interests of minority holders.
 - ii. We consider withholding support from or voting against a nominee if he or she is affiliated with a major shareholder that has representation on a board disproportionate to its economic interest.
- c. Depending on market standards, we consider withholding support from or voting against a nominee who is interested and who is standing for election as a member of the company's compensation/remuneration, nominating/governance or audit committee.
- d. We consider withholding support from or voting against nominees if the term for which they are nominated is excessive. We consider this issue on a market-specific basis.
- e. We consider withholding support from or voting against nominees if in our view there has been insufficient board renewal (turnover), particularly in the context of extended poor company performance.
- f. We consider withholding support from or voting against a nominee standing for election if the board has not taken action to implement generally accepted governance practices for which there is a "bright line" test. For example, in the context of the U.S. market, failure to eliminate a dead hand or slow hand poison pill would be seen as a basis for opposing one or more incumbent nominees.
- g. In markets that encourage designated audit committee financial experts, we consider voting against members of an audit committee if no members are designated as such. We also consider voting against the audit committee members if the company has faced financial reporting issues and/or does not put the auditor up for ratification by shareholders.
- h. We believe investors should have the ability to vote on individual nominees, and may abstain or vote against a slate of nominees where we are not given the opportunity to vote on individual nominees.
- i. We consider withholding support from or voting against a nominee who has failed to attend at least 75% of the nominee's board and board committee meetings within a given year without a reasonable excuse. We also consider opposing nominees if the company does not meet market standards for disclosure on attendance.
- j. We consider withholding support from or voting against a nominee who appears overcommitted, particularly through service on an excessive number of boards. Market expectations are incorporated into this analysis; for U.S. boards, we generally oppose election of a nominee who serves on more than six public company boards (excluding investment companies), although we also may reference National Association of Corporate Directors guidance suggesting that public company CEOs, for example, should serve on no more than two outside boards given level of time commitment required in their primary job.
- k. We consider withholding support from or voting against a nominee where we believe executive remuneration practices are poor, particularly if the company does not offer shareholders a separate "say-on-pay" advisory vote on pay.

2. Discharge of directors' duties: In markets where an annual discharge of directors' responsibility is a routine agenda item, we generally support such discharge. However, we may vote against discharge or abstain from voting where there are serious findings of fraud or other unethical behavior for which the individual bears responsibility. The annual discharge of responsibility represents shareholder approval of disclosed actions taken by the board during the year and may make future shareholder action against the board difficult to pursue.

3. Board independence: We generally support U.S. shareholder proposals requiring that a certain percentage (up to 66⅔%) of the company's board members be independent directors, and promoting all-independent audit, compensation and nominating/governance committees.

4. Board diversity: We consider on a case-by-case basis shareholder proposals urging diversity of board membership with respect to gender, race or other factors.

5. Majority voting: We generally support proposals requesting or requiring majority voting policies in election of directors, so long as there is a carve-out for plurality voting in the case of contested elections.

6. Proxy access: We consider on a case-by-case basis shareholder proposals on particular procedures for inclusion of shareholder nominees in company proxy statements.

7. Reimbursement for dissident nominees: We generally support well-crafted U.S. shareholder proposals that would provide for reimbursement of dissident nominees elected to a board, as the cost to shareholders in electing such nominees can be factored into the voting decision on those nominees.

8. Proposals to elect directors more frequently: In the U.S. public company context, we usually support shareholder and management proposals to elect all directors annually (to “declassify” the board), although we make an exception to this policy where we believe that long-term shareholder value may be harmed by this change given particular circumstances at the company at the time of the vote on such proposal. As indicated above, outside the United States we generally support greater accountability to shareholders that comes through more frequent director elections, but recognize that many markets embrace longer term lengths, sometimes for valid reasons given other aspects of the legal context in electing boards.

9. Cumulative voting: We generally support proposals to eliminate cumulative voting in the U.S. market context. (Cumulative voting provides that shareholders may concentrate their votes for one or a handful of candidates, a system that can enable a minority bloc to place representation on a board.) U.S. proposals to establish cumulative voting in the election of directors generally will not be supported.

10. Separation of Chairman and CEO positions: We vote on shareholder proposals to separate the Chairman and CEO positions and/or to appoint an independent Chairman based in part on prevailing practice in particular markets, since the context for such a practice varies. In many non-U.S. markets, we view separation of the roles as a market standard practice, and support division of the roles in that context. In the United States, we consider such proposals on a case-by-case basis, considering, among other things, the existing board leadership structure, company performance, and any evidence of entrenchment or perceived risk that power is overly concentrated in a single individual.

11. Director retirement age and term limits: Proposals setting or recommending director retirement ages or director term limits are voted on a case-by-case basis that includes consideration of company performance, the rate of board renewal, evidence of effective individual director evaluation processes, and any indications of entrenchment.

12. Proposals to limit directors’ liability and/or broaden indemnification of officers and directors: Generally, we will support such proposals provided that an individual is eligible only if he or she has not acted in bad faith, with gross negligence or with reckless disregard of their duties.

C. Statutory auditor boards.

The statutory auditor board, which is separate from the main board of directors, plays a role in corporate governance in several markets. These boards are elected by shareholders to provide assurance on compliance with legal and accounting standards and the company’s articles of association. We generally vote for statutory auditor nominees if they meet independence standards. In markets that require disclosure on attendance by internal statutory auditors, however, we consider voting against nominees for these positions who failed to attend at least 75% of meetings in the previous year. We also consider opposing nominees if the company does not meet market standards for disclosure on attendance.

D. Corporate transactions and proxy fights.

We examine proposals relating to mergers, acquisitions and other special corporate transactions (i.e., takeovers, spin-offs, sales of assets, reorganizations, restructurings and recapitalizations) on a case-by-case basis in the interests of each fund or other account. Proposals for mergers or other significant transactions that are friendly and approved by the Research Providers usually are supported if there is no portfolio manager objection. We also analyze proxy contests on a case-by-case basis.

E. Changes in capital structure.

1. We generally support the following:

- Management and shareholder proposals aimed at eliminating unequal voting rights, assuming fair economic treatment of classes of shares we hold.
- U.S. management proposals to increase the authorization of existing classes of common stock (or securities convertible into common stock) if: (i) a clear business purpose is stated that we can support and the number of shares requested is reasonable in relation to the purpose for which authorization is requested; and/or (ii) the authorization does not exceed 100% of shares currently authorized and at least 30% of the total new authorization will be outstanding. (We consider proposals that do not meet these criteria on a case-by-case basis.)
- U.S. management proposals to create a new class of preferred stock or for issuances of preferred stock up to 50% of issued capital, unless we have concerns about use of the authority for anti-takeover purposes.
- Proposals in non-U.S. markets that in our view appropriately limit potential dilution of existing shareholders. A major consideration is whether existing shareholders would have preemptive rights for any issuance under a proposal for standing

share issuance authority. We generally consider market-specific guidance in making these decisions; for example, in the U.K. market we usually follow Association of British Insurers' ("ABI") guidance, although company-specific factors may be considered and for example, may sometimes lead us to voting against share authorization proposals even if they meet ABI guidance.

- Management proposals to authorize share repurchase plans, except in some cases in which we believe there are insufficient protections against use of an authorization for anti-takeover purposes.
- Management proposals to reduce the number of authorized shares of common or preferred stock, or to eliminate classes of preferred stock.
- Management proposals to effect stock splits.
- Management proposals to effect reverse stock splits if management proportionately reduces the authorized share amount set forth in the corporate charter. Reverse stock splits that do not adjust proportionately to the authorized share amount generally will be approved if the resulting increase in authorized shares coincides with the proxy guidelines set forth above for common stock increases.
- Management dividend payout proposals, except where we perceive company payouts to shareholders as inadequate.

2. We generally oppose the following (notwithstanding management support):

- Proposals to add classes of stock that would substantially dilute the voting interests of existing shareholders.
- Proposals to increase the authorized or issued number of shares of existing classes of stock that are unreasonably dilutive, particularly if there are no preemptive rights for existing shareholders. However, depending on market practices, we consider voting for proposals giving general authorization for issuance of shares not subject to pre-emptive rights if the authority is limited.
- Proposals that authorize share issuance at a discount to market rates, except where authority for such issuance is de minimis, or if there is a special situation that we believe justifies such authorization (as may be the case, for example, at a company under severe stress and risk of bankruptcy).
- Proposals relating to changes in capitalization by 100% or more.

We consider on a case-by-case basis shareholder proposals to increase dividend payout ratios, in light of market practice and perceived market weaknesses, as well as individual company payout history and current circumstances. For example, currently we perceive low payouts to shareholders as a concern at some Japanese companies, but may deem a low payout ratio as appropriate for a growth company making good use of its cash, notwithstanding the broader market concern.

F. Takeover Defenses and Shareholder Rights.

1. Shareholder rights plans: We generally support proposals to require shareholder approval or ratification of shareholder rights plans (poison pills). In voting on rights plans or similar takeover defenses, we consider on a case-by-case basis whether the company has demonstrated a need for the defense in the context of promoting long-term share value; whether provisions of the defense are in line with generally accepted governance principles in the market (and specifically the presence of an adequate qualified offer provision that would exempt offers meeting certain conditions from the pill); and the specific context if the proposal is made in the midst of a takeover bid or contest for control.

2. Supermajority voting requirements: We generally oppose requirements for supermajority votes to amend the charter or bylaws, unless the provisions protect minority shareholders where there is a large shareholder. In line with this view, in the absence of a large shareholder we support reasonable shareholder proposals to limit such supermajority voting requirements.

3. Shareholder right to call a special meeting: We consider proposals to enhance a shareholder's rights to call meetings on a case-by-case basis. At large-cap U.S. companies, we generally support efforts to establish the right of holders of 10% or more of shares to call special meetings, unless the board or state law has set a policy or law establishing such rights at a threshold that we believe to be acceptable.

4. Written consent rights: In the U.S. context, we examine proposals for shareholder written consent rights on a case-by-case basis.

5. Reincorporation: We consider management and shareholder proposals to reincorporate to a different jurisdiction on a case-by-case basis. We oppose such proposals if we believe the main purpose is to take advantage of laws or judicial precedents that reduce shareholder rights.

6. Anti-greenmail provisions: Proposals relating to the adoption of anti-greenmail provisions will be supported, provided that the proposal: (i) defines greenmail; (ii) prohibits buyback offers to large block holders (holders of at least 1% of the outstanding shares and in certain cases, a greater amount) not made to all shareholders or not approved by disinterested shareholders; and (iii) contains no anti-takeover measures or other provisions restricting the rights of shareholders.

7. Bundled proposals: We may consider opposing or abstaining on proposals if disparate issues are "bundled" and presented for a single vote.

G. Auditors.

We generally support management proposals for selection or ratification of independent auditors. However, we may consider opposing such proposals with reference to incumbent audit firms if the company has suffered from serious accounting irregularities and we believe rotation

of the audit firm is appropriate, or if fees paid to the auditor for non-audit-related services are excessive. Generally, to determine if non-audit fees are excessive, a 50% test will be applied (i.e., non-audit-related fees should be less than 50% of the total fees paid to the auditor). We generally vote against proposals to indemnify auditors.

H. Executive and Director Remuneration.

1. We generally support the following:

- Proposals for employee equity compensation plans and other employee ownership plans, provided that our research does not indicate that approval of the plan would be against shareholder interest. Such approval may be against shareholder interest if it authorizes excessive dilution and shareholder cost, particularly in the context of high usage (“run rate”) of equity compensation in the recent past; or if there are objectionable plan design and provisions.
- Proposals relating to fees to outside directors, provided the amounts are not excessive relative to other companies in the country or industry, and provided that the structure is appropriate within the market context. While stock-based compensation to outside directors is positive if moderate and appropriately structured, we are wary of significant stock option awards or other performance-based awards for outside directors, as well as provisions that could result in significant forfeiture of value on a director’s decision to resign from a board (such forfeiture can undercut director independence).
- Proposals for employee stock purchase plans that permit discounts, but only for grants that are part of a broad-based employee plan, including all non-executive employees, and only if the discounts are limited to a reasonable market standard or less.
- Proposals for the establishment of employee retirement and severance plans, provided that our research does not indicate that approval of the plan would be against shareholder interest.

2. We generally oppose retirement plans and bonuses for non-executive directors and independent statutory auditors.

3. In the U.S. context, we generally vote against shareholder proposals requiring shareholder approval of all severance agreements, but we generally support proposals that require shareholder approval for agreements in excess of three times the annual compensation (salary and bonus). We generally oppose shareholder proposals that would establish arbitrary caps on pay. We consider on a case-by-case basis shareholder proposals that seek to limit Supplemental Executive Retirement Plans (SERPs), but support such shareholder proposals where we consider SERPs to be excessive.

4. Shareholder proposals advocating stronger and/or particular pay-for-performance models will be evaluated on a case-by-case basis, with consideration of the merits of the individual proposal within the context of the particular company and its labor markets, and the company’s current and past practices. While we generally support emphasis on long-term components of senior executive pay and strong linkage of pay to performance, we consider factors including whether a proposal may be overly prescriptive, and the impact of the proposal, if implemented as written, on recruitment and retention.

5. We generally support proposals advocating reasonable senior executive and director stock ownership guidelines and holding requirements for shares gained in executive equity compensation programs.

6. We generally support shareholder proposals for reasonable “claw-back” provisions that provide for company recovery of senior executive bonuses to the extent they were based on achieving financial benchmarks that were not actually met in light of subsequent restatements.

7. Management proposals effectively to re-price stock options are considered on a case-by-case basis. Considerations include the company’s reasons and justifications for a re-pricing, the company’s competitive position, whether senior executives and outside directors are excluded, potential cost to shareholders, whether the re-pricing or share exchange is on a value-for-value basis, and whether vesting requirements are extended.

8. Say-on-Pay: We consider proposals relating to an advisory vote on remuneration on a case-by-case basis. Considerations include a review of the relationship between executive remuneration and performance based on operating trends and total shareholder return over multiple performance periods. In addition, we review remuneration structures and potential poor pay practices, including relative magnitude of pay, discretionary bonus awards, tax gross ups, change-in-control features, internal pay equity and peer group construction. As long-term investors, we support remuneration policies that align with long-term shareholder returns.

I. Social, Political and Environmental Issues.

Shareholders in the United States and certain other markets submit proposals encouraging changes in company disclosure and practices related to particular corporate social, political and environmental matters. We consider how to vote on the proposals on a case-by-case basis to determine likely impacts on shareholder value. We seek to balance concerns on reputational and other risks that lie behind a proposal against costs of implementation, while considering appropriate shareholder and management prerogatives. We may abstain from voting on proposals that do not have a readily determinable financial impact on shareholder value. We support proposals that if implemented would enhance useful disclosure, but we generally vote against proposals requesting reports that we believe are duplicative, related to matters not material to the business, or that would impose unnecessary or excessive costs. We believe that certain social and environmental shareholder proposals may intrude excessively on management prerogatives, which can lead us to oppose them.

J. Fund of Funds.

Certain Funds advised by an MSIM Affiliate invest only in other MSIM Funds. If an underlying fund has a shareholder meeting, in order to avoid any potential conflict of interest, such proposals will be voted in the same proportion as the votes of the other shareholders of the underlying fund, unless otherwise determined by the Proxy Review Committee. Other MSIM Funds invest in unaffiliated funds. If an unaffiliated underlying fund has a shareholder meeting and the MSIM Fund owns more than 25% of the voting shares of the underlying fund, the MSIM Fund will vote its shares in the unaffiliated underlying fund in the same proportion as the votes of the other shareholders of the underlying fund.

III. ADMINISTRATION OF POLICY

The MSIM Proxy Review Committee (the “Committee”) has overall responsibility for the Policy. The Committee, which is appointed by MSIM’s Long-Only Executive Committee, consists of investment professionals who represent the different investment disciplines and geographic locations of the firm, and is chaired by the director of the Corporate Governance Team (“CGT”). Because proxy voting is an investment responsibility and impacts shareholder value, and because of their knowledge of companies and markets, portfolio managers and other members of investment staff play a key role in proxy voting, although the Committee has final authority over proxy votes.

The CGT Director is responsible for identifying issues that require Committee deliberation or ratification. The CGT, working with advice of investment teams and the Committee, is responsible for voting on routine items and on matters that can be addressed in line with these Policy guidelines. The CGT has responsibility for voting case-by-case where guidelines and precedent provide adequate guidance.

The Committee will periodically review and have the authority to amend, as necessary, the Policy and establish and direct voting positions consistent with the Client Proxy Standard.

CGT and members of the Committee may take into account Research Providers’ recommendations and research as well as any other relevant information they may request or receive, including portfolio manager and/or analyst comments and research, as applicable. Generally, proxies related to securities held in accounts that are managed pursuant to quantitative, index or index-like strategies (“Index Strategies”) will be voted in the same manner as those held in actively managed accounts, unless economic interests of the accounts differ. Because accounts managed using Index Strategies are passively managed accounts, research from portfolio managers and/or analysts related to securities held in these accounts may not be available. If the affected securities are held only in accounts that are managed pursuant to Index Strategies, and the proxy relates to a matter that is not described in this Policy, the CGT will consider all available information from the Research Providers, and to the extent that the holdings are significant, from the portfolio managers and/or analysts.

A. Committee Procedures

The Committee meets at least quarterly, and reviews and considers changes to the Policy at least annually. Through meetings and/or written communications, the Committee is responsible for monitoring and ratifying “split votes” (i.e., allowing certain shares of the same issuer that are the subject of the same proxy solicitation and held by one or more MSIM portfolios to be voted differently than other shares) and/or “override voting” (i.e., voting all MSIM portfolio shares in a manner contrary to the Policy). The Committee will review developing issues and approve upcoming votes, as appropriate, for matters as requested by CGT.

The Committee reserves the right to review voting decisions at any time and to make voting decisions as necessary to ensure the independence and integrity of the votes.

B. Material Conflicts of Interest

In addition to the procedures discussed above, if the CGT Director determines that an issue raises a material conflict of interest, the CGT Director may request a special committee to review, and recommend a course of action with respect to, the conflict(s) in question (“Special Committee”).

A potential material conflict of interest could exist in the following situations, among others:

1. The issuer soliciting the vote is a client of MSIM or an affiliate of MSIM and the vote is on a matter that materially affects the issuer.
2. The proxy relates to Morgan Stanley common stock or any other security issued by Morgan Stanley or its affiliates except if echo voting is used, as with MSIM Funds, as described herein.
3. Morgan Stanley has a material pecuniary interest in the matter submitted for a vote (e.g., acting as a financial advisor to a party to a merger or acquisition for which Morgan Stanley will be paid a success fee if completed).

If the CGT Director determines that an issue raises a potential material conflict of interest, depending on the facts and circumstances, the issue will be addressed as follows:

1. If the matter relates to a topic that is discussed in this Policy, the proposal will be voted as per the Policy.
2. If the matter is not discussed in this Policy or the Policy indicates that the issue is to be decided case-by-case, the proposal will be voted in a manner consistent with the Research Providers, provided that all the Research Providers consulted have the same recommendation, no portfolio manager objects to that vote, and the vote is consistent with MSIM’s Client Proxy Standard.

3. If the Research Providers' recommendations differ, the CGT Director will refer the matter to a Special Committee to vote on the proposal, as appropriate.

Any Special Committee shall be comprised of the CGT Director, and at least two portfolio managers (preferably members of the Committee), as approved by the Committee. The CGT Director may request non-voting participation by MSIM's General Counsel or his/her designee and the Chief Compliance Officer or his/her designee. In addition to the research provided by Research Providers, the Special Committee may request analysis from MSIM Affiliate investment professionals and outside sources to the extent it deems appropriate.

C. Proxy Voting Reporting

The CGT will document in writing all Committee and Special Committee decisions and actions, which documentation will be maintained by the CGT for a period of at least six years. To the extent these decisions relate to a security held by an MSIM Fund, the CGT will report the decisions to each applicable Board of Trustees/Directors of those Funds at each Board's next regularly scheduled Board meeting. The report will contain information concerning decisions made during the most recently ended calendar quarter immediately preceding the Board meeting.

MSIM will promptly provide a copy of this Policy to any client requesting it. MSIM will also, upon client request, promptly provide a report indicating how each proxy was voted with respect to securities held in that client's account.

MSIM's Legal Department is responsible for filing an annual Form N-PX on behalf of each MSIM Fund for which such filing is required, indicating how all proxies were voted with respect to such Fund's holdings.

Appendix A

Appendix A applies to the following accounts managed by Morgan Stanley AIP GP LP or Private Investment Partners Inc. ("AIP"): (i) closed-end funds registered under the Investment Company Act of 1940, as amended, (ii) separate accounts and (iii) unregistered funds.

Generally, AIP will follow the guidelines set forth in Section II of MSIM's Proxy Voting Policy and Procedures. To the extent that such guidelines do not provide specific direction, or AIP determines that consistent with the Client Proxy Standard, the guidelines should not be followed, the Proxy Review Committee has delegated the voting authority to vote securities held by accounts managed by AIP to the Fund of Hedge Funds investment team, the Private Equity Fund of Funds investment team or the Private Equity Real Estate Fund of Funds investment team of AIP. A summary of decisions made by the investment teams will be made available to the Proxy Review Committee for its information at the next scheduled meeting of the Proxy Review Committee.

In certain cases, AIP may determine to abstain from determining (or recommending) how a proxy should be voted (and therefore abstain from voting such proxy or recommending how such proxy should be voted), such as where the expected cost of giving due consideration to the proxy does not justify the potential benefits to the affected account(s) that might result from adopting or rejecting (as the case may be) the measure in question.

WAIVER OF VOTING RIGHTS

For regulatory reasons, AIP may either 1) invest in a class of securities of an underlying fund (the "Fund") that does not provide for voting rights; or 2) waive 100% of its voting rights with respect to the following:

1. Any rights with respect to the removal or replacement of a director, general partner, managing member or other person acting in a similar capacity for or on behalf of the Fund (each individually a "Designated Person," and collectively, the "Designated Persons"), which may include, but are not limited to, voting on the election or removal of a Designated Person in the event of such Designated Person's death, disability, insolvency, bankruptcy, incapacity, or other event requiring a vote of interest holders of the Fund to remove or replace a Designated Person; and
2. Any rights in connection with a determination to renew, dissolve, liquidate, or otherwise terminate or continue the Fund, which may include, but are not limited to, voting on the renewal, dissolution, liquidation, termination or continuance of the Fund upon the occurrence of an event described in the Fund's organizational documents; provided, however, that, if the Fund's organizational documents require the consent of the Fund's general partner or manager, as the case may be, for any such termination or continuation of the Fund to be effective, then AIP may exercise its voting rights with respect to such matter.

Pacific Investment Management Company LLC

October 2012

Proxy Voting Policies and Procedures

PIMCO has adopted written proxy voting policies and procedures ("Proxy Policy") as required by Rule 206(4)-6 under the Advisers Act. In addition to covering the voting of equity securities, the Proxy Policy also applies generally to voting and/or consent rights of fixed income securities, including but not limited to, plans of reorganization, and waivers and consents under applicable indentures. The Proxy Policy does not apply, however, to consent rights that primarily entail decisions to buy or sell investments, such as tender or exchange offers, conversions, put options, redemption and Dutch auctions. The Proxy Policy is designed and implemented in a manner reasonably expected to ensure that voting and consent rights (collectively, "proxies") are exercised in the best interests of accounts.

With respect to the voting of proxies relating to equity securities, PIMCO has selected an unaffiliated third party proxy research and voting service (“Proxy Voting Service”), to assist it in researching and voting proxies. With respect to each proxy received, the Proxy Voting Service researches the financial implications of the proposals and provides a recommendation to PIMCO as to how to vote on each proposal based on the Proxy Voting Service’s research of the individual facts and circumstances and the Proxy Voting Service’s application of its research findings to a set of guidelines that have been approved by PIMCO. Upon the recommendation of the applicable portfolio managers, PIMCO may determine to override any recommendation made by the Proxy Voting Service. In the event that the Proxy Voting Service does not provide a recommendation with respect to a proposal, PIMCO may determine to vote on the proposals directly.

With respect to the voting of proxies relating to fixed income securities, PIMCO’s fixed income credit research group (the “Credit Research Group”) is responsible for researching and issuing recommendations for voting proxies. With respect to each proxy received, the Credit Research Group researches the financial implications of the proxy proposal and makes voting recommendations specific for each account that holds the related fixed income security. PIMCO considers each proposal regarding a fixed income security on a case-by-case basis taking into consideration any relevant contractual obligations as well as other relevant facts and circumstances at the time of the vote. Upon the recommendation of the applicable portfolio managers, PIMCO may determine to override any recommendation made by the Credit Research Group. In the event that the Credit Research Group does not provide a recommendation with respect to a proposal, PIMCO may determine to vote the proposal directly.

PIMCO may determine not to vote a proxy for an equity or fixed income security if: (1) the effect on the applicable account’s economic interests or the value of the portfolio holding is insignificant in relation to the account’s portfolio; (2) the cost of voting the proxy outweighs the possible benefit to the applicable account, including, without limitation, situations where a jurisdiction imposes share blocking restrictions which may affect the ability of the portfolio managers to effect trades in the related security; or (3) PIMCO otherwise has determined that it is consistent with its fiduciary obligations not to vote the proxy.

In the event that the Proxy Voting Service or the Credit Research Group, as applicable, does not provide a recommendation or the portfolio managers of a client account propose to override a recommendation by the Proxy Voting Service, or the Credit Research Group, as applicable, PIMCO will review the proxy to determine whether there is a material conflict between PIMCO and the applicable account or among PIMCO-advised accounts. If no material conflict exists, the proxy will be voted according to the portfolio managers’ recommendation. If a material conflict does exist, PIMCO will seek to resolve the conflict in good faith and in the best interests of the applicable client account, as provided by the Proxy Policy. The Proxy Policy permits PIMCO to seek to resolve material conflicts of interest by pursuing any one of several courses of action. With respect to material conflicts of interest between PIMCO and a client account, the Proxy Policy permits PIMCO to either: (i) convene a committee to assess and resolve the conflict (the “Proxy Conflicts Committee”); or (ii) vote in accordance with protocols previously established by the Proxy Policy, the Proxy Conflicts Committee and/or other relevant procedures approved by PIMCO’s Legal and Compliance department with respect to specific types of conflicts. With respect to material conflicts of interest between one or more PIMCO-advised accounts, the Proxy Policy permits PIMCO to: (i) designate a PIMCO portfolio manager who is not subject to the conflict to determine how to vote the proxy if the conflict exists between two accounts with at least one portfolio manager in common; or (ii) permit the respective portfolio managers to vote the proxies in accordance with each client account’s best interests if the conflict exists between client accounts managed by different portfolio managers.

PIMCO will supervise and periodically review its proxy voting activities and the implementation of the Proxy Policy. PIMCO’s Proxy Policy, and information about how PIMCO voted a client’s proxies, is available upon request.

PineBridge Investments LLC

Original Issue Date: 2005

Last Revision Date: March 2013

I. Introduction

Proxy voting is an important right of shareholders, such as PineBridge Clients, for which PineBridge must take reasonable care and diligence to ensure such rights are properly and timely exercised. PineBridge, as a fiduciary for its Clients, must vote proxies in each Client’s best interest.

II. Policy Statement

Proxy Procedures

As a registered investment adviser that votes (or delegates the voting of) securities held in Client portfolios, PineBridge has implemented proxy voting procedures that are reasonably designed to help ensure that a) PineBridge votes proxies in the best interest of its Clients; b) describes its proxy voting procedures to its Clients, and c) discloses to Clients how they may obtain information on how PineBridge voted their proxies. These procedures are designed to help enable PineBridge to manage material conflicts of interest. While PineBridge must disclose its votes upon request to Clients, no public disclosure is required. (Note that disclosure is required for any mutual funds advised by PineBridge, on Form N-PX.)

Record-Keeping

PineBridge must retain (i) these proxy voting policies and procedures; (ii) proxy statements received regarding Client securities; (iii) records of votes it casts on behalf of Clients; (iv) records of Client requests for proxy voting information, and; (v) any documents prepared by

PineBridge that were material to making a decision how to vote, or that memorialized the basis for the decision. PineBridge may rely on proxy statements filed on EDGAR instead of keeping its own copies, and rely on proxy statements and records of proxy votes cast by PineBridge that are maintained by contract with a third party proxy voting service or other third party.

Proxies of Shares of Non-U.S. Corporations

PineBridge has implemented general voting policies with respect to non-U.S. shares owned by Clients. However, although U.S. companies must give shareholders at least 20 days' advance notice to vote proxies, some non-U.S. companies may provide considerably shorter notice or none at all. PineBridge is not required to "rush" voting decisions in order to meet an impractical deadline, and as a result, PineBridge or PineBridge affiliates' regional designees under certain circumstances may not vote certain proxies. In addition, certain non-U.S. regulations impose additional costs to a Portfolio that votes proxies, and PineBridge will take that into consideration when determining whether or not to vote.

Policy on Monitoring Class Action Suits

In the event that PineBridge has purchased the same security for a Client's portfolio alongside its investments on behalf of itself or an affiliate, PineBridge generally will seek to inform a Client that such Client may also have a cause of action whenever such issuer is subject to class action litigation. PineBridge as a general matter will also make available to the Client such rights, if any, as that PineBridge may have against any such issuer in its capacity as the Client's agent, and PineBridge will, where possible, give the Client such assistance as it may reasonably require to exercise its rights in any such action.

PineBridge generally does not, however, search out potential legal claims or monitor class action lawsuits against issuers arising from investments held in a Client portfolio, nor may PineBridge institute a lawsuit on a Client's behalf arising from investments held in the Client portfolio.

In addition, given the size and breadth of PineBridge's business, it is possible that there may be situations in which PineBridge or an affiliate might become aware of a potential lawsuit with respect to a security, one of which may also be held within a Client portfolio. In these situations, there is the possibility, due to confidentiality requirements or conflicts of interest, that PineBridge would be restricted from informing a Client of potential legal actions and activities.

In the case of a material conflict between the interests of PineBridge and those of its Clients, PineBridge will take steps to address such conflicts (which may include consulting with counsel), and will attempt to resolve all conflicts in the Client's best interest.

III. Procedures

PineBridge will vote proxies in the best interests of its Clients, which may result in different voting results for proxies for the same issuer.

- Compliance is responsible for ensuring that the PineBridge ADV includes the appropriate language summarizing PineBridge's proxy voting procedures and for updating the summary in the ADV whenever the procedures are updated. Compliance is also responsible for consulting with Legal to ensure that PineBridge's proxy voting policy is kept up to date and in a form appropriate for transmission to Clients.
- If a Client or potential Client requests a copy of the Proxy Voting Policy from Client Relations or Sales, Compliance should be contacted for the most recent version, or it may be obtained from the intranet. Client Relations will send to such Client a copy of the current version of the voting procedures within 7 days and will ensure that Compliance receives a log of each Client's request and the action taken.
- If a Client requests access to the records of how PineBridge voted its proxies, the Client should be assured that this will be provided, and Compliance should be consulted. Compliance has access to these proxy voting records.
- PineBridge has established a Proxy Committee (the "Committee"). The PineBridge Proxy Committee is comprised of members of Compliance, the Investment Department, and senior management.
- The Committee conducts an annual review of the proxy voting guidelines for domestic and non-U.S. Portfolios. Guidelines are reviewed to ensure that the interests of PineBridge's Clients are best served.
- Issues not addressed in the voting guidelines are determined on a case-by-case basis with input from the Committee and portfolio managers.
- PineBridge has engaged a third party vendor to administer proxy voting on its behalf. The vendor receives, in a majority of cases, proxies directly from the Client's custodian and votes them based on PineBridge's general voting guidelines.
- In circumstances where PineBridge receives proxies directly, these proxies must be sent to the vendor promptly. The vendor then votes them in accordance with PineBridge's general voting guidelines. The vendor maintains a listing of all votes cast on behalf of PineBridge Clients.

IV. Associated Policies

Advisory Agreements Policy

ProFund Advisors LLC

ProFund Advisors LLC (“ProFund Advisors”) has adopted the following proxy voting policies and procedures (the “Guidelines”), which are designed to maximize shareholder value and protect shareholder interests when voting proxies. ProFund Advisors’ Proxy Oversight Committee (the “Proxy Committee”) exercises and documents ProFund Advisors’ responsibility with regard to voting of client proxies. The Proxy Committee is composed of representatives of ProFund Advisors’ Compliance, Legal and Portfolio Management Departments. The Proxy Committee reviews and monitors the effectiveness of the Guidelines.

To assist ProFund Advisors in its responsibility for voting proxies and the overall proxy voting process, ProFund Advisors has retained ISS Governance Services (“ISS”) as an expert in the proxy voting and corporate governance area. ISS is a subsidiary of MSCI, Inc., an independent company that specializes in, among other things, providing a variety of proxy-related services to institutional investment managers, plan sponsors, custodians, consultants, and other institutional investors. The services provided by ISS include in-depth research, global issuer analysis, and voting recommendations as well as vote execution, reporting and record keeping. ISS issues quarterly reports for ProFund Advisors to review to assure proxies are being voted properly. ProFund Advisors and ISS also perform spot checks intra-quarter to match the voting activity with available shareholder meeting information. ISS’s management meets on a regular basis to discuss its approach to new developments and amendments to existing policies. Information on such developments or amendments in turn is provided to the Proxy Committee. The Proxy Committee reviews and, as necessary, may amend periodically the Guidelines to address new or revised proxy voting policies or procedures.

The Guidelines are maintained and implemented by ISS and are an extensive list of common proxy voting issues with recommended voting actions based on the overall goal of achieving maximum shareholder value and protection of shareholder interests. Generally, proxies are voted in accordance with the voting recommendations contained in the Guidelines. If necessary, ProFund Advisors will be consulted by ISS on non-routine issues. Proxy issues identified in the Guidelines include but are not limited to:

Election of Directors – considering factors such as director qualifications, term of office and age limits.

Proxy Contests – considering factors such as voting for nominees in contested elections and reimbursement of expenses.

Election of Auditors – considering factors such as independence and reputation of the auditing firm.

Proxy Contest Defenses – considering factors such as board structure and cumulative voting.

Tender Offer Defenses – considering factors such as poison pills (stock purchase rights plans) and fair price provisions.

Miscellaneous Governance Issues – considering factors such as confidential voting and equal access.

Capital Structure – considering factors such as common stock authorization and stock distributions.

Executive and Director Compensation – considering factors such as performance goals and employee stock purchase plans.

State of Incorporation – considering factors such as state takeover statutes and voting on reincorporation proposals.

Mergers and Corporate Restructuring – considering factors such as spin-offs and asset sales.

Mutual Fund Proxy Voting – considering factors such as election of directors and proxy contests.

Consumer and Public Safety Issues – considering factors such as social and environmental issues as well as labor issues.

A full description of each Guideline and voting policy is maintained by ProFund Advisors, and a complete copy of the Guidelines is available upon request.

Conflicts of Interest

From time to time, proxy issues may pose a material conflict of interest between a fund’s shareholders and ProFund Advisors, the underwriter or any affiliates thereof. Due to the limited nature of ProFund Advisors’ activities (e.g., no underwriting business, no publicly traded affiliates, no investment banking activities, and no research recommendations), conflicts of interest are likely to be infrequent. Nevertheless, it shall be the duty of the Proxy Committee to monitor potential conflicts of interest. In the event a conflict of interest arises, ProFund Advisors will direct ISS to use its independent judgment to vote affected proxies in accordance with approved guidelines. The Proxy Committee will disclose to TAM the voting issues that created the conflict of interest and the manner in which ISS voted such proxies.

Quantitative Management Associates LLC

Proxy Voting Policies and Procedures

IV. OPERATIONS POLICIES B. PROXY POLICY

Policy Statement:

QMA will vote proxies in the best long-term economic interests of clients whose accounts hold the securities. In the case of pooled accounts, QMA will vote proxies in the best long-term economic interest of the pooled account. QMA will maintain its proxy voting policies and the voting records for all client accounts. QMA will make these policies available to clients upon their request, and the voting records for any client will be made available to that client upon its request. QMA will not disclose to outside sources how it intends to vote a proxy but may, on occasion, discuss a proxy issue with major shareholders and/or company management.

Regulatory Background:

Rule 206(4)-6 under the Investment Advisers Act of 1940 (“Advisers Act”) requires advisers to adopt and implement policies and procedures that are reasonably designed to ensure that the adviser votes proxies in the best interest of its clients. These policies and procedures must be in writing and must describe how the adviser addresses material conflicts between its interests and those of its clients with respect to proxy voting. Accordingly, QMA has adopted and implements written procedures designed to enable it to identify, address and monitor potential conflicts of interest.

Rule 206(4)-6 also requires each investment adviser to (1) disclose to clients how they may obtain information from the adviser about how it voted with respect to their respective securities; and (2) describe to clients its proxy voting policies and procedures and, upon request, furnish a copy of the policies and procedures to the requesting client.

Proxy Voting Responsibilities and Procedures:

Proxy voting is coordinated by the QMA Operations unit. QMA currently utilizes a third party vendor as its proxy voting facilitator and administrator (the “Voting Agent”).

QMA has provided the Voting Agent with its standardized voting instructions for routine issues. When proxies are received with respect to issues not clearly addressed by QMA’s standard guidelines, the portfolio managers designated by the proxy committee will determine how to vote on such issues on a case-by-case basis, and QMA Operations will work directly with the portfolio managers and/or QMA’s proxy committee to document each such voting decision.

QMA Operations will maintain procedures that identify the controls and reconciliations of the Voting Agent’s voting records to monitor the Voting Agent’s compliance with QMA’s voting guidelines and instructions.

QMA may, from time to time, in its discretion, engage other vendors to provide some or all of the services presently provided by the Voting Agent. Notwithstanding its engagement of third parties to facilitate the proxy voting process, however, QMA will retain responsibility for fulfilling its proxy voting obligations under the Advisers Act.

Some of QMA’s clients elect to retain voting authority for themselves. Those clients receive proxies and other solicitation materials from their custodians. If QMA receives these materials for the account of such a client, we will forward them to the client’s custodian. If a client has a question about a particular solicitation, the client may contact its client service representative and QMA will seek to address the client’s question but will not, (as noted above) disclose how we intend to vote on an issue for other clients’ accounts.

Certain QMA clients may participate in securities lending programs in their accounts. QMA does not control or participate in any way in these programs and does not know when or which securities in our clients’ accounts have been loaned. QMA cannot vote securities that are out of our clients’ portfolios on loan or are otherwise excluded from voting privileges.

Recordkeeping Requirements Relating to Proxy Voting:

Rule 204-2(c)(2) under the Advisers Act requires advisers to retain::

1. their proxy voting policies and procedures,
2. proxy statements received regarding client securities*,
3. records of votes they cast on behalf of clients,
4. copies of written client requests for proxy voting information and the adviser’s responses, and
5. any documents prepared by the adviser that were material to making a decision how to vote, or that memorialized the basis for the decision.

The books and records described above must be retained for two years on-site and five years overall. QMA Operations will maintain the records of QMA’s proxy voting policies and of each proxy voted.

QMA Proxy Committee:

The QMA Proxy Committee has been formed to provide guidance to and oversight of QMA’s proxy voting responsibilities. The Committee is comprised of representatives from the Investment, Operations, Compliance, and Legal units. Committee representatives from the Investment unit are responsible for determining the voting guidelines (“Guidelines”) identified in QMA’s ‘Statement of Proxy Voting Guidelines and Procedures’ attached herein and have established standing instructions for many routine ballot issues. These Committee representatives are also responsible for reviewing and reconsidering QMA’s proxy voting instructions periodically to ensure that they reflect the investment team’s current views. Additionally, the Investment unit representatives (or delegates on the investment team) will act to determine any votes on non-routine issues on a case-by-case basis, as identified in the Guidelines or otherwise.

The QMA Proxy Committee will also identify any issuers (“Conflict Issuer”) as to which QMA believes there may be a potential conflict between the respective interests of QMA and its clients. Proxies with respect to these issuers will be voted in accordance with the Voting Agent’s policy.

* Advisers are required to retain a copy of each proxy statement received regarding client securities, but may rely on their ability to obtain proxy statements from the SEC’s EDGAR system, which makes proxy statements publicly available, to meet this requirement.

Currently, QMA defines a Conflict Issuer, with respect to existing clients, as a client who is a public issuer of securities and represents greater than 1% of QMA's annual revenues. From time to time, QMA may determine different or additional criteria to identify other Conflict Issuers. Conflict Issuers, including QMA's parent company Prudential Financial, are voted in accordance with the Voting Agent's guidelines. On an annual basis, PIM Compliance will collect and aggregate information from each PIM business unit, including QMA and Jennison, with respect to public securities issuers that may potentially present a material conflict of interest based on their client, vendor or other business relationship to or with a specific investment unit. Following review of the list, the PIM Compliance unit will communicate Conflict Issuers from this list to QMA. QMA Operations will communicate and confirm with the Voting Agent that they are voting these proxies in accordance with the Voting Agent's policy.

Systematic Financial Management, L.P.

Proxy Voting Disclosure

Clients may delegate proxy voting authority over their account to Systematic in their investment management agreement or investment guidelines, or by other written direction to Systematic. Upon such delegation of proxy voting authority, Systematic will notify both its independent proxy-voting agent ("agent") and the client's custodian that Systematic's agent will vote on behalf of Systematic for that client's account. Systematic will also provide the client's custodian with the appropriate instructions for delivery of proxy ballots for the client's account. Systematic clients may revoke Systematic's voting authority by providing written notice to Systematic

As stated above, Systematic has retained an independent proxy-voting agent ("agent"), and Systematic generally follows the agent's proxy voting guidelines when voting proxies. The adoption of the agent's proxy voting guidelines provides independent guidelines for voting proxies and is designed to remove conflicts of interest that could affect the outcome of a vote. The intent of this policy is to remove any discretion that Systematic may have to interpret how to vote proxies in cases where Systematic has a conflict of interest or the appearance of a conflict of interest.

Although under normal circumstances Systematic is not expected to exercise its voting discretion or to override the agent's recommendation, Systematic's Proxy Voting Committee will monitor any situation where Systematic believes it has a material conflict of interest, or where Systematic wishes to exercise its discretion or more closely review a particular matter. In these situations, the Proxy Voting Committee will provide the actual voting recommendation after a review of the vote(s) involved with such determination being based in the Committee's determination of what is in the best interests of Systematic's clients. Systematic uses consensus decisions when voting an issue and does not allow Portfolio Managers to vote proxies independently. Systematic's Chief Compliance Officer (CCO) must approve any decision made on such vote prior to the vote being cast. In approving any such decision, the CCO will use his or her best judgment to ensure that the spirit of Systematic's proxy voting guidelines is being followed. Systematic will maintain documentation of any such voting decision.

The agent has policies and procedures in place to mitigate potential conflicts of interest. The agent is obligated to notify Systematic, in advance of voting any proxies, in specific situations where it may have a material conflict of interest with a company whose proxy it is responsible for voting on behalf of a Systematic client. If this situation occurs, the agent will follow its procedures regarding conflicts of interest and Systematic will follow the same procedures it does for situations where it has a material conflict of interest, as described above.

Systematic maintains five sets of proxy voting guidelines: one based on AFL-CIO polices for Taft-Hartley Plan Sponsors, another for clients with Socially Responsible Investing guidelines, another for Public Plans, another for Catholic or other faith-based entities and the fifth being a General Policy for all other clients, covering U.S. and global proxies. Institutional clients may select which set of proxy guidelines they wish be used to vote their account's proxies. In instances where the client does not select a voting policy, Systematic would typically apply the General Proxy Voting Policy when voting on behalf of the client. Systematic may process certain proxies without voting them, such as by making a decision to abstain from voting or take no action on such proxies (or on certain proposals within such proxies). Examples include, without limitation: proxies issued by companies that the firm has decided to sell, proxies issued for securities that the firm did not select for a client portfolio (such as securities selected by the client or a previous adviser, unsupervised securities held in a client's account, money market securities or other securities selected by clients or their representatives other than Systematic), or proxies issued by foreign companies that impose burdensome or unreasonable voting, power of attorney or holding requirements such as with share blocking as further noted below.

Systematic also seeks to ensure that, to the extent reasonably feasible, proxies for which it receives ballots in good order and receives timely notice will be voted or otherwise processed (such as through a decision to abstain or take no action). Systematic may be unable to vote or otherwise process proxy ballots that are not received in a timely manner due to limitations of the proxy voting system, custodial limitations or other factors beyond the firm's control. Such ballots may include, without limitation, ballots for securities out on loan under securities lending programs initiated by the client or its custodian, ballots not forwarded in a timely manner by a custodian, or ballots that were not received by Systematic from its proxy voting vendor on a timely basis.

SHARE BLOCKING

In general, unless otherwise directed by the client, Systematic will make reasonable efforts to vote client proxies in accordance with the proxy voting recommendations of the Firm's proxy voting service provider. Systematic will generally decline to vote proxies if to do so would cause a restriction to be placed on Systematic's ability to trade securities held in client accounts in "share blocking" countries. Accordingly, Systematic may abstain from votes in a share blocking country in favor of preserving its ability to trade any particular security at any time.

Systematic maintains written Proxy Voting Policies and Procedures as required by Rule 206(4)-6 under the Investment Advisers Act. These policies and procedures, in addition to how Systematic voted proxies for securities held in your account(s), are available upon request.

PROXY VOTING POLICIES AND PROCEDURES

Responsibility to Vote Proxies

T. Rowe Price Associates, Inc., T. Rowe Price International Ltd, T. Rowe Price (Canada), Inc., T. Rowe Price Hong Kong Limited, and T. Rowe Price Singapore Private Ltd. (“T. Rowe Price”) recognize and adhere to the principle that one of the privileges of owning stock in a company is the right to vote in the election of the company’s directors and on matters affecting certain important aspects of the company’s structure and operations that are submitted to shareholder vote. As an investment adviser with a fiduciary responsibility to its clients, T. Rowe Price analyzes the proxy statements of issuers whose stock is owned by the U.S.-registered investment companies which it sponsors and serves as investment adviser (“T. Rowe Price Funds”) and by common trust funds, offshore funds, institutional and private counsel clients who have requested that T. Rowe Price be involved in the proxy process. T. Rowe Price has assumed the responsibility for voting proxies on behalf of the T. Rowe Price Funds and certain counsel clients who have delegated such responsibility to T. Rowe Price. In addition, T. Rowe Price makes recommendations regarding proxy voting to counsel clients who have not delegated the voting responsibility but who have requested voting advice. T. Rowe Price reserves the right to decline to vote proxies in accordance with client-specific voting guidelines.

T. Rowe Price has adopted these Proxy Voting Policies and Procedures (“Policies and Procedures”) for the purpose of establishing formal policies and procedures for performing and documenting its fiduciary duty with regard to the voting of client proxies.

Fiduciary Considerations. It is the policy of T. Rowe Price that decisions with respect to proxy issues will be made in light of the anticipated impact of the issue on the desirability of investing in the portfolio company from the viewpoint of the particular client or Price Fund. Proxies are voted solely in the interests of the client, Price Fund shareholders or, where employee benefit plan assets are involved, in the interests of plan participants and beneficiaries. Our intent has always been to vote proxies, where possible to do so, in a manner consistent with our fiduciary obligations and responsibilities. Practicalities and costs involved with international investing may make it impossible at times, and at other times disadvantageous, to vote proxies in every instance.

Other Considerations. One of the primary factors T. Rowe Price considers when determining the desirability of investing in a particular company is the quality and depth of its management. We recognize that a company’s management is entrusted with the day-to-day operations of the company, as well as its long-term direction and strategic planning, subject to the oversight of the company’s board of directors. Accordingly, our proxy voting guidelines are not intended to substitute our judgment for management’s with respect to the company’s day-to-day operations. Rather, our voting guidelines are designed to promote accountability of a company’s management and board of directors to its shareholders; to align the interests of management with those of shareholders; and to encourage companies to adopt best practices in terms of their corporate governance. In addition to our voting guidelines, we rely on a company’s disclosures, its board’s recommendations, a company’s track record, country-specific best practices codes, our research providers and, most importantly, our investment professionals’ views, in making voting decisions.

ADMINISTRATION OF POLICIES AND PROCEDURES

Proxy Committee. T. Rowe Price’s Proxy Committee (“Proxy Committee”) is responsible for establishing positions with respect to corporate governance and other proxy issues, including those involving corporate social responsibility issues. Certain delegated members of the Proxy Committee also review questions and respond to inquiries from clients and mutual fund shareholders pertaining to proxy issues. While the Proxy Committee sets voting guidelines and serves as a resource for T. Rowe Price portfolio management, it does not have proxy voting authority for any Price Fund or counsel client. Rather, this responsibility is held by the Chairperson of the Fund’s Investment Advisory Committee or counsel client’s portfolio manager.

Global Proxy Services Group. The Global Proxy Services Group is responsible for administering the proxy voting process as set forth in the Policies and Procedures.

Proxy Administrator. The Global Proxy Services Group will assign a Proxy Administrator who will be responsible for ensuring that all meeting notices are reviewed and important proxy matters are communicated to the portfolio managers for consideration.

Global Corporate Governance Analyst. Our Global Corporate Governance Analyst is responsible for reviewing the proxy agendas for all upcoming meetings and making company-specific recommendations to our global industry analysts and portfolio managers with regard to the voting decisions in their portfolios.

HOW PROXIES ARE REVIEWED, PROCESSED AND VOTED

In order to facilitate the proxy voting process, T. Rowe Price has retained ISS as an expert in the proxy voting and corporate governance area. ISS specializes in providing a variety of fiduciary-level proxy advisory and voting services. These services include voting recommendations as well as vote execution, reporting, auditing and consulting assistance for the handling of proxy voting responsibility. In order to reflect T. Rowe Price’s issue-by-issue voting guidelines as approved each year by the Proxy Committee, ISS maintains and implements a custom voting policy for the Price Funds and other client accounts.

Meeting Notification

T. Rowe Price utilizes ISS's voting agent services to notify us of upcoming shareholder meetings for portfolio companies held in client accounts and to transmit votes to the various custodian banks of our clients. ISS tracks and reconciles T. Rowe Price holdings against incoming proxy ballots. If ballots do not arrive on time, ISS procures them from the appropriate custodian or proxy distribution agent. Meeting and record date information is updated daily, and transmitted to T. Rowe Price through Proxy Exchange, ISS's web-based application.

Vote Determination

Each day, ISS delivers into T. Rowe Price's proprietary proxy research platform a comprehensive summary of upcoming meetings, proxy proposals, publications discussing key proxy voting issues, and custom vote recommendations to assist us with proxy research and processing. The final authority and responsibility for proxy voting decisions remains with T. Rowe Price. Decisions with respect to proxy matters are made primarily in light of the anticipated impact of the issue on the desirability of investing in the company from the perspective of our clients.

Portfolio managers may decide to vote their proxies consistent with T. Rowe Price's policies as set by the Proxy Committee and instruct our Proxy Administrator to vote all proxies accordingly. Alternatively, portfolio managers may request to review the vote recommendations and sign off on all proxies before the votes are cast, or they may choose only to sign off on those votes cast against management. The portfolio managers are also given the option of reviewing and determining the votes on all proxies without utilizing the vote guidelines of the Proxy Committee. In all cases, the portfolio managers may elect to receive current reports summarizing all proxy votes in their client accounts. Portfolio managers who vote their proxies inconsistent with T. Rowe Price guidelines are required to document the rationale for their votes. The Proxy Administrator is responsible for maintaining this documentation and assuring that it adequately reflects the basis for any vote which is cast contrary to T. Rowe Price guidelines.

T. Rowe Price Voting Policies

Specific voting guidelines have been adopted by the Proxy Committee for all regularly occurring categories of management and shareholder proposals. A detailed set of voting guidelines is available on the T. Rowe Price web site, www.troweprice.com. The following is a summary of our guidelines on the most significant proxy voting topics:

Election of Directors – For U.S. companies, T. Rowe Price generally supports slates with a majority of independent directors. However, T. Rowe Price may vote against outside directors who do not meet our criteria relating to their independence, particularly when they serve on key board committees, such as compensation and nominating committees, for which we believe that all directors should be independent. Outside the U.S., we expect companies to adhere to the minimum independence standard established by regional corporate governance codes. At a minimum, however, we believe boards in all regions should include a blend of executive and non-executive members, and we are likely to vote against senior executives at companies without any independent directors. We also vote against directors who are unable to dedicate sufficient time to their board duties due to their commitments to other boards. We may vote against certain directors who have served on company boards where we believe there has been a gross failure in governance or oversight. Additionally, we may vote against compensation committee members who approve excessive executive compensation or severance arrangements. We support efforts to elect all board members annually because boards with staggered terms lessen directors' accountability to shareholders and act as deterrents to takeover proposals. To strengthen boards' accountability, T. Rowe Price supports proposals calling for a majority vote threshold for the election of directors and we may withhold votes from an entire board if they fail to implement shareholder proposals that receive majority support.

Anti-takeover, Capital Structure and Corporate Governance Issues – T. Rowe Price generally opposes anti-takeover measures since they adversely impact shareholder rights and limit the ability of shareholders to act on potential value-enhancing transactions. Such anti-takeover mechanisms include classified boards, supermajority voting requirements, dual share classes, and poison pills. When voting on capital structure proposals, T. Rowe Price will consider the dilutive impact to shareholders and the effect on shareholder rights. We may support shareholder proposals that call for the separation of the Chairman and CEO positions if we determine that insufficient governance safeguards are in place at the company.

Executive Compensation Issues – T. Rowe Price's goal is to assure that a company's equity-based compensation plan is aligned with shareholders' long-term interests. We evaluate plans on a case-by-case basis, using a proprietary, scorecard-based approach that employs a number of factors, including dilution to shareholders, problematic plan features, burn rate, and the equity compensation mix. Plans that are constructed to effectively and fairly align executives' and shareholders' incentives generally earn our approval. Conversely, we oppose compensation packages that provide what we view as excessive awards to few senior executives, contain the potential for excessive dilution relative to the company's peers, or rely on an inappropriate mix of options and full-value awards. We also may oppose equity plans at any company where we deem the overall compensation practices to be problematic. We generally oppose efforts to reprice options in the event of a decline in value of the underlying stock unless such plans appropriately balance shareholder and employee interests. For companies with particularly egregious pay practices such as excessive severance packages, executives with outsized pledged/hedged stock positions, executive perks, and bonuses that are not adequately linked to performance, we may vote against compensation committee members. We analyze management proposals requesting ratification of a company's executive compensation practices ("Say-on-Pay" proposals) on a case-by-case basis, using a proprietary scorecard-based approach that assesses the long-term linkage between executive compensation and company performance as well as the presence of objectionable structural features in compensation plans. With respect to the frequency in

which companies should seek advisory votes on compensation, we believe shareholders should be offered the opportunity to vote annually. Finally, we may withhold votes from compensation committee members or even the entire board if we have cast votes against a company's "Say-on-Pay" vote in consecutive years.

Mergers and Acquisitions – T. Rowe Price considers takeover offers, mergers, and other extraordinary corporate transactions on a case-by-case basis to determine if they are beneficial to shareholders' current and future earnings stream and to ensure that our Price Funds and clients are receiving fair consideration for their securities. We generally oppose proposals for the ratification of executive severance packages ("Say on Golden Parachute" proposals) in conjunction with merger transactions because we believe these arrangements are, by and large, unnecessary, and they reduce the alignment of executives' incentives with shareholders' interests.

Corporate Social Responsibility Issues – Vote recommendations for corporate responsibility issues are generated by the Global Corporate Governance Analyst using ISS's proxy research and company reports. T. Rowe Price generally votes with a company's management on social, environmental and corporate responsibility issues unless the issue has substantial investment implications for the company's business or operations which have not been adequately addressed by management. T. Rowe Price supports well-targeted shareholder proposals on environmental and other public policy issues that are particularly relevant to a company's businesses.

Global Portfolio Companies – ISS applies a two-tier approach to determining and applying global proxy voting policies. The first tier establishes baseline policy guidelines for the most fundamental issues, which span the corporate governance spectrum without regard to a company's domicile. The second tier takes into account various idiosyncrasies of different countries, making allowances for standard market practices, as long as they do not violate the fundamental goals of good corporate governance. The goal is to enhance shareholder value through effective use of the shareholder franchise, recognizing that application of policies developed for U.S. corporate governance issues are not appropriate for all markets. The Proxy Committee has reviewed ISS's general global policies and has developed international proxy voting guidelines which in most instances are consistent with ISS recommendations.

Index and Passively Managed Accounts – Proxy voting for index and other passively-managed portfolios is administered by the Global Proxy Services Group using T. Rowe Price's policies as set by the Proxy Committee. If a portfolio company is held in both an actively managed account and an index account, the index account will default to the vote as determined by the actively managed proxy voting process.

Divided Votes – In situations where a decision is made which is contrary to the policies established by the Proxy Committee, or differs from the vote for any other client or T. Rowe Price Fund, the Global Proxy Services Group advises the portfolio managers involved of the divided vote. The persons representing opposing views may wish to confer to discuss their positions. In such instances, it is the normal practice for the portfolio manager to document the reasons for the vote if it is against T. Rowe Price policy. The Proxy Administrator is responsible for assuring that adequate documentation is maintained to reflect the basis for any vote which is cast in opposition to T. Rowe Price policy.

Shareblocking – Shareblocking is the practice in certain foreign countries of "freezing" shares for trading purposes in order to vote proxies relating to those shares. In markets where shareblocking applies, the custodian or sub-custodian automatically freezes shares prior to a shareholder meeting once a proxy has been voted. Shareblocking typically takes place between one and fifteen (15) days before the shareholder meeting, depending on the market. In markets where shareblocking applies, there is a potential for a pending trade to fail if trade settlement takes place during the blocking period. T. Rowe Price's policy is generally to abstain from voting shares in shareblocking countries unless the matter has compelling economic consequences that outweigh the loss of liquidity in the blocked shares.

Securities on Loan – The T. Rowe Price Funds and our institutional clients may participate in securities lending programs to generate income. Generally, the voting rights pass with the securities on loan; however, lending agreements give the lender the right to terminate the loan and pull back the loaned shares provided sufficient notice is given to the custodian bank in advance of the voting deadline. T. Rowe Price's policy is generally not to vote securities on loan unless the portfolio manager has knowledge of a material voting event that could affect the value of the loaned securities. In this event, the portfolio manager has the discretion to instruct the Proxy Administrator to pull back the loaned securities in order to cast a vote at an upcoming shareholder meeting.

Monitoring and Resolving Conflicts of Interest

The Proxy Committee is also responsible for monitoring and resolving potential conflicts between the interests of T. Rowe Price and those of its clients with respect to proxy voting. We have adopted safeguards to ensure that our proxy voting is not influenced by interests other than those of our fund shareholders. While membership on the Proxy Committee is diverse, it does not include individuals whose primary duties relate to client relationship management, marketing, or sales. Since T. Rowe Price's voting guidelines are pre-determined by the Proxy Committee, application of the guidelines by fund portfolio managers to vote fund proxies should in most instances adequately address any potential conflicts of interest. However, the Proxy Committee conducts a post-vote review of all proxy votes that are inconsistent with the guidelines to determine whether the portfolio manager's voting rationale appears reasonable. The Proxy Committee also assesses whether any business or other material relationships between T. Rowe Price and a portfolio company (unrelated to the ownership of the portfolio company's securities) could have influenced an inconsistent vote on that company's proxy. Issues raising potential conflicts of interest are referred to designated members of the Proxy Committee for immediate resolution prior to the time T. Rowe Price casts its vote. With respect to personal conflicts of interest, T. Rowe Price's Code of Ethics and Conduct requires all employees to avoid placing themselves in a "compromising position" in which their interests may conflict with those of our clients and restrict their ability to engage in certain outside business activities. Portfolio managers or Proxy Committee members with a personal conflict of interest regarding a particular proxy vote must recuse themselves and not participate in the voting decisions with respect to that proxy.

Specific Conflict of Interest Situations. Voting of T. Rowe Price Group, Inc. common stock (sym: TROW) by certain T. Rowe Price Index Funds will be done in all instances in accordance with T. Rowe Price policy, and votes inconsistent with policy will not be permitted. In addition, T. Rowe Price has voting authority for proxies of the holdings of certain T. Rowe Price funds that invest in other T. Rowe Price funds. In cases where the underlying fund of a T. Rowe Price fund-of-funds holds a proxy vote, T. Rowe Price will mirror vote the fund shares held by the fund-of-funds in the same proportion as the votes cast by the shareholders of the underlying funds.

REPORTING AND RECORD RETENTION

Vote Summary Reports will be generated for each client that requests T. Rowe Price to furnish proxy voting records. The report specifies the portfolio companies, meeting dates, proxy proposals, and votes which have been cast for the client during the period and the position taken with respect to each issue. Reports normally cover quarterly or annual periods and are provided to clients upon request.

T. Rowe Price retains proxy solicitation materials, memoranda regarding votes cast in opposition to the position of a company's management, and documentation on shares voted differently. In addition, any document which is material to a proxy voting decision such as the T. Rowe Price voting guidelines, Proxy Committee meeting materials, and other internal research relating to voting decisions will be kept. All proxy voting materials and supporting documentation are retained for six years (except for proxy statements available on the SEC's EDGAR database).

Updated: February 2013

TORRAY LLC

PROXY VOTING POLICY AND PROCEDURES

GOVERNING STANDARDS

This Proxy Voting Policy and Procedures (the "Policy") has been adopted by TORRAY LLC ("TORRAY") to comply with Rule 206(4)-6 (the "Rule") under the Investment Advisers Act of 1940 ("Advisers Act"). The Policy, which has been designed to ensure that TORRAY votes proxies in the best interest of its clients and provides clients with information about how their proxies are voted, contains procedures that have been reasonably designed to prevent and detect fraudulent, deceptive or manipulative acts by TORRAY and its advisory affiliates.¹

LEGAL REQUIREMENTS

The Rule states that it is a fraudulent, deceptive, or manipulative act, practice or course of business within the meaning of Section 206(4) of the Advisers Act, for an investment adviser to exercise voting authority with respect to client securities, unless the adviser:

- (a) Adopts and implements written policies and procedures that are reasonably designed to ensure that the adviser votes client securities in the best interest of clients, which procedures must include how the adviser addresses material conflicts that may arise between its interests and those of its clients;
- (b) Discloses to clients how they may obtain information from the adviser about how it voted with respect to their securities; and
- (c) Describes to clients the adviser's proxy voting policies and procedures and, upon request, furnish a copy of the policies and procedures to the requesting client.

In accordance with their obligations under the Rule, TORRAY has designed and adopted the following procedures to ensure that client proxies are voted in the best interest of clients at all times.

POLICY

The Policy applies to those client accounts that contain voting securities and for which TORRAY has authority to vote client proxies. The Policy will be reviewed and, as necessary, updated periodically to address new or revised proxy voting issues.

When voting proxies for client accounts, TORRAY's primary objective is to make voting decisions in the interest of maximizing shareholder value. To that end, TORRAY will vote in a way that it believes, consistent with its fiduciary duty, will cause the issue to increase the most or decline the least in value. Consideration will be given to both the short and long term implications of the proposal to be voted on when considering the optimal vote.

In certain situations, a client or its fiduciary may provide TORRAY with a statement of proxy voting policy or guidelines. In these situations, TORRAY shall seek to comply with such policy or guidelines to the extent that it would not be inconsistent with applicable regulation or its fiduciary responsibilities.

PROCEDURES

- A. TORRAY votes proxies for all clients. TORRAY will maintain a list of all clients for which it does not vote proxies. The list will be maintained electronically and updated by an individual delegated by TORRAY's Chief Compliance Officer ("CCO") on an as-needed basis.
- B. TORRAY shall ensure that it is the designated party to receive proxy voting materials from companies or intermediaries. Such entities shall be instructed to direct all proxy voting materials to TORRAY's CCO or delegated individual.
- C. TORRAY subscribes to the Broadridge Proxy Edge® service. This browser-based proxy voting system automates the physical paper handling and detailed recordkeeping needs of TORRAY's proxy voting function.

- D. Proxy Edge® informs TORRAY of when it is required to vote a particular proxy on behalf of its clients. However, TORRAY retains all decision making authority with respect to the voting of client proxies and casts such proxy votes in an electronic format via the Internet over Proxy Edge's® website.
- E. TORRAY's CCO or delegated individual will provide all proxy solicitation information and materials to the appropriate investment personnel of TORRAY (i.e., portfolio managers, analysts, etc.) for their review and consideration.
- F. In general, TORRAY shall support management if management's position appears reasonable and is not detrimental to the long-term equity ownership of the corporation. This procedure should not be interpreted as a predetermined policy to vote in favor of the management of companies held in client portfolios. As noted by the SEC in Advisers Act Release No. 2106, the fiduciary duty that TORRAY owes its clients prohibits the adoption of a policy to enter default proxy votes in favor of management. Thus, TORRAY shall review all client proxies in accordance with the general principles outlined above.
- G. If TORRAY finds that, for a particular security, management's position on resolutions cannot be supported consistently, TORRAY shall review the quality of management and the projected future expectations of the issuer to determine whether TORRAY should sell its equity interest in such company.
- H. TORRAY's investment personnel shall be responsible for making voting decisions with respect to all client proxies. Such decisions shall then be forwarded to TORRAY's CCO or delegated individual, who will then ensure that such proxy votes are submitted in a timely manner.
- I. TORRAY's CCO may delegate the actual voting of client proxies to any of TORRAY's employees who are familiar with Broadridge's Proxy Edge® service.
- J. TORRAY is not required to vote every client proxy and refraining from voting should not be construed as a violation of TORRAY's fiduciary obligations. TORRAY shall at no time ignore or neglect its proxy voting responsibilities. However, there may be times when refraining from voting is in the client's best interest, such as when an adviser's analysis of a particular client proxy reveals that the cost of voting the proxy may exceed the expected benefit to the client (e.g., casting a vote on a foreign security may require that the adviser engage a translator or travel to a foreign country to vote in person). Such position also complies with Interpretive Bulletin 94-2 of the DOL.
- K. TORRAY's CFO shall be responsible for conducting the proxy voting cost-benefit analysis in those certain situations in which TORRAY believes it may be in its clients' best interest for TORRAY not to vote a particular proxy. TORRAY's CCO shall maintain documentation of any cost-benefit analysis with respect to client proxies that are not voted by TORRAY.
- L. TORRAY's CCO will report any attempts by any of TORRAY personnel to influence the voting of client proxies in a manner that is inconsistent with TORRAY's Policy. Such report shall be made to TORRAY's President, or if the President is the person attempting to influence the voting, then to the TORRAY's outside counsel.

MATERIAL CONFLICTS OF INTEREST

- A. *General:* As noted previously, TORRAY will vote its clients' proxies in the best interest of its clients and not its own. In voting client proxies, TORRAY shall avoid material conflicts of interest between the interests of TORRAY on the one hand and the interests of its clients on the other.
- B. *Potential Material Conflicts of Interest:* TORRAY is aware of the following potential material conflicts that could affect TORRAY's proxy voting process in the future. It should be noted that these potential conflicts have been listed for informational purposes only and do not include all of the potential conflicts of interest that an adviser might face in voting client proxies. TORRAY acknowledges that the existence of a relationship of the types discussed below, even in the absence of any active efforts to solicit or influence TORRAY with respect to a proxy vote related to such relationship, is sufficient for a material conflict to exist.
 - *Example Conflict No. 1:* A client of TORRAY is affiliated with an issuer that is held in TORRAY's client portfolios. For example, XYZ's pension fund may engage TORRAY to manage its assets. XYZ is a public company and TORRAY's clients hold shares of XYZ. This type of relationship may influence TORRAY to vote with management on proxies to gain favor with management. Such favor may influence XYZ's decision to continue to engage TORRAY.
 - *Example Conflict No. 2:* A client of TORRAY is an officer or director of an issuer that is held in TORRAY's client portfolios. Similar conflicts of interest exist in this relationship as discussed above in Example Conflict No. 1.
 - *Example Conflict No. 3:* TORRAY's employees maintain a personal and/or business relationship (not an advisory relationship) with issuers or individuals that serve as officers or directors of issuers. For example, the spouse of a TORRAY employee may be a high-level executive of an issuer that is held in TORRAY's Funds. The spouse could attempt to influence TORRAY to vote in favor of management.
- C. *Determining the Materiality of Conflicts of Interest:* Determinations as to whether a conflict of interest is material will be made after internal discussion among members of a committee that will include, at a minimum, TORRAY's President and CCO. Where the President, CCO or any other member of the committee has a direct connection to the conflict in question, that person will be recused from the materiality discussion. Among the factors to be considered in determining the materiality of a conflict include whether the relevant client relationship accounts for a significant percentage of TORRAY's annual revenues, or the percentage of TORRAY's

assets that is invested with a particular issuer. Materiality determinations are fact based, and will depend on the details of a particular situation. Whether a particular conflict of interest is deemed material will be based on the likelihood that the conflict might cause a proxy to be voted in a manner that was not in the best interests of TORRAY's clients. All materiality deliberations will be memorialized in writing by the committee.

If the committee determines that the conflict in question is not material, TORRAY will vote the proxy in accordance with the policies stated herein. If a conflict is judged material, TORRAY will obtain the informed consent of the affected clients as to the fact that a material conflict exists in voting the client's proxy in the manner favored by TORRAY. If obtaining such consent from any client is impracticable or undesirable, TORRAY shall engage Institutional Shareholder Services ("ISS"), an independent proxy voting advisory and research firm, and vote the client(s) proxy in accordance with the published recommendation of ISS. Any vote recommended by ISS is binding and may not be overridden by TORRAY.

RECORDKEEPING

A. General: In accordance with Rule 204-2(c)(2) under the Advisers Act, TORRAY shall maintain the following documents in an easily accessible place for five years, the first two in an appropriate office of TORRAY:

- Proxy voting policies and procedures;
- Proxy statements received regarding client securities;
- Records of votes cast on behalf of clients;
- Records of client requests for proxy voting information; and
- Any documents prepared by TORRAY that were material to making a decision how to vote, or that memorialized the basis for the decision.

In lieu of maintaining its own copies of proxy statements as noted above, TORRAY may rely on proxy statements filed on the SEC's EDGAR system (See). Additionally, TORRAY may rely on proxy statements and records of proxy votes cast by TORRAY that are maintained with a third party, such as Broadridge.

All proxy votes will be recorded with Broadridge, or if Broadridge does not hold the information, on the *Proxy Voting Record* or in another suitable place. In either case, the following information will be maintained:

- The name of the issuer of the portfolio security;
 - The exchange ticker symbol of the portfolio security;
 - The Council on Uniform Securities Identification Procedures ("CUSIP") number for the portfolio security;
 - The shareholder meeting date;
 - The number of shares TORRAY is voting on a firm-wide basis;
 - A brief identification of the matter voted on;
 - Whether the matter was proposed by the issuer or by a security holder;
 - Whether or not TORRAY cast its votes on the matter;
 - How TORRAY cast its vote (e.g., for or against proposal, or abstain; for or withhold regarding election of directors);
 - Whether TORRAY cast its vote with or against management; and
 - Whether any client requested an alternative vote on its proxy.
- B. Conflicting Votes: In the event that TORRAY votes the same proxy in two directions, it shall maintain documentation to support its voting (this may occur if a client requires TORRAY to vote a certain way on an issue, while TORRAY deems it beneficial to vote in the opposite direction for its other clients) in the permanent file.
- C. Client Request to Review Votes: Any request, whether written (including e-mail) or oral, received by any of TORRAY's employees, must be promptly reported to TORRAY's CCO. All written requests must be retained in TORRAY's proxy voting file. The following additional procedures shall be followed with respect to a client request to review proxy voting information:

TORRAY's CCO shall record the identity of the client, the date of the request, and the disposition (e.g., provided a written or oral response to client's request, referred to third party, not a proxy voting client, other dispositions, etc.) on the document included at Exhibit B entitled *Client Requests for Proxy Information* or in another suitable place.

TORRAY shall provide the information requested, free of charge, to the client within a reasonable time period (no more than 10 business days) for their review. A copy of the information sent to the client will be maintained in the permanent file.

Clients are permitted to request, and TORRAY is required to distribute, the proxy voting record for such client for the five (5) year period prior to their request.

Transamerica Asset Management, Inc.

Proxy Voting Policies and Procedures (“TAM Proxy Policy”)

I. PURPOSE

The TAM Proxy Policy is adopted in accordance with Rule 206(4)-6 under the Investment Advisers Act of 1940 (the “Advisers Act”) and TAM’s fiduciary and other duties to its clients. The purpose of the TAM Proxy Policy is to ensure that where TAM exercises proxy voting authority with respect to client securities it does so in the best interests of the client, and that Sub-Advisers (as defined below) to TAM clients exercise voting authority with respect to TAM client securities in accordance with policies and procedures adopted by the Sub-Advisers under Rule 206(4)-6 and approved by the TAM client.

II. TAM’S ADVISORY ACTIVITIES

TAM acts as investment adviser to Transamerica Funds, Transamerica Income Shares, Inc., Transamerica Partners Portfolios, Transamerica Asset Allocation Variable Funds, and Transamerica Series Trust (collectively, the “Funds”). For most of the investment portfolios comprising the Funds, TAM has delegated day-to-day management of the portfolio, including the authority to buy, sell, or hold securities in the portfolio and to exercise proxy voting authority with respect to those securities, to one or more investment sub-advisers, pursuant to sub-advisory agreements entered into between TAM and each sub-adviser (each, a “Sub-Adviser” and collectively, the “Sub-Advisers”) and approved by the Board of Trustees/Directors of the client Fund (the “Board”). TAM serves as a “manager of managers” with respect to the Sub-Advisers and monitors their activities in accordance with the terms of an exemptive order granted by the Securities and Exchange Commission (Release No. IC-23379, August 5, 1998).

III. SUMMARY OF THE TAM PROXY POLICY

TAM delegates the responsibility to exercise voting authority with respect to securities held in the Funds’ portfolios for which one or more Sub-Advisers has been retained to the Sub-Adviser(s) for each such portfolio, in accordance with each applicable Sub-Adviser Proxy Policy (as defined below). TAM will collect and review each Sub-Adviser Proxy Policy, together with a certification from the Sub-Adviser that the Sub-Adviser Proxy Policy complies with Rule 206(4)-6, and submit these materials to the Board for approval. In the event that TAM is called upon to exercise voting authority with respect to client securities, TAM generally will vote in accordance with the recommendation of Glass, Lewis & Co., LLC. (“Glass Lewis”) or another qualified independent third party, except that if TAM believes the recommendation would not be in the best interest of the relevant portfolio and its shareholders, TAM will consult the Board of the relevant Fund (or a Committee of the Board) and vote in accordance with instructions from the Board or Committee.

IV. Delegation of Proxy Voting Authority to Sub-Advisers

TAM delegates to each Sub-Adviser the responsibility to exercise voting authority with respect to securities held by the portfolio(s), or portion thereof, managed by the Sub-Adviser. Each Sub-Adviser is responsible for monitoring, evaluating and voting on all proxy matters with regard to investments the Sub-Adviser manages for the Funds in accordance with the Sub-Adviser’s proxy voting policies and procedures adopted to comply with Rule 206(4)-6 (each, a “Sub-Adviser Proxy Policy” and collectively, the “Sub-Adviser Proxy Policies”).

V. ADMINISTRATION, REVIEW AND SUBMISSION TO BOARD OF SUB-ADVISER PROXY POLICIES

A. Appointment of Proxy Administrator

TAM will appoint an officer to be responsible for collecting and reviewing the Sub-Adviser Proxy Policies and carrying out the other duties set forth herein (the “Proxy Administrator”).

B. Initial Review

1. The Proxy Administrator will collect from each Sub-Adviser:

- a) its Sub-Adviser Proxy Policy;
- b) a certification from the Sub-Adviser that (i) its Sub-Adviser Proxy Policy is reasonably designed to ensure that the Sub-Adviser votes client securities in the best interest of clients, and that the Sub-Adviser Proxy Policy includes an explanation of how the Sub-Adviser addresses material conflicts that may arise between the Sub-Adviser’s interests and those of its clients, (ii) the Sub-Adviser Proxy Policy has been adopted in accordance with Rule 206(4)-6, and (iii) the Sub-Adviser Proxy Policy complies the terms of Rule 206(4)-6; and
- c) a summary of the Sub-Adviser Proxy Policy suitable for inclusion in the client Fund’s registration statement, in compliance with Item 13(f) of Form N-1A, and a certification to that effect.

2. The Proxy Administrator will review each Sub-Adviser Proxy Policy with a view to TAM making a recommendation to the Board. In conducting its review, TAM recognizes that the Securities and Exchange Commission has not adopted specific policies or procedures for

¹ A firm’s advisory affiliates are defined in this Policy to include: 1) all officers, partners, directors (or any person performing similar functions); 2) all persons directly or indirectly controlling or controlled by the adviser; and 3) all current employees.

advisers, or provided a list of approved procedures, but has left advisers the flexibility to craft policies and procedures suitable to their business and the nature of the conflicts they may face. As a consequence, Sub-Adviser Proxy Policies are likely to differ widely. Accordingly, the Proxy Administrator's review of the Sub-Adviser Proxy Policies will be limited to addressing the following matters:

- a) whether the Sub-Adviser Proxy Policy provides that the Sub-Adviser votes solely in the best interests of clients;
- b) whether the Sub-Adviser Proxy Policy includes a description of how the Sub-Adviser addresses material conflicts of interest that may arise between the Sub-Adviser or its affiliates and its clients; and
- c) whether the Sub-Adviser Proxy Policy includes both general policies and procedures as well as policies with respect to specific types of issues (for this purpose general policies include any delegation to a third party, policies relating to matters that may substantially affect the rights or privileges of security holders, and policies regarding the extent of weight given to the view of the portfolio company management; specific issues include corporate governance matters, changes to capital structure, stock option plans and other management compensation issues, and social corporate responsibility issues, among others).

3. The Proxy Administrator will review the certification provided pursuant to paragraph 1(b) above for completeness, and will review the summary provided pursuant to paragraph 1(c) above for compliance with the requirements of Form N-1A.

4. TAM will provide to the Board (or a Board Committee), the materials referred to in Section V.B.1. and a recommendation pursuant to the Proxy Administrator's review of the Sub-Adviser Proxy Policy provided for in Section V.B.2.

5. TAM will follow the same procedure in connection with the engagement of any new Sub-Adviser.

C. Subsequent Review

TAM will request that each Sub-Adviser provide TAM with prompt notice of any material change in its Sub-Adviser Proxy Policy. TAM will report any such changes at the next quarterly Board meeting of the applicable Fund. No less frequently than once each calendar year, TAM will request that each Sub-Adviser provide TAM with its current Sub-Adviser Proxy Policy, or certify that there have been no material changes to its Sub-Adviser Proxy Policy or that all material changes have been previously provided for review by TAM and approval by the relevant Board(s), and that the Sub-Adviser Proxy Policy continues to comply with Rule 206(4)-6.

D. Record of Proxy Votes Exercised by Sub-Adviser

The Proxy Administrator, or a third party as permitted by regulations issued by the Securities and Exchange Commission (such as Glass Lewis), will maintain a record of any proxy votes (including the information called for in Items 1(a) through (i) of Form N-PX) exercised by the Sub-Adviser on behalf of a portfolio of the Funds. The Proxy Administrator, or a third party as permitted by regulations issued by the Securities and Exchange Commission (such as Glass Lewis), will maintain a complete proxy voting record with respect to each Fund. If TAM utilizes the services of a third party for maintaining the records above specified, TAM shall obtain an undertaking from the third party that it will provide the records promptly upon request.

VI. TAM EXERCISE OF PROXY VOTING AUTHORITY

A. Use of Independent Third Party

If TAM is called upon to exercise voting authority on behalf of a Fund client, TAM will vote in accordance with the recommendations of Glass Lewis or another qualified independent third party (the "Independent Third Party"), provided that TAM agrees that the voting recommendation issued by the Independent Third Party reflects the best interests of the relevant portfolio and its shareholders.

B. Conflict with View of Independent Third Party

If, in its review of the Independent Third Party recommendation, TAM believes that the recommendation is not in the best interests of the Fund client, TAM will submit to the Board (or a Board Committee) its reasons for disagreeing with the Independent Third Party, as well as full disclosure of any conflict of interest between TAM or its affiliates and the Fund in connection with the vote, and seek consent of the Board (or Committee) with respect to TAM's proposed vote.

C. Asset Allocation Portfolios

For any asset allocation portfolio managed by TAM and operated, in whole or in part, as a "fund of funds", TAM will vote proxies in accordance with the recommendations of the Board(s) of the Fund(s). If any such asset allocation portfolio holds shares of a registered investment company that is not a portfolio of a Fund, TAM will seek Board (or Committee) consent with respect to TAM's proposed vote in accordance with the provisions of Section VI.B.

VII. CONFLICTS OF INTEREST BETWEEN TAM OR ITS AFFILIATES AND THE FUNDS

The TAM Proxy Voting Policy addresses material conflicts that may arise between TAM or its affiliates and the Funds by, in every case where TAM exercises voting discretion, either (i) providing for voting in accordance with the recommendation of the Independent Third Party or Board(s); or (ii) obtaining the consent of the Board (or a Board Committee) with full disclosure of the conflict.

VIII. RECORDKEEPING

A. Records Generally Maintained

In accordance with Rule 204-2(c)(2) under the Advisers Act, the Proxy Administrator shall cause TAM to maintain the following records:

1. the TAM Proxy Voting Policy; and
2. records of Fund client requests for TAM proxy voting information.

B. Records for TAM Exercise of Proxy Voting Authority

In accordance with Rule 204-2(c)(2) under the Advisers Act, if TAM exercises proxy voting authority pursuant to Section VI above, TAM, or a third party as permitted by regulations issued by the Securities and Exchange Commission (such as ISS), shall make and maintain the following records:

1. proxy statements received regarding matters it has voted on behalf of Fund clients;
2. records of votes cast by TAM; and
3. copies of any documents created by TAM that were material to deciding how to vote proxies on behalf of Fund clients or that memorialize the basis for such a decision.

If TAM utilizes the services of a third party for maintaining the records above specified, TAM shall obtain an undertaking from the third party that it will provide the records promptly upon request.

C. Records Pertaining to Sub-Adviser Proxy Policies

The Proxy Administrator will cause TAM and/or a third party as permitted by regulations issued by the Securities and Exchange Commission (such as ISS), to maintain the following records:

1. each Sub-Adviser Proxy Policy; and
2. the materials delineated in Article V above.

If TAM utilizes the services of a third party for maintaining the records above specified, TAM shall obtain an undertaking from the third party that it will provide the records promptly upon request.

D. Time Periods for Record Retention

All books and records required to maintain under this Section VIII will be maintained in an easily accessible place for a period of not less than five years from the end of the fiscal year during which the last entry was made on the record, the first two years in an appropriate office of TAM.

IX. PROVISION OF TAM PROXY POLICY TO FUND CLIENTS

The Proxy Administrator will provide each Fund's Board (or a Board Committee) a copy of the TAM Proxy Policy at least once each calendar year.

Last Revised: July 1, 2012

Thompson, Siegel & Walmsley LLC

Proxy Voting Policy

Thompson, Siegel & Walmsley LLC (TS&W) acknowledges it has a fiduciary obligation to its clients that requires it to monitor corporate events and vote client proxies. TS&W has adopted and implemented written policies and procedures reasonably designed to ensure that proxies for domestic and foreign stock holdings are voted in the best interest of our clients on a best efforts basis. TS&W recognizes that it (i) has a fiduciary responsibility under the Employee Retirement Income Securities Act (ERISA) to vote proxies prudently and solely in the best interest of plan participants and beneficiaries (ii) will vote stock proxies in the best interest of the client (non-ERISA) when directed (together, our "clients"). TS&W has developed its policy to be consistent with, wherever possible, enhancing long-term shareholder value and leading corporate governance practices. TS&W has retained the services of Institutional Shareholder Services (ISS). ISS is a Registered Investment Adviser under the Investment Advisers Act of 1940. As a leading provider of proxy voting and corporate governance services with 20+ years of experience, ISS serves more than 1,700 institutions. ISS's core business is to analyze proxies and issue informed research and objective vote recommendations for more than 38,000 companies across 115 markets worldwide. ISS provides TS&W proxy proposal research and voting recommendations and votes accounts on TS&W's behalf under the guidance of ISS's standard voting guidelines which include:

- Operational Issues
- Corporate Responsibility
- Board of Directors
- Consumer Issues and Public Safety
- Proxy Contests
- Environment and Energy
- Anti-takeover Defenses and Voting Related Issues

- General Corporate Issues
- Mergers and Corporate Restructurings
- Labor Standards and Human Rights
- State of Incorporation
- Military Business
- Capital Structure
- Workplace Diversity
- Executive & Director Compensation
- Mutual Fund Proxies
- Equity Compensation Plans
- Specific Treatment of Certain Award Types in Equity Plan Evaluations
- Other Compensation Proposals & Policies
- Shareholder Proposals on Compensation

TS&W's proxy coordinator is responsible for monitoring ISS's voting procedures on an ongoing basis. TS&W's general policy regarding the voting of proxies is as follows:

PROXY VOTING GUIDELINES:

Routine and/or non-controversial, general corporate governance issues are normally voted with management; this would include the Approval of Independent Auditors.

Occasionally, ISS may vote against management's proposal on a particular issue; such issues would generally be those deemed likely to reduce shareholder control over management, entrench management at the expense of shareholders, or in some way diminish shareholders' present or future value. From time to time TS&W will receive and act upon the client's specific instructions regarding proxy proposals. TS&W reserves the right to vote against any proposals motivated by political, ethical or social concerns. TS&W and ISS will examine each issue solely from an economic perspective.

A complete summary of ISS's voting guidelines, domestic & foreign, are available at: <http://www.issgovernance.com/policy>.

CONFLICTS OF INTEREST:

Occasions may arise during the voting process in which the best interests of the clients conflicts with TS&W's interests. Conflicts of interest generally include (i) business relationships where TS&W has a substantial business relationship with, or is actively soliciting business from, a company soliciting proxies (ii) personal or family relationships whereby an employee of TS&W has a family member or other personal relationship that is affiliated with a company soliciting proxies, such as a spouse who serves as a director of a public company. A conflict could also exist if a substantial business relationship exists with a proponent or opponent of a particular initiative. If TS&W determines that a material conflict of interest exists, TS&W will instruct ISS to vote using ISS's standard policy guidelines which are derived independently from TS&W.

PROXY VOTING PROCESS:

Upon timely receipt of proxy materials, ISS will automatically release vote instructions on client's behalf as soon as custom research is completed. TS&W retains authority to override the votes (before cut-off date) if they disagree with the vote recommendation.

The Proxy Coordinator will monitor the voting process at ISS via Proxy Exchange website (ISS's online voting and research platform). Records of which accounts are voted, how accounts are voted, and how many shares are voted are kept electronically with ISS.

For proxies not received at ISS, TS&W and ISS will make a best efforts attempt to receive ballots from the clients' custodian.

TS&W will be responsible for account maintenance – opening and closing of accounts, transmission of holdings and account environment monitoring.

Associate Portfolio Manager (proxy oversight representative) will keep abreast of any critical or exceptional events or events qualifying as a conflict of interest via ISS Proxy Exchange website and email. TS&W has the ability to override vote instructions, and the Associate Portfolio Manager will consult with TS&W's Investment Policy Committee or product managers in these types of situations.

All proxies are voted solely in the best interest of clients.

Proactive communication takes place via regular meetings with ISS's Client Relations Team.

PRACTICAL LIMITATIONS RELATING TO PROXY VOTING:

While TS&W uses its best efforts to vote proxies, in certain circumstances it may be impractical or impossible for TS&W to do so. Identifiable circumstances include:

Limited Value: TS&W may abstain from voting in those circumstances where it has concluded to do so would have no identifiable economic benefit to the client-shareholder.

Unjustifiable Cost: TS&W may abstain from voting when the costs of or disadvantages resulting from voting, in TS&W's judgment, outweigh the economic benefits of voting.

Securities Lending: Certain of TS&W's clients engage in securities lending programs under which shares of an issuer could be on loan while that issuer is conducting a proxy solicitation. As part of the securities lending program, if the securities are on loan at the record date, the client lending the security cannot vote that proxy. Because TS&W generally is not aware of when a security may be on loan, it does not have an opportunity to recall the security prior to the record date. Therefore, in most cases, those shares will not be voted and TS&W may not be able fully to reconcile the securities held at record date with the securities actually voted.

Failure to Receive Proxy Statements: TS&W may not be able to vote proxies in connection with certain holdings, most frequently for foreign securities, if it does not receive the account's proxy statement in time to vote the proxy.

PROXY VOTING RECORDS & REPORTS:

The proxy information is maintained by ISS on TS&W's behalf and includes the following: (i) name of the issuer, (ii) the exchange ticker symbol, (iii) the CUSIP number, (iv) the shareholder meeting date, (v) a brief description of the matter brought to vote; (vi) whether the proposal was submitted by management or a shareholder, (vii) how the proxy was voted (for, against, abstained), (viii) whether the proxy was voted for or against management, and (ix) documentation materials to make the decision. TS&W's Proxy Coordinator coordinates retrieval and report production as required or requested.

Clients will be notified annually of their ability to request a copy of our proxy policies and procedures. A copy of how TS&W voted on securities held is available free of charge upon request from our clients or by calling us toll free at (800) 697-1056.

Voya Investment Management Co. LLC

Proxy Voting Policies and Procedures

Effective as of December 13, 2012

Introduction:

ING U.S. Investment Management ("ING US IM") believes that proxies must be voted in the best interest of our clients. The ING US IM Proxy Voting Guidelines ("Guidelines") summarize various issues of concern to investors, and give a general indication of how ING US IM will vote a client's portfolio securities on proposals dealing with particular issues.

These Guidelines:

- cover only accounts managed by ING US IM for which the client has delegated voting authority to ING US IM;
- reflect the usual voting position on certain recurring proxy issues;
- are not expected to involve unusual circumstances;
- may not anticipate every proposal that will appear before all accounts managed by ING US IM;
- are subject to change as issues arise; and,
- should not be construed as binding.

While ING US IM typically looks to vote proxies similarly across managed accounts for which it has voting authority, we may, when agreed upon in writing, vote proxies for certain clients in accordance with the client's own proxy voting policy (e.g., clients wishing to accord a heightened focus to environmental, social, and corporate governance issues).

Responsibility of Investment Manager to Vote Proxies:

ING US IM has delegated certain administrative duties with respect to voting proxies to Institutional Shareholder Services Inc., an indirect, wholly-owned subsidiary of MSCI Inc. ("ISS"). ISS is an independent adviser that specializes in providing a variety of fiduciary-level proxy related services to institutional investment managers, plan sponsors, custodians, consultants, and other institutional investors. The services provided include in-depth research, global issuer analysis, and voter recommendations. While ING US IM may review and utilize the recommendations of ISS in making proxy voting decisions, we are in no way obligated to follow such recommendations. In addition to research, ISS provides vote execution, reporting, and recordkeeping services.

Adviser Procedures:

ING US IM has a Proxy Team, led by the Proxy Manager, which includes the ING Funds Proxy Coordinator team (“Proxy Coordinator”). The Proxy Team is responsible for oversight of ISS and the ING US IM proxy voting process. The Proxy Team works with ING US IM’s Middle Office, Back Office, and Senior Loan Operation Teams to ensure proper set-up and maintenance of all accounts with ISS. Responsibilities assigned to the Proxy Manager under these Guidelines may be performed by the Proxy Coordinator as deemed appropriate by the Proxy Manager.

ING US IM has a Proxy Committee whose primary responsibility is to ensure that proxies are voted consistent with firm policies. In so doing, the Proxy Committee reviews and evaluates the firm’s proxy policy, oversees the implementation of the policy and Guidelines, and resolves ad hoc issues that may arise. The Proxy Committee shall conduct its activities in accordance with its charter.

Procedural Items:

1. Voting Practices – Unless otherwise noted in these Guidelines, best efforts will be used to vote proxies in all instances. However, in addition to certain provisions described below, ING US IM may determine not to vote proxies under certain circumstances including, but not limited to, the following: (1) if the economic effect on a client’s interests or the value of the portfolio holding is indeterminable or insignificant, e.g., proxies in connection with fractional shares or securities no longer held in a client portfolio, or proxies being considered on behalf of an account that has been liquidated or is otherwise no longer in existence; (2) if the expenditure of resources required to vote the proxy outweighs the benefits, e.g., certain international proxies for which meeting- or market-specific restrictions are imposed or documentation is required (e.g., Powers of Attorney or share blocking practices that may impose trading restrictions (see item 5, below)); or (3) if ballots cannot be procured by ISS in time to execute the vote by the stated deadline, e.g., certain international proxies with early voting deadlines.

2. Securities Lending – When an account participates in the lending of its securities and the securities are on loan at record date, proxies related to such securities will not be forwarded to ISS by the account’s custodian and therefore will not be voted.

3. Conflicts of Interest – ING US IM shall establish and maintain procedures to identify and address conflicts that may arise from time to time, including those concerning ISS or its affiliates (each, a “Potential ISS Conflict”) and ING US IM or its affiliates, ING US IM clients, top counterparties used by ING US IM to execute equity trades on behalf of ING US IM clients, and/or key vendors of ING US IM (each, a “Potential ING US IM Conflict”).

a. Potential ISS Conflicts. The Proxy Manager, through the Proxy Coordinator, has adopted annual and periodic assessment procedures in which actions are taken to (1) reasonably ensure ISS’ independence, competence, and impartiality and (2) identify and address conflicts that may arise from time to time concerning ISS or its affiliates. The procedures includes comprehensive due diligence regarding policies, practices, and activities of ISS and its affiliates as well as specific analysis of ISS’ services on behalf of ING US IM and its clients.

b. Potential ING US IM Conflicts. The Proxy Team maintains a Potential Proxy Conflicts List, which it uses to screen for Potential ING US IM Conflicts whenever the Proxy Committee considers voting contrary to the Guidelines (see item 3, below).

4. Investment Team Input – Members of the Investment Team (defined for purposes of these Guidelines to include ING US IM Equity Portfolio Managers, Equity Research Analysts, and Traders) may submit recommendations to the Proxy Committee, through the Proxy Manager, regarding the voting of proxies related to the portfolio securities over which they have day-to-day portfolio management responsibility. Input from the relevant member of the Investment Team will be given consideration in the determination of how the proxy will be voted.

If a member of the Investment Team wishes to diverge from the Guidelines, the request shall be sent to the Proxy Manager for review and action. Before acting on any Investment Team input, the Proxy Manager shall first determine whether a Potential ING US IM Conflict is present and whether the security is held by more than one Portfolio Manager.

a. If the Proxy Manager determines that a Potential ING US IM Conflict is present, the Proxy Manager will follow the course noted in 4.d., below.

b. If the Proxy Manager determines that no Potential ING US IM Conflict is present and the security is held by only one Portfolio Manager, the Proxy Manager shall inform the Proxy Committee of the request but may instruct the Proxy Team to execute the vote as requested, provided that no member of the Proxy Committee asks that a meeting be called to further consider the vote.

c. If the Proxy Manager determines that no Potential ING US IM Conflict is present and more than one Portfolio Manager holds the security, the Proxy Manager will consult with the other relevant member(s) of the Investment Team on the voting matter. If all members of the Investment Team concur, the Proxy Manager will follow the course noted in 4.b., above. If all members of the Investment Team do not concur, the Proxy Manager will follow the course noted in 4.d., below.

d. When required to resolve a Potential ING US IM Conflict or consider multiple views from members of the Investment Team, the Proxy Manager will call a meeting of the Proxy Committee. The Proxy Committee will consider the matter and vote on the best course of action. Additional insight may be provided to the Proxy Committee from internal analysts who cover the security. The Proxy Manager shall use best efforts to convene the Proxy Committee with respect to all matters requiring its consideration. In the event quorum requirements cannot be timely met in connection with a voting deadline, the Proxy Manager shall execute the vote in accordance with the Guidelines.

A record shall be maintained regarding any determination to vote contrary to the Guidelines, including those where a Potential ING US IM Conflict is present, referencing the member(s) of the Investment Team requesting the vote and their rationale for it.

5. Share-blocking Countries – ING US IM does not generally vote proxies in countries which impose share-blocking or for which custodians may impose share-blocking. ING US IM may vote proxies in share-blocking countries if the proxy is listed as non share-blocking by ISS.

6. Auto-release of Proxy Votes – Accounts at ISS are set up to auto-release votes as timely as practical except in share-blocking countries, which are never auto released. Certain considerations, such as conflicts of interest or Investment Team input, may require manual intervention on the Proxy Team’s part to adjust a voting instruction.

7. Unverified Accounts – From time to time, ballots may be posted by ISS to accounts designated as ING US IM accounts but not yet verified as such. ING US IM will cease voting activity for any account for which it has been verified ING US IM has not been given voting authority. Treatment of ballots during the verification process will generally be tailored to operational considerations of the business line to which the account is related:

a. Wrap business. The wrap business is subject to ongoing service provider turnover, which typically occurs without prior notification to ING US IM and may result in a high level of new account generation related to ballots being redirected from existing accounts to new ones. As such, the voting of unverified wrap accounts is an accepted industry practice, and ING US IM will generally vote ballots received for unverified accounts in the wrap business line during the account verification process.

b. Institutional business. ING US IM generally has prior notification of client or service provider changes that may impact voting accounts in the institutional line of business. Unverified accounts are more likely to be generated due to operational errors. Accordingly, ballots for unverified accounts in the institutional line of business will generally not be voted unless the account has been verified.

How ING US IM Votes Proxies:

Except where ING US IM has agreed to implement a client-specific proxy voting policy, the proxies received by accounts managed by ING US IM are generally voted using the ISS Benchmark Policy, which is designed to assist in the informed exercise of proxy voting worldwide, taking into account the differing legal, political, and economic systems existing in each country. Core to the development of the proxy voting guidelines are key theoretical underpinnings that include: enhancing shareholder value, mitigating risk, ensuring accountability of directors to shareholders, providing checks and balances, and promoting transparency and engagement. The application of these guidelines varies for different markets, with the basic principles of governance remaining evident in each region’s policies. An understanding of local market structures and practices is essential for making informed voting decisions. The exercise of an institution’s proxy voting rights is a key component in protecting the shareholder franchise. Below is a summary of the guidelines used in the ISS Benchmark Policy.

1. Audit Items:

- ISS will generally recommend a vote FOR proposals to ratify auditors unless:
 - a. An auditor has a financial interest in or association with the company, and is therefore not independent
 - b. There is reason to believe that the independent auditor has rendered an opinion which is neither accurate nor indicative of the company’s financial position; or
 - c. Poor accounting practices are identified that rise to a serious level of concern or fees for non-audit services are excessive.
- ISS will recommend votes case-by-case as to shareholder proposals asking companies to prohibit or limit their auditors from engaging in non-audit services. Non-audit fees are generally deemed excessive if they exceed audit fees plus audit related fees plus tax compliance/preparation fees.
- ISS will recommend votes case-by-case as to shareholder proposals asking for audit firm rotation, taking into account: the tenure of the audit firm; the length of rotation specified in the proposal; any significant audit-related issues at the company; the number of Audit Committee meetings held each year; the number of financial experts serving on the Audit Committee; and whether the company has a periodic renewal process where the auditor is evaluated for both audit quality and competitive price.

2. Board of Directors:

- ISS will generally recommend withholding support from non-independent directors if:
 - a. The inside or affiliated director serves on any of the three key committees: audit, compensation, or nominating;
 - b. The company lacks an audit, compensation, or nominating committee so that the full board functions as that committee;

c. The company lacks a formal nominating committee, even if the board attests that the independent directors fulfill the functions of such a committee; or

d. The full board is comprised of less than a majority of independent directors.

The ISS Benchmark Policy incorporates standards for board independence which are more stringent than listing standards.

- ISS will generally recommend withholding support from continuing directors if there are problematic takeover defenses, problematic audit- related practices, problematic compensation practices, or governance failures.
- ISS may recommend withholding support from continuing directors at companies with sustained poor performance relative to peers and problematic governance provisions.
- ISS will generally recommend withholding support from continuing directors when the board is not responsive to shareholders.
- ISS will generally recommend withholding support from continuing directors for attendance issues and overboarding.
- ISS will generally recommend a vote FOR proposals for majority threshold voting requirements.
- ISS' recommendations allow for lead director and countervailing governance structure in lieu of separation of CEO and chairman roles.
- ISS generally does not recommend withholding support from a CEO director unless the CEO director serves on more than 3 boards. ISS generally does not recommend withholding support from a non-CEO director unless the director serves on more than 6 boards.

3. Proxy Contests:

- ISS' recommendations as to voting for director nominees in contested elections are made on a case-by-case basis considering the following factors:
 - a. Long term financial performance of the target company relative to its industry;
 - b. Management's track record;
 - c. Background to the proxy contest;
 - d. Qualifications of director nominees (both slates);
 - e. Strategic plan of dissident slate;
 - f. Quality of critique against management;
 - g. Likelihood that the proposed goals and objectives can be achieved (both slates); and
 - h. Stock ownership positions.
- ISS' recommendations are made on a case-by-case basis on proposals to reimburse proxy solicitation expenses. When voting in conjunction with support of a dissident slate, ISS generally recommends a vote FOR the reimbursement of all appropriate proxy solicitation expenses associated with the election.
- ISS will generally recommend a vote FOR shareholder proposals calling for the reimbursement of reasonable costs incurred in connection with nominating one or more candidates in a contested election where the following apply:
 - a. The election of fewer than 50 percent of the directors to be elected is contested in the election;
 - b. One or more of the dissident's candidates is elected;
 - c. Shareholders are not permitted to cumulate their votes for directors; and
 - d. The election occurred, and the expenses were incurred, after the adoption of this bylaw.

4. Anti-takeover Defenses and Voting Related Issues:

- ISS will make a vote recommendation on a case-by-case basis, giving support to proposals that allow shareholders to submit proposals/nominations reasonably close to the meeting date and within the broadest window possible, recognizing the need to allow sufficient notice for company, regulatory and shareholder review. In general, ISS is generally supportive of additional efforts by companies to ensure full disclosure in regard to a proponent's economic and voting position in the company so long as the information requirements are reasonable and aimed at providing shareholders with the necessary information to review such proposal.
- ISS will generally recommend a vote FOR shareholder proposals requesting that the company submit its poison pill to a shareholder vote unless the company has a shareholder approved poison pill in place or the company has adopted a policy concerning the adoption of a pill in the future specifying that the board will only adopt a shareholder rights plan if either shareholders have approved the adoption of the plan or the board determines that it is in the best interest of shareholders to adopt the pill without delay. A poison pill adopted only by the board would be put to a shareholder ratification vote within 12 months of adoption or expire.

- ISS will generally make a vote recommendation on a case-by-case basis on management proposals on poison pill ratification, focusing on the features of the shareholder rights plan. The ISS Benchmark Policy suggests that rights plans should contain the following attributes:
 - a. No lower than a 20 percent trigger, flip-in or flip-over;
 - b. A term of no more than three years;
 - c. No dead-hand, slow-hand, no-hand or similar feature that limits the ability of a future board to redeem the pill; and
 - d. Shareholder redemption feature (qualifying offer clause).
- For management proposals to adopt a poison pill for the stated purpose of preserving a company's net operating losses, the following factors should be considered:
 - a. The trigger;
 - b. The value of the net operating losses;
 - c. The term;
 - d. Shareholder protection mechanisms; and
 - e. Other factors that may be applicable.
- ISS will generally recommend a vote to withhold support from the entire board of directors if the board adopts or renews a poison pill without shareholder approval, does not commit to putting it to a shareholder vote within 12 months of adoption, or reneges on a commitment to put the pill to a vote.

5. Mergers and Corporate Restructurings

- For mergers and acquisitions, the ISS Benchmark Policy is designed to review and evaluate the merits and drawbacks of the proposed transaction, balancing various and countervailing factors including:
 - a. Valuation;
 - b. Market reaction;
 - c. Strategic rationale;
 - d. Negotiations and process;
 - e. Conflicts of interest; and
 - f. Governance

6. State of Incorporation

- The ISS Benchmark Policy will evaluate management or shareholder proposals to change a company's state of incorporation on a case-by-case basis, giving consideration to both financial and corporate governance concerns including:
 - a. Reasons for incorporation;
 - b. Comparison of company's governance practices and provisions prior to and following the reincorporation; and
 - c. Comparison of corporate laws of original state and destination state.
- ISS will generally recommend a vote FOR reincorporation when the economic factors outweigh any neutral or negative governance changes.

7. Capital Structure

- The ISS Benchmark Policy will evaluate on a case-by-case basis proposals to increase the number of shares of common stock or preferred stock authorized for issuance. The Policy is designed to take into account company-specific factors which include, at a minimum, the following:
 - a. Past Board Performance:
 1. The company's use of authorized shares during the last three years
 - b. The Current Request:
 1. Disclosure in the proxy statement of the specific purposes of the proposed increase;
 2. Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request; and

3. The dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns.

- ISS will generally recommend a vote FOR proposals to approve increases beyond the allowable cap when a company's shares are in danger of being de-listed or if a company's ability to continue to operate as a going concern is uncertain.
- ISS will generally recommend a vote AGAINST proposals authorizing the creation of new classes of preferred stock with unspecified voting, conversion, dividend distribution, and other rights ("blank check" preferred stock).
- ISS will generally recommend a vote FOR proposals to create "de-clawed" blank check preferred stock (stock that cannot be used as a takeover defense).
- ISS will generally recommend a vote FOR proposals to authorize preferred stock in cases where the company specifies the voting, dividend, conversion, and other rights of such stock and the terms of the preferred stock appear reasonable.
- ISS will generally recommend a vote AGAINST proposals to increase the number of blank check preferred stock authorized for issuance when no shares have been issued or reserved for a specific purpose.
- ISS will generally recommend a vote FOR proposals to increase the number of authorized common shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.
- ISS will generally recommend a vote AGAINST proposals at companies with more than one class of common stock to increase the number of authorized shares of the class of common stock that has superior voting rights.
- ISS will generally recommend a vote AGAINST proposals to increase the number of authorized common shares if a vote for a reverse stock split on the same ballot is warranted despite the fact that the authorized shares would not be reduced proportionally.

8. Executive and Director Compensation:

- ISS will generally recommend a vote AGAINST equity plans if:
 - a. Cost of equity plan is excessive;
 - b. The company's 3 year equity burn rate is egregious;
 - c. Re-pricing is permitted; and
 - d. The plan allows for accelerated vesting of awards without an actual change in control.
- ISS will generally recommend a vote AGAINST compensation plans if ISS believes a pay-for-performance disconnect exists.
- ISS will generally recommend withholding support for "egregious" pay practices.
- Advisory Vote on Compensation (MSOP) – ISS considers three key factors that may be critical to long-term shareholder value: 1) Whether there is a significant misalignment between CEO pay and company performance; 2) Whether the company maintains problematic pay practices; and, 3) Whether the board has exhibited persistent poor communication and lack of responsiveness to shareholders.

9. Corporate Social Responsibility Issues:

- ISS will generally evaluate environmental and social issues on a case-by- case basis, evaluating each on an industry by industry basis through a long-term risk mitigation prism in an effort to identify the impact on the firm's immediate economic value as compared to its peers.

10. Global Proxies:

- ING US IM will generally vote in accordance with ISS' global voting policies, which provide for varying regulatory and legal requirements, market practices, and political and economic systems existing in various global markets. ISS' voting policies in connection with proxies of U.S. issuers may also be applied to global proxies when applicable. Unless otherwise provided for herein, it shall generally be the policy of ING US IM to withhold support from global proxy proposals in cases in which ISS recommends so doing because relevant disclosure by the issuer, or the time provided for consideration of such disclosure, is inadequate.

Wellington Management Company, LLP

Global Proxy Voting Guidelines

INTRODUCTION

Upon a client's written request, Wellington Management Company, LLP ("Wellington Management") votes securities that are held in the client's account in response to proxies solicited by the issuers of such securities. Wellington Management established these *Global Proxy Voting Guidelines* to document positions generally taken on common proxy issues voted on behalf of clients.

These guidelines are based on Wellington Management's fiduciary obligation to act in the best economic interest of its clients as shareholders. Hence, Wellington Management examines and votes each proposal so that the long-term effect of the vote will ultimately

increase shareholder value for our clients. Because ethical considerations can have an impact on the long-term value of assets, our voting practices are also attentive to these issues and votes will be cast against unlawful and unethical activity. Further, Wellington Management's experience in voting proposals has shown that similar proposals often have different consequences for different companies. Moreover, while these *Global Proxy Voting Guidelines* are written to apply globally, differences in local practice and law make universal application impractical. Therefore, each proposal is evaluated on its merits, taking into account its effects on the specific company in question, and on the company within its industry. It should be noted that the following are guidelines, and not rigid rules, and Wellington Management reserves the right in all cases to vote contrary to guidelines where doing so is judged to represent the best economic interest of its clients.

Following is a list of common proposals and the guidelines on how Wellington Management anticipates voting on these proposals. The "(SP)" after a proposal indicates that the proposal is usually presented as a Shareholder Proposal.

VOTING GUIDELINES

Composition and Role of the Board of Directors

- Election of Directors: Case-by-Case

We believe that shareholders' ability to elect directors annually is the most important right shareholders have. We generally support management nominees, but will withhold votes from any director who is demonstrated to have acted contrary to the best economic interest of shareholders. We may also withhold votes from directors who failed to implement shareholder proposals that received majority support, implemented dead-hand or no-hand poison pills, or failed to attend at least 75% of scheduled board meetings.

- Classify Board of Directors: Against

We will also vote in favor of shareholder proposals seeking to declassify boards.

- Adopt Director Tenure/Retirement Age (SP): Against

- Adopt Director & Officer Indemnification: For

We generally support director and officer indemnification as critical to the attraction and retention of qualified candidates to the board. Such proposals must incorporate the duty of care.

- Allow Special Interest Representation to Board (SP): Against

- Require Board Independence: For

We believe that, in the absence of a compelling counter-argument or prevailing market norms, at least 65% of a board should be comprised of independent directors, with independence defined by the local market regulatory authority. Our support for this level of independence may include withholding approval for non-independent directors, as well as votes in support of shareholder proposals calling for independence.

- Require Key Board Committees to be Independent. For

Key board committees are the Nominating, Audit, and Compensation Committees. Exceptions will be made, as above, in respect of local market conventions.

- Require a Separation of Chair and CEO or Require a Lead Director (SP): Case-by-Case

We will generally support management proposals to separate the Chair and CEO or establish a Lead Director.

- Approve Directors' Fees: For

- Approve Bonuses for Retiring Directors: Case-by-Case

- Elect Supervisory Board/Corporate Assembly: For

- Elect/Establish Board Committee: For

- Adopt Shareholder Access/Majority Vote on Election of Directors (SP): Case-by-Case

We believe that the election of directors by a majority of votes cast is the appropriate standard for companies to adopt and therefore generally will support those proposals that seek to adopt such a standard. Our support for such proposals will extend typically to situations where the relevant company has an existing resignation policy in place for directors that receive a majority of "withhold" votes. We believe that it is important for majority voting to be defined within the company's charter and not simply within the company's corporate governance policy.

Generally we will not support proposals that fail to provide for the exceptional use of a plurality standard in the case of contested elections. Further, we will not support proposals that seek to adopt a majority of votes outstanding (i.e., total votes *eligible* to be cast as opposed to actually cast) standard.

Management Compensation

- Adopt/Amend Stock Option Plans: Case-by-Case

- Adopt/Amend Employee Stock Purchase Plans: For
- Approve/Amend Bonus Plans: Case-by-Case

In the US, Bonus Plans are customarily presented for shareholder approval pursuant to Section 162(m) of the Omnibus Budget Reconciliation Act of 1992 (“OBRA”). OBRA stipulates that certain forms of compensation are not tax-deductible unless approved by shareholders and subject to performance criteria. Because OBRA does not prevent the payment of subject compensation, we generally vote “for” these proposals. Nevertheless, occasionally these proposals are presented in a bundled form seeking 162 (m) approval and approval of a stock option plan. In such cases, failure of the proposal prevents the awards from being granted. We will vote against these proposals where the grant portion of the proposal fails our guidelines for the evaluation of stock option plans.

- Approve Remuneration Policy: Case-by-Case
- To approve compensation packages for named executive Officers: Case-by-Case
- To determine whether the compensation vote will occur every 1, 2 or 3 years: 1 Year
- Exchange Underwater Options: Case-by-Case

We may support value-neutral exchanges in which senior management is ineligible to participate.

- Eliminate or Limit Severance Agreements (Golden Parachutes): Case-by-Case

We will oppose excessively generous arrangements, but may support agreements structured to encourage management to negotiate in shareholders’ best economic interest.

- To approve golden parachute arrangements in connection with certain corporate transactions: Case-by-Case
- Shareholder Approval of Future Severance Agreements Covering Senior Executives (SP): Case-by-Case

We believe that severance arrangements require special scrutiny, and are generally supportive of proposals that call for shareholder ratification thereof. But, we are also mindful of the board’s need for flexibility in recruitment and retention and will therefore oppose limitations on board compensation policy where respect for industry practice and reasonable overall levels of compensation have been demonstrated.

- Expense Future Stock Options (SP): For
- Shareholder Approval of All Stock Option Plans (SP): For
- Disclose All Executive Compensation (SP): For

Reporting of Results

- Approve Financial Statements: For
- Set Dividends and Allocate Profits: For
- Limit Non-Audit Services Provided by Auditors (SP): Case-by-Case

We follow the guidelines established by the Public Company Accounting Oversight Board regarding permissible levels of non-audit fees payable to auditors.

- Ratify Selection of Auditors and Set Their Fees: Case-by-Case

We will generally support management’s choice of auditors, unless the auditors have demonstrated failure to act in shareholders’ best economic interest.

- Elect Statutory Auditors: Case-by-Case
- Shareholder Approval of Auditors (SP): For

Shareholder Voting Rights

- Adopt Cumulative Voting (SP): Against

We are likely to support cumulative voting proposals at “controlled” companies (i.e., companies with a single majority shareholder), or at companies with two-tiered voting rights.

- Shareholder Rights Plans: Case-by-Case

Also known as Poison Pills, these plans can enable boards of directors to negotiate higher takeover prices on behalf of shareholders. However, these plans also may be misused to entrench management. The following criteria are used to evaluate both management and shareholder proposals regarding shareholder rights plans.

We generally support plans that include:

- Shareholder approval requirement

- Sunset provision
- Permitted bid feature (i.e., bids that are made for all shares and demonstrate evidence of financing must be submitted to a shareholder vote).

Because boards generally have the authority to adopt shareholder rights plans without shareholder approval, we are equally vigilant in our assessment of requests for authorization of blank check preferred shares (see below).

- Authorize Blank Check Preferred Stock: Case-by-Case

We may support authorization requests that specifically proscribe the use of such shares for anti-takeover purposes.

- Eliminate Right to Call a Special Meeting: Against
- Establish Right to Call a Special Meeting or Lower Ownership Threshold to Call a Special Meeting (SP): Case-by-Case
- Increase Supermajority Vote Requirement: Against

We likely will support shareholder and management proposals to remove existing supermajority vote requirements.

- Adopt Anti-Greenmail Provision: For
- Adopt Confidential Voting (SP): Case-by-Case

We require such proposals to include a provision to suspend confidential voting during contested elections so that management is not subject to constraints that do not apply to dissidents.

- Remove Right to Act by Written Consent: Against

Capital Structure

- Increase Authorized Common Stock: Case-by-Case

We generally support requests for increases up to 100% of the shares currently authorized. Exceptions will be made when the company has clearly articulated a reasonable need for a greater increase. Conversely, at companies trading in less liquid markets, we may impose a lower threshold.

- Approve Merger or Acquisition: Case-by-Case
- Approve Technical Amendments to Charter: Case-by-Case
- Opt Out of State Takeover Statutes: For
- Authorize Share Repurchase: For
- Authorize Trade in Company Stock: For
- Approve Stock Splits: Case-by-Case

We approve stock splits and reverse stock splits that preserve the level of authorized, but unissued shares.

- Approve Recapitalization/Restructuring: Case-by-Case
- Issue Stock with or without Preemptive Rights: Case-by-Case
- Issue Debt Instruments: Case-by-Case

Environmental and Social Issues

We expect portfolio companies to comply with applicable laws and regulations with regards to environmental and social standards. We evaluate shareholder proposals related to environmental and social issues on a case-by-case basis.

- Disclose Political and PAC Gifts (SP): Case-by-Case
- Report on Sustainability (SP): Case-by-Case

Miscellaneous

- Approve Other Business: Against
- Approve Reincorporation: Case-by-Case
- Approve Third-Party Transactions: Case-by-Case

Dated: March 8, 2012

Global Proxy Policy and Procedures

INTRODUCTION

Wellington Management Company, LLP (“Wellington Management”) has adopted and implemented policies and procedures that it believes are reasonably designed to ensure that proxies are voted in the best economic interests of its clients around the world.

Wellington Management’s Proxy Voting Guidelines (the “Guidelines”), which are incorporated by reference to these Global Proxy Policy and Procedures, set forth the sets of guidelines that Wellington Management uses in voting specific proposals presented by the boards of directors or shareholders of companies whose securities are held in client portfolios for which Wellington Management has voting discretion. While the Guidelines set forth general sets of guidelines for voting proxies, it should be noted that these are guidelines and not rigid rules. Many of the Guidelines are accompanied by explanatory language that describes criteria that may affect our vote decision. The criteria as described are to be read as part of the guideline, and votes cast according to the criteria will be considered within guidelines. In some circumstances, the merits of a particular proposal may cause us to enter a vote that differs from the Guidelines.

STATEMENT OF POLICY

As a matter of policy, Wellington Management:

1. Takes responsibility for voting client proxies only upon a client’s written request.
2. Votes all proxies in the best interests of its clients as shareholders, i.e., to maximize economic value.
3. Develops and maintains broad guidelines setting out positions on common proxy issues, but also considers each proposal in the context of the issuer, industry, and country or countries in which its business is conducted.
4. Evaluates all factors it deems relevant when considering a vote, and may determine in certain instances that it is in the best interest of one or more clients to refrain from voting a given proxy ballot.
5. Identifies and resolves all material proxy-related conflicts of interest between the firm and its clients in the best interests of the client.
6. Believes that sound corporate governance practices can enhance shareholder value and therefore encourages consideration of an issuer’s corporate governance as part of the investment process.
7. Believes that proxy voting is a valuable tool that can be used to promote sound corporate governance to the ultimate benefit of the client as shareholder.
8. Provides all clients, upon request, with copies of these Global Proxy Policy and Procedures, the Guidelines, and related reports, with such frequency as required to fulfill obligations under applicable law or as reasonably requested by clients.
9. Reviews regularly the voting record to ensure that proxies are voted in accordance with these Global Proxy Policy and Procedures and the Guidelines; and ensures that procedures, documentation, and reports relating to the voting of proxies are promptly and properly prepared and disseminated.

RESPONSIBILITY AND OVERSIGHT

Wellington Management has a Corporate Governance Committee, established by action of the firm’s Executive Committee, that is responsible for the review and approval of the firm’s written Global Proxy Policy and Procedures and the Guidelines, and for providing advice and guidance on specific proxy votes for individual issuers. The firm’s Legal and Compliance Group monitors regulatory requirements with respect to proxy voting on a global basis and works with the Corporate Governance Committee to develop policies that implement those requirements. Day-to-day administration of the proxy voting process at Wellington Management is the responsibility of the Global Research Services Group. In addition, the Global Research Services Group acts as a resource for portfolio managers and research analysts on proxy matters, as needed.

STATEMENT OF PROCEDURES

Wellington Management has in place certain procedures for implementing its proxy voting policy.

General Proxy Voting

AUTHORIZATION TO VOTE

Wellington Management will vote only those proxies for which its clients have affirmatively delegated proxy-voting authority.

RECEIPT OF PROXY

Proxy materials from an issuer or its information agent are forwarded to registered owners of record, typically the client’s custodian bank. If a client requests that Wellington Management votes proxies on its behalf, the client must instruct its custodian bank to deliver all relevant voting material to Wellington Management or its voting agent. Wellington Management, or its voting agent, may receive this voting information by mail, fax, or other electronic means.

RECONCILIATION

To the extent reasonably practicable, each public security proxy received by electronic means is matched to the securities eligible to be voted and a reminder is sent to any custodian or trustee that has not forwarded the proxies as due. Although proxies received for private securities, as well as those received in non-electronic format, are voted as received, Wellington Management is not able to reconcile these proxies to holdings, nor does it notify custodians of non-receipt.

RESEARCH

In addition to proprietary investment research undertaken by Wellington Management investment professionals, the firm conducts proxy research internally, and uses the resources of a number of external sources to keep abreast of developments in corporate governance around the world and of current practices of specific companies.

PROXY VOTING

Following the reconciliation process, each proxy is compared against the Guidelines, and handled as follows:

- Generally, issues for which explicit proxy voting guidance is provided in the Guidelines (i.e., “For”, “Against”, “Abstain”) are reviewed by the Global Research Services Group and voted in accordance with the Guidelines.
- Issues identified as “case-by-case” in the Guidelines are further reviewed by the Global Research Services Group. In certain circumstances, further input is needed, so the issues are forwarded to the relevant research analyst and/or portfolio manager(s) for their input.
- Absent a material conflict of interest, the portfolio manager has the authority to decide the final vote. Different portfolio managers holding the same securities may arrive at different voting conclusions for their clients’ proxies.

Material Conflict of Interest Identification and Resolution Processes: Wellington Management’s broadly diversified client base and functional lines of responsibility serve to minimize the number of, but not prevent, material conflicts of interest it faces in voting proxies. Annually, the Corporate Governance Committee sets standards for identifying material conflicts based on client, vendor, and lender relationships, and publishes those standards to individuals involved in the proxy voting process. In addition, the Corporate Governance Committee encourages all personnel to contact the Global Research Services Group about apparent conflicts of interest, even if the apparent conflict does not meet the published materiality criteria. Apparent conflicts are reviewed by designated members of the Corporate Governance Committee to determine if there is a conflict, and if so whether the conflict is material.

If a proxy is identified as presenting a material conflict of interest, the matter must be reviewed by designated members of the Corporate Governance Committee, who will resolve the conflict and direct the vote. In certain circumstances, the designated members may determine that the full Corporate Governance Committee should convene. Any Corporate Governance Committee member who is himself or herself subject to the identified conflict will not participate in the decision on whether and how to vote the proxy in question.

Other Considerations

In certain instances, Wellington Management may be unable to vote or may determine not to vote a proxy on behalf of one or more clients. While not exhaustive, the following list of considerations highlights some potential instances in which a proxy vote might not be entered.

SECURITIES LENDING

Wellington Management may be unable to vote proxies when the underlying securities have been lent out pursuant to a client’s securities lending program. In general, Wellington Management does not know when securities have been lent out and are therefore unavailable to be voted. Efforts to recall loaned securities are not always effective, but, in rare circumstances, Wellington Management may recommend that a client attempt to have its custodian recall the security to permit voting of related proxies.

SHARE BLOCKING AND RE-REGISTRATION

Certain countries require shareholders to stop trading securities for a period of time prior to and/or after a shareholder meeting in that country (i.e., share blocking). When reviewing proxies in share blocking countries, Wellington Management evaluates each proposal in light of the trading restrictions imposed and determines whether a proxy issue is sufficiently important that Wellington Management would consider the possibility of blocking shares. The portfolio manager retains the final authority to determine whether to block the shares in the client’s portfolio or to pass on voting the meeting.

In certain countries, re-registration of shares is required to enter a proxy vote. As with share blocking, re-registration can prevent Wellington Management from exercising its investment discretion to sell shares held in a client’s portfolio for a substantial period of time. The decision process in blocking countries as discussed above is also employed in instances where re-registration is necessary.

LACK OF ADEQUATE INFORMATION, UNTIMELY RECEIPT OF PROXY MATERIALS, OR EXCESSIVE COSTS

Wellington Management may be unable to enter an informed vote in certain circumstances due to the lack of information provided in the proxy statement or by the issuer or other resolution sponsor, and may abstain from voting in those instances. Proxy materials not delivered in a timely fashion may prevent analysis or entry of a vote by voting deadlines. In addition, Wellington Management’s practice is to abstain from voting a proxy in circumstances where, in its judgment, the costs exceed the expected benefits to clients. Requirements for Powers of Attorney and consularization are examples of such circumstances.

Additional Information: Wellington Management maintains records of proxies voted pursuant to Section 204-2 of the Investment Advisers Act of 1940 (the “Advisers Act”), the Employee Retirement Income Security Act of 1974, as amended (“ERISA”), and other applicable laws.

Wellington Management’s Global Proxy Policy and Procedures may be amended from time to time by Wellington Management. Wellington Management provides clients with a copy of its Global Proxy Policy and Procedures, including the Guidelines, upon written request. In addition, Wellington Management will make specific client information relating to proxy voting available to a client upon reasonable written request.

Western Asset Management Company

Proxy Voting Policies and Procedures

BACKGROUND

An investment adviser is required to adopt and implement policies and procedures that we believe are reasonably designed to ensure that proxies are voted in the best interest of clients, in accordance with fiduciary duties and SEC Rule 206(4)-6 under the Investment Advisers Act of 1940 (“Advisers Act”). The authority to vote the proxies of our clients is established through investment management agreements or comparable documents. In addition to SEC requirements governing advisers, long-standing fiduciary standards and responsibilities have been established for ERISA accounts. Unless a manager of ERISA assets has been expressly precluded from voting proxies, the Department of Labor has determined that the responsibility for these votes lies with the investment manager.

POLICY

As a fixed income only manager, the occasion to vote proxies is very rare. However, the Firm has adopted and implemented policies and procedures that we believe are reasonably designed to ensure that proxies are voted in the best interest of clients, in accordance with our fiduciary duties and SEC Rule 206(4)-6 under the Investment Advisers Act of 1940 (“Advisers Act”). In addition to SEC requirements governing advisers, our proxy voting policies reflect the long-standing fiduciary standards and responsibilities for ERISA accounts. Unless a manager of ERISA assets has been expressly precluded from voting proxies, the Department of Labor has determined that the responsibility for these votes lies with the Investment Manager.

While the guidelines included in the procedures are intended to provide a benchmark for voting standards, each vote is ultimately cast on a case-by-case basis, taking into consideration the Firm’s contractual obligations to our clients and all other relevant facts and circumstances at the time of the vote (such that these guidelines may be overridden to the extent the Firm deems appropriate).

In exercising its voting authority, Western Asset will not consult or enter into agreements with officers, directors or employees of Legg Mason Inc. or any of its affiliates (other than Western Asset Management Company Limited) regarding the voting of any securities owned by its clients.

PROCEDURE

Responsibility and Oversight

The Western Asset Legal and Compliance Department (“Compliance Department”) is responsible for administering and overseeing the proxy voting process. The gathering of proxies is coordinated through the Corporate Actions area of Investment Support (“Corporate Actions”). Research analysts and portfolio managers are responsible for determining appropriate voting positions on each proxy utilizing any applicable guidelines contained in these procedures.

Client Authority

The Investment Management Agreement for each client is reviewed at account start-up for proxy voting instructions. If an agreement is silent on proxy voting, but contains an overall delegation of discretionary authority or if the account represents assets of an ERISA plan, Western Asset will assume responsibility for proxy voting. The Legal and Compliance Department maintains a matrix of proxy voting authority.

Proxy Gathering

Registered owners of record, client custodians, client banks and trustees (“Proxy Recipients”) that receive proxy materials on behalf of clients should forward them to Corporate Actions. Proxy Recipients for new clients (or, if Western Asset becomes aware that the applicable Proxy Recipient for an existing client has changed, the Proxy Recipient for the existing client) are notified at start-up of appropriate routing to Corporate Actions of proxy materials received and reminded of their responsibility to forward all proxy materials on a timely basis. If Western Asset personnel other than Corporate Actions receive proxy materials, they should promptly forward the materials to Corporate Actions.

Proxy Voting

Once proxy materials are received by Corporate Actions, they are forwarded to the Legal and Compliance Department for coordination and the following actions:

- a. Proxies are reviewed to determine accounts impacted.
- b. Impacted accounts are checked to confirm Western Asset voting authority.

c. Legal and Compliance Department staff reviews proxy issues to determine any material conflicts of interest. (See conflicts of interest section of these procedures for further information on determining material conflicts of *interest*.)

d. If a material conflict of interest exists, (i) to the extent reasonably practicable and permitted by applicable law, the client is promptly notified, the conflict is disclosed and Western Asset obtains the client's proxy voting instructions, and (ii) to the extent that it is not reasonably practicable or permitted by applicable law to notify the client and obtain such instructions (e.g., the client is a mutual fund or other commingled vehicle or is an ERISA plan client), Western Asset seeks voting instructions from an independent third party.

e. Legal and Compliance Department staff provides proxy material to the appropriate research analyst or portfolio manager to obtain their recommended vote. Research analysts and portfolio managers determine votes on a case-by-case basis taking into account the voting guidelines contained in these procedures. For avoidance of doubt, depending on the best interest of each individual client, Western Asset may vote the same proxy differently for different clients. The analyst's or portfolio manager's basis for their decision is documented and maintained by the Legal and Compliance Department.

f. Legal and Compliance Department staff votes the proxy pursuant to the instructions received in (d) or (e) and returns the voted proxy as indicated in the proxy materials.

Timing

Western Asset personnel act in such a manner to ensure that, absent special circumstances, the proxy gathering and proxy voting steps noted above can be completed before the applicable deadline for returning proxy votes.

Recordkeeping

Western Asset maintains records of proxies voted pursuant to Section 204-2 of the Advisers Act and ERISA DOL Bulletin 94-2. These records include:

- A copy of Western Asset's policies and procedures.
- Copies of proxy statements received regarding client securities.
- A copy of any document created by Western Asset that was material to making a decision how to vote proxies.
- Each written client request for proxy voting records and Western Asset's written response to both verbal and written client requests.
- A proxy log including:
 - Issuer name;
 - Exchange ticker symbol of the issuer's shares to be voted;
 - Committee on Uniform Securities Identification Procedures ("CUSIP") number for the shares to be voted;
 - A brief identification of the matter voted on;
 - Whether the matter was proposed by the issuer or by a shareholder of the issuer;
 - Whether a vote was cast on the matter;
 - A record of how the vote was cast; and
 - Whether the vote was cast for or against the recommendation of the issuer's management team.

Records are maintained in an easily accessible place for five years, the first two in Western Asset's offices.

Disclosure

Western Asset's proxy policies are described in the firm's Part II of Form ADV. Clients will be provided a copy of these policies and procedures upon request. In addition, upon request, clients may receive reports on how their proxies have been voted.

Conflicts of Interest

All proxies are reviewed by the Legal and Compliance Department for material conflicts of interest. Issues to be reviewed include, but are not limited to:

- Whether Western (or, to the extent required to be considered by applicable law, its affiliates) manages assets for the company or an employee group of the company or otherwise has an interest in the company;
- Whether Western or an officer or director of Western or the applicable portfolio manager or analyst responsible for recommending the proxy vote (together, "Voting Persons") is a close relative of or has a personal or business relationship with an executive, director or person who is a candidate for director of the company or is a participant in a proxy contest; and
- Whether there is any other business or personal relationship where a Voting Person has a personal interest in the outcome of the matter before shareholders.

Voting Guidelines

Western Asset's substantive voting decisions turn on the particular facts and circumstances of each proxy vote and are evaluated by the designated research analyst or portfolio manager. The examples outlined below are meant as guidelines to aid in the decision making process.

Guidelines are grouped according to the types of proposals generally presented to shareholders. Part I deals with proposals which have been approved and are recommended by a company's board of directors; Part II deals with proposals submitted by shareholders for inclusion in proxy statements; Part III addresses issues relating to voting shares of investment companies; and Part IV addresses unique considerations pertaining to foreign issuers.

I. BOARD APPROVED PROPOSALS

The vast majority of matters presented to shareholders for a vote involve proposals made by a company itself that have been approved and recommended by its board of directors. In view of the enhanced corporate governance practices currently being implemented in public companies, Western Asset generally votes in support of decisions reached by independent boards of directors. More specific guidelines related to certain board-approved proposals are as follows:

Matters relating to the Board of Directors

Western Asset votes proxies for the election of the company's nominees for directors and for board-approved proposals on other matters relating to the board of directors with the following exceptions:

- Votes are withheld for the entire board of directors if the board does not have a majority of independent directors or the board does not have nominating, audit and compensation committees composed solely of independent directors.
- Votes are withheld for any nominee for director who is considered an independent director by the company and who has received compensation from the company other than for service as a director.
- Votes are withheld for any nominee for director who attends less than 75% of board and committee meetings without valid reasons for absences.
- Votes are cast on a case-by-case basis in contested elections of directors.

Matters relating to Executive Compensation

Western Asset generally favors compensation programs that relate executive compensation to a company's long-term performance. Votes are cast on a case-by-case basis on board-approved proposals relating to executive compensation, except as follows:

- Except where the firm is otherwise withholding votes for the entire board of directors, Western Asset votes for stock option plans that will result in a minimal annual dilution.
- Western Asset votes against stock option plans or proposals that permit replacing or repricing of underwater options.
- Western Asset votes against stock option plans that permit issuance of options with an exercise price below the stock's current market price.
- Except where the firm is otherwise withholding votes for the entire board of directors, Western Asset votes for employee stock purchase plans that limit the discount for shares purchased under the plan to no more than 15% of their market value, have an offering period of 27 months or less and result in dilution of 10% or less.

Matters relating to Capitalization

The management of a company's capital structure involves a number of important issues, including cash flows, financing needs and market conditions that are unique to the circumstances of each company. As a result, Western Asset votes on a case-by-case basis on board-approved proposals involving changes to a company's capitalization except where Western Asset is otherwise withholding votes for the entire board of directors.

- Western Asset votes for proposals relating to the authorization of additional common stock.
- Western Asset votes for proposals to effect stock splits (excluding reverse stock splits).
- Western Asset votes for proposals authorizing share repurchase programs.

Matters relating to Acquisitions, Mergers, Reorganizations and Other Transactions

Western Asset votes these issues on a case-by-case basis on board-approved transactions.

Matters relating to Anti-Takeover Measures

Western Asset votes against board-approved proposals to adopt anti-takeover measures except as follows:

- Western Asset votes on a case-by-case basis on proposals to ratify or approve shareholder rights plans.
- Western Asset votes on a case-by-case basis on proposals to adopt fair price provisions.

Other Business Matters

Western Asset votes for board-approved proposals approving such routine business matters such as changing the company's name, ratifying the appointment of auditors and procedural matters relating to the shareholder meeting.

- Western Asset votes on a case-by-case basis on proposals to amend a company's charter or bylaws.
- Western Asset votes against authorization to transact other unidentified, substantive business at the meeting.

II. SHAREHOLDER PROPOSALS

SEC regulations permit shareholders to submit proposals for inclusion in a company's proxy statement. These proposals generally seek to change some aspect of a company's corporate governance structure or to change some aspect of its business operations. Western Asset votes in accordance with the recommendation of the company's board of directors on all shareholder proposals, except as follows:

- Western Asset votes for shareholder proposals to require shareholder approval of shareholder rights plans.
- Western Asset votes for shareholder proposals that are consistent with Western Asset's proxy voting guidelines for board-approved proposals.
- Western Asset votes on a case-by-case basis on other shareholder proposals where the firm is otherwise withholding votes for the entire board of directors.

III. VOTING SHARES OF INVESTMENT COMPANIES

Western Asset may utilize shares of open or closed-end investment companies to implement its investment strategies. Shareholder votes for investment companies that fall within the categories listed in Parts I and II above are voted in accordance with those guidelines.

- Western Asset votes on a case-by-case basis on proposals relating to changes in the investment objectives of an investment company taking into account the original intent of the fund and the role the fund plays in the clients' portfolios.
- Western Asset votes on a case-by-case basis all proposals that would result in increases in expenses (e.g., proposals to adopt 12b-1 plans, alter investment advisory arrangements or approve fund mergers) taking into account comparable expenses for similar funds and the services to be provided.

IV. VOTING SHARES OF FOREIGN ISSUERS

In the event Western Asset is required to vote on securities held in non-U.S. issuers – i.e. issuers that are incorporated under the laws of a foreign jurisdiction and that are not listed on a U.S. securities exchange or the NASDAQ stock market, the following guidelines are used, which are premised on the existence of a sound corporate governance and disclosure framework. These guidelines, however, may not be appropriate under some circumstances for foreign issuers and therefore apply only where applicable.

- Western Asset votes for shareholder proposals calling for a majority of the directors to be independent of management.
- Western Asset votes for shareholder proposals seeking to increase the independence of board nominating, audit and compensation committees.
- Western Asset votes for shareholder proposals that implement corporate governance standards similar to those established under U.S. federal law and the listing requirements of U.S. stock exchanges, and that do not otherwise violate the laws of the jurisdiction under which the company is incorporated.
- Western Asset votes on a case-by-case basis on proposals relating to (1) the issuance of common stock in excess of 20% of a company's outstanding common stock where shareholders do not have preemptive rights, or (2) the issuance of common stock in excess of 100% of a company's outstanding common stock where shareholders have preemptive rights.

RETIREMENT ACCOUNTS

For accounts subject to ERISA, as well as other Retirement Accounts, Western Asset is presumed to have the responsibility to vote proxies for the client. The Department of Labor ("DOL") has issued a bulletin that states that investment managers have the responsibility to vote proxies on behalf of Retirement Accounts unless the authority to vote proxies has been specifically reserved to another named fiduciary. Furthermore, unless Western Asset is expressly precluded from voting the proxies, the DOL has determined that the responsibility remains with the investment manager.

In order to comply with the DOL's position, Western Asset will be presumed to have the obligation to vote proxies for its Retirement Accounts unless Western Asset has obtained a specific written instruction indicating that: (a) the right to vote proxies has been reserved to a named fiduciary of the client, and (b) Western Asset is precluded from voting proxies on behalf of the client. If Western Asset does not receive such an instruction, Western Asset will be responsible for voting proxies in the best interests of the Retirement Account client and in accordance with any proxy voting guidelines provided by the client.

Appendix B – Portfolio Managers

In addition to managing the assets of each portfolio, a portfolio manager may have responsibility for managing other client accounts of the applicable adviser or its affiliates. The tables below show, per portfolio manager, the number and asset size of (1) SEC registered investment companies (or series thereof) other than each portfolio, (2) pooled investment vehicles that are not registered investment companies and (3) other accounts (e.g., accounts managed for individuals or organizations) managed by a portfolio manager. Total assets attributed to a portfolio manager in the tables below include total assets of each account managed, although a portfolio manager may only manage a portion of such account's assets. The tables also show the number of performance based fee accounts, as well as the total assets of the accounts for which the advisory fee is based on the performance of the account. This information is provided as of each portfolio's most recent fiscal year end, except as otherwise noted.

AllianceBernstein L.P. (“AllianceBernstein”)

Conflict of Interest

As an investment adviser and fiduciary, AllianceBernstein owes its clients and shareholders an undivided duty of loyalty. AllianceBernstein recognizes that conflicts of interest are inherent in its business and accordingly has developed policies and procedures (including oversight monitoring) reasonably designed to detect, manage and mitigate the effects of actual or potential conflicts of interest in the area of employee personal trading, managing multiple accounts for multiple clients, and allocating investment opportunities. Investment professionals, including portfolio managers and research analysts, are subject to the above-mentioned policies and oversight monitoring to ensure that all clients are treated equitably. AllianceBernstein places the interests of its clients first and expects all of its employees to meet their fiduciary duties.

Employee Personal Trading

AllianceBernstein has adopted a Code of Business Conduct and Ethics that is designed to detect and prevent conflicts of interest when investment professionals and other personnel of AllianceBernstein own, buy or sell securities which may be owned by, or bought or sold for, clients. Personal securities transactions by an employee may raise a potential conflict of interest when an employee owns or trades in a security that is owned or considered for purchase or sale by a client, or recommended for purchase or sale by an employee to a client. Subject to the reporting requirements and other limitations of its Code of Business Conduct and Ethics, AllianceBernstein permits its employees to engage in personal securities transactions, and also allows them to acquire investments in the AllianceBernstein Mutual Funds through direct purchase, 401k/profit sharing plan investment and/or notionally in connection with deferred incentive compensation awards. AllianceBernstein's Code of Ethics and Business Conduct requires disclosure of all personal accounts and maintenance of brokerage accounts with designated broker-dealers approved by AllianceBernstein. The Code also requires preclearance of all securities transactions and imposes a 90 day holding period for securities purchased by employees to discourage short-term trading.

Managing Multiple Accounts for Multiple Clients

AllianceBernstein has compliance policies and oversight monitoring in place to address conflicts of interest relating to the management of multiple accounts for multiple clients. Conflicts of interest may arise when an investment professional has responsibilities for the investments of more than one account because the investment professional may be unable to devote equal time and attention to each account. The investment professional or investment professional teams for each client may have responsibilities for managing all or a portion of the investments of multiple accounts with a common investment strategy, including other registered investment companies, unregistered investment vehicles, such as hedge funds, pension plans, separate accounts, collective trusts and charitable foundations. Among other things, AllianceBernstein's policies and procedures provide for the prompt dissemination to investment professionals of initial or changed investment recommendations by analysts so that investment professionals are better able to develop investment strategies for all accounts they manage. In addition, investment decisions by investment professionals are reviewed for the purpose of maintaining uniformity among similar accounts and ensuring that accounts are treated equitably. No investment professional that manages client accounts carrying performance fees is compensated directly or specifically for the performance of those accounts. Investment professional compensation reflects a broad contribution in multiple dimensions to long-term investment success for our clients and is not tied specifically to the performance of any particular client's account, nor is it directly tied to the level or change in the level of assets under management.

Allocating Investment Opportunities

AllianceBernstein has policies and procedures intended to address conflicts of interest relating to the allocation of investment opportunities. These policies and procedures are designed to ensure that information relevant to investment decisions is disseminated promptly within its portfolio management teams and investment opportunities are allocated equitably among different clients. The investment professionals at AllianceBernstein routinely are required to select and allocate investment opportunities among accounts. Portfolio holdings, position sizes, and industry and sector exposures tend to be similar across similar accounts which minimizes the potential for conflicts of interest relating to the allocation of investment opportunities. Nevertheless, investment opportunities may be allocated differently among accounts due to the particular characteristics of an account, such as size of the account, cash position, tax status, risk tolerance and investment restrictions or for other reasons.

AllianceBernstein's procedures are also designed to prevent potential conflicts of interest that may arise when AllianceBernstein has a particular financial incentive, such as a performance-based management fee, relating to an account. An investment professional may perceive that he or she has an incentive to devote more time to developing and analyzing investment strategies and opportunities or allocating securities preferentially to accounts for which AllianceBernstein could share in investment gains.

To address these conflicts of interest, AllianceBernstein's policies and procedures require, among other things, the prompt dissemination to investment professionals of any initial or changed investment recommendations by analysts; the aggregation of orders to facilitate best execution for all accounts; price averaging for all aggregated orders; objective allocation for limited investment opportunities (e.g., on a rotational basis) to ensure fair and equitable allocation among accounts; and limitations on short sales of securities. These procedures also require documentation and review of justifications for any decisions to make investments only for select accounts or in a manner disproportionate to the size of the account.

Compensation

AllianceBernstein's compensation program for portfolio managers and analysts is designed to be competitive and effective in order to attract and retain the highest caliber employees. Portfolio managers receive base compensation, incentive compensation and contributions to AllianceBernstein's 401(k) plan. Part of the annual incentive compensation is normally paid in the form of a cash bonus and part through an award under the firm's Incentive Compensation Award Plan (ICAP). The ICAP awards vest over a four-year period. Deferred awards are in the form of the firm's publicly traded equity units, although award recipients have the ability to receive a portion of their awards in deferred cash.

Total compensation is determined by quantitative and qualitative factors. Quantitative factors, which are weighted more heavily, are driven by investment performance to align compensation with client investment returns. Qualitative factors are driven by portfolio managers' contributions to the investment process and client success.

The quantitative component includes measures of absolute, relative and risk-adjusted investment performance. Relative and risk-adjusted returns are determined based on the benchmark in the fund's prospectus and versus peers over one-, three- and five-year calendar periods—with more weight given to longer time periods. Peer groups are chosen by investment CIOs, who consult with the Product Management team to identify products most similar to our investment style and most relevant within the asset class.

The qualitative component incorporates the manager's contribution to the overall investment process and our clients' success. Among the important aspects are: thought leadership, collaboration with other investment professionals at the firm, contributions to risk-adjusted returns in other portfolios, building a strong talent pool, mentoring newer investment professionals, and being a good corporate citizen.

Other factors can play a part in determining portfolio managers' compensation, including complexity of investment strategies managed, volume of assets managed and experience. Assessments of investment professionals are formalized in a year-end review process that includes 360-degree feedback from other professionals from across the investment teams and firm.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

Conflict of Interest

AUIM individual portfolio managers may manage multiple accounts for multiple clients. In addition to the sub-advisory management of the portfolios, AUIM manages separate accounts for institutions, individuals, as well as various affiliated entities, which could create the potential for conflicts of interest. AUIM recognizes its fiduciary obligation to treat all clients, including the portfolios, fairly and equitably. AUIM mitigates the potential for conflicts between accounts through its trade aggregation and allocation policy and procedures. To facilitate the fair treatment among all our client accounts, AUIM does not consider factors such as: account performance, account fees, or our affiliate relationships when aggregating and allocating orders. In addition to the trade aggregation and allocation policy and procedures, AUIM manages conflicts of interest between the portfolios and other client accounts through compliance with AUIM's Code of Ethics, internal review processes, and senior management oversight.

Compensation

As of December 31, 2013, each portfolio manager's compensation is provided by the portfolio's sub-adviser and not by the portfolio. The portfolio manager's compensation consists of a fixed base salary and a variable performance incentive. The performance incentive is based on the following factors: the economic performance of the overall relevant portfolio manager's asset class, including the performance of the portfolio's assets; leadership and communication with clients; assisting with the sub-adviser's strategic goals; and Aegon USA's earnings results. The economic performance of the overall relevant portfolio manager's asset class, including the performance of the portfolio's assets is measured over a 1 and 3 year (weighted 40:60) period against peer group benchmark data, such as eVestment and Morningstar; High Yield and Emerging Market asset classes are evaluated on a three year annualized total return relative to benchmark data. Some of the portfolio managers participate in the sub-adviser's deferred compensation plan, which is based on the same performance factors as the variable performance incentive compensation but payment of which is spread over a three-year period.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

Lewis Ropp	0	\$0	0	\$0	0	\$0

¹ Mr. Nixon is a member of a team managing 62 other accounts and \$5.5 billion in the large cap value strategy.

Conflicts of Interest

Actual or potential conflicts of interest may arise when a portfolio manager has management responsibilities to more than one account (including the Fund). BHMS manages potential conflicts between funds or with other types of accounts through allocation policies and procedures, internal review processes and oversight by directors and independent third parties to ensure that no client, regardless of type or fee structure, is intentionally favored at the expense of another. Allocation policies are designed to address potential conflicts in situations where two or more funds or accounts participate in investment decisions involving the same securities.

Compensation

In addition to base salary, all portfolio managers and analysts at BHMS share in a bonus pool that is distributed semi-annually. Portfolio managers and analysts are rated on their value added to the team-oriented investment process. Overall compensation applies with respect to all accounts managed and compensation does not differ with respect to distinct accounts managed by a portfolio manager. Compensation is not tied to a published or private benchmark. It is important to understand that contributions to the overall investment process may include not recommending securities in an analyst’s sector if there are no compelling opportunities in the industries covered by that analyst.

The compensation of portfolio managers is not directly tied to fund performance or growth in assets for any fund or other account managed by a portfolio manager and portfolio managers are not compensated for bringing in new business. Of course, growth in assets from the appreciation of existing assets and/or growth in new assets will increase revenues and profit. The consistent, long-term growth in assets at any investment firm is to a great extent, dependent upon the success of the portfolio management team. The compensation of the portfolio management team at BHMS will increase over time, if and when assets continue to grow through competitive performance. Lastly, many of our key investment personnel have a long-term incentive compensation plan in the form of an equity interest in BHMS.

Ownership of Securities

As of December 31, 2013, the portfolio managers did not own any shares of the fund.

Potential Material Conflicts of Interest

BlackRock has built a professional working environment, firm-wide compliance culture and compliance procedures and systems designed to protect against potential incentives that may favor one account over another. BlackRock has adopted policies and procedures that address the allocation of investment opportunities, execution of portfolio transactions, personal trading by employees and other potential conflicts of interest that are designed to ensure that all client accounts are treated equitably over time. Nevertheless, BlackRock furnishes investment management and advisory services to numerous clients in addition to the Fund, and BlackRock may, consistent with applicable law, make investment recommendations to other clients or accounts (including accounts which are hedge funds or have performance or higher fees paid to BlackRock, or in which portfolio managers have a personal interest in the receipt of such fees), which may be the same as or different from those made to the Fund. In addition, BlackRock, its affiliates and significant shareholders and any officer, director, shareholder or employee may or may not have an interest in the securities whose purchase and sale BlackRock recommends to the Fund. BlackRock, or any of its affiliates or significant shareholders, or any officer, director, shareholder, employee or any member of their families may take different actions than those recommended to the Fund by BlackRock with respect to the same securities. Moreover, BlackRock may refrain from rendering any advice or services concerning securities of companies of which any of BlackRock's (or its affiliates' or significant shareholders') officers, directors or employees are directors or officers, or companies as to which BlackRock or any of its affiliates or significant shareholders or the officers, directors and employees of any of them has any substantial economic interest or possesses material non-public information. Certain portfolio managers also may manage accounts whose investment strategies may at times be opposed to the strategy utilized for a fund. It should also be noted that Messrs. Doll, Hanson, Pellicciaro, Rieder, and Stournaras may be managing hedge fund and/or long only accounts, or may be part of a team managing hedge fund and/or long only accounts, subject to incentive fees. Messrs. Doll, Hanson, Pellicciaro, Rieder, and Stournaras may therefore be entitled to receive a portion of any incentive fees earned on such accounts.

As a fiduciary, BlackRock owes a duty of loyalty to its clients and must treat each client fairly. When BlackRock purchases or sells securities for more than one account, the trades must be allocated in a manner consistent with its fiduciary duties. BlackRock attempts to allocate investments in a fair and equitable manner among client accounts, with no account receiving preferential treatment. To this end, BlackRock has adopted policies that are intended to ensure reasonable efficiency in client transactions and provide BlackRock with sufficient flexibility to allocate investments in a manner that is consistent with the particular investment discipline and client base, as appropriate.

Portfolio Manager Compensation Overview

BlackRock's financial arrangements with its portfolio managers, its competitive compensation and its career path emphasis at all levels reflect the value senior management places on key resources. Compensation may include a variety of components and may vary from year to year based on a number of factors. The principal components of compensation include a base salary, a performance-based discretionary bonus, participation in various benefits programs and one or more of the incentive compensation programs established by BlackRock.

Base compensation

Generally, portfolio managers receive base compensation based on their position with the firm.

Discretionary Incentive Compensation for Messrs. Christofel, Green, and Ramukumar:

Discretionary incentive compensation is a function of several components: the performance of BlackRock, Inc., the performance of the portfolio manager's group within BlackRock, the investment performance, including risk-adjusted returns, of the firm's assets under management or supervision by that portfolio manager, and the individual's performance and contribution to the overall performance of these portfolios and BlackRock. Among other things, BlackRock's Chief Investment Officers make a subjective determination with respect to each portfolio manager's compensation based on the performance of the Funds and other accounts managed by each portfolio manager. Performance of multi-asset class funds is generally measured on a pre-tax basis over various time periods including 1-, 3- and 5- year periods, as applicable. The performance of Messrs. Christofel, Green and Ramukumar is not measured against a specific benchmark.

Discretionary Incentive Compensation for Messrs. Chamby, Roldan, and Stattman:

Generally, discretionary incentive compensation for Global Allocation portfolio managers is based on a formulaic compensation program. The team's formulaic portfolio manager compensation program is based on team revenue with a measure of operational efficiency, and pre-tax investment performance relative to benchmark over 1 and 5-year performance periods. In most cases, these benchmarks are the same as the benchmark or benchmarks against which the performance of the Funds or other accounts managed by the portfolio managers are measured. BlackRock's Chief Investment Officers determine the benchmarks or rankings against which the performance of funds and other accounts managed by each portfolio management team is compared and the period of time over which performance is evaluated. With respect to these portfolio managers, such benchmarks for the Fund and other accounts are: S&P 500 Index; FTSE World ex-US Index; BofA Merrill Lynch Current 5-Year Treasury Index; Citigroup Non-Dollar World Government Bond Index.

A smaller element of portfolio manager discretionary compensation may include consideration of: financial results, expense control, profit margins, strategic planning and implementation, quality of client service, market share, corporate reputation, capital allocation, compliance and risk control, leadership, technology and innovation. These factors are considered collectively by BlackRock management.

Distribution of Discretionary Incentive Compensation

Discretionary incentive compensation is distributed to portfolio managers in a combination of cash and BlackRock, Inc. restricted stock units which vest ratably over a number of years. For some portfolio managers, discretionary incentive compensation is also distributed in deferred cash awards that notionally track the returns of select BlackRock investment products they manage and that vest ratably over a number of years. The BlackRock, Inc. restricted stock units, upon vesting, will be settled in BlackRock, Inc. common stock. Typically, the cash portion of the discretionary incentive compensation, when combined with base salary, represents more than 60% of total compensation for the portfolio managers. Paying a portion of discretionary incentive compensation in BlackRock, Inc. stock puts compensation earned by a portfolio manager for a given year "at risk" based on BlackRock's ability to sustain and improve its performance over future periods. Providing a portion of discretionary incentive compensation in deferred cash awards that notionally track the BlackRock investment products they manage provides direct alignment with investment product results.

Long-Term Incentive Plan Awards: From time to time long-term incentive equity awards are granted to certain key employees to aid in retention, align their interests with long-term shareholder interests and motivate performance. Equity awards are generally granted in the form of BlackRock, Inc. restricted stock units that, once vested, settle in BlackRock, Inc. common stock. Mr. Green has unvested long-term incentive awards.

Deferred Compensation Program: A portion of the compensation paid to eligible United States-based BlackRock employees may be voluntarily deferred at their election for defined periods of time into an account that tracks the performance of certain of the firm's investment products. Any portfolio manager who is either a managing director or director at BlackRock is eligible to participate in the deferred compensation program.

Other compensation benefits: In addition to base compensation and discretionary incentive compensation, portfolio managers may be eligible to receive or participate in one or more of the following:

Incentive Savings Plans – BlackRock, Inc. has created a variety of incentive savings plans in which BlackRock employees are eligible to participate, including a 401(k) plan, the BlackRock Retirement Savings Plan (RSP), and the BlackRock Employee Stock Purchase Plan (ESPP). The employer contribution components of the RSP include a company match equal to 50% of the first 8% of eligible pay contributed to the plan capped at \$5,000 per year, and a company retirement contribution equal to 3-5% of eligible compensation up to the Internal Revenue Service limit (\$255,000 for 2013). The RSP offers a range of investment options, including registered investment companies and collective investment funds managed by the firm. BlackRock contributions follow the investment direction set by participants for their own contributions or, absent participant investment direction, are invested into a target date fund that corresponds to, or is closest to, the year in which the participant attains age 65. The ESPP allows for investment in BlackRock common stock at a 5% discount on the fair market value of the stock on the purchase date. Annual participation in the ESPP is limited to the purchase of 1,000 shares of common stock or a dollar value of \$25,000 based on its fair market value on the purchase date. All of the eligible portfolio managers are eligible to participate in these plans.

Portfolio Manager Potential Material Conflicts of Interest

BlackRock has built a professional working environment, firm-wide compliance culture and compliance procedures and systems designed to protect against potential incentives that may favor one account over another. BlackRock has adopted policies and procedures that address the allocation of investment opportunities, execution of portfolio transactions, personal trading by employees and other potential conflicts of interest that are designed to ensure that all client accounts are treated equitably over time. Nevertheless, BlackRock furnishes investment management and advisory services to numerous clients in addition to the Fund, and BlackRock may, consistent with applicable law, make investment recommendations to other clients or accounts (including accounts which are hedge funds or have performance or higher fees paid to BlackRock, or in which portfolio managers have a personal interest in the receipt of such fees), which may be the same as or different from those made to the Fund. In addition, BlackRock, its affiliates and significant shareholders and any officer, director, shareholder or employee may or may not have an interest in the securities whose purchase and sale BlackRock recommends to the Fund. BlackRock, or any of its affiliates or significant shareholders, or any officer, director, shareholder, employee or any member of their families may take different actions than those recommended to the Fund by BlackRock with respect to the same securities. Moreover, BlackRock may refrain from rendering any advice or services concerning securities of companies of which any of BlackRock's (or its affiliates' or significant shareholders') officers, directors or employees are directors or officers, or companies as to which BlackRock or any of its affiliates or significant shareholders or the officers, directors and employees of any of them has any substantial economic interest or possesses material non-public information. Certain portfolio managers also may manage accounts whose investment strategies may at times be opposed to the strategy utilized for a fund. It should also be noted that a portfolio manager may be managing hedge fund and/or long only accounts, or may be part of a team managing hedge fund and/or long only accounts, subject to incentive fees. Such portfolio managers may therefore be entitled to receive a portion of any incentive fees earned on such accounts. Currently, the portfolio managers of these funds are not entitled to receive a portion of incentive fees of other accounts.

As a fiduciary, BlackRock owes a duty of loyalty to its clients and must treat each client fairly. When BlackRock purchases or sells securities for more than one account, the trades must be allocated in a manner consistent with its fiduciary duties. BlackRock attempts to allocate investments in a fair and equitable manner among client accounts, with no account receiving preferential treatment. To this end, BlackRock has adopted policies that are intended to ensure reasonable efficiency in client transactions and provide BlackRock with sufficient flexibility to allocate investments in a manner that is consistent with the particular investment discipline and client base, as appropriate.

Ownership of Securities

As of December 31, 2013, the portfolio managers did not beneficially own any shares of the portfolio(s).

Portfolio Manager	Registered Investment Companies		Other Pooled Investment Vehicles		Other Accounts	
	Number	Assets Managed	Number	Assets Managed	Number	Assets Managed
Joseph P. Smith, CFA	0	\$0	2	\$118 million	8	\$2.05 billion

Conflict of Interest

A CBRE Clarion portfolio manager may be subject to potential conflicts of interest because the portfolio manager is responsible for other accounts in addition to the fund. These other accounts may include, among others, other mutual funds, separately managed advisory accounts, commingled trust accounts, insurance separate accounts, wrap fee programs and hedge funds. Potential conflicts may arise out of the implementation of differing investment strategies for a portfolio manager's various accounts, the allocation of investment opportunities among those accounts or differences in the advisory fees paid by the portfolio manager's accounts.

A potential conflict of interest may arise as a result of a CBRE Clarion portfolio manager's responsibility for multiple accounts with similar investment guidelines. Under these circumstances, a potential investment may be suitable for more than one of the portfolio manager's accounts, but the quantity of the investment available for purchase is less than the aggregate amount the accounts would ideally devote to the opportunity. Similar conflicts may arise when multiple accounts seek to dispose of the same investment.

A CBRE Clarion portfolio manager may also manage accounts whose objectives and policies differ from those of the fund. These differences may be such that under certain circumstances, trading activity appropriate for one account managed by the portfolio manager may have adverse consequences for another account managed by the portfolio manager. For example, if an account were to sell a significant position in a security, which could cause the market price of that security to decrease, while the fund maintained its position in that security.

A potential conflict may also arise when a CBRE Clarion portfolio manager is responsible for accounts that have different advisory fees – the difference in the fees may create an incentive for the portfolio manager to favor one account over another, for example, in terms of access to particularly appealing investment opportunities. This conflict may be heightened where an account is subject to a performance-based fee.

The sub-adviser recognizes the duty of loyalty it owes to its clients and has established and implemented certain policies and procedures designed to control and mitigate conflicts of interest arising from the execution of a variety of portfolio management and trading strategies across the firm's diverse client base. Such policies and procedures include, but are not limited to, (i) investment process, portfolio management and trade allocation procedures (ii) procedures regarding short sales in securities recommended for other clients; and (iii) procedures regarding personal trading by the firm's employees (contained in the Code of Ethics).

Compensation

There are five pieces of compensation for CBRE Clarion portfolio managers:

Base Salary— Portfolio manager salaries are reviewed annually and fixed for each year at competitive market levels.

Profit Participation— Senior management, including the portfolio managers primarily responsible for the Fund, owns a minority interest in CBRE Clarion. Ownership entitles senior management to an increasing share of the firm's profit over time, although an owner's equity interest may be forfeited if the individual resigns voluntarily in the first several years.

Bonus— Portfolio manager bonuses are drawn from an incentive compensation pool into which a significant percentage of CBRE Clarion's pre-tax profits is set aside. Bonuses are based upon the measurement of performance in the portfolio manager's respective area of coverage. Performance is quantified through a proprietary "scorecard" graded by the CEO and the other CIOs. In order to avoid the pitfalls of relying solely upon a rigid performance format, however, the overall bonus takes into account other important factors such as the portfolio manager's contribution to the team, firm, and overall process.

Deferred Compensation— A portion of the incentive compensation pool is set aside each year as deferred compensation for a large number of senior employees in the firm, including the portfolio managers. These awards have vesting and payout features, which encourage long-term stability of our senior staff.

Other Compensation— Portfolio managers may also participate in benefit plans and programs available generally to all employees, such as CBRE Clarion's 401(k) plan.

Portfolio manager compensation is not based on the performance of any particular account, including the Fund, nor is compensation based on the level of Fund assets.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

Janus Capital Management LLC (“Janus”)

Transamerica Janus Balanced VP

Portfolio Manager	Registered Investment Companies		Other Pooled Investment Vehicles		Other Accounts	
	Number	Assets Managed	Number	Assets Managed	Number	Assets Managed
Marc Pinto	10	\$28.80 billion	0	\$0	15	\$561 million
Gibson Smith	23	\$30.70 billion	0	\$0	33	\$5.02 billion
Fee Based Accounts						
(The number of accounts and the total assets in the accounts managed by each portfolio manager with respect to which the advisory fee is based on the performance of the account.)						
Marc Pinto	1	\$9.94 billion	0	\$0	1	\$242 million
Gibson Smith	0	\$0	0	\$0	0	\$0

Conflict of Interest

As shown in the table above, certain portfolio managers may manage other accounts with investment strategies similar to the Portfolio. Those other accounts may include other Janus funds, private-label mutual funds for which Janus serves as subadviser, and separately managed accounts or other pooled investment vehicles, such as hedge funds, which may have materially higher fees than a Portfolio or may have a performance-based management fee. Fees earned by Janus may vary among these accounts, the portfolio managers may personally invest in some but not all of these accounts, portfolio managers may personally invest in some but not all of these accounts, and certain of these accounts may have a greater impact on their compensation than others. In addition, certain portfolio managers may also have roles as research analysts for one or more Janus funds and receive compensation with respect to the analyst role. These factors could create conflicts of interest because a portfolio manager may have incentives to favor certain accounts over others, resulting in the potential for other accounts outperforming the Portfolio. A conflict may also exist if a portfolio manager identifies a limited investment opportunity that may be appropriate for more than one account, but the Portfolio is not able to take full advantage of that opportunity due to the need to allocate that opportunity among multiple accounts. In addition, the portfolio manager may execute transactions for another account that may adversely impact the value of securities held by the Portfolio. However, Janus believes that these conflicts may be mitigated to a certain extent by the fact that accounts with like investment strategies managed by a particular portfolio manager are generally managed in a similar fashion, subject to a variety of exceptions, for example, to account for particular investment restrictions or policies applicable only to certain accounts, certain portfolio holdings that may be transferred in-kind when an account is opened, differences in cash flows and account sizes, and similar factors. In addition, Janus has adopted trade allocation procedures that govern allocation of securities among various Janus accounts.

Compensation

The following describes the structure and method of calculating a portfolio manager’s compensation as of December 31, 2013. Portfolio managers and, if applicable, co-portfolio managers (“portfolio manager” or “portfolio managers”) are compensated for managing a Fund and any other funds, portfolios or accounts for which they have exclusive or shared responsibilities (collectively, the “Managed Funds”) through two components: fixed compensation and variable compensation.

Fixed Compensation: Fixed compensation is paid in cash and is comprised of an annual base salary. The base salary is based on factors such as individual and managed funds performance, the complexity of managing funds, scope of responsibility (including assets under management), skills, knowledge, experience, ability, and market competitiveness.

Variable Compensation: Variable compensation is paid in the form of cash and long-term incentive awards (consisting of a mixture of Janus Capital Group, Inc. restricted stock and a cash-deferred award that is credited with income, gains, and losses based on the performance of Janus mutual fund investments selected by the portfolio manager).

A portfolio manager’s variable compensation is discretionary and is determined by Janus management. The overall investment team variable compensation pool is funded by an amount equal to a percentage of Janus’ operating income before the payment of incentive compensation. In determining individual awards, both quantitative and qualitative factors are considered. Such factors include, among other things, consistent short-term and long-term fund performance (i.e., one-, three-, and five-year performance), client support and investment team support through the sharing of ideas, leadership, development, mentoring, and teamwork.

Newly hired portfolio managers may have guaranteed minimum compensation levels for limited periods. Portfolio managers who take on new responsibilities or who are transitioning or have transitioned their responsibilities may also have guaranteed minimum compensation levels for limited periods.

Portfolio managers may elect to defer payment of a designated percentage of their fixed compensation and/or up to all of their variable compensation in accordance with Janus Capital Groups, Inc.’s Executive Income Deferral Program.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

⁽¹⁾ Other Accounts excludes the assets and number of accounts in wrap fee programs that are managed using model portfolios.

⁽²⁾ Excludes performance fee account(s).

Conflict of Interest

Jennison manages accounts with asset-based fees alongside accounts with performance-based fees. This side-by-side management can create an incentive for Jennison and its investment professionals to favor one account over another. Specifically, Jennison has the incentive to favor accounts for which it receives performance fees, and possibly take greater investment risks in those accounts, in order to bolster performance and increase its fees.

Other types of side-by-side management of multiple accounts can also create incentives for Jennison to favor one account over another. Examples are detailed below, followed by a discussion of how Jennison addresses these conflicts.

- Long only accounts/long-short accounts: Jennison manages accounts in strategies that only hold long securities positions as well as accounts in strategies that are permitted to sell securities short. Jennison may hold a long position in a security in some client accounts while selling the same security short in other client accounts. Jennison permits quantitatively hedged strategies to short securities that are held long in other strategies. Additionally, Jennison permits securities that are held long in quantitatively derived strategies to be shorted by other strategies. The strategies that sell a security short held long by another strategy could lower the price for the security held long. Similarly, if a strategy is purchasing a security that is held short in other strategies, the strategies purchasing the security could increase the price of the security held short.
- Multiple strategies: Jennison may buy or sell, or may direct or recommend that one client buy or sell, securities of the same kind or class that are purchased or sold for another client, at prices that may be different. Jennison may also, at any time, execute trades of securities of the same kind or class in one direction for an account and in the opposite direction for another account, due to differences in investment strategy or client direction. Different strategies effecting trading in the same securities or types of securities may appear as inconsistencies in Jennison’s management of multiple accounts side-by-side.
- Affiliated accounts/unaffiliated accounts and seeded/nonseeded accounts and accounts receiving asset allocation assets from affiliated investment advisers: Jennison manages accounts for its affiliates and accounts in which it has an interest alongside unaffiliated accounts. Jennison could have an incentive to favor its affiliated accounts over unaffiliated accounts. Additionally, Jennison’s affiliates may provide initial funding or otherwise invest in vehicles managed by Jennison. When an affiliate provides “seed capital” or other capital for a fund, it may do so with the intention of redeeming all or part of its interest at a particular future point in time or when it deems that sufficient additional capital has been invested in that fund. Jennison typically requests seed capital to start a track record for a new strategy or product. Managing “seeded” accounts alongside “non-seeded” accounts can create an incentive to favor the “seeded” accounts to establish a track record for a new strategy or product. Additionally, Jennison’s affiliated investment advisers could allocate their asset allocation clients’ assets to Jennison. Jennison could favor accounts used by its affiliate for their asset allocation clients to receive more assets from the affiliate.
- Non-discretionary accounts or models: Jennison provides non-discretionary model portfolios to some clients and manages other portfolios on a discretionary basis. The non-discretionary clients may be disadvantaged if Jennison delivers the model investment portfolio to them after Jennison initiates trading for the discretionary clients, or vice versa.
- Higher fee paying accounts or products or strategies: Jennison receives more revenues from (1) larger accounts or client relationships than smaller accounts or client relationships and from (2) managing discretionary accounts than advising

nondiscretionary models and from (3) non-wrap fee accounts than from wrap fee accounts and from (4) charging higher fees for some strategies than others. The differences in revenue that Jennison receives could create an incentive for Jennison to favor the higher fee paying or higher revenue generating account or product or strategy over another.

- *Personal interests*: The performance of one or more accounts managed by Jennison's investment professionals is taken into consideration in determining their compensation. Jennison also manages accounts that are investment options in its employee benefit plans such as its defined contribution plans or deferred compensation arrangements and where its employees may have personally invested alongside other accounts where there is no personal interest. These factors could create an incentive for Jennison to favor the accounts where it has a personal interest over accounts where Jennison does not have a personal interest.

How Jennison Addresses These Conflicts of Interest

The conflicts of interest described above could create incentives for Jennison to favor one or more accounts or types of accounts over others in the allocation of investment opportunities, time, aggregation and timing of investments. Generally, portfolios in a particular strategy with similar objectives are managed similarly to the extent possible. Accordingly, portfolio holdings and industry and sector exposure tend to be similar across a group of accounts in a strategy that have similar objectives, which tends to minimize the potential for conflicts of interest among accounts within a product strategy. While these accounts have many similarities, the investment performance of each account will be different primarily due to differences in guidelines, individual portfolio manager's decisions, timing of investments, fees, expenses and cash flows.

Additionally, Jennison has developed policies and procedures that seek to address, mitigate and monitor these conflicts of interest.

- Jennison has adopted trade aggregation and allocation procedures that seek to treat all clients (including affiliated accounts) fairly and equitably. These policies and procedures address the allocation of limited investment opportunities, such as initial public offerings (IPOs) and new issues, the allocation of transactions across multiple accounts, and the timing of transactions between its non-wrap accounts and its wrap fee accounts.
- Jennison has policies that limit the ability to short securities in portfolios that primarily rely on its fundamental research and investment processes (fundamental portfolios) if the security is held long in other fundamental portfolios.
- Jennison has adopted procedures to monitor allocations between accounts with performance fees and non-performance fee based accounts and to monitor overlapping long and short positions among long accounts and long-short accounts.
- Jennison has adopted a code of ethics and policies relating to personal trading.

Compensation

Jennison seeks to maintain a highly competitive compensation program designed to attract and retain outstanding investment professionals, which include portfolio managers and research analysts, and to align the interests of its investment professionals with those of its clients and overall firm results. Overall firm profitability determines the total amount of incentive compensation pool that is available for investment professionals. Investment professionals are compensated with a combination of base salary and cash bonus. In general, the cash bonus comprises the majority of the compensation for investment professionals. Jennison sponsors a profit sharing retirement plan for all eligible employees. The contribution to the profit sharing retirement plan for portfolio managers is based on a percentage of the portfolio manager's total compensation, subject to a maximum determined by applicable law. In addition to eligibility to participate in retirement and welfare plans, senior investment professionals, including portfolio managers and senior research analysts, are eligible to participate in a deferred compensation program where all or a portion of the cash bonus can be invested in a variety of predominantly Jennison-managed investment strategies on a tax-deferred basis.

Investment professionals' total compensation is determined through a subjective process that evaluates numerous qualitative and quantitative factors. There is no particular weighting or formula for considering the factors. Some portfolio managers may manage or contribute ideas to more than one product strategy, and the performance of the other product strategies is also considered in determining the portfolio manager's overall compensation. The factors reviewed for the portfolio managers are listed below in order of importance.

The following primary quantitative factor is reviewed for the portfolio managers: one, three, five year and longer pre-tax investment performance of groupings of accounts managed by the portfolio manager in the same strategy (composite) relative to market conditions, pre-determined passive indices and industry peer group data for the product strategy (e.g., large cap growth, large cap value) for which the portfolio manager is responsible.

- Performance for the composite of accounts that includes the Fund managed by the portfolio managers is measured against the Russell 1000 Growth Index.

The qualitative factors reviewed for the portfolio managers may include:

- The quality of the portfolio manager's investment ideas and consistency of the portfolio manager's judgment;
- Historical and long-term business potential of the product strategies;
- Qualitative factors such as teamwork and responsiveness; and

- Individual factors such as years of experience and responsibilities specific to the individual's role such as being a team leader or supervisor are also factored into the determination of an investment professional's total compensation.

Conflict of Interest

The potential for conflicts of interest exists when portfolio managers manage other accounts with similar investment objectives and strategies as the Fund (“Similar Accounts”). Potential conflicts may include, for example, conflicts between investment strategies and conflicts in the allocation of investment opportunities.

Responsibility for managing JP Morgan and its affiliates clients’ portfolios is organized according to investment strategies within asset classes. Generally, client portfolios with similar strategies are managed by portfolio managers in the same portfolio management group using the same objectives, approach and philosophy. Underlying sectors or strategy allocations within a larger portfolio are likewise managed by portfolio managers who use the same approach and philosophy as similarly managed portfolios. Therefore, portfolio holdings, relative position sizes and industry and sector exposures tend to be similar across similar portfolios and strategies, which minimize the potential for conflicts of interest.

JPMorgan and/or its affiliates (“JPMorgan Chase”) perform investment services, including rendering investment advice, to varied clients. JPMorgan, JPMorgan Chase and its or their directors, officers, agents, and/or employees may render similar or differing investment advisory services to clients and may give advice or exercise investment responsibility and take such other action with respect to any of its other clients that differs from the advice given or the timing or nature of action taken with respect to another client or group of clients. It is JPMorgan’s policy, to the extent practicable, to allocate, within its reasonable discretion, investment opportunities among clients over a period of time on a fair and equitable basis. One or more of JPMorgan’s other client accounts may at any time hold, acquire, increase, decrease, dispose, or otherwise deal with positions in investments in which another client account may have an interest from time-to-time.

JPMorgan, JPMorgan Chase, and any of its or their directors, partners, officers, agents or employees, may also buy, sell, or trade securities for their own accounts or the proprietary accounts of JPMorgan and/or JPMorgan Chase. JPMorgan and/or JPMorgan Chase, within their discretion, may make different investment decisions and other actions with respect to their own proprietary accounts than those made for client accounts, including the timing or nature of such investment decisions or actions. Further, JPMorgan is not required to purchase or sell for any client account securities that it, JPMorgan Chase, and any of its or their employees, principals, or agents may purchase or sell for their own accounts or the proprietary accounts of JPMorgan, or JPMorgan Chase or its clients.

JP Morgan and/or its affiliates may receive more compensation with respect to certain Similar Accounts than that received with respect to the Fund or may receive compensation based in part on the performance of certain Similar Accounts. This may create a potential conflict of interest for JP Morgan and its affiliates or its portfolio managers by providing an incentive to favor these Similar Accounts when, for example, placing securities transactions. In addition, JP Morgan or its affiliates could be viewed as having a conflict of interest to the extent

that JP Morgan or an affiliate has a proprietary investment in Similar Accounts, the portfolio managers have personal investments in Similar Accounts or the Similar Accounts are investment options in JP Morgan's or its affiliate's employee benefit plans. Potential conflicts of interest may arise with both the aggregation and allocation of securities transactions and allocation of investment opportunities because of market factors or investment restrictions imposed upon JP Morgan and its affiliates by law, regulation, contract or internal policies. Allocations of aggregated trades, particularly trade orders that were only partially completed due to limited availability and allocation of investment opportunities generally, could raise a potential conflict of interest, as JP Morgan or its affiliates may have an incentive to allocate securities that are expected to increase in value to favored accounts. Initial public offerings, in particular, are frequently of very limited availability. JP Morgan and its affiliates may be perceived as causing accounts they manages to participate in an offering to increase JP Morgan's or its affiliates' overall allocation of securities in that offering.

A potential conflict of interest also may be perceived to arise if transactions in one account closely follow related transactions in a different account, such as when a purchase increases the value of securities previously purchased by another account, or when a sale in one account lowers the sale price received in a sale by a second account. If JP Morgan or its affiliates manage accounts that engage in short sales of securities of the type in which the Fund invests, JP Morgan or its affiliates could be seen as harming the performance of the Fund for the benefit of the accounts engaging in short sales if the short sales cause the market value of the securities to fall.

As an internal policy matter, JP Morgan may from time to time maintain certain overall investment limitations on the securities positions or positions in other financial instruments JP Morgan or its affiliates will take on behalf of its various clients due to, among other things, liquidity concerns and regulatory restrictions. Such policies may preclude a Fund from purchasing particular securities or financial instruments, even if such securities or financial instruments would otherwise meet the Fund's objectives.

The goal of JP Morgan and its affiliates is to meet their fiduciary obligation with respect to all clients. JP Morgan and its affiliates have policies and procedures that seek to manage conflicts. JP Morgan and its affiliates monitor a variety of areas, including compliance with fund guidelines, review of allocation decisions and compliance with JP Morgan's Codes of Ethics and JPMC's Code of Conduct. With respect to the allocation of investment opportunities, JP Morgan and its affiliates also have certain policies designed to achieve fair and equitable allocation of investment opportunities among its clients over time. For example:

Orders for the same equity security are aggregated on a continual basis throughout each trading day consistent with JP Morgan's duty of best execution for its clients. If aggregated trades are fully executed, accounts participating in the trade will be allocated their pro rata share on an average price basis. Partially completed orders generally will be allocated among the participating accounts on a pro-rata average price basis, subject to certain limited exceptions. For example, accounts that would receive a de minimis allocation relative to their size may be excluded from the order. Another exception may occur when thin markets or price volatility require that an aggregated order be completed in multiple executions over several days. If partial completion of the order would result in an uneconomic allocation to an account due to fixed transaction or custody costs, JP Morgan or its affiliates may exclude small orders until 50% of the total order is completed. Then the small orders will be executed. Following this procedure, small orders will lag in the early execution of the order, but will be completed before completion of the total order.

Purchases of money market instruments and fixed income securities cannot always be allocated pro rata across the accounts with the same investment strategy and objective. However, JP Morgan and its affiliates attempt to mitigate any potential unfairness by basing non-pro rata allocations traded through a single trading desk or system upon objective predetermined criteria for the selection of investments and a disciplined process for allocating securities with similar duration, credit quality and liquidity in the good faith judgment of JP Morgan or its affiliates so that fair and equitable allocation will occur over time.

Compensation

JP Morgan Portfolio managers participate in a competitive compensation program that is designed to attract and retain outstanding people and closely link the performance of investment professionals to client investment objectives. The total compensation program includes a base salary fixed from year to year and a variable performance bonus consisting of cash incentives and restricted stock and may include mandatory notional investments (as described below) in selected mutual funds advised by JP Morgan. These elements reflect individual performance and the performance of JP Morgan's business as a whole.

Each portfolio manager's performance is formally evaluated annually based on a variety of factors including the aggregate size and blended performance of the portfolios such portfolio manager manages. Individual contribution relative to client goals carries the highest impact. Portfolio manager compensation is primarily driven by meeting or exceeding clients' risk and return objectives, relative performance to competitors or competitive indices and compliance with firm policies and regulatory requirements. In evaluating each portfolio manager's performance with respect to the mutual funds he or she manages, the funds' pre-tax performance is compared to the appropriate market peer group and to each fund's benchmark index listed in the fund's prospectus over one, three and five year periods (or such shorter time as the portfolio manager has managed the fund). Investment performance is generally more heavily weighted to the long term.

Awards of restricted stock are granted as part of an employee's annual performance bonus and comprise from 0% to 40% of a portfolio manager's total bonus. As the level of incentive compensation increases, the percentage of compensation awarded in restricted stock also

increases. Up to 50% of the restricted stock portion of a portfolio manager's bonus may instead be subject to a mandatory notional investment in selected mutual funds advised by JP Morgan or its affiliates. When these awards vest over time, the portfolio manager receives cash equal to the market value of the notional investment in the selected mutual funds.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolios.

Conflicts of Interest

Potential Conflicts of Interest

LMGAA maintains policies and procedures reasonably designed to detect and minimize material conflicts of interest inherent in circumstances when a portfolio manager has day-to-day portfolio management responsibilities for multiple portfolios. Nevertheless, no set of policies and procedures can possibly anticipate or relieve all potential conflicts of interest. These conflicts may be real, potential, or perceived; certain of these conflicts are described in detail below.

Allocation of Limited Investment Opportunities: If a portfolio manager identifies a limited investment opportunity (including initial public offerings) that may be suitable for multiple funds and/or accounts, the investment opportunity may be allocated among these several funds or accounts, which may limit a client's ability to take full advantage of the investment opportunity, due to liquidity constraints or other factors.

LMGAA has adopted trade allocation procedures designed to ensure that allocations of limited investment opportunities are conducted in a fair and equitable manner between client accounts. Nevertheless, investment opportunities may be allocated differently among client accounts due to the particular characteristics of an account, such as the size of the account, cash position, investment guidelines and restrictions or its sector/country/region exposure or other risk controls, market restrictions or for other reasons.

Similar Investment Strategies. LMGAA and its portfolio management team may manage multiple portfolios with similar investment strategies. Investment decisions for each portfolio are generally made based on each portfolio's investment objectives and guidelines, cash

availability, and current holdings. Purchases or sales of securities for the portfolios may be appropriate for other portfolios with like objectives and may be bought or sold in different amounts and at different times in multiple portfolios. In these cases, transactions are allocated to portfolios in a manner believed by LMGAA to be the most equitable to each client, generally utilizing a pro rata allocation methodology. Purchase and sale orders for a portfolio may be combined with those of other portfolios in the interest of achieving the most favorable net results for all clients.

Different Investment Strategies. LMGAA may manage long-short strategies alongside long-only strategies. As such, the potential exists for short sales of securities in certain portfolios while the same security is held long in one or more other portfolios. In an attempt to mitigate the inherent risks of simultaneous management of long-short and long-only strategies, LMGAA has established and implemented procedures to promote fair and equitable treatment of all portfolios. The procedures include monitoring and surveillance, supervisory reviews, and compliance oversight of short sale activity.

Differences in Financial Incentives. A conflict of interest may arise where the financial or other benefits available to a portfolio manager or an investment adviser differ among the funds and/or accounts under management. For example, when the structure of an investment adviser's management fee differs among the funds and/or accounts under its management (such as where certain funds or accounts pay higher management fees or performance-based management fees), a portfolio manager might be motivated to favor certain funds and/or accounts over others. Performance-based fees could also create an incentive for an investment adviser to make investments that are riskier or more speculative. In addition, a portfolio manager might be motivated to favor funds and/or accounts in which he or she or the investment adviser and/or its affiliates have a financial interest. Similarly, the desire to maintain or raise assets under management or to enhance the portfolio manager's performance record in a particular investment strategy or to derive other rewards, financial or otherwise, could influence a portfolio manager to lend preferential treatment to those funds and/or accounts that could most significantly benefit the portfolio manager. To manage conflicts that may arise from management of portfolios with performance-based fees, performance in portfolios with like strategies is regularly reviewed by management.

Investment professionals employed by LMGAA may manage personal accounts in which they have a fiduciary interest with holdings similar to those of client accounts. LMGAA has implemented a Code of Ethics which is designed to address the possibility that these professionals could place their own interests ahead of those of clients. The Code of Ethics addresses this potential conflict of interest by imposing reporting requirements, blackout periods, supervisory oversight and other measures designed to reduce conflict.

LMGAA allows its employees to trade in securities that it recommends to advisory clients. LMGAA's employees may buy, hold or sell securities at or about the same time that LMGAA is purchasing, holding or selling the same or similar securities for client account portfolios and the actions taken by such individuals on a personal basis may differ from, or be inconsistent with, the nature and timing of advice or actions taken by LMGAA for its client accounts. LMGAA and its employees may also invest in mutual funds and other pooled investment vehicles that are managed by LMGAA. This may result in a potential conflict of interest since LMGAA's employees have knowledge of such funds' investment holdings, which is non-public information.

Portfolio Manager Compensation

LMGAA investment professionals receive base salary and other employee benefits and are eligible to receive incentive compensation. Base salary is fixed and typically determined based on market factors and the skill and experience of individual investment personnel.

The level of incentive compensation is determined by the senior management of Legg Mason and is awarded on a discretionary basis. A formula-based scheme directly linking compensation to investment performance as measured against a benchmark is not currently in place nor is one planned; however, senior management considers a number of factors when determining compensation, including (but not limited to) the performance of LMGAA's funds relative to their benchmarks and to their relevant peer groups over a 1, 3 and 5-year period.

Up to 20% of an investment professional's annual incentive compensation is subject to deferral. Of that principal deferred award amount, 50% will accrue a return based on the hypothetical returns of the investment fund or product that is the primary focus of the investment professional's business activities with LMGAA, and 50% may be received in the form of Legg Mason restricted stock shares.

In May 2015, the compensation structure with respect to Mr. Lin will change to the structure described below.

For Mr. Thomas Picciochi and Ms. Ellen Tesler, who are being named portfolio managers for the Transamerica/Legg Mason funds effective May 30, 2014 (and for Mr. Lin effective May 2015), they will be compensated under the policies set forth below:

Portfolio managers will be eligible for total compensation comprised of base salary and variable compensation.

Base Salary. Base salary is the fixed portion of the portfolio manager compensation and is linked to professional experience and qualifications and financial services industry peer comparison.

Variable Compensation. Variable compensation for portfolio managers will be linked to the metrics for which they have responsibility; checking and implementing quantitative model output, minimizing transaction costs and market impact, monitoring client portfolios for appropriate market risk and ensuring adherence to regulatory and investment guidelines. Portfolio manager compensation is not tied to peer group and/or relative benchmark performance. The qualitative analysis of a portfolio manager's individual performance is based on, among

other things, the results of an annual management and internal peer review process, and management's assessment of overall portfolio manager contributions to the investment team, the investment process and overall performance (distinct from fund and other account performance). Other factors taken into consideration include adherence to Compliance Policies and Procedures, Risk Management procedures and the firm's Code of Ethics.

Ownership of Securities

The portfolio manager(s) did not beneficially own any shares of the portfolio(s) as of December 31, 2013 for Mr. Lin and March 31, 2014 for Mr. Picciochi and Ms. Tesler.

Conflict of Interest

Potential conflicts of interest may arise because Madison engages in portfolio management activities for clients other than the funds. For example, portfolio managers at Madison and its affiliates typically manage multiple accounts. These accounts may include, among others, mutual funds, separate accounts (assets managed on behalf of wealthy individuals as well as institutions such as pension funds, colleges and universities, insurance companies and foundations), subadvised accounts that we manage for other investment advisers and model accounts for which we only provide recommendations to our clients and do not have discretion to actually trade the accounts.

Our portfolio managers make investment decisions for each portfolio based on the investment objectives, policies, practices, and other relevant investment considerations that the managers believe are applicable to that portfolio. Consequently, portfolio managers may purchase (or sell) securities for one portfolio and not another portfolio. Likewise, we may purchase securities for one portfolio and sell the same security from another. To address the potential conflicts that occur as a result, Madison adopted a variety of portfolio security aggregation, brokerage and trade allocation policies which are designed to provide reasonable assurance that buy and sell opportunities are allocated fairly among clients. Likewise, Madison has policies to address "cross selling" from one account to another. In this manner, we seek to address any potential conflicts associated with managing multiple accounts for multiple clients. Also, as disclosed under the "Compensation" section, below, our portfolio managers' compensation is determined in the same manner with respect to all portfolios managed by the portfolio manager.

Compensation

Madison believes investment professionals should receive compensation for the performance of the firm's client accounts, their individual effort, and the overall profitability of the firm. As such, investment professionals receive a base salary, as well as an incentive bonus based on

the attainment of certain goals and objectives in the portfolio management process (described below). The manager also participates in the overall profitability of the firm directly, through an ownership interest in the firm, or indirectly, through a firm-sponsored profit sharing plan. Madison believes its portfolio managers' goals are aligned with those of long-term investors, recognizing client goals to outperform over the long-term, rather than focused on short-term performance contests.

With regard to incentive compensation, the incentive pools for the asset allocation, equity and fixed income teams are calculated based on a percentage of revenue from each investment strategy. Managers are rewarded for performance relative to their benchmark(s) over both one and three year periods (measured on a pre-tax basis). Incentive compensation earned is paid out over a three year period, so that if a portfolio manager leaves the employ of Madison, he or she forfeits a percentage of his or her incentive compensation. The purpose of this structured payout is to aid in the retention of investment personnel. All incentive compensation must be approved by the compensation committee. All investment professionals are eligible to participate in the incentive compensation pool.

The incentive compensation pool shared by the members of the firm's asset allocation and equity management teams is based on the performance of the firm's various asset allocation and equity composites (or some combination of such composites and the relevant mutual fund(s)) measured against the appropriate index benchmarks. All firm asset allocation and equity accounts, including mutual funds, regardless of whether they are included in such composites, are managed with the same general investment philosophy, approach and applicable allocations, quality and other portfolio characteristics.

The incentive compensation pool shared by the members of the firm's fixed-income management team is based on the performance of the firm's various fixed-income composites measured against the appropriate index benchmarks. All firm fixed income accounts, including mutual funds, regardless of whether they are included in such composites, are managed with the same general investment philosophy, approach and applicable allocations regarding duration, spreads and other fixed-income characteristics. Incentive compensation is not earned for performance below 0.25% of an applicable benchmark and the compensation pool is generally fully paid for performance exceeding 0.75% of an applicable benchmark.

There is no difference in terms of the way the firm compensates portfolio managers for managing a mutual fund or a private client account (or any other type of account for that matter). Instead, compensation is based on the entire employment relationship, not based on the performance of any single account or type of account.

Ownership of Securities

As of December 31, 2013, the portfolio managers did not beneficially own any shares of the portfolios.

Daniel Ling	0	\$0	0	\$0	1	\$740.6 million
Marcus L. Smith	0	\$0	0	\$0	1	\$740.6 million

* Performance fees for any particular account are paid to MFS, not the portfolio manager, and the portfolio manager's compensation is not determined by reference to the level of performance fees received by MFS.

Conflict of Interest

MFS seeks to identify potential conflicts of interest resulting from a portfolio manager's management of both the Portfolio and other accounts, and has adopted policies and procedures designed to address such potential conflicts.

The management of multiple funds and accounts (including proprietary accounts) gives rise to potential conflicts of interest if the funds and accounts have different objectives and strategies, benchmarks, time horizons and fees as a portfolio manager must allocate his or her time and investment ideas across multiple funds and accounts. In certain instances there are securities which are suitable for the Portfolio as well as for accounts of MFS or its subsidiaries with similar investment objectives. MFS trade allocation policies may give rise to conflicts of interest if the Portfolio's orders do not get fully executed or are delayed in getting executed due to being aggregated with those of other accounts of MFS or its subsidiaries. A portfolio manager may execute transactions for another fund or account that may adversely affect the value of the Portfolio's investments. Investments selected for funds or accounts other than the Portfolio may outperform investments selected for the Portfolio.

When two or more clients are simultaneously engaged in the purchase or sale of the same security, the securities are allocated among clients in a manner believed by MFS to be fair and equitable to each. It is recognized that in some cases this system could have a detrimental effect on the price or volume of the security as far as the Portfolio is concerned. In most cases, however, MFS believes that the Portfolio's ability to participate in volume transactions will produce better executions for the Portfolio.

MFS and/or a portfolio manager may have a financial incentive to allocate favorable or limited opportunity investments or structure the timing of investments to favor accounts other than the fund, for instance, those that pay a higher advisory fee and/or have a performance adjustment and/or include an investment by the portfolio manager.

Compensation

Portfolio manager compensation is reviewed annually. As of December 31, 2013, the MFS portfolio managers' total cash compensation is a combination of base salary and performance bonus:

- **Base Salary** – Base salary represents a smaller percentage of portfolio manager total cash compensation than performance bonus.
- **Performance Bonus** – Generally, the performance bonus represents more than a majority of portfolio manager total cash compensation.

The performance bonus is based on a combination of quantitative and qualitative factors, generally with more weight given to the former and less weight given to the latter.

The quantitative portion is based on the pre-tax performance of assets managed by the portfolio manager over one-, three-, and five-year periods relative to peer group universes and/or indices ("benchmarks"). As of December 31, 2013, the following benchmarks were used to measure the following portfolio managers' performance for the portfolio:

Portfolio Manager	Benchmark(s)
Daniel Ling	MSCI EAFE (Europe, Australia, Far East) Index
Marcus L. Smith	MSCI EAFE (Europe Australia, Far East) Index

Additional or different benchmarks, including versions of indices, custom indices, and linked indices that combine performance of different indices for different portions of the time period, may also be used. Primary weight is given to portfolio performance over a three-year time period with lesser consideration given to portfolio performance over one- and five-year periods (adjusted as appropriate if the portfolio manager has served for less than five years).

The qualitative portion is based on the results of an annual internal peer review process (conducted by other portfolio managers, analysts, and traders) and management's assessment of overall portfolio manager contributions to investor relations and the investment process (distinct from fund and other account performance). This performance bonus may be in the form of cash and/or a deferred cash award, at the discretion of management. A deferred cash award is issued for a cash value and becomes payable over a three-year vesting period if the portfolio manager remains in the continuous employ of MFS or its affiliates. During the vesting period, the value of the unfunded deferred cash award will fluctuate as though the portfolio manager had invested the cash value of the award in an MFS Fund(s) selected by the portfolio manager. A selected fund may be, but is not required to be, a fund that is managed by the portfolio manager. Portfolio managers also typically benefit from the opportunity to participate in the MFS Equity Plan. Equity interests and/or options to acquire equity interests in MFS or its parent company are awarded by management, on a discretionary basis, taking into account tenure at MFS, contribution to the investment process, and other factors.

Finally, portfolio managers also participate in benefit plans (including a defined contribution plan and health and other insurance plans) and programs available generally to other employees of MFS. The percentage such benefits represent of any portfolio manager's compensation depends upon the length of the individual's tenure at MFS and salary level, as well as other factors.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

Conflicts of Interest

The Sub-Adviser has not identified any material conflicts between the Portfolios and other accounts managed by the Sub-Adviser and its portfolio managers. However, actual or apparent conflicts of interest may arise in connection with the day-to-day management of the Portfolios and other accounts because the portfolio managers manage other accounts. The management of the Portfolios and other accounts may result in unequal time and attention being devoted to the Portfolios and other accounts. Another potential conflict of interest may arise where another account has the same investment objective as the Portfolios, whereby the portfolio managers could favor one account over another. Further, a potential conflict could include the portfolio managers' knowledge about the size, timing and possible market impact of Portfolios' trades, whereby they could use this information to the advantage of other accounts and to the disadvantage of the Portfolios. These potential conflicts of interest could create the appearance that the portfolio managers are favoring one investment vehicle over another.

Compensation Overview

Portfolio managers are paid competitive salaries by the Sub-Adviser. Portfolio managers may receive bonuses based on qualitative considerations, such as an individual's contribution to the organization, and performance reviews in relation to job responsibilities. Bonuses paid to the portfolio managers are also based in part on the profitability of the investment adviser. Investment professionals may participate in profit-sharing plans.

Ownership of Securities

As of November 10, 2014, the portfolio manager did not beneficially own any shares of the portfolio(s).

Conflict of Interest

Because the portfolio managers may manage assets for other investment companies, pooled investment vehicles, and/or other accounts (including institutional clients, pension plans and certain high net worth individuals), there may be an incentive to favor one client over another resulting in conflicts of interest. For instance, the sub-adviser may receive fees from certain accounts that are higher than the fee it receives from the fund, or it may receive a performance-based fee on certain accounts. In those instances, the portfolio managers may have an incentive to favor the higher and/or performance-based fee accounts over the fund. In addition, a conflict of interest could exist to the extent the sub-adviser has proprietary investments in certain accounts, where portfolio managers have personal investments in certain accounts or when certain accounts are investment options in the sub-adviser’s employee benefits and/or deferred compensation plans. The portfolio manager may have an incentive to favor these accounts over others. If the sub-adviser manages accounts that engage in short sales of securities of the type in which the fund invests, the sub-adviser could be seen as harming the performance of the fund for the benefit of the accounts engaging in short sales if the short sales cause the market value of the securities to fall. The sub-adviser has adopted trade allocation and other policies and procedures that it believes are reasonably designed to address these and other conflicts of interest.

Compensation

Portfolio Manager Compensation Structure

Morgan Stanley's compensation structure is based on a total reward system of base salary and Incentive Compensation which is paid partially as a cash bonus and partially as mandatory deferred compensation. Deferred compensation may be granted as deferred cash under the Adviser's Investment Management Alignment Plan ("IMAP"), as an equity-based awards or it may be granted under other plans as determined annually by Morgan Stanley's Compensation, Management Development and Succession Committee subject to vesting and other conditions.

Base salary compensation. Generally, portfolio managers receive base salary compensation based on the level of their position with the Adviser.

Incentive compensation. In addition to base compensation, portfolio managers may receive discretionary year-end compensation.

Incentive compensation may include:

Cash Bonus.

Deferred Compensation:

A mandatory program that defers a portion of incentive compensation into restricted stock units or other awards based on Morgan Stanley common stock or other plans that are subject to vesting and other conditions.

IMAP is a mandatory program that defers a portion of incentive compensation and notionally invests it in designated funds advised by the Adviser or its affiliates. The award is subject to vesting and other conditions. Portfolio managers must notionally invest a minimum of 25% to a maximum of 100% of their IMAP deferral account into a combination of the designated funds they manage that are included in the IMAP fund menu, which may or may not include one of the Portfolios.

All deferred compensation awards are subject to clawback provisions where awards can be cancelled, in whole or in part, if an employee takes any action, or omits to take any action which; causes a restatement of Morgan Stanley's consolidated financial results; constitutes a violation by the portfolio manager of Morgan Stanley's Global Risk Management Principles, Policies and Standards; or constitutes violation of internal risk and control policies involving a subsequent loss.

Several factors determine discretionary compensation, which can vary by portfolio management team and circumstances. These factors include:

Revenues generated by the investment companies, pooled investment vehicles and other accounts managed by the portfolio manager.

The investment performance of the funds/accounts managed by the portfolio manager.

Contribution to the business objectives of the Adviser.

The dollar amount of assets managed by the portfolio manager.

Market compensation survey research by independent third parties.

Other qualitative factors, such as contributions to client objectives.

Performance of Morgan Stanley and Morgan Stanley Investment Management, and the overall performance of the investment team(s) of which the portfolio manager is a member.

Ownership of Securities

As of December 31, 2013, none of the portfolio manager(s) beneficially owned any equity securities in the portfolios that they manage.

Conflict of Interest

From time to time, potential and actual conflicts of interest may arise between a portfolio manager's management of the investments of a portfolio on the one hand, and the management of other accounts, on the other. Potential and actual conflicts of interest may also arise as a result of PIMCO other business activities and PIMCO's possession of material non-public information about an issuer. Other accounts managed by a portfolio manager might have similar investment objectives or strategies a portfolio, or otherwise hold, purchase, or sell securities that are eligible to be held, purchased or sold by the portfolios. The other accounts might also have different investment objectives or strategies than the portfolios.

Knowledge and Timing of Fund Trades: A potential conflict of interest may arise as a result of the portfolio manager's day-to-day management of a portfolio. Because of their positions with the portfolios, the portfolio managers know the size, timing and possible market impact of a portfolio's trades. It is theoretically possible that the portfolio managers could use this information to the advantage of other accounts they manage and to the possible detriment of a portfolio.

Investment Opportunities: A potential conflict of interest may arise as a result of the portfolio manager's management of a number of accounts with varying investment guidelines. Often, an investment opportunity may be suitable for both a portfolio and other accounts managed by the portfolio manager, but may not be available in sufficient quantities for both the portfolio and the other accounts to participate fully. Similarly, there may be limited opportunity to sell an investment held by a portfolio and another account. PIMCO has adopted policies and procedures reasonably designed to allocate investment opportunities on a fair and equitable basis over time.

Under PIMCO's allocation procedures, investment opportunities are allocated among various investment strategies based on individual account investment guidelines and PIMCO's investment outlook. PIMCO has also adopted additional procedures to complement the general trade allocation policy that are designed to address potential conflicts of interest due to the side-by-side management of the portfolios and certain pooled investment vehicles, including investment opportunity allocation issues.

Conflicts potentially limiting a portfolio's investment opportunities may also arise when the portfolio and other PIMCO clients invest in different parts of an issuer's capital structure, such as when the portfolio owns senior debt obligations of an issuer and other clients own junior tranches of the same issuer. In such circumstances, decisions over whether to trigger an event of default, over the terms of any workout, or how to exit an investment may result in conflicts of interest. In order to minimize such conflicts, a portfolio manager may avoid certain investment opportunities that would potentially give rise to conflicts with other PIMCO clients or PIMCO may enact internal procedures designed to minimize such conflicts, which could have the effect of limiting a portfolio's investment opportunities.

Additionally, if PIMCO acquires material non-public confidential information in connection with its business activities for other clients, a portfolio manager may be restricted from purchasing securities or selling securities for a portfolio. When making investment decisions where a conflict of interest may arise, PIMCO will endeavor to act in a fair and equitable manner as between a portfolio and other clients; however, in certain instances the resolution of the conflict may result in PIMCO acting on behalf of another client in a manner that may not be in the best interest, or may be opposed to the best interest, of a portfolio.

Performance Fees: A portfolio manager may advise certain accounts with respect to which the advisory fee is based entirely or partially on performance. Performance fee arrangements may create a conflict of interest for the portfolio manager in that the portfolio manager may have an incentive to allocate the investment opportunities that he or she believes might be the most profitable to such other accounts instead of allocating them to a portfolio. PIMCO has adopted policies and procedures reasonably designed to allocate investment opportunities between the portfolios and such other accounts on a fair and equitable basis over time.

Compensation

PIMCO has adopted a Total Compensation Plan for its professional level employees, including its portfolio managers, that is designed to pay competitive compensation and reward performance, integrity and teamwork consistent with the firm's mission statement. The Total Compensation Plan includes an incentive component that rewards high performance standards, work ethic and consistent individual and team contributions to the firm. The compensation of portfolio managers consists of a base salary and discretionary performance bonuses, and may include an equity or long term incentive component.

Certain employees of PIMCO, including portfolio managers, may elect to defer compensation through PIMCO's deferred compensation plan. PIMCO also offers its employees a non-contributory defined contribution plan through which PIMCO makes a contribution based on the employee's compensation. PIMCO's contribution rate increases at a specified compensation level, which is a level that would include portfolio managers.

The Total Compensation Plan consists of three components:

- **Base Salary** – Base salary is determined based on core job responsibilities, positions/levels, and market factors. Base salary levels are reviewed annually, when there is a significant change in job responsibilities or a significant change in the market. Base salary is paid in regular installments throughout the year and payment dates are in line with local practice.

- **Performance Bonus** – Performance bonuses are designed to reward individual performance. Each professional and his or her supervisor will agree upon performance objectives to serve as a basis for performance evaluation during the year. The objectives will outline individual goals according to pre-established measures of the group or department success. Achievement against these goals as measured by the employee and supervisor will be an important, but not exclusive, element of the bonus decision process. Award amounts are determined at the discretion of the Compensation Committee (and/or certain senior portfolio managers, as appropriate) and will also consider firm performance.
- **Equity or Long Term Incentive Compensation** – Equity allows key professionals to participate in the long-term growth of the firm. This program provides mid to senior level employees with the potential to acquire an equity stake in PIMCO over their careers and to better align employee incentives with the firm’s long-term results. These options vest over a number of years and may convert into PIMCO equity which shares in the profit distributions of the firm. M Units are non-voting common equity of PIMCO and provide a mechanism for individuals to build a significant equity stake in PIMCO over time. Employees who reach a total compensation threshold are delivered their annual compensation in a mix of cash and option awards. PIMCO incorporates a progressive allocation of option awards as a percentage of total compensation which is in line with market practices.

In certain countries with significant tax implications for employees to participate in the M Unit Option Plan, PIMCO continues to use the Long Term Incentive Plan (“LTIP”) in place of the M Unit Option Plan. The LTIP provides cash awards that appreciate or depreciate based upon PIMCO’s performance over a three-year period. The aggregate amount available for distribution to participants is based upon PIMCO’s profit growth.

Participation in the M Unit Option Plan and LTIP is contingent upon continued employment at PIMCO.

In addition, the following non-exclusive list of qualitative criteria may be considered when specifically determining the total compensation for portfolio managers:

- 3-year, 2-year and 1-year dollar-weighted and account-weighted, pre-tax investment performance as judged against the applicable benchmarks for each account managed by a portfolio manager (including the Portfolios) and relative to applicable industry peer groups;
- Appropriate risk positioning that is consistent with PIMCO’s investment philosophy and the Investment Committee/CIO approach to the generation of alpha;
- Amount and nature of assets managed by the portfolio manager;
- Consistency of investment performance across portfolios of similar mandate and guidelines (reward low dispersion);
- Generation and contribution of investment ideas in the context of PIMCO’s secular and cyclical forums, portfolio strategy meetings, Investment Committee meetings, and on a day-to-day basis;
- Absence of defaults and price defaults for issues in the portfolios managed by the portfolio manager;
- Contributions to asset retention, gathering and client satisfaction;
- Contributions to mentoring, coaching and/or supervising; and
- Personal growth and skills added.

A portfolio manager’s compensation is not based directly on the performance of any Portfolio or any other account managed by that portfolio manager.

Profit Sharing Plan. Portfolio managers who are Managing Directors of PIMCO receive compensation from a non-qualified profit sharing plan consisting of a portion of PIMCO’s net profits. Portfolio managers who are Managing Directors receive an amount determined by the Compensation Committee, based upon an individual’s overall contribution to the firm.

Ownership of Securities

As of December 31, 2013, the portfolio manager did not beneficially own any shares of the portfolio(s).

Amit Agrawal	0	\$0	0	\$0	0	\$0

Conflict of Interest

PineBridge recognizes that it may be subject to a conflict of interest with respect to allocations of investment opportunities and transactions among its clients. To mitigate these conflicts, PineBridge’s policies and procedures seek to provide that investment decisions are made in accordance with the fiduciary duties owed to such accounts and without consideration of PineBridge’s economic, investment or other financial interests. Personal securities transactions by an employee may raise a potential conflict of interest when an employee trades in a security that is considered for purchase or sale by a client, or recommended for purchase or sale by an employee to a client, in that the employee may be able to personally benefit from prior knowledge of transactions for a client by trading in a personal account. PineBridge has policies to address potential conflicts of interest when its employees buy or sell securities also bought or sold for clients. Under certain circumstances, conflicts may arise in cases where different clients of PineBridge invest in different parts of a single issuer’s capital structure, including circumstances in which one or more PineBridge clients may own private securities or obligations of an issuer and other PineBridge clients may own public securities of the same issuer. Such conflicts of interest will be discussed and resolved on a case-by-case basis and will take into consideration the interest of the relevant clients, the circumstances giving rise to the conflict, and applicable regulations.

Compensation

Compensation for all PineBridge Investments portfolio managers consists of both a salary and a bonus component. The Salary component is a fixed base salary, and does not vary based on a portfolio manager’s performance. Generally, salary is based upon several factors, including experience and market levels of salary for such position. The bonus component is generally discretionarily determined based both on a portfolio manager’s individual performance and the overall performance of PineBridge Investments. In assessing individual performance of portfolio managers, both qualitative performance measures and also quantitative performance measures assessing the management of a portfolio manager’s funds are considered. A portfolio manager may also receive a long-term compensation component, either in the form of a partnership interest in the firm or as a cash-based award the ultimate value of which would depend upon financial performance of the firm.

Ownership of Securities

As of September 30, 2014, neither portfolio manager owned any securities in the portfolio.

Michael Neches	0	\$0	0	\$0	0	\$0
Rachel Ames	0	\$0	0	\$0	0	\$0

Conflict of Interest

Portfolio managers are generally responsible for multiple investment company accounts. As further described below, certain inherent conflicts of interest arise from the fact that portfolio managers have responsibility for multiple accounts, including conflicts relating to the allocation of investment opportunities. Listed above for each portfolio manager are the number and type of accounts managed or overseen by each team on which each portfolio manager acts, as of December 31, 2013.

In the course of providing advisory services, the sub-adviser may simultaneously recommend the sale of a particular security for one account while recommending the purchase of the same security for another account if such recommendations are consistent with each client's investment strategies. The sub-adviser also may recommend the purchase or sale of securities that may also be recommended by ProShare Advisors LLC, an affiliate of the sub-adviser.

The sub-adviser, its principals, officers and employees (and members of their families) and affiliates may participate directly or indirectly as investors in the sub-adviser's clients, such as the portfolio. Thus, the sub-adviser may recommend to clients the purchase or sale of securities in which it, or its officers, employees or related persons have a financial interest. The sub-adviser may give advice and take actions in the performance of its duties to its clients that differ from the advice given or the timing and nature of actions taken, with respect to other clients' accounts and/or employees' accounts that may invest in some of the same securities recommended to clients.

In addition, the sub-adviser, its affiliates and principals may trade for their own accounts. Consequently, non-customer and proprietary trades may be executed and cleared through any prime broker or other broker utilized by clients. It is possible that officers or employees of the sub-adviser may buy or sell securities or other instruments that the sub-adviser has recommended to, or purchased for, its clients and may engage in transactions for their own accounts in a manner that is inconsistent with the sub-adviser's recommendations to a client. Personal securities transactions by employees may raise potential conflicts of interest when such persons trade in a security that is owned by, or considered for purchase or sale for, a client. The sub-adviser has adopted policies and procedures designed to detect and prevent such conflicts of interest and, when they do arise, to ensure that it effects transactions for clients in a manner that is consistent with its fiduciary duty to its clients and in accordance with applicable law. Any Access Person (as such term is defined in Rule 204A-1 under the Investment Advisers Act of 1940, as amended) of the sub-adviser may make security purchases subject to the terms of the sub-adviser's code of ethics, described below. The sub-adviser and its affiliated persons may come into possession from time to time of material nonpublic and other confidential information about companies which, if disclosed, might affect an investor's decision to buy, sell, or hold a security. Under applicable law, the sub-adviser and its affiliated persons would be prohibited from improperly disclosing or using this information for their personal benefit or for the benefit of any person, regardless of whether the person is a client of the sub-adviser. Accordingly, should the sub-adviser or any affiliated person come into possession of material nonpublic or other confidential information with respect to any company, the sub-adviser and its affiliated persons will have no responsibility or liability for failing to disclose the information to clients as a result of following its policies and procedures designed to comply with applicable law.

Compensation

ProFund believes that its compensation program is competitively positioned to attract and retain high-caliber investment professionals. The compensation package for portfolio managers consists of a fixed-base salary, an annual incentive bonus opportunity and a competitive benefits package. A portfolio manager's salary compensation is designed to be competitive with the marketplace and reflect a portfolio manager's relative experience and contribution to the firm. Fixed-base salary compensation is reviewed and adjusted annually to reflect increases in the cost of living and market rates. The annual incentive bonus opportunity provides cash bonuses based upon the firm's overall performance and individual contributions. Principal consideration is given to appropriate risk management, teamwork and investment support activities in determining the annual bonus amount. Portfolio managers are eligible to participate in the firm's standard employee benefits programs, which include a competitive 401(k) retirement savings program with employer match, life insurance coverage, and health and welfare programs.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

Quantitative Management Associates LLC ("QMA")

* Accounts are managed on a team basis. If a portfolio manager is a member of a team, any account managed by that team is included in the number of accounts and total assets for such portfolio manager (even if such portfolio manager is not primarily involved in the day-to-day management of the account).

“QMA Other Pooled Investment Vehicles” includes commingled insurance company separate accounts, commingled trust funds and other commingled investment vehicles. “QMA Other Accounts” includes single client accounts, managed accounts (which are counted as one account per managed account platform), asset allocation clients, and accounts of affiliates. The assets in certain accounts have been estimated due to the availability of information only at the end of calendar quarters.

Conflict of Interest

Like other investment advisers, QMA is subject to various conflicts of interest in the ordinary course of its business. QMA strives to identify potential risks, including conflicts of interest, that are inherent in its business, and conducts annual conflict of interest reviews. When actual or potential conflicts of interest are identified, QMA seeks to address such conflicts through one or more of the following methods:

- Elimination of the conflict;
- Disclosure of the conflict; or
- Management of the conflict through the adoption of appropriate policies and procedures.

QMA follows Prudential Financial’s policies on business ethics, personal securities trading, and information barriers. QMA has adopted a code of ethics, allocation policies and conflicts of interest policies, among others, and has adopted supervisory procedures to monitor compliance with its policies. QMA cannot guarantee, however, that its policies and procedures will detect and prevent, or assure disclosure of, each and every situation in which a conflict may arise.

Side-by-Side Management of Accounts and Related Conflicts of Interest

Side-by-side management of multiple accounts can create incentives for QMA to favor one account over another. Examples are detailed below, followed by a discussion of how QMA addresses these conflicts.

Asset-Based Fees vs. Performance-Based Fees; Other Fee Considerations. QMA manages accounts with asset-based fees alongside accounts with performance-based fees. Asset-based fees are calculated based on the value of a client’s portfolio at periodic measurement dates or over specified periods of time. Performance-based fees are generally based on a share of the capital appreciation of a portfolio, and may offer greater upside potential to an investment manager than asset-based fees, depending on how the fees are structured. This side-by-side management can create an incentive for QMA and its investment professionals to favor one account over another. Specifically, QMA has the incentive to favor accounts for which it receives performance fees, and possibly take greater investment risks in those accounts, in order to bolster performance and increase its fees. In addition, since fees are negotiable, one client may be paying a higher fee than another client with similar investment objectives or goals. In negotiating fees, QMA takes into account a number of factors including, but not limited to, the investment strategy, the size of a portfolio being managed, the relationship with the client, and the required level of service. Fees may also differ based on account type. For example, fees for commingled vehicles, including those that QMA subadvises, may differ from fees charged for single client accounts.

Long Only/Long-Short Accounts. QMA manages accounts that only allow usit to hold securities long as well as accounts that permit short selling. QMA may, therefore, sell a security short in some client accounts while holding the same security long in other client accounts, creating the possibility that QMA is taking inconsistent positions with respect to a particular security in different client accounts.

Compensation/Benefit Plan Accounts/Other Investments by Investment Professionals. QMA manages certain funds and strategies whose performance is considered in determining long-term incentive plan benefits for certain investment professionals. Investment professionals involved in the management of those funds and accounts in these strategies have an incentive to favor them over other accounts they manage in order to increase their compensation. Additionally, QMA’s investment professionals may have an interest in those funds if the funds are chosen as options in their 401(k) or deferred compensation plans offered by Prudential or if they otherwise invest in those funds directly.

Proprietary Accounts. QMA manages accounts on behalf of its affiliates as well as unaffiliated accounts. QMA could have an incentive to favor accounts of affiliates over others.

Non-Discretionary Accounts or Models. QMA provides non-discretionary model portfolios to some clients and manages other portfolios on a discretionary basis. The non-discretionary clients may be disadvantaged if QMA delivers the model investment portfolio to them after it initiates trading for the discretionary clients, or vice versa.

Large Accounts. Large accounts typically generate more revenue than do smaller accounts. As a result, a portfolio manager has an incentive when allocating scarce investment opportunities to favor accounts that pay a higher fee or generate more income for QMA.

Securities of the Same Kind or Class. QMA may buy or sell, or may direct or recommend that one client buy or sell, securities of the same kind or class that are purchased or sold for another client, at prices that may be different. QMA may also, at any time, execute trades of securities of the same kind or class in one direction for an account and in the opposite direction for another account, due to differences in investment strategy or client direction. Different strategies effecting trading in the same securities or types of securities may appear as inconsistencies in QMA's management of multiple accounts side-by-side.

How QMA Addresses These Conflicts of Interest

The conflicts of interest described above with respect to different types of side-by-side management could influence QMA's allocation of investment opportunities as well as its timing, aggregation and allocation of trades. QMA has developed policies and procedures designed to address these conflicts of interest.

In keeping with its fiduciary obligations, QMA's policies with respect to allocation and aggregation are to treat all of its accounts fairly and equitably. QMA's compliance procedures with respect to these policies include independent monitoring by its compliance unit of the timing, allocation and aggregation of trades and the allocation of investment opportunities. These procedures are designed to detect patterns and anomalies in QMA's side-by-side management and trading so that QMA may take measures to correct or improve its processes. QMA's trade management oversight committee, which consists of senior members of its management team, reviews trading patterns on a periodic basis.

QMA rebalances portfolios periodically with frequencies that vary with market conditions and investment objectives. QMA seeks to aggregate trades for all portfolios rebalanced on any given day, where appropriate and consistent with our duty of best execution. Orders are generally allocated at the time of the transaction, or as soon as possible thereafter, on a pro rata basis equal to each account's appetite for the issue when such appetite can be determined. As mentioned above, QMA's compliance unit performs periodic monitoring to determine that all portfolios are rebalanced consistently, over time, within all strategies.

QMA's investment strategies generally require that QMA invest its clients' assets in securities that are publicly traded. QMA generally does not participate in initial public offerings. These factors significantly reduce the risk that QMA could favor one client over another in the allocation of investment opportunities.

With respect to QMA's management of long-short and long only accounts, the security weightings (positive or negative) in each account are always determined by a quantitative algorithm. An independent review is performed by the compliance unit to assess whether any such positions would represent a departure from the quantitative algorithm used to derive the positions in each portfolio. QMA's review is also intended to identify situations where QMA would seem to have conflicting views of the same security in different portfolios. Such views may actually be reasonable and consistent due to differing portfolio constraints.

QMA's Relationships with Affiliates and Related Conflicts of Interest

As an indirect wholly-owned subsidiary of Prudential Financial, QMA is part of a diversified, global financial services organization. It is affiliated with many types of financial service providers, including broker-dealers, insurance companies, commodity pool operators and other investment advisers. Some of its employees are officers of some of these affiliates.

Conflicts Related to QMA's Affiliations

Conflicts Arising Out of Legal Restrictions. QMA may be restricted by law, regulation or contract as to how much, if any, of a particular security it may purchase or sell on behalf of a client, and as to the timing of such purchase or sale. These restrictions may apply as a result of QMA's relationship with Prudential Financial and its other affiliates. For example, QMA's holdings of a security on behalf of its clients may, under some SEC rules, be aggregated with the holdings of that security by other Prudential Financial affiliates. These holdings could, on an aggregate basis, exceed certain reporting thresholds unless QMA and Prudential monitor and restrict purchases. In addition, QMA could receive material, non-public information with respect to a particular issuer from an affiliate and, as a result, be unable to execute purchase or sale transactions in securities of that issuer for our clients. QMA is generally able to avoid receiving material, non-public information from its affiliates by maintaining information barriers to prevent the transfer of information between affiliates.

The Fund may be prohibited from engaging in transactions with its affiliates even when such transactions may be beneficial for the Fund. Certain affiliated transactions are permitted in accordance with procedures adopted by the Fund and reviewed by the independent board members of the Fund.

Conflicts Arising Out of Securities Holdings and Other Financial Interests

QMA, Prudential Financial, Inc., the general account of the Prudential Insurance Company of America (PICA) and accounts of other affiliates of QMA (collectively, affiliated accounts) may, at times, have financial interests in, or relationships with, companies whose securities QMA may hold, purchase or sell in our client accounts. This may occur, for example, because affiliated accounts hold public and private debt and equity securities of a large number of issuers and may invest in some of the same companies as QMA's client accounts. At any time, these interests and relationships could be inconsistent or in potential or actual conflict with positions held or actions taken by us on behalf of QMA's client accounts. For instance, QMA may invest client assets in the equity of companies whose debt is held by an affiliate. QMA may also invest in the securities of one or more clients for the accounts of other clients. While these conflicts cannot be eliminated, QMA has implemented policies and procedures, including adherence to PIM's information barrier policy, that are designed to ensure that investments of clients are managed in their best interests.

Certain of QMA's employees may offer and sell securities of, and units in, commingled funds that QMA manages or subadvises. Employees may offer and sell securities in connection with their roles as registered representatives of Prudential Investment Management Services LLC (a broker-dealer affiliate), or as officers, agents, or approved persons of other affiliates. There is an incentive for QMA's employees to offer these securities to investors regardless of whether the investment is appropriate for such investor since increased assets in these vehicles will result in increased advisory fees to QMA. In addition, such sales could result in increased compensation to the employee.

A portion of the long-term incentive grant of some of QMA's investment professionals will increase or decrease based on the annual performance of several of QMA's advised accounts over a defined time period. Consequently, some of QMA's portfolio managers from time to time have financial interests in the accounts they advise. To address potential conflicts related to these financial interests, QMA has procedures, including supervisory review procedures, designed to ensure that each of its accounts is managed in a manner that is consistent with QMA's fiduciary obligations, as well as with the account's investment objectives, investment strategies and restrictions. Specifically, QMA's Chief Investment Officer will perform a comparison of trading costs between the advised accounts whose performance is considered in connection with the long-term incentive grant and other accounts, to ensure that such costs are consistent with each other or otherwise in line with expectations. The results of the analysis are discussed at a trade management meeting. Additionally, QMA's compliance group will review the performance of these accounts to ensure that it is consistent with the performance of other accounts in the same strategy that are not considered in connection with the grant.

Conflicts of Interest in the Voting Process

Occasionally, a conflict of interest may arise in connection with proxy voting. For example, the issuer of the securities being voted may also be a client of QMA. When QMA identifies an actual or potential conflict of interest between QMA and its clients, QMA votes in accordance with the policy of its proxy voting facilitator rather than its own policy. In that manner, QMA seeks to assure the independence and objectivity of the vote

Compensation

QMA's investment professionals are compensated through a combination of base salary, a performance-based annual cash incentive bonus and an annual long-term incentive grant. QMA regularly benchmarks its compensation program against leading asset management firms to monitor competitiveness.

The salary component is based on market data relative to similar positions within the industry as well as the past performance, years of experience and scope of responsibility of the individual.

An investment professional's incentive compensation, including both the annual cash bonus and long-term incentive grant, is largely driven by a person's contribution to QMA's goal of providing investment performance to clients consistent with portfolio objectives, guidelines and risk parameters. In addition, a person's qualitative contributions would also be considered in determining compensation. An investment professional's long-term incentive grant is currently divided into two components: (i) 80% of the value of the grant is subject to increase or decrease based on the annual performance of certain QMA strategies, and (ii) 20% of the value of the grant consists of stock options and/or restricted stock of Prudential Financial, Inc. (QMA's ultimate parent company). The long-term incentive grants are subject to vesting requirements. The incentive compensation of each investment professional is not based solely or directly on the performance of the Fund (or any other individual account managed by QMA) or the value of the assets of the Fund (or any other individual account managed by QMA).

The size of the annual cash bonus pool available for individual grants is determined quantitatively based on two primary factors: 1) investment performance of composites representing QMA's various investment strategies on a 1-year and 3-year basis relative to appropriate market peer groups and the indices against which our strategies are managed, and 2) business results as measured by QMA's pre-tax income.

The size of the annual long-term incentive pool available for individual grants is determined based on a percentage of the total compensation of QMA's eligible employees for the prior year.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

Systematic Financial Management, L.P. (“Systematic”)

Transamerica Systematic Small/Mid Cap Value VP

Kenneth Burgess, CFA	0	\$0	0	\$0	0	\$0
Ron Mushock, CFA	0	\$0	0	\$0	1	\$109 million

Conflict of Interest

Portfolio managers of Systematic Financial Management, LP (“Systematic”) oversee the investment of various types of accounts in the same strategy, such as mutual funds, pooled investment vehicles and separate accounts for individuals and institutions. The simultaneous management of these diverse accounts and specific client circumstances may create perceived conflicts of interest related to differences in the investment management fees charged and unequal time and attention devoted to certain accounts. However, Systematic recognizes its affirmative duty to treat all accounts fairly and equitably over time and maintains a series of controls in furtherance of this goal.

Generally, portfolio managers apply investment decisions to all accounts utilizing a particular strategy on a pro rata basis, while also accounting for varying client circumstances, including client objectives and preferences, instructions, restrictions, account size, cash availability and current specific needs. Nevertheless, during the normal course of managing assets for multiple clients of different types and asset levels, portfolio managers may encounter conflicts of interest that could, if not properly addressed, be harmful to one or more of our clients. Those of a material nature that are encountered most frequently involve, without limitation, investment security selection, employee personal securities trading, proxy voting and the allocation of investment opportunities. To mitigate these potential conflicts and ensure its clients are not negatively impacted by the adverse actions of Systematic or its employees, Systematic has implemented a series of policies and procedures that are overseen by compliance professionals and, in Systematic’s view, reasonably designed to prevent and detect conflicts.

For example, Systematic’s Code of Ethics restricts employees’ personal securities trading, forbids employees from giving, soliciting or accepting inappropriate gifts and entertainment and requires employees to receive explicit approval prior to serving as a board member or officer of a public company or rendering outside investment advice. Additionally, to effectively remove conflicts of interest related to voting proxies for accounts that have delegated such authority to Systematic, Systematic has a Proxy Voting Policy that provides for an independent third-party proxy voting agent, which agent’s pre-determined voting policy guidelines Systematic has adopted. Systematic’s Allocation and Aggregation and Trade Error Correction policies similarly seek to reduce potential conflicts of interest by promoting the fair and equitable allocation of investment opportunities among client accounts over time and the consistent resolution of trading errors.

Notably, Affiliated Managers Group, Inc. (NYSE: AMG), a publicly traded asset management company, holds a majority interest in Systematic through AMG’s wholly-owned subsidiary, Titan NJ LP Holdings LLC. Systematic operates independently as a separate, autonomous affiliate of AMG, which has equity investments in a group of investment management firms including Systematic. The AMG Affiliates do not formulate advice for Systematic’s clients and do not, in Systematic’s view, present any potential conflict of interest with Systematic’s clients.

Compensation

Certain Systematic employees share equity ownership with AMG as Partners, which may serve to incentivize Systematic’s investment professionals to perform successfully. The compensation package for portfolio managers Ronald Mushock and Ken Burgess, both of whom are Managing Partners of Systematic, consists of a fixed base salary and a share of the Firm’s profits based on each Partner’s respective individual ownership position in Systematic. Total compensation is influenced by Systematic’s overall profitability, and therefore is based in part on the aggregate performance of all of Systematic’s portfolios. Portfolio managers are not compensated based solely on the performance of, or the value of assets held in, any product managed by Systematic. Moreover, the Portfolio Managers are provided with a benefits package, including health insurance, and participation in a company 401(K) plan, comparable to that received by other Systematic employees.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

T. Rowe Price Associates, Inc. (“T. Rowe Price”)

Transamerica T. Rowe Price Small Cap VP

Portfolio Manager	Registered Investment Companies		Other Pooled Investment Vehicles		Other Accounts	
	Number	Assets Managed	Number	Assets Managed	Number	Assets Managed
Sudhir Nanda, CFA	3	\$2.47 billion	0	\$0	0	\$0
Fee Based Accounts (The number of accounts and the total assets in the accounts managed by each portfolio manager with respect to which the advisory fee is based on the performance of the account.)						
Sudhir Nanda, CFA	0	\$0	0	\$0	0	\$0

Conflict of Interest

As of December 31, 2013, portfolio managers at T. Rowe Price and its affiliates typically manage multiple accounts. These accounts may include, among others, mutual funds, separate accounts (assets managed on behalf of institutions such as pension funds, colleges and universities, foundations), offshore funds and common trust funds. Portfolio managers make investment decisions for each fund based on the investment objectives, policies, practices and other relevant investment considerations that the managers believe are applicable to that fund. Consequently, portfolio managers may purchase (or sell) securities for one fund and not another fund. T. Rowe Price and its affiliates have adopted brokerage and trade allocation policies and procedures which they believe are reasonably designed to address any potential conflicts associated with managing multiple accounts for multiple clients. Also, as disclosed under the “Portfolio Manager’s Compensation” section, our portfolio managers’ compensation is determined in the same manner with respect to all portfolios managed by the portfolio manager.

T. Rowe Price funds may, from time to time, own shares of Morningstar, Inc. Morningstar is a provider of investment research to individual and institutional investors, and publishes ratings on mutual funds, including the Price Funds. T. Rowe Price manages the Morningstar retirement plan and T. Rowe Price and its affiliates pay Morningstar for a variety of products and services. In addition, Morningstar may provide investment consulting and investment management services to clients of T. Rowe Price or its affiliates.

Compensation

Portfolio manager compensation consists primarily of a base salary, a cash bonus, and an equity incentive that usually comes in the form of a stock option grant or restricted stock grant. Compensation is variable and is determined based on the following factors.

Investment performance over 1-, 3-, 5-, and 10-year periods is the most important input. The weightings for these time periods are generally balanced and are applied consistently across similar strategies. T. Rowe Price (and Price Hong Kong, Price Singapore, and T. Rowe Price International, as appropriate), evaluate performance in absolute, relative, and risk-adjusted terms. Relative performance and risk-adjusted performance are determined with reference to the broad-based index (e.g., S&P 500) and the Lipper index (e.g., Large-Cap Growth) set forth in the total returns table in the fund’s prospectus, although other benchmarks may be used as well. Investment results are also measured against comparably managed funds of competitive investment management firms. The selection of comparable funds is approved by the applicable investment steering committee (as described under the “Disclosure of Fund Portfolio Information” section) and are the same as those presented to the directors of the Price Funds in their regular review of fund performance. Performance is primarily measured on a pretax basis though tax efficiency is considered and is especially important for the Tax-Efficient Equity Fund.

Compensation is viewed with a long-term time horizon. The more consistent a manager’s performance over time, the higher the compensation opportunity. The increase or decrease in a fund’s assets due to the purchase or sale of fund shares is not considered a material factor. In reviewing relative performance for fixed-income funds, a fund’s expense ratio is usually taken into account. Contribution to T. Rowe Price’s overall investment process is an important consideration as well. Leveraging ideas and investment insights across the global investment platform; working effectively with and mentoring others; and other contributions to our clients, the firm or our culture are important components of T. Rowe Price’s long-term success and are highly valued.

All employees of T. Rowe Price, including portfolio managers, participate in a 401(k) plan sponsored by T. Rowe Price Group. In addition, all employees are eligible to purchase T. Rowe Price common stock through an employee stock purchase plan that features a limited corporate matching contribution. Eligibility for and participation in these plans is on the same basis as for all employees. Finally, all vice presidents of T. Rowe Price Group, including all portfolio managers, receive supplemental medical/hospital reimbursement benefits.

The compensation structure is used for all portfolios managed by the portfolio manager.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

Torray LLC (“Torray”)**Transamerica Torray Concentrated Growth VP**

Portfolio Manager	Registered Investment Companies		Other Pooled Investment Vehicles		Other Accounts	
	Number	Assets Managed	Number	Assets Managed	Number	Assets Managed
Nicholas C. Haffenreffer	1	\$13.8 million	3	\$44.7 million	83	\$163 million
Fee Based Accounts (The number of accounts and the total assets in the accounts managed by each portfolio manager with respect to which the advisory fee is based on the performance of the account.)						
Nicholas C. Haffenreffer	0	\$0	0	\$0	0	\$0

Conflict of Interest

As indicated in the table above, portfolio managers at Torray LLC may manage accounts for multiple clients. The portfolio managers manage other registered investment companies, other types of pooled accounts (such as private investment funds), and separate accounts (i.e., accounts managed on behalf of individuals for public or private institutions). Portfolio managers at Torray LLC make investment decisions for each account based on the investment objectives and policies and other relevant investment considerations applicable to that portfolio. Because a portfolio manager’s compensation is affected by revenues earned by Torray LLC, the incentives associated with any given account may be higher or lower than those associated with other accounts. Torray LLC has adopted and implemented policies and procedures, including brokerage and trade allocation policies and procedures, which it believes address the conflicts associated with managing multiple accounts for multiple clients. Torray LLC monitors a variety of areas, including compliance with account investment guidelines, the allocation of initial public offerings and other similar investment opportunities, and compliance with Torray LLC’s Code of Ethics.

Compensation

The portfolio manager’s compensation consists of a fixed annual salary, plus additional remuneration based on the overall performance of Torray LLC for Torray LLC’s most recently completed fiscal year of operations. This additional remuneration, if any, is not based on the performance of Torray LLC as compared to a particular benchmark investment index and instead is based on the economic performance of Torray LLC from its business operations

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the fund(s).

Thompson, Siegel & Walmsley LLC (“TS&W”)**Transamerica TS&W International Equity VP**

Portfolio Manager	Registered Investment Companies		Other Pooled Investment Vehicles		Other Accounts	
	Number	Assets Managed	Number	Assets Managed	Number	Assets Managed
Brandon H. Harrell, CFA	3	\$739 million	2	\$50.5 million	0	\$0
Fee Based Accounts (The number of accounts and the total assets in the accounts managed by each portfolio manager with respect to which the advisory fee is based on the performance of the account.)						
Brandon H. Harrell, CFA	0	\$0	0	\$0	0	\$0

Conflict of Interest

TS&W seeks to minimize actual or potential conflicts of interest that may arise from its management of the Fund and management of non-Fund accounts. TS&W has designed and implemented policies and procedures to address (although may not eliminate) potential conflicts of interest, including, among others, performance based fees; hedge funds; aggregation, allocation, and best execution or orders; TS&W’s Code of Ethics which requires personnel to act solely in the best interest of their clients and imposes certain restrictions on the ability of Access Persons to engage in personal securities transactions for their own account(s), and procedures to ensure soft dollar arrangements meet the necessary requirements of Section 28(e) of the Securities Exchange Act of 1934. TS&W seeks to treat all clients fairly and to put clients’ interests first.

Compensation

For each portfolio manager, TS&W’s compensation structure includes the following components: base salary, annual incentive bonus, participation in an Employees’ Retirement Plan and the ability to participate in a voluntary income deferral plan.

- **Base Salary** – Each portfolio manager is paid a fixed base salary, which varies among portfolio managers depending on the experience and responsibilities of the portfolio manager, as well as the strength or weakness of the employment market at the time the portfolio manager is hired or upon any renewal period.
- **Bonus** – Each portfolio manager is eligible to receive an annual incentive bonus. Targeted bonus amounts vary among portfolio managers based on the experience level and responsibilities of the portfolio manager. Bonus amounts are discretionary tied to overall performance versus individual objectives. Performance versus peer groups and benchmarks are taken into consideration.
- **Defined Contribution Plan** – At the discretion of TS&W, a contribution may be made to the employer contribution account for eligible employees of the TS&W Retirement Plan subject to IRS limitations.
- **Deferred Compensation Plan** – Portfolio managers meeting certain requirements are also eligible to participate in a voluntary, nonqualified deferred compensation plan that allows participants to defer a portion of their income on a pre-tax basis and potentially earn tax deferred returns.
- **Equity Plan** – Key employees may be awarded deferred TS&W equity grants. In addition, key employees may purchase TS&W equity directly.

Each portfolio manager is eligible to participate in benefit plans and programs available generally to all employees of TS&W.

Jeffrey Bianchi, CFA	0	\$0	0	\$0	0	\$0
Michael Pytosh	0	\$0	0	\$0	0	\$0

Conflict of Interest

A portfolio manager may be subject to potential conflicts of interest because the portfolio manager is responsible for other accounts in addition to a Fund. These other accounts may include, among others, other mutual funds, separately managed advisory accounts, commingled trust accounts, insurance separate accounts, wrap fee programs, and hedge funds. Potential conflicts may arise out of the implementation of differing investment strategies for the portfolio manager's various accounts, the allocation of investment opportunities among those accounts, or differences in the advisory fees paid by the portfolio manager's accounts.

A potential conflict of interest may arise as a result of the portfolio manager's responsibility for multiple accounts with similar investment guidelines. Under these circumstances, a potential investment may be suitable for more than one of the portfolio manager's accounts, but the quantity of the investment available for purchase is less than the aggregate amount the accounts would ideally devote to the opportunity. Similar conflicts may arise when multiple accounts seek to dispose of the same investment.

A portfolio manager may also manage accounts whose objectives and policies differ from those of a Fund. These differences may be such that under certain circumstances, trading activity appropriate for one account managed by the portfolio manager may have adverse consequences for another account managed by the portfolio manager. For example, if an account were to sell a significant position in a security, which could cause the market price of that security to decrease, while a Fund maintained its position in that security.

A potential conflict may arise when a portfolio manager is responsible for accounts that have different advisory fees—the difference in the fees may create an incentive for the portfolio manager to favor one account over another, for example, in terms of access to particularly appealing investment opportunities. This conflict may be heightened where an account is subject to a performance-based fee.

As part of its compliance program, Voya IM has adopted policies and procedures reasonably designed to address the potential conflicts of interest described above.

Finally, a potential conflict of interest may arise because the investment mandates for certain other accounts, such as hedge funds, may allow extensive use of short sales which, in theory, could allow them to enter into short positions in securities where other accounts hold long positions. Voya IM has policies and procedures reasonably designed to limit and monitor short sales by the other accounts to avoid harm to the Funds.

Compensation

Compensation consists of: (i) a fixed base salary; (ii) a bonus, which is based on Voya IM performance, one, three and five year pre-tax performance of the accounts the portfolio managers are primarily and jointly responsible for relative to account benchmarks, peer universe performance, and revenue growth and net cash flow growth (changes in the accounts' net assets not attributable to changes in the value of the accounts' investments) of the accounts they are responsible for; and (iii) longterm equity awards tied to the performance of our parent company, Voya Groep and/or a notional investment in a pre-defined set of Voya IM sub-advised Funds.

Portfolio managers are also eligible to receive an annual cash incentive award delivered in some combination of cash and a deferred award in the form of Voya stock. The overall design of the annual incentive plan was developed to tie pay to both performance and cash flows,

structured in such a way as to drive performance and promote retention of top talent. As with base salary compensation, individual target awards are determined and set based on external market data and internal comparators. Investment performance is measured on both relative and absolute performance in all areas.

Large Cap Growth

Voya IM has defined the Russell 1000® Growth Index for Mr. Corapi, Mr. Pytosh, and Mr. Bianchi as portfolio managers for Large Cap Growth Fund; and set performance goals to appropriately reflect requirements for the investment team. The measures for each team are outlined on a “scorecard” that is reviewed on an annual basis. These scorecards measure investment performance versus benchmark and peer groups over one-, three- and five-year periods; year-to-date net cash flow (changes in the accounts’ net assets not attributable in the value of the accounts’ investments) for all accounts managed by the team. The results for overall Voya IM scorecards are typically calculated on an asset weighted performance basis of the individual team scorecards.

Investment professionals’ performance measures for bonus determinations are weighted by 25% being attributable to the overall Voya IM performance and 75% attributable to their specific team results (65% investment performance, 5% net cash flow, and 5% revenue growth).

Mid Cap Opportunities

Voya IM has defined the Russell Mid Cap Growth Index for Mr. Bianchi, and Mr. Pytosh as Portfolio Managers for Mid Cap Growth Fund; and set performance goals to appropriately reflect requirements for the investment team. The measures for each team are outlined on a “scorecard” that is reviewed on an annual basis. These scorecards measure investment performance versus benchmark and peer groups over one-, three- and five-year periods; year-to-date net cash flow (changes in the accounts’ net assets not attributable in the value of the accounts’ investments) for all accounts managed by the team. The results for overall Voya IM scorecards are typically calculated on an asset weighted performance basis of the individual team scorecards.

Investment professionals’ performance measures for bonus determinations are weighted by 25% being attributable to the overall Voya IM performance and 75% attributable to their specific team results (65% investment performance, 5% net cash flow, and 5% revenue growth).

Limited Maturity Bond

Voya IM has defined the Barclays Capital U.S. 1-3 Year Government/Credit Bond Index for Ms. Hurtsellers and Mr. Toms as Portfolio Managers of Limited Maturity Bond Fund and set performance goals to appropriately reflect requirements for the investment team. The measures for each team are outlined on a “scorecard” that is reviewed on an annual basis. These scorecards measure investment performance versus benchmark and peer groups over one-, three-, and five-year periods; year-to-date net cash flow (changes in the accounts’ net assets not attributable to changes in the value of the accounts’ investments) for all accounts managed by the team. The results for overall IIM scorecards are typically calculated on an asset weighted performance basis of the individual team scorecards.

Investment professionals’ performance measures for bonus determinations are weighted by 25% being attributable to the overall Voya IM performance and 75% attributable to their specific team results (65% investment performance, 5% net cash flow, and 5% revenue growth).

Intermediate Bond

Voya IM has defined the Barclays Capital U.S. Aggregate Bond Index for Ms. Hurtsellers and Mr. Toms as Portfolio Managers of Intermediate Bond Fund. The measures for each team are outlined on a “scorecard” that is reviewed on an annual basis. These scorecards measure investment performance versus benchmark and peer groups over one-, three-, and five-year periods; year-to-date net cash flow (changes in the accounts’ net assets not attributable to changes in the value of the accounts’ investments) for all accounts managed by the team. The results for overall Voya IM scorecards are typically calculated on an asset weighted performance basis of the individual team scorecards.

Investment professionals’ performance measures for bonus determinations are weighted by 25% being attributable to the overall Voya IM performance and 75% attributable to their specific team results (65% investment performance, 5% net cash flow, and 5% revenue growth).

Ownership of Securities

Mammen Chally, CFA	11	\$3.21 billion	3	\$143.32 million	2	\$300.52 million
Fee Based Accounts (The number of accounts and the total assets in the accounts managed by each portfolio manager with respect to which the advisory fee is based on the performance of the account.)						
Mammen Chally, CFA	0	\$0	0	\$0	0	\$0

Conflict of Interest

Individual investment professionals at Wellington Management manage multiple accounts for multiple clients. These accounts may include mutual funds, separate accounts (assets managed on behalf of institutions, such as pension funds, insurance companies, foundations, or separately managed account programs sponsored by financial intermediaries), bank common trust accounts, and hedge funds. Each portfolio’s manager listed in the prospectus who is primarily responsible for the day-to-day management of each portfolio (“Portfolio Manager”) generally manages accounts in several different investment styles. These accounts may have investment objectives, strategies, time horizons, tax considerations and risk profiles that differ from those of the relevant portfolios. The Portfolio Manager makes investment decisions for each account, including the relevant portfolio, based on the investment objectives, policies, practices, benchmarks, cash flows, tax and other relevant investment considerations applicable to that account. Consequently, the Portfolio Manager may purchase or sell securities, including IPOs, for one account and not another account, and the performance of securities purchased for one account may vary from the performance of securities purchased for other accounts. Alternatively, these accounts may be managed in a similar fashion to the relevant portfolio and thus the accounts may have similar, and in some cases nearly identical, objectives, strategies and/or holdings to that of the relevant portfolio.

The Portfolio Manager or other investment professionals at Wellington Management may place transactions on behalf of other accounts that are directly or indirectly contrary to investment decisions made on behalf of the relevant portfolio, or make investment decisions that are similar to those made for the relevant portfolio, both of which have the potential to adversely impact the relevant portfolio depending on market conditions. For example, an investment professional may purchase a security in one account while appropriately selling that same security in another account. Similarly, the Portfolio Manager may purchase the same security for the relevant portfolio and one or more other accounts at or about the same time. In those instances the other accounts will have access to their respective holdings prior to the public disclosure of the relevant portfolio’s holdings. In addition, some of these accounts have fee structures, including performance fees, which are or have the potential to be higher, in some cases significantly higher, than the fees Wellington Management receives for managing the portfolios. Mr. Markand also manages accounts which pay performance allocations to Wellington Management or its affiliates. Because incentive payments paid by Wellington Management to the Portfolio Manager are tied to revenues earned by Wellington Management and, where noted, to the performance achieved by the manager in each account, the incentives associated with any given account may be significantly higher or lower than those associated with other accounts managed by the Portfolio Manager. Finally, the Portfolio Manager may hold shares or investments in the other pooled investment vehicles and/or other accounts identified above.

Wellington Management’s goal is to meet its fiduciary obligation to treat all clients fairly and provide high quality investment services to all of its clients. Wellington Management has adopted and implemented policies and procedures, including brokerage and trade allocation policies and procedures, which it believes address the conflicts associated with managing multiple accounts for multiple clients. In addition, Wellington Management monitors a variety of areas, including compliance with primary account guidelines, the allocation of IPOs, and compliance with the firm’s Code of Ethics, and places additional investment restrictions on investment professionals who manage hedge funds and certain other accounts. Furthermore, senior investment and business personnel at Wellington Management periodically review the performance of Wellington Management’s investment professionals. Although Wellington Management does not track the time an investment professional spends on a single account, Wellington Management does periodically assess whether an investment professional has adequate time and resources to effectively manage the investment professional’s various client mandates.

Compensation

Wellington Management receives a fee based on the assets under management of each portfolio as set forth in the Investment Sub-advisory Agreement between Wellington Management and TAM on behalf of each portfolio. Wellington Management pays its investment professionals out of its total revenues, including the advisory fees earned with respect to each portfolio. The following information relates to the fiscal year ended December 31, 2013.

Wellington Management’s compensation structure is designed to attract and retain high-caliber investment professionals necessary to deliver high quality investment management services to its clients. Wellington Management’s compensation of the portfolio manager listed in the

prospectus who is primarily responsible for the day-to-day management of the portfolios (“Portfolio Manager”) includes a base salary and incentive components. The base salary for each Portfolio Manager who is a partner of Wellington Management is generally a fixed amount that is determined by the Managing Partners of the firm. The Portfolio Manager is eligible to receive an incentive payment based on the revenues earned by Wellington Management from the portfolios and generally each other account managed by such Portfolio Manager. The Portfolio Manager’s incentive payment relating to the portfolios is linked to the gross pre-tax performance of the portfolios managed by the Portfolio Manager compared to the benchmark index and/or peer group identified below over one and three year periods, with an emphasis on three year results. In 2012, Wellington Management began placing increased emphasis on long-term performance and is phasing in a five-year performance comparison period, which will be fully implemented by December 31, 2016. Wellington Management applies similar incentive compensation structures (although the benchmarks or peer groups, time periods and rates may differ) to other accounts managed by the Portfolio Manager, including accounts with performance fees.

Portfolio-based incentives across all accounts managed by an investment professional can, and typically do, represent a significant portion of an investment professional’s overall compensation; incentive compensation varies significantly by individual and can vary significantly from year to year. The Portfolio Manager may also be eligible for bonus payments based on his overall contribution to Wellington Management’s business operations. Senior management at Wellington Management may reward individuals as it deems appropriate based on other factors. Each partner of Wellington Management is eligible to participate in a partner-funded tax qualified retirement plan, the contributions to which are made pursuant to an actuarial formula.

Conflicts of Interest

Western Asset has adopted compliance policies and procedures to address a wide range of potential conflicts of interest that could directly impact client portfolios. For example, potential conflicts of interest may arise in connection with the management of multiple portfolios

(including portfolios managed in a personal capacity). These could include potential conflicts of interest related to the knowledge and timing of a portfolio's trades, investment opportunities and broker selection. Portfolio managers are privy to the size, timing, and possible market impact of a portfolio's trades.

It is possible that an investment opportunity may be suitable for both a portfolio and other accounts managed by a portfolio manager, but may not be available in sufficient quantities for both the portfolio and the other accounts to participate fully. Similarly, there may be limited opportunity to sell an investment held by a portfolio and another account. A conflict may arise where the portfolio manager may have an incentive to treat an account preferentially as compared to a portfolio because the account pays a performance-based fee or the portfolio manager, Western Asset or an affiliate has an interest in the account. The firm has adopted procedures for allocation of portfolio transactions and investment opportunities across multiple client accounts on a fair and equitable basis over time. All eligible accounts that can participate in a trade share the same price on a pro-rata allocation basis to ensure that no conflict of interest occurs. Trades are allocated among similarly managed accounts to maintain consistency of portfolio strategy, taking into account cash availability, investment restrictions and guidelines, and portfolio composition versus strategy.

With respect to securities transactions, Western Asset determines which broker or dealer to use to execute each order, consistent with its duty to seek best execution of the transaction. However, with respect to certain other accounts (such as pooled investment vehicles that are not registered investment companies and other accounts managed for organizations and individuals), the firm may be limited by the client with respect to the selection of brokers or dealers or may be instructed to direct trades through a particular broker or dealer. In these cases, trades for a portfolio in a particular security may be placed separately from, rather than aggregated with, such other accounts. Having separate transactions with respect to a security may temporarily affect the market price of the security or the execution of the transaction, or both, to the possible detriment of a portfolio or the other account(s) involved. Additionally, the management of multiple portfolios and/or other accounts may result in a portfolio manager devoting unequal time and attention to the management of each portfolio and/or other account. Western Asset's team approach to portfolio management and block trading approach works to limit this potential risk.

The firm also maintains a gift and entertainment policy to address the potential for a business contact to give gifts or host entertainment events that may influence the business judgment of an employee. Employees are permitted to retain gifts of only a nominal value and are required to make reimbursement for entertainment events above a certain value. All gifts (except those of a de minimus value) and entertainment events that are given or sponsored by a business contact are required to be reported in a gift and entertainment log which is reviewed on a regular basis for possible issues.

Employees of the firm have access to transactions and holdings information regarding client accounts and the firm's overall trading activities. This information represents a potential conflict of interest because employees may take advantage of this information as they trade in their personal accounts. Accordingly, the firm maintains a Code of Ethics that is compliant with Rule 17j-1 and Rule 204A-1 to address personal trading. In addition, the Code of Ethics seeks to establish broader principles of good conduct and fiduciary responsibility in all aspects of the firm's business. The Code of Ethics is administered by the Legal and Compliance Department and monitored through the firm's compliance monitoring program.

Western Asset may also face other potential conflicts of interest with respect to managing client assets, and the description above is not a complete description of every conflict of interest that could be deemed to exist. The firm also maintains a compliance monitoring program and engages independent auditors to conduct a SSAE16/ISAE 3402 audit on an annual basis. These steps help to ensure that potential conflicts of interest have been addressed.

Portfolio Manager Compensation

At Western Asset, one compensation methodology covers all products and functional areas, including portfolio managers. Western Asset's philosophy is to reward its employees through total compensation. Total compensation is reflective of the external market value for skills, experience, ability to produce results and the performance of one's group and the firm as a whole.

Discretionary bonuses make up the variable component of total compensation. These are structured to reward sector specialists for contributions to the firm as well as relative performance of their specific portfolios/product and are determined by the professional's job function and performance as measured by a formal review process.

For portfolio managers, the formal review process includes a thorough review of portfolios they were assigned to lead, or with which they were otherwise involved, and includes not only investment performance, but maintaining a detailed knowledge of client portfolio objectives and guidelines, monitoring of risks and performance for adherence to these parameters, execution of asset allocation consistent with current firm and portfolio strategy and communication with clients. In reviewing pre-tax investment performance, one-, three- and five-year annualized returns are measured against appropriate market peer groups and to each fund's benchmark index.

Ownership of Securities

As of December 31, 2013, the portfolio manager(s) did not beneficially own any shares of the portfolio(s).

Vanguard Variable Insurance Funds

Supplement to the Statement of Additional Information Dated April 30, 2014

Important Changes to Vanguard Variable Insurance Fund Growth Portfolio

Delaware Investments Fund Advisers (one of the advisors to Vanguard Variable Insurance Fund Growth Portfolio) and members of the Focus Growth Team at Delaware Investments Fund Advisers have created a new jointly owned firm called Jackson Square Partners, LLC (Jackson Square). Jackson Square now serves as advisor to the portion of the Portfolio formerly managed by Delaware Investments Fund Advisers.

Jeffrey S. Van Harte, Daniel J. Prislín, Christopher M. Ericksen, and Christopher J. Bonavico continue to serve as portfolio managers for the portion of the Portfolio advised by Jackson Square.

The joint venture will not result in a change in the nature or level of advisory services provided to the Portfolio, or an increase in the fees paid by the Portfolio for such services. The Portfolio's investment objective, strategies, and risks remain unchanged.

Statement of Additional Information Text Changes

All references to Delaware Investments Fund Advisers are hereby changed to Jackson Square Partners, LLC.

In the **Investment Advisory Services** section, the following replaces the introductory text for Delaware Investments Fund Advisers under "III. Growth Portfolio" on page B-54:

A. Jackson Square Partners, LLC (Jackson Square)

Jackson Square Partners, LLC, is an investment management firm founded in 2013. Jackson Square is organized as a Delaware limited-liability company with principal offices at 101 California Street, Suite 3750, San Francisco, CA 94111.

Within the same section, under "3. Description of Compensation," the following replaces the text under that subsection:

Jackson Square's investment professionals have remained together, bound by culture and the unique nature of the team's research/portfolio manager role, for over a decade on average. Through various market and organizational circumstances over the years, the group has maintained a meritocracy and very strong pay-for-performance ethos that rewards positive impact to client portfolios. Each stock in each portfolio has two or more "sponsors" who have mathematical ownership of those names for performance attribution purposes (e.g., 60/40 or 50/50 responsibility splits). This stock-by-stock attribution can then be aggregated and the individual contributions of team members measured, down to the basis point, for each performance period measured: 1-, 3-, and 5-year, and since inception.

Aggregate compensation is ultimately driven by revenues. These in turn are correlated with assets under management (AUM), which ultimately correlates with performance over the long term, in a self-reinforcing cycle of better performance leading to more AUM (both via flows and appreciation) and greater revenues/compensation. Additionally, qualitative factors such as contribution to debates of other team members' ideas are also considered in determining compensation. Certain employees, including all eight members of the investment team, have equity ownership as part of their compensation.

In terms of the composition of compensation paid to the investment team, it is expected to be a combination of base salary, partnership equity distributions, and discretionary annual bonuses. Jackson Square believes this combination will have the proper incentives to award prudent long-term focus on building a stable and sustainable business while also rewarding professionals for superior relative interim results.

Also in the **Investment Advisory Services** section, the first paragraph under “Duration and Termination of Investment Advisory Agreements” on page B-69 is replaced with the following two paragraphs:

The current investment advisory agreements with the unaffiliated advisors (other than Jackson Square) are renewable for successive one-year periods, only if (1) each renewal is specifically approved by a vote of the Fund’s board of trustees, including the affirmative votes of a majority of the trustees who are not parties to the agreement or “interested persons” (as defined in the 1940 Act) of any such party, cast in person at a meeting called for the purpose of considering such approval, or (2) each renewal is specifically approved by a vote of a majority of the Portfolio’s outstanding voting securities.

The initial investment advisory agreement with Jackson Square is binding for a two-year period. At the end of that time, the agreement will become renewable for successive one-year periods, subject to the above conditions.

PART B

VANGUARD® VARIABLE INSURANCE FUNDS

STATEMENT OF ADDITIONAL INFORMATION

April 30, 2014

This Statement of Additional Information is not a prospectus but should be read in conjunction with the Fund's current prospectus dated (April 30, 2014). To obtain, without charge, a prospectus or the most recent Annual Report to Shareholders, which contains the Fund's financial statements as hereby incorporated by reference, please contact The Vanguard Group, Inc. (Vanguard), or the insurance company sponsoring the accompanying variable life insurance or variable annuity contract.

DESCRIPTION OF THE TRUST

Vanguard Variable Insurance Funds (hereinafter the Trust or the Fund) currently offers the following Portfolios:

Balanced Portfolio	Mid-Cap Index Portfolio
Capital Growth Portfolio	Moderate Allocation Portfolio
Conservative Allocation Portfolio	Money Market Portfolio
Diversified Value Portfolio	REIT Index Portfolio
Equity Income Portfolio	Short-Term Investment-Grade Portfolio
Equity Index Portfolio	Small Company Growth Portfolio
Growth Portfolio	Total Bond Market Index Portfolio
High Yield Bond Portfolio	Total Stock Market Index Portfolio
International Portfolio	

(individually, a Portfolio; collectively, the Portfolios)

Each Portfolio offers only one class of shares (Investor Shares). Throughout this document, any references to "class" indicate how a Portfolio would operate if, in the future, the Portfolio issued more than one class of shares. The Fund has the ability to offer additional portfolios or classes of shares. There is no limit on the number of full and fractional shares that the Fund may issue for a single portfolio or class of shares.

Organization

The Trust was organized as a Maryland corporation in 1989 before becoming a Pennsylvania business trust later in 1989, and was reorganized as a Delaware statutory trust in 1998. Prior to its reorganization as a Delaware statutory trust, the Trust was known by the same name as is currently used. The Trust is registered with the United States Securities and

Exchange Commission (SEC) under the Investment Company Act of 1940 (the 1940 Act) as an open-end management investment company. All Portfolios within the Trust are classified as diversified within the meaning of the 1940 Act.

Each Portfolio offers its shares to insurance companies that sponsor both annuity and life insurance contracts. An insurance company might offer some, but not necessarily all, of the Portfolios.

Service Providers

Custodians. Bank of New York Mellon, One Wall Street, New York, NY 10286 (for the Capital Growth, Growth, Money Market, and Short-Term Investment-Grade Portfolios); Brown Brothers Harriman & Co., 40 Water Street, Boston, MA 02109 (for the Conservative Allocation, Equity Income, International, Moderate Allocation, and Total Stock Market Index Portfolios); State Street Bank and Trust Company, One Lincoln Street, Boston, MA 02111 (for the Balanced, Diversified Value, Equity Index, High Yield Bond, Mid-Cap Index, REIT Index, and Small Company Growth Portfolios); and JPMorgan Chase Bank, 270 Park Avenue, New York, NY 10017-2070 (for the Total Bond Market Index Portfolio), serve as the Portfolios' custodians. The custodians are responsible for maintaining the Portfolios' assets, keeping all necessary accounts and records of Portfolio assets, and appointing any foreign subcustodians or foreign securities depositories.

Independent Registered Public Accounting Firm. PricewaterhouseCoopers LLP, Two Commerce Square, Suite 1700, 2001 Market Street, Philadelphia, PA 19103-7042, serves as the Portfolios' independent registered public accounting firm. The independent registered public accounting firm audits the Portfolios' annual financial statements and provides other related services.

Transfer and Dividend-Paying Agent. The Portfolios' transfer agent and dividend-paying agent is Vanguard, P.O. Box 2600, Valley Forge, PA 19482.

Characteristics of the Fund's Shares

Restrictions on Holding or Disposing of Shares. There are no restrictions on the right of shareholders to retain or dispose of a Portfolio's shares, other than those described in the Fund's current prospectus and elsewhere in this Statement of Additional Information. The Portfolio or class may be terminated by reorganization into another mutual fund or class or by liquidation and distribution of the assets of the Portfolio or class. Unless terminated by reorganization or liquidation, each Portfolio and share class will continue indefinitely.

Shareholder Liability. The Trust is organized under Delaware law, which provides that shareholders of a statutory trust are entitled to the same limitations of personal liability as shareholders of a corporation organized under Delaware law. This means that a shareholder of a Portfolio generally will not be personally liable for payment of the Portfolio's debts. Some state courts, however, may not apply Delaware court law on this point. We believe that the possibility of such a situation arising is remote.

Dividend Rights. The shareholders of each class of a Portfolio are entitled to receive any dividends or other distributions declared by the Portfolio for each such class. No shares of a Portfolio have priority or preference over any other shares of the Portfolio with respect to distributions. Distributions will be made from the assets of the Portfolio, and will be paid ratably to all shareholders of a particular class according to the number of shares of the class held by shareholders on the record date. The amount of dividends per share may vary between separate share classes of the Portfolio based upon differences in the net asset values of the different classes and differences in the way that expenses are allocated between share classes pursuant to a multiple class plan approved by the Fund's board of trustees.

Voting Rights. Shareholders are entitled to vote on a matter if (1) the matter concerns an amendment to the Declaration of Trust that would adversely affect to a material degree the rights and preferences of the shares of a Portfolio or class; (2) the trustees determine that it is necessary or desirable to obtain a shareholder vote; (3) a merger or consolidation, share conversion, share exchange, or sale of assets is proposed and a shareholder vote is required by the 1940 Act to approve the transaction; or (4) a shareholder vote is required under the 1940 Act. The 1940 Act requires a shareholder vote under various circumstances, including to elect or remove trustees upon the written request of shareholders representing 10% or more of a Portfolio's net assets, to change any fundamental policy of a Portfolio, and to enter into certain merger transactions. Unless otherwise required by applicable law, shareholders of each Portfolio receive one vote for each dollar of net asset value owned on the record date, and a fractional vote for each fractional dollar of net asset value owned on the record date. However, only the shares of the Portfolio or class affected by a particular matter are entitled to vote on that matter. Voting rights are noncumulative and cannot be modified without a majority vote.

Liquidation Rights. In the event that a Portfolio is liquidated, shareholders will be entitled to receive a pro rata share of the Portfolio's net assets. Shareholders may receive cash, securities, or a combination of the two.

Preemptive Rights. There are no preemptive rights associated with the Portfolio's shares.

Conversion Rights. There are no conversion rights associated with the Portfolio's shares.

Redemption Provisions. The Portfolio's redemption provisions are described in the current annuity or life insurance program prospectus and elsewhere in this Statement of Additional Information.

Sinking Fund Provisions. The Portfolios have no sinking fund provisions.

Calls or Assessment. Each Portfolio's shares, when issued, are fully paid and non-assessable.

Tax Status of the Portfolios

Each Portfolio expects to qualify each year for treatment as a "regulated investment company" under Subchapter M of the Internal Revenue Code of 1986, as amended (the IRC). This special tax status means that the Portfolios will not be liable for federal tax on income and capital gains distributed to shareholders. In order to preserve its tax status, each Portfolio must comply with certain requirements. If a Portfolio fails to meet these requirements in any taxable year, the Portfolio will, in some cases, be able to cure such failure, including by paying a portfolio-level tax, paying interest, making additional distributions, or disposing of certain assets. If the Portfolio is ineligible to or otherwise does not cure such failure for any year, it will be subject to tax on its taxable income at corporate rates, and each insurance company's separate account invested in the Portfolio would fail to satisfy the diversification requirements under the IRC, with the result that income and gain allocable to the variable annuity and variable life insurance contracts supported by that account could be taxable to you currently. See "Tax Matters—Federal Tax Requirements Applicable to Variable Annuity and Variable Life Insurance Contracts". In addition, the Portfolio could be required to recognize unrealized gains, pay substantial taxes and interest, and make substantial distributions before regaining its tax status as a regulated investment company.

FUNDAMENTAL POLICIES

Each Portfolio is subject to the following fundamental investment policies, which cannot be changed in any material way without the approval of the holders of a majority of the affected Portfolio's shares. For these purposes, a "majority" of shares means shares representing the lesser of (1) 67% or more of the Portfolio's net assets voted, so long as shares representing more than 50% of the Portfolio's net assets are present or represented by proxy; or (2) more than 50% of the Portfolio's net assets.

Borrowing. Each Portfolio may borrow money only as permitted by the 1940 Act or other governing statute, by the Rules thereunder, or by the SEC or other regulatory agency with authority over the Fund.

Commodities. Each Portfolio may invest in commodities only as permitted by the 1940 Act or other governing statute, by the Rules thereunder, or by the SEC or other regulatory agency with authority over the Fund.

Diversification. With respect to 75% of its total assets, each Portfolio (other than the Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios) may not: (1) purchase more than 10% of the outstanding voting securities of any one issuer; or (2) purchase securities of any issuer if, as a result, more than 5% of the Portfolio's total assets would be invested in that issuer's securities. This limitation does not apply to obligations of the U. S. government or its agencies or instrumentalities. Additionally, each Portfolio (except the Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios) will limit the aggregate value of its holdings of a single issuer (other than U.S. government securities, as defined in the IRC), to a maximum of 25% of the Portfolio's total assets as of the end of each quarter of the taxable year.

The Total Stock Market Index Portfolio will limit the aggregate value of its holdings (other than U.S. government securities, cash, and cash items, as defined under subchapter M of the IRC, and securities of other regulated investment companies), for each holding that exceeds 5% of the Portfolio's total assets or 10% of the issuer's outstanding voting securities, to an aggregate of 50% of the Portfolio's total assets as of the end of each quarter of the taxable year. Additionally, the Portfolio will limit the aggregate value of its holdings of a single issuer (other than U.S. government securities, as defined in the IRC, or the securities of other regulated investment companies) to a maximum of 25% of the Portfolio's total assets as of the end of each quarter of the taxable year.

Industry Concentration. Each Portfolio (other than those indicated in the following exceptions) will not concentrate its investments in the securities of issuers whose principal business activities are in the same industry.

The Money Market Portfolio will concentrate its assets in the securities of issuers whose principal business activities are in the financial services industry. For the purposes of this policy, the financial services industry is deemed to include the group of industries within the financial services sector. In addition, the Portfolio reserves the right to concentrate its investments in government securities, as defined in the 1940 Act.

The REIT Index Portfolio will concentrate its investments in the securities of issuers whose principal business activities are in the real estate industry, as defined in the prospectus.

For the Equity Index, Mid-Cap Index, Total Bond Market Index, and Total Stock Market Index Portfolios: Each Portfolio will not concentrate its investments in the securities of issuers whose principal business activities are in the same industry, except as may be necessary to approximate the composition of its target index.

Investment Objective. The investment objective of each Portfolio may not be materially changed without a shareholder vote.

Loans. Each Portfolio may make loans to another person only as permitted by the 1940 Act or other governing statute, by the Rules thereunder, or by the SEC or other regulatory agency with authority over the Fund.

Real Estate. Each Portfolio may not invest directly in real estate unless it is acquired as a result of ownership of securities or other instruments. This restriction shall not prevent the Fund from investing in securities or other instruments (1) issued by companies that invest, deal, or otherwise engage in transactions in real estate or (2) backed or secured by real estate or interests in real estate.

Senior Securities. Each Portfolio may not issue senior securities except as permitted by the 1940 Act or other governing statute, by the Rules thereunder, or by the SEC or other regulatory agency with authority over the Fund.

Underwriting. Each Portfolio may not act as an underwriter of another issuer's securities, except to the extent that the Portfolio may be deemed to be an underwriter within the meaning of the Securities Act of 1933 (the 1933 Act), in connection with the purchase and sale of portfolio securities.

Compliance with the fundamental policies previously described is generally measured at the time the securities are purchased. Unless otherwise required by the 1940 Act (as is the case with borrowing), if a percentage restriction is adhered to at the time the investment is made, a later change in percentage resulting from a change in the market value of assets will not constitute a violation of such restriction. All fundamental policies must comply with applicable regulatory requirements. For more details, see **Investment Strategies and Nonfundamental Policies**.

None of these policies prevents the Fund from having an ownership interest in Vanguard. As a part owner of Vanguard, the Fund may own securities issued by Vanguard, make loans to Vanguard, and contribute to Vanguard's costs or other financial requirements. See **Management of the Fund** for more information.

INVESTMENT STRATEGIES AND NONFUNDAMENTAL POLICIES

Some of the investment strategies and policies described on the following pages and in the Fund's prospectus set forth percentage limitations on a Portfolio's investment in, or holdings of, certain securities or other assets. Unless otherwise required by law, compliance with these strategies and policies will be determined immediately after the acquisition of such securities or assets by the Portfolio. Subsequent changes in values, net assets, or other circumstances will not be considered when determining whether the investment complies with the Portfolios' investment strategies and policies.

The following investment strategies and policies supplement each Portfolio's investment strategies and policies set forth in the prospectus. With respect to the different investments discussed as follows, a Portfolio may acquire such investments to the extent consistent with its investment strategies and policies. The Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios are indirectly exposed to the investment strategies and policies of the underlying Vanguard funds in which they invest and are therefore subject to all risks associated with the investment strategies and policies of the underlying Vanguard funds. The investment strategies and policies and associated risks detailed in this section also include those to which the Allocation Portfolios and the Total Stock Market Index Portfolio indirectly may be exposed through their investment in the underlying Vanguard funds.

Asset-Backed Securities. Asset-backed securities represent a participation in, or are secured by and payable from, pools of underlying assets such as debt securities, bank loans, motor vehicle installment sales contracts, installment loan contracts, leases of various types of real and personal property, receivables from revolving credit (i.e., credit card) agreements, and other categories of receivables. These underlying assets are securitized through the use of trusts and special purpose entities. Payment of interest and repayment of principal on asset-backed securities may be largely dependent upon the cash flows generated by the underlying assets backing the securities and, in certain cases, may be supported by letters of credit, surety bonds, or other credit enhancements. The rate of principal payments on asset-backed securities is related to the rate of principal payments, including prepayments, on the underlying assets. The credit quality of asset-backed securities depends primarily on the quality of the underlying assets, the level of credit support, if any, provided for the securities, and the credit quality of the credit-support provider, if any. The value of asset-backed securities may be affected by the various factors described above and other factors, such as changes in interest rates, the availability of information concerning the pool and its structure, the creditworthiness of the servicing agent for the pool, the originator of the underlying assets, or the entities providing the credit enhancement.

Asset-backed securities are often subject to more rapid repayment than their stated maturity date would indicate, as a result of the pass-through of prepayments of principal on the underlying assets. Prepayments of principal by borrowers or foreclosure or other enforcement action by creditors shortens the term of the underlying assets. The occurrence of prepayments is a function of several factors, such as the level of interest rates, the general economic conditions, the location and age of the underlying obligations, and other social and demographic conditions. A fund's ability to maintain positions in asset-backed securities is affected by the reductions in the principal amount of the underlying assets because of prepayments. A fund's ability to reinvest prepayments of principal (as well as interest and other distributions and sale proceeds) at a comparable yield is subject to generally prevailing interest rates at that time. The value of asset-backed securities varies with changes in market interest rates generally and the differentials in yields among various kinds of U.S. government securities, mortgage-backed securities, and asset-backed securities. In periods of rising interest rates, the rate of prepayment tends to decrease, thereby lengthening the average life of the underlying securities. Conversely, in periods of falling interest rates, the rate of prepayment tends to increase, thereby shortening the average life of such assets. Because prepayments of principal generally occur when interest rates are declining, an investor, such as a fund, generally has to reinvest the proceeds of such prepayments at lower interest rates than those at which the assets were previously invested. Therefore, asset-backed securities have less potential for capital appreciation in periods of falling interest rates than other income-bearing securities of comparable maturity.

Because asset-backed securities generally do not have the benefit of a security interest in the underlying assets that is comparable to a mortgage, asset-backed securities present certain additional risks that are not present with mortgage-backed securities. For example, revolving credit receivables are generally unsecured and the debtors on such receivables are entitled to the protection of a number of state and federal consumer credit laws, many of which give debtors the right to set off certain amounts owed, thereby reducing the balance due. Automobile receivables generally are secured, but by automobiles rather than by real property. Most issuers of automobile receivables permit loan servicers to retain possession of the underlying assets. If the servicer of a pool of underlying assets sells them to another party, there is the risk that the purchaser could acquire an interest superior to that of holders of the asset-backed securities. In addition, because of the large number of vehicles involved in a typical issue of asset-backed securities and technical requirements under state law, the trustee for the holders of the automobile receivables may not have a proper security interest in the automobiles. Therefore, there is the possibility that recoveries on repossessed collateral may not be available to support payments on these securities. Asset-backed securities have been, and may continue to be, subject to greater liquidity risks because of the deterioration of worldwide economic and liquidity conditions that became acute in 2008. In addition, government actions and proposals that affect the terms of underlying home and consumer loans, thereby changing demand for products financed by those loans, as well as the inability of borrowers to refinance existing loans, have had and may continue to have a negative effect on the valuation and liquidity of asset-backed securities.

Borrowing. A fund's ability to borrow money is limited by its investment policies and limitations; by the 1940 Act; and by applicable exemptions, no-action letters, interpretations, and other pronouncements issued from time to time by the SEC and its staff or any other regulatory authority with jurisdiction. Under the 1940 Act, a fund is required to maintain continuous asset coverage (that is, total assets including borrowings, less liabilities exclusive of borrowings) of 300% of the amount borrowed, with an exception for borrowings not in excess of 5% of the fund's total assets made for temporary or emergency purposes. Any borrowings for temporary purposes in excess of 5% of the fund's total assets must maintain continuous asset coverage. If the 300% asset coverage should decline as a result of market fluctuations

or for other reasons, a fund may be required to sell some of its portfolio holdings within three days (excluding Sundays and holidays) to reduce the debt and restore the 300% asset coverage, even though it may be disadvantageous from an investment standpoint to sell securities at that time.

Borrowing will tend to exaggerate the effect on net asset value of any increase or decrease in the market value of a fund's portfolio. Money borrowed will be subject to interest costs that may or may not be recovered by earnings on the securities purchased. A fund also may be required to maintain minimum average balances in connection with a borrowing or to pay a commitment or other fee to maintain a line of credit; either of these requirements would increase the cost of borrowing over the stated interest rate.

The SEC takes the position that transactions that have a leveraging effect on the capital structure of a fund or are economically equivalent to borrowing can be viewed as constituting a form of borrowing by the fund for purposes of the 1940 Act. These transactions can include entering into reverse repurchase agreements; engaging in mortgage-dollar-roll transactions; selling securities short (other than short sales "against-the-box"); buying and selling certain derivatives (such as futures contracts); selling (or writing) put and call options; engaging in sale-buybacks; entering into firm-commitment and standby-commitment agreements; engaging in when-issued, delayed-delivery, or forward-commitment transactions; and participating in other similar trading practices. (Additional discussion about a number of these transactions can be found on the following pages.) A borrowing transaction will not be considered to constitute the issuance, by a fund, of a "senior security," as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by a fund, if the fund maintains an offsetting financial position; segregates liquid assets (with such liquidity determined by the advisor in accordance with procedures established by the board of trustees) equal (as determined on a daily mark-to-market basis) in value to the fund's potential economic exposure under the borrowing transaction; or otherwise "covers" the transaction in accordance with applicable SEC guidance (collectively, "covers" the transaction). A fund may have to buy or sell a security at a disadvantageous time or price in order to cover a borrowing transaction. In addition, segregated assets may not be available to satisfy redemptions or to fulfill other obligations.

Common Stock. Common stock represents an equity or ownership interest in an issuer. Common stock typically entitles the owner to vote on the election of directors and other important matters, as well as to receive dividends on such stock. In the event an issuer is liquidated or declares bankruptcy, the claims of owners of bonds, other debt holders, and owners of preferred stock take precedence over the claims of those who own common stock.

Convertible Securities. Convertible securities are hybrid securities that combine the investment characteristics of bonds and common stocks. Convertible securities typically consist of debt securities or preferred stock that may be converted (on a voluntary or mandatory basis) within a specified period of time (normally for the entire life of the security) into a certain amount of common stock or other equity security of the same or a different issuer at a predetermined price. Convertible securities also include debt securities with warrants or common stock attached and derivatives combining the features of debt securities and equity securities. Other convertible securities with features and risks not specifically referred to herein may become available in the future. Convertible securities involve risks similar to those of both fixed income and equity securities. In a corporation's capital structure, convertible securities are senior to common stock but are usually subordinated to senior debt obligations of the issuer.

The market value of a convertible security is a function of its "investment value" and its "conversion value." A security's "investment value" represents the value of the security without its conversion feature (i.e., a nonconvertible fixed income security). The investment value may be determined by reference to its credit quality and the current value of its yield to maturity or probable call date. At any given time, investment value is dependent upon such factors as the general level of interest rates, the yield of similar nonconvertible securities, the financial strength of the issuer, and the seniority of the security in the issuer's capital structure. A security's "conversion value" is determined by multiplying the number of shares the holder is entitled to receive upon conversion or exchange by the current price of the underlying security. If the conversion value of a convertible security is significantly below its investment value, the convertible security will trade like nonconvertible debt or preferred stock and its market value will not be influenced greatly by fluctuations in the market price of the underlying security. In that circumstance, the convertible security takes on the characteristics of a bond, and its price moves in the opposite direction from interest rates. Conversely, if the conversion value of a convertible security is near or above its investment value, the market value of the convertible security will be more heavily influenced by fluctuations in the market price of the underlying security. In that case, the convertible security's price may be as volatile as that of common stock. Because both interest rates and market movements can influence its value, a convertible security generally is not as sensitive to interest rates as a similar fixed income security, nor is it as

sensitive to changes in share price as its underlying equity security. Convertible securities are often rated below investment grade or are not rated, and they are generally subject to a high degree of credit risk.

Although all markets are prone to change over time, the generally high rate at which convertible securities are retired (through mandatory or scheduled conversions by issuers or through voluntary redemptions by holders) and replaced with newly issued convertible securities may cause the convertible securities market to change more rapidly than other markets. For example, a concentration of available convertible securities in a few economic sectors could elevate the sensitivity of the convertible securities market to the volatility of the equity markets and to the specific risks of those sectors. Moreover, convertible securities with innovative structures, such as mandatory-conversion securities and equity-linked securities, have increased the sensitivity of the convertible securities market to the volatility of the equity markets and to the special risks of those innovations, which may include risks different from, and possibly greater than, those associated with traditional convertible securities. A convertible security may be subject to redemption at the option of the issuer at a price set in the governing instrument of the convertible security. If a convertible security held by a fund is subject to such redemption option and is called for redemption, the fund must allow the issuer to redeem the security, convert it into the underlying common stock, or sell the security to a third party.

Debt Securities. A debt security, sometimes called a fixed income security, consists of a certificate or other evidence of a debt (secured or unsecured) on which the issuing company or governmental body promises to pay the holder thereof a fixed, variable, or floating rate of interest for a specified length of time and to repay the debt on the specified maturity date. Some debt securities, such as zero-coupon bonds, do not make regular interest payments but are issued at a discount to their principal or maturity value. Debt securities include a variety of fixed income obligations, including, but not limited to, corporate bonds, government securities, municipal securities, convertible securities, mortgage-backed securities, and asset-backed securities. Debt securities include investment-grade securities, non-investment-grade securities, and unrated securities. Debt securities are subject to a variety of risks, such as interest rate risk, income risk, call/prepayment risk, inflation risk, credit risk, and (in the case of foreign securities) country risk and currency risk. The reorganization of an issuer under the federal bankruptcy laws may result in the issuer's debt securities being cancelled without repayment, repaid only in part, or repaid in part or in whole through an exchange thereof for any combination of cash, debt securities, convertible securities, equity securities, or other instruments or rights in respect to the same issuer or a related entity.

Debt Securities—Bank Obligations. Time deposits are non-negotiable deposits maintained in a banking institution for a specified period of time at a stated interest rate. Certificates of deposit are negotiable short-term obligations of commercial banks. Variable rate certificates of deposit have an interest rate that is periodically adjusted prior to their stated maturity based upon a specified market rate. As a result of these adjustments, the interest rate on these obligations may be increased or decreased periodically. Frequently, dealers selling variable rate certificates of deposit to a fund will agree to repurchase such instruments, at the fund's option, at par on or near the coupon dates. The dealers' obligations to repurchase these instruments are subject to conditions imposed by various dealers; such conditions typically are the continued credit standing of the issuer and the existence of reasonably orderly market conditions. A fund is also able to sell variable rate certificates of deposit on the secondary market. Variable rate certificates of deposit normally carry a higher interest rate than comparable fixed-rate certificates of deposit. A banker's acceptance is a time draft drawn on a commercial bank by a borrower usually in connection with an international commercial transaction (to finance the import, export, transfer, or storage of goods). The borrower is liable for payment, as is the bank, which unconditionally guarantees to pay the draft at its face amount on the maturity date. Most acceptances have maturities of 6 months or less and are traded in the secondary markets prior to maturity.

Debt Securities—Commercial Paper. Commercial paper refers to short-term, unsecured promissory notes issued by corporations to finance short-term credit needs. It is usually sold on a discount basis and has a maturity at the time of issuance not exceeding 9 months. Commercial paper rated A-1 by Standard & Poor's has the following characteristics: (1) liquidity ratios are adequate to meet cash requirements; (2) long-term senior debt is rated "A" or better; (3) the issuer has access to at least two additional channels of borrowing; (4) basic earnings and cash flow have an upward trend with allowance made for unusual circumstances; (5) typically, the issuer's industry is well established and the issuer has a strong position within the industry; and (6) the reliability and quality of management are unquestioned. Relative strength or weakness of the above factors determines whether the issuer's commercial paper is A-1, A-2, or A-3. The rating Prime-1 is the highest commercial paper rating assigned by Moody's Investors Service, Inc. (Moody's). Among the factors considered by Moody's in assigning ratings are the following: (1) evaluation of the management of the issuer, (2) economic evaluation of the issuer's industry or industries and the appraisal of speculative-type risks that may be

inherent in certain areas, (3) evaluation of the issuer's products in relation to competition and customer acceptance, (4) liquidity, (5) amount and quality of long-term debt, (6) trend of earnings over a period of ten years, (7) financial strength of a parent company and the relationships that exist with the issuer, and (8) recognition by the management of obligations that may be present or may arise as a result of public-interest questions and preparations to meet such obligations.

Variable-amount master-demand notes are demand obligations that permit the investment of fluctuating amounts at varying market rates of interest pursuant to arrangement between the issuer and a commercial bank acting as agent for the payees of such notes, whereby both parties have the right to vary the amount of the outstanding indebtedness on the notes. Because variable-amount master-demand notes are direct lending arrangements between a lender and a borrower, it is not generally contemplated that such instruments will be traded, and there is no secondary market for these notes, although they are redeemable (and thus immediately repayable by the borrower) at face value, plus accrued interest, at any time. In connection with a fund's investment in variable-amount master-demand notes, Vanguard's investment management staff will monitor, on an ongoing basis, the earning power, cash flow, and other liquidity ratios of the issuer, along with the borrower's ability to pay principal and interest on demand.

Debt Securities—Inflation-Indexed Securities. Inflation-indexed securities are debt securities, the principal value of which is periodically adjusted to reflect the rate of inflation as indicated by the Consumer Price Index (CPI). Inflation-indexed securities may be issued by the U.S. government, by agencies and instrumentalities of the U.S. government, and by corporations. Two structures are common. The U.S. Treasury and some other issuers use a structure that accrues inflation into the principal value of the bond. Most other issuers pay out the CPI accruals as part of a semiannual coupon.

The periodic adjustment of U.S. inflation-indexed securities is tied to the CPI, which is calculated monthly by the U.S. Bureau of Labor Statistics. The CPI is a measurement of changes in the cost of living, made up of components such as housing, food, transportation, and energy. Inflation-indexed securities issued by a foreign government are generally adjusted to reflect a comparable inflation index, calculated by that government. There can be no assurance that the CPI or any foreign inflation index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States.

Inflation—a general rise in prices of goods and services—erodes the purchasing power of an investor's portfolio. For example, if an investment provides a "nominal" total return of 5% in a given year and inflation is 2% during that period, the inflation-adjusted, or real, return is 3%. Inflation, as measured by the CPI, has occurred in each of the past 50 years, so investors should be conscious of both the nominal and real returns of their investments. Investors in inflation-indexed securities funds who do not reinvest the portion of the income distribution that is attributable to inflation adjustments will not maintain the purchasing power of the investment over the long term. This is because interest earned depends on the amount of principal invested, and that principal will not grow with inflation if the investor fails to reinvest the principal adjustment paid out as part of a fund's income distributions. Although inflation-indexed securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in value. If interest rates rise because of reasons other than inflation (e.g., changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the bond's inflation measure.

If the periodic adjustment rate measuring inflation (i.e., the CPI) falls, the principal value of inflation-indexed securities will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-indexed securities, even during a period of deflation. However, the current market value of the inflation-indexed securities is not guaranteed and will fluctuate. Other inflation-indexed securities include inflation-related bonds, which may or may not provide a similar guarantee. If a guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal.

The value of inflation-indexed securities should change in response to changes in real interest rates. Real interest rates, in turn, are tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if inflation were to rise at a faster rate than nominal interest rates, real interest rates might decline, leading to an increase in value of inflation-indexed securities. In contrast, if nominal interest rates were to increase at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation-indexed securities.

Coupon payments that a fund receives from inflation-indexed securities are included in the fund's gross income for the period during which they accrue. Any increase in principal for an inflation-indexed security resulting from inflation adjustments is considered by Internal Revenue Service (IRS) regulations to be taxable income in the year it occurs. For direct holders of an inflation-indexed security, this means that taxes must be paid on principal adjustments, even though these amounts are not received until the bond matures. By contrast, a fund holding these securities distributes both interest income and the income attributable to principal adjustments each quarter in the form of cash or reinvested shares (which, like principal adjustments, are taxable to shareholders). It may be necessary for the fund to liquidate portfolio positions, including when it is not advantageous to do so, in order to make required distributions.

Debt Securities—Non-Investment-Grade Securities. Non-investment-grade securities, also referred to as “high-yield securities” or “junk bonds,” are debt securities that are rated lower than the four highest rating categories by a nationally recognized statistical rating organization (e.g., lower than Baa3/P-2 by Moody's Investors Service, Inc. (Moody's), or below BBB-/A-2 by Standard & Poor's) or, if unrated, are determined to be of comparable quality by the fund's advisor. These securities are generally considered to be, on balance, predominantly speculative with respect to capacity to pay interest and repay principal in accordance with the terms of the obligation, and they will generally involve more credit risk than securities in the investment-grade categories. Non-investment-grade securities generally provide greater income and opportunity for capital appreciation than higher quality securities, but they also typically entail greater price volatility and principal and income risk.

Analysis of the creditworthiness of issuers of high-yield securities may be more complex than for issuers of investment-grade securities. Thus, reliance on credit ratings in making investment decisions entails greater risks for high-yield securities than for investment-grade securities. The success of a fund's advisor in managing high-yield securities is more dependent upon its own credit analysis than is the case with investment-grade securities.

Some high-yield securities are issued by smaller, less-seasoned companies, while others are issued as part of a corporate restructuring such as an acquisition, a merger, or a leveraged buyout. Companies that issue high-yield securities are often highly leveraged and may not have more traditional methods of financing available to them. Therefore, the risk associated with acquiring the securities of such issuers generally is greater than is the case with investment-grade securities. Some high-yield securities were once rated as investment-grade but have been downgraded to junk-bond status because of financial difficulties experienced by their issuers.

The market values of high-yield securities tend to reflect individual issuer developments to a greater extent than do investment-grade securities, which in general react to fluctuations in the general level of interest rates. High-yield securities also tend to be more sensitive to economic conditions than are investment-grade securities. A projection of an economic downturn or of a sustained period of rising interest rates, for example, could cause a decline in junk-bond prices because the advent of a recession could lessen the ability of a highly leveraged company to make principal and interest payments on its debt securities. If an issuer of high-yield securities defaults, in addition to risking payment of all or a portion of interest and principal, a fund investing in such securities may incur additional expenses to seek recovery.

The secondary market on which high-yield securities are traded may be less liquid than the market for investment-grade securities. Less liquidity in the secondary trading market could adversely affect the ability of a fund's advisor to sell a high-yield security or the price at which a fund's advisor could sell a high-yield security, and it could also adversely affect the daily net asset value of fund shares. When secondary markets for high-yield securities are less liquid than the market for investment-grade securities, it may be more difficult to value the securities because such valuation may require more research, and elements of judgment may play a greater role in the valuation because less reliable, objective data is available.

Except as otherwise provided in a fund's prospectus, if a credit-rating agency changes the rating of a portfolio security held by a fund, the fund may retain the portfolio security if the advisor deems it in the best interests of shareholders.

Debt Securities—Structured and Indexed Securities. Structured securities (also called “structured notes”) and indexed securities are derivative debt securities, the interest rate or principal of which is determined by an unrelated indicator. Indexed securities include structured notes as well as securities other than debt securities. The value of the principal of and/or interest on structured and indexed securities is determined by reference to changes in the value of a specific asset, reference rate, or index (the reference) or the relative change in two or more references. The interest rate or the principal amount payable upon maturity or redemption may be increased or decreased, depending upon changes in the applicable reference. The terms of the structured and indexed securities may provide that, in certain circumstances, no principal is due at maturity and, therefore, may result in a loss of invested capital. Structured and

indexed securities may be positively or negatively indexed, so that appreciation of the reference may produce an increase or a decrease in the interest rate or value of the security at maturity. In addition, changes in the interest rate or the value of the structured or indexed security at maturity may be calculated as a specified multiple of the change in the value of the reference; therefore, the value of such security may be very volatile. Structured and indexed securities may entail a greater degree of market risk than other types of debt securities because the investor bears the risk of the reference. Structured or indexed securities may also be more volatile, less liquid, and more difficult to accurately price than less complex securities or more traditional debt securities.

Debt Securities—U.S. Government Securities. The term “U.S. Government Securities” refers to a variety of debt securities that are issued or guaranteed by the U.S. Treasury, by various agencies of the U.S. government, and by various instrumentalities that have been established or sponsored by the U.S. government. The term also refers to repurchase agreements collateralized by such securities.

U.S. Treasury securities are backed by the full faith and credit of the U.S. government. Other types of securities issued or guaranteed by federal agencies and U.S. government-sponsored instrumentalities may or may not be backed by the full faith and credit of the U.S. government. The U.S. government, however, does not guarantee the market price of any U.S. government securities. In the case of securities not backed by the full faith and credit of the U.S. government, the investor must look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment and may not be able to assert a claim against the United States itself in the event the agency or instrumentality does not meet its commitment.

Some of the U.S. government agencies that issue or guarantee securities include the Government National Mortgage Association, the Export-Import Bank of the United States, the Federal Housing Administration, the Maritime Administration, the Small Business Administration, and the Tennessee Valley Authority. An instrumentality of the U.S. government is a government agency organized under federal charter with government supervision. Instrumentalities issuing or guaranteeing securities include, among others, the Federal Deposit Insurance Corporation, the Federal Home Loan Banks, and the Federal National Mortgage Association.

Debt Securities—Variable and Floating Rate Securities. Variable and floating rate securities are debt securities that provide for periodic adjustments in the interest rate paid on the security. Variable rate securities provide for a specified periodic adjustment in the interest rate, while floating rate securities have interest rates that change whenever there is a change in a designated benchmark rate or the issuer’s credit quality. There is a risk that the current interest rate on variable and floating rate securities may not accurately reflect current market interest rates or adequately compensate the holder for the current creditworthiness of the issuer. Some variable or floating rate securities are structured with liquidity features such as (1) put options or tender options that permit holders (sometimes subject to conditions) to demand payment of the unpaid principal balance plus accrued interest from the issuers or certain financial intermediaries or (2) auction-rate features, remarketing provisions, or other maturity-shortening devices designed to enable the issuer to refinance or redeem outstanding debt securities (market-dependent liquidity features). Variable or floating rate securities that include market-dependent liquidity features may have greater liquidity risk than other securities. The greater liquidity risk may exist, for example, because of the failure of a market-dependent liquidity feature to operate as intended (as a result of the issuer’s declining creditworthiness, adverse market conditions, or other factors) or the inability or unwillingness of a participating broker-dealer to make a secondary market for such securities. As a result, variable or floating rate securities that include market-dependent liquidity features may lose value, and the holders of such securities may be required to retain them until the later of the repurchase date, the resale date, or the date of maturity. A demand instrument with a demand notice exceeding seven days may be considered illiquid if there is no secondary market for such security.

Debt Securities—Zero-Coupon and Pay-in-Kind Securities. Zero-coupon and pay-in-kind securities are debt securities that do not make regular cash interest payments. Zero-coupon securities generally do not pay interest. Zero-coupon Treasury bonds are U.S. Treasury notes and bonds that have been stripped of their unmatured interest coupons, or the coupons themselves, and also receipts or certificates representing an interest in such stripped debt obligations and coupons. The timely payment of coupon interest and principal on these instruments remains guaranteed by the full faith and credit of the U.S. government. Pay-in-kind securities pay interest through the issuance of additional securities. These securities are generally issued at a discount to their principal or maturity value. Because such securities do not pay current cash income, the price of these securities can be volatile when interest rates fluctuate. Although these securities do not pay current cash income, federal income tax law requires the holders of zero-coupon and pay-in-kind securities to include in income each year the portion of the original issue discount and other noncash income on such securities

accrued during that year. Each fund that holds such securities intends to pass along such interest as a component of the fund's distributions of net investment income. It may be necessary for the fund to liquidate portfolio positions, including when it is not advantageous to do so, in order to make required distributions.

Depository Receipts. Depository receipts are securities that evidence ownership interests in a security or a pool of securities that have been deposited with a "depository." Depository receipts may be sponsored or unsponsored and include American Depositary Receipts (ADRs), European Depositary Receipts (EDRs), and Global Depositary Receipts (GDRs). For ADRs, the depository is typically a U.S. financial institution, and the underlying securities are issued by a foreign issuer. For other depository receipts, the depository may be a foreign or a U.S. entity, and the underlying securities may have a foreign or a U.S. issuer. Depository receipts will not necessarily be denominated in the same currency as their underlying securities. Generally, ADRs are issued in registered form, denominated in U.S. dollars, and designed for use in the U.S. securities markets. Other depository receipts, such as GDRs and EDRs, may be issued in bearer form and denominated in other currencies, and they are generally designed for use in securities markets outside the United States. Although the two types of depository receipt facilities (sponsored and unsponsored) are similar, there are differences regarding a holder's rights and obligations and the practices of market participants.

A depository may establish an unsponsored facility without participation by (or acquiescence of) the underlying issuer; typically, however, the depository requests a letter of nonobjection from the underlying issuer prior to establishing the facility. Holders of unsponsored depository receipts generally bear all the costs of the facility. The depository usually charges fees upon the deposit and withdrawal of the underlying securities, the conversion of dividends into U.S. dollars or other currency, the disposition of noncash distributions, and the performance of other services. The depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the underlying issuer or to pass through voting rights to depository receipt holders with respect to the underlying securities.

Sponsored depository receipt facilities are created in generally the same manner as unsponsored facilities, except that sponsored depository receipts are established jointly by a depository and the underlying issuer through a deposit agreement. The deposit agreement sets out the rights and responsibilities of the underlying issuer, the depository, and the depository receipt holders. With sponsored facilities, the underlying issuer typically bears some of the costs of the depository receipts (such as dividend payment fees of the depository), although most sponsored depository receipt holders may bear costs such as deposit and withdrawal fees. Depositories of most sponsored depository receipts agree to distribute notices of shareholder meetings, voting instructions, and other shareholder communications and information to the depository receipt holders at the underlying issuer's request.

For purposes of a fund's investment policies, investments in depository receipts will be deemed to be investments in the underlying securities. Thus, a depository receipt representing ownership of common stock will be treated as common stock. Depository receipts do not eliminate all of the risks associated with directly investing in the securities of foreign issuers.

Derivatives. A derivative is a financial instrument that has a value based on—or "derived from"—the values of other assets, reference rates, or indexes. Derivatives may relate to a wide variety of underlying references, such as commodities, stocks, bonds, interest rates, currency exchange rates, and related indexes. Derivatives include futures contracts and options on futures contracts, forward-commitment transactions, options on securities, caps, floors, collars, swap agreements, and other financial instruments. Some derivatives, such as futures contracts and certain options, are traded on U.S. commodity and securities exchanges, while other derivatives, such as swap agreements, are privately negotiated and entered into in the over-the-counter (OTC) market. As a result of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act"), certain swap agreements may be cleared through a clearinghouse and traded on an exchange or swap execution facility. New regulations could, among other things, increase the costs of such transactions. The risks associated with the use of derivatives are different from, and possibly greater than, the risks associated with investing directly in the securities, assets, or market indexes on which the derivatives are based. Derivatives are used by some investors for speculative purposes. Derivatives also may be used for a variety of purposes that do not constitute speculation, such as hedging, managing risk, seeking to stay fully invested, seeking to reduce transaction costs, seeking to simulate an investment in equity or debt securities or other investments, and seeking to add value by using derivatives to more efficiently implement portfolio positions when derivatives are favorably priced relative to equity or debt securities or other investments. There is no assurance that any derivatives strategy used by a fund's advisor will succeed. The counterparties to the funds' derivatives will not be considered the issuers thereof for purposes of certain provisions of the 1940 Act and the IRC, although such derivatives may qualify as securities or

investments under such laws. The funds' advisors, however, will monitor and adjust, as appropriate, the funds' credit risk exposure to derivative counterparties.

Derivative products are highly specialized instruments that require investment techniques and risk analyses different from those associated with stocks, bonds, and other traditional investments. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself, without the benefit of observing the performance of the derivative under all possible market conditions.

The use of derivatives generally involves the risk that a loss may be sustained as a result of the insolvency or bankruptcy of the other party to the contract (usually referred to as a "counterparty") or the failure of the counterparty to make required payments or otherwise comply with the terms of the contract. Additionally, the use of credit derivatives can result in losses if a fund's advisor does not correctly evaluate the creditworthiness of the issuer on which the credit derivative is based.

Derivatives may be subject to liquidity risk, which exists when a particular derivative is difficult to purchase or sell. If a derivative transaction is particularly large or if the relevant market is illiquid (as is the case with many OTC derivatives), it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price.

Derivatives may be subject to pricing or "basis" risk, which exists when a particular derivative becomes extraordinarily expensive relative to historical prices or the prices of corresponding cash market instruments. Under certain market conditions, it may not be economically feasible to initiate a transaction or liquidate a position in time to avoid a loss or take advantage of an opportunity.

Because many derivatives have a leverage component, adverse changes in the value or level of the underlying asset, reference rate, or index can result in a loss substantially greater than the amount invested in the derivative itself. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment. A derivative transaction will not be considered to constitute the issuance, by a fund, of a "senior security," as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by a fund, if the fund covers the transaction in accordance with the requirements described under the heading "*Borrowing*."

Like most other investments, derivative instruments are subject to the risk that the market value of the instrument will change in a way detrimental to a fund's interest. A fund bears the risk that its advisor will incorrectly forecast future market trends or the values of assets, reference rates, indexes, or other financial or economic factors in establishing derivative positions for the fund. If the advisor attempts to use a derivative as a hedge against, or as a substitute for, a portfolio investment, the fund will be exposed to the risk that the derivative will have or will develop imperfect or no correlation with the portfolio investment. This could cause substantial losses for the fund. Although hedging strategies involving derivative instruments can reduce the risk of loss, they can also reduce the opportunity for gain or even result in losses by offsetting favorable price movements in other fund investments. Many derivatives (in particular, OTC derivatives) are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to a fund.

Eurodollar and Yankee Obligations. Eurodollar bank obligations are dollar-denominated certificates of deposit and time deposits issued outside the U.S. capital markets by foreign branches of banks and by foreign banks. Yankee bank obligations are dollar-denominated obligations issued in the U.S. capital markets by foreign banks.

Eurodollar and Yankee obligations are subject to the same risks that pertain to domestic issuers, most notably income risk (and, to a lesser extent, credit risk, market risk, and liquidity risk). Additionally, Eurodollar (and, to a limited extent, Yankee) obligations are subject to certain sovereign risks. One such risk is the possibility that a sovereign country might prevent capital, in the form of dollars, from flowing across its borders. Other risks include adverse political and economic developments, the extent and quality of government regulation of financial markets and institutions, the imposition of foreign withholding taxes, and expropriation or nationalization of foreign issuers. However, Eurodollar and Yankee obligations will undergo the same type of credit analysis as domestic issuers in which a Vanguard fund invests, and they will have at least the same financial strength as the domestic issuers approved for the fund.

Exchange-Traded Funds. A fund may purchase shares of exchange-traded funds (ETFs), including ETF Shares issued by other Vanguard funds. Typically, a fund would purchase ETF shares for the same reason it would purchase (and as an alternative to purchasing) futures contracts: to obtain exposure to all or a portion of the stock or bond market. ETF shares enjoy several advantages over futures. Depending on the market, the holding period, and other factors, ETF shares can be

less costly and more tax-efficient than futures. In addition, ETF shares can be purchased for smaller sums, offer exposure to market sectors and styles for which there is no suitable or liquid futures contract, and do not involve leverage.

An investment in an ETF generally presents the same primary risks as an investment in a conventional fund (i.e., one that is not exchange-traded) that has the same investment objective, strategies, and policies. The price of an ETF can fluctuate within a wide range, and a fund could lose money investing in an ETF if the prices of the securities owned by the ETF go down. In addition, ETFs are subject to the following risks that do not apply to conventional funds: (1) the market price of an ETF's shares may trade at a discount or a premium to their net asset value; (2) an active trading market for an ETF's shares may not develop or be maintained; and (3) trading of an ETF's shares may be halted by the activation of individual or marketwide "circuit breakers" (which halt trading for a specific period of time when the price of a particular security or overall market prices decline by a specified percentage). Trading of an ETF's shares may also be halted if the shares are delisted from the exchange without first being listed on another exchange or if the listing exchange's officials determine that such action is appropriate in the interest of a fair and orderly market or for the protection of investors.

Most ETFs are investment companies. Therefore, a fund's purchases of ETF shares generally are subject to the limitations on, and the risks of, a fund's investments in other investment companies, which are described under the heading "*Other Investment Companies*."

Vanguard ETF^{®*} Shares are exchange-traded shares that represent an interest in an investment portfolio held by Vanguard funds. A fund's investments in Vanguard ETF Shares are also generally subject to the descriptions, limitations, and risks described under the heading "*Other Investment Companies*," except as provided by an exemption granted by the SEC that permits registered investment companies to invest in a Vanguard fund that issues ETF Shares beyond the limits of Section 12(d)(1) of the 1940 Act, subject to certain terms and conditions.

* U.S. Patent Nos. 6,879,964; 7,337,138; 7,720,749; 7,925,573; 8,090,646; and 8,417,623.

Foreign Securities. Typically, foreign securities are considered to be equity or debt securities issued by entities organized, domiciled, or with a principal executive office outside the United States, such as foreign corporations and governments. Securities issued by certain companies organized outside the United States may not be deemed to be foreign securities if the company's principal operations are conducted from the United States or when the company's equity securities trade principally on a U.S. stock exchange. Foreign securities may trade in U.S. or foreign securities markets. A fund may make foreign investments either directly by purchasing foreign securities or indirectly by purchasing depositary receipts or depositary shares of similar instruments (depositary receipts) for foreign securities. Direct investments in foreign securities may be made either on foreign securities exchanges or in the OTC markets. Investing in foreign securities involves certain special risk considerations that are not typically associated with investing in securities of U.S. companies or governments.

Because foreign issuers are not generally subject to uniform accounting, auditing, and financial reporting standards and practices comparable to those applicable to U.S. issuers, there may be less publicly available information about certain foreign issuers than about U.S. issuers. Evidence of securities ownership may be uncertain in many foreign countries. As a result, there are multiple risks that could result in a loss to the fund, including, but not limited to, the risk that a fund's trade details could be incorrectly or fraudulently entered at the time of the transaction. Securities of foreign issuers are generally less liquid than securities of comparable U.S. issuers, and foreign investments may be effected through structures that may be complex or confusing. In certain countries, there is less government supervision and regulation of stock exchanges, brokers, and listed companies than in the United States. In addition, with respect to certain foreign countries, there is the possibility of expropriation or confiscatory taxation, political or social instability, war, terrorism, nationalization, limitations on the removal of funds or other assets, or diplomatic developments that could affect U.S. investments in those countries. Although an advisor will endeavor to achieve the most favorable execution costs for a fund's portfolio transactions in foreign securities under the circumstances, commissions and other transaction costs are generally higher than those on U.S. securities. In addition, it is expected that the custodian arrangement expenses for a fund that invests primarily in foreign securities will be somewhat greater than the expenses for a fund that invests primarily in domestic securities. Certain foreign governments levy withholding or other taxes against dividend and interest income from or transactions in foreign securities. Although in some countries a portion of these taxes is recoverable by the fund, the nonrecovered portion of foreign withholding taxes will reduce the income received from such securities.

The value of the foreign securities held by a fund that are not U.S. dollar-denominated may be significantly affected by changes in currency exchange rates. The U.S. dollar value of a foreign security generally decreases when the value of the U.S. dollar rises against the foreign currency in which the security is denominated, and it tends to increase when the value

of the U.S. dollar falls against such currency (as discussed under the heading "*Foreign Securities—Foreign Currency Transactions*," a fund may attempt to hedge its currency risks). In addition, the value of fund assets may be affected by losses and other expenses incurred in converting between various currencies in order to purchase and sell foreign securities, as well as by currency restrictions, exchange control regulation, currency devaluations, and political and economic developments.

Foreign Securities—Emerging Market Risk. Investing in emerging market countries involves certain risks not typically associated with investing in the United States, and it imposes risks greater than, or in addition to, risks of investing in more developed foreign countries. These risks include, but are not limited to, the following: nationalization or expropriation of assets or confiscatory taxation; currency devaluations and other currency exchange rate fluctuations; greater social, economic, and political uncertainty and instability (including amplified risk of war and terrorism); more substantial government involvement in the economy; less government supervision and regulation of the securities markets and participants in those markets and possible arbitrary and unpredictable enforcement of securities regulations; controls on foreign investment and limitations on repatriation of invested capital and on the fund's ability to exchange local currencies for U.S. dollars; unavailability of currency-hedging techniques in certain emerging market countries; generally smaller, less seasoned, or newly organized companies; difference in, or lack of, auditing and financial reporting standards, which may result in unavailability of material information about issuers; difficulty in obtaining and/or enforcing a judgment in a court outside the United States; and greater price volatility, substantially less liquidity, and significantly smaller market capitalization of securities markets. Also, any change in the leadership or politics of emerging market countries, or the countries that exercise a significant influence over those countries, may halt the expansion of or reverse the liberalization of foreign investment policies now occurring and adversely affect existing investment opportunities. Furthermore, high rates of inflation and rapid fluctuations in inflation rates have had, and may continue to have, negative effects on the economies and securities markets of certain emerging market countries. Custodial services and other investment-related costs are often more expensive in emerging market countries, which can reduce a fund's income from investments in securities or debt instruments of emerging market country issuers.

Foreign Securities—Foreign Currency Transactions. The value in U.S. dollars of a fund's non-dollar-denominated foreign securities may be affected favorably or unfavorably by changes in foreign currency exchange rates and exchange control regulations, and the fund may incur costs in connection with conversions between various currencies. To seek to minimize the impact of such factors on net asset values, a fund may engage in foreign currency transactions in connection with its investments in foreign securities. A fund will not speculate in foreign currency exchange and will enter into foreign currency transactions only to attempt to "hedge" the currency risk associated with investing in foreign securities. Although such transactions tend to minimize the risk of loss that would result from a decline in the value of the hedged currency, they also may limit any potential gain that might result should the value of such currency increase.

Currency exchange transactions may be conducted either on a spot (i.e., cash) basis at the rate prevailing in the currency exchange market or through forward contracts to purchase or sell foreign currencies. A forward currency contract involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. These contracts are entered into with large commercial banks or other currency traders who are participants in the interbank market. Currency exchange transactions also may be effected through the use of swap agreements or other derivatives.

Currency exchange transactions may be considered borrowings. A currency exchange transaction will not be considered to constitute the issuance, by a fund, of a "senior security," as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by a fund, if the fund covers the transaction in accordance with the requirements described under the heading "*Borrowing*."

By entering into a forward contract for the purchase or sale of foreign currency involved in underlying security transactions, a fund may be able to protect itself against part or all of the possible loss between trade and settlement dates for that purchase or sale resulting from an adverse change in the relationship between the U.S. dollar and such foreign currency. This practice is sometimes referred to as "transaction hedging." In addition, when the advisor reasonably believes that a particular foreign currency may suffer a substantial decline against the U.S. dollar, a fund may enter into a forward contract to sell an amount of foreign currency approximating the value of some or all of its portfolio securities denominated in such foreign currency. This practice is sometimes referred to as "portfolio hedging." Similarly,

when the advisor reasonably believes that the U.S. dollar may suffer a substantial decline against a foreign currency, a fund may enter into a forward contract to buy that foreign currency for a fixed dollar amount.

A fund may also attempt to hedge its foreign currency exchange rate risk by engaging in currency futures, options, and “cross-hedge” transactions. In cross-hedge transactions, a fund holding securities denominated in one foreign currency will enter into a forward currency contract to buy or sell a different foreign currency (one that the advisor reasonably believes generally tracks the currency being hedged with regard to price movements). The advisor may select the tracking (or substitute) currency rather than the currency in which the security is denominated for various reasons, including in order to take advantage of pricing or other opportunities presented by the tracking currency or to take advantage of a more liquid or more efficient market for the tracking currency. Such cross-hedges are expected to help protect a fund against an increase or decrease in the value of the U.S. dollar against certain foreign currencies.

A fund may hold a portion of its assets in bank deposits denominated in foreign currencies, so as to facilitate investment in foreign securities as well as protect against currency fluctuations and the need to convert such assets into U.S. dollars (thereby also reducing transaction costs). To the extent these assets are converted back into U.S. dollars, the value of the assets so maintained will be affected favorably or unfavorably by changes in foreign currency exchange rates and exchange control regulations.

The forecasting of currency market movement is extremely difficult, and whether any hedging strategy will be successful is highly uncertain. Moreover, it is impossible to forecast with precision the market value of portfolio securities at the expiration of a forward currency contract. Accordingly, a fund may be required to buy or sell additional currency on the spot market (and bear the expense of such transaction) if its advisor’s predictions regarding the movement of foreign currency or securities markets prove inaccurate. In addition, the use of cross-hedging transactions may involve special risks and may leave a fund in a less advantageous position than if such a hedge had not been established. Because forward currency contracts are privately negotiated transactions, there can be no assurance that a fund will have flexibility to roll over a forward currency contract upon its expiration if it desires to do so. Additionally, there can be no assurance that the other party to the contract will perform its services thereunder.

Foreign Securities—Foreign Investment Companies. Some of the countries in which a fund may invest may not permit, or may place economic restrictions on, direct investment by outside investors. Fund investments in such countries may be permitted only through foreign government-approved or authorized investment vehicles, which may include other investment companies. Such investments may be made through registered or unregistered closed-end investment companies that invest in foreign securities. Investing through such vehicles may involve layered fees or expenses and may also be subject to the limitations on, and the risks of, a fund’s investments in other investment companies, which are described under the heading “*Other Investment Companies*.”

Foreign Securities—Russian Market Risk. There are significant risks inherent in investing in Russian securities. The underdeveloped state of Russia’s banking system subjects the settlement, clearing, and registration of securities transactions to significant risks. In March of 2013, the National Settlement Depository (NSD) began acting as a central depository for the majority of Russian equity securities; the NSD is now recognized as the Central Securities Depository in Russia.

For Russian issuers with less than 50 shareholders, ownership records are maintained only by registrars who are under contract with the issuers and are currently not settled with the NSD. Although a Russian subcustodian will maintain copies of the registrar’s records (Share Extracts) on its premises, such Share Extracts are not recorded with the NSD and may not be legally sufficient to establish ownership of securities. The registrars may not be independent from the issuer, are not necessarily subject to effective state supervision, and may not be licensed with any governmental entity. A fund will endeavor to ensure by itself or through a custodian or other agent that the fund’s interest continues to be appropriately recorded for Russian issuers with less than 50 shareholders by inspecting the share register and by obtaining extracts of share registers through regular confirmations. However, these extracts have no legal enforceability, and the possibility exists that a subsequent illegal amendment or other fraudulent act may deprive the fund of its ownership rights or may improperly dilute its interest. In addition, although applicable Russian regulations impose liability on registrars for losses resulting from their errors, a fund may find it difficult to enforce any rights it may have against the registrar or issuer of the securities in the event of loss of share registration.

Futures Contracts and Options on Futures Contracts. Futures contracts and options on futures contracts are derivatives. A futures contract is a standardized agreement between two parties to buy or sell at a specific time in the

future a specific quantity of a commodity at a specific price. The commodity may consist of an asset, a reference rate, or an index. A security futures contract relates to the sale of a specific quantity of shares of a single equity security or a narrow-based securities index. The value of a futures contract tends to increase and decrease in tandem with the value of the underlying commodity. The buyer of a futures contract enters into an agreement to purchase the underlying commodity on the settlement date and is said to be “long” the contract. The seller of a futures contract enters into an agreement to sell the underlying commodity on the settlement date and is said to be “short” the contract. The price at which a futures contract is entered into is established either in the electronic marketplace or by open outcry on the floor of an exchange between exchange members acting as traders or brokers. Open futures contracts can be liquidated or closed out by physical delivery of the underlying commodity or payment of the cash settlement amount on the settlement date, depending on the terms of the particular contract. Some financial futures contracts (such as security futures) provide for physical settlement at maturity. Other financial futures contracts (such as those relating to interest rates, foreign currencies, and broad-based securities indexes) generally provide for cash settlement at maturity. In the case of cash-settled futures contracts, the cash settlement amount is equal to the difference between the final settlement price on the last trading day of the contract and the price at which the contract was entered into. Most futures contracts, however, are not held until maturity but instead are “offset” before the settlement date through the establishment of an opposite and equal futures position.

The purchaser or seller of a futures contract is not required to deliver or pay for the underlying commodity unless the contract is held until the settlement date. However, both the purchaser and seller are required to deposit “initial margin” with a futures commission merchant (FCM) when the futures contract is entered into. Initial margin deposits are typically calculated as a percentage of the contract’s market value. If the value of either party’s position declines, that party will be required to make additional “variation margin” payments to settle the change in value on a daily basis. This process is known as “marking-to-market.” A futures transaction will not be considered to constitute the issuance, by a fund, of a “senior security,” as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by a fund, if the fund covers the transaction in accordance with the requirements described under the heading “*Borrowing*.”

An option on a futures contract (or futures option) conveys the right, but not the obligation, to purchase (in the case of a call option) or sell (in the case of a put option) a specific futures contract at a specific price (called the “exercise” or “strike” price) any time before the option expires. The seller of an option is called an option writer. The purchase price of an option is called the premium. The potential loss to an option buyer is limited to the amount of the premium plus transaction costs. This will be the case, for example, if the option is held and not exercised prior to its expiration date. Generally, an option writer sells options with the goal of obtaining the premium paid by the option buyer. If an option sold by an option writer expires without being exercised, the writer retains the full amount of the premium. The option writer, however, has unlimited economic risk because its potential loss, except to the extent offset by the premium received when the option was written, is equal to the amount the option is “in-the-money” at the expiration date. A call option is in-the-money if the value of the underlying futures contract exceeds the exercise price of the option. A put option is in-the-money if the exercise price of the option exceeds the value of the underlying futures contract. Generally, any profit realized by an option buyer represents a loss for the option writer.

A fund that takes the position of a writer of a futures option is required to deposit and maintain initial and variation margin with respect to the option, as previously described in the case of futures contracts. A futures option transaction will not be considered to constitute the issuance, by a fund, of a “senior security,” as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by a fund, if the fund covers the transaction in accordance with the requirements described under the heading “*Borrowing*.”

The Fund intends to comply with Rule 4.5 under the Commodity Exchange Act (CEA), under which a mutual fund is conditionally excluded from the definition of the term Commodity Pool Operator (CPO). Accordingly, Vanguard is not subject to registration or regulation as a CPO with respect to the Fund under the CEA. The Fund will only enter into futures contracts and futures options that are traded on a U.S. or foreign exchange, board of trade, or similar entity or that are quoted on an automated quotation system.

Futures Contracts and Options on Futures Contracts—Risks. The risk of loss in trading futures contracts and in writing futures options can be substantial because of the low margin deposits required, the extremely high degree of leverage involved in futures and options pricing, and the potential high volatility of the futures markets. As a result, a relatively small price movement in a futures position may result in immediate and substantial loss (or gain) for the

investor. For example, if at the time of purchase, 10% of the value of the futures contract is deposited as margin, a subsequent 10% decrease in the value of the futures contract would result in a total loss of the margin deposit, before any deduction for the transaction costs, if the account were then closed out. A 15% decrease would result in a loss equal to 150% of the original margin deposit if the contract were closed out. Thus, a purchase or sale of a futures contract, and the writing of a futures option, may result in losses in excess of the amount invested in the position. In the event of adverse price movements, a fund would continue to be required to make daily cash payments to maintain its required margin. In such situations, if the fund has insufficient cash, it may have to sell portfolio securities to meet daily margin requirements (and segregation requirements, if applicable) at a time when it may be disadvantageous to do so. In addition, on the settlement date, a fund may be required to make delivery of the instruments underlying the futures positions it holds.

A fund could suffer losses if it is unable to close out a futures contract or a futures option because of an illiquid secondary market. Futures contracts and futures options may be closed out only on an exchange that provides a secondary market for such products. However, there can be no assurance that a liquid secondary market will exist for any particular futures product at any specific time. Thus, it may not be possible to close a futures or option position. Moreover, most futures exchanges limit the amount of fluctuation permitted in futures contract prices during a single trading day. The daily limit establishes the maximum amount that the price of a futures contract may vary either up or down from the previous day's settlement price at the end of a trading session. Once the daily limit has been reached in a particular type of contract, no trades may be made on that day at a price beyond that limit. The daily limit governs only price movement during a particular trading day and therefore does not limit potential losses, because the limit may prevent the liquidation of unfavorable positions. Futures contract prices have occasionally moved to the daily limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of future positions and subjecting some futures traders to substantial losses. The inability to close futures and options positions also could have an adverse impact on the ability to hedge a portfolio investment or to establish a substitute for a portfolio investment. U.S. Treasury futures are generally not subject to such daily limits.

A fund bears the risk that its advisor will incorrectly predict future market trends. If the advisor attempts to use a futures contract or a futures option as a hedge against, or as a substitute for, a portfolio investment, the fund will be exposed to the risk that the futures position will have or will develop imperfect or no correlation with the portfolio investment. This could cause substantial losses for the fund. Although hedging strategies involving futures products can reduce the risk of loss, they can also reduce the opportunity for gain or even result in losses by offsetting favorable price movements in other fund investments.

A fund could lose margin payments it has deposited with its FCM if, for example, the FCM breaches its agreement with the fund or becomes insolvent or goes into bankruptcy. In that event, the fund may be entitled to return of margin owed to it only in proportion to the amount received by the FCM's other customers, potentially resulting in losses to the fund.

Hybrid Instruments. A hybrid instrument, or hybrid, is an interest in an issuer that combines the characteristics of an equity security, a debt security, a commodity, and/or a derivative. A hybrid may have characteristics that, on the whole, more strongly suggest the existence of a bond, stock, or other traditional investment, but a hybrid may also have prominent features that are normally associated with a different type of investment. Moreover, hybrid instruments may be treated as a particular type of investment for one regulatory purpose (such as taxation) and may be simultaneously treated as a different type of investment for a different regulatory purpose (such as securities or commodity regulation). Hybrids can be used as an efficient means of pursuing a variety of investment goals, including increased total return, duration management, and currency hedging. Because hybrids combine features of two or more traditional investments and may involve the use of innovative structures, hybrids present risks that may be similar to, different from, or greater than those associated with traditional investments with similar characteristics.

Examples of hybrid instruments include convertible securities, which combine the investment characteristics of bonds and common stocks; perpetual bonds, which are structured like fixed income securities, have no maturity date, and may be characterized as debt or equity for certain regulatory purposes; contingent convertible securities, which are fixed income securities that, under certain circumstances, either convert into common stock of the issuer or undergo a principal write-down by a predetermined percentage if the issuer's capital ratio falls below a predetermined trigger level; and trust-preferred securities, which are preferred stocks of a special-purpose trust that holds subordinated debt of the corporate parent. Another example of a hybrid is a commodity-linked bond, such as a bond issued by an oil company that

pays a small base level of interest with additional interest that accrues in correlation to the extent to which oil prices exceed a certain predetermined level. Such a hybrid would be a combination of a bond and a call option on oil.

In the case of hybrids that are structured like fixed income securities (such as structured notes), the principal amount or the interest rate is generally tied (positively or negatively) to the price of some commodity, currency, securities index, interest rate, or other economic factor (each, a benchmark). For some hybrids, the principal amount payable at maturity or the interest rate may be increased or decreased, depending on changes in the value of the benchmark. Other hybrids do not bear interest or pay dividends. The value of a hybrid or its interest rate may be a multiple of a benchmark and, as a result, may be leveraged and move (up or down) more steeply and rapidly than the benchmark. These benchmarks may be sensitive to economic and political events, such as commodity shortages and currency devaluations, which cannot be readily foreseen by the purchaser of a hybrid. Under certain conditions, the redemption value of a hybrid could be zero. Thus, an investment in a hybrid may entail significant market risks that are not associated with a similar investment in a traditional, U.S. dollar-denominated bond with a fixed principal amount that pays a fixed rate or floating rate of interest. The purchase of hybrids also exposes a fund to the credit risk of the issuer of the hybrids. Depending on the level of a fund's investment in hybrids, these risks may cause significant fluctuations in the fund's net asset value. Hybrid instruments may also carry liquidity risk since the instruments are often "customized" to meet the needs of an issuer or, sometimes, the portfolio needs of a particular investor, and therefore the number of investors that are willing and able to buy such instruments in the secondary market may be smaller than that for more traditional debt securities.

Certain issuers of hybrid instruments known as structured products may be deemed to be investment companies as defined in the 1940 Act. As a result, the funds' investments in these products may be subject to the limitations described under the heading "*Other Investment Companies*."

Interfund Borrowing and Lending. The SEC has granted an exemption permitting registered open-end Vanguard funds to participate in Vanguard's interfund lending program. This program allows the Vanguard funds to borrow money from and lend money to each other for temporary or emergency purposes. The program is subject to a number of conditions, including, among other things, the requirements that (1) no fund may borrow or lend money through the program unless it receives a more favorable interest rate than is typically available from a bank for a comparable transaction; (2) no equity, taxable bond, or money market fund may loan money if the loan would cause its aggregate outstanding loans through the program to exceed 5%, 7.5%, or 10%, respectively, of its net assets at the time of the loan; and (3) a fund's interfund loans to any one fund shall not exceed 5% of the lending fund's net assets. In addition, a Vanguard fund may participate in the program only if and to the extent that such participation is consistent with the fund's investment objective and investment policies. The boards of trustees of the Vanguard funds are responsible for overseeing the interfund lending program. Any delay in repayment to a lending fund could result in a lost investment opportunity or additional borrowing costs.

Investing for Control. The Vanguard funds invest in securities and other instruments for the sole purpose of achieving a specific investment objective. As such, they do not seek to acquire enough of a company's outstanding voting stock to have control over management decisions. The Vanguard funds do not invest for the purpose of controlling a company's management.

Loan Interests and Direct Debt Instruments. Loan interests and direct debt instruments are interests in amounts owed by a corporate, governmental, or other borrower to lenders or lending syndicates (in the case of loans and loan participations); to suppliers of goods or services (in the case of trade claims or other receivables); or to other parties. These investments involve a risk of loss in case of the default, the insolvency, or the bankruptcy of the borrower and may offer less legal protection to the purchaser in the event of fraud or misrepresentation, or there may be a requirement that a purchaser supply additional cash to a borrower on demand.

Purchasers of loans and other forms of direct indebtedness depend primarily upon the creditworthiness of the borrower for payment of interest and repayment of principal. Direct debt instruments may not be rated by a rating agency. If scheduled interest or principal payments are not made, or are not made in a timely manner, the value of the instrument may be adversely affected. Loans that are fully secured provide more protections than unsecured loans in the event of failure to make scheduled interest or principal payments. However, there is no assurance that the liquidation of collateral from a secured loan would satisfy the borrower's obligation or that the collateral could be liquidated. Indebtedness of borrowers whose creditworthiness is poor involves substantially greater risks and may be highly speculative. Borrowers that are in bankruptcy or restructuring may never pay off their indebtedness, or they may pay only a small fraction of the

amount owed. Direct indebtedness of developing countries also involves a risk that the governmental entities responsible for the repayment of the debt may be unable, or unwilling, to pay interest and repay principal when due.

Corporate loans and other forms of direct corporate indebtedness in which a fund may invest generally are made to finance internal growth, mergers, acquisitions, stock repurchases, refinancing of existing debt, leveraged buyouts, and other corporate activities. A significant portion of the corporate indebtedness purchased by a fund may represent interests in loans or debt made to finance highly leveraged corporate acquisitions (known as “leveraged buyout” transactions), leveraged recapitalization loans, and other types of acquisition financing. Another portion may also represent loans incurred in restructuring or “work-out” scenarios, including super-priority debtor-in-possession facilities in bankruptcy and acquisition of assets out of bankruptcy. Loans in restructuring or work-out scenarios may be especially vulnerable to the inherent uncertainties in restructuring processes. In addition, the highly leveraged capital structure of the borrowers in any such transactions, whether in acquisition financing or restructuring, may make such loans especially vulnerable to adverse or unusual economic or market conditions.

Loans and other forms of direct indebtedness generally are subject to restrictions on transfer, and only limited opportunities may exist to sell them in secondary markets. As a result, a fund may be unable to sell loans and other forms of direct indebtedness at a time when it may otherwise be desirable to do so or may be able to sell them only at a price that is less than their fair value.

Investments in loans through direct assignment of a financial institution’s interests with respect to a loan may involve additional risks. For example, if a loan is foreclosed, the purchaser could become part owner of any collateral and would bear the costs and liabilities associated with owning and disposing of the collateral. In addition, it is at least conceivable that, under emerging legal theories of lender liability, a purchaser could be held liable as a co-lender. Direct debt instruments may also involve a risk of insolvency of the lending bank or other intermediary.

A loan is often administered by a bank or other financial institution that acts as agent for all holders. The agent administers the terms of the loan, as specified in the loan agreement. Unless the purchaser has direct recourse against the borrower, the purchaser may have to rely on the agent to apply appropriate credit remedies against a borrower under the terms of the loan or other indebtedness. If assets held by the agent for the benefit of a purchaser were determined to be subject to the claims of the agent’s general creditors, the purchaser might incur certain costs and delays in realizing payment on the loan or loan participation and could suffer a loss of principal or interest.

Direct indebtedness may include letters of credit, revolving credit facilities, or other standby financing commitments that obligate purchasers to make additional cash payments on demand. These commitments may have the effect of requiring a purchaser to increase its investment in a borrower when it would not otherwise have done so, even if the borrower’s condition makes it unlikely that the amount will ever be repaid.

A fund’s investment policies will govern the amount of total assets that it may invest in any one issuer or in issuers within the same industry. For purposes of these limitations, a fund generally will treat the borrower as the “issuer” of indebtedness held by the fund. In the case of loan participations in which a bank or other lending institution serves as financial intermediary between a fund and the borrower, if the participation does not shift to the fund the direct debtor-creditor relationship with the borrower, SEC interpretations require the fund, in some circumstances, to treat both the lending bank or other lending institution and the borrower as “issuers” for purposes of the fund’s investment policies. Treating a financial intermediary as an issuer of indebtedness may restrict a fund’s ability to invest in indebtedness related to a single financial intermediary, or a group of intermediaries engaged in the same industry, even if the underlying borrowers represent many different companies and industries.

Mortgage Dollar Rolls. A mortgage dollar roll is a transaction in which a fund sells a mortgage-backed security to a dealer and simultaneously agrees to purchase a similar security (but not the same security) in the future at a predetermined price. A mortgage-dollar-roll program may be structured to simulate an investment in mortgage-backed securities at a potentially lower cost, or with potentially reduced administrative burdens, than directly holding mortgage-backed securities. For accounting purposes, each transaction in a mortgage dollar roll is viewed as a separate purchase and sale of a mortgage-backed security. The fund receives cash for a mortgage-backed security in the initial transaction and enters into an agreement that requires the fund to purchase a similar mortgage-backed security in the future.

The counterparty with which a fund enters into a mortgage-dollar-roll transaction is obligated to provide the fund with similar securities to purchase as those originally sold by the fund. These securities generally must (1) be issued by the same agency and be part of the same program; (2) have similar original stated maturities; (3) have identical net coupon rates; and (4) satisfy “good delivery” requirements, meaning that the aggregate principal amounts of the securities

delivered and received back must be within a certain percentage of the initial amount delivered. Mortgage dollar rolls will be used only if consistent with a fund's investment objective and strategies and will not be used to change a fund's risk profile.

Mortgage-Backed Securities. Mortgage-backed securities represent direct or indirect participation in, or are collateralized by and payable from, mortgage loans secured by real property or instruments derived from such loans and may be based on different types of mortgages, including those on residential properties or commercial real estate. Mortgage-backed securities include various types of securities, such as government stripped mortgage-backed securities, adjustable rate mortgage-backed securities, and collateralized mortgage obligations.

Generally, mortgage-backed securities represent interests in pools of mortgage loans assembled for sale to investors by various governmental agencies, such as the Government National Mortgage Association (GNMA); by government-related organizations, such as the Federal National Mortgage Association (FNMA) and the Federal Home Loan Mortgage Corporation (FHLMC); and by private issuers, such as commercial banks, savings and loan institutions, and mortgage bankers. The average maturity of pass-through pools of mortgage-backed securities in which a fund may invest varies with the maturities of the underlying mortgage instruments. In addition, a pool's average maturity may be shortened by unscheduled payments on the underlying mortgages. Factors affecting mortgage prepayments include the level of interest rates, the general economic and social conditions, the location of the mortgaged property, and the age of the mortgage. Because prepayment rates of individual mortgage pools vary widely, the average life of a particular pool cannot be predicted accurately.

Mortgage-backed securities may be classified as private, government, or government-related, depending on the issuer or guarantor. Private mortgage-backed securities represent interest in pass-through pools consisting principally of conventional residential or commercial mortgage loans created by nongovernment issuers, such as commercial banks, savings and loan associations, and private mortgage insurance companies. Private mortgage-backed securities may not be readily marketable. In addition, mortgage-backed securities have been subject to greater liquidity risk because of the deterioration of worldwide economic and liquidity conditions that became especially severe in 2008. U.S. government mortgage-backed securities are backed by the full faith and credit of the U.S. government. GNMA, the principal U.S. guarantor of these securities, is a wholly owned U.S. government corporation within the Department of Housing and Urban Development. Government-related mortgage-backed securities are not backed by the full faith and credit of the U.S. government. Issuers include FNMA and FHLMC, which are congressionally chartered corporations. In September 2008, the U.S. Treasury placed FNMA and FHLMC under conservatorship and appointed the Federal Housing Finance Agency (FHFA) to manage their daily operations. In addition, the U.S. Treasury entered into purchase agreements with FNMA and FHLMC to provide them with capital in exchange for senior preferred stock. Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA. Participation certificates representing interests in mortgages from FHLMC's national portfolio are guaranteed as to the timely payment of interest and principal by FHLMC. Private, government, or government-related entities may create mortgage loan pools offering pass-through investments in addition to those described above. The mortgages underlying these securities may be alternative mortgage instruments (that is, mortgage instruments whose principal or interest payments may vary or whose terms to maturity may be shorter than customary).

Mortgage-backed securities are often subject to more rapid repayment than their stated maturity date would indicate as a result of the pass-through of prepayments of principal on the underlying loans. Prepayments of principal by mortgagors or mortgage foreclosures shorten the term of the mortgage pool underlying the mortgage-backed security. A fund's ability to maintain positions in mortgage-backed securities is affected by the reductions in the principal amount of such securities resulting from prepayments. A fund's ability to reinvest prepayments of principal at comparable yield is subject to generally prevailing interest rates at that time. The values of mortgage-backed securities vary with changes in market interest rates generally and the differentials in yields among various kinds of government securities, mortgage-backed securities, and asset-backed securities. In periods of rising interest rates, the rate of prepayment tends to decrease, thereby lengthening the average life of a pool of mortgages supporting a mortgage-backed security. Conversely, in periods of falling interest rates, the rate of prepayment tends to increase, thereby shortening the average life of such a pool. Because prepayments of principal generally occur when interest rates are declining, an investor, such as a fund, generally has to reinvest the proceeds of such prepayments at lower interest rates than those at which its assets were previously invested. Therefore, mortgage-backed securities have less potential for capital appreciation in periods of falling interest rates than other income-bearing securities of comparable maturity.

Mortgage-Backed Securities—Adjustable Rate Mortgage-Backed Securities. Adjustable rate mortgage-backed securities (ARMBSs) have interest rates that reset at periodic intervals. Acquiring ARMBSs permits a fund to participate in increases in prevailing current interest rates through periodic adjustments in the coupons of mortgages underlying the pool on which ARMBSs are based. Such ARMBSs generally have higher current yield and lower price fluctuations than is the case with more traditional fixed income debt securities of comparable rating and maturity. However, because the interest rates on ARMBSs are reset only periodically, changes in market interest rates or in the issuer’s creditworthiness may affect their value. In addition, when prepayments of principal are made on the underlying mortgages during periods of rising interest rates, a fund can reinvest the proceeds of such prepayments at rates higher than those at which they were previously invested. Mortgages underlying most ARMBSs, however, have limits on the allowable annual or lifetime increases that can be made in the interest rate that the mortgagor pays. Therefore, if current interest rates rise above such limits over the period of the limitation, a fund holding an ARMBS does not benefit from further increases in interest rates. Moreover, when interest rates are in excess of coupon rates (i.e., the rates being paid by mortgagors) of the mortgages, ARMBSs behave more like fixed income securities and less like adjustable rate securities and are thus subject to the risks associated with fixed income securities. In addition, during periods of rising interest rates, increases in the coupon rate of adjustable rate mortgages generally lag current market interest rates slightly, thereby creating the potential for capital depreciation on such securities.

Mortgage-Backed Securities—Collateralized Mortgage Obligations. Collateralized mortgage obligations (CMOs) are mortgage-backed securities that are collateralized by whole loan mortgages or mortgage pass-through securities. The bonds issued in a CMO transaction are divided into groups, and each group of bonds is referred to as a “tranche.” Under the traditional CMO structure, the cash flows generated by the mortgages or mortgage pass-through securities in the collateral pool are used to first pay interest and then pay principal to the CMO bondholders. The bonds issued under a traditional CMO structure are retired sequentially as opposed to the pro-rata return of principal found in traditional pass-through obligations. Subject to the various provisions of individual CMO issues, the cash flow generated by the underlying collateral (to the extent it exceeds the amount required to pay the stated interest) is used to retire the bonds. Under a CMO structure, the repayment of principal among the different tranches is prioritized in accordance with the terms of the particular CMO issuance. The “fastest-pay” tranches of bonds, as specified in the prospectus for the issuance, would initially receive all principal payments. When those tranches of bonds are retired, the next tranche (or tranches) in the sequence, as specified in the prospectus, receives all of the principal payments until that tranche is retired. The sequential retirement of bond groups continues until the last tranche is retired. Accordingly, the CMO structure allows the issuer to use cash flows of long-maturity, monthly pay collateral to formulate securities with short, intermediate, and long final maturities and expected average lives and risk characteristics.

In recent years, new types of CMO tranches have evolved. These include floating rate CMOs, planned amortization classes, accrual bonds, and CMO residuals. These newer structures affect the amount and timing of principal and interest received by each tranche from the underlying collateral. Under certain of these new structures, given classes of CMOs have priority over others with respect to the receipt of prepayments on the mortgages. Therefore, depending on the type of CMOs in which a fund invests, the investment may be subject to a greater or lesser risk of prepayment than other types of mortgage-backed securities.

CMOs may include real estate mortgage investment conduits (REMICs). REMICs, which were authorized under the Tax Reform Act of 1986, are private entities formed for the purpose of holding a fixed pool of mortgages secured by an interest in real property. A REMIC is a CMO that qualifies for special tax treatment under the IRC and invests in certain mortgages principally secured by interests in real property. Investors may purchase beneficial interests in REMICs, which are known as “regular” interests, or “residual” interests. Guaranteed REMIC pass-through certificates (REMIC Certificates) issued by FNMA or FHLMC represent beneficial ownership interests in a REMIC trust consisting principally of mortgage loans or FNMA, FHLMC, or GNMA-guaranteed mortgage pass-through certificates. For FHLMC REMIC Certificates, FHLMC guarantees the timely payment of interest and also guarantees the payment of principal, as payments are required to be made on the underlying mortgage participation certificates. FNMA REMIC Certificates are issued and guaranteed as to timely distribution of principal and interest by FNMA.

The primary risk of CMOs is the uncertainty of the timing of cash flows that results from the rate of prepayments on the underlying mortgages serving as collateral and from the structure of the particular CMO transaction (that is, the priority of the individual tranches). An increase or decrease in prepayment rates (resulting from a decrease or increase in mortgage interest rates) will affect the yield, the average life, and the price of CMOs. The prices of certain CMOs,

depending on their structure and the rate of prepayments, can be volatile. Some CMOs may also not be as liquid as other securities.

Mortgage-Backed Securities—Hybrid ARMs. A hybrid adjustable rate mortgage (hybrid ARM) is a type of mortgage in which the interest rate is fixed for a specified period and then resets periodically, or floats, for the remaining mortgage term. Hybrid ARMs are usually referred to by their fixed and floating periods. For example, a 5/1 ARM refers to a mortgage with a 5-year fixed interest rate period, followed by a 1-year interest rate adjustment period. During the initial interest period (i.e., the initial five years for a 5/1 hybrid ARM), hybrid ARMs behave more like fixed income securities and are thus subject to the risks associated with fixed income securities. All hybrid ARMs have reset dates. A reset date is the date when a hybrid ARM changes from a fixed interest rate to a floating interest rate. At the reset date, a hybrid ARM can adjust by a maximum specified amount based on a margin over an identified index. Like ARMBSs, hybrid ARMs have periodic and lifetime limitations on the increases that can be made to the interest rates that mortgagors pay. Therefore, if during a floating rate period interest rates rise above the interest rate limits of the hybrid ARM, a fund holding the hybrid ARM does not benefit from further increases in interest rates.

Mortgage-Backed Securities—Stripped Mortgage-Backed Securities. Stripped mortgage-backed securities (SMBSs) are derivative multiclass mortgage-backed securities. SMBSs may be issued by agencies or instrumentalities of the U.S. government or by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks, and special purpose entities formed or sponsored by any of the foregoing.

SMBSs are usually structured with two classes that receive different proportions of the interest and principal distributions on a pool of mortgage assets. A common type of SMBS will have one class receiving some of the interest and most of the principal from the mortgage assets, while the other class will receive most of the interest and the remainder of the principal. In the most extreme case, one class will receive all of the interest (the “IO” class), while the other class will receive all of the principal (the principal-only or “PO” class). The price and yield to maturity on an IO class are extremely sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets, and a rapid rate of principal payments may have a material adverse effect on a fund’s yield to maturity from these securities. If the underlying mortgage assets experience greater than anticipated prepayments of principal, a fund may fail to recoup some or all of its initial investment in these securities, even if the security is in one of the highest rating categories.

Although SMBSs are purchased and sold by institutional investors through several investment banking firms acting as brokers or dealers, these securities were only recently developed. As a result, established trading markets have not yet developed, and accordingly, these securities may be deemed “illiquid” and thus subject to a fund’s limitations on investment in illiquid securities.

Municipal Bonds. Municipal bonds are debt obligations issued by states, municipalities, U.S. jurisdictions or territories, and other political subdivisions and by agencies, authorities, and instrumentalities of states and multistate agencies or authorities (collectively, municipalities). Typically, the interest payable on municipal bonds is, in the opinion of bond counsel to the issuer at the time of issuance, exempt from federal income tax. Municipal bonds include securities from a variety of sectors, each of which has unique risks. Municipal bonds include, but are not limited to, general obligation bonds, limited obligation bonds, and revenue bonds, including industrial development bonds issued pursuant to federal tax law.

General obligation bonds are secured by the issuer’s pledge of its full faith, credit, and taxing power for the payment of principal and interest. Limited obligation bonds are payable only from the revenues derived from a particular facility or class of facilities or, in some cases, from the proceeds of a special excise or other specific revenue source. Revenue or special tax bonds are payable only from the revenues derived from a particular facility or class of facilities or, in some cases, from the proceeds of a special excise or other tax, but not from general tax revenues.

Revenue bonds involve the credit risk of the underlying project or enterprise (or its corporate user) rather than the credit risk of the issuing municipality. Under the IRC, certain limited obligation bonds are considered “private activity bonds,” and interest paid on such bonds is treated as an item of tax preference for purposes of calculating federal alternative minimum tax liability. Tax-exempt private activity bonds and industrial development bonds generally are also classified as revenue bonds and thus are not payable from the issuer’s general revenues. The credit and quality of private activity bonds and industrial development bonds are usually related to the credit of the corporate user of the facilities. Payment of interest on and repayment of principal of such bonds are the responsibility of the corporate user (and/or any guarantor). Some municipal bonds may be issued as variable or floating rate securities and may incorporate market-dependent liquidity features (see discussion of “*Debt Securities—Variable and Floating Rate Securities*”). A tax-exempt

fund will generally invest only in securities deemed tax-exempt by a nationally recognized bond counsel, but there is no guarantee that the interest payments on municipal bonds will continue to be tax-exempt for the life of the bonds.

Some longer-term municipal bonds give the investor the right to “put” or sell the security at par (face value) within a specified number of days following the investor’s request—usually one to seven days. This demand feature enhances a security’s liquidity by shortening its maturity and enables it to trade at a price equal to or very close to par. If a demand feature terminates prior to being exercised, a fund would hold the longer-term security, which could experience substantially more volatility. Municipal bonds that are issued as variable or floating rate securities incorporating market-dependent liquidity features may have greater liquidity risk than other municipal bonds (see discussion of “*Debt Securities—Variable and Floating Rate Securities*”).

Some municipal bonds feature credit enhancements, such as lines of credit, letters of credit, municipal bond insurance, and standby bond purchase agreements (SBPAs). SBPAs include lines of credit that are issued by a third party, usually a bank, to enhance liquidity and ensure repayment of principal and any accrued interest if the underlying municipal bond should default. Municipal bond insurance (which is usually purchased by the bond issuer from a private, nongovernmental insurance company) provides an unconditional and irrevocable guarantee that the insured bond’s principal and interest will be paid when due. Insurance does not guarantee the price of the bond or the share price of any fund. The credit rating of an insured bond reflects the higher of the credit rating of the insurer, based on its claims-paying ability, or the credit rating of the underlying bond issuer or obligor. The obligation of a municipal bond insurance company to pay a claim extends over the life of each insured bond. Although defaults on insured municipal bonds have been historically low and municipal bond insurers historically have met their claims, there is no assurance this will continue. A higher-than-expected default rate could strain the insurer’s loss reserves and adversely affect its ability to pay claims to bondholders. The number of municipal bond insurers is relatively small, and not all of them have the highest credit rating. An SBPA can include a liquidity facility that is provided to pay the purchase price of any bonds that cannot be remarketed. The obligation of the liquidity provider (usually a bank) is only to advance funds to purchase tendered bonds that cannot be remarketed and does not cover principal or interest under any other circumstances. The liquidity provider’s obligations under the SBPA are usually subject to numerous conditions, including the continued creditworthiness of the underlying borrower or bond issuer.

Municipal bonds also include tender option bonds, which are municipal derivatives created by dividing the income stream provided by an underlying municipal bond to create two securities issued by a special-purpose trust, one short-term and one long-term. The interest rate on the short-term component is periodically reset. The short-term component has negligible interest rate risk, while the long-term component has all of the interest rate risk of the original bond. After income is paid on the short-term securities at current rates, the residual income goes to the long-term securities. Therefore, rising short-term interest rates result in lower income for the longer-term portion, and vice versa. The longer-term components can be very volatile and may be less liquid than other municipal bonds of comparable maturity. These securities have been developed in the secondary market to meet the demand for short-term, tax-exempt securities.

Municipal securities also include a variety of structures geared toward accommodating municipal-issuer short-term cash-flow requirements. These structures include, but are not limited to, general market notes, commercial paper, put bonds, and variable-rate demand obligations (VRDOs). VRDOs comprise a significant percentage of the outstanding debt in the short-term municipal market. VRDOs can be structured to provide a wide range of maturity options (1 day to over 360 days) to the underlying issuing entity and are typically issued at par. The longer the maturity option, the greater the degree of liquidity risk (the risk of not receiving an asking price of par or greater) and reinvestment risk (the risk that the proceeds from maturing bonds must be reinvested at a lower interest rate).

Although most municipal bonds are exempt from federal income tax, some are not. Taxable municipal bonds include Build America Bonds (BABs). The borrowing costs of BABs are subsidized by the federal government, but BABs are subject to state and federal income tax. BABs were created pursuant to the American Recovery and Reinvestment Act of 2009 (ARRA) to offer an alternative form of financing to state and local governments whose primary means for accessing the capital markets had been through the issuance of tax-exempt municipal bonds. BABs also include Recovery Zone Economic Development Bonds, which are subsidized more heavily by the federal government than other BABs and are designed to finance certain types of projects in distressed geographic areas.

Under ARRA, an issuer of a BAB is entitled to receive payments from the U.S. Treasury over the life of the BAB equal to 35% of the interest paid (or 45% of the interest paid in the case of a Recovery Zone Economic Development Bond). For example, if a state or local government were to issue a BAB at a taxable interest rate of 10% of the par value of the

bond, the U.S. Treasury would make a payment directly to the issuing government of 35% of that interest (3.5% of the par value of the bond) or 45% of the interest (4.5% of the par value of the bond) in the case of a Recovery Zone Economic Development Bond. Thus, the state or local government's net borrowing cost would be 6.5% or 5.5%, respectively, on BABs that pay 10% interest. In other cases, holders of a BAB receive a 35% or 45% tax credit, respectively. The BAB program expired on December 31, 2010. BABs outstanding prior to the expiration of the program continue to be eligible for the federal interest rate subsidy or tax credit, which continues for the life of the BABs; however, the interest rate subsidy or tax credit has been reduced by the government sequester. Additionally, no bonds issued following expiration of the program would be eligible for federal payment or tax credit. In addition to BABs, a fund may invest in other municipal bonds that pay taxable interest.

The reorganization under the federal bankruptcy laws of an issuer of, or payment obligor with respect to, municipal bonds may result in the municipal bonds being cancelled without repayment; repaid only in part; or repaid in part or whole through an exchange thereof for any combination of cash, municipal bonds, debt securities, convertible securities, equity securities, or other instruments or rights in respect to the same issuer or payment obligor or a related entity. Certain issuers are not eligible to file for bankruptcy.

The yields of municipal bonds depend on, among other things, general money market conditions, conditions in the municipal bond market, size of a particular offering, maturity of the obligation, and rating of the issue. The ratings of Moody's Investors Service, Inc., Standard & Poor's, and other nationally recognized statistical rating organizations (NRSROs) represent their opinions of the quality of the municipal bonds rated by them. It should be emphasized that such ratings are general and are not absolute standards of quality. Consequently, municipal bonds with the same maturity, coupon, and rating may have different yields, while municipal bonds of the same maturity and coupon, but with different ratings, may have the same yield. It is the responsibility of a fund's investment management staff to appraise independently the fundamental quality of bonds held by the fund.

Municipal Bonds—Risks. Municipal bonds are subject to credit risk. Like other debt securities, municipal bonds include investment-grade, non-investment-grade, and unrated securities. Rated municipal bonds that may be held by a fund include those rated investment grade at the time of investment or those issued by issuers whose senior debt is rated investment grade at the time of investment. In the case of any unrated municipal bonds, the advisor to a fund will assign a credit rating based upon criteria that include an analysis of factors similar to those considered by NRSROs. Information about the financial condition of an issuer of municipal bonds may not be as extensive as that which is made available by corporations whose securities are publicly traded. Obligations of issuers of municipal bonds are subject to the provisions of bankruptcy, insolvency, and other laws affecting the rights and remedies of creditors. Congress, state legislatures, or other governing authorities may seek to extend the time for payment of principal or interest, or both, or to impose other constraints upon enforcement of such obligations. For example, from time to time, proposals have been introduced before Congress to restrict or eliminate the federal income tax exemption for interest on municipal bonds. Also, from time to time, proposals have been introduced before state and local legislatures to restrict or eliminate the state and local income tax exemption for interest on municipal bonds. Similar proposals may be introduced in the future. If any such proposal were enacted, it might restrict or eliminate the ability of a fund to achieve its respective investment objective. In that event, the fund's trustees and officers would reevaluate its investment objective and policies and consider recommending to its shareholders changes in such objective and policies.

There is also the possibility that, as a result of litigation or other conditions, the power or ability of issuers to meet their obligations for the payment of interest and principal on their municipal bonds may be materially affected or their obligations may be found to be invalid or unenforceable. Such litigation or conditions may, from time to time, have the effect of introducing uncertainties in the market for municipal bonds or certain segments thereof or of materially affecting the credit risk with respect to particular bonds. Adverse economic, business, legal, or political developments might affect all or a substantial portion of a fund's municipal bonds in the same manner. For example, a state specific tax-exempt fund is subject to state-specific risk, which is the chance that the fund, because it invests primarily in securities issued by a particular state and its municipalities, is more vulnerable to unfavorable developments in that state than are funds that invest in municipal securities of many states. Unfavorable developments in any economic sector may have far-reaching ramifications on a state's overall municipal market. In the event that a particular obligation held by a fund is downgraded below the minimum investment level permitted by the investment policies of such fund, the trustees and officers of the fund will carefully assess the creditworthiness of the obligation to determine whether it continues to meet the policies and objective of the fund.

Municipal bonds are subject to interest rate risk, which is the chance that bond prices will decline over short or even long periods because of rising interest rates. Interest rate risk is higher for long-term bonds, whose prices are much more sensitive to interest rate changes than are the prices of shorter-term bonds. Generally, prices of longer-maturity issues tend to fluctuate more than prices of shorter-maturity issues. Prices and yields on municipal bonds are dependent on a variety of factors, such as the financial condition of the issuer, the general conditions of the municipal bond market, the size of a particular offering, the maturity of the obligation, and the rating of the issue. A number of these factors, including the ratings of particular issues, are subject to change from time to time.

Municipal bonds are subject to call risk, which is the chance that during periods of falling interest rates, issuers of callable bonds may call (redeem) securities with higher coupons or interest rates before their maturity dates. A fund would then lose any price appreciation above the bond's call price and would be forced to reinvest the unanticipated proceeds at lower interest rates, resulting in a decline in the fund's income. Call risk is generally high for long-term bonds.

Municipal bonds may be deemed to be illiquid as determined by or in accordance with methods adopted by a fund's board of trustees. In determining the liquidity and appropriate valuation of a municipal bond, a fund's advisor may consider the following factors relating to the security, among others: (1) the frequency of trades and quotes; (2) the number of dealers willing to purchase or sell the security; (3) the willingness of dealers to undertake to make a market; (4) the nature of the marketplace trades, including the time needed to dispose of the security, the method of soliciting offers, and the mechanics of transfer; and (5) the factors unique to a particular security, including general creditworthiness of the issuer and the likelihood that the marketability of the securities will be maintained throughout the time the security is held by the fund.

Options. An option is a derivative. An option on a security (or index) is a contract that gives the holder of the option, in return for the payment of a "premium," the right, but not the obligation, to buy from (in the case of a call option) or sell to (in the case of a put option) the writer of the option the security underlying the option (or the cash value of the index) at a specified exercise price prior to the expiration date of the option. The writer of an option on a security has the obligation upon exercise of the option to deliver the underlying security upon payment of the exercise price (in the case of a call option) or to pay the exercise price upon delivery of the underlying security (in the case of a put option). The writer of an option on an index has the obligation upon exercise of the option to pay an amount equal to the cash value of the index minus the exercise price, multiplied by the specified multiplier for the index option. The multiplier for an index option determines the size of the investment position the option represents. Unlike exchange-traded options, which are standardized with respect to the underlying instrument, expiration date, contract size, and strike price, the terms of OTC options (options not traded on exchanges) generally are established through negotiation with the other party to the option contract. Although this type of arrangement allows the purchaser or writer greater flexibility to tailor an option to its needs, OTC options generally involve greater credit risk than exchange-traded options, which are guaranteed by the clearing organization of the exchanges where they are traded.

The buyer (or holder) of an option is said to be "long" the option, while the seller (or writer) of an option is said to be "short" the option. A call option grants to the holder the right to buy (and obligates the writer to sell) the underlying security at the strike price. A put option grants to the holder the right to sell (and obligates the writer to buy) the underlying security at the strike price. The purchase price of an option is called the "premium." The potential loss to an option buyer is limited to the amount of the premium plus transaction costs. This will be the case if the option is held and not exercised prior to its expiration date. Generally, an option writer sells options with the goal of obtaining the premium paid by the option buyer, but that person could also seek to profit from an anticipated rise or decline in option prices. If an option sold by an option writer expires without being exercised, the writer retains the full amount of the premium. The option writer, however, has unlimited economic risk because its potential loss, except to the extent offset by the premium received when the option was written, is equal to the amount the option is "in-the-money" at the expiration date. A call option is in-the-money if the value of the underlying position exceeds the exercise price of the option. A put option is in-the-money if the exercise price of the option exceeds the value of the underlying position. Generally, any profit realized by an option buyer represents a loss for the option writer. The writing of an option will not be considered to constitute the issuance, by a fund, of a "senior security," as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by a fund, if the fund covers the transaction in accordance with the requirements described under the heading "*Borrowing*."

If a trading market in particular options were to become unavailable, investors in those options (such as the funds) would be unable to close out their positions until trading resumes, and they may be faced with substantial losses if the value of the underlying instrument moves adversely during that time. Even if the market were to remain available, there may be times when options prices will not maintain their customary or anticipated relationships to the prices of the underlying instruments and related instruments. Lack of investor interest, changes in volatility, or other factors or conditions might adversely affect the liquidity, efficiency, continuity, or even the orderliness of the market for particular options.

A fund bears the risk that its advisor will not accurately predict future market trends. If the advisor attempts to use an option as a hedge against, or as a substitute for, a portfolio investment, the fund will be exposed to the risk that the option will have or will develop imperfect or no correlation with the portfolio investment, which could cause substantial losses for the fund. Although hedging strategies involving options can reduce the risk of loss, they can also reduce the opportunity for gain or even result in losses by offsetting favorable price movements in other fund investments. Many options, in particular OTC options, are complex and often valued based on subjective factors. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to a fund.

Other Investment Companies. A fund may invest in other investment companies to the extent permitted by applicable law or SEC exemption. Under Section 12(d)(1) of the 1940 Act, a fund generally may invest up to 10% of its assets in shares of investment companies and up to 5% of its assets in any one investment company, as long as no investment represents more than 3% of the voting stock of an acquired investment company. In addition, no funds for which Vanguard acts as an advisor may, in the aggregate, own more than 10% of the voting stock of a closed-end investment company. The 1940 Act and related rules provide certain exemptions from these restrictions. If a fund invests in other investment companies, shareholders will bear not only their proportionate share of the fund's expenses (including operating expenses and the fees of the advisor), but they also may indirectly bear the similar expenses of the underlying investment companies. Certain investment companies, such as business development companies (BDCs), are more akin to operating companies and, as such, their expenses are not direct expenses paid by fund shareholders and are not used to calculate the fund's net asset value. SEC rules nevertheless require that any expenses incurred by a BDC be included in a fund's expense ratio as "Acquired Fund Fees and Expenses." The expense ratio of a fund that holds a BDC will thus overstate what the fund actually spends on portfolio management, administrative services, and other shareholder services by an amount equal to these Acquired Fund Fees and Expenses. The Acquired Fund Fees and Expenses are not included in a fund's financial statements, which provide a clearer picture of a fund's actual operating expenses. Shareholders would also be exposed to the risks associated not only with the investments of the fund but also with the portfolio investments of the underlying investment companies. Certain types of investment companies, such as closed-end investment companies, issue a fixed number of shares that typically trade on a stock exchange or over-the-counter at a premium or discount to their net asset value. Others are continuously offered at net asset value but also may be traded on the secondary market.

Preferred Stock. Preferred stock represents an equity or ownership interest in an issuer. Preferred stock normally pays dividends at a specified rate and has precedence over common stock in the event the issuer is liquidated or declares bankruptcy. However, in the event an issuer is liquidated or declares bankruptcy, the claims of owners of bonds take precedence over the claims of those who own preferred and common stock. Preferred stock, unlike common stock, often has a stated dividend rate payable from the corporation's earnings. Preferred stock dividends may be cumulative or noncumulative, participating, or auction rate. "Cumulative" dividend provisions require all or a portion of prior unpaid dividends to be paid before dividends can be paid to the issuer's common stock. "Participating" preferred stock may be entitled to a dividend exceeding the stated dividend in certain cases. If interest rates rise, the fixed dividend on preferred stocks may be less attractive, causing the price of such stocks to decline. Preferred stock may have mandatory sinking fund provisions, as well as provisions allowing the stock to be called or redeemed, which can limit the benefit of a decline in interest rates. Preferred stock is subject to many of the risks to which common stock and debt securities are subject. In addition, preferred stock may be subject to more abrupt or erratic price movements than common stock or debt securities because preferred stock may trade with less frequency and in more limited volume.

Real Estate Investment Trusts (REITs). An equity REIT owns real estate properties directly and generates income from rental and lease payments. Equity REITs also have the potential to generate capital gains as properties are sold at a profit. A mortgage REIT makes construction, development, and long-term mortgage loans to commercial real estate developers and earns interest income on these loans. A hybrid REIT holds both properties and mortgages. To avoid taxation at the corporate level, REITs must distribute most of their earnings to shareholders.

Investments in REITs are subject to many of the same risks as direct investments in real estate. In general, real estate values can be affected by a variety of factors, including supply and demand for properties, general or local economic conditions, and the strength of specific industries that rent properties. Ultimately, a REIT's performance depends on the types and locations of the properties it owns and on how well the REIT manages its properties. For example, rental income could decline because of extended vacancies, increased competition from nearby properties, tenants' failure to pay rent, or incompetent management. Property values could decrease because of overbuilding in the area, environmental liabilities, uninsured damages caused by natural disasters, a general decline in the neighborhood, losses because of casualty or condemnation, increases in property taxes, or changes in zoning laws.

The value of a REIT may also be affected by changes in interest rates. Rising interest rates generally increase the cost of financing for real estate projects, which could cause the value of an equity REIT to decline. During periods of declining interest rates, mortgagors may elect to prepay mortgages held by mortgage REITs, which could lower or diminish the yield on the REIT. REITs are also subject to heavy cash-flow dependency, default by borrowers, and changes in tax and regulatory requirements. In addition, a REIT may fail to qualify for tax-exempt status under the IRC and/or fail to maintain exemption from the 1940 Act.

Repurchase Agreements. A repurchase agreement is an agreement under which a fund acquires a fixed income security (generally a security issued by the U.S. government or an agency thereof, a banker's acceptance, or a certificate of deposit) from a commercial bank, a broker, or a dealer and simultaneously agrees to resell such security to the seller at an agreed-upon price and date (normally, the next business day). Because the security purchased constitutes collateral for the repurchase obligation, a repurchase agreement may be considered a loan that is collateralized by the security purchased. The resale price reflects an agreed-upon interest rate effective for the period the instrument is held by a fund and is unrelated to the interest rate on the underlying instrument. In these transactions, the securities acquired by a fund (including accrued interest earned thereon) must have a total value in excess of the value of the repurchase agreement and be held by a custodian bank until repurchased. When entering into a repurchase agreement with the Federal Reserve, the collateral received will equal 100% of the value of the repurchase agreement. In addition, the investment advisor will monitor a fund's repurchase agreement transactions generally and will evaluate the creditworthiness of any bank, broker, or dealer party to a repurchase agreement relating to a fund. The aggregate amount of any such agreements is not limited, except to the extent required by law.

The use of repurchase agreements involves certain risks. One risk is the seller's ability to pay the agreed-upon repurchase price on the repurchase date. If the seller defaults, the fund may incur costs in disposing of the collateral, which would reduce the amount realized thereon. If the seller seeks relief under the bankruptcy laws, the disposition of the collateral may be delayed or limited. For example, if the other party to the agreement becomes insolvent and subject to liquidation or reorganization under the bankruptcy or other laws, a court may determine that the underlying security is collateral for a loan by the fund not within its control, and therefore the realization by the fund on such collateral may be automatically stayed. Finally, it is possible that the fund may not be able to substantiate its interest in the underlying security and may be deemed an unsecured creditor of the other party to the agreement.

Restricted and Illiquid Securities. Illiquid securities are securities that cannot be sold or disposed of within seven days in the ordinary course of business at approximately the price at which they are valued. The SEC generally limits aggregate holdings of illiquid securities by a mutual fund to 15% of its net assets (5% for money market funds). A fund may experience difficulty valuing and selling illiquid securities and, in some cases, may be unable to value or sell certain illiquid securities for an indefinite period of time. Illiquid securities may include a wide variety of investments, such as (1) repurchase agreements maturing in more than seven days (unless the agreements have demand/redemption features), (2) OTC options contracts and certain other derivatives (including certain swap agreements), (3) fixed time deposits that are not subject to prepayment or do not provide for withdrawal penalties upon prepayment (other than overnight deposits), (4) loan interests and other direct debt instruments, (5) certain municipal lease obligations, (6) commercial paper issued pursuant to Section 4(2) of the 1933 Act, and (7) securities whose disposition is restricted under the federal securities laws. Illiquid securities include restricted, privately placed securities that, under the federal securities laws, generally may be resold only to qualified institutional buyers. If a substantial market develops for a restricted security held by a fund, it may be treated as a liquid security, in accordance with procedures and guidelines approved by the board of trustees. This generally includes securities that are unregistered, that can be sold to qualified institutional buyers in accordance with Rule 144A under the 1933 Act, or that are exempt from registration under the 1933 Act, such as commercial paper. Although a fund's advisor monitors the liquidity of restricted securities, the board of trustees oversees and retains ultimate responsibility for the advisor's liquidity determinations. Several factors that the

trustees consider in monitoring these decisions include the valuation of a security; the availability of qualified institutional buyers, brokers, and dealers that trade in the security; and the availability of information about the security's issuer.

Reverse Repurchase Agreements. In a reverse repurchase agreement, a fund sells a security to another party, such as a bank or broker-dealer, in return for cash and agrees to repurchase that security at an agreed-upon price and time. Under a reverse repurchase agreement, the fund continues to receive any principal and interest payments on the underlying security during the term of the agreement. Reverse repurchase agreements involve the risk that the market value of securities retained by the fund may decline below the repurchase price of the securities sold by the fund that it is obligated to repurchase. A reverse repurchase agreement may be considered a borrowing transaction for purposes of the 1940 Act. A reverse repurchase agreement transaction will not be considered to constitute the issuance, by a fund, of a "senior security," as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by a fund, if the fund covers the transaction in accordance with the requirements described under the heading "*Borrowing*." A fund will enter into reverse repurchase agreements only with parties whose creditworthiness has been reviewed and found satisfactory by the advisor. If the buyer in a reverse repurchase agreement becomes insolvent or files for bankruptcy, a fund's use of proceeds from the sale may be restricted while the other party or its trustee or receiver determines if it will honor the fund's right to repurchase the securities. If the fund is unable to recover the securities it sold in a reverse repurchase agreement, it would realize a loss equal to the difference between the value of the securities and the payment it received for them.

Securities Lending. A fund may lend its investment securities to qualified institutional investors (typically brokers, dealers, banks, or other financial institutions) who may need to borrow securities in order to complete certain transactions, such as covering short sales, avoiding failures to deliver securities, or completing arbitrage operations. By lending its investment securities, a fund attempts to increase its net investment income through the receipt of interest on the securities lent. Any gain or loss in the market price of the securities lent that might occur during the term of the loan would be for the account of the fund. If the borrower defaults on its obligation to return the securities lent because of insolvency or other reasons, a fund could experience delays and costs in recovering the securities lent or in gaining access to the collateral. These delays and costs could be greater for foreign securities. If a fund is not able to recover the securities lent, a fund may sell the collateral and purchase a replacement investment in the market. The value of the collateral could decrease below the value of the replacement investment by the time the replacement investment is purchased. Cash received as collateral through loan transactions may be invested in other eligible securities. Investing this cash subjects that investment to market appreciation or depreciation. Currently, Vanguard funds that lend securities invest the cash collateral received in one or more Vanguard CMT Funds, which are very low-cost money market funds.

The terms and the structure of the loan arrangements, as well as the aggregate amount of securities loans, must be consistent with the 1940 Act and the rules or interpretations of the SEC thereunder. These provisions limit the amount of securities a fund may lend to 33 1/3% of the fund's total assets and require that (1) the borrower pledge and maintain with the fund collateral consisting of cash, an irrevocable letter of credit, or securities issued or guaranteed by the U.S. government having at all times not less than 100% of the value of the securities lent; (2) the borrower add to such collateral whenever the price of the securities lent rises (i.e., the borrower "marks to market" on a daily basis); (3) the loan be made subject to termination by the fund at any time; and (4) the fund receives reasonable interest on the loan (which may include the fund's investing any cash collateral in interest-bearing short-term investments), any distribution on the lent securities, and any increase in their market value. Loan arrangements made by each fund will comply with all other applicable regulatory requirements, including the rules of the New York Stock Exchange, which presently require the borrower, after notice, to redeliver the securities within the normal settlement time of three business days. The advisor will consider the creditworthiness of the borrower, among other things, in making decisions with respect to the lending of securities, subject to oversight by the board of trustees. At the present time, the SEC does not object if an investment company pays reasonable negotiated fees in connection with lent securities, so long as such fees are set forth in a written contract and approved by the investment company's trustees. In addition, voting rights pass with the lent securities, but if a fund has knowledge that a material event will occur affecting securities on loan, and in respect to which the holder of the securities will be entitled to vote or consent, the lender must be entitled to call the loaned securities in time to vote or consent. A fund bears the risk that there may be a delay in the return of the securities, which may impair the fund's ability to vote on such a matter.

Pursuant to Vanguard's securities lending policy, Vanguard's fixed income and money market funds are not permitted to, and do not, lend their investment securities.

Swap Agreements. A swap agreement, which is a type of derivative, is an agreement between two parties (counterparties) to exchange payments at specified dates (periodic payment dates) on the basis of a specified amount (notional amount) with the payments calculated with reference to a specified asset, reference rate, or index.

Examples of swap agreements include, but are not limited to, interest rate swaps, credit default swaps, equity swaps, commodity swaps, foreign currency swaps, index swaps, excess return swaps, and total return swaps. Most swap agreements provide that when the periodic payment dates for both parties are the same, payments are netted, and only the net amount is paid to the counterparty entitled to receive the net payment. Consequently, a fund's current obligations (or rights) under a swap agreement will generally be equal only to the net amount to be paid or received under the agreement, based on the relative values of the positions held by each counterparty. Swap agreements allow for a wide variety of transactions. For example, fixed rate payments may be exchanged for floating rate payments; U.S. dollar-denominated payments may be exchanged for payments denominated in a different currency; and payments tied to the price of one asset, reference rate, or index may be exchanged for payments tied to the price of another asset, reference rate, or index.

An option on a swap agreement, also called a "swaption," is an option that gives the buyer the right, but not the obligation, to enter into a swap on a future date in exchange for paying a market-based "premium." A receiver swaption gives the owner the right to receive the total return of a specified asset, reference rate, or index. A payer swaption gives the owner the right to pay the total return of a specified asset, reference rate, or index. Swaptions also include options that allow an existing swap to be terminated or extended by one of the counterparties.

The use of swap agreements by a fund entails certain risks, which may be different from, or possibly greater than, the risks associated with investing directly in the securities and other investments that are the referenced asset for the swap agreement. Swaps are highly specialized instruments that require investment techniques, risk analyses, and tax planning different from those associated with stocks, bonds, and other traditional investments. The use of a swap requires an understanding not only of the referenced asset, reference rate, or index but also of the swap itself, without the benefit of observing the performance of the swap under all possible market conditions.

Swap agreements may be subject to liquidity risk, which exists when a particular swap is difficult to purchase or sell. If a swap transaction is particularly large or if the relevant market is illiquid (as is the case with many OTC swaps), it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses. In addition, swap transactions may be subject to a fund's limitation on investments in illiquid securities.

Swap agreements may be subject to pricing risk, which exists when a particular swap becomes extraordinarily expensive or inexpensive relative to historical prices or the prices of corresponding cash market instruments. Under certain market conditions, it may not be economically feasible to initiate a transaction or liquidate a position in time to avoid a loss or take advantage of an opportunity or to realize the intrinsic value of the swap agreement.

Because some swap agreements have a leverage component, adverse changes in the value or level of the underlying asset, reference rate, or index can result in a loss substantially greater than the amount invested in the swap itself. Certain swaps have the potential for unlimited loss, regardless of the size of the initial investment. A leveraged swap transaction will not be considered to constitute the issuance, by a fund, of a "senior security," as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by a fund, if the fund covers the transaction in accordance with the requirements described under the heading "*Borrowing*."

Like most other investments, swap agreements are subject to the risk that the market value of the instrument will change in a way detrimental to a fund's interest. A fund bears the risk that its advisor will not accurately forecast future market trends or the values of assets, reference rates, indexes, or other economic factors in establishing swap positions for the fund. If the advisor attempts to use a swap as a hedge against, or as a substitute for, a portfolio investment, the fund will be exposed to the risk that the swap will have or will develop imperfect or no correlation with the portfolio investment. This could cause substantial losses for the fund. Although hedging strategies involving swap instruments can reduce the risk of loss, they can also reduce the opportunity for gain or even result in losses by offsetting favorable price movements in other fund investments. Many swaps, OTC swaps in particular, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to a fund.

The use of a swap agreement also involves the risk that a loss may be sustained as a result of the insolvency or bankruptcy of the counterparty or the failure of the counterparty to make required payments or otherwise comply with

the terms of the agreement. Additionally, the use of credit default swaps can result in losses if a fund's advisor does not correctly evaluate the creditworthiness of the issuer on which the credit swap is based.

The market for swaps and swaptions is a relatively new market. It is possible that developments in the market could adversely affect a fund, including its ability to terminate existing swap agreements or to realize amounts to be received under such agreements. As previously noted under the heading "*Derivatives*," under the Dodd-Frank Act, certain swaps that may be used by a fund may be cleared through a clearinghouse and traded on an exchange or swap execution facility.

Tax Matters—Federal Tax Discussion. Discussion herein of U.S. federal income tax matters summarizes some of the important, generally applicable U.S. federal tax considerations relevant to the Portfolios and the insurance company separate accounts investing in the Portfolios on the IRC, U.S. Treasury regulations, and other applicable authority. These authorities are subject to change by legislative, administrative, or judicial action, possibly with retroactive effect. The discussion assumes that the shares of each Portfolio will be respected as owned by the insurance company separate accounts that invest in such Portfolio to fund the insurance company's obligations under a variable life or variable annuity contract. For information concerning the federal income tax consequences to a holder of such a contract, refer to the prospectus for the particular contract. A shareholder should consult his or her tax professional for information regarding the particular situation and the possible application of U.S. federal, state, local, foreign, and other taxes.

Tax Matters—Federal Tax Treatment of Bonds Issued or Purchased at a Discount. Any investment in zero-coupon bonds, deferred interest bonds, payment-in-kind bonds, certain inflation-adjusted debt instruments, certain stripped securities, and certain securities purchased at a market discount (including certain high yield debt obligations) will cause a Portfolio to recognize income prior to the receipt of cash payments with respect to those securities. To distribute this income and avoid a tax on the Portfolio, the Portfolio may be required to liquidate portfolio securities that it might otherwise have continued to hold.

Tax Matters—Federal Tax Treatment of Derivatives, Foreign Currency, Hedging, and Related Transactions. A Portfolio's transactions in derivative instruments (including, but not limited to, options, futures, forward contracts, and swap agreements), as well as any of the Portfolio's hedging, short sale, securities loan, or similar transactions, may be subject to one or more special tax rules that affect the amount, timing, and character of the Portfolio's income and distributions to shareholders. These rules can cause a Portfolio to recognize income for tax purposes prior to the receipt of cash payments with respect to the underlying investments; in order to distribute this income and avoid a tax on the Portfolio, the Portfolio may be required to liquidate portfolio securities that it might otherwise have continued to hold.

In order for a fund to continue to qualify for federal income tax treatment as a regulated investment company, at least 90% of its gross income for a taxable year must be derived from qualifying income—i.e., dividends, interest, income derived from securities loans, gains from the sale of securities or foreign currencies, or other income derived with respect to the fund's business of investing in securities or currencies. The funds generally expect that any net gain from options, futures, and forward contracts will be treated as qualifying income.

Tax Matters—Federal Tax Treatment of Investments in REITs and Certain Mortgage-Related Investments. Under a notice issued by the IRS in 2006 and U.S. Treasury regulations that have yet to be issued but may apply retroactively, a portion of a Portfolio's income (including income allocated to a Portfolio from a REIT or other pass-through entity) that is attributable to a residual interest in real estate mortgage conduits (REMICs) or taxable mortgage pools (excess inclusion) will be subject to federal income tax in all events. This notice also provides, and the regulations are expected to provide, that excess inclusion income of a regulated investment company will be allocated to shareholders of the regulated investment company in proportion to the dividends received by such shareholders, with the same consequences as if the shareholders held the related residual interest directly. As a result, a life insurance company separate account funding a variable contract may be taxed currently to the extent of its share of a Portfolio's excess inclusion income. In general, where excess inclusion income is allocated to a life insurance company separate account funding a variable life insurance or variable annuity contract, such income cannot be offset by an adjustment to the reserves and thus is currently taxed notwithstanding the more general tax deferral available to insurance company separate accounts funding such contracts.

Tax Matters—Passive Foreign Investment Companies. Special tax considerations apply with respect to investments by a Portfolio in certain passive foreign investment companies (PFICs). A foreign company is generally a PFIC if 75% or more of its gross income is passive or if 50% or more of its assets produce passive income. Capital gains on the sale of an interest in a PFIC will be deemed ordinary income regardless of how long the Fund held it. Also, each Portfolio may be subject to corporate income tax and an interest charge on certain dividends and capital gains earned in respect to PFICs interests, whether or not such amounts are distributed to shareholders. To avoid such tax and interest, a Portfolio may

elect to “mark to market” its PFIC interests, that is, to treat such interests as sold on the last day of the Portfolio’s fiscal year and to recognize any unrealized gains (or losses, to the extent of previously recognized gains) as ordinary income each year. This election may cause the Portfolio to recognize income prior to the receipt of cash payments with respect to those investments; in order to distribute this income and avoid a tax on the Portfolio, the Portfolio may be required to liquidate portfolio securities that it might otherwise have continued to hold, potentially resulting in additional taxable gain or loss to the Portfolio. Distributions from the Portfolio that are attributable to income or gains earned in respect to PFIC interests are characterized as ordinary income. Each Portfolio (other than the Money Market, Short-Term Investment-Grade, Total Bond Market Index, and High Yield Bond Portfolios) may invest in PFICs.

Time Deposits. The Money Market Portfolio may invest in U.S. dollar-denominated time deposits of U.S. banks, foreign branches of U.S. banks, and foreign branches of foreign banks. Time deposits are interest-bearing, non-negotiable deposits at a bank with a specific maturity date. A time deposit earns a negotiated rate of interest over a definite period of time. For The Money Market Portfolio, time deposits are typically no longer than overnight.

Time deposits are subject to the same risks that pertain to domestic issuers of money market instruments, most notably credit risk (and, to a lesser extent, income risk, market risk, and liquidity risk). Additionally, time deposits of foreign branches of U.S. banks and foreign branches of foreign banks may be subject to certain sovereign risks. One such risk is the possibility that a sovereign country might prevent capital, in the form of U.S. dollars, from flowing across its borders. Other risks include adverse political and economic developments, the extent and quality of government regulation of financial markets and institutions, the imposition of foreign withholding taxes, and expropriation or nationalization of foreign issuers. However, time deposits of such issuers will undergo the same type of credit analysis as domestic issuers in which a Vanguard fund invests and will have at least the same financial strength as the domestic issuers approved for the fund.

Trust Preferred Securities. Trust preferred securities are a type of hybrid security in which a parent company issues subordinated debt to an affiliated special purpose trust, which will in turn issue limited-life preferred securities to investors and common securities to the parent company. Investors will receive distributions of the interest the trust receives on the debt issued by the parent company during the term of the preferred securities. The underlying subordinated debt may be secured or unsecured, and it generally ranks slightly higher in terms of payment priority than both common and preferred securities of the issuer, but below its other debt securities. Trust preferred securities generally have a yield advantage over traditional preferred stocks, but unlike preferred stocks, distributions generally are treated as interest rather than dividends for federal income tax purposes and, therefore, are not eligible for the dividends-received deduction available to U.S. corporations for dividends paid by U.S. corporations or the lower federal tax rate applicable to qualified dividends. Trust preferred securities typically have maturities of 30 years or more, may be subject to prepayment by the issuer under certain circumstances, and have periodic fixed or variable interest payments and maturities at face value. In addition, trust preferred securities may allow for deferral of interest payments for up to 5 years or longer. However, during any deferral period, interest will accrue and be taxable for holders of the trust preferred securities. Furthermore, if an issuer of trust preferred securities exercised its right to defer interest payments, the securities would be treated as issued with original issue discount (OID) at that time and all interest on the securities would thereafter be treated as OID as long as the securities remained outstanding. Unlike typical asset-backed securities, trust preferred securities have only one underlying obligor and are not over-collateralized. For that reason, the market may effectively treat trust preferred securities as subordinate corporate debt of the parent company issuer. The risks associated with trust preferred securities typically include those relating to the financial condition of the parent company, as the trust typically has no business operations other than holding the subordinated debt issued by the parent company. Holders of trust preferred securities have limited voting rights to control the activities of the trust and no voting rights with respect to the parent company. There can be no assurance as to the liquidity of trust preferred securities or the ability of holders of the trust preferred securities to sell their holdings.

Warrants. Warrants are instruments that give the holder the right, but not the obligation, to buy an equity security at a specific price for a specific period of time. Changes in the value of a warrant do not necessarily correspond to changes in the value of its underlying security. The price of a warrant may be more volatile than the price of its underlying security, and a warrant may offer greater potential for capital appreciation as well as capital loss. Warrants do not entitle a holder to dividends or voting rights with respect to the underlying security and do not represent any rights in the assets of the issuing company. A warrant ceases to have value if it is not exercised prior to its expiration date. These factors can make warrants more speculative than other types of investments.

When-Issued, Delayed-Delivery, and Forward-Commitment Transactions. When-issued, delayed-delivery, and forward-commitment transactions involve a commitment to purchase or sell specific securities at a predetermined price or yield in which payment and delivery take place after the customary settlement period for that type of security. Typically, no interest accrues to the purchaser until the security is delivered. When purchasing securities pursuant to one of these transactions, payment for the securities is not required until the delivery date. However, the purchaser assumes the rights and risks of ownership, including the risks of price and yield fluctuations and the risk that the security will not be issued as anticipated. When a fund has sold a security pursuant to one of these transactions, the fund does not participate in further gains or losses with respect to the security. If the other party to a delayed-delivery transaction fails to deliver or pay for the securities, the fund could miss a favorable price or yield opportunity or suffer a loss. A fund may renegotiate a when-issued or forward-commitment transaction and may sell the underlying securities before delivery, which may result in capital gains or losses for the fund. When-issued, delayed-delivery, and forward-commitment transactions will not be considered to constitute the issuance, by a fund, of a "senior security," as that term is defined in Section 18(g) of the 1940 Act, and therefore such transaction will not be subject to the 300% asset coverage requirement otherwise applicable to borrowings by the fund, if the fund covers the transaction in accordance with the requirements described under the heading "*Borrowing*."

Regulatory restrictions in India. Shares of Vanguard Variable Insurance Fund International Portfolio have not been, and will not be, registered under the laws of India and are not intended to benefit from any laws in India promulgated for the protection of shareholders. Due to regulatory requirements in India, shares of the International Portfolio shall not be knowingly offered to (directly or indirectly) or sold or delivered to (within India); transferred to or purchased by; or held for, on the account of, or for the benefit of (i) a "person resident in India" (as defined in the Foreign Exchange Management Act, 1999), (ii) a "non-resident Indian," an "overseas corporate body," or a "person of Indian origin," (as each such term is defined in the Foreign Exchange Management (Deposit) Regulations, 2000), or (iii) any other entity or person disqualified or otherwise prohibited from accessing the Indian securities market under applicable laws, as may be amended from time to time. Each investor, prior to purchasing shares of the International Portfolio, must satisfy itself regarding compliance with these requirements.

SHARE PRICE

Each Portfolio's share price, called its *net asset value*, or NAV, is calculated each business day after the close of regular trading on the New York Stock Exchange (the Exchange), generally 4 p.m., Eastern time. NAV per share is computed by dividing the total assets, minus liabilities, of the Portfolio by the number of Portfolio shares outstanding. On U.S. holidays or other days when the Exchange is closed, the NAV is not calculated, and the Portfolios do not sell or redeem shares. However, on those days the value of the Portfolios' assets may be affected to the extent that the Portfolios hold foreign securities that trade on foreign markets that are open. The underlying Vanguard funds in which the Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios invest also do not calculate their NAV on days when the Exchange is closed but the value of their assets may be affected to the extent that they hold foreign securities that trade on foreign markets that are open.

The Exchange typically observes the following holidays: New Year's Day; Martin Luther King, Jr., Day; Presidents' Day (Washington's Birthday); Good Friday; Memorial Day; Independence Day; Labor Day; Thanksgiving Day; and Christmas Day. Although the Fund expects the same holidays to be observed in the future, the Exchange may modify its holiday schedule or hours of operation at any time.

It is the policy of the Money Market Portfolio to attempt to maintain a net asset value of \$1 per share for sales and redemptions. The instruments held by the Portfolio are valued on the basis of amortized cost, which does not take into account unrealized capital gains or losses. This involves valuing an instrument at its cost and thereafter assuming a constant amortization to maturity of any discount or premium, regardless of the impact of fluctuating interest rates on the market value of the instrument. While this method provides certainty in valuation, it may result in periods during which value, as determined by amortized cost, is higher or lower than the price which the Portfolio would receive if it sold the instrument. The Portfolio's holdings will be reviewed by the trustees, at such intervals as they may deem appropriate, to determine whether the Portfolio's net asset value calculated by using available market quotations deviates from \$1 per share based on amortized cost. The extent of any deviation will be examined by the trustees. If such deviation exceeds 1/2 of 1%, the trustees will promptly consider what action, if any, will be initiated. In the event the trustees determine that a deviation exists which may result in material dilution or other unfair results to investors or

existing shareholders, they have agreed to take such corrective action as they regard as necessary and appropriate, including the sale of fund instruments prior to maturity to realize capital gains or losses or to shorten average portfolio maturity; withholding dividends; making a special capital distribution; redemptions of shares in kind; or establishing a net asset value per share by using available market quotations.

The use of amortized cost and the maintenance of the Money Market Portfolio's net asset value at \$1 is based on its election to operate under Rule 2a-7 under the 1940 Act. As a condition of operating under that rule, the Portfolio must maintain a dollar-weighted average portfolio maturity of 60 days or less; maintain a dollar-weighted average life of 120 days or less; purchase only instruments having remaining maturities of 397 days or less; meet applicable daily, weekly, and general liquidity requirements; and invest only in securities that are determined by methods approved by the trustees to present minimal credit risks and that are of high quality as determined by the requisite rating services, or in the case of an instrument not so rated, determined to be of comparable quality by methods approved by the trustees.

Each Portfolio's NAV is used to determine the unit value for the separate account that invests in that Portfolio. For more information on unit values, please refer to the prospectus of the insurance company separate account that offers your annuity or life insurance contract.

PURCHASE AND REDEMPTION OF SHARES

Purchase of Shares

The purchase price of shares of each Portfolio is the NAV next determined after the purchase request is received in good order, as defined in the Portfolio's prospectus.

The Total Bond Market Index Portfolio reserves the right to impose a transaction fee of 0.18% on any purchase that, in the opinion of the advisor, would disrupt efficient management of the Portfolio. The advisor may impose this transaction fee if an investor's aggregate purchases into the Portfolio over a twelve-month period exceed, or are expected to exceed, \$30 million. The Portfolio may incur substantial transaction costs in absorbing very large investments, and the fee (paid directly to the Portfolio) is intended to protect existing shareholders from being unfairly impacted by such costs. The Portfolio's advisor will consider several factors in determining whether to apply the fee, including the following:

- The transaction costs of buying securities, determined in part by the availability of securities at that time.
- The offsetting effect of any Portfolio redemptions occurring at that time.
- The Portfolio's then-current rate of growth.

Exchange of Securities for Shares of a Portfolio. Shares of a Portfolio may be purchased "in kind" (i.e., in exchange for securities, rather than for cash) at the discretion of the Portfolio's portfolio manager. Such securities must not be restricted as to transfer and must have a value that is readily ascertainable. Securities accepted by the Portfolio will be valued, as set forth in the Portfolio's prospectus, as of the time of the next determination of NAV after such acceptance. All dividend, subscription, or other rights that are reflected in the market price of accepted securities at the time of valuation become the property of the Portfolio and must be delivered to the Portfolio by the investor upon receipt from the issuer. A gain or loss for federal income tax purposes, depending upon the cost of the securities tendered, would be realized by the investor upon the exchange. Investors interested in purchasing portfolio shares in kind should contact Vanguard.

Redemption of Shares

The redemption price of shares of each Portfolio is the NAV next determined after the redemption request is received in good order, as defined in the Portfolio's prospectus.

Each Portfolio may suspend redemption privileges or postpone the date of payment for redeemed shares (1) during any period that the Exchange is closed or trading on the Exchange is restricted as determined by the SEC; (2) during any period when an emergency exists, as defined by the SEC, as a result of which it is not reasonably practicable for the Portfolio to dispose of securities it owns or to fairly determine the value of its assets; or (3) for such other periods as the SEC may permit, including in connection with a determination by the board of a money market fund under Rule 22e-3 under the 1940 Act to suspend redemptions and postpone payment of redemption proceeds in order to facilitate an orderly liquidation of a portfolio.

The Trust has filed a notice of election with the SEC to pay in cash all redemptions requested by any shareholder of record limited in amount during any 90-day period to the lesser of \$250,000 or 1% of the net assets of a Portfolio at the beginning of such period.

If Vanguard determines that it would be detrimental to the best interests of the remaining shareholders of a Portfolio to make payment wholly or partly in cash, the Portfolio may pay the redemption price in whole or in part by a distribution in kind of readily marketable securities held by the Portfolio in lieu of cash in conformity with applicable rules of the SEC. Investors may incur brokerage charges on the sale of such securities received in payment of redemptions.

The Portfolios do not charge redemption fees. Shares redeemed may be worth more or less than what was paid for them, depending on the market value of the securities held by the Portfolio.

Right to Change Policies

Vanguard reserves the right, without notice, to (1) alter, add, or discontinue any conditions of purchase (including eligibility requirements), redemption, exchange, service, or privilege at any time; (2) accept initial purchases by telephone; (3) freeze any account and/or suspend account services if Vanguard has received reasonable notice of a dispute regarding the assets in an account, including notice of a dispute between the registered or beneficial account owners, or if Vanguard reasonably believes a fraudulent transaction may occur or has occurred; (4) temporarily freeze any account and/or suspend account services upon initial notification to Vanguard of the death of the shareholder until Vanguard receives required documentation in good order; (5) alter, impose, discontinue, or waive any purchase fee, redemption fee, account service fee, or other fees charged to a group of shareholders; and (6) redeem an account or suspend account privileges, without the owner's permission to do so, in cases of threatening conduct or activity Vanguard believes to be suspicious, fraudulent, or illegal. Changes may affect any or all investors. These actions will be taken when, at the sole discretion of Vanguard management, Vanguard reasonably believes they are deemed to be in the best interest of a fund.

MANAGEMENT OF THE FUND

Vanguard

The Fund is part of the Vanguard group of investment companies, which consists of more than 170 funds. Through their jointly owned subsidiary, Vanguard, the funds obtain at cost virtually all of their corporate management, administrative, and distribution services. Vanguard also provides investment advisory services on an at-cost basis to several of the Vanguard funds.

Vanguard was established and operates under an Amended and Restated Funds' Service Agreement (the Agreement). Vanguard employs a supporting staff of management and administrative personnel needed to provide the requisite services to the funds and also furnishes the funds with necessary office space, furnishings, and equipment. The funds' officers are also officers and employees of Vanguard.

Vanguard, Vanguard Marketing Corporation (VMC), the funds, and the funds' advisors have adopted codes of ethics designed to prevent employees who may have access to nonpublic information about the trading activities of the funds (access persons) from profiting from that information. The codes of ethics permit access persons to invest in securities for their own accounts, including securities that may be held by a fund, but place substantive and procedural restrictions on the trading activities of access persons. For example, the codes of ethics require that access persons receive advance approval for most securities trades to ensure that there is no conflict with the trading activities of the funds.

For all Portfolios except the Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios. Vanguard provides corporate management, administrative, and distribution services at cost. Each fund pays its share of Vanguard's total expenses, which are allocated among the funds under methods approved by the board of trustees of each fund. In addition, each fund bears its own direct expenses, such as legal, auditing, and custodial fees. The Agreement provides that each Vanguard fund may be called upon to invest up to 0.40% of its current net assets in Vanguard. The amounts that each fund has invested are adjusted from time to time in order to maintain the proportionate relationship between each fund's relative net assets and its contribution to Vanguard's capital.

As of December 31, 2013, each Portfolio had contributed capital to Vanguard as follows:

Vanguard Variable Insurance Fund Portfolio	Capital Contribution to Vanguard	Percentage of Portfolio's Average Net Assets	Percent of Vanguard's Capitalization
Balanced Portfolio	\$ 231,000	0.01%	0.09%
Capital Growth Portfolio	71,000	0.01	0.03
Diversified Value Portfolio	125,000	0.01	0.05
Equity Income Portfolio	102,000	0.01	0.04
Equity Index Portfolio	353,000	0.01	0.14
Growth Portfolio	44,000	0.01	0.02
High Yield Bond Portfolio	57,000	0.01	0.02
International Portfolio	250,000	0.01	0.10
Mid-Cap Index Portfolio	128,000	0.01	0.05
Money Market Portfolio	147,000	0.01	0.06
REIT Index Portfolio	73,000	0.01	0.03
Short-Term Investment-Grade Portfolio	127,000	0.01	0.05
Small Company Growth Portfolio	154,000	0.01	0.06
Total Bond Market Index Portfolio	260,000	0.01	0.10

For the Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios. The Agreement provides that each Portfolio will not contribute to Vanguard's capitalization or pay for corporate management, administrative, and distribution services provided by Vanguard. However, each Portfolio will bear its own direct expenses, such as legal, auditing, and custodial fees. In addition, the Agreement further provides that each Portfolio's direct expenses will be offset, in whole or in part, by a reimbursement from Vanguard for (1) the Portfolio's contributions to the cost of operating the underlying Vanguard funds in which the Portfolio invests, and (2) certain savings in administrative and marketing costs that Vanguard expects to derive from the Portfolio's operations. Each Portfolio expects that the reimbursements should be sufficient to offset most or all of the direct expenses incurred by the Portfolio. Therefore, each Portfolio is expected to operate at a very low—or zero—direct expense ratio. Of course, there is no guarantee that this will always be the case.

Although each Portfolio is not expected to incur any net expenses directly, the Portfolio's shareholders indirectly bear the expenses of the underlying Vanguard funds. As of December 31, 2013, the Acquired Fund Fees and Expenses of the Total Stock Market Index Portfolio were 0.18%. For the Conservative Allocation and Moderate Allocation Portfolios, the Acquired Fund Fees and Expenses were 0.19% each.

Management. Corporate management and administrative services include (1) executive staff, (2) accounting and financial, (3) legal and regulatory, (4) shareholder account maintenance, (5) monitoring and control of custodian relationships, (6) shareholder reporting, and (7) review and evaluation of advisory and other services provided to the funds by third parties.

Distribution. Vanguard Marketing Corporation, 400 Devon Park Drive A39, Wayne, PA 19087, a wholly owned subsidiary of Vanguard, is the principal underwriter for the funds and in that capacity performs and finances marketing, promotional, and distribution activities (collectively, marketing and distribution activities) that are primarily intended to result in the sale of the funds' shares. VMC offers shares of each fund for sale on a continuous basis and will use all reasonable efforts in connection with the distribution of shares of the funds. VMC performs marketing and distribution activities at cost in accordance with the conditions of a 1981 SEC exemptive order that permits the Vanguard funds to internalize and jointly finance the marketing, promotion, and distribution of their shares. The funds' trustees review and approve the marketing and distribution expenses incurred by the funds, including the nature and cost of the activities and the desirability of each fund's continued participation in the joint arrangement.

To ensure that each fund's participation in the joint arrangement falls within a reasonable range of fairness, each fund contributes to VMC's marketing and distribution expenses in accordance with an SEC-approved formula. Under that formula, one half of the marketing and distribution expenses are allocated among the funds based upon their relative net assets. The remaining half of those expenses are allocated among the funds based upon each fund's sales for the preceding 24 months relative to the total sales of the funds as a group, provided, however, that no fund's aggregate quarterly rate of contribution for marketing and distribution expenses shall exceed 125% of the average marketing and distribution expense rate for Vanguard and that no fund shall incur annual marketing and distribution expenses in excess of 0.20% of its average month-end net assets. Each fund's contribution to these marketing and distribution expenses helps to maintain and enhance the attractiveness and viability of the Vanguard complex as a whole, which benefits all of the funds and their shareholders.

VMC's principal marketing and distribution expenses are for advertising, promotional materials, and marketing personnel. Other marketing and distribution activities that VMC undertakes on behalf of the funds may include, but are not limited to:

- Conducting or publishing Vanguard-generated research and analysis concerning the funds, other investments, the financial markets, or the economy.
- Providing views, opinions, advice, or commentary concerning the funds, other investments, the financial markets, or the economy.
- Providing analytical, statistical, performance, or other information concerning the funds, other investments, the financial markets, or the economy.
- Providing administrative services in connection with investments in the funds or other investments, including, but not limited to, shareholder services, recordkeeping services, and educational services.
- Providing products or services that assist investors or financial service providers (as defined below) in the investment decision-making process.
- Providing promotional discounts, commission-free trading, fee waivers, and other benefits to clients of Vanguard Brokerage Services[®] who maintain qualifying investments in the funds.
- Sponsoring, jointly sponsoring, financially supporting, or participating in conferences, programs, seminars, presentations, meetings, or other events involving fund shareholders, financial service providers, or others concerning the funds, other investments, the financial markets, or the economy, such as industry conferences, prospecting trips, due diligence visits, training or education meetings, and sales presentations.

VMC performs most marketing and distribution activities itself. Some activities may be conducted by third parties pursuant to shared marketing arrangements under which VMC agrees to share the costs and performance of marketing and distribution activities in concert with a financial service provider. Financial service providers include, but are not limited to, investment advisors, broker-dealers, financial planners, financial consultants, banks, and insurance companies. Under these cost- and performance-sharing arrangements, VMC may pay or reimburse a financial service provider (or a third party it retains) for marketing and distribution activities that VMC would otherwise perform. VMC's cost- and performance-sharing arrangements may be established in connection with Vanguard investment products or services offered or provided to or through the financial service providers. VMC's arrangements for shared marketing and distribution activities may vary among financial service providers, and its payments or reimbursements to financial service providers in connection with shared marketing and distribution activities may be significant. VMC participates in an offshore arrangement established with a third party to provide marketing, promotional, and other services to qualifying Vanguard funds that are distributed in certain foreign countries on a private-placement basis to government-sponsored and other institutional investors. In exchange for such services, the third party receives an annual base (fixed) fee and may also receive discretionary fees or performance adjustments.

In connection with its marketing and distribution activities, VMC may give financial service providers (or their representatives) (1) promotional items of nominal value that display Vanguard's logo, such as golf balls, shirts, towels, pens, and mouse pads; (2) gifts that do not exceed \$100 per person annually and are not preconditioned on achievement of a sales target; (3) an occasional meal, a ticket to a sporting event or the theater, or comparable entertainment that is neither so frequent nor so extensive as to raise any question of propriety and is not preconditioned on achievement of a sales target; and (4) reasonable travel and lodging accommodations to facilitate participation in marketing and distribution activities.

VMC, as a matter of policy, does not pay asset-based fees, sales-based fees, or account-based fees to financial service providers in connection with its marketing and distribution activities for the Vanguard funds. VMC policy also prohibits marketing and distribution activities that are intended, designed, or likely to compromise suitability determinations by, or the fulfillment of any fiduciary duties or other obligations that apply to, financial service providers. Nonetheless, VMC's marketing and distribution activities are primarily intended to result in the sale of the funds' shares, and as such, its activities, including shared marketing and distribution activities, may influence participating financial service providers (or their representatives) to recommend, promote, include, or invest in a Vanguard fund or share class. In addition, Vanguard or any of its subsidiaries may retain a financial service provider to provide consulting or other services, and that financial service provider also may provide services to investors. Investors should consider the possibility that any of these activities or relationships may influence a financial service provider's (or its representatives') decision to recommend, promote, include, or invest in a Vanguard fund or share class. Each financial service provider should consider its suitability determinations, fiduciary duties, and other legal obligations (or those of its representatives) in connection with any decision to consider, recommend, promote, include, or invest in a Vanguard fund or share class.

The following table describes the expenses of Vanguard and VMC that are incurred by the Fund on an at-cost basis. Amounts captioned "Management and Administrative Expenses" include a Fund's allocated share of expenses associated with the management, administrative, and transfer agency services Vanguard provides to the funds. Amounts captioned "Marketing and Distribution Expenses" include a Fund's allocated share of expenses associated with the marketing and distribution activities that VMC conducts on behalf of the Vanguard funds.

As is the case with all mutual funds, transaction costs incurred by the Portfolios for buying and selling securities are not reflected in the table. Annual Shared Fund Operating Expenses are based on expenses incurred in the fiscal years ended December 31, 2011, 2012, and 2013, and are presented as a percentage of each Portfolio's average month-end net assets.

The Growth Portfolio's investment advisors may direct certain security trades, subject to obtaining the best price and execution, to brokers who have agreed to rebate to the Portfolio part of the commissions generated. Such rebates are used solely to reduce the Portfolio's management and administrative expenses and are not reflected in these totals.

Officers and Trustees

Each Vanguard fund is governed by the board of trustees of its trust and a single set of officers. Consistent with the board's corporate governance principles, the trustees believe that their primary responsibility is oversight of the management of each fund for the benefit of its shareholders, not day-to-day management. The trustees set broad policies for the funds; select investment advisors; monitor fund operations, regulatory compliance, performance, and costs; nominate and select new trustees; and elect fund officers. Vanguard manages the day-to-day operations of the funds under the direction of the board of trustees.

The trustees play an active role, as a full board and at the committee level, in overseeing risk management for the funds. The trustees delegate the day-to-day risk management of the funds to various groups, including portfolio review, investment management, risk management, compliance, legal, fund accounting, and fund financial services. These groups provide the trustees with regular reports regarding investment, valuation, liquidity, and compliance, as well as the risks associated with each. The trustees also oversee risk management for the funds through regular interactions with the funds' internal and external auditors.

The full board participates in the funds' risk oversight, in part, through the Vanguard funds' compliance program, which covers the following broad areas of compliance: investment and other operations; recordkeeping; valuation and pricing; communications and disclosure; reporting and accounting; oversight of service providers; fund governance; and codes of ethics, insider trading controls, and protection of nonpublic information. The program seeks to identify and assess risk through various methods, including through regular interdisciplinary communications between compliance professionals and business personnel who participate on a daily basis in risk management on behalf of the funds. The funds' chief compliance officer regularly provides reports to the board in writing and in person.

The audit committee of the board, which is composed of all independent trustees, oversees management of financial risks and controls. The audit committee serves as the channel of communication between the independent auditors of the funds and the board with respect to financial statements and financial-reporting processes, systems of internal control, and the audit process. The head of internal audit reports directly to the audit committee and provides reports to the committee in writing and in person on a regular basis. Although the audit committee is responsible for overseeing the management of financial risks, the entire board is regularly informed of these risks through committee reports.

All of the trustees bring to each fund's board a wealth of executive leadership experience derived from their service as executives (in many cases chief executive officers), board members, and leaders of diverse public operating companies, academic institutions, and other organizations. In determining whether an individual is qualified to serve as a trustee of the funds, the board considers a wide variety of information about the trustee, and multiple factors contribute to the board's decision. Each trustee is determined to have the experience, skills, and attributes necessary to serve the funds and their shareholders because each trustee demonstrates an exceptional ability to consider complex business and financial matters, evaluate the relative importance and priority of issues, make decisions, and contribute effectively to the deliberations of the board. The board also considers the individual experience of each trustee and determines that the trustee's professional experience, education, and background contribute to the diversity of perspectives on the board. The business acumen, experience, and objective thinking of the trustees are considered invaluable assets for Vanguard management and, ultimately, the Vanguard funds' shareholders. The specific roles and experience of each board member that factor into this determination are presented on the following pages. The mailing address of the trustees and officers is P.O. Box 876, Valley Forge, PA 19482.

Name, Year of Birth	Position(s) Held With Fund	Vanguard Funds' Trustee/ Officer Since	Principal Occupation(s) and Outside Directorships During the Past Five Years and Other Experience	Number of Vanguard Funds Overseen by Trustee/Officer
Interested Trustee¹				
F. William McNabb III (1957)	Chairman of the Board, Chief Executive Officer, and President	July 2009	Mr. McNabb has served as Chairman of the Board of Vanguard and of each of the investment companies served by Vanguard, since January 2010; Trustee of each of the investment companies served by Vanguard, since 2009; Director of Vanguard since 2008; and Chief Executive Officer and President of Vanguard and of each of the investment companies served by Vanguard, since 2008. Mr. McNabb also serves as a Director of Vanguard Marketing Corporation. Mr. McNabb served as a Managing Director of Vanguard from 1995 to 2008.	178

¹ Mr. McNabb is considered an "interested person," as defined in the 1940 Act, because he is an officer of the Trust.

Independent Trustees				
Emerson U. Fullwood (1948)	Trustee	January 2008	Mr. Fullwood is the former Executive Chief Staff and Marketing Officer for North America and Corporate Vice President (retired 2008) of Xerox Corporation (document management products and services). Previous positions held at Xerox by Mr. Fullwood include President of the Worldwide Channels Group, President of Latin America, Executive Chief Staff Officer of Developing Markets, and President of Worldwide Customer Services. Mr. Fullwood is the Executive in Residence and 2010 Distinguished Minett Professor at the Rochester Institute of Technology. Mr. Fullwood serves as a director of SPX Corporation (multi-industry manufacturing), Amerigroup Corporation (managed health care), the University of Rochester Medical Center, Monroe Community College Foundation, the United Way of Rochester, and North Carolina A&T University.	178
Rajiv L. Gupta (1945)	Trustee	December 2001	Mr. Gupta is the former Chairman and Chief Executive Officer (retired 2009) and President (2006–2008) of Rohm and Haas Co. (chemicals). Mr. Gupta serves as a director of Tyco International, Ltd. (diversified manufacturing and services), Hewlett-Packard Company (electronic computer manufacturing), and Delphi Automotive LLP (automotive components) and as Senior Advisor at New Mountain Capital.	178
Amy Gutmann (1949)	Trustee	June 2006	Dr. Gutmann has served as the President of the University of Pennsylvania since 2004. She is the Christopher H. Browne Distinguished Professor of Political Science, School of Arts and Sciences, and Professor of Communication, Annenberg School for Communication, with secondary faculty appointments in the Department of Philosophy, School of Arts and Sciences, and at the Graduate School of Education, University of Pennsylvania. Dr. Gutmann also serves as a trustee of the National Constitution Center. Dr. Gutmann is Chair of the Presidential Commission for the Study of Bioethical Issues.	178

Name, Year of Birth	Position(s) Held With Fund	Vanguard Funds' Trustee/ Officer Since	Principal Occupation(s) and Outside Directorships During the Past Five Years and Other Experience	Number of Vanguard Funds Overseen by Trustee/Officer
JoAnn Heffernan Heisen (1950)	Trustee	July 1998	Ms. Heisen is the former Corporate Vice President and Chief Global Diversity Officer (retired 2008) and a former Member of the Executive Committee (1997–2008) of Johnson & Johnson (pharmaceuticals/ medical devices/consumer products). Ms. Heisen served as Vice President and Chief Information Officer of Johnson & Johnson from 1997 to 2005. Ms. Heisen serves as a director of Skytop Lodge Corporation (hotels), the University Medical Center at Princeton, the Robert Wood Johnson Foundation, and the Center for Talent Innovation and as a member of the advisory board of the Maxwell School of Citizenship and Public Affairs at Syracuse University.	178
F. Joseph Loughrey (1949)	Trustee	October 2009	Mr. Loughrey is the former President and Chief Operating Officer (retired 2009) and Vice Chairman of the Board (2008–2009) of Cummins Inc. (industrial machinery). Mr. Loughrey serves as Chairman of the Board of Hillenbrand, Inc. (specialized consumer services), and of Oxfam America; as a director of SKF AB (industrial machinery), Hyster-Yale Materials Handling, Inc. (forklift trucks), the Lumina Foundation for Education, and the V Foundation for Cancer Research; and as a member of the Advisory Council for the College of Arts and Letters and of the Advisory Board to the Kellogg Institute for International Studies, both at the University of Notre Dame. Mr. Loughrey served as a director of Sauer-Danfoss Inc. (machinery) from 2000 to 2010 and of Cummins Inc. from 2005 to 2009.	178
Mark Loughridge (1953)	Trustee	March 2012	Mr. Loughridge is the former Senior Vice President and Chief Financial Officer (retired 2013) at IBM (information technology services). Mr. Loughridge also served as a fiduciary member of IBM's Retirement Plan Committee (2004-2013). Previous positions held by Mr. Loughridge at IBM include Senior Vice President and General Manager of Global Financing (2002–2004), Vice President and Controller (1998–2002), and a variety of management roles. Mr. Loughridge serves as a member of the Council on Chicago Booth.	178
Scott C. Malpass (1962)	Trustee	March 2012	Mr. Malpass has served as Chief Investment Officer since 1989 and Vice President since 1996 at the University of Notre Dame. Mr. Malpass serves as an Assistant Professor of Finance at the Mendoza College of Business at the University of Notre Dame and is a member of the Notre Dame 403(b) Investment Committee. Mr. Malpass also serves on the board of TIFF Advisory Services, Inc. (investment advisor), and as a member of the investment advisory committees of the Financial Industry Regulatory Authority (FINRA) and of Major League Baseball.	178

Name, Year of Birth	Position(s) Held With Fund	Vanguard Funds' Trustee/ Officer Since	Principal Occupation(s) and Outside Directorships During the Past Five Years and Other Experience	Number of Vanguard Funds Overseen by Trustee/Officer
André F. Perold (1952)	Trustee	December 2004	Dr. Perold is the George Gund Professor of Finance and Banking, Emeritus at the Harvard Business School (retired 2011). Dr. Perold serves as Chief Investment Officer and Managing Partner of HighVista Strategies LLC (private investment firm). Dr. Perold also serves as a director of Rand Merchant Bank and as an overseer of the Museum of Fine Arts Boston. From 2003 to 2009, Dr. Perold served as chairman of the board of UNX, Inc. (equities trading firm).	178
Alfred M. Rankin, Jr. (1941)	Lead Independent Trustee	January 1993	Mr. Rankin serves as Chairman, President, and Chief Executive Officer of NACCO Industries, Inc. (housewares/lignite), and of Hyster-Yale Materials Handling, Inc. (forklift trucks). Mr. Rankin also serves as Chairman of the Board of University Hospitals of Cleveland. Mr. Rankin served as a director of Goodrich Corporation (industrial products/aircraft systems and services) from 1988 to 2012 and as Chairman of the Board of the Fourth District Federal Reserve Bank from 2010 to 2012.	178
Peter F. Volanakis (1955)	Trustee	July 2009	Mr. Volanakis is the retired President and Chief Operating Officer (retired 2010) of Corning Incorporated (communications equipment) and a former director of Corning Incorporated (2000–2010) and of Dow Corning (2001–2010). Mr. Volanakis served as a director of SPX Corporation (multi-industry manufacturing) in 2012 and as an Overseer of the Amos Tuck School of Business Administration at Dartmouth College from 2001 to 2013. Mr. Volanakis serves as a trustee of Colby-Sawyer College and as a member of the Advisory Board of the Norris Cotton Cancer Center and of the Advisory Board of the Parthenon Group (strategy consulting).	178
Executive Officers				
Glenn Booraem (1967)	Controller	July 2010	Mr. Booraem, a Principal of Vanguard, has served as Controller of each of the investment companies served by Vanguard, since 2010. Mr. Booraem served as Assistant Controller of each of the investment companies served by Vanguard, from 2001 to 2010.	178
Thomas J. Higgins (1957)	Chief Financial Officer	September 2008	Mr. Higgins, a Principal of Vanguard, has served as Chief Financial Officer of each of the investment companies served by Vanguard, since 2008. Mr. Higgins served as Treasurer of each of the investment companies served by Vanguard, from 1998 to 2008.	178
Kathryn J. Hyatt (1955)	Treasurer	November 2008	Ms. Hyatt, a Principal of Vanguard, has served as Treasurer of each of the investment companies served by Vanguard, since 2008. Ms. Hyatt served as Assistant Treasurer of each of the investment companies served by Vanguard, from 1988 to 2008.	178

Name, Year of Birth	Position(s) Held With Fund	Vanguard Funds' Trustee/ Officer Since	Principal Occupation(s) and Outside Directorships During the Past Five Years and Other Experience	Number of Vanguard Funds Overseen by Trustee/Officer
Heidi Stam (1956)	Secretary	July 2005	Ms. Stam has served as a Managing Director of Vanguard since 2006; General Counsel of Vanguard since 2005; Secretary of Vanguard and of each of the investment companies served by Vanguard, since 2005; and Director and Senior Vice President of Vanguard Marketing Corporation since 2005. Ms. Stam served as a Principal of Vanguard from 1997 to 2006.	178

All but one of the trustees are independent. The independent trustees designate a lead independent trustee. The lead independent trustee is a spokesperson and principal point of contact for the independent trustees and is responsible for coordinating the activities of the independent trustees, including calling regular executive sessions of the independent trustees; developing the agenda of each meeting together with the chairman; and chairing the meetings of the independent trustees, including the meetings of the audit, compensation, and nominating committees. The board also has two investment committees, which consist of independent trustees and the sole interested trustee.

The independent trustees appoint the chairman of the board. The roles of chairman of the board and chief executive officer currently are held by the same person; as a result, the chairman of the board is an "interested" trustee. The independent trustees generally believe that the Vanguard funds' chief executive officer is best qualified to serve as chairman and that fund shareholders benefit from this leadership structure through accountability and strong day-to-day leadership.

Board Committees: The Trust's board has the following committees:

- **Audit Committee:** This committee oversees the accounting and financial reporting policies, the systems of internal controls, and the independent audits of each fund. All independent trustees serve as members of the committee. The committee held four meetings during the Portfolios' fiscal year ended December 31, 2013.
- **Compensation Committee:** This committee oversees the compensation programs established by each fund for the benefit of its trustees. All independent trustees serve as members of the committee. The committee held five meetings during the Portfolios' fiscal year ended December 31, 2013.
- **Investment Committees:** These committees assist the board in its oversight of investment advisors to the funds and in the review and evaluation of materials relating to the board's consideration of investment advisory agreements with the funds. Each trustee serves on one of two investment committees. Each investment committee held six meetings during the Portfolios' fiscal year ended December 31, 2013.
- **Nominating Committee:** This committee nominates candidates for election to the board of trustees of each fund. The committee also has the authority to recommend the removal of any trustee. All independent trustees serve as members of the committee. The committee held three meetings during the Portfolios' fiscal year ended December 31, 2013.

The Nominating Committee will consider shareholder recommendations for trustee nominees. Shareholders may send recommendations to Mr. Rankin, chairman of the committee.

Trustee Compensation

The same individuals serve as trustees of all Vanguard funds and each fund pays a proportionate share of the trustees' compensation. The funds employ their officers on a shared basis; however, officers are compensated by Vanguard, not the funds. The trustees and officers of the Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios will receive no remuneration directly from the Portfolios. However, the Portfolios' underlying funds pay their proportionate share of the trustees' compensation and the officers' salaries and benefits.

Independent Trustees. The funds compensate their independent trustees (i.e., the ones who are not also officers of the funds) in three ways:

- The independent trustees receive an annual fee for their service to the funds, which is subject to reduction based on absences from scheduled board meetings.
- The independent trustees are reimbursed for the travel and other expenses that they incur in attending board meetings.

- Upon retirement (after attaining age 65 and completing five years of service), the independent trustees who began their service prior to January 1, 2001, receive a retirement benefit under a separate account arrangement. As of January 1, 2001, the opening balance of each eligible trustee's separate account was generally equal to the net present value of the benefits he or she had accrued under the trustees' former retirement plan. Each eligible trustee's separate account will be credited annually with interest at a rate of 7.5% until the trustee receives his or her final distribution. Those independent trustees who began their service on or after January 1, 2001, are not eligible to participate in the plan.

"Interested" Trustee. Mr. McNabb serves as trustee but is not paid in this capacity. He is, however, paid in his role as an officer of Vanguard.

Compensation Table. The following table provides compensation details for each of the trustees. We list the amounts paid as compensation and accrued as retirement benefits by the Fund for each trustee. In addition, the table shows the total amount of benefits that we expect each trustee to receive from all Vanguard funds upon retirement and the total amount of compensation paid to each trustee by all Vanguard funds.

VANGUARD VARIABLE INSURANCE FUNDS TRUSTEES' COMPENSATION TABLE

Trustee	Aggregate Compensation from the Fund ¹	Pension or Retirement Benefits Accrued as Part of the Fund's Expenses ²	Accrued Annual Retirement Benefit at January 1, 2014 ³	Total Compensation from All Vanguard Funds Paid to Trustees ³
F. William McNabb III	—	—	—	—
Emerson U. Fullwood	\$3,059	—	—	\$220,000
Rajiv L. Gupta	3,059	—	—	213,800
Amy Gutmann	3,059	—	—	220,000
JoAnn Heffernan Heisen	3,059	\$ 42	\$ 6,045	207,600
F. Joseph Loughrey	3,059	—	—	220,000
Mark Loughridge	3,059	—	—	207,600
Scott C. Malpass	3,059	—	—	213,800
André F. Perold	3,059	—	—	220,000
Alfred M. Rankin, Jr.	3,475	82	11,846	250,000
Peter F. Volanakis	3,059	—	—	220,000

1 The amounts shown in this column are based on the Fund's fiscal year ended December 31, 2013. Each Portfolio of the Fund is responsible for a proportionate share of these amounts.

2 Each trustee is eligible to receive retirement benefits only after completing at least 5 years (60 consecutive months) of service as a trustee for the Vanguard funds. The annual retirement benefit will be paid in monthly installments, beginning with the month following the trustee's retirement from service, and will cease after 10 years of payments (120 monthly installments). Trustees who began their service on or after January 1, 2001, are not eligible to participate in the retirement benefit plan.

3 The amounts reported in this column reflect the total compensation paid to each trustee for his or her service as trustee of 182 Vanguard funds for the 2013 calendar year.

Ownership of Fund Shares

All trustees allocate their investments among the various Vanguard funds based on their own investment needs. The Portfolios are mutual funds used solely as investment options for annuity or life insurance contracts offered by insurance companies, which can only be purchased through a contract offered by an insurance company. Accordingly, the trustees cannot directly own shares of the Portfolios. The following table shows each trustee's ownership of shares of all Vanguard funds served by the trustee as of December 31, 2013.

Trustee	Aggregate Dollar Range of Vanguard Fund Shares Owned By Trustee
Emerson U. Fullwood	Over \$100,000
Rajiv L. Gupta	Over \$100,000
Amy Gutmann	Over \$100,000
JoAnn Heffernan Heisen	Over \$100,000
F. Joseph Loughrey	Over \$100,000
Mark Loughridge	Over \$100,000
Scott C. Malpass	Over \$100,000
F. William McNabb III	Over \$100,000
André F. Perold	Over \$100,000
Alfred M. Rankin, Jr.	Over \$100,000
Peter F. Volanakis	Over \$100,000

As of March 31, 2014, the trustees and officers of the funds owned, in the aggregate, less than 1% of each class of each fund's outstanding shares.

As of March 31, 2014, the following owned of record 5% or more of the outstanding shares of each Portfolio:

Money Market Portfolio: Monumental Life Insurance Company, Cedar Rapids, IA (60.78%), Nationwide Life Insurance Company, Columbus, OH (14.47%), COLI VUL-7 Series Account, Greenwood Village, CO (6.35%), Transamerica Life Insurance Company, Cedar Rapids, IA (6.19%)

Balanced Portfolio: Monumental Life Insurance Company, Cedar Rapids, IA (80.27%), Transamerica Financial Life Insurance Company, Harrison, NY (5.18%).

Equity Index Portfolio: Monumental Life Insurance Company, Cedar Rapids, IA (33.73%), Brown Brothers Harriman & Co. (31.42%), CUNA Mutual Group, Waverly, IA (5.39%).

A shareholder who owns more than 25% of a Portfolio's voting shares may be considered a controlling person. Monumental Life Insurance Company (a wholly owned subsidiary of Transamerica Corporation, which is indirectly owned by AEGON N.V. of The Netherlands) owns the indicated percentage of each Portfolio. Under current law, Monumental Life Insurance Company must vote these shares in accordance with instructions received by underlying contract holders. Vanguard Variable Insurance Fund Total Stock Market Index Portfolio owns the indicated percentage of the Equity Index Portfolio. The Total Stock Market Index Portfolio must echo vote these shares in proportionately the same manner as shares voted by the Equity Index Portfolio's other shareholders.

Portfolio Holdings Disclosure Policies and Procedures

Introduction

Vanguard and the boards of trustees of the Vanguard funds (Boards) have adopted Portfolio Holdings Disclosure Policies and Procedures (Policies and Procedures) to govern the disclosure of the portfolio holdings of each Vanguard fund. Vanguard and the Boards considered each of the circumstances under which Vanguard fund portfolio holdings may be disclosed to different categories of persons under the Policies and Procedures. Vanguard and the Boards also considered actual and potential material conflicts that could arise in such circumstances between the interests of Vanguard fund shareholders, on the one hand, and those of the fund's investment advisor, distributor, or any affiliated person of the fund, its investment advisor, or its distributor, on the other. After giving due consideration to such matters and after the exercise of their fiduciary duties and reasonable business judgment, Vanguard and the Boards determined that the Vanguard funds have a legitimate business purpose for disclosing portfolio holdings to the persons described in each of the circumstances set forth in the Policies and Procedures and that the Policies and Procedures are reasonably designed to ensure that disclosure of portfolio holdings and information about portfolio holdings is in the best interests of fund shareholders and appropriately addresses the potential for material conflicts of interest.

The Boards exercise continuing oversight of the disclosure of Vanguard fund portfolio holdings by (1) overseeing the implementation and enforcement of the Policies and Procedures, the Code of Ethics, and the Policies and Procedures Designed to Prevent the Misuse of Inside Information (collectively, the portfolio holdings governing policies) by the chief compliance officer of Vanguard and the Vanguard funds; (2) considering reports and recommendations by the chief compliance officer concerning any material compliance matters (as defined in Rule 38a-1 under the 1940 Act and Rule 206(4)-7 under the Investment Advisers Act of 1940) that may arise in connection with any portfolio holdings governing policies; and (3) considering whether to approve or ratify any amendment to any portfolio holdings governing policies. Vanguard and the Boards reserve the right to amend the Policies and Procedures at any time and from time to time without prior notice at their sole discretion. For purposes of the Policies and Procedures, the term "portfolio holdings" means the equity and debt securities (e.g., stocks and bonds) held by a Vanguard fund and does not mean the cash investments, derivatives, and other investment positions (collectively, other investment positions) held by the fund.

Online Disclosure of Ten Largest Stock Holdings

Each actively managed Vanguard fund generally will seek to disclose the fund's ten largest stock portfolio holdings and the percentages of the fund's total assets that each of these holdings represents as of the end of the most recent calendar quarter (quarter-end ten largest stock holdings with weightings) online at *vanguard.com*, in the "Portfolio" section of the

fund's Portfolio & Management page, 15 calendar days after the end of the calendar quarter. Each Vanguard index fund generally will seek to disclose the fund's ten largest stock portfolio holdings and the percentage of the fund's total assets that each of these holdings represents as of the end of the most recent month (month-end ten largest stock holdings with weightings) online at *vanguard.com*, in the "Portfolio" section of the fund's Portfolio & Management page, 15 calendar days after the end of the month. In addition, Vanguard funds generally will seek to disclose the fund's ten largest stock portfolio holdings and the aggregate percentage of the fund's total assets (and, for balanced funds, the aggregate percentage of the fund's equity securities) that these holdings represent as of the end of the most recent month (month-end ten largest stock holdings) online at *vanguard.com*, in the "Portfolio" section of the fund's Portfolio & Management page, 10 business days after the end of the month. Together, the quarter-end and month-end ten largest stock holdings are referred to as the ten largest stock holdings. Online disclosure of the ten largest stock holdings is made to all categories of persons, including individual investors, institutional investors, intermediaries, third-party service providers, rating and ranking organizations, affiliated persons of a Vanguard fund, and all other persons.

The Vanguard Variable Insurance Fund Portfolios will also disclose the top ten stock holdings of the portfolios online at *vanguard.com*.

Online Disclosure of Complete Portfolio Holdings

Each actively managed Vanguard fund, excluding Vanguard money market funds and Vanguard Market Neutral Fund, generally will seek to disclose the fund's complete portfolio holdings as of the end of the most recent calendar quarter online at *vanguard.com*, in the "Portfolio" section of the fund's Portfolio & Management page, 30 calendar days after the end of the calendar quarter. In accordance with Rule 2a-7 under the 1940 Act, each of the Vanguard money market funds will disclose the fund's complete portfolio holdings as of the last business day of the prior month online at *vanguard.com*, in the "Portfolio" section of the fund's Portfolio & Management page, no later than the fifth business day of the current month. The complete portfolio holdings information for money market funds will remain available online for at least six months after the initial posting. Vanguard Market Neutral Fund generally will seek to disclose the Fund's complete portfolio holdings as of the end of the most recent calendar quarter online at *vanguard.com*, in the "Portfolio" section of the Fund's Portfolio & Management page, 60 calendar days after the end of the calendar quarter. Each Vanguard index fund generally will seek to disclose the fund's complete portfolio holdings as of the end of the most recent month online at *vanguard.com*, in the "Portfolio" section of the fund's Portfolio & Management page, 15 calendar days after the end of the month. Online disclosure of complete portfolio holdings is made to all categories of persons, including individual investors, institutional investors, intermediaries, third-party service providers, rating and ranking organizations, affiliated persons of a Vanguard fund, and all other persons. Vanguard's Portfolio Review Department will review complete portfolio holdings before online disclosure is made and, except with respect to the complete portfolio holdings of the Vanguard money market funds, may withhold any portion of the fund's complete portfolio holdings from online disclosure when deemed to be in the best interests of the fund after consultation with a Vanguard fund's investment advisor.

The Vanguard Variable Insurance Fund Portfolios will also disclose the complete holdings of the portfolios online at *vanguard.com*.

Disclosure of Complete Portfolio Holdings to Service Providers Subject to Confidentiality and Trading Restrictions

Vanguard, for legitimate business purposes, may disclose Vanguard fund complete portfolio holdings at times it deems necessary and appropriate to rating and ranking organizations; financial printers; proxy voting service providers; pricing information vendors; third parties that deliver analytical, statistical, or consulting services; and other third parties that provide services (collectively, Service Providers) to Vanguard, Vanguard subsidiaries, and/or the Vanguard funds. Disclosure of complete portfolio holdings to a Service Provider is conditioned on the Service Provider being subject to a written agreement imposing a duty of confidentiality, including a duty not to trade on the basis of any material nonpublic information.

The frequency with which complete portfolio holdings may be disclosed to a Service Provider, and the length of the lag, if any, between the date of the information and the date on which the information is disclosed to the Service Provider, is determined based on the facts and circumstances, including, without limitation, the nature of the portfolio holdings information to be disclosed, the risk of harm to the funds and their shareholders, and the legitimate business purposes served by such disclosure. The frequency of disclosure to a Service Provider varies and may be as frequent as daily, with no lag. Disclosure of Vanguard fund complete portfolio holdings by Vanguard to a Service Provider must be authorized by

a Vanguard fund officer or a Principal in Vanguard's Portfolio Review or Legal Department. Any disclosure of Vanguard fund complete portfolio holdings to a Service Provider as previously described may also include a list of the other investment positions that make up the fund, such as cash investments and derivatives.

Currently, Vanguard fund complete portfolio holdings are disclosed to the following Service Providers as part of ongoing arrangements that serve legitimate business purposes: Abel/Noser Corporation; Advisor Software, Inc.; Alcom Printing Group Inc.; Apple Press, L.C.; Bloomberg L.P.; Brilliant Graphics, Inc.; Broadridge Financial Solutions, Inc.; Brown Brothers Harriman & Co.; Canon Business Process Services; FactSet Research Systems Inc.; Innovation Printing & Communications; Institutional Shareholder Services, Inc.; Intelligencer Printing Company; Investment Technology Group, Inc.; Lipper, Inc.; Markit WSO Corporation; McMunn Associates Inc.; Reuters America Inc.; R.R. Donnelley, Inc.; State Street Bank and Trust Company; Triune Color Corporation; and Tursack Printing Inc.

Disclosure of Complete Portfolio Holdings to Vanguard Affiliates and Certain Fiduciaries Subject to Confidentiality and Trading Restrictions

Vanguard fund complete portfolio holdings may be disclosed between and among the following persons (collectively, Affiliates and Fiduciaries) for legitimate business purposes within the scope of their official duties and responsibilities, subject to such persons' continuing legal duty of confidentiality and legal duty not to trade on the basis of any material nonpublic information, as such duties are imposed under the Code of Ethics, the Policies and Procedures Designed to Prevent the Misuse of Inside Information, by agreement, or under applicable laws, rules, and regulations: (1) persons who are subject to the Code of Ethics or the Policies and Procedures Designed to Prevent the Misuse of Inside Information; (2) an investment advisor, distributor, administrator, transfer agent, or custodian to a Vanguard fund; (3) an accounting firm, an auditing firm, or outside legal counsel retained by Vanguard, a Vanguard subsidiary, or a Vanguard fund; (4) an investment advisor to whom complete portfolio holdings are disclosed for due diligence purposes when the advisor is in merger or acquisition talks with a Vanguard fund's current advisor; and (5) a newly hired investment advisor or sub-advisor to whom complete portfolio holdings are disclosed prior to the time it commences its duties.

The frequency with which complete portfolio holdings may be disclosed between and among Affiliates and Fiduciaries, and the length of the lag, if any, between the date of the information and the date on which the information is disclosed between and among the Affiliates and Fiduciaries, is determined by such Affiliates and Fiduciaries based on the facts and circumstances, including, without limitation, the nature of the portfolio holdings information to be disclosed, the risk of harm to the funds and their shareholders, and the legitimate business purposes served by such disclosure. The frequency of disclosure between and among Affiliates and Fiduciaries varies and may be as frequent as daily, with no lag. Any disclosure of Vanguard fund complete portfolio holdings to any Affiliates and Fiduciaries as previously described may also include a list of the other investment positions that make up the fund, such as cash investments and derivatives. Disclosure of Vanguard fund complete portfolio holdings or other investment positions by Vanguard, Vanguard Marketing Corporation, or a Vanguard fund to Affiliates and Fiduciaries must be authorized by a Vanguard fund officer or a Principal of Vanguard.

Currently, Vanguard fund complete portfolio holdings are disclosed to the following Affiliates and Fiduciaries as part of ongoing arrangements that serve legitimate business purposes: Vanguard and each investment advisor, custodian, and independent registered public accounting firm identified in each fund's Statement of Additional Information.

Disclosure of Portfolio Holdings to Broker-Dealers in the Normal Course of Managing a Fund's Assets

An investment advisor, administrator, or custodian for a Vanguard fund may, for legitimate business purposes within the scope of its official duties and responsibilities, disclose portfolio holdings (whether partial portfolio holdings or complete portfolio holdings) and other investment positions that make up the fund to one or more broker-dealers during the course of, or in connection with, normal day-to-day securities and derivatives transactions with or through such broker-dealers subject to the broker-dealer's legal obligation not to use or disclose material nonpublic information concerning the fund's portfolio holdings, other investment positions, securities transactions, or derivatives transactions without the consent of the fund or its agents. The Vanguard funds have not given their consent to any such use or disclosure and no person or agent of Vanguard is authorized to give such consent except as approved in writing by the Boards of the Vanguard funds. Disclosure of portfolio holdings or other investment positions by Vanguard to broker-dealers must be authorized by a Vanguard fund officer or a Principal of Vanguard.

Disclosure of Nonmaterial Information

The Policies and Procedures permit Vanguard fund officers, Vanguard fund portfolio managers, and other Vanguard representatives (collectively, Approved Vanguard Representatives) to disclose any views, opinions, judgments, advice, or commentary, or any analytical, statistical, performance, or other information, in connection with or relating to a Vanguard fund or its portfolio holdings and/or other investment positions (collectively, commentary and analysis) or any changes in the portfolio holdings of a Vanguard fund that occurred after the end of the most recent calendar quarter (recent portfolio changes) to any person if (1) such disclosure serves a legitimate business purpose, (2) such disclosure does not effectively result in the disclosure of the complete portfolio holdings of any Vanguard fund (which can be disclosed only in accordance with the Policies and Procedures), and (3) such information does not constitute material nonpublic information. Disclosure of commentary and analysis or recent portfolio changes by Vanguard, Vanguard Marketing Corporation, or a Vanguard fund must be authorized by a Vanguard fund officer or a Principal of Vanguard.

An Approved Vanguard Representative must make a good faith determination whether the information constitutes material nonpublic information, which involves an assessment of the particular facts and circumstances. Vanguard believes that in most cases recent portfolio changes that involve a few or even several securities in a diversified portfolio or commentary and analysis would be immaterial and would not convey any advantage to a recipient in making an investment decision concerning a Vanguard fund. Nonexclusive examples of commentary and analysis about a Vanguard fund include (1) the allocation of the fund's portfolio holdings and other investment positions among various asset classes, sectors, industries, and countries; (2) the characteristics of the stock and bond components of the fund's portfolio holdings and other investment positions; (3) the attribution of fund returns by asset class, sector, industry, and country; and (4) the volatility characteristics of the fund. Approved Vanguard Representatives may, at their sole discretion, deny any request for information made by any person, and may do so for any reason or for no reason. Approved Vanguard Representatives include, for purposes of the Policies and Procedures, persons employed by or associated with Vanguard or a subsidiary of Vanguard who have been authorized by Vanguard's Portfolio Review Department to disclose recent portfolio changes and/or commentary and analysis in accordance with the Policies and Procedures.

Disclosure of Portfolio Holdings to Enable Insurance Company Compliance with Federal Income Tax Requirements or Other Applicable Law

Vanguard may disclose the complete portfolio holdings of a Portfolio of Vanguard Variable Insurance Fund (VVIF Portfolio) at times it deems necessary and appropriate to any insurance company that invests in the VVIF Portfolio and requests such information for the legitimate business purpose of enabling the insurance company to determine its compliance with federal income tax requirements or other applicable laws, rules, and regulations. Disclosure is conditioned on the insurance company being subject to a written agreement imposing a duty of confidentiality, including a duty not to trade on the basis of any material nonpublic information. The frequency of disclosure to an insurance company varies and may be as frequent as quarterly, with no lag. Disclosure must be authorized by a Vanguard fund officer or a Principal in Vanguard's Portfolio Review or Legal Department. Any disclosure of a VVIF Portfolio's complete portfolio holdings to an insurance company as previously described may also include a list of the other investment positions that make up the Portfolio, such as cash investments and derivatives.

Currently, VVIF Portfolios' complete portfolio holdings are disclosed to Chase Life and Annuity Company, Kemper Investors Life Insurance Company, and PricewaterhouseCoopers LLP.

Disclosure of Portfolio Holdings Related Information to the Issuer of a Security for Legitimate Business Purposes

Vanguard, at its sole discretion, may disclose portfolio holdings information concerning a security held by one or more Vanguard funds to the issuer of such security if the issuer presents, to the satisfaction of Vanguard's Fund Financial Services unit, convincing evidence that the issuer has a legitimate business purpose for such information. Disclosure of this information to an issuer is conditioned on the issuer being subject to a written agreement imposing a duty of confidentiality, including a duty not to trade on the basis of any material nonpublic information. The frequency with which portfolio holdings information concerning a security may be disclosed to the issuer of such security, and the length of the lag, if any, between the date of the information and the date on which the information is disclosed to the issuer, is determined based on the facts and circumstances, including, without limitation, the nature of the portfolio holdings information to be disclosed, the risk of harm to the funds and their shareholders, and the legitimate business purposes

served by such disclosure. The frequency of disclosure to an issuer cannot be determined in advance of a specific request and will vary based upon the particular facts and circumstances and the legitimate business purposes, but in unusual situations could be as frequent as daily, with no lag. Disclosure of portfolio holdings information concerning a security held by one or more Vanguard funds to the issuer of such security must be authorized by a Vanguard fund officer or a Principal in Vanguard's Portfolio Review or Legal Department.

Disclosure of Portfolio Holdings as Required by Applicable Law

Vanguard fund portfolio holdings (whether partial portfolio holdings or complete portfolio holdings) and other investment positions that make up a fund shall be disclosed to any person as required by applicable laws, rules, and regulations. Examples of such required disclosure include, but are not limited to, disclosure of Vanguard fund portfolio holdings (1) in a filing or submission with the SEC or another regulatory body, (2) in connection with seeking recovery on defaulted bonds in a federal bankruptcy case, (3) in connection with a lawsuit, or (4) as required by court order. Disclosure of portfolio holdings or other investment positions by Vanguard, Vanguard Marketing Corporation, or a Vanguard fund as required by applicable laws, rules, and regulations must be authorized by a Vanguard fund officer or a Principal of Vanguard.

Prohibitions on Disclosure of Portfolio Holdings

No person is authorized to disclose Vanguard fund portfolio holdings or other investment positions (whether online at *vanguard.com*, in writing, by fax, by e-mail, orally, or by other means) except in accordance with the Policies and Procedures. In addition, no person is authorized to make disclosure pursuant to the Policies and Procedures if such disclosure is otherwise unlawful under the antifraud provisions of the federal securities laws (as defined in Rule 38a-1 under the 1940 Act). Furthermore, Vanguard's management, at its sole discretion, may determine not to disclose portfolio holdings or other investment positions that make up a Vanguard fund to any person who would otherwise be eligible to receive such information under the Policies and Procedures, or may determine to make such disclosures publicly as provided by the Policies and Procedures.

Prohibitions on Receipt of Compensation or Other Consideration

The Policies and Procedures prohibit a Vanguard fund, its investment advisor, and any other person or entity from paying or receiving any compensation or other consideration of any type for the purpose of obtaining disclosure of Vanguard fund portfolio holdings or other investment positions. "Consideration" includes any agreement to maintain assets in the fund or in other investment companies or accounts managed by the investment advisor or by any affiliated person of the investment advisor.

INVESTMENT ADVISORY SERVICES

The Trust currently uses ten investment advisors:

- Baillie Gifford Overseas Ltd. provides investment advisory services for a portion of the assets in the International Portfolio.
- Barrow, Hanley, Mewhinney & Strauss, LLC, provides investment advisory services to the Diversified Value Portfolio.
- Delaware Investments Fund Advisers provides investment advisory services for a portion of the assets in the Growth Portfolio.
- Granahan Investment Management, Inc., provides investment advisory services for a portion of the assets in the Small Company Growth Portfolio.
- M&G Investment Management Limited provides investment advisory services for a portion of the assets in the International Portfolio.
- PRIMECAP Management Company provides investment advisory services to the Capital Growth Portfolio.
- Schroder Investment Management North America Inc. provides investment advisory services for a portion of the assets in the International Portfolio.
- Wellington Management Company, LLP, provides investment advisory services to the High Yield Bond and Balanced Portfolios, and for a portion of the assets in the Equity Income and Growth Portfolios.
- William Blair & Company, L.L.C., provides investment advisory services for a portion of the assets in the Growth Portfolio.
- Vanguard provides investment advisory services to the Conservative Allocation, Equity Index, Mid-Cap Index, Moderate Allocation, Money Market, REIT Index, Short-Term Investment-Grade, Total Bond Market Index, and

Total Stock Market Index Portfolios, and for a portion of the assets in the Equity Income and Small Company Growth Portfolios.

The Trust previously employed one other firm as an investment advisor:

- AllianceBernstein L.P. provided investment advisory services for a portion of the assets in the Growth Portfolio from 2001 through September 2010.

Independent Third-Party Advisors

For funds that are advised by independent third-party advisory firms unaffiliated with Vanguard, the board of trustees of each fund hires investment advisory firms, not individual portfolio managers, to provide investment advisory services to such funds. Vanguard negotiates each advisory agreement, which contains advisory fee arrangements, on an arms-length basis with the advisory firm. Each advisory agreement is reviewed annually by each fund's board of trustees, taking into account numerous factors, which include, without limitation, the nature, extent, and quality of the services provided; investment performance; and the fair market value of the services provided. Each advisory agreement is between the Trust and the advisory firm, not between the Trust and the portfolio manager. The structure of the advisory fee paid to each unaffiliated investment advisory firm is described in the following sections. In addition, each firm has established policies and procedures designed to address the potential for conflicts of interest. Each firm's compensation structure and management of potential conflicts of interest are summarized by the advisory firm in the following sections for the fiscal year ended December 31, 2013.

The Fund is party to an investment advisory agreement with each of its independent third-party advisors whereby the advisor manages the investment and reinvestment of the portion of each Portfolio's assets that the Fund's board of trustees determines to assign to the advisor. Hereafter, each portion is referred to as the advisor's Portfolio. In this capacity, each advisor continuously reviews, supervises, and administers its portion of its Portfolio's investment program. Each advisor discharges its responsibilities subject to the supervision and oversight of Vanguard's Portfolio Review Group and the officers and trustees of the Fund. Vanguard's Portfolio Review Group is responsible for recommending changes in a Portfolio's advisory arrangements to the Fund's board of trustees, including changes in the amount of assets allocated to each advisor, and whether to hire, terminate, or replace an advisor.

I. Capital Growth Portfolio

PRIMECAP Management Company (PRIMECAP), an investment advisory services firm founded in 1983, is a California corporation whose outstanding shares are owned by its directors and officers. The directors of the corporation and the offices they currently hold are Mitchell J. Milias, Chairman; Theo A. Kolokotronis, Vice Chairman; Joel P. Fried, President; and Alfred W. Mordecai, Executive Vice President. PRIMECAP provides investment advisory services to endowment funds, employee benefit plans, and foundations unrelated to Vanguard.

The Portfolio pays PRIMECAP on a quarterly basis. The advisory fee is a percentage of average daily net assets under management during the most recent fiscal quarter.

During the fiscal years ended December 31, 2011, 2012, and 2013, the Capital Growth Portfolio incurred investment advisory fees of approximately \$554,000, \$579,000, and \$794,000, respectively.

1. Other Accounts Managed

Theo A. Kolokotronis, Joel P. Fried, Alfred W. Mordecai, and M. Mohsin Ansari jointly manage the Capital Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$631 million. As of December 31, 2013, the named portfolio managers also jointly managed six other registered investment companies with total assets of \$68 billion (none of which had advisory fees based on account performance). As of December 31, 2013, the named portfolio managers also jointly managed one other pooled investment vehicle with total assets of \$1.8 million (advisory fee not based on account performance). As of December 31, 2013, the managers also individually managed other accounts as follows: Mr. Kolokotronis, 35 other accounts with total assets of \$16.7 billion; Mr. Fried, 32 other accounts with total assets of \$16.7 billion; Mr. Mordecai, 27 other accounts with total assets of \$16.7 billion; and Mr. Ansari, 26 other accounts with total assets of \$16.7 billion (none of which had advisory fees based on account performance).

2. Material Conflicts of Interest

PRIMECAP employs a multimanager approach to managing its clients' portfolios. In addition to mutual funds, a portfolio manager may also manage separate accounts for institutional clients. Conflicts of interest may arise with aggregation or allocation of securities trades amongst the Portfolio and other accounts. The investment objective of the Portfolio and strategies used to manage the Portfolio may differ from other accounts, and the performance may be impacted as well. Portfolio managers who have day-to-day management responsibilities with respect to more than one fund or other account may be presented with several potential or actual conflicts of interest. For example, the management of multiple funds and/or other accounts may result in a portfolio manager devoting unequal time and attention to the management of each fund and/or other account. If a portfolio manager identifies a limited investment opportunity that may be suitable for more than one fund or other account, a fund may not be able to take full advantage of the opportunity because of an allocation of filled purchase or sale orders across all eligible funds and other accounts managed by the portfolio managers. PRIMECAP has adopted best execution and trade allocation policies and procedures to prevent potential conflicts of interest that may arise between mutual funds and separate accounts, whereby a client or clients may be disadvantaged by trades executed in other clients' portfolios on the same security. These policies and procedures are strictly monitored and are reviewed by PRIMECAP.

3. Description of Compensation

Compensation is paid solely by PRIMECAP. Each portfolio manager receives a fixed salary that is in part based on industry experience as well as contribution to the firm. On an annual basis, each portfolio manager's compensation may be adjusted according to market conditions and/or to reflect his past performance.

In addition, each portfolio manager may receive a bonus partially based on the Portfolio's pre-tax return and the total value of assets managed by that portfolio manager. Performance is measured on a relative basis, using the S&P 500 Index as the benchmark, and the bonuses are earned only when performance exceeds that of the S&P 500. The value of assets managed by PRIMECAP is not a factor in determination of a portfolio manager's bonus. Bonuses earned are accrued and paid ratably according to the following schedule over rolling three-year periods: 50% in year one, 33% in year two, and 17% in year three. Although the bonus is determined by pre-tax returns, each portfolio manager considers tax consequences in taxable accounts as part of his decision-making process.

The portfolio managers do not receive deferred compensation but participate in a profit-sharing plan available to all employees of PRIMECAP; amounts are determined as a percentage of the employee's eligible compensation for a calendar year based on IRS limitations.

Each portfolio manager is a principal of PRIMECAP and receives quarterly dividends based on his or her equity in the company.

II. Diversified Value Portfolio

Barrow, Hanley, Mewhinney & Strauss, LLC (Barrow, Hanley), a Delaware limited liability company, is an investment management firm founded in 1979 that provides investment advisory services to separately managed U.S. and non-U.S. equity, fixed income, and balanced portfolios for large institutional clients, mutual funds, employee benefit plans, endowments, foundations, insurance companies, limited liability companies, and other institutions and individuals. Barrow, Hanley is a subsidiary of Old Mutual Asset Managers (US) LLC, which is a subsidiary of Old Mutual plc, based in London, England.

The Portfolio pays the advisor a base fee plus or minus a performance adjustment. The base fee, which is paid quarterly, is a percentage of average daily net assets under management during the most recent fiscal quarter. The performance adjustment, also paid quarterly, is based on the cumulative total return of the Portfolio relative to that of the MSCI US Prime Market 750 Index over the preceding 36-month period.

During the fiscal years ended December 31, 2011, 2012, and 2013, the Diversified Value Portfolio incurred investment advisory fees of approximately \$957,000 (before a performance-based decrease of \$71,000), \$1,015,000 (before a performance-based decrease of \$78,000), and \$1,277,000 (before a performance-based decrease of \$57,000), respectively.

1. Other Accounts Managed

James P. Barrow manages the Diversified Value Portfolio; as of December 31, 2013, the Portfolio held assets of \$1.1 billion. As of December 31, 2013, Mr. Barrow also managed six other registered investment companies with total assets of \$35 billion (advisory fees based on account performance for two of these accounts with total assets of \$34 billion), one other pooled investment vehicles with total assets of \$291.7 million (advisory fees not based on account performance), and 21 other accounts with total assets of \$3.1 billion (advisory fees not based on account performance).

Jeff G. Fahrenbruch is an associate portfolio manager of the Diversified Value Portfolio; as of December 31, 2013, the Portfolio held assets of \$1.1 billion. As of December 31, 2013, Mr. Fahrenbruch also co-managed one other registered investment company with total assets of \$195 million and 13 other accounts with total assets of \$1.5 billion (none of which had advisory fees based on account performance).

David W. Ganucheau is an associate portfolio manager of the Diversified Value Portfolio; as of December 31, 2013, the Portfolio held assets of \$1.1 billion. As of December 31, 2013, Mr. Ganucheau also co-managed one other registered investment company with total assets of \$195 million and 13 other accounts with total assets of \$1.5 billion (none of which had advisory fees based on account performance).

2. Material Conflicts of Interest

Actual or potential conflicts of interest may arise when a portfolio manager has management responsibilities to more than one account (including the Portfolio). Barrow, Hanley manages potential conflicts between funds or with other types of accounts through allocation policies and procedures, internal review processes, and oversight by directors and independent third parties to ensure that no client, regardless of type or fee structure, is intentionally favored at the expense of another. Allocation policies are designed to address potential conflicts in situations where two or more funds or accounts participate in investment decisions involving the same securities.

3. Description of Compensation

In addition to base salary, all portfolio managers and analysts share in a bonus pool that is distributed semiannually. Portfolio managers and analysts are rated on their value added to the team-oriented investment process. Overall compensation applies with respect to all accounts managed and compensation does not differ with respect to distinct accounts managed by a portfolio manager. Compensation is not tied to a published or private benchmark. It is important to understand that contributions to the overall investment process may include not recommending securities in an analyst's sector if there are no compelling opportunities in the industries covered by that analyst.

The compensation of portfolio managers is not directly tied to fund performance or growth in assets for any fund or other account managed by a portfolio manager and portfolio managers are not compensated for bringing in new business. Of course, growth in assets from the appreciation of existing assets and/or growth in new assets will increase revenues and profit. The consistent, long-term growth in assets at any investment firm is, to a great extent, dependent upon the success of the portfolio management team. The compensation of the portfolio management team at Barrow, Hanley will increase over time if and when assets continue to grow through competitive performance. Lastly, many of the key investment personnel have a long-term incentive compensation plan in the form of an equity interest in Barrow, Hanley.

III. Growth Portfolio

The Portfolio pays each of its independent third-party investment advisors a base fee plus or minus a performance adjustment. Each base fee, which is paid quarterly, is a percentage of average daily net assets managed by the advisor during the most recent fiscal quarter. The performance adjustment, also paid quarterly, is based on the cumulative total return of each advisor's portion of the Portfolio relative to that of the Russell 1000 Growth Index over the preceding 36-month period (60-month period for William Blair & Company).

During the fiscal years ended December 31, 2011, 2012, and 2013, the Growth Portfolio incurred aggregate investment advisory fees of approximately \$369,000 (before a performance-based decrease of \$30,000), \$413,000 (before a performance-based decrease of \$28,000), and \$499,000 (before a performance-based decrease of \$43,000), respectively.

A. Delaware Investments Fund Advisers

Delaware Investments Fund Advisers (DIFA), a series of Delaware Management Business Trust (DMBT), serves as a Sub-Adviser to the portfolio. DMBT is a subsidiary of Delaware Management Holdings, Inc. (DMHI). DMHI is a subsidiary and subject to the ultimate control of Macquarie Group, Limited (Macquarie). Macquarie is a Sydney, Australia-headquartered global provider of banking, financial, advisory, and investment and funds management services. Delaware Investments is the marketing name for DMHI and its subsidiaries. Investments in the portfolio are not and will not be deposits with or liabilities of Macquarie Bank Limited ABN 46 008 583 542 and its holding companies, including their subsidiaries or related companies (the Macquarie Group), and are subject to investment risk, including possible delays in repayment and loss of income and capital invested. No Macquarie Group company guarantees or will guarantee the performance of the portfolio or any particular rate of return.

1. Other Accounts Managed

Christopher J. Bonavico co-manages a portion of the Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$411 million. As of December 31, 2013, Mr. Bonavico also managed 17 other registered investment companies with total assets of \$11.9 billion (advisory fees based on account performance for one of these accounts with total assets of \$2.0 billion), 14 other pooled investment vehicles with total assets of \$2.4 billion (advisory fees not based on account performance), and 59 other accounts with total assets of \$10.8 billion (advisory fees based on account performance for four of these accounts with total assets of \$781.3 million).

Christopher M. Ericksen co-manages a portion of the Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$411 million. As of December 31, 2013, Mr. Ericksen also managed 11 other registered investment companies with total assets of \$9.3 billion (advisory fees based on account performance for one of these accounts with total assets of \$2.0 billion), six other pooled investment vehicles with total assets of \$513.4 million (advisory fees not based on account performance), and 38 other accounts with total assets of \$8.6 billion (advisory fees based on account performance for two of these accounts with total assets of \$463 million).

Daniel J. Prislin co-manages a portion of the Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$411 million. As of December 31, 2013, Mr. Prislin also co-managed 12 other registered investment companies with total assets of \$9.5 billion (advisory fees based on account performance for one of these accounts with total assets of \$2.0 billion), eight other pooled investment vehicles with total assets of \$694.3 million (advisory fees not based on account performance), and 43 other accounts with total assets of \$9.1 billion (advisory fees based on account performance for four of these accounts with total assets of \$781.3 million).

Jeffrey S. Van Harte co-manages a portion of the Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$411 million. As of December 31, 2013, Mr. Van Harte also co-managed 12 other registered investment companies with total assets of \$9.5 billion (advisory fees based on account performance for one of these accounts with total assets of \$2.0 billion), eight other pooled investment vehicles with total assets of \$694.3 million (advisory fees not based on account performance), and 42 other accounts with total assets of \$9.1 billion (advisory fees based on account performance for four of these accounts with total assets of \$781.3 million).

2. Material Conflicts of Interest

Individual portfolio managers may perform investment management services for other funds or accounts similar to those provided to the Delaware Investments Fund Advisers Portfolio, and the investment action for each other fund or account and the Delaware Investments Fund Advisers Portfolio may differ. For example, one account or fund may be selling a security, while another fund or account may be purchasing or holding the same security. As a result, transactions executed for one fund or account or the Delaware Investments Fund Advisers Portfolio may adversely affect the value of securities held by another fund or account or the Delaware Investments Fund Advisers Portfolio. In addition, the management of multiple other funds or accounts and the Delaware Investments Fund Advisers Portfolio may give rise to potential conflicts of interest, as a portfolio manager must allocate time and effort to multiple funds or accounts and the Delaware Investments Fund Advisers Portfolio. A portfolio manager may discover an investment opportunity that may be suitable for more than one fund or account. The investment opportunity may be limited, however, so that all funds or accounts for which the investment would be suitable may not be able to participate. Delaware Investments Fund Advisers has adopted procedures designed to allocate investments fairly across multiple funds or accounts.

Five of the accounts managed by the portfolio managers have performance-based fees. This compensation structure presents a potential conflict of interest. The portfolio managers have an incentive to manage such accounts so as to enhance their performance, to the possible detriment of other accounts for which the investment manager does not receive a performance-based fee. A portfolio manager's management of personal accounts also may present certain conflicts of interest.

Although Delaware Investments Fund Advisers' code of ethics is designed to address these potential conflicts, there is no guarantee that it will do so.

3. Description of Compensation

Each portfolio manager's compensation consists of the following:

Base Salary—Each named portfolio manager receives a fixed base salary. Salaries are determined by a comparison to industry data prepared by third parties to ensure that portfolio manager salaries are in line with salaries paid at peer investment advisory firms.

Bonus—Each named portfolio manager is eligible to receive an annual cash bonus. The bonus pool is determined by the revenues associated with the products a portfolio manager manages. Delaware Investments keeps a percentage of the revenues and the remaining percentage of revenues (minus appropriate expenses associated with relevant product and the investment management team) create the "bonus pool" for the product. Various members of the team have the ability to earn a percentage of the bonus pool with the most senior contributor generally having the largest share. The pool is allotted based on subjective factors (50%) and objective factors (50%).

The primary objective factors are the performance of the funds managed relative to the performance of the appropriate Lipper peer groups and the performance of institutional composites relative to a peer group from a nationally recognized publicly available database, for five successive rolling-12-month periods. An average is taken of the five-year relative performance data to determine the multiplier to be applied in calculating the portion of the pool that will be paid out. To the extent there was less than a complete payout of the "objective" portion of the bonus pool over the previous five years, there is an opportunity to recoup these amounts if the multiplier is in excess of 100% (at the discretion of senior management).

Individual allocations of the bonus pool are based on individual performance measurements, both objective and subjective, as determined by senior management.

Portfolio managers participate in retention programs, including the Delaware Investments Incentive Unit Plan, the Delaware Investments Notional Investment Plan, and the Macquarie Group Employee Retained Equity Plan, for alignment of interest purposes.

Delaware Investments Incentive Unit Plan—Portfolio managers may be awarded incentive unit awards ("Awards") relating to the underlying shares of common stock of DMHI issuable pursuant to the terms of the Delaware Investments Incentive Unit Plan (the "Plan") adopted on November 30, 2010.

The Plan was adopted in order to assist Delaware Investments Fund Advisers in attracting, retaining, and rewarding key employees of the company; enable such employees to acquire or increase an equity interest in the company in order to align the interest of such employees and Delaware Investments Fund Advisers; and provide such employees with incentives to expend their maximum efforts. Subject to the terms of the Plan and applicable award agreements, Awards typically vest in 25% increments on a four-year schedule, and shares of common stock underlying the Awards are issued after vesting. The fair market value of the shares of DMHI is normally determined as of each March 31, June 30, September 30, and December 31 by an independent appraiser. Generally, a stockholder may put shares back to the company during the put period communicated in connection with the applicable valuation.

Delaware Investments Notional Investment Plan - A portion of a portfolio manager's retained profit sharing may be notionally exposed to the return of a portfolio of Delaware Investments Family of Funds-managed funds pursuant to the terms of the Delaware Investment Notional Investment Plan. The retained amount will vest in three equal tranches in each of the first, second, and third years following the date upon which the investment is made.

Macquarie Group Employee Retained Equity Plan - A portion of a portfolio manager's retained profit share may be invested in the Macquarie Group Employee Retained Equity Plan ("MEREP"), which is used to deliver remuneration in the form of Macquarie Group Limited ("Macquarie") equity. The main type of award currently being offered under the

MEREP is units comprising a beneficial interest in a Macquarie share held in a trust for the employee, subject to the vesting and forfeiture provisions of the MEREP. Subject to vesting conditions, vesting and release of the shares occurs in equal tranches two, three, and four years after the date of investment.

Other Compensation—Portfolio managers may also participate in benefit plans and programs available generally to all employees.

B. Wellington Management Company, LLP (Wellington Management)

Wellington Management is a Massachusetts limited liability partnership with principal offices at 280 Congress Street, Boston, MA 02210. As of January 1, 2014, the firm is owned by 142 partners, all fully active in the firm. Wellington Management is a professional investment counseling firm that provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years.

1. Other Accounts Managed

Andrew J. Shilling manages a portion of the Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$411 million. As of December 31, 2013, Mr. Shilling also managed four other registered investment companies with total assets of \$3.4 billion (advisory fee based on account performance for one of these accounts with total assets of \$2 billion), eight other pooled investment vehicles with total assets of \$1.5 billion (advisory fees not based on account performance), and 24 other accounts with total assets of \$4.8 billion (advisory fee based on account performance for one of these accounts with total assets of \$252 million).

2. Material Conflicts of Interest

Please refer to Wellington Management's discussion on page B-65.

3. Description of Compensation

Wellington Management receives a fee based on the assets under management of the Wellington Management Portfolio as set forth in the Investment Advisory Agreement between Wellington Management and the Trust on behalf of the Portfolio. Wellington Management pays its investment professionals out of its total revenues, including the advisory fees earned with respect to the Wellington Management Portfolio.

Wellington Management's compensation structure is designed to attract and retain high-caliber investment professionals necessary to deliver high-quality investment management services to its clients. Wellington Management's compensation of the portfolio manager listed in the prospectus, who is primarily responsible for the day-to-day management of the Wellington Management Portfolio (Portfolio Manager) includes a base salary and incentive components. The base salary for the Portfolio Manager, who is a partner of Wellington Management, is generally a fixed amount that is determined by the Managing Partners of the firm.

The Portfolio Manager is eligible to receive an incentive payment based on the revenues earned by Wellington Management from the Wellington Management Portfolio and generally each other account managed by the Portfolio Manager. The Portfolio Manager's incentive payment relating to the Wellington Management Portfolio is linked to the net pre-tax performance of the portion of the Wellington Management Portfolio managed by the Portfolio Manager compared to the Russell 1000 Growth Index over one- and three-year periods, with an emphasis on three-year results. In 2012, Wellington Management began placing increased emphasis on long-term performance and is phasing in a five-year performance comparison period, which will be fully implemented by December 31, 2016. Wellington Management applies similar incentive compensation structures (although the benchmarks or peer groups, time periods and rates may differ) to other accounts managed by the Portfolio Manager, including accounts with performance fees.

Portfolio-based incentives across all accounts managed by an investment professional can, and typically do, represent a significant portion of an investment professional's overall compensation; incentive compensation varies significantly by individual and can vary significantly from year to year. The Portfolio Manager may also be eligible for bonus payments based on his overall contribution to Wellington Management's business operations. Senior management at Wellington Management may reward individuals as it deems appropriate based on other factors. Each partner of Wellington Management is eligible to participate in a partner-funded tax-qualified retirement plan, the contributions to which are made pursuant to an actuarial formula. Mr. Shilling is a partner of the firm.

C. William Blair & Company, L.L.C. (William Blair & Company)

William Blair & Company is an independently owned, full-service investment advisory firm founded in 1935. William Blair & Company is organized as a Delaware limited liability company.

1. Other Accounts Managed

James Golan co-manages a portion of the Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$411 million. As of December 31, 2013, Mr. Golan also managed two other registered investment companies with total assets of \$748 million (advisory fees based on account performance for one of these accounts with total assets of \$701 million) and 17 other accounts with total assets of \$111 million (advisory fees not based on account performance).

David Ricci co-manages a portion of the Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$411 million. As of December 31, 2013, Mr. Ricci also managed five other registered investment companies with total assets of \$3.7 billion (advisory fees based on account performance for two of these accounts with total assets of \$2.2 billion), six other pooled investment vehicles with total assets of \$419 million (advisory fees not based on account performance), and 27 other accounts with total assets of \$1.9 billion (advisory fees not based on account performance).

2. Material Conflicts of Interest

Because each portfolio manager manages other accounts in addition to the William Blair & Company Portfolio, conflicts of interest may arise in connection with the portfolio manager's management of the William Blair & Company Portfolio's investments on the one hand and the investments of such other accounts on the other hand. However, William Blair & Company has adopted policies and procedures designed to address such conflicts, including, among others, policies and procedures relating to allocation of investment opportunities, soft dollars, and aggregation of trades.

3. Description of Compensation

The compensation of William Blair & Company portfolio managers is based on the firm's mission: "to achieve success for its clients." The portfolio managers are principals of William Blair & Company, and each portfolio manager's compensation consists of a fixed base salary, a share of the firm's profits, and, in some instances, a discretionary bonus. The discretionary bonus, as well as any potential changes to the principals' ownership stakes, is determined by the head of William Blair & Company's Investment Management Department subject to the approval of the firm's Executive Committee and is based entirely on a qualitative assessment rather than a formula. The discretionary bonus rewards the specific accomplishments in the prior year, including short-term and long-term investment performance, quality of research ideas, and other contributions to the firm and its clients. Changes in ownership stake are based upon the portfolio manager's sustained, multi-year contribution to long-term investment performance and to the firm's revenue, profitability, intellectual capital, and brand reputation. The compensation process is a subjective one that takes into account the factors described in this section. Portfolio managers do not receive any direct compensation based upon the performance of any individual client account, and no indices are used to measure performance. In addition, there is no particular weighting or formula for evaluating the factors.

IV. International Portfolio

The Portfolio pays each of its independent third-party investment advisors a base fee plus or minus a performance adjustment. Each base fee, which is paid quarterly, is a percentage of average daily net assets managed by the advisor during the most recent fiscal quarter. The performance adjustment, also paid quarterly, is based on the cumulative total return of each advisor's portion of the Portfolio relative to that of the MSCI ACWI ex USA Index over the preceding 36-month period.

During the fiscal years ended December 31, 2011, 2012, and 2013, the International Portfolio incurred aggregate investment advisory fees of \$2,439,000 (before a performance-based increase of \$661,000), \$2,431,000 (before a performance-based increase of \$705,000), and \$2,955,000 (before a performance-based increase of \$627,000), respectively.

A. Baillie Gifford Overseas Ltd. (Baillie Gifford)

Baillie Gifford is an investment advisory firm founded in 1983. Baillie Gifford is wholly owned by a Scottish investment company, Baillie Gifford & Co. Founded in 1908, Baillie Gifford & Co., which is one of the largest independently owned investment management firms in the United Kingdom, manages money primarily for institutional clients.

1. Other Accounts Managed

James K. Anderson co-manages a portion of the International Portfolio; as of December 31, 2013, the Portfolio held assets of \$2.3 billion. As of December 31, 2013, Mr. Anderson also led investment teams responsible for managing four other registered investment companies with total assets of \$15.3 billion (advisory fee based on account performance for one of these accounts with total assets of \$11.8 billion), four other pooled investment vehicles with total assets of \$7.2 billion (advisory fees not based on account performance), and 85 other accounts with total assets of \$38 billion (advisory fees based on account performance for 11 of these accounts with total assets of \$6.5 billion).

Kave Sigaroudinia co-manages a portion of Vanguard International Portfolio; as of December 31, 2013, the Fund held assets of \$2.3 billion. As of December 31, 2013, Mr. Sigaroudinia also managed four other registered investment companies with total assets of \$15.3 billion (advisory fee based on account performance for one of these accounts with total assets of \$11.8 billion), one other pooled investment vehicle with total assets of \$377 million (advisory fees not based on account performance), and 33 other accounts with total assets of \$14.3 billion (none of which had advisory fees based on account performance).

2. Material Conflicts of Interest

At Baillie Gifford, individual portfolio managers may manage multiple accounts for multiple clients. In addition to mutual funds, these other accounts may include separate accounts, collective investment schemes, or offshore funds. Baillie Gifford manages potential conflicts between funds or with other types of accounts by implementing effective organizational and administrative arrangements to ensure that reasonable steps are taken to prevent the conflict giving rise to a material risk of damage to the interests of clients.

One area where a conflict of interest potentially arises is in the placing of orders for multiple clients and subsequent allocation of trades. Unless client-specific circumstances dictate otherwise, investment teams normally implement transactions in individual stocks for all clients with similar mandates at the same time. This aggregation of individual transactions can, of course, operate to the advantage or disadvantage of the clients involved in the order. When receiving orders from investment managers, traders at Baillie Gifford will generally treat order priority on a "first come, first served" basis, and any exceptions to this are permitted only in accordance with established policies. Baillie Gifford has also developed trade allocation systems and controls to ensure that no one client, regardless of type, is intentionally favored at the expense of another. Allocation policies are designed to address potential conflicts in situations where two or more funds or accounts participate in investment decisions involving the same securities.

3. Description of Compensation

Mr. Anderson and Mr. Sigaroudinia are Partners of Baillie Gifford & Co. Their remuneration comprises a base salary and a share of the partnership profits. The profit share is calculated as a percentage of total partnership profits based on seniority, role within Baillie Gifford, and length of service. The basis for the profit share is detailed in the Baillie Gifford Partnership Agreement. The main staff benefits, such as pension benefits, are not available to Partners, and therefore Partners provide for benefits from their own personal funds.

B. M&G Investment Management Limited (M&G)

M&G is a wholly owned subsidiary of Prudential plc (an English insurance company not affiliated in any manner with Prudential Financial, Inc., a company whose principal place of business is in the United States). M&G, founded in 1931, launched Great Britain's first unit trust (mutual fund).

1. Other Accounts Managed

Greg Aldridge manages a portion of the International Portfolio; as of December 31, 2013, the Portfolio held assets of \$2.3 billion. As of December 31, 2013, Mr. Aldridge also managed one other registered investment company with total assets of \$362 million (advisory fee based on account performance) and five other pooled investment vehicles with total assets of \$2.2 billion (advisory fee based on account performance for one of these accounts with total assets of \$46.1 million).

2. Material Conflicts of Interest

At M&G, individual portfolio managers may manage multiple accounts for multiple clients. In addition to mutual funds, these other accounts may include non-US collective investment schemes, insurance companies, and segregated pension funds. M&G manages potential conflicts between funds or with other types of accounts through allocation policies and procedures, internal review processes, and oversight by directors. M&G has developed trade allocation procedures and controls to ensure that no one client, regardless of type, is intentionally favored at the expense of another. Allocation policies are designed to address potential conflicts in situations where two or more funds participate in investment decisions involving the same securities.

3. Description of Compensation

Greg Aldridge is compensated in line with standard M&G practice, which is:

M&G has a strong and integrated set of compensation practices designed to reflect the logic, internally within M&G, of people's value as well as their outputs. Each component of the remuneration package has a role to play in the effective and appropriate reward of individuals in order to attract, retain, and motivate. M&G believes it is also important to ensure that in total the components are coherent and relate appropriately to each other, delivering the reward levels that M&G wants to make available for different levels of performance. The components are as follows:

- Base pay is used to reward inputs, reflecting the values of people's knowledge, skills, aptitudes, and track records. It progresses in line with personal growth, general contribution, and potential.
- Bonus payment levels are closely aligned with "outputs," chiefly investment performance but also other results. Bonuses are discretionary, variable year on year and reflect personal, team, and company performance. Depending on the portfolio's objective, M&G uses either a representative index or a representative group of competitor funds as a benchmark against which to measure performance. In the case of the International Portfolio, the performance factor of the portfolio managers' bonus is dependent on the Portfolio's performance over one- and three-year periods compared with the MSCI ACWI ex USA. The actual bonus, which is paid on an annual basis, may be up to a multiple of base salary, depending on the achieved percentile ranking in this peer group over these time periods.
- M&G's long-term incentive plan, combining phantom equity and options over phantom equity in M&G, is designed to provide a meaningful stake in the future growth of the company's value to those who have a significant role to play in its growth. The long-term incentive plan consists of phantom shares, normally awarded on an annual basis, with each award having a three-year performance cycle. The value of an award at vesting, and consequently the payment a participant receives, is dependent on its initial value and the change in operating profit for the M&G Retail business over the performance cycle. While the exit price is based on actual business performance, the shares awarded are phantom shares as M&G is not a listed company.
- The method used to determine the compensation for portfolio managers who are responsible for the management of multiple accounts is the same for all funds.

In addition, the portfolio managers are eligible for the standard retirement benefits and health benefits generally available to all M&G employees.

M&G's remuneration package is regularly reviewed by outside consultants to ensure that it is competitive in the London investment management market.

C. Schroder Investment Management North America Inc. (Schroders)

Each of Schroders and Schroder Investment Management North America Limited (Schroder Limited), 31 Gresham Street, London, EC2V 7QA, England, is an indirect wholly owned subsidiary of Schroders plc, the ultimate parent of a large worldwide group of financial service companies with subsidiaries and branches and representative offices located in 27 countries. Schroders plc is a publicly owned holding company organized under the laws of England. Schroders and its affiliates specialize in providing investment management services.

Schroders Sub-advisory Agreement

On behalf of the Fund, Schroders has entered into a sub-advisory agreement with Schroder Limited pursuant to which Schroder Limited has primary responsibility for choosing investments for the International Portfolio. Under the terms of the sub-advisory agreement with the Fund, Schroders pays Schroder Limited fees equal to 59% of the management fee payable to Schroders under its management contract with the Fund.

1. Other Accounts Managed

Simon Webber manages a portion of the International Portfolio; as of December 31, 2013, the Portfolio held assets of \$2.3 billion. As of December 31, 2013, Mr. Webber also managed six other registered investment companies with total assets of \$1.9 billion (advisory fees not based on account performance), and managed 16 other pooled investment vehicles with total assets of \$2.8 billion (advisory fee based on account performance for one of these accounts with total assets of \$145 million) and 34 other accounts with total assets of \$6.8 billion (advisory fee based on account performance for five of these accounts with total assets of \$718 million).

2. Material Conflicts of Interest

Whenever a portfolio manager of the Schroders Portfolio manages other accounts, potential conflicts of interest exist, including potential conflicts between the investment strategy of the Schroders Portfolio and the investment strategy of the other accounts. For example, in certain instances, a portfolio manager may take conflicting positions in a particular security for different accounts by selling a security for one account and continuing to hold it for another account. In addition, the fact that other accounts require the portfolio manager to devote less than all of his or her time to the Schroders Portfolio may be seen itself to constitute a conflict with the interest of the Schroders Portfolio.

A portfolio manager may also execute transactions for another fund or account at the direction of such fund or account that may adversely impact the value of securities held by the Schroders Portfolio. Securities selected for funds or accounts other than the Schroders Portfolio may outperform the securities selected for the Schroders Portfolio. Finally, if a portfolio manager identifies a limited investment opportunity that may be suitable for more than one fund or other account, the Schroders Portfolio may not be able to take full advantage of that opportunity due to an allocation of that opportunity across all eligible funds and accounts.

At Schroders, individual portfolio managers may manage multiple accounts for multiple clients. In addition to mutual funds, these other accounts may include separate accounts, collective trusts, or offshore funds. Certain of these accounts may pay a performance fee, and portfolio managers may have an incentive to allocate investment to these accounts.

Schroders manages potential conflicts between funds or with other types of accounts through allocation policies and procedures, internal review processes, and oversight by client directors. Schroders has developed trade allocation and client order priority systems and controls to ensure that no one client, regardless of type, is intentionally favored at the expense of another. Allocation policies are designed to address potential conflicts in situations where two or more funds or accounts participate in investment decisions involving the same securities.

The structure of each portfolio manager's compensation may give rise to potential conflicts of interest. Each portfolio manager's base pay tends to increase with additional and more complex responsibilities that include increased assets under management, which indirectly links compensation to sales.

Schroders has adopted certain compliance procedures that are designed to address these, and other, types of conflicts. However, there is no guarantee that such procedures will detect each and every situation where a conflict arises.

3. Description of Compensation

The principle underlying Schroders' employee compensation arrangements is that Schroders should reward employees with a remuneration package which reflects their contribution to the success of their team and Schroder's overall business. Schroders pays investment professionals competitive salary packages and discretionary bonuses to reflect their performance. The bonus is dependent upon the profitability of Schroders, the individual's contribution to their team's performance, and their own individual results.

In the case of investment professionals, incentive compensation is closely tied to the pre-tax performance of their portfolios/funds against both competitors and benchmarks. Qualitative factors, such as an individual's contribution to their team and Schroders' business as a whole are also important factors. Research analysts, responsible for detailed security research, rating, and monitoring, are evaluated and their compensation is based on a mixture of quantitative and qualitative factors. Quantitative factors such as evaluation of the performance of their security grades and on the performance of portfolios managed by their team are considered. The qualitative factors include their effectiveness in communicating their ideas, their teamwork with colleagues, the impact of their recommendations on portfolios, and their performance against Schroders' core values. At the level of the investment desk, the discretionary pool available for distribution will depend in part on the revenues generated by their products.

Global and International Equity team bonuses are set according to transparent formulae that are applied to all team members. For Global Sector Specialists (GSS), 25% of their bonus is awarded based on qualitative factors and 75% on quantitative factors.

Schroders' quantitative assessment is based both on the efficacy of their recommendations versus the global sector and performance of the team's flagship funds over one and three years and, additionally the performance of any sector fund, where relevant to the particular GSS.

The qualitative factors include enthusiasm, effectiveness of communication, contribution to team discussion, and feedback from both team portfolio managers and local analysts. Schroders' methodology rewarding the contribution made by its portfolio managers combines quantitative measures focused on the performance of the assets managed by the team over one and three years relative to peer group and benchmark, and qualitative measures similar to those described above for GSS.

Schroders believes strongly that this compensation structure closely aligns the interests of the team and clients in terms of performance and time horizon and also encourages the full team approach to portfolio construction.

V. Small Company Growth Portfolio

The Portfolio pays Granahan a base fee plus or minus a performance adjustment. The base fee, which is paid quarterly, is a percentage of average daily net assets managed by the advisor during the most recent fiscal quarter. The performance adjustment, also paid quarterly, is based on the cumulative total return of the advisor's portion of the Portfolio relative to that of the Russell 2500 Growth Index through September 30, 2013, and the Russell 2000 Growth Index thereafter, over the preceding 36-month period. The Portfolio pays Vanguard on an at-cost basis with respect to its portion of the Small Company Growth Portfolio's assets.

During the fiscal years ended December 31, 2011, 2012, and 2013, the Small Company Growth Portfolio incurred aggregate investment advisory fees and expenses of approximately \$1,103,000 (before a performance-based increase of \$326,000), \$1,155,000 (before a performance-based increase of \$141,000), and \$1,593,000 (before a performance-based increase of \$65,000), respectively.

Of the aggregate fees and expenses previously described, the investment advisory expenses paid to Vanguard for the fiscal year ended December 31, 2013, were approximately \$275,000 (representing an effective annual rate of 0.02%). The investment advisory fees paid to Granahan for the fiscal year ended December 31, 2013, were \$1,383,000 (representing an effective annual rate of 0.11%).

A. Granahan Investment Management, Inc. (Granahan)

Granahan is a Massachusetts corporation.

1. Other Accounts Managed

Gary C. Hatton, Jane M. White, Jennifer M Pawloski, and John V. Schneider jointly manage a portion of the Small Company Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$1.4 billion. As of December 31, 2013, the Granahan Portfolio's managers also jointly managed two other registered investment companies with total assets of \$2.8 billion (advisory fee based on account performance for one of these accounts with total assets of \$2.5 billion). In addition, Mr. Hatton also managed two other pooled investment vehicles with total assets of \$167 million (neither of which had advisory fees based on account performance).

2. Material Conflicts of Interest

The portfolio management team responsible for managing the Granahan Portfolio has similar responsibilities to other clients of Granahan. The firm has established policies and procedures to address the potential conflicts of interest inherent in managing portfolios for multiple clients. These policies and procedures are designed to prevent and detect favorable treatment of one account over another, and include policies for allocating trades equitably across multiple accounts, monitoring the composition of client portfolios to ensure that each reflects the profile of that client, and reviewing the performance of accounts of similar styles. Additionally, each employee of Granahan is bound by its Code

of Ethics, which establishes policies and procedures designed to ensure that clients' interests are placed before those of an individual or the firm.

3. Description of Compensation

The Portfolio is managed by the portfolio management team of Gary C. Hatton, Jane M. White, Jennifer M. Pawloski, and John V. Schneider at Granahan Investment Management. The portfolio managers' compensation is made up of a base salary plus a performance bonus. Base salary for portfolio managers varies, depending on qualitative and quantitative factors such as salary levels in the industry, experience, length of employment, and the nature and number of other duties for which he or she has responsibility. The performance bonus is based on a number of factors including the one- and three- year returns, before management fees and taxes, of each account managed relative to its benchmark (the Russell 2500 Growth Index through September 30, 2013, and the Russell 2000 Growth Index thereafter, for the Granahan Portfolio); the one- and three-year returns, before management fees and taxes, of each account managed relative to the benchmark sector for which that manager has responsibility; and the value of the assets managed by that manager. Additionally, each individual shares in the overall profit of the firm either in the form of dividends, for shareholders, or via the company's profit-sharing plan for non-shareholders.

B. Vanguard

Vanguard, through its Equity Investment Group, provides investment advisory services on an at-cost basis with respect to a portion of the Small Company Growth Portfolio's assets. The compensation and other expenses of Vanguard's advisory staff are allocated among the funds utilizing Vanguard's advisory services.

1. Other Accounts Managed

James D. Troyer, James P. Stetler, and Michael R. Roach co-manage a portion of the Small Company Growth Portfolio; as of December 31, 2013, the Portfolio held assets of \$1.4 billion. As of December 31, 2013, Mr. Troyer, Mr. Stetler, and Mr. Roach also co-managed all or a portion of 13 other registered investment companies with total assets of \$113 billion and four other pooled investment vehicles with total assets of \$96.7 million (none of which had advisory fees based on account performance).

2. Material Conflicts of Interest

Please refer to Vanguard's discussion on page B-67.

3. Description of Compensation

Please refer to Vanguard's discussion on page B-68.

VI. Equity Income Portfolio

The Portfolio pays Wellington Management a base fee plus or minus a performance adjustment. The base fee, which is paid quarterly, is a percentage of average daily net assets managed by the advisor during the most recent fiscal quarter. The performance adjustment, also paid quarterly, is based on the cumulative total return of the advisor's portion of the Portfolio relative to that of the FTSE High Dividend Yield Index over the preceding 36-month period. The Portfolio pays Vanguard on an at-cost basis with respect to its portion of the Equity Income Portfolio's assets.

During the fiscal years ended December 31, 2011, 2012, and 2013, the Portfolio incurred aggregate investment advisory fees and expenses of approximately \$471,000 (before a performance-based increase of \$49,000), \$580,000 (before a performance-based increase of \$19,000), and \$742,000 (before a performance-based increase of \$3,000), respectively.

Of the aggregate fees and expenses previously described, the investment advisory expenses paid to Vanguard for the fiscal year ended December 31, 2013, were approximately \$233,000 (representing an effective annual rate of 0.03%). The investment advisory fees paid to Wellington Management for the fiscal year ended December 31, 2013, were \$512,000 (representing an effective annual rate of 0.06%).

A. Wellington Management

Wellington Management is a Massachusetts limited liability partnership with principal offices at 280 Congress Street, Boston, MA 02210. As of January 1, 2014, the firm is owned by 142 partners, all fully active in the firm. Wellington Management is a professional investment counseling firm that provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years.

1. Other Accounts Managed

W. Michael Reckmeyer, III, manages a portion of the Equity Income Portfolio; as of December 31, 2013, the Portfolio held assets of \$911 million. As of December 31, 2013, Mr. Reckmeyer also managed 13 other registered investment companies with total assets of \$32 billion (advisory fees based on account performance for two of these accounts with total assets of \$23.6 billion) and five other accounts with total assets of \$1.7 billion (advisory fees not based on account performance).

2. Material Conflicts of Interest

Please refer to Wellington Management's discussion on page B-65.

3. Description of Compensation

Wellington Management receives a fee based on the assets under management of the Wellington Management Portfolio as set forth in the Investment Advisory Agreement between Wellington Management and the Trust on behalf of the Portfolio. Wellington Management pays its investment professionals out of its total revenues, including the advisory fees earned with respect to the Wellington Management Portfolio.

Wellington Management's compensation structure is designed to attract and retain high-caliber investment professionals necessary to deliver high quality investment management services to its clients. Wellington Management's compensation of the portfolio manager listed in the prospectus, who is primarily responsible for the day-to-day management of the Wellington Management Portfolio (Portfolio Manager) includes a base salary and incentive components. The base salary for the Portfolio Manager, who is a partner of Wellington Management, is generally a fixed amount that is determined by the Managing Partners of the firm.

The Portfolio Manager is eligible to receive an incentive payment based on the revenues earned by Wellington Management from the Wellington Management Portfolio and generally each other account managed by the Portfolio Manager. The Portfolio Manager's incentive payment relating to the Wellington Management Portfolio is linked to the net pre-tax performance of the portion of the Wellington Management Portfolio managed by the Portfolio Manager compared to the FTSE High Dividend Yield Index over one- and three- year periods, with an emphasis on three-year results. In 2012, Wellington Management began placing increased emphasis on long-term performance and is phasing in a five-year performance comparison period, which will be fully implemented by December 31, 2016. Wellington Management applies similar incentive compensation structures (although the benchmarks or peer groups, time periods and rates may differ) to other accounts managed by the Portfolio Manager, including accounts with performance fees.

Portfolio-based incentives across all accounts managed by an investment professional can, and typically do, represent a significant portion of an investment professional's overall compensation; incentive compensation varies significantly by individual and can vary significantly from year to year. The Portfolio Manager may also be eligible for bonus payments based on his overall contribution to Wellington Management's business operations. Senior management at Wellington Management may reward individuals as it deems appropriate based on other factors. Each partner of Wellington Management is eligible to participate in a partner-funded tax-qualified retirement plan, the contributions to which are made pursuant to an actuarial formula. Mr. Reckmeyer is a partner of the firm.

B. Vanguard

Vanguard, through its Equity Investment Group, provides investment advisory services on an at-cost basis with respect to a portion of the Equity Income Portfolio's assets. The compensation and other expenses of Vanguard's advisory staff are allocated among the funds utilizing Vanguard's advisory services.

1. Other Accounts Managed

James D. Troyer, James P. Stetler, and Michael R. Roach co-manage a portion of the Equity Income Portfolio; as of December 31, 2013, the Portfolio held assets of \$911 million. As of December 31, 2013, Mr. Troyer, Mr. Stetler, and Mr. Roach also co-managed all or a portion of 13 other registered investment companies with total assets of \$114 billion and four other pooled investment vehicles with total assets of \$96.7 million (none of which had advisory fees based on account performance).

2. Material Conflicts of Interest

3. Description of Compensation

Please refer to Vanguard's discussion on page B-68.

VII. Balanced and High Yield Bond Portfolios

Wellington Management is a Massachusetts limited liability partnership with principal offices at 280 Congress Street, Boston, MA 02210. As of January 1, 2014, the firm is owned by 142 partners, all fully active in the firm. Wellington Management is a professional investment counseling firm that provides investment services to investment companies, employee benefit plans, endowments, foundations, and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years.

The Balanced Portfolio pays Wellington Management a base fee plus or minus a performance adjustment. The base fee, which is paid quarterly, is a percentage of average daily net assets under management during the most recent fiscal quarter. The base fee has breakpoints, which means that the percentage declines as assets go up. The performance adjustment, also paid quarterly, is based on the cumulative total return of the Portfolio relative to that of a Composite Stock/Bond Index over the preceding 36-month period. The Index is a composite benchmark, weighted 65% in the Standard & Poor's 500 Index and 35% in the Barclays U.S. Credit A or Better Bond Index.

During the fiscal years ended December 31, 2011, 2012, and 2013, the Balanced Portfolio incurred investment advisory fees of \$921,000 (before a performance-based increase of \$20,000), \$989,000 (before a performance-based increase of \$147,000), and \$1,113,000 (before a performance-based decrease of \$47,000), respectively.

The High Yield Bond Portfolio pays Wellington Management a base fee. The base fee, which is paid quarterly, is a percentage of average daily net assets under management during the most recent fiscal quarter.

During the fiscal years ended December 31, 2011, 2012, and 2013, the High Yield Bond Portfolio incurred investment advisory fees of approximately \$216,000, \$289,000, and \$316,000 respectively.

1. Other Accounts Managed

Edward P. Bousa manages the stock portion of the Balanced Portfolio; as of December 31, 2013, the Portfolio held assets of \$2.1 billion. As of December 31, 2013, Mr. Bousa also managed five other registered investment companies with total assets of \$69 billion (advisory fee based on account performance for one of these accounts with total assets of \$53 billion), 11 other pooled investment vehicles with total assets of \$4.4 billion (advisory fees not based on account performance), and 22 other accounts with total assets of \$6.7 billion (advisory fees based on account performance for two of these accounts with total assets of \$1.3 billion).

John C. Keogh manages the bond portion of the Balanced Portfolio; as of December 31, 2013, the Portfolio held assets of \$2.1 billion. As of December 31, 2013, Mr. Keogh also managed seven other registered investment companies with total assets of \$52 billion (advisory fees based on account performance for two of these accounts with total assets of \$48 billion) and one other account with total assets of \$2.1 million (advisory fees not based on account performance).

Michael L. Hong manages the High Yield Bond Portfolio; as of December 31, 2013, the Portfolio held assets of \$2.1 billion. As of December 31, 2013, Mr. Hong also managed 11 other registered investment company with total assets of \$16.7 billion, four other pooled investment vehicle with total assets of \$436 million, and ten other accounts with total assets of \$802 million (none of which had advisory fees based on account performance).

2. Material Conflicts of Interest

Individual investment professionals at Wellington Management manage multiple accounts for multiple clients. These accounts may include mutual funds, separate accounts (assets managed on behalf of institutions, such as pension funds, insurance companies, foundations, or separately managed account programs sponsored by financial intermediaries), bank common trust accounts, and hedge funds. The Portfolios' managers listed in the prospectus, who are primarily responsible for the day-to-day management of each Portfolio (Portfolio Managers), generally manage accounts in several different investment styles. These accounts may have investment objectives, strategies, time horizons, tax considerations, and risk profiles that differ from those of the relevant Portfolio. The Portfolio Managers make investment decisions for each account, including the relevant Portfolio, based on the investment objective, policies, practices, benchmarks, cash flows, tax, and other relevant investment considerations applicable to that account. Consequently, the Portfolio Managers may purchase or sell securities, including IPOs, for one account and not another account, and the performance of securities purchased for one account may vary from the performance of securities purchased for other accounts. Alternatively, these accounts may be managed in a similar fashion to the relevant Portfolio and thus the accounts may have similar, and in some cases nearly identical, objectives, strategies and/or holdings to that of the relevant Portfolio.

The Portfolio Managers or other investment professionals at Wellington Management may place transactions on behalf of other accounts that are directly or indirectly contrary to investment decisions made on behalf of the relevant Portfolio, or make investment decisions that are similar to those made for the relevant Portfolio, both of which have the potential to adversely impact the relevant Portfolio depending on market conditions. For example, an investment professional may purchase a security in one account while appropriately selling that same security in another account. Similarly, a Portfolio Manager may purchase the same security for the relevant Portfolio and one or more other accounts at or about the same time, and in those instances the other accounts will have access to their respective holdings prior to the public disclosure of the relevant Portfolio's holdings. In addition, some of these accounts have fee structures, including performance fees, which are or have the potential to be higher, in some cases significantly higher, than the fees Wellington Management receives for managing the Portfolios. Messrs. Bousa, Keogh, Reckmeyer, and Shilling also manage accounts which pay performance allocations to Wellington Management or its affiliates. Because incentive payments paid by Wellington Management to the Portfolio Managers are tied to revenues earned by Wellington Management and, where noted, to the performance achieved by the manager in each account, the incentives associated with any given account may be significantly higher or lower than those associated with other accounts managed by a given Portfolio Manager. Finally, the Portfolio Managers may hold shares or investments in other pooled investment vehicles and/or other previously identified.

Wellington Management's goal is to meet its fiduciary obligation to treat all clients fairly and provide high quality investment services to all of its clients. Wellington Management has adopted and implemented policies and procedures, including brokerage and trade allocation policies and procedures, that it believes address the conflicts associated with managing multiple accounts for multiple clients. In addition, Wellington Management monitors a variety of areas, including compliance with primary account guidelines, the allocation of IPOs, and compliance with the firm's Code of Ethics, and places additional investment restrictions on investment professionals who manage hedge funds and certain other accounts. Furthermore, senior investment and business personnel at Wellington Management periodically review the performance of Wellington Management's investment professionals. Although Wellington Management does not track the time an investment professional spends on a single account, Wellington Management does periodically assess whether an investment professional has adequate time and resources to effectively manage the investment professional's various client mandates.

3. Description of Compensation

Wellington Management receives a fee based on the assets under management of each Portfolio as set forth in the Investment Advisory Agreements between Wellington Management and the Trust on behalf of each Portfolio. Wellington Management pays its investment professionals out of its total revenues, including the advisory fees earned with respect to each Portfolio.

Wellington Management's compensation structure is designed to attract and retain high-caliber investment professionals necessary to deliver high quality investment management services to its clients. Wellington Management's compensation of the portfolio managers listed in the prospectus, who are primarily responsible for the day-to-day management of the Portfolios (Portfolio Managers) includes a base salary and incentive components. The base salary for each Portfolio Manager

who is a partner of Wellington Management is generally a fixed amount that is determined by the Managing Partners of the firm. The base salary for Mr. Hong is determined by his experience and performance in his role as a Portfolio Manager. Base salaries for Wellington Management's employees are reviewed annually and may be adjusted based on the recommendation of a Portfolio Manager's manager, using guidelines established by Wellington Management's Compensation Committee, which has final oversight responsibility for base salaries of employees of the firm.

Each Portfolio Manager is eligible to receive an incentive payment based on the revenues earned by Wellington Management from the Portfolio managed by the Portfolio Manager and generally each other account managed by such Portfolio Manager. Mr. Bousa's incentive payment relating to the Balanced Portfolio is linked to the net pre-tax performance of his portion of the Portfolio compared to the Standard & Poor's 500 Index over one- and three-year periods, with an emphasis on three-year results. In 2012, Wellington Management began placing increased emphasis on long-term performance and is phasing in a five-year performance comparison period, which will be fully implemented by December 31, 2016. Wellington Management applies similar incentive compensation structures (although the benchmarks or peer groups, time periods and rates may differ) to other accounts managed by Mr. Bousa, including accounts with performance fees. The incentive paid to the other Portfolio Managers is based on the revenues earned by Wellington Management.

Portfolio-based incentives across all accounts managed by an investment professional can, and typically do, represent a significant portion of an investment professional's overall compensation; incentive compensation varies significantly by individual and can vary significantly from year to year. The Portfolio Managers may also be eligible for bonus payments based on their overall contribution to Wellington Management's business operations. Senior management at Wellington Management may reward individuals as it deems appropriate based on other factors. Each partner of Wellington Management is eligible to participate in a partner-funded tax-qualified retirement plan, the contributions to which are made pursuant to an actuarial formula. Messrs. Bousa and Keogh are partners of the firm.

VIII. Conservative Allocation, Equity Index, Mid-Cap Index, Moderate Allocation, Money Market, REIT Index, Short-Term Investment-Grade, Total Bond Market Index, and Total Stock Market Index Portfolios

Vanguard provides investment advisory services on an at-cost basis to the Equity Index, Mid-Cap Index, Money Market, REIT Index, Short-Term Investment-Grade, and Total Bond Market Index Portfolios. Vanguard's Fixed Income Group provides advisory services to the Money Market, Short-Term Investment-Grade, and Total Bond Market Index Portfolios, and Vanguard's Equity Investment Group provides advisory services to the Equity Index, Mid-Cap Index, and REIT Index Portfolios. The compensation and other expenses of Vanguard's advisory staff are allocated among the funds utilizing Vanguard's advisory services.

During the fiscal years ended December 31, 2011, 2012, and 2013, the Portfolios paid the following approximate amounts of Vanguard's expenses relating to investment advisory services:

Vanguard Variable Insurance Fund Portfolio	2011	2012	2013
Equity Index Portfolio	\$265,000	\$242,000	\$263,000
Mid-Cap Index Portfolio	119,000	121,000	129,000
Money Market Portfolio	53,000	46,000	37,000
REIT Index Portfolio	73,000	86,000	106,000
Short-Term Investment-Grade Portfolio	115,000	92,000	104,000
Total Bond Market Index Portfolio	271,000	234,000	242,000

Vanguard also provides advisory services to the Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios, each a fund of funds, by (1) maintaining each Portfolio's allocation to its underlying investments, and (2) providing advisory services to those underlying funds. The Portfolios benefit from the investment advisory services provided to the underlying funds and, as shareholders of those funds, indirectly bear a proportionate share of those funds' at-cost advisory expenses. For more information about the investment advisory services provided to the underlying funds, please refer to each fund's Statement of Additional Information.

1. Other Accounts Managed

Ryan E. Ludt manages the Equity Index Portfolio; as of December 31, 2013, the Portfolio held assets of \$3.2 billion. As of December 31, 2013, Mr. Ludt also managed six other registered investment companies with total assets of \$60 billion (none of which had advisory fees based on account performance.)

Donald M. Butler manages the Mid-Cap Index Portfolio; as of December 31, 2013, the Portfolio held assets of \$1.2 billion. As of December 31, 2013, Mr. Butler also managed six other registered investment companies with total assets of \$272 billion and two other pooled investment vehicle with total assets of \$14.9 billion (none of which had advisory fees based on account performance).

John C. Lanius manages the Money Market Portfolio; as of December 31, 2013, the Portfolio held assets of \$1.3 billion. As of December 31, 2013, Mr. Lanius also managed two other registered investment companies with total assets of \$39 billion (neither of which had advisory fees based on account performance).

Gerard C. O'Reilly manages the REIT Index Portfolio; as of December 31, 2013, the Portfolio held assets of \$655 million. As of December 31, 2013, Mr. O'Reilly also managed six other registered investment companies with total assets of \$428 billion and one other pooled investment vehicles with total assets of \$506.7 million (none of which had advisory fees based on account performance).

Gregory S. Nassour manages the Short-Term Investment-Grade Portfolio; as of December 31, 2013, the Portfolio held assets of \$1.1 billion. As of December 31, 2013, Mr. Nassour also managed two other registered investment companies with total assets of \$64 billion, one other pooled investment vehicle with total assets of \$7.4 billion, and co-managed one other registered investment company with total assets of \$13.5 billion (none of which had advisory fees based on account performance).

Joshua C. Barrickman co-manages the Total Bond Market Index Portfolio; as of December 31, 2013, the Portfolio held assets of \$2.3 billion. As of December 31, 2013, Mr. Barrickman also managed five other registered investment companies with total assets of \$88 billion and co-managed all or a portion of 12 other registered investment companies with total assets of \$211 billion (none of which had advisory fees based on account performance).

William D. Baird co-manages the Total Bond Market Index Portfolio; as of December 31, 2013, the Portfolio held assets of \$2.3 billion. As of December 31, 2013, Mr. Baird also co-managed two other registered investment companies with total assets of \$1.5 billion and three other pooled investment vehicles with total assets of \$1.7 billion (none of which had advisory fees based on account performance).

Michael H. Buek, William Coleman, and Walter Nejman co-manage the Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios; as of December 31, 2013, the Conservative Allocation Portfolio held assets of \$102 million, the Moderate Allocation Portfolio held assets of \$133 million, and the Total Stock Market Index Portfolio held assets of \$1.2 billion. As of December 31, 2013, Mr. Buek, Mr. Coleman, and Mr. Nejman also co-managed 15 other registered companies with total assets of \$217 billion (none of which had advisory fees based on account performance).

As of December 31, 2013, Mr. Buek also managed seven other registered investment companies with total assets of \$214 billion, all or a portion of two other pooled investment vehicles with total assets of \$940.3 million, and one other account with total assets of \$1.2 billion (none of which had advisory fees based on account performance).

As of December 31, 2013, Mr. Coleman also managed three other registered companies with total assets of \$397.2 million, one other pooled investment vehicle with total assets of \$6 billion, and one other account with total assets of \$1.7 billion (none of which had advisory fees based on account performance).

2. Material Conflicts of Interest

At Vanguard, individual portfolio managers may manage multiple accounts for multiple clients. In addition to mutual funds, these accounts may include separate accounts, collective trusts, or offshore funds. Managing multiple funds or accounts may give rise to potential conflicts of interest including, for example, conflicts among investment strategies and conflicts in the allocation of investment opportunities. Vanguard manages potential conflicts between funds or accounts through allocation policies and procedures, internal review processes and oversight by trustees and independent third parties. Vanguard has developed trade allocation procedures and controls to ensure that no one client, regardless of type, is intentionally favored at the expense of another. Allocation policies are designed to address potential conflicts in situations where two or more funds or accounts participate in investment decisions involving the same securities.

3. Description of Compensation

All named Vanguard portfolio managers are Vanguard employees. This section describes the compensation of the Vanguard employees who manage Vanguard mutual funds. As of December 31, 2013, a Vanguard portfolio manager's compensation generally consists of base salary, bonus, and payments under Vanguard's long-term incentive compensation program. In addition, portfolio managers are eligible for the standard retirement benefits and health and welfare benefits available to all Vanguard employees. Also, certain portfolio managers may be eligible for additional retirement benefits under several supplemental retirement plans that Vanguard adopted in the 1980s to restore dollar-for-dollar the benefits of management employees that had been cut back solely as a result of tax law changes. These plans are structured to provide the same retirement benefits as the standard retirement plans.

In the case of portfolio managers responsible for managing multiple Vanguard funds or accounts, the method used to determine their compensation is the same for all funds and investment accounts. A portfolio manager's base salary is determined by the manager's experience and performance in the role, taking into account the ongoing compensation benchmark analyses performed by Vanguard's Human Resources Department. A portfolio manager's base salary is generally a fixed amount that may change as a result of an annual review, upon assumption of new duties, or when a market adjustment of the position occurs.

A portfolio manager's bonus is determined by a number of factors. One factor is gross, pre-tax performance of a fund relative to expectations for how the fund should have performed, given the fund's investment objective, policies, strategies, and limitations, and the market environment during the measurement period. This performance factor is not based on the amount of assets held in the fund's portfolio. For the Short-Term Investment-Grade Portfolio, the performance factor depends on how successfully the portfolio manager outperforms these expectations and maintains the risk parameters of the fund over a three-year period. For the Conservative Allocation and Moderate Allocation Portfolios, the performance factor depends on how successfully the portfolio manager outperforms each Portfolio's composite index and maintains the risk parameters of the Portfolio over a three-year period. For the Equity Index, Mid-Cap Index, REIT Index, Total Bond Market Index, and Total Stock Market Index Portfolios, the performance factor depends on how closely the portfolio manager tracks the Portfolio's benchmark index over a one-year period. For the Equity Income and Small Company Growth Portfolios, the performance factor depends on how successfully the portfolio manager maintains the risk parameters of the fund and outperforms the relevant peer group that invests in the market sectors in which the fund is permitted to invest over a three-year period. For the Money Market Portfolio, the performance factor depends on how successfully the portfolio manager maintains the credit quality of the fund and, consequently, how the fund performs relative to the expectations described above over a one-year period. Additional factors include the portfolio manager's contributions to the investment management functions within the sub-asset class, contributions to the development of other investment professionals and supporting staff, and overall contributions to strategic planning and decisions for the investment group. The target bonus is expressed as a percentage of base salary. The actual bonus paid may be more or less than the target bonus, based on how well the manager satisfies the objectives previously described. The bonus is paid on an annual basis.

Under the long-term incentive compensation program, all full-time employees receive a payment from Vanguard's long-term incentive compensation plan based on their years of service, job level, and, if applicable, management responsibilities. Each year, Vanguard's independent directors determine the amount of the long-term incentive compensation award for that year based on the investment performance of the Vanguard funds relative to competitors and Vanguard's operating efficiencies in providing services to the Vanguard funds.

Ownership of Securities in the Portfolios

The Portfolios are mutual funds used solely as investment options for annuity or life insurance contracts offered by insurance companies, which can only be purchased through a contract offered by an insurance company. Accordingly, the Portfolios that make up the Fund are suitable investments for only a limited subset of investors. As of December 31, 2013, Mr. Keogh, through investing in Vanguard Variable Annuity, indirectly had investments in the Balanced Portfolio within the \$100,001-\$500,000 range. No other named portfolio managers had indirect investments with any of the Portfolios.

Duration and Termination of Investment Advisory Agreements

The current investment advisory agreements with the unaffiliated advisors are renewable for successive one-year periods, only if (1) each renewal is specifically approved by a vote of the Fund's board of trustees, including the affirmative votes of a majority of the trustees who are not parties to the agreement or "interested persons" (as defined in the 1940 Act) of any such party, cast in person at a meeting called for the purpose of considering such approval, or (2) each renewal is specifically approved by a vote of a majority of the Portfolio's outstanding voting securities.

An agreement is automatically terminated if assigned, and may be terminated without penalty at any time either (1) by vote of the board of trustees of the Fund upon sixty (60) days' written notice to the advisor (thirty (30) days' written notice for Barrow, Hanley; Delaware Investments Fund Advisers; M&G; PRIMECAP; Wellington Management (for the Balanced, Equity Income, and Growth Portfolios); and William Blair & Company); (2) by a vote of a majority of the Portfolio's outstanding voting securities upon 60 days' written notice to the advisor (30 days' written notice for Barrow, Hanley; Delaware Investments Fund Advisers; M&G; PRIMECAP; Wellington Management (for the Balanced, Equity Income, and Growth Portfolios); and William Blair & Company), or (3) by the advisor upon ninety (90) days' written notice to the Portfolio.

Vanguard provides at-cost investment advisory services to the Conservative Allocation, Equity Index, Mid-Cap Index, Moderate Allocation, Money Market, REIT Index, Short-Term Investment-Grade, Total Bond Market Index, and Total Stock Market Index Portfolios, and for a portion of the assets in the Equity Income and Small Company Growth Portfolios, pursuant to the terms of the Fifth Amended and Restated Funds' Service Agreement. This agreement will continue in full force and effect until terminated or amended by mutual agreement of the Vanguard funds and Vanguard.

PORTFOLIO TRANSACTIONS

The advisors decide which securities to buy and sell on behalf of a Portfolio and then selects the brokers or dealers that will execute the trades on an agency basis or the dealers with whom the trades will be effected on a principal basis. For each trade, the advisor must select a broker-dealer that it believes will provide "best execution." Best execution does not necessarily mean paying the lowest spread or commission rate available. In seeking best execution, the SEC has said that an advisor should consider the full range of a broker-dealer's services. The factors considered by the advisor in seeking best execution include, but are not limited to, the broker-dealer's execution capability; clearance and settlement services; commission rate; trading expertise; willingness and ability to commit capital; ability to provide anonymity; financial responsibility; reputation and integrity; responsiveness; access to underwritten offerings and secondary markets; and access to company management, as well as the value of any research provided by the broker-dealer. In assessing which broker-dealer can provide best execution for a particular trade, the advisor also may consider the timing and size of the order and available liquidity and current market conditions. Subject to applicable legal requirements, the advisor may select a broker based partly on brokerage or research services provided to the advisor and its clients, including the Portfolio. The advisor may cause the Portfolio to pay a higher commission than other brokers would charge if the advisor determines in good faith that the amount of the commission is reasonable in relation to the value of services provided. An advisor also may receive brokerage or research services from broker-dealers that are provided at no charge in recognition of the volume of trades directed to the broker. To the extent research services or products may be a factor in selecting brokers, services and products may include written research reports analyzing performance or securities; discussions with research analysts; meetings with corporate executives to obtain oral reports on company performance; market data; and other products and services that will assist the advisor in its investment decision-making process. The research services provided by brokers through which a Portfolio effects securities transactions may be used by the advisor in servicing all of its accounts, and some of the services may not be used by the advisor in connection with the Portfolio.

The Conservative Allocation, Moderate Allocation, and Total Stock Market Index Portfolios, which employ a "fund of funds" investment strategy, will each purchase and sell the principal portion of its securities (i.e., shares of the underlying Vanguard funds) by dealing directly with the issuer—the underlying fund. As such, the Portfolios incur no brokerage commissions. To the extent these Portfolios purchase and sell ETF Shares of an underlying fund, a Portfolio will pay brokerage commissions.

Balanced (bond portion only), High Yield Bond, Money Market, Short-Term Investment-Grade,

and Total Bond Market Index Portfolios

The types of securities in which the money market and bond Portfolios invest are generally purchased and sold through principal transactions, meaning that the Portfolios normally purchase securities directly from the issuer or a primary market-maker acting as principal for the securities on a net basis. Explicit brokerage commissions are not paid on these transactions, although purchases of new issues from underwriters of bonds typically include a commission or concession paid by the issuer to the underwriter, and purchases from dealers serving as market-makers typically include a dealer's markup (i.e., a spread between the bid and the asked prices).

As previously explained, the types of securities that the Portfolios purchase do not normally involve the payment of explicit brokerage commissions. If any such brokerage commissions are paid, however, the advisor will evaluate their reasonableness by considering (1) historical commission rates; (2) rates which other institutional investors are paying, based upon publicly available information; (3) rates quoted by brokers and dealers; (4) the size of a particular transaction, in terms of the number of shares, dollar amount, and number of clients involved; (5) the complexity of a particular transaction in terms of both execution and settlement; (6) the level and type of business done with a particular firm over a period of time; and (7) the extent to which the broker or dealer has capital at risk in the transaction.

All Portfolios

During the fiscal years ended December 31, 2011, 2012, and 2013, the named Portfolios paid the following approximate amounts in brokerage commissions:

Portfolio	2011	2012	2013
Balanced Portfolio	\$286,000	\$332,000	\$344,000
Capital Growth Portfolio ¹	146,000	63,000	103,000
Diversified Value Portfolio ²	229,000	169,000	264,000
Equity Income Portfolio ¹	98,000	138,000	135,000
Equity Index Portfolio	40,000	21,000	21,000
Growth Portfolio	117,000	106,000	86,000
High Yield Bond Portfolio	—	—	—
International Portfolio	1,383,000	1,043,000	844,000
Mid-Cap Index Portfolio ³	38,000	23,000	64,000
Money Market Portfolio	—	—	—
REIT Index Portfolio ²	22,000	18,000	37,000
Short-Term Investment-Grade Portfolio	53,000	47,000	53,000
Small Company Growth Portfolio	1,248,000	1,196,000	2,774,000
Total Bond Market Index Portfolio	—	—	—

1 The fluctuations in brokerage commissions for the Portfolio for the years shown are a result of changing market conditions during those years, which impacted the frequency of portfolio transactions.

2 The increase in brokerage commissions for the Portfolio in 2013 was due to an increase in trading activity.

3 The increase in brokerage commissions in 2013 for the Portfolio was due to the Index transition from MSCI to CRSP.

Some securities that are considered for investment by a Portfolio may also be appropriate for other Vanguard funds or for other clients served by the advisors. If such securities are compatible with the investment policies of the Portfolio and one or more of an advisor's other clients, and are considered for purchase or sale at or about the same time, then transactions in such securities may be aggregated by that advisor and the purchased securities or sale proceeds may be allocated among the participating Vanguard funds and the other participating clients of the advisor in a manner deemed equitable by the advisor. Although there may be no specified formula for allocating such transactions, the allocation methods used, and the results of such allocations, will be subject to periodic review by the Fund's board of trustees.

The ability of Vanguard and external advisors to purchase or dispose of investments in regulated industries, the derivatives markets, and certain international markets, or to exercise rights or undertake business transactions on behalf of a Portfolio, may be restricted or impaired due to limitations on the aggregate level of investment unless regulatory or corporate consents are obtained. As a result, Vanguard and external advisors on behalf of a Portfolio may be required to

limit purchases, sell existing investments, or otherwise restrict or limit the exercise of shareholder rights by the Portfolio, including voting rights.

As of December 31, 2013, each Portfolio held securities of its "regular brokers or dealers," as that term is defined in Rule 10b-1 of the 1940 Act, as follows:

Vanguard Variable Insurance Fund Portfolio	Regular Broker or Dealer (or Parent)	Aggregate Holdings
Balanced Portfolio	Banc of America Securities LLC	\$18,357,000

PROXY VOTING GUIDELINES

The Board of Trustees (the Board) of each Vanguard fund that invests in stocks has adopted proxy voting procedures and guidelines to govern proxy voting by the fund. The Board has delegated oversight of proxy voting to the Proxy Oversight Committee (the Committee), made up of senior officers of Vanguard and subject to the operating procedures and guidelines described below. The Committee reports directly to the Board. Vanguard is subject to these procedures and guidelines to the extent that they call for Vanguard to administer the voting process and implement the resulting voting decisions, and for these purposes the guidelines have been approved by the Board of Directors of Vanguard.

The overarching objective in voting is simple: to support proposals and director nominees that maximize the value of a fund's investments—and those of fund shareholders—over the long term. Although the goal is simple, the proposals the funds receive are varied and frequently complex. As such, the guidelines adopted by the Board provide a rigorous framework for assessing each proposal. Under the guidelines, each proposal must be evaluated on its merits, based on the particular facts and circumstances as presented.

For ease of reference, the procedures and guidelines often refer to all funds. However, our processes and practices seek to ensure that proxy voting decisions are suitable for individual funds. For most proxy proposals, particularly those involving corporate governance, the evaluation will result in the same position being taken across all of the funds and the funds voting as a block. In some cases, however, a fund may vote differently, depending upon the nature and objective of the fund, the composition of its portfolio, and other factors.

The guidelines do not permit the Board to delegate voting responsibility to a third party that does not serve as a fiduciary for the funds. Because many factors bear on each decision, the guidelines incorporate factors the Committee should consider in each voting decision. A fund may refrain from voting some or all of its shares or vote in a particular way if doing so would be in the fund’s and its shareholders’ best interests. These circumstances may arise, for example, if the expected cost of voting exceeds the expected benefits of voting, if exercising the vote would result in the imposition of trading or other restrictions, or if a fund (or all Vanguard funds in the aggregate) were to own more than the permissible maximum percentage of a company’s stock (as determined by the company’s governing documents or by applicable law, regulation, or regulatory agreement).

In evaluating proxy proposals, we consider information from many sources, including, but not limited to, the investment advisor for the fund, the management or shareholders of a company presenting a proposal, and independent proxy research services. We will give substantial weight to the recommendations of the company’s board, absent guidelines or other specific facts that would support a vote against management. In all cases, however, the ultimate decision rests with the members of the Committee, who are accountable to the fund’s Board.

While serving as a framework, the following guidelines cannot contemplate all possible proposals with which a fund may be presented. In the absence of a specific guideline for a particular proposal (e.g., in the case of a transactional issue or contested proxy), the Committee will evaluate the issue and cast the fund’s vote in a manner that, in the Committee’s view, will maximize the value of the fund’s investment, subject to the individual circumstances of the fund.

I. The Board of Directors

A. Election of directors

Good governance starts with a majority-independent board, whose key committees are made up entirely of independent directors. As such, companies should attest to the independence of directors who serve on the Compensation, Nominating, and Audit committees. In any instance in which a director is not categorically independent, the basis for the independence determination should be clearly explained in the proxy statement.

Although the funds will generally support the board’s nominees, the following factors will be taken into account in determining each fund’s vote:

Factors For Approval	Factors Against Approval
Nominated slate results in board made up of a majority of independent directors.	Nominated slate results in board made up of a majority of non-independent directors.
All members of Audit, Nominating, and Compensation committees are independent of management.	Audit, Nominating, and/or Compensation committees include non-independent members.
	Incumbent board member failed to attend at least 75% of meetings in the previous year.
	Actions of committee(s) on which nominee serves are inconsistent with other guidelines (e.g., excessive equity grants, substantial non-audit fees, lack of board independence).

B. Contested director elections

In the case of contested board elections, we will evaluate the nominees’ qualifications, the performance of the incumbent board, and the rationale behind the dissidents’ campaign, to determine the outcome that we believe will maximize shareholder value.

C. Classified boards

The funds will generally support proposals to declassify existing boards (whether proposed by management or shareholders), and will block efforts by companies to adopt classified board structures in which only part of the board is elected each year.

II. Approval of Independent Auditors

The relationship between the company and its auditors should be limited primarily to the audit, although it may include certain closely related activities that do not, in the aggregate, raise any appearance of impaired independence. The funds will generally support management's recommendation for the ratification of the auditor, except in instances in which audit and audit-related fees make up less than 50% of the total fees paid by the company to the audit firm. We will evaluate on a case-by-case basis instances in which the audit firm has a substantial non-audit relationship with the company (regardless of its size relative to the audit fee) to determine whether independence has been compromised.

III. Compensation Issues

A. Stock-based compensation plans

Appropriately designed stock-based compensation plans, administered by an independent committee of the board and approved by shareholders, can be an effective way to align the interests of long-term shareholders with the interests of management, employees, and directors. The funds oppose plans that substantially dilute their ownership interest in the company, provide participants with excessive awards, or have inherently objectionable structural features.

An independent compensation committee should have significant latitude to deliver varied compensation to motivate the company's employees. However, we will evaluate compensation proposals in the context of several factors (a company's industry, market capitalization, competitors for talent, etc.) to determine whether a particular plan or proposal balances the perspectives of employees and the company's other shareholders. We will evaluate each proposal on a case-by-case basis, taking all material facts and circumstances into account.

The following factors will be among those considered in evaluating these proposals:

Factors For Approval	Factors Against Approval
Company requires senior executives to hold a minimum amount of company stock (frequently expressed as a multiple of salary).	Total potential dilution (including all stock-based plans) exceeds 15% of shares outstanding.
Company requires stock acquired through equity awards to be held for a certain period of time.	Annual equity grants have exceeded 2% of shares outstanding.
Compensation program includes performance-vesting awards, indexed options, or other performance-linked grants.	Plan permits repricing or replacement of options without shareholder approval.
Concentration of equity grants to senior executives is limited (indicating that the plan is very broad-based).	Plan provides for the issuance of reload options.
Stock-based compensation is clearly used as a substitute for cash in delivering market-competitive total pay.	Plan contains automatic share replenishment (evergreen) feature.

B. Bonus plans

Bonus plans, which must be periodically submitted for shareholder approval to qualify for deductibility under Section 162(m) of the IRC, should have clearly defined performance criteria and maximum awards expressed in dollars. Bonus plans with awards that are excessive, in both absolute terms and relative to a comparative group, generally will not be supported.

C. Employee stock purchase plans

The funds will generally support the use of employee stock purchase plans to increase company stock ownership by employees, provided that shares purchased under the plan are acquired for no less than 85% of their market value and that shares reserved under the plan amount to less than 5% of the outstanding shares.

D. Advisory votes on executive compensation (Say on Pay)

In addition to proposals on specific equity or bonus plans, the funds are required to cast advisory votes approving many companies' overall executive compensation plans (so-called Say on Pay votes). In evaluating these proposals, we consider a number of factors, including the amount of compensation that is at risk, the amount of equity-based compensation that is linked to the company's performance, and the level of compensation as compared to industry peers. The funds will generally support pay programs that demonstrate effective linkage between pay and performance over time and that provide compensation opportunities that are competitive relative to industry peers. On the other hand, pay programs in which significant compensation is guaranteed or insufficiently linked to performance will be less likely to earn our support.

E. Executive severance agreements (golden parachutes)

Although executives' incentives for continued employment should be more significant than severance benefits, there are instances—particularly in the event of a change in control—in which severance arrangements may be appropriate. Severance benefits payable upon a change of control AND an executive's termination (so-called "double trigger" plans) are generally acceptable to the extent that benefits paid do not exceed three times salary and bonus. Arrangements in which the benefits exceed three times salary and bonus should be justified and submitted for shareholder approval. We do not generally support guaranteed severance absent a change in control or arrangements that do not require the termination of the executive (so-called "single trigger" plans).

IV. Corporate Structure and Shareholder Rights

The exercise of shareholder rights, in proportion to economic ownership, is a fundamental privilege of stock ownership that should not be unnecessarily limited. Such limits may be placed on shareholders' ability to act by corporate charter or by-law provisions, or by the adoption of certain takeover provisions. In general, the market for corporate control should be allowed to function without undue interference from these artificial barriers.

The funds' positions on a number of the most commonly presented issues in this area are as follows:

A. Shareholder rights plans (poison pills)

A company's adoption of a so-called poison pill effectively limits a potential acquirer's ability to buy a controlling interest without the approval of the target's board of directors. Such a plan, in conjunction with other takeover defenses, may serve to entrench incumbent management and directors. However, in other cases, a poison pill may force a suitor to negotiate with the board and result in the payment of a higher acquisition premium.

In general, shareholders should be afforded the opportunity to approve shareholder rights plans within a year of their adoption. This provides the board with the ability to put a poison pill in place for legitimate defensive purposes, subject to subsequent approval by shareholders. In evaluating the approval of proposed shareholder rights plans, we will consider the following factors:

Factors For Approval	Factors Against Approval
Plan is relatively short-term (3-5 years).	Plan is long term (>5 years).
Plan requires shareholder approval for renewal.	Renewal of plan is automatic or does not require shareholder approval.
Plan incorporates review by a committee of independent directors at least every three years (so-called TIDE provisions).	Board with limited independence.
Ownership trigger is reasonable (15-20%).	Ownership trigger is less than 15%.
Highly independent, non-classified board.	Classified board.
Plan includes permitted-bid/qualified-offer feature (chewable pill) that mandates a shareholder vote in certain situations.	

B. Cumulative voting

The funds are generally opposed to cumulative voting under the premise that it allows shareholders a voice in director elections that is disproportionate to their economic investment in the corporation.

C. Supermajority vote requirements

The funds support shareholders' ability to approve or reject matters presented for a vote based on a simple majority. Accordingly, the funds will support proposals to remove supermajority requirements and oppose proposals to impose them.

D. Right to call meetings and act by written consent

The funds support shareholders' right to call special meetings of the board (for good cause and with ample representation) and to act by written consent. The funds will generally vote for proposals to grant these rights to shareholders and against proposals to abridge them.

E. Confidential voting

The integrity of the voting process is enhanced substantially when shareholders (both institutions and individuals) can vote without fear of coercion or retribution based on their votes. As such, the funds support proposals to provide confidential voting.

F. Dual classes of stock

We are opposed to dual class capitalization structures that provide disparate voting rights to different groups of shareholders with similar economic investments. We will oppose the creation of separate classes with different voting rights and will support the dissolution of such classes.

V. Corporate and Social Policy Issues

Proposals in this category, initiated primarily by shareholders, typically request that the company disclose or amend certain business practices. The Board generally believes that these are "ordinary business matters" that are primarily the responsibility of management and should be evaluated and approved solely by the corporation's board of directors. Often, proposals may address concerns with which the Board philosophically agrees, but absent a compelling economic impact on shareholder value (e.g., proposals to require expensing of stock options), the funds will typically abstain from voting on these proposals. This reflects the belief that regardless of our philosophical perspective on the issue, these decisions should be the province of company management unless they have a significant, tangible impact on the value of a fund's investment and management is not responsive to the matter.

VI. Voting in Foreign Markets

Corporate governance standards, disclosure requirements, and voting mechanics vary greatly among the markets outside the United States in which the funds may invest. Each fund's votes will be used, where applicable, to advocate for improvements in governance and disclosure by each fund's portfolio companies. We will evaluate issues presented to shareholders for each fund's foreign holdings in the context with the guidelines described above, as well as local market standards and best practices. The funds will cast their votes in a manner believed to be philosophically consistent with these guidelines, while taking into account differing practices by market. In addition, there may be instances in which the funds elect not to vote, as described below.

Many foreign markets require that securities be "blocked" or reregistered to vote at a company's meeting. Absent an issue of compelling economic importance, we will generally not subject the fund to the loss of liquidity imposed by these requirements.

The costs of voting (e.g., custodian fees, vote agency fees) in foreign markets may be substantially higher than for U.S. holdings. As such, the fund may limit its voting on foreign holdings in instances in which the issues presented are unlikely to have a material impact on shareholder value.

VII. Voting Shares of a Company that has an Ownership Limitation

Certain companies have provisions in their governing documents that restrict stock ownership in excess of a specified limit. Typically, these ownership restrictions are included in the governing documents of real estate investment trusts, but may be included in other companies' governing documents.

A company's governing documents normally allow the company to grant a waiver of these ownership limits, which would allow a fund (or all Vanguard-advised funds) to exceed the stated ownership limit. Sometimes a company will grant a waiver without restriction. From time to time, a company may grant a waiver only if a fund (or funds) agrees to not vote the company's shares in excess of the normal specified limit. In such a circumstance, a fund may refrain from voting shares if owning the shares beyond the company's specified limit is in the best interests of the fund and its shareholders.

In addition, applicable law may require prior regulatory approval to permit ownership of certain regulated issuer's voting securities above certain limits or may impose other restrictions on owners of more than a certain percentage of a regulated issuer's voting shares. The Board has authorized the funds to vote shares above these limits in the same proportion as votes cast by the issuer's entire shareholder base (i.e., mirror vote) or to refrain from voting excess shares if mirror voting is not practicable. For example, rules administered by the Board of Governors of the Federal Reserve System (the "FRB") generally require that a person seeking to own more than 10% of a bank regulated by the FRB seek prior approval. Vanguard has obtained regulatory approval that allows Vanguard funds to own up to 15% of a class of a bank's outstanding voting shares without seeking prior regulatory approval, provided the funds' shares in excess of 10% are mirror voted or not voted at all.

These ownership limits may be applied at the individual fund level, across all Vanguard-advised funds, or across all Vanguard funds, regardless of whether they are advised by Vanguard.

VIII. Voting on a Fund's Holdings of Other Vanguard Funds

Certain Vanguard funds (owner funds) may, from time to time, own shares of other Vanguard funds (underlying funds). If an underlying fund submits a matter to a vote of its shareholders, votes for and against such matters on behalf of the owner funds will be cast in the same proportion as the votes of the other shareholders in the underlying fund.

IX. The Proxy Voting Group

The Board has delegated the day-to-day operations of the funds' proxy voting process to the Proxy Voting Group, which the Committee oversees. Although most votes will be determined, subject to the individual circumstances of each fund, by reference to the guidelines as separately adopted by each of the funds, there may be circumstances when the Proxy Voting Group will refer proxy issues to the Committee for consideration. In addition, at any time, the Board has the authority to vote proxies, when, at the Board's or the Committee's discretion, such action is warranted.

The Proxy Voting Group performs the following functions: (1) managing proxy voting vendors; (2) reconciling share positions; (3) analyzing proxy proposals using factors described in the guidelines; (4) determining and addressing potential or actual conflicts of interest that may be presented by a particular proxy; and (5) voting proxies. The Proxy Voting Group also prepares periodic and special reports to the Board, and any proposed amendments to the procedures and guidelines.

X. The Proxy Oversight Committee

The Board, including a majority of the independent trustees, appoints the members of the Committee who are senior officers of Vanguard.

The Committee does not include anyone whose primary duties include external client relationship management or sales. This clear separation between the proxy voting and client relationship functions is intended to eliminate any potential conflict of interest in the proxy voting process. In the unlikely event that a member of the Committee believes he or she might have a conflict of interest regarding a proxy vote, that member must recuse himself or herself from the committee meeting at which the matter is addressed, and not participate in the voting decision.

The Committee works with the Proxy Voting Group to provide reports and other guidance to the Board regarding proxy voting by the funds. The Committee has an obligation to conduct its meetings and exercise its decision-making authority

subject to the fiduciary standards of good faith, fairness, and Vanguard's Code of Ethics. The Committee shall authorize proxy votes that the Committee determines, at its sole discretion, to be in the best interests of each fund's shareholders. In determining how to apply the guidelines to a particular factual situation, the Committee may not take into account any interest that would conflict with the interest of fund shareholders in maximizing the value of their investments.

The Board may review these procedures and guidelines and modify them from time to time. The procedures and guidelines are available on Vanguard's website at *vanguard.com*.

You may obtain a free copy of a report that details how the funds voted the proxies relating to the portfolio securities held by the funds for the prior 12-month period ended June 30 by logging on to Vanguard's website at *vanguard.com* or the SEC's website at *www.sec.gov*.

FINANCIAL STATEMENTS

The Fund's Financial Statements for the fiscal year ended December 31, 2013, appearing in the Portfolios' 2013 Annual Report to Shareholders, and the reports thereon of PricewaterhouseCoopers LLP, an independent registered public accounting firm, also appearing therein, are incorporated by reference into this Statement of Additional Information. For a more complete discussion of the Fund's performance, please see the Portfolios' Annual and Semiannual Reports to Shareholders, which may be obtained without charge.

DESCRIPTION OF BOND RATINGS

Moody's Rating Symbols

The following describe characteristics of the global long-term (original maturity of 1 year or more) bond ratings provided by Moody's Investors Service, Inc. (Moody's):

Aaa—Judged to be obligations of the highest quality, they are subject to the lowest level of credit risk.

Aa—Judged to be obligations of high quality, they are subject to very low credit risk. Together with the Aaa group they make up what are generally known as high-grade bonds.

A—Judged to be upper-medium-grade obligations, they are subject to low credit risk.

Baa—Judged to be medium-grade obligations, subject to moderate credit risk, they may possess certain speculative characteristics.

Ba—Judged to be speculative obligations, they are subject to substantial credit risk.

B—Considered to be speculative obligations, they are subject to high credit risk.

Caa—Judged to be speculative obligations of poor standing, they are subject to very high credit risk.

Ca—Viewed as highly speculative obligations, they are likely in, or very near, default, with some prospect of recovery of principal and interest.

C—Viewed as the lowest rated obligations, they are typically in default, with little prospect for recovery of principal and interest.

Moody's also supplies numerical indicators (1, 2, and 3) to rating categories. The modifier 1 indicates that the security is in the higher end of its rating category, the modifier 2 indicates a mid-range ranking, and the modifier 3 indicates a ranking toward the lower end of the category.

The following describe characteristics of the global short-term (original maturity of 13 months or less) bond ratings provided by Moody's. This ratings scale also applies to U.S. municipal tax-exempt commercial paper.

Prime-1 (P-1)—Judged to have a superior ability to repay short-term debt obligations.

Prime-2 (P-2)—Judged to have a strong ability to repay short-term debt obligations.

Prime-3 (P-3)—Judged to have an acceptable ability to repay short-term debt obligations.

Not Prime (NP)—Cannot be judged to be in any of the prime rating categories.

The following describe characteristics of the U.S. municipal short-term bond ratings provided by Moody's:

Moody's ratings for state and municipal notes and other short-term (up to 3 years) obligations are designated Municipal Investment Grade (MIG).

MIG-1—Indicates superior quality, enjoying the excellent protection of established cash flows, liquidity support, and broad-based access to the market for refinancing.

MIG-2—Indicates strong credit quality with ample margins of protection, although not as large as in the preceding group.

MIG-3—Indicates acceptable credit quality, with narrow liquidity and cash-flow protection and less well-established market access for refinancing.

SG—Indicates speculative credit quality with questionable margins of protection.

Standard and Poor's Rating Symbols

The following describe characteristics of the long-term (original maturity of 1 year or more) bond ratings provided by Standard and Poor's:

AAA—These are the highest rated obligations. The capacity to pay interest and repay principal is extremely strong.

AA—These also qualify as high-grade obligations. They have a very strong capacity to pay interest and repay principal, and they differ from AAA issues only in small degree.

A—These are regarded as upper-medium-grade obligations. They have a strong capacity to pay interest and repay principal although they are somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than debt in higher rated categories.

BBB—These are regarded as having an adequate capacity to pay interest and repay principal. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity in this regard. This group is the lowest that qualifies for commercial bank investment.

BB, B, CCC, CC, and C—These obligations range from speculative to significantly speculative with respect to the capacity to pay interest and repay principal. BB indicates the lowest degree of speculation and C the highest.

D—These obligations are in default, and payment of principal and/or interest is likely in arrears.

The ratings from AA to CCC may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

The following describe characteristics of short-term (original maturity of 365 days or less) bond and commercial paper ratings designations provided by Standard and Poor's:

A-1—These are the highest rated obligations. The capacity of the obligor to pay interest and repay principal is strong. The addition of a plus sign (+) would indicate a very strong capacity.

A-2—These obligations are somewhat susceptible to changing economic conditions. The obligor has a satisfactory capacity to pay interest and repay principal.

A-3—These obligations are more susceptible to the adverse effects of changing economic conditions, which could lead to a weakened capacity to pay interest and repay principal.

B—These obligations are vulnerable to nonpayment and are significantly speculative, but the obligor currently has the capacity to meet its financial commitments.

C—These obligations are vulnerable to nonpayment, but the obligor must rely on favorable economic conditions to meet its financial commitment.

D—These obligations are in default, and payment of principal and/or interest is likely in arrears.

The following describe characteristics of U.S. municipal short-term (original maturity of 3 years or less) note ratings provided by Standard and Poor's:

SP-1—This designation indicates a strong capacity to pay principal and interest.

SP-2—This designation indicates a satisfactory capacity to pay principal and interest.

SP-3—This designation indicates a speculative capacity to pay principal and interest.

SAI PRIMER

The SAI is a part of the Funds' registration statement that is filed with the SEC. The registration statement includes the Funds' prospectuses, the SAI and certain exhibits. The SAI, and any supplements to it, can be found online by accessing the SEC's website at www.sec.gov.

For purposes of any electronic version of this SAI, all references to websites, or universal resource locators (URLs), are intended to be inactive and are not meant to incorporate the contents of any website into this SAI.

The SAI generally provides additional information about the Funds that is not required to be in the Funds' prospectuses. The SAI expands discussions of certain matters described in the Funds' prospectuses and provides certain additional information about the Funds that may be of interest to some investors. Among other things, the SAI provides information about:

- the organization of the Trust;
- the Funds' investments;
- the Funds' investment adviser and other service providers, including roles and relationships of Ameriprise Financial and its affiliates, and conflicts of interest;
- the governance of the Funds;
- the Funds' brokerage practices;
- the share class offered by the Funds;
- the purchase, redemption and pricing of Fund shares; and
- the application of U.S. federal income tax laws.

Investors may find this information important and helpful. If you have any questions about the Funds, please call Columbia Wanger Funds at 888.4.WANGER (888.492.6457) or contact your financial advisor.

Before reading the SAI, you should consult the Glossary below, which defines certain of the terms used in the SAI.

Glossary

1933 Act	Securities Act of 1933, as amended
1934 Act	Securities Exchange Act of 1934, as amended
1940 Act	Investment Company Act of 1940, as amended
Administration Agreement	The administration agreement between the Trust, on behalf of the Funds, and the Administrator
Administrator	Columbia Wanger Asset Management, LLC
Advisory Agreement	The investment advisory agreement between the Trust, on behalf of the Funds, and the Investment Manager
Ameriprise Financial	Ameriprise Financial, Inc.

SAI	This Statement of Additional Information
SEC	United States Securities and Exchange Commission
Selling Agent(s)	Participating Insurance Companies, Qualified Plan sponsors, broker-dealers and financial advisors, as well as firms that employ such broker-dealers and financial advisors, including, for example, brokerage firms, banks, investment advisers, third party administrators and other financial intermediaries, including Ameriprise Financial and its affiliates.
Sub-Administrator	Columbia Management
Transfer Agency Agreement	The transfer agency and shareholder services agreement between the Trust, on behalf of the Funds, and Columbia Management Investment Services Corp.
Transfer Agent	Columbia Management Investment Services Corp.
The Trust	Wanger Advisors Trust, the open-end registered investment company to which this SAI relates
Trustee(s)	One or more of the Board's Trustees
Underwriting Agreement	The distribution agreement between the Trust, on behalf of the Funds, and the Distributor

ABOUT THE TRUST

The Trust is an open-end investment company registered under the 1940 Act within the Columbia Funds Family.

The Trust was organized as a Massachusetts business trust on August 30, 1994. It currently consists of four Funds with differing investment objectives, policies and restrictions: Wanger USA, formerly named Wanger U.S. Smaller Companies through June 1, 2008 and formerly named Wanger U.S. Small Cap Advisor through April 30, 2002; Wanger International, formerly named Wanger International Small Cap through June 1, 2008; Wanger Select, formerly named Wanger Twenty through April 30, 2004; and Wanger International Select, formerly named Wanger Foreign Forty through April 30, 2004.

Each of the Funds is a series of the Trust. Each Fund operates as an open-end diversified investment company and has a fiscal year end of December 31st. Prior to January 31, 2012, Wanger Select operated as a non-diversified investment company; it may not do so again without first obtaining shareholder approval.

The Funds are underlying investment vehicles for Contracts and Qualified Plans.

The Board monitors events to identify any material conflicts that may arise between the interests of Contract owners and Qualified Plan participants. The interests of Contract owners and Qualified Plan participants could diverge for a variety of reasons, including: (a) an action by a state insurance regulatory authority; (b) a change in applicable federal or state insurance, tax, or securities laws or regulations, or a public ruling, private letter ruling, no-action or interpretative letter, or similar action by an insurance, tax, or securities regulatory authority; (c) an administrative or judicial decision in a relevant proceeding; (d) the manner in which the investments of a Fund are being managed; (e) a difference in voting instructions given by Contract owners; (f) a decision by a Participating Insurance Company to disregard the voting instructions of Contract owners; or (g) as applicable, a decision by a Qualified Plan to disregard the voting instructions of Qualified Plan participants. The Trust currently does not foresee any disadvantages to Contract owners or Qualified Plan participants arising from the fact that certain interests of owners/participants may differ. However, the Board will monitor for any such developments to identify any material irreconcilable conflicts and to determine what action, if any, should be taken in response to such conflicts. If such a conflict were to arise, the Trust might require one or more separate accounts to withdraw their investments in a Fund or substitute shares of another mutual fund. This might force the Funds to sell securities at disadvantageous prices.

The Trust is not required to hold annual meetings of shareholders, but special meetings may be called for certain purposes. The last meeting to elect Trustees was held on May 27, 2010. Additional meetings may be called for purposes of electing or removing Trustees or changing a Fund's fundamental policies, or for other reasons. Shareholders of a Fund are entitled to one vote for each share that Fund held on any matter presented to shareholders. Shares of the Funds will vote separately as individual series when required by the 1940 Act, or other applicable law or when the Board determines that the matter affects only the interests of one or more Funds, but shares of all the Funds vote together, to the extent required by the 1940 Act, in the election or selection of Trustees.

ABOUT THE FUNDS' INVESTMENTS

The investment objective, principal investment strategies (*i.e.*, as used in this SAI and the corresponding prospectuses, a strategy which generally involves the ability to invest 10% or more of a Fund's total assets) and related principal investment risks for each Fund are discussed in each Fund's prospectus.

Certain Investment Activity Limits

The overall investment and other activities of the Investment Manager and its affiliates may limit the investment opportunities for each Fund in certain markets, industries or transactions or in individual issuers where limitations are imposed by regulators upon the aggregate amount of investment by the Funds and other accounts managed by the Investment Manager and accounts of its affiliates. From time to time, each Fund's activities also may be restricted because of regulatory restrictions applicable to the Investment Manager and its affiliates and/or because of their internal policies. See *Investment Advisory and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest*.

Fundamental and Non-Fundamental Investment Policies

The following discussion of "fundamental" and "non-fundamental" investment policies and limitations for each Fund supplements the discussion of investment policies in the Fund's prospectuses. A fundamental policy may be changed only with Board and shareholder approval. A non-fundamental policy may be changed by the Board and does not require shareholder approval, but may require notice to shareholders in certain instances.

Unless otherwise noted, whenever an investment policy or limitation states a maximum percentage of a Fund's assets that may be invested in any security or other asset, or sets forth a policy regarding an investment standard, compliance with such percentage limitation or standard will be determined solely at the time of the Fund's acquisition of such security or asset. Borrowings and other instruments that may give rise to leverage and the restriction on investing in illiquid securities are monitored on an ongoing basis.

Fundamental Investment Policies

The 1940 Act provides that a "vote of a majority of the outstanding voting securities" means the affirmative vote of the lesser of (1) more than 50% of the outstanding shares of a Fund, or (2) 67% or more of the shares present at a meeting if more than 50% of the outstanding shares are represented at the meeting in person or by proxy. The following fundamental investment policies cannot be changed without such a vote.

Wanger USA and Wanger International may not, as a matter of fundamental policy:

1. With respect to 75% of the value of the Fund's total assets, invest more than 5% of its total assets (valued at the time of investment) in securities of a single issuer, except securities issued or guaranteed by the government of the U.S., or any of its agencies or instrumentalities;
2. Acquire securities of any one issuer that at the time of investment (a) represent more than 10% of the voting securities of the issuer or (b) have a value greater than 10% of the value of the outstanding securities of the issuer;
3. Invest more than 25% of its assets (valued at the time of investment) in securities of companies in any one industry;
4. Make loans, but this restriction shall not prevent the Fund from (a) buying a part of an issue of bonds, debentures, or other obligations that are publicly distributed, or from investing up to an aggregate of 15% of its total assets (taken at market value at the time of each purchase) in parts of issues of bonds, debentures or other obligations of a type privately placed with financial institutions, (b) investing in repurchase agreements, or (c) lending portfolio securities, provided that it may not lend securities if, as a result, the aggregate value of all securities loaned would exceed 33% of its total assets (taken at market value at the time of such loan);

5. Borrow money except (a) from banks for temporary or emergency purposes in amounts not exceeding 33% of the value of the Fund's total assets at the time of borrowing, and (b) in connection with transactions in options, futures and options on futures;*

6. Underwrite the distribution of securities of other issuers; however, the Fund may acquire "restricted" securities which, in the event of a resale, might be required to be registered under the 1933 Act on the ground that the Fund could be regarded as an underwriter as defined by that act with respect to such resale; but the Fund will limit its total investment in restricted securities and in other securities for which there is no ready market, including repurchase agreements maturing in more than seven days, to not more than 15% of its net assets at the time of acquisition;

7. Purchase and sell real estate or interests in real estate, although it may invest in marketable securities of enterprises which invest in real estate or interests in real estate;

8. Purchase and sell commodities or commodity contracts, except that it may enter into (a) futures and options on futures and (b) forward contracts;

9. Make margin purchases of securities, except for use of such short-term credits as are needed for clearance of transactions and except in connection with transactions in options, futures and options on futures;

10. Issue any senior security except to the extent permitted under the 1940 Act.

Wanger Select and Wanger International Select may not, as a matter of fundamental policy:

1. **[Wanger International Select only]** With respect to 75% of the value of the Fund's total assets, invest more than 5% of its total assets (valued at the time of investment) in securities of a single issuer, except securities issued or guaranteed by the government of the U.S., or any of its agencies or instrumentalities;

2. Acquire securities of any one issuer, which at the time of investment (a) represent more than 10% of the voting securities of the issuer or (b) have a value greater than 10% of the value of the outstanding securities of the issuer;

3. **[Wanger Select only]** With respect to 50% of its total assets, purchase the securities of any issuer (other than cash items and U.S. Government securities and securities of other investment companies) if such purchase would cause the Fund's holdings of that issuer to exceed more than 5% of the Fund's total assets;**

4. Invest more than 25% of its total assets in a single issuer (other than U.S. Government securities);

5. Invest more than 25% of its total assets in the securities of companies in a single industry (excluding U.S. Government securities);

6. Make loans, but this restriction shall not prevent the Fund from (a) investing in debt securities, (b) investing in repurchase agreements, or (c) lending its portfolio securities, provided that it may not lend securities if, as a result, the aggregate value of all securities loaned would exceed 33% of its total assets (taken at market value at the time of such loan);

7. Borrow money except (a) from banks for temporary or emergency purposes in amounts not exceeding 33% of the value of the Fund's total assets at the time of borrowing, and (b) in connection with transactions in options, futures, and options on futures;

* State insurance laws currently restrict a Fund's borrowings to facilitate redemptions to no more than 25% of the Fund's net assets.

** As permitted by its fundamental policy regarding issuer concentration (which generally prohibits the Fund, with respect to 50% of its assets, from investing more than 5% of its assets in any one issuer, and which may not be changed without shareholder approval), Wanger Select became diversified effective January 31, 2012. The Fund may not resume operating in a non-diversified manner without first obtaining shareholder approval. Accordingly, with respect to 75% of its assets, the Fund may not invest more than 5% of its assets in any one issuer.

8. Underwrite the distribution of securities of other issuers; however, the Fund may acquire “restricted” securities which, in the event of a resale, might be required to be registered under the 1933 Act on the ground that the Fund could be regarded as an underwriter as defined by that act with respect to such resale;

9. Purchase and sell real estate or interests in real estate, although it may invest in marketable securities of enterprises which invest in real estate or interests in real estate;

10. Purchase and sell commodities or commodity contracts, except that it may enter into (a) futures and options on futures and (b) foreign currency contracts;

11. Make margin purchases of securities, except for use of such short-term credits as are needed for clearance of transactions and except in connection with transactions in options, futures, and options on futures;

12. Issue any senior security except to the extent permitted under the 1940 Act.

Non-Fundamental Investment Policies

Each Fund, as a matter of non-fundamental policy, may not:

1. Acquire securities of other registered investment companies except in compliance with the 1940 Act;
2. Invest in companies for the purpose of management or the exercise of control; or
3. Pledge, mortgage or hypothecate its assets, except as may be necessary in connection with permitted borrowings or in connection with short sales, options, futures and options on futures.

Each of Wanger USA and Wanger International, as a matter of non-fundamental policy, may not: sell securities short or maintain a short position.

Wanger USA, as a matter of non-fundamental policy, may not: under normal circumstances, invest less than 80% of its net assets (plus any borrowings for investment purposes) in domestic securities. The Fund will notify shareholders at least 60 days prior to any change in its 80% policy.

Each of Wanger Select and Wanger International Select, as a matter of non-fundamental policy, may not:

1. Invest more than 25% of its net assets (valued at time of investment) in illiquid securities, including repurchase agreements maturing in more than seven days; or
2. Make short sales of securities unless the Fund owns at least an equal amount of such securities, or owns securities that are convertible or exchangeable, without payment of further consideration, into at least an equal amount of such securities.

Wanger Select, as a matter of non-fundamental policy, may not: invest more than 33% of its total assets (valued at the time of investment) in the securities of foreign issuers.

Wanger International Select, as a matter of non-fundamental policy, may not:

1. Under normal circumstances, invest less than 65% of its net assets (plus any borrowings for investment purposes) in the stocks of foreign companies based in developed markets outside the United States;
2. Invest more than 25% of its total assets in securities of U.S. issuers, under normal market conditions.

Notwithstanding the foregoing investment restrictions, any Fund may purchase securities pursuant to the exercise of subscription rights, provided that such purchase will not result in the Fund's ceasing to be a diversified investment company. Japanese and European corporations frequently issue additional capital stock by means of subscription rights offerings to existing shareholders at a price substantially below the market price of the shares. The failure to exercise such rights would result in a Fund's interest in the issuing company being diluted. The market for such rights is not well developed in all cases and, accordingly, the Fund may not always realize full value on the sale of rights. The exception applies in cases where the limits set forth in the investment restrictions would otherwise be exceeded by exercising rights or would have already been exceeded as a result of fluctuations in the market value of the Fund's portfolio securities with the result that the Fund would be forced either to sell securities at a time when it might not otherwise have done so, or to forego exercising the rights.

Other Investment Restrictions

The Funds are also subject to the following additional investment restrictions and policies under certain applicable insurance laws pertaining to Contract separate accounts. These policies and restrictions are not fundamental and may be changed by the Board without shareholder approval:

(a) A Fund may not acquire the securities of any issuer if, as a result of such investment, more than 10% of the Fund's total assets would be invested in the securities of any one issuer, except that this restriction shall not apply to U.S. Government securities or foreign government securities; and the Fund will not invest in a security if, as a result of such investment, it would hold more than 10% of the outstanding voting securities of any one issuer.

(b) Each Fund may borrow no more than 10% of the value of its net assets when borrowing for any general purpose and no more than 25% of its net assets when borrowing as a temporary measure to facilitate redemptions.

If a percentage limit with respect to any of the foregoing fundamental and non-fundamental policies is satisfied at the time of investment or borrowing, a later increase or decrease in a Fund's assets will not constitute a violation of the limit.

Permissible Investments and Related Risks

Each Fund's prospectus identifies and summarizes the individual types of securities in which the Fund invests as part of its principal investment strategies and the principal risks associated with such investments.

The table below identifies for each Fund certain types of securities in which it is permitted to invest, including certain types of securities that are described in each Fund's prospectus. A Fund generally has the ability to invest 10% or more of its total assets in each type of security described in its prospectus (and in each sub-category of such security type described in this SAI). To the extent that a type of security identified below for a Fund is not described in the Fund's prospectus (or as a sub-category of such security type in this SAI), the Fund generally invests less than 10% of its total assets in such security type, except as noted below.

Information about individual types of securities (including certain of their associated risks) in which some or all of the Funds may invest is set forth below. Each Fund's investment in these types of securities is subject to its investment objective and fundamental and non-fundamental investment policies.

Temporary Defensive Positions. Each Fund may temporarily invest in money market instruments or hold cash or cash equivalents. Unless prohibited by its investment policies, certain Funds may also temporarily invest in derivatives, such as futures (i.e., index futures) or options on futures, for various purposes, including among others, investing in particular derivatives to achieve indirect investment exposures to a sector, country or region where the Investment Manager believes such defensive positioning is appropriate. It may do so without limit and for as long a period as deemed necessary, when the Investment Manager: (i) believes that the market conditions

are not favorable for profitable investing; (ii) is unable to locate favorable investment opportunities; or (iii) determines that a temporary defensive position is advisable or necessary in order to meet anticipated redemption requests, or for other reasons. While a Fund engages in such strategies, it may not achieve its investment objective. The Investment Manager currently expects that substantially all of each Fund's assets will be invested in accordance with its principal investment strategies. As a result, the Funds expect to remain substantially exposed to the equity markets.

Asset-Backed Securities

Asset-backed securities represent interests in, or debt instruments that are backed by, pools of various types of assets that generate cash payments generally over fixed periods of time, such as, among others, motor vehicle installment sales, contracts, installment loan contracts, leases of various types of real and personal property, and receivables from revolving (credit card) agreements. Such securities entitle the security holders to receive distributions (i.e., principal and interest) that are tied to the payments made by the borrower on the underlying assets (less fees paid to the originator, servicer, or other parties, and fees paid for credit enhancement), so that the payments made on the underlying assets effectively pass through to such security holders. Asset-backed securities typically are created by an originator of loans or owner of accounts receivable that sells such underlying assets to a special purpose entity in a process called a securitization. The special purpose entity issues securities that are backed by the payments on the underlying assets, and have a minimum denomination and specific term. Asset-backed securities may be structured as fixed-, variable- or floating-rate obligations or as zero coupon, pay-in-kind or step-coupon securities and may be privately placed or publicly offered. See ***Permissible Fund Investments — Zero Coupon, Pay-in-Kind and Step-Coupon Securities*** and ***Permissible Investments — Private Placement and Other Restricted Securities*** for more information.

Investing in asset-backed securities is subject to certain risks. For example, the value of asset-backed securities may be affected by, among other factors, changes in: interest rates, the market's assessment of the quality of underlying assets, the creditworthiness of the servicer for the underlying assets, information concerning the originator of the underlying assets, or the creditworthiness or rating of the entities that provide any supporting letters of credit, surety bonds, derivative instruments, or other credit enhancement. The value of asset-backed securities also will be affected by the exhaustion, termination or expiration of any credit enhancement.

Declining or low interest rates may lead to a more rapid rate of repayment on the underlying assets, resulting in accelerated payments on asset-backed securities that then would be reinvested at a lesser rate of interest. Rising or high interest rates tend to lead to a slower rate of repayment on the underlying assets, resulting in slower than expected payments on asset-backed securities that can, in turn, lead to a decline in value. The impact of changing interest rates on the value of asset-backed securities may be difficult to predict and result in greater volatility. Holders of asset-backed securities generally have no recourse against the originator of the underlying assets in the event of a default on the underlying assets. Credit risk is the risk that a holder of securities, backed by pools of receivables such as mortgage loans, may not receive all or part of its principal because the issuer, any credit enhancer and/or an underlying obligor has defaulted on its obligations. Credit risk is increased for asset-backed securities that are subordinated to another security (i.e., if the holder of an asset-backed security is entitled to receive payments only after payment obligations to holders of the other security are satisfied). The more deeply subordinated the security, the greater the credit risk associated with the security will be.

Bank Obligations (Domestic and Foreign)

Bank obligations include certificates of deposit, bankers' acceptances, time deposits and promissory notes that earn a specified rate of return and may be issued by (i) a domestic branch of a domestic bank, (ii) a foreign branch of a domestic bank, (iii) a domestic branch of a foreign bank or (iv) a foreign branch of a foreign bank.

Certificates of deposit, or so-called CDs, typically are interest-bearing debt instruments issued by banks and have maturities ranging from a few weeks to several years. Yankee dollar certificates of deposit are negotiable CDs issued in the United States by branches and agencies of foreign banks. Eurodollar certificates of deposit are CDs issued by foreign banks with interest and principal paid in U.S. dollars. Eurodollar and Yankee Dollar CDs typically have maturities of less than two years and have interest rates that typically are pegged to the London Interbank Offered Rate, or LIBOR. See ***Permissible Fund Investments — Eurodollar and Yankee Dollar Instruments***. Bankers' acceptances are time drafts drawn on and accepted by banks, are a customary means of effecting payment for merchandise sold in import-export transactions and are a general source of financing. A time deposit can be either a savings account or CD that is an obligation of a financial institution for a fixed term.

Typically, there are penalties for early withdrawals of time deposits. Promissory notes are written commitments of the maker to pay the payee a specified sum of money either on demand or at a fixed or determinable future date, with or without interest.

Bank investment contracts are issued by banks. Pursuant to such contracts, a Fund may make cash contributions to a deposit fund of a bank. The bank then credits to the Fund payments at floating or fixed interest rates. A Fund also may hold funds on deposit with its custodian for temporary purposes.

Investing in bank obligations is subject to certain risks. Certain bank obligations, such as some CDs, are insured by the FDIC up to certain specified limits. Many other bank obligations, however, are neither guaranteed nor insured by the FDIC or the U.S. Government. These bank obligations are “backed” only by the creditworthiness of the issuing bank or parent financial institution. Domestic and foreign banks are subject to different governmental regulation. Accordingly, certain obligations of foreign banks, including Eurodollar and Yankee dollar obligations, involve different and/or heightened investment risks than those affecting obligations of domestic banks, including, among others, the possibilities that: (i) their liquidity could be impaired because of political or economic developments; (ii) the obligations may be less marketable than comparable obligations of domestic banks; (iii) a foreign jurisdiction might impose withholding and other taxes at high levels on interest income; (iv) foreign deposits may be seized or nationalized; (v) foreign governmental restrictions such as exchange controls may be imposed, which could adversely affect the payment of principal and/or interest on those obligations; (vi) there may be less publicly available information concerning foreign banks issuing the obligations; and (vii) the reserve requirements and accounting, auditing and financial reporting standards, practices and requirements applicable to foreign banks may differ (including, by being less stringent) from those applicable to domestic banks. Foreign banks generally are not subject to examination by any U.S. Government agency or instrumentality. See *Permissible Fund Investments — Foreign Securities*.

Common Stock

Common stock represents a unit of equity ownership of a corporation. Owners typically are entitled to vote on the selection of directors and other important corporate governance matters, and to receive dividend payments, if any, on their holdings. However, ownership of common stock does not entitle owners to participate in the day-to-day operations of the corporation. Common stocks of domestic and foreign public corporations can be listed, and their shares traded, on domestic stock exchanges, such as the NYSE or the NASDAQ Stock Market. Domestic and foreign corporations also may have their shares traded on foreign exchanges, such as the London Stock Exchange or Tokyo Stock Exchange. See *Permissible Fund Investments — Foreign Securities*. Common stock may be privately placed or publicly offered. The price of common stock is generally determined by corporate earnings, type of products or services offered, projected growth rates, experience of management, liquidity, and market conditions generally. In the event that a corporation declares bankruptcy or is liquidated, the claims of secured and unsecured creditors and owners of bonds and preferred stock take precedence over the claims of those who own common stock. See *Permissible Fund Investments — Private Placement and Other Restricted Securities — Preferred Stock and Permissible Fund Investments — Convertible Securities* for more information.

Under normal conditions, the common stock investments of the Funds (as a percent of total assets) are allocated as follows:

Fund	U.S. Companies Maximum	Foreign Companies Maximum
Wanger USA	no limit	up to 20%*
Wanger International	up to 35%	no limit
Wanger Select	no limit	up to 33%
Wanger International Select	up to 25%	no limit

* Not including American Depositary Receipts.

Investing in common stocks is subject to certain risks. Stock market risk, for example, is the risk that the value of such stocks, like the broader stock markets, may decline or fail to rise over short or even extended periods of time, perhaps substantially or unexpectedly. Domestic and foreign stock markets tend to be cyclical, with periods when stock prices generally rise and periods when stock prices generally decline. The value of individual stocks will rise and fall based on factors specific to each company, such as changes in earnings or management, as well as general economic and market factors.

If a corporation is liquidated, the claims of secured and unsecured creditors and owners of debt securities and “preferred” stock take priority over the claims of those who own common stock.

Investing in common stocks also poses risks applicable to the particular type of company issuing the common stock. For example, stocks of smaller companies tend to have greater price swings than stocks of larger companies because, among other things, they trade less frequently and in lower volumes, are more susceptible to changes in economic conditions, may be more reliant on singular products or services and are more vulnerable to larger competitors. Common stocks of these types of companies may have a higher potential for gains, but also may be subject to greater risk of loss.

Investing in common stocks also poses risks applicable to a particular industry, such as technology, financial services, consumer goods or natural resources (e.g., oil and gas). To some extent, the prices of common stocks tend to move by industry sector. When market conditions favorably affect, or are expected to favorably affect, an industry, the share prices of the common stocks of companies in that industry tend to rise. Conversely, negative news or a poor outlook for a particular industry can cause the share prices of the common stocks of companies in that industry to decline quickly.

Convertible Securities

Convertible securities include bonds, debentures, notes, preferred stocks or other securities that may be converted or exchanged (by the holder or by the issuer) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio or predetermined price (the conversion price). As such, convertible securities combine the investment characteristics of debt securities and equity securities. A holder of convertible securities is entitled to receive the income of a bond, debenture or note or the dividend of a preferred stock until the conversion privilege is exercised. The market value of convertible securities generally is a function of, among other factors, interest rates, the rates of return of similar nonconvertible securities and the financial strength of the issuer. The market value of convertible securities tends to decline as interest rates rise and, conversely, to rise as interest rates decline. However, a convertible security’s market value tends to reflect the market price of the common stock of the issuing company when that stock price approaches or is greater than its conversion price. As the market price of the underlying common stock declines, the price of the convertible security tends to be influenced more by the rate of return of the convertible security. Because both interest rate and market movements in both interest rates and the underlying common stock can influence their value, convertible securities generally are neither as sensitive to changes in interest rates as similar non-convertible debt securities nor generally as sensitive to changes in share price as the underlying common stock. Convertible securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind or step-coupon securities and may be privately placed or publicly offered. See ***Permissible Fund Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities***, ***Permissible Fund Investments — Common Stock***, ***Permissible Fund Investments — Corporate Debt Securities*** and ***Permissible Fund Investments — Private Placement and Other Restricted Securities*** for more information.

Investing in convertible securities is subject to certain risks. Certain convertible securities, particularly securities that are convertible into securities of an issuer other than the issuer of the convertible security, may be illiquid and, therefore, may be more difficult to resell in a timely fashion or for a fair price, which could result in investment losses. Certain convertible securities may have a mandatory conversion feature, pursuant to which the securities convert automatically into common stock or other equity securities (of the same or a different issuer) at

a specified date and a specified exchange ratio. Certain convertible securities may be convertible at the option of the issuer, which may require a holder to convert the security into the underlying common stock, even at times when the value of the underlying common stock or other equity security has declined substantially.

In addition, some convertible securities may be rated below investment grade or may not be rated and, therefore, may be considered speculative investments. Companies that issue convertible securities frequently are small- and mid-capitalization companies and, accordingly, carry the risks associated with such companies. In addition, the credit rating of a company's convertible securities generally is lower than that of its conventional debt securities. Convertible securities are senior to equity securities and have a claim to the assets of an issuer prior to the holders of the issuer's common stock in the event of liquidation but generally are subordinate to similar non-convertible debt securities of the same issuer. Some convertible securities are particularly sensitive to changes in interest rates when their predetermined conversion price is much higher than the price for the issuing company's common stock.

Corporate Debt Securities

Corporate debt securities are long and short term fixed income securities typically issued by businesses to finance their operations. Corporate debt securities are issued by public or private companies, as distinct from debt securities issued by a government or its agencies. The issuer of a corporate debt security often has a contractual obligation to pay interest at a stated rate on specific dates and to repay principal periodically or on a specified maturity date. Corporate debt securities typically have four distinguishing features: (i) they are taxable; (ii) they have a par value of \$1,000; (iii) they have a term maturity, which means they come due at a specified time period; and (iv) many are traded on major securities exchanges. Notes, bonds, debentures and commercial paper are the most common types of corporate debt securities, with the primary difference being their interest rates, maturity dates and secured or unsecured status. Commercial paper has the shortest term and usually is unsecured, as are debentures. The broad category of corporate debt securities includes debt issued by domestic or foreign companies of all kinds, including those with small-, mid- and large- capitalizations. The category also includes bank loans, as well as assignments, participations and other interests in bank loans. Corporate debt securities may be rated investment grade or below investment grade and may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See ***Permissible Fund Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities***, ***Permissible Fund Investments — Private Placement and Other Restricted Securities***, ***Permissible Fund Investments — Debt Obligations***, ***Permissible Fund Investments — Commercial Paper*** and ***Permissible Fund Investments — High Yield Securities*** for more information.

Extendible commercial notes (ECNs) are very similar to commercial paper except that with ECNs, the issuer has the option to extend the notes' maturity. ECNs are issued at a discount rate, with an initial redemption of not more than 90 days from the date of issue. If ECNs are not redeemed by the issuer on the initial redemption date, the issuer will pay a premium (step-up) rate based on the ECN's credit rating at the time.

Because of the wide range of types and maturities of corporate debt securities, as well as the range of creditworthiness of issuers, corporate debt securities can have widely varying risk/return profiles. For example, commercial paper issued by a large established domestic corporation that is rated by an NRSRO as investment grade may have a relatively modest return on principal but present relatively limited risk. On the other hand, a long-term corporate note issued, for example, by a small foreign corporation from an emerging market country that has not been rated by an NRSRO may have the potential for relatively large returns on principal but carries a relatively high degree of risk.

Investing in corporate debt securities is subject to certain risks including, among others, credit and interest rate risk. Credit risk is the risk that a Fund could lose money if the issuer of a corporate debt security is unable to pay interest or repay principal when it becomes due. Some corporate debt securities that are rated below investment grade by an NRSRO generally are considered speculative because they present a greater risk of loss,

including default, than higher quality debt securities. The credit risk of a particular issuer's debt security may vary based on its priority for repayment. For example, higher ranking (senior) debt securities have a higher priority than and, therefore, may be paid in full before, lower ranking (subordinated) securities. In addition, in the event of bankruptcy, holders of higher-ranking senior securities may receive amounts otherwise payable to the holders of more junior securities. Interest rate risk is the risk that the value of certain corporate debt securities will tend to fall when interest rates rise. In general, corporate debt securities with longer terms tend to fall more in value when interest rates rise than do corporate debt securities with shorter terms.

Custody Receipts and Trust Certificates

Custody receipts and trust certificates are derivative products that evidence direct ownership in a pool of securities. Typically, a sponsor will deposit a pool of securities with a custodian in exchange for custody receipts evidencing interests in those securities. The sponsor generally then will sell the custody receipts or trust certificates in negotiated transactions at varying prices. Each custody receipt or trust certificate evidences the individual securities in the pool and the holder of a custody receipt or trust certificate generally will have all the rights and privileges of owners of those securities.

Investing in custody receipts and trust certificates is subject to certain risks. Custody receipts and trust certificates generally are subject to the same risks as the securities evidenced by the receipts or certificates. Custody receipts and trust certificates also may be less liquid than the underlying securities.

Derivatives

General

Derivatives are financial instruments whose values are based on (or "derived" from) traditional securities (such as a stock or a bond), assets (such as a commodity, like gold), reference rates (such as LIBOR) or market indices (such as the S&P 500® Index), or customized baskets of securities or instruments. Some forms of derivatives, such as exchange-traded futures and options on securities, commodities, or indices, are traded on regulated exchanges. These types of derivatives are standardized contracts that can easily be bought and sold, and whose market values are determined and published daily. Non-standardized derivatives, on the other hand, tend to be more specialized or complex, and may be harder to value. Many derivative instruments require little or no initial payment and in such case will create economic leverage. Derivatives, when used properly, can enhance returns and be useful in hedging portfolios and managing risk. Some common types of derivatives include futures; options; options on futures; forward foreign currency exchange contracts; forward contracts on securities and securities indices; linked securities and structured products; CMOs; stripped securities; warrants and rights; swap agreements and swaptions.

A Fund may use derivatives for a variety of reasons, including, for example: (i) to enhance its return; (ii) to attempt to protect against possible unfavorable changes in the market value of securities held in or to be purchased for its portfolio resulting from securities markets or currency exchange rate fluctuations (i.e., to hedge); (iii) to protect its unrealized gains reflected in the value of its portfolio securities; (iv) to facilitate the sale of such securities for investment purposes; (v) to reduce transaction costs; (vi) to manage the effective maturity or duration of its portfolio; and/or (vii) to increase available cash while remaining fully invested.

A Fund's use of derivatives presents risks different from, and possibly greater than, the risks associated with investing directly in traditional securities. The use of derivatives can lead to losses because of adverse movements in the price or value of the underlying security, asset, index or reference rate, which may be magnified by certain features of the derivatives. These risks are heightened when a Fund uses derivatives to enhance its return or as a substitute for a position or security, rather than solely to hedge or offset the risk of a position or security held by a Fund. There is also a risk that the derivative will not correlate well with the security for which it is substituting. A Fund's use of derivatives to leverage risk also may exaggerate a loss, potentially causing a Fund to lose more money than if it had invested in the underlying security, or limit a potential gain.

The success of management's derivative strategies will depend on its ability to assess and predict the impact of market or economic developments on the underlying security, asset, index or reference rate and the derivative itself, without necessarily the benefit of observing the performance of the derivative under all possible market conditions. Other risks arise from a Fund's potential inability to terminate or sell its derivative positions as a liquid secondary market for such positions may not exist at times when a Fund may wish to terminate or sell them. Over-the-counter instruments (investments not traded on an exchange) may be illiquid. Derivatives traded in the over-the-counter market are subject to the risk that the other party will not meet its obligations. Also, with some derivative strategies there is the risk that a Fund may not be able to find a suitable derivative transaction counterparty, and thus may be unable to invest in derivatives altogether.

A Fund may use any or all of the above investment techniques and may purchase different types of derivative instruments at any time and in any combination. The use of derivatives is a function of numerous variables, including market conditions. See also *Permissible Fund Investments — Warrants and Rights* and *Permissible Fund Investments — When Issued, Delayed Delivery and Forward Commitment Transactions*.

Index or Linked Securities (Structured Products)

General. Indexed or linked securities, also often referred to as “structured products,” are instruments that may have varying combinations of equity and debt characteristics. These instruments are structured to recast the investment characteristics of the underlying security or reference asset. If the issuer is a unit investment trust or other special purpose vehicle, the structuring will typically involve the deposit with or purchase by such issuer of specified instruments (such as commercial bank loans or securities) and/or the execution of various derivative transactions, and the issuance by that entity of one or more classes of securities (structured securities) backed by, or representing interests in, the underlying instruments. The cash flow on the underlying instruments may be apportioned among the newly issued structured securities to create securities with different investment characteristics, such as varying maturities, payment priorities and interest rate provisions, and the extent of such payments made with respect to structured securities is dependent on the extent of the cash flow on the underlying instruments.

Indexed and Inverse Floating Rate Securities. A Fund may invest in securities that provide a potential return based on a particular index or interest rates. For example, a Fund may invest in debt securities that pay interest based on an index of interest rates. The principal amount payable upon maturity of certain securities also may be based on the value of the index. To the extent a Fund invests in these types of securities, a Fund's return on such securities will rise and fall with the value of the particular index: that is, if the value of the index falls, the value of the indexed securities owned by a Fund will fall. Interest and principal payable on certain securities may also be based on relative changes among particular indices.

A Fund may also invest in so-called “inverse floaters” or “residual interest bonds” on which the interest rates vary inversely with a floating rate (which may be reset periodically by a dutch auction, a remarketing agent, or by reference to a short-term tax-exempt interest rate index). A Fund may purchase synthetically-created inverse floating rate bonds evidenced by custodial or trust receipts. A trust funds the purchase of a bond by issuing two classes of certificates: short-term floating rate notes (typically sold to third parties) and inverse floaters (also known as residual certificates). No additional income beyond that provided by the trust's underlying bond is created; rather, that income is merely divided-up between the two classes of certificates. Generally, income on inverse floating rate bonds will decrease when interest rates increase, and will increase when interest rates decrease. Such securities have the effect of providing a degree of investment leverage, since they may increase or decrease in value in response to changes in market interest rates at a rate that is a multiple of the actual rate at which fixed-rate securities increase or decrease in response to such changes. As a result, the market values of such securities will generally be more volatile than the market values of fixed-rate securities. To seek to limit the volatility of these securities, a Fund may purchase inverse floating obligations that have shorter-term maturities or that contain limitations on the extent to which the interest rate may vary. Certain investments in such obligations may be illiquid. When used for hedging purposes, indexed and inverse securities involve

correlation risk. Furthermore, where such a security includes a contingent liability, in the event of an adverse movement in the underlying index or interest rate, a Fund may be required to pay substantial additional margin to maintain the position.

Credit-Linked Securities. Among the income producing securities in which a Fund may invest are credit-linked securities. The issuers of these securities frequently are limited purpose trusts or other special purpose vehicles that, in turn, invest in a derivative instrument or basket of derivative instruments, such as credit default swaps, interest rate swaps and other securities, in order to provide exposure to certain fixed income markets. For instance, a Fund may invest in credit-linked securities as a cash management tool in order to gain exposure to a certain market and/or to remain fully invested when more traditional income producing securities are not available.

Like an investment in a bond, investments in these credit-linked securities represent the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on or linked to the issuer's receipt of payments from, and the issuer's potential obligations to, the counterparties to the derivative instruments and other securities in which the issuer invests. For instance, the issuer may sell one or more credit default swaps, under which the issuer would receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a default occurs, the stream of payments may stop and the issuer would be obligated to pay the counterparty the par (or other agreed upon value) of the referenced debt obligation. This, in turn, would reduce the amount of income and/or principal that a Fund would receive. A Fund's investments in these securities are indirectly subject to the risks associated with derivative instruments. These securities generally are exempt from registration under the 1933 Act. Accordingly, there may be no established trading market for the securities and they may constitute illiquid investments.

Index-, Commodity- and Currency-Linked Securities. "Index-linked" or "commodity-linked" notes are debt securities of companies that call for interest payments and/or payment at maturity in different terms than the typical note where the borrower agrees to make fixed interest payments and to pay a fixed sum at maturity. Principal and/or interest payments on an index-linked or commodity-linked note depend on the performance of one or more market indices, such as the S&P 500® Index, a weighted index of commodity futures such as crude oil, gasoline and natural gas or the market prices of a particular commodity or basket of commodities or securities. Currency-linked debt securities are short-term or intermediate-term instruments having a value at maturity, and/or an interest rate, determined by reference to one or more foreign currencies. Payment of principal or periodic interest may be calculated as a multiple of the movement of one currency against another currency, or against an index.

Index-, commodity- and currency-linked securities may entail substantial risks. Such instruments may be subject to significant price volatility. The company issuing the instrument may fail to pay the amount due on maturity. The underlying investment may not perform as expected by the Investment Manager. Markets and underlying investments and indexes may move in a direction that was not anticipated by the Investment Manager. Performance of the derivatives may be influenced by interest rate and other market changes in the United States and abroad, and certain derivative instruments may be illiquid.

Linked securities are often issued by unit investment trusts. Examples of this include such index-linked securities as S&P Depositary Receipts (SPDRs), which is an interest in a unit investment trust holding a portfolio of securities linked to the S&P 500® Index, and a type of exchange traded fund (ETF). Because a unit investment trust is an investment company under the 1940 Act, a Fund's investments in SPDRs are subject to the limitations set forth in Section 12(d)(1)(A) of the 1940 Act, although the SEC has issued exemptive relief permitting investment companies such as the Funds to invest beyond the limits of Section 12(d)(1)(A) subject to certain conditions. SPDRs generally closely track the underlying portfolio of securities, trade like a share of common stock and pay periodic dividends proportionate to those paid by the portfolio of stocks that comprise the S&P

500® Index. As a holder of interests in a unit investment trust, a Fund would indirectly bear its ratable share of that unit investment trust's expenses. At the same time, a Fund would continue to pay its own management and advisory fees and other expenses, as a result of which a Fund and its shareholders in effect would be absorbing higher levels of fees with respect to investments in such unit investment trusts.

Because linked securities typically involve no credit enhancement, their credit risk generally will be equivalent to that of the underlying instruments. Investments in structured products may be structured as a class that is either subordinated or unsubordinated to the right of payment of another class. Subordinated linked securities typically have higher rates of return and present greater risks than unsubordinated structured products. Structured products sometimes are sold in private placement transactions and often have a limited trading market.

Investments in "linked" securities have the potential to lead to significant losses because of unexpected movements in the underlying financial asset, index, currency or other investment. The ability of a Fund to utilize linked-securities successfully will depend on its ability correctly to predict pertinent market movements, which cannot be assured. Because currency-linked securities usually relate to foreign currencies, some of which may be currencies from emerging market countries, there are certain additional risks associated with such investments.

SPDRs are subject to the risks of an investment in a broadly based portfolio of common stocks, including the risk that the general level of stock prices may decline, thereby adversely affecting the value of such investment. In addition, because individual investments in SPDRs are not redeemable, except upon termination of the unit investment trust, the liquidity of small holdings of SPDRs will depend upon the existence of a secondary market. Large holdings of SPDRs are called "creation unit size" and are redeemable in-kind only and are not redeemable for cash from the unit investment trust. The price of a SPDR is derived from and based upon the securities held by the unit investment trust. Accordingly, the level of risk involved in the purchase or sale of a SPDR is similar to the risk involved in the purchase or sale of traditional common stock, with the exception that the pricing mechanism for SPDRs is based on a basket of stocks. Disruptions in the markets for the securities underlying SPDRs purchased or sold by a Fund could result in losses on SPDRs.

Futures Contracts and Options on Futures Contracts

Futures Contracts. A futures contract sale creates an obligation by the seller to deliver the type of security or other asset called for in the contract at a specified delivery time for a stated price. A futures contract purchase creates an obligation by the purchaser to take delivery of the type of security or other asset called for in the contract at a specified delivery time for a stated price. The specific security or other asset delivered or taken at the settlement date is not determined until on or near that date. The determination is made in accordance with the rules of the exchange on which the futures contract was made. A Fund may enter into futures contracts which are traded on national or foreign futures exchanges and are standardized as to maturity date and underlying security or other asset. Futures exchanges and trading in the United States are regulated under the Commodity Exchange Act (CEA) by the CFTC. See ***Permissible Fund Investments — Derivatives — CFTC Regulation*** below for more information.

Traders in futures contracts may be broadly classified as either "hedgers" or "speculators." Hedgers use the futures markets primarily to offset unfavorable changes (anticipated or potential) in the value of securities or other assets currently owned or expected to be acquired by them. Speculators less often own the securities or other assets underlying the futures contracts which they trade, and generally use futures contracts with the expectation of realizing profits from fluctuations in the value of the underlying securities or other assets. Pursuant to a notice of eligibility claiming exclusion from the definition of commodity pool operator filed with the CFTC and the National Futures Association on behalf of the Funds, neither the Trust nor any of the individual Funds is deemed to be a "commodity pool operator" under the CEA, and, accordingly, they are excluded from registration or regulation as such under the CEA. However, on February 9, 2012, the CFTC adopted amendments to its rules that, should they come into effect, may affect the ability of a Fund to continue to claim this exclusion. A Fund that seeks to claim the exclusion after the effectiveness of the amended rules would

be limited in its ability to use futures and options on futures or commodities or engage in swap transactions. If a Fund were no longer able to claim the exclusion, the Investment Manager would be required to register as a “commodity pool operator,” and the Fund and the Investment Manager would be subject to regulation under the CEA.

Upon entering into futures contracts, in compliance with regulatory requirements, cash or liquid securities, equal in value to the amount of a Fund’s obligation under the contract (less any applicable margin deposits and any assets that constitute “cover” for such obligation), will be segregated with a Fund’s custodian.

Unlike when a Fund purchases or sells a security, no price is paid or received by a Fund upon the purchase or sale of a futures contract, although a Fund is required to deposit with its custodian in a segregated account in the name of the futures broker an amount of cash and/or U.S. Government securities in order to initiate and maintain open positions in futures contracts. This amount is known as “initial margin.” The nature of initial margin in futures transactions is different from that of margin in security transactions, in that futures contract margin does not involve the borrowing of funds by a Fund to finance the transactions. Rather, initial margin is in the nature of a performance bond or good faith deposit intended to assure completion of the contract (delivery or acceptance of the underlying security or other asset) that is returned to a Fund upon termination of the futures contract, assuming all contractual obligations have been satisfied. Minimum initial margin requirements are established by the relevant futures exchange and may be changed. Brokers may establish deposit requirements which are higher than the exchange minimums. Futures contracts are customarily purchased and sold on margin which may range upward from less than 5% of the value of the contract being traded. Subsequent payments, called “variation margin,” to and from the broker (or the custodian) are made on a daily basis as the price of the underlying security or other asset fluctuates, a process known as “marking to market.” If the futures contract price changes to the extent that the margin on deposit does not satisfy margin requirements, payment of additional variation margin will be required. Conversely, a change in the contract value may reduce the required margin, resulting in a repayment of excess margin to the contract holder. Variation margin payments are made for as long as the contract remains open. A Fund expects to earn interest income on its margin deposits.

Although futures contracts by their terms call for actual delivery or acceptance of securities or other assets (stock index futures contracts or futures contracts that reference other intangible assets do not permit delivery of the referenced assets), the contracts usually are closed out before the settlement date without the making or taking of delivery. A Fund may elect to close some or all of its futures positions at any time prior to their expiration. The purpose of taking such action would be to reduce or eliminate the position then currently held by a Fund. Closing out an open futures position is done by taking an opposite position (“buying” a contract which has previously been “sold,” “selling” a contract previously “purchased”) in an identical contract (i.e., the same aggregate amount of the specific type of security or other asset with the same delivery date) to terminate the position. Final determinations are made as to whether the price of the initial sale of the futures contract exceeds or is below the price of the offsetting purchase, or whether the purchase price exceeds or is below the offsetting sale price. Final determinations of variation margin are then made, additional cash is required to be paid by or released to a Fund, and a Fund realizes a loss or a gain. Brokerage commissions are incurred when a futures contract is bought or sold.

Successful use of futures contracts by a Fund is subject to the Investment Manager’s ability to predict correctly movements in the direction of interest rates and other factors affecting securities and commodities markets. This requires different skills and techniques than those required to predict changes in the prices of individual securities. A Fund, therefore, bears the risk that future market trends will be incorrectly predicted.

The risk of loss in trading futures contracts in some strategies can be substantial, due both to the relatively low margin deposits required and the potential for an extremely high degree of leverage involved in futures contracts. As a result, a relatively small price movement in a futures contract may result in an immediate and substantial loss to the investor. For example, if at the time of purchase, 10% of the value of the futures contract is deposited as margin, a subsequent 10% decrease in the value of the futures contract would result in a total loss of

the margin deposit, before any deduction for the transaction costs, if the account were then closed out. A 15% decrease would result in a loss equal to 150% of the original margin deposit if the contract were closed out. Thus, a purchase or sale of a futures contract may result in losses in excess of the amount posted as initial margin for the contract.

In the event of adverse price movements, a Fund would continue to be required to make daily cash payments in order to maintain its required margin. In such a situation, if a Fund has insufficient cash, it may have to sell portfolio securities in order to meet daily margin requirements at a time when it may be disadvantageous to do so. The inability to close the futures position also could have an adverse impact on the ability to hedge effectively.

To reduce or eliminate a hedge position held by a Fund, a Fund may seek to close out a position. The ability to establish and close out positions will be subject to the development and maintenance of a liquid secondary market. It is not certain that this market will develop or continue to exist for a particular futures contract, which may limit a Fund's ability to realize its profits or limit its losses. Reasons for the absence of a liquid secondary market on an exchange include the following: (i) there may be insufficient trading interest in certain contracts; (ii) restrictions may be imposed by an exchange on opening transactions, closing transactions or both; (iii) trading halts, suspensions or other restrictions may be imposed with respect to particular classes or series of contracts, or underlying securities; (iv) unusual or unforeseen circumstances, such as volume in excess of trading or clearing capability, may interrupt normal operations on an exchange; (v) the facilities of an exchange or a clearing corporation may not at all times be adequate to handle current trading volume; or (vi) one or more exchanges could, for economic or other reasons, decide or be compelled at some future date to discontinue the trading of contracts (or a particular class or series of contracts), in which event the secondary market on that exchange (or in the class or series of contracts) would cease to exist, although outstanding contracts on the exchange that had been issued by a clearing corporation as a result of trades on that exchange would continue to be exercisable in accordance with their terms.

Interest Rate Futures Contracts. Bond prices are established in both the cash market and the futures market. In the cash market, bonds are purchased and sold with payment for the full purchase price of the bond being made in cash, generally within five business days after the trade. In the futures market, a contract is made to purchase or sell a bond in the future for a set price on a certain date. Historically, the prices for bonds established in the futures markets have tended to move generally in the aggregate in concert with the cash market prices and have maintained fairly predictable relationships. Accordingly, a Fund may use interest rate futures contracts as a defense, or hedge, against anticipated interest rate changes. A Fund presently could accomplish a similar result to that which it hopes to achieve through the use of interest rate futures contracts by selling bonds with long maturities and investing in bonds with short maturities when interest rates are expected to increase, or conversely, selling bonds with short maturities and investing in bonds with long maturities when interest rates are expected to decline. However, because of the liquidity that is often available in the futures market, the protection is more likely to be achieved, perhaps at a lower cost and without changing the rate of interest being earned by a Fund, through using futures contracts.

Interest rate futures contracts are traded in an auction environment on the floors of several exchanges – principally, the Chicago Board of Trade, the Chicago Mercantile Exchange and the New York Futures Exchange. Each exchange guarantees performance under contract provisions through a clearing corporation, a nonprofit organization managed by the exchange membership. A public market exists in futures contracts covering various financial instruments including long term U.S. Treasury Bonds and Notes; GNMA modified pass-through mortgage backed securities; three-month U.S. Treasury Bills; and ninety-day commercial paper. A Fund may also invest in exchange-traded Eurodollar contracts, which are interest rate futures on the forward level of LIBOR. These contracts are generally considered liquid securities and trade on the Chicago Mercantile Exchange. Such Eurodollar contracts are generally used to “lock-in” or hedge the future level of short-term rates. A Fund may trade in any interest rate futures contracts for which there exists a public market, including, without limitation, the foregoing instruments.

Index Futures Contracts. An index futures contract is a contract to buy or sell units of an index at a specified future date at a price agreed upon when the contract is made. Entering into a contract to buy units of an index is commonly referred to as buying or purchasing a contract or holding a long position in the index. Entering into a contract to sell units of an index is commonly referred to as selling a contract or holding a short position in the index. A unit is the current value of the index. A Fund may enter into stock index futures contracts, debt index futures contracts, or other index futures contracts appropriate to its objective(s).

There are several risks in connection with the use by a Fund of index futures as a hedging device. One risk arises because of the imperfect correlation between movements in the prices of the index futures and movements in the prices of securities which are the subject of the hedges. The Investment Manager may attempt to reduce this risk by selling, to the extent possible, futures on indices the movements of which will, in its judgment, have a significant correlation with movements in the prices of a Fund's portfolio securities sought to be hedged.

Options on Futures Contracts. A Fund may purchase and write call and put options on those futures contracts that it is permitted to buy or sell. A Fund may use such options on futures contracts in lieu of writing options directly on the underlying securities or other assets or purchasing and selling the underlying futures contracts. Such options generally operate in the same manner as options purchased or written directly on the underlying investments. A futures option gives the holder, in return for the premium paid, the right, but not the obligation, to buy from (call) or sell to (put) the writer of the option a futures contract at a specified price at any time during the period of the option. Upon exercise, the writer of the option is obligated to pay the difference between the cash value of the futures contract and the exercise price. Like the buyer or seller of a futures contract, the holder or writer of an option has the right to terminate its position prior to the scheduled expiration of the option by selling or purchasing an option of the same series, at which time the person entering into the closing purchase transaction will realize a gain or loss. There is no guarantee that such closing purchase transactions can be effected.

A Fund will enter into written options on futures contracts only when, in compliance with regulatory requirements, it has segregated cash or liquid securities equal in value to the underlying security's or other asset's value (less any applicable margin deposits). A Fund will be required to deposit initial margin and maintenance margin with respect to put and call options on futures contracts written by it pursuant to brokers' requirements similar to those described above.

Investments in futures options involve some of the same risks that are involved in connection with investments in futures contracts (for example, the existence of a liquid secondary market). In addition, the purchase of an option also entails the risk that changes in the value of the underlying futures contract will not be fully reflected in the value of the option purchased. There may be circumstances when the purchase of a call or put option on a futures contract would result in a loss to a Fund when the purchase or sale of a futures contract would not, such as when there is no movement in the prices of the hedged investments. In general, the market prices of options can be expected to be more volatile than the market prices on the underlying futures contracts. Compared to the purchase or sale of futures contracts, however, the purchase of call or put options on futures contracts may frequently involve less potential risk to a Fund because the maximum amount at risk is the premium paid for the options (plus transaction costs).

Successful use of index futures by a Fund is also subject to the Investment Manager's ability to predict correctly movements in the direction of the market. It is possible that, for example, where a Fund has sold futures to hedge its portfolio against a decline in the market, the index on which the futures are written may advance and the value of securities held in a Fund's portfolio may decline. If this occurred, a Fund would lose money on the futures and also experience a decline in the value of its portfolio securities, as a Fund's ability to effectively hedge all or a portion of the securities in its portfolio, in anticipation of or during a market decline, through transactions in futures or put options on stock indices, depends on the degree to which price movements in the underlying index correlate with the price movements of the securities held by a Fund. Inasmuch as a Fund's securities will not duplicate the components of an index, the correlation will not be perfect. Consequently, a Fund

bears the risk that the prices of its securities being hedged will not move to the same extent as do the prices of its put options on the stock indices. It is also possible that, if a Fund has hedged against the possibility of a decline in the market adversely affecting securities held in its portfolio and securities prices increase instead, a Fund will lose part or all of the benefit of the increased values of those securities that it has hedged, because it will have offsetting losses in its futures positions. In addition, in such situations, if a Fund has insufficient cash, it may have to sell securities to meet daily variation margin requirements.

In addition to the possibility that there may be an imperfect correlation, or no correlation at all, between movements in the index futures and the securities of the portfolio being hedged, the prices of index futures may not correlate perfectly with movements in the underlying index due to certain market distortions. First, all participants in the futures markets are subject to margin deposit and maintenance requirements. Rather than meeting additional margin deposit requirements, investors may close futures contracts through offsetting transactions, which would distort the normal relationship between the index and futures markets. Second, margin requirements in the futures market are less onerous than margin requirements in the securities market, and as a result, the futures market may attract more speculators than the securities market. Increased participation by speculators in the futures market may also cause temporary price distortions. Due to the possibility of price distortions in the futures market, and also because of the imperfect correlation between movements in an index and movements in the prices of index futures, even a correct forecast of general market trends by the Investment Manager may still not result in a successful hedging transaction.

There is also the risk of loss by a Fund of margin deposits in the event of bankruptcy of a broker with whom a Fund has an open position in a futures contract or related option. Most futures exchanges limit the amount of fluctuation permitted in some contract prices during a single trading day. The daily limit establishes the maximum amount that the price of a futures contract may vary either up or down from the previous day's settlement price at the end of a trading session. Once the daily limit has been reached in a particular type of contract, no trades may be made on that day at a price beyond that limit. The daily limit governs only price movement during a particular trading day and, therefore, does not limit potential losses, because the limit may prevent the liquidation of unfavorable positions. Futures contract prices have occasionally moved to the daily limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of futures positions and subjecting some futures traders to substantial losses.

Options on Index Futures Contracts. A Fund may also purchase and sell options on index futures contracts. Options on index futures give the purchaser the right, in return for the premium paid, to assume a position in an index futures contract (a long position if the option is a call and a short position if the option is a put), at a specified exercise price at any time during the period of the option. Upon exercise of the option, the delivery of the futures position by the writer of the option to the holder of the option will be accompanied by delivery of the accumulated balance in the writer's futures margin account, which represents the amount by which the market price of the index futures contract, at exercise, exceeds (in the case of a call) or is less than (in the case of a put) the exercise price of the option on the index future. If an option is exercised on the last trading day prior to the expiration date of the option, the settlement will be made entirely in cash equal to the difference between the exercise price of the option and the closing level of the index on which the future is based on the expiration date. Purchasers of options who fail to exercise their options prior to the exercise date suffer a loss of the premium paid.

There are various risks in connection with the use by a Fund of index futures as a hedging device. For example, a risk arises because of the imperfect correlation between movements in the prices of the index futures and movements in the prices of securities which are the subject of the hedges. The Investment Manager will attempt to reduce this risk by selling, to the extent possible, futures on indices the movements of which will, in its judgment, have a significant correlation with movements in the prices of a Fund's portfolio securities sought to be hedged; there can be no assurance that the Investment Manager will be successful in doing so.

Stock Options and Stock Index Options

A Fund may purchase and write (i.e., sell) put and call options. Such options may relate to particular stocks or stock indices, and may or may not be listed on a domestic or foreign securities exchange and may or may not be issued by the Options Clearing Corporation (OCC). Stock index options are put options and call options on various stock indices. In most respects, they are identical to listed options on common stocks.

There is a key difference between stock options and index options in connection with their exercise. In the case of stock options, the underlying security, common stock, is delivered. However, upon the exercise of an index option, settlement does not occur by delivery of the securities comprising the index. The option holder who exercises the index option receives an amount of cash if the closing level of the stock index upon which the option is based is greater than (in the case of a call) or less than (in the case of a put) the exercise price of the option. This amount of cash is equal to the difference between the closing price of the stock index and the exercise price of the option expressed in dollars times a specified multiple. A stock index fluctuates with changes in the market value of the securities included in the index. For example, some stock index options are based on a broad market index, such as the S&P 500[®] Index or a narrower market index, such as the S&P 100[®] Index. Indices may also be based on an industry or market segment.

A Fund may, for the purpose of hedging its portfolio, subject to applicable securities regulations, purchase and write put and call options on foreign stock indices listed on foreign and domestic stock exchanges. As an alternative to purchasing call and put options on index futures, a Fund may purchase call and put options on the underlying indices themselves. Such options could be used in a manner identical to the use of options on index futures. Options involving securities indices provide the holder with the right to make or receive a cash settlement upon exercise of the option based on movements in the relevant index. Such options must be listed on a national securities exchange and issued by the OCC. Such options may relate to particular securities or to various stock indices, except that a Fund may not write covered options on an index.

The successful use of a Fund's options strategies depends on the ability of the Investment Manager to forecast interest rate and market movements correctly. When it purchases an option, a Fund runs the risk that it will lose its entire investment in the option in a relatively short period of time, unless a Fund exercises the option or enters into a closing sale transaction for such option during the life of the option. If the price of the underlying security does not rise (in the case of a call) or fall (in the case of a put) to an extent sufficient to cover the option premium and transaction costs, a Fund will lose part or all of its investment in the option. This contrasts with an investment by a Fund in the underlying securities, since a Fund may continue to hold its investment in those securities notwithstanding the lack of a change in price of those securities.

The effective use of options also depends on a Fund's ability to terminate option positions at times when the Investment Manager deems it desirable to do so. Although a Fund will take an option position only if the Investment Manager believes there is a liquid secondary market for the option, there is no assurance that a Fund will be able to effect closing transactions at any particular time or at an acceptable price.

If a secondary trading market in options were to become unavailable, a Fund could no longer engage in closing transactions. The writer in such circumstances would be subject to the risk of market decline or appreciation in the instrument during such period. If an option purchased by a Fund expires unexercised, a Fund will realize a loss equal to the premium paid. Reasons for the absence of a liquid secondary market on an exchange include the following: (i) there may be insufficient trading interest in certain options; (ii) restrictions may be imposed by an exchange on opening transactions or closing transactions or both; (iii) trading halts, suspensions or other restrictions may be imposed with respect to particular classes or series of options, or underlying securities; (iv) unusual or unforeseen circumstances, such as volume in excess of trading or clearing capability, may interrupt normal operations on an exchange; (v) the facilities of an exchange or a clearing corporation may not at all times be adequate to handle current trading volume; or (vi) one or more exchanges could, for economic or other reasons, decide or be compelled at some future date to discontinue the trading of options (or a particular class or series of options), in which event the secondary market on that exchange (or in

the class or series of options) would cease to exist, although outstanding options on the exchange that had been issued by a clearing corporation as a result of trades on that exchange would continue to be exercisable in accordance with their terms.

Disruptions in the markets for the securities underlying options purchased or sold by a Fund could result in losses on the options. If trading is interrupted in an underlying security, the trading of options on that security is normally halted as well. As a result, a Fund as purchaser or writer of an option will be unable to close out its positions until options trading resumes, and it may be faced with losses if trading in the security reopens at a substantially different price. In addition, the OCC or other options markets may impose exercise restrictions. If a prohibition on exercise is imposed at a time when trading in the option has also been halted, a Fund as purchaser or writer of an option will be locked into its position until one of the two restrictions has been lifted. If a prohibition on exercise remains in effect until an option owned by a Fund has expired, a Fund could lose the entire value of its option.

Special risks are presented by internationally traded options. Because of time differences between the United States and various foreign countries, and because different holidays are observed in different countries, foreign options markets may be open for trading during hours or on days when U.S. markets are closed. As a result, option premiums may not reflect the current prices of the underlying interest in the United States.

Writing Covered Options. A Fund may write covered call options and covered put options on securities held in its portfolio. Call options written by a Fund give the purchaser the right to buy the underlying securities from a Fund at the stated exercise price at any time prior to the expiration date of the option, regardless of the security's market price; put options give the purchaser the right to sell the underlying securities to a Fund at the stated exercise price at any time prior to the expiration date of the option, regardless of the security's market price.

A Fund may write covered options, which means that, so long as a Fund is obligated as the writer of a call option, it will own the underlying securities subject to the option (or comparable securities satisfying the cover requirements of securities exchanges). In the case of put options, a Fund will hold liquid securities equal to the price to be paid if the option is exercised. In addition, a Fund will be considered to have covered a put or call option if and to the extent that it holds an option that offsets some or all of the risk of the option it has written. A Fund may write combinations of covered puts and calls (straddles) on the same underlying security.

A Fund will receive a premium from writing a put or call option, which increases a Fund's return on the underlying security if the option expires unexercised or is closed out at a profit. The amount of the premium reflects, among other things, the relationship between the exercise price and the current market value of the underlying security, the volatility of the underlying security, the amount of time remaining until expiration, current interest rates, and the effect of supply and demand in the options market and in the market for the underlying security. By writing a call option, a Fund limits its opportunity to profit from any increase in the market value of the underlying security above the exercise price of the option but continues to bear the risk of a decline in the value of the underlying security. By writing a put option, a Fund assumes the risk that it may be required to purchase the underlying security for an exercise price higher than the security's then-current market value, resulting in a potential capital loss unless the security subsequently appreciates in value.

A Fund's obligation to sell an instrument subject to a call option written by it, or to purchase an instrument subject to a put option written by it, may be terminated prior to the expiration date of the option by a Fund's execution of a closing purchase transaction, which is effected by purchasing on an exchange an offsetting option of the same series (i.e., same underlying instrument, exercise price and expiration date) as the option previously written. A closing purchase transaction will ordinarily be effected in order to realize a profit on an outstanding option, to prevent an underlying instrument from being called, to permit the sale of the underlying instrument or to permit the writing of a new option containing different terms on such underlying instrument. A Fund realizes a profit or loss from a closing purchase transaction if the cost of the transaction (option premium plus transaction costs) is less or more than the premium received from writing the option. Because increases in the market price of a call option

generally reflect increases in the market price of the security underlying the option, any loss resulting from a closing purchase transaction may be offset in whole or in part by unrealized appreciation of the underlying security.

If a Fund writes a call option but does not own the underlying security, and when it writes a put option, a Fund may be required to deposit cash or securities with its broker as “margin” or collateral for its obligation to buy or sell the underlying security. As the value of the underlying security varies, a Fund may also have to deposit additional margin with the broker. Margin requirements are complex and are fixed by individual brokers, subject to minimum requirements currently imposed by the Federal Reserve Board and by stock exchanges and other self-regulatory organizations.

Purchasing Put Options. A Fund may purchase put options to protect its portfolio holdings in an underlying security against a decline in market value. Such hedge protection is provided during the life of the put option since a Fund, as holder of the put option, is able to sell the underlying security at the put exercise price regardless of any decline in the underlying security’s market price. For a put option to be profitable, the market price of the underlying security must decline sufficiently below the exercise price to cover the premium and transaction costs. By using put options in this manner, a Fund will reduce any profit it might otherwise have realized from appreciation of the underlying security by the premium paid for the put option and by transaction costs.

Purchasing Call Options. A Fund may purchase call options to hedge against an increase in the price of securities that a Fund wants ultimately to buy. Such hedge protection is provided during the life of the call option since a Fund, as holder of the call option, is able to buy the underlying security at the exercise price regardless of any increase in the underlying security’s market price. In order for a call option to be profitable, the market price of the underlying security must rise sufficiently above the exercise price to cover the premium and transaction costs. These costs will reduce any profit a Fund might have realized had it bought the underlying security at the time it purchased the call option.

Over-the-Counter (OTC) Options. OTC options (options not traded on exchanges) are generally established through negotiation with the other party to the options contract. A Fund will enter into OTC options transactions only with primary dealers in U.S. Government securities and, in the case of OTC options written by a Fund, only pursuant to agreements that will assure that a Fund will at all times have the right to repurchase the option written by it from the dealer at a specified formula price. A Fund will treat the amount by which such formula price exceeds the amount, if any, by which the option may be “in-the-money” as an illiquid investment. It is the present policy of a Fund not to enter into any OTC option transaction if, as a result, more than 15% (10% in some cases, refer to a Fund’s prospectus) of a Fund’s net assets would be invested in (i) illiquid investments (determined under the foregoing formula) relating to OTC options written by a Fund, (ii) OTC options purchased by a Fund, (iii) securities which are not readily marketable, and (iv) repurchase agreements maturing in more than seven days.

Swap Agreements

Swap agreements are derivative instruments that can be individually negotiated and structured to include exposure to a variety of different types of investments or market factors. Depending on their structure, swap agreements may increase or decrease a Fund’s exposure to long- or short-term interest rates, foreign currency values, mortgage securities, corporate borrowing rates, or other factors such as security prices or inflation rates. A Fund may enter into a variety of swap agreements, including interest rate, index, commodity, commodity futures, equity, equity index, credit default, bond futures, total return, portfolio and currency exchange rate swap agreements, and other types of swap agreements such as caps, collars and floors. A Fund also may enter into swaptions, which are options to enter into a swap agreement.

Swap agreements are usually entered into without an upfront payment because the value of each party’s position is the same. The market values of the underlying commitments will change over time, resulting in one of the commitments being worth more than the other and the net market value creating a risk exposure for one party or the other.

In a typical interest rate swap, one party agrees to make regular payments equal to a floating interest rate times a “notional principal amount,” in return for payments equal to a fixed rate times the same amount, for a specified period of time. If a swap agreement provides for payments in different currencies, the parties might agree to exchange notional principal amount as well. In a total return swap agreement, the non-floating rate side of the swap is based on the total return of an individual security, a basket of securities, an index or another reference asset. Swaps may also depend on other prices or rates, such as the value of an index or mortgage prepayment rates.

In a typical cap or floor agreement, one party agrees to make payments only under specified circumstances, usually in return for payment of a fee by the other party. For example, the buyer of an interest rate cap obtains the right to receive payments to the extent that a specified interest rate exceeds an agreed-upon level, while the seller of an interest rate floor is obligated to make payments to the extent that a specified interest rate falls below an agreed-upon level. Caps and floors have an effect similar to buying or writing options. A collar combines elements of buying a cap and selling a floor. In interest rate collar transactions, one party sells a cap and purchases a floor, or vice versa, in an attempt to protect itself against interest rate movements exceeding given minimum or maximum levels or collar amounts.

Swap agreements will tend to shift a Fund’s investment exposure from one type of investment to another. For example, if a Fund agreed to pay fixed rates in exchange for floating rates while holding fixed-rate bonds, the swap would tend to decrease a Fund’s exposure to long-term interest rates. Another example is if a Fund agreed to exchange payments in dollars for payments in foreign currency, the swap agreement would tend to decrease a Fund’s exposure to U.S. interest rates and increase its exposure to foreign currency and interest rates.

Because swaps are two-party contracts that may be subject to contractual restrictions on transferability and termination and because they may have terms of greater than seven days, swap agreements may be considered to be illiquid. If a swap is not liquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses. Moreover, a Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty. When a counterparty’s obligations are not fully secured by collateral, then the Fund is essentially an unsecured creditor of the counterparty. If the counterparty defaults, the Fund will have contractual remedies, but there is no assurance that a counterparty will be able to meet its obligations pursuant to such contracts or that, in the event of default, the Fund will succeed in enforcing contractual remedies. Counterparty risk still exists even if a counterparty’s obligations are secured by collateral because the Fund’s interest in collateral may not be perfected or additional collateral may not be promptly posted as required. Counterparty risk also may be more pronounced if a counterparty’s obligations exceed the amount of collateral held by the Fund (if any), the Fund is unable to exercise its interest in collateral upon default by the counterparty, or the termination value of the instrument varies significantly from the marked-to-market value of the instrument.

Counterparty risk with respect to derivatives will be affected by new rules and regulations affecting the derivatives market. Some derivatives transactions are required to be centrally cleared, and a party to a cleared derivatives transaction is subject to the credit risk of the clearing house and the clearing member through which it holds its cleared position, rather than the credit risk of its original counterparty to the derivative transaction. Credit risk of market participants with respect to derivatives that are centrally cleared is concentrated in a few clearing houses, and it is not clear how an insolvency proceeding of a clearing house would be conducted and what impact an insolvency of a clearing house would have on the financial system. A clearing member is obligated by contract and by applicable regulation to segregate all funds received from customers with respect to cleared derivatives transactions from the clearing member’s proprietary assets. However, all funds and other property received by a clearing broker from its customers are generally held by the clearing broker on a commingled basis in an omnibus account, and the clearing member may invest those funds in certain instruments permitted under the applicable regulations. The assets of a Fund might not be fully protected in the event of the bankruptcy of a Fund’s clearing member, because the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing broker’s customers for a relevant account class. Also, the clearing member is required to transfer to the clearing organization the amount of margin required by the

clearing organization for cleared derivatives, which amounts are generally held in an omnibus account at the clearing organization for all customers of the clearing member. Regulations promulgated by the CFTC require that the clearing member notify the clearing house of the amount of initial margin provided by the clearing member to the clearing organization that is attributable to each customer. However, if the clearing member does not provide accurate reporting, the Funds are subject to the risk that a clearing organization will use a Fund's assets held in an omnibus account at the clearing organization to satisfy payment obligations of a defaulting customer of the clearing member to the clearing organization. In addition, clearing members generally provide to the clearing organization the net amount of variation margin required for cleared swaps for all of its customers in the aggregate, rather than the gross amount of each customer. The Funds are therefore subject to the risk that a clearing organization will not make variation margin payments owed to a Fund if another customer of the clearing member has suffered a loss and is in default, and the risk that a Fund will be required to provide additional variation margin to the clearing house before the clearing house will move the Fund's cleared derivatives transactions to another clearing member. In addition, if a clearing member does not comply with the applicable regulations or its agreement with the Funds, or in the event of fraud or misappropriation of customer assets by a clearing member, a Fund could have only an unsecured creditor claim in an insolvency proceeding of the clearing member with respect to the margin held by the clearing member.

Interest Rate Swaps. Interest rate swap agreements are often used to obtain or preserve a desired return or spread at a lower cost than through a direct investment in an instrument that yields the desired return or spread. They are financial instruments that involve the exchange of one type of interest rate cash flow for another type of interest rate cash flow on specified dates in the future. In a standard interest rate swap transaction, two parties agree to exchange their respective commitments to pay fixed or floating interest rates on a predetermined specified (notional) amount. The swap agreement's notional amount is the predetermined basis for calculating the obligations that the swap counterparties have agreed to exchange. Under most swap agreements, the obligations of the parties are exchanged on a net basis. The two payment streams are netted out, with each party receiving or paying, as the case may be, only the net amount of the two payments. Interest rate swaps can be based on various measures of interest rates, including LIBOR, swap rates, Treasury rates and foreign interest rates.

Credit Default Swap Agreements. A Fund may enter into credit default swap agreements, which may have as reference obligations one or more securities or a basket of securities that are or are not currently held by a Fund. The protection "buyer" in a credit default contract is generally obligated to pay the protection "seller" an upfront or a periodic stream of payments over the term of the contract provided that no credit event, such as a default, on a reference obligation has occurred. If a credit event occurs, the seller generally must pay the buyer the "par value" (full notional value) of the swap in exchange for an equal face amount of deliverable obligations of the reference entity described in the swap, or the seller may be required to deliver the related net cash amount, if the swap is cash settled. A Fund may be either the buyer or seller in a credit default swap. If a Fund is a buyer and no credit event occurs, a Fund may recover nothing if the swap is held through its termination date. However, if a credit event occurs, the buyer generally may elect to receive the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity whose value may have significantly decreased. As a seller, a Fund generally receives an upfront payment or a fixed rate of income throughout the term of the swap provided that there is no credit event. As the seller, a Fund would effectively add leverage to its portfolio because, in addition to its total net assets, a Fund would be subject to investment exposure on the notional amount of the swap.

Credit default swap agreements may involve greater risks than if a Fund had invested in the reference obligation directly since, in addition to risks relating to the reference obligation, credit default swaps are subject to illiquidity risk, counterparty risk and credit risk. A Fund will enter into credit default swap agreements generally with counterparties that meet certain standards of creditworthiness. A buyer generally will lose its investment and recover nothing if no credit event occurs and the swap is held to its termination date. If a credit event were to occur, the value of any deliverable obligation received by the seller, coupled with the upfront or periodic payments previously received, may be less than the full notional value it pays to the buyer, resulting in a loss of value to the seller.

A Fund's obligations under a credit default swap agreement will be accrued daily (offset against any amounts owing to the Fund). In connection with credit default swaps in which a Fund is the buyer, the Fund will segregate or " earmark " cash or other liquid assets, or enter into certain offsetting positions, with a value at least equal to the Fund's exposure (any accrued but unpaid net amounts owed by the Fund to any counterparty), on a mark-to-market basis. In connection with credit default swaps in which a Fund is the seller, the Fund will segregate or " earmark " cash or other liquid assets, or enter into offsetting positions, with a value at least equal to the full notional amount of the swap (minus any amounts owed to the Fund). Such segregation or " earmarking " will ensure that a Fund has assets available to satisfy its obligations with respect to the transaction. Such segregation or " earmarking " will not limit a Fund's exposure to loss.

Equity Swaps. A Fund may engage in equity swaps. Equity swaps allow the parties to the swap agreement to exchange components of return on one equity investment (e.g., a basket of equity securities or an index) for a component of return on another non-equity or equity investment, including an exchange of differential rates of return. Equity swaps may be used to invest in a market without owning or taking physical custody of securities in circumstances where direct investment may be restricted for legal reasons or is otherwise impractical. Equity swaps also may be used for other purposes, such as hedging or seeking to increase total return.

The values of equity swaps can be very volatile. To the extent that the Investment Manager does not accurately analyze and predict the potential relative fluctuation on the components swapped with the other party, a Fund may suffer a loss. The value of some components of an equity swap (such as the dividend on a common stock) may also be sensitive to changes in interest rates. Furthermore, during the period a swap is outstanding, a Fund may suffer a loss if the counterparty defaults.

Total Return Swap Agreements. Total return swap agreements are contracts in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to a Fund's portfolio because, in addition to its total net assets, a Fund would be subject to investment exposure on the notional amount of the swap.

Total return swap agreements are subject to the risk that a counterparty will default on its payment obligations to a Fund thereunder, and conversely, that a Fund will not be able to meet its obligation to the counterparty. Generally, a Fund will enter into total return swaps on a net basis (i.e., the two payment streams are netted against one another with a Fund receiving or paying, as the case may be, only the net amount of the two payments). The net amount of the excess, if any, of a Fund's obligations over its entitlements with respect to each total return swap will be accrued on a daily basis, and an amount of liquid assets having an aggregate net asset value (NAV) at least equal to the accrued excess will be segregated by a Fund. If the total return swap transaction is entered into on other than a net basis, the full amount of a Fund's obligations will be accrued on a daily basis, and the full amount of a Fund's obligations will be segregated by a Fund in an amount equal to or greater than the market value of the liabilities under the total return swap agreement or the amount it would have cost a Fund initially to make an equivalent direct investment, plus or minus any amount a Fund is obligated to pay or is to receive under the total return swap agreement.

Variance, Volatility and Correlation Swap Agreements. Variance and volatility swaps are contracts that provide exposure to increases or decreases in the volatility of certain referenced assets. Correlation swaps are contracts that provide exposure to increases or decreases in the correlation between the prices of different assets or different market rates.

Commodity-Linked Swaps. Commodity-linked swaps are two-party contracts in which the parties agree to exchange the return or interest rate on one instrument for the return of a particular commodity, commodity

index or commodities futures or options contract. The payment streams are calculated by reference to an agreed upon notional amount. A one-period swap contract operates in a manner similar to a forward or futures contract because there is an agreement to swap a commodity for cash at only one forward date. A Fund may engage in swap transactions that have more than one period and therefore more than one exchange of commodities. A Fund may invest in total return commodity swaps to gain exposure to the overall commodity markets. In a total return commodity swap, a Fund will receive the price appreciation of a commodity index, a portion of the index, or a single commodity in exchange for paying an agreed-upon fee. If the commodity swap is for one period, the Fund will pay a fixed fee, established at the outset of the swap. However, if the term of the commodity swap is more than one period, with interim swap payments, the Fund will pay an adjustable or floating fee. With a “floating” rate, the fee is pegged to a base rate such as LIBOR, and is adjusted each period. Therefore, if interest rates increase over the term of the swap contract, a Fund may be required to pay a higher fee at each swap reset date.

Cross Currency Swaps. Cross currency swaps are similar to interest rate swaps, except that they involve multiple currencies. A Fund may enter into a cross currency swap when it has exposure to one currency and desires exposure to a different currency. Typically, the interest rates that determine the currency swap payments are fixed, although occasionally one or both parties may pay a floating rate of interest. Unlike an interest rate swap, however, the principal amounts are exchanged at the beginning of the contract and returned at the end of the contract. In addition to paying and receiving amounts at the beginning and termination of the agreements, both sides will have to pay in full periodically based upon the currency they have borrowed. Changes in foreign exchange currency rates and changes in interest rates, as described above, may negatively affect currency swaps.

Contracts for Differences. Contracts for differences are swap arrangements in which the parties agree that their return (or loss) will be based on the relative performance of two different groups or baskets of securities. Often, one or both baskets will be an established securities index. A Fund’s return will be based on changes in value of theoretical long futures positions in the securities comprising one basket (with an aggregate face value equal to the notional amount of the contract for differences) and theoretical short futures positions in the securities comprising the other basket. A Fund also may use actual long and short futures positions and achieve similar market exposure by netting the payment obligations of the two contracts. A Fund typically enters into contracts for differences (and analogous futures positions) when the Investment Manager believes that the basket of securities constituting the long position will outperform the basket constituting the short position. If the short basket outperforms the long basket, a Fund will realize a loss — even in circumstances when the securities in both the long and short baskets appreciate in value.

Swaptions. A swaption is an options contract on a swap agreement. These transactions that give a counterparty the right (but not the obligation) to enter into new swap agreements or to shorten, extend, cancel or otherwise modify an existing swap agreement (which are described herein) at some designated future time on specified terms, in return for payment of the purchase price (the “premium”) of the option. A Fund may write (sell) and purchase put and call swaptions to the same extent it may make use of standard options on securities or other instruments. The writer of the contract receives the premium and bears the risk of unfavorable changes in the market value on the underlying swap agreement. Swaptions can be bundled and sold as a package. These are commonly called interest rate caps, floors and collars (which are described herein).

Many swaps are complex and often valued subjectively. Many over-the-counter derivatives are complex and their valuation often requires modeling and judgment, which increases the risk of mispricing or incorrect valuation. The pricing models used may not produce valuations that are consistent with the values the Fund realizes when it closes or sells an over-the-counter derivative. Valuation risk is more pronounced when the Fund enters into over-the-counter derivatives with specialized terms because the market value of those derivatives in some cases is determined in part by reference to similar derivatives with more standardized terms. Incorrect valuations may result in increased cash payment requirements to counterparties, undercollateralization and/or errors in calculation of the Fund’s net asset value. Title VII of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”) established a framework for the regulation of OTC swap markets; the framework outlined the joint responsibility of the CFTC and the SEC in regulating swaps. The CFTC is

responsible for the regulation of swaps, the SEC is responsible for the regulation of security-based swaps and they are both jointly responsible for the regulation of mixed swaps.

Risk of Potential Governmental Regulation of Derivatives

It is possible that government regulation of various types of derivative instruments, including futures and swap agreements, may limit or prevent the Funds from using such instruments as a part of their investment strategy, and could ultimately prevent the Funds from being able to achieve their investment objectives. It is impossible to predict fully the effects of legislation and regulation in this area, but the effects could be substantial and adverse. The futures markets are subject to comprehensive statutes, regulations, and margin requirements. The SEC, the CFTC and the exchanges are authorized to take extraordinary actions in the event of a market emergency, including, for example, the implementation or reduction of speculative position limits, the implementation of higher margin requirements, the establishment of daily price limits and the suspension of trading.

The regulation of swaps and futures transactions in the U.S. is a rapidly changing area of law and is subject to modification by government and judicial action. There is a possibility of future regulatory changes altering, perhaps to a material extent, the nature of an investment in a Fund or the ability of a Fund to continue to implement its investment strategies. In particular, the Dodd-Frank Act, which was signed into law in July 2010, sets forth a new legislative framework for OTC derivatives, such as swaps, in which the Funds may invest. Title VII of the Dodd-Frank Act makes broad changes to the OTC derivatives market, grants significant new authority to the SEC and the CFTC to regulate OTC derivatives and market participants, and will require clearing of many OTC derivatives transactions.

Additional Risk Factors in Cleared Derivatives Transactions

Under recently adopted rules and regulations, transactions in some types of swaps (including interest rate swaps and credit default swaps on North American and European indices) are required to be centrally cleared. In a transaction involving those swaps (“cleared derivatives”), a Fund’s counterparty is a clearing house, rather than a bank or broker. Since the Funds are not members of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Funds will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Funds will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Clearing members guarantee performance of their clients’ obligations to the clearing house.

In many ways, cleared derivative arrangements are less favorable to mutual funds than bilateral arrangements. For example, the Funds may be required to provide more margin for cleared derivatives positions than for bilateral derivatives positions. Also, in contrast to a bilateral derivatives position, following a period of notice to a Fund, a clearing member generally can require termination of an existing cleared derivatives position at any time or an increase in margin requirements above the margin that the clearing member required at the beginning of a transaction. Clearing houses also have broad rights to increase margin requirements for existing positions or to terminate those positions at any time. Any increase in margin requirements or termination of existing cleared derivatives positions by the clearing member or the clearing house could interfere with the ability of a Fund to pursue its investment strategy. Further, any increase in margin requirements by a clearing member could expose a Fund to greater credit risk to its clearing member because margin for cleared derivatives positions in excess of a clearing house’s margin requirements typically is held by the clearing member. Also, a Fund is subject to risk if it enters into a derivatives transaction that is required to be cleared (or that the Adviser expects to be cleared), and no clearing member is willing or able to clear the transaction on the Fund’s behalf. While the documentation in place between the Funds and their clearing members generally provides that the clearing members will accept for clearing all cleared derivatives transactions that are within credit limits (specified in advance) for each Fund, the Funds are still subject to the risk that no clearing member will be willing or able to clear a transaction. In those cases, the position might have to be terminated, and the Fund could lose some or all of the benefit of the position, including loss of an increase in the value of the position and/or loss

of hedging protection. In addition, the documentation governing the relationship between the Funds and clearing members is drafted by the clearing members and generally is less favorable to the Funds than typical bilateral derivatives documentation. For example, documentation relating to cleared derivatives generally includes a one-way indemnity by the Funds in favor of the clearing member for losses the clearing member incurs as the Funds' clearing member and typically does not provide the Funds any remedies if the clearing member defaults or becomes insolvent. While futures contracts entail similar risks, the risks likely are more pronounced for cleared swaps due to their more limited liquidity and market history.

Some types of cleared derivatives are required to be executed on an exchange or on a swap execution facility. A swap execution facility is a trading platform where multiple market participants can execute derivatives by accepting bids and offers made by multiple other participants in the platform. While this execution requirement is designed to increase transparency and liquidity in the cleared derivatives market, trading on a swap execution facility can create additional costs and risks for the Funds. For example, swap execution facilities typically charge fees, and if a Fund executes derivatives on a swap execution facility through a broker intermediary, the intermediary may impose fees as well. Also, a Fund may indemnify a swap execution facility, or a broker intermediary who executes cleared derivatives on a swap execution facility on the Fund's behalf, against any losses or costs that may be incurred as a result of the Fund's transactions on the swap execution facility.

These and other new rules and regulations could, among other things, further restrict a Fund's ability to engage in, or increase the cost to the Fund of, derivatives transactions, for example, by making some types of derivatives no longer available to the Fund, increasing margin or capital requirements, or otherwise limiting liquidity or increasing transaction costs. These regulations are new and evolving, so their potential impact on the Funds and the financial system are not yet known. While the new regulations and central clearing of some derivatives transactions are designed to reduce systemic risk (i.e., the risk that the interdependence of large derivatives dealers could cause them to suffer liquidity, solvency or other challenges simultaneously), there is no assurance that the new clearing mechanisms will achieve that result, and in the meantime, as noted above, central clearing and related requirements expose the Funds to new kinds of risks and costs.

CFTC Regulation

Each of the Funds listed on the cover of this SAI qualifies for an exclusion from the definition of a commodity pool under the CEA and has filed a notice of exclusion under CFTC Rule 4.5. Accordingly, the Investment Manager is not subject to registration or regulation as a "commodity pool operator" under the CEA with respect to the Funds. To remain eligible for the exclusion, each of the Funds is limited in its ability to use certain financial instruments regulated under the CEA ("commodity interests"), including futures and options on futures and certain swaps transactions. In the event that a Fund's investments in commodity interests are not within the thresholds set forth in the exclusion, the Investment Manager may be required to register as a "commodity pool operator" with the CFTC with respect to that Fund. The Investment Manager's eligibility to claim the exclusion with respect to a Fund will be based upon, among other things, the level and scope of a Fund's investments in commodity interests, the purposes of such investments and the manner in which the Fund holds out its use of commodity interests. Each Fund's ability to invest in commodity interests (including, but not limited to, futures and swaps on broad-based securities indexes and interest rates) is limited by the Investment Manager's intention to operate the Fund in a manner that would permit the Investment Manager to continue to claim the exclusion under CFTC Rule 4.5, which may adversely affect the Fund's total return. In the event the Investment Manager becomes unable to rely on the exclusion in Rule 4.5 and is required to register with the CFTC as a commodity pool operator with respect to a Fund, the Fund's expenses may increase, adversely affecting that Fund's total return. The Columbia Wanger Funds do not expect to have significant investments, if any, in commodity interests.

Equity-Linked Notes

An equity-linked note (ELN) is a debt instrument whose value is based on the value of a single equity security, basket of equity securities or an index of equity securities (each, an Underlying Equity). An ELN typically provides

interest income, thereby offering a yield advantage over investing directly in an Underlying Equity. The Fund may purchase ELNs that trade on a securities exchange or those that trade on the over-the-counter markets, including Rule 144A securities. The Fund may also purchase ELNs in a privately negotiated transaction with the issuer of the ELNs (or its broker-dealer affiliate). The Fund may or may not hold an ELN until its maturity.

Equity-linked securities also include issues such as Structured Yield Product Exchangeable for Stock (STRYPES), Trust Automatic Common Exchange Securities (TRACES), Trust Issued Mandatory Exchange Securities (TIMES) and Trust Enhanced Dividend Securities (TRENDS). The issuers of these equity-linked securities generally purchase and hold a portfolio of stripped U.S. Treasury securities maturing on a quarterly basis through the conversion date, and a forward purchase contract with an existing shareholder of the company relating to the common stock. Quarterly distributions on such equity-linked securities generally consist of the cash received from the U.S. Treasury securities and such equity-linked securities generally are not entitled to any dividends that may be declared on the common stock.

Eurodollar and Yankee Dollar and Related Derivatives Instruments

Eurodollar instruments are bonds that pay interest and principal in U.S. dollars held in banks outside the United States, primarily in Europe. Eurodollar instruments are usually issued on behalf of multinational companies and foreign governments by large underwriting groups composed of banks and issuing houses from many countries. Yankee Dollar instruments are U.S. dollar-denominated bonds issued in the United States by foreign banks and corporations. These investments involve risks that are different from investments in securities issued by U.S. issuers. Eurodollar futures contracts enable purchasers to obtain a fixed rate for the lending of funds and sellers to obtain a fixed rate for borrowings. A Fund may use Eurodollar futures contracts and options thereon to hedge against changes in the LIBOR, to which many interest rate swaps and fixed income instruments are linked.

Foreign Currency Transactions

Because investments in foreign securities usually involve currencies of foreign countries and because a Fund may hold cash and cash equivalent investments in foreign currencies, the value of a Fund's assets as measured in U.S. dollars may be affected favorably or unfavorably by changes in currency exchange rates and exchange control regulations. Also, a Fund may incur costs in connection with conversions between various currencies. Currency exchange rates may fluctuate significantly over short periods of time, causing a Fund's net asset value to fluctuate. Currency exchange rates are generally determined by the forces of supply and demand in the foreign exchange markets, actual or anticipated changes in interest rates, and other complex factors. Currency exchange rates also can be affected by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments.

Spot Rates and Derivative Instruments. A Fund may conduct its foreign currency exchange transactions either at the spot (cash) rate prevailing in the foreign currency exchange market or by entering into forward foreign currency exchange contracts (forward contracts). (See ***Permissible Fund Investments — Derivatives.***) These contracts are traded in the interbank market conducted directly between currency traders (usually large commercial banks) and their customers. Because foreign currency transactions occurring in the interbank market might involve substantially larger amounts than those involved in the use of such derivative instruments, a Fund could be disadvantaged by having to deal in the odd lot market for the underlying foreign currencies at prices that are less favorable than for round lots.

A Fund may enter into forward contracts for a variety of reasons, including for risk management (hedging) or for investment purposes.

When a Fund enters into a contract for the purchase or sale of a security denominated in a foreign currency or has been notified of a dividend or interest payment, it may desire to lock in the price of the security or the amount of

the payment, usually in U.S. dollars, although it could desire to lock in the price of the security in another currency. By entering into a forward contract, a Fund would be able to protect itself against a possible loss resulting from an adverse change in the relationship between different currencies from the date the security is purchased or sold to the date on which payment is made or received or when the dividend or interest is actually received.

A Fund may enter into forward contracts when the Investment Manager believes the currency of a particular foreign country may decline in value relative to another currency. When selling currencies forward in this fashion, a Fund may seek to hedge the value of foreign securities it holds against an adverse move in exchange rates. The precise matching of forward contract amounts and the value of securities involved generally will not be possible since the future value of securities in foreign currencies more than likely will change between the date the forward contract is entered into and the date it matures. The projection of short-term currency market movements is extremely difficult and successful execution of a short-term hedging strategy is highly uncertain.

This method of protecting the value of a Fund's securities against a decline in the value of a currency does not eliminate fluctuations in the underlying prices of the securities. It simply establishes a rate of exchange that can be achieved at some point in time. Although forward contracts can be used to minimize the risk of loss due to a decline in value of hedged currency, they will also limit any potential gain that might result should the value of such currency increase.

A Fund may also enter into forward contracts when the Investment Manager believes the currency of a particular country will increase in value relative to another currency. A Fund may buy currencies forward to gain exposure to a currency without incurring the additional costs of purchasing securities denominated in that currency.

For example, the combination of U.S. dollar-denominated instruments with long forward currency exchange contracts creates a position economically equivalent to a position in the foreign currency, in anticipation of an increase in the value of the foreign currency against the U.S. dollar. Conversely, the combination of U.S. dollar-denominated instruments with short forward currency exchange contracts is economically equivalent to borrowing the foreign currency for delivery at a specified date in the future, in anticipation of a decrease in the value of the foreign currency against the U.S. dollar.

Unanticipated changes in the currency exchange results could result in poorer performance for Funds that enter into these types of transactions.

A Fund may designate cash or securities in an amount equal to the value of the Fund's total assets committed to consummating forward contracts entered into under the circumstance set forth above. If the value of the securities declines, additional cash or securities will be designated on a daily basis so that the value of the cash or securities will equal the amount of the Fund's commitments on such contracts.

At maturity of a forward contract, a Fund may either deliver (if a contract to sell) or take delivery of (if a contract to buy) the foreign currency or terminate its contractual obligation by entering into an offsetting contract with the same currency trader, having the same maturity date, and covering the same amount of foreign currency.

If a Fund engages in an offsetting transaction, it will incur a gain or loss to the extent there has been movement in forward contract prices. If a Fund engages in an offsetting transaction, it may subsequently enter into a new forward contract to buy or sell the foreign currency.

Although a Fund values its assets each business day in terms of U.S. dollars, it may not intend to convert its foreign currencies into U.S. dollars on a daily basis. However, it will do so from time to time, and such conversions involve certain currency conversion costs. Although foreign exchange dealers do not charge a fee for conversion, they do realize a profit based on the difference (spread) between the prices at which they buy and sell various currencies. Thus, a dealer may offer to sell a foreign currency to a Fund at one rate, while offering a lesser rate of exchange should a Fund desire to resell that currency to the dealer.

It is possible, under certain circumstances, including entering into forward currency contracts for investment purposes, that a Fund will be required to limit or restructure its forward contract currency transactions to qualify as a “regulated investment company” under the Internal Revenue Code.

Options on Foreign Currencies. A Fund may buy put and call options and write covered call and cash-secured put options on foreign currencies for hedging purposes and to gain exposure to foreign currencies. For example, a decline in the dollar value of a foreign currency in which securities are denominated will reduce the dollar value of such securities, even if their value in the foreign currency remains constant. In order to protect against the diminutions in the value of securities, a Fund may buy put options on the foreign currency. If the value of the currency does decline, a Fund would have the right to sell the currency for a fixed amount in dollars and would thereby offset, in whole or in part, the adverse effect on its portfolio that otherwise would have resulted.

Conversely, where a change in the dollar value of a currency would increase the cost of securities a Fund plans to buy, or where a Fund would benefit from increased exposure to the currency, a Fund may buy call options on the foreign currency, giving it the right to purchase the currency for a fixed amount in dollars. The purchase of the options could offset, at least partially, the changes in exchange rates.

As in the case of other types of options, however, the benefit to a Fund derived from purchases of foreign currency options would be reduced by the amount of the premium and related transaction costs. In addition, where currency exchange rates do not move in the direction or to the extent anticipated, a Fund could sustain losses on transactions in foreign currency options that would require it to forego a portion or all of the benefits of advantageous changes in rates.

A Fund may write options on foreign currencies for similar purposes. For example, when a Fund anticipates a decline in the dollar value of foreign-denominated securities due to adverse fluctuations in exchange rates, it could, instead of purchasing a put option, write a call option on the relevant currency, giving the option holder the right to purchase that currency from the Fund for a fixed amount in dollars. If the expected decline occurs, the option would most likely not be exercised and the diminution in value of securities would be offset, at least partially, by the amount of the premium received.

Similarly, instead of purchasing a call option when a foreign currency is expected to appreciate, a Fund could write a put option on the relevant currency, giving the option holder the right to that currency from the Fund for a fixed amount in dollars. If rates move in the manner projected, the put option would expire unexercised and allow the Fund to hedge increased cost up to the amount of the premium.

As in the case of other types of options, however, the writing of a foreign currency option will constitute only a partial hedge up to the amount of the premium, and only if rates move in the expected direction. If this does not occur, the option may be exercised and the Fund would be required to buy or sell the underlying currency at a loss that may not be offset by the amount of the premium. Through the writing of options on foreign currencies, the Fund also may be required to forego all or a portion of the benefits that might otherwise have been obtained from favorable movements on exchange rates. An option written on foreign currencies is covered if a Fund holds currency sufficient to cover the option or has an absolute and immediate right to acquire that currency without additional cash consideration upon conversion of assets denominated in that currency or exchange of other currency held in its portfolio. An option writer could lose amounts substantially in excess of its initial investments due to the margin and collateral requirements associated with such positions.

Options on foreign currencies are traded through financial institutions acting as market-makers, although foreign currency options also are traded on certain national securities exchanges, such as the Philadelphia Stock Exchange and the Chicago Board Options Exchange, subject to SEC regulation. In an over-the-counter trading environment, many of the protections afforded to exchange participants will not be available. For example, there are no daily price fluctuation limits, and adverse market movements could therefore continue to an unlimited

extent over a period of time. Although the purchaser of an option cannot lose more than the amount of the premium plus related transaction costs, this entire amount could be lost.

Foreign currency option positions entered into on a national securities exchange are cleared and guaranteed by the OCC, thereby reducing the risk of counterparty default. Further, a liquid secondary market in options traded on a national securities exchange may be more readily available than in the over-the-counter market, potentially permitting a Fund to liquidate open positions at a profit prior to exercise or expiration, or to limit losses in the event of adverse market movements.

Foreign Currency Futures and Related Options. A Fund may enter into currency futures contracts to buy or sell currencies. It also may buy put and call options and write covered call and cash-secured put options on currency futures. Currency futures contracts are similar to currency forward contracts, except that they are traded on exchanges (and have margin requirements) and are standardized as to contract size and delivery date. Most currency futures call for payment of delivery in U.S. dollars. A Fund may use currency futures for the same purposes as currency forward contracts, subject to CFTC limitations.

Currency futures and options on futures values can be expected to correlate with exchange rates, but will not reflect other factors that may affect the value of the Fund's investments. A currency hedge, for example, should protect a Yen-denominated bond against a decline in the Yen, but will not protect a Fund against price decline if the issuer's creditworthiness deteriorates. Because the value of a Fund's investments denominated in foreign currency will change in response to many factors other than exchange rates, it may not be possible to match the amount of a forward contract to the value of a Fund's investments denominated in that currency over time.

Foreign Securities

Foreign securities include debt, equity and derivative securities that the Investment Manager determines are "foreign" based primarily on the consideration of an issuer's domicile, its principal place of business/ organization/incorporation, its primary stock exchange listing, the source of its revenue, the location of its assets, its exposure to the economic fortunes and risks of countries or geographic regions outside the United States, and other factors. Foreign securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind or step-coupon securities and may be privately placed or publicly offered. See ***Permissible Fund Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities*** and ***Permissible Fund Investments — Private Placement and Other Restricted Securities*** for more information.

Foreign securities may include depositary receipts, such as American Depositary Receipts (ADRs), European Depositary Receipts (EDRs) and Global Depositary Receipts (GDRs). ADRs are U.S. dollar-denominated receipts issued in registered form by a domestic bank or trust company that evidence ownership of underlying securities issued by a foreign issuer. EDRs are foreign currency-denominated receipts issued in Europe, typically by foreign banks or trust companies and foreign branches of domestic banks, that evidence ownership of foreign or domestic securities. GDRs are receipts structured similarly to ADRs and EDRs and are marketed globally. Depositary receipts will not necessarily be denominated in the same currency as their underlying securities. In general, ADRs, in registered form, are designed for use in the U.S. securities markets, and EDRs, in bearer form, are designed for use in European securities markets. GDRs are tradable both in the United States and in Europe and are designed for use throughout the world. A Fund may invest in depositary receipts through "sponsored" or "unsponsored" facilities. A sponsored facility is established jointly by the issuer of the underlying security and a depositary, whereas a depositary may establish an unsponsored facility without participation by the issuer of the deposited security. Holders of unsponsored depositary receipts generally bear all the costs of such facilities and the depositary of an unsponsored facility frequently is under no obligation to distribute interestholder communications received from the issuer of the deposited security or to pass through voting rights to the holders of such receipts in respect of the deposited securities. The issuers of unsponsored depositary receipts are not obligated to disclose material information in the United States, and, therefore, there may be limited information available regarding such issuers and/or limited correlation between available information and the market value of the depositary receipts.

Due to the potential for foreign withholding taxes, Morgan Stanley Capital International (MSCI) publishes two versions of its indices reflecting the reinvestment of dividends using two different methodologies: gross dividends and net dividends. While both versions reflect reinvested dividends, they differ with respect to the manner in which taxes associated with dividend payments are treated. In calculating the net dividends version, MSCI incorporates reinvested dividends applying the withholding tax rate applicable to foreign non-resident institutional investors that do not benefit from double taxation treaties. The Investment Manager believes that the net dividends version of MSCI indices better reflects the returns U.S. investors might expect were they to invest directly in the component securities of an MSCI index.

Investing in foreign securities is subject to certain risks. For example, foreign markets can be extremely volatile. Fluctuations in currency exchange rates also may impact the value of foreign securities denominated in foreign currencies or U.S. dollars, without a change in the intrinsic value of those securities. Additionally, the U.S. dollar value of a foreign security tends to decrease when the value of the U.S. dollar rises against the foreign currency in which the security is denominated and tends to increase when the value of the U.S. dollar falls against such currency. A Fund may attempt to minimize the risk from adverse changes in the relationship between the U.S. dollar and foreign currencies by purchasing and selling forward foreign currency exchange contracts and foreign currency futures contracts and related options. Foreign securities may be less liquid than domestic securities so that a Fund may, at times, be unable to sell foreign securities at desirable prices. Brokerage commissions, custodial fees and other fees also are generally higher for foreign securities. A Fund may have limited legal recourse in the event of default with respect to certain debt securities issued by foreign governments. Foreign governments may impose potentially confiscatory withholding or other taxes, which would reduce a Fund's return on these securities. There is generally less publicly available information about foreign companies. Investments in foreign companies may be adversely affected by the impact of political, social or diplomatic events or possible seizure, expropriation or nationalization of a company or its assets resulting in a partial or total loss of an investment in such foreign companies. Accounting, auditing and financial reporting standards may also be less comprehensive and stringent than those applicable to domestic companies. Investments in foreign securities are also subject to the risk of potential imposition of economic and other sanctions against a particular foreign country, its nationals or industries or businesses within the country. The risks posed by such sanctions may be heightened to the extent the Fund invests significantly in the affected country or region or in issuers from the affected country that depend on global markets.

Operational and Settlement Risks of Foreign Securities. A Fund's foreign securities are generally held outside the United States in the primary market for the securities in the custody of certain eligible foreign banks and trust companies, as permitted under the 1940 Act ("foreign sub-custodians"). Settlement practices for foreign securities may differ from those in the United States. Some countries have limited governmental oversight and regulation of industry practices, stock exchanges, depositories, registrars, brokers and listed companies, which increases the risk of corruption and fraud and the possibility of losses to a Fund. In particular, under certain circumstances, foreign securities may settle on a delayed delivery basis, meaning that the Fund may be required to make payment for securities before the Fund has actually received delivery of the securities or deliver securities prior to the receipt of payment. Typically, in these cases, the Fund will receive evidence of ownership in accordance with the generally accepted settlement practices in the local market entitling the Fund to delivery or payment at a future date, but there is a risk that the security will not be delivered to the Fund or that payment will not be received, although the Fund and its foreign sub-custodians take reasonable precautions to mitigate this risk. Losses can also result from lost, stolen or counterfeit securities; defaults by brokers and banks; failures or defects of the settlement system; or poor and improper record keeping by registrars and issuers.

Share Blocking. Share blocking refers to a practice in certain foreign markets under which an issuer's securities are blocked from trading at the custodian or sub-custodian level for a specified number of days before and, in certain instances, after a shareholder meeting where a vote of shareholders takes place. The blocking period can last up to several weeks. Share blocking may prevent a Fund from buying or selling securities during this period, because during the time shares are blocked, trades in such securities will not settle. It may be difficult or impossible to lift blocking restrictions, with the particular requirements varying widely by country. As a

consequence of these restrictions, the Investment Manager, on behalf of a Fund, may abstain from voting proxies in markets that require share blocking.

Emerging Market Securities. Risks associated with investments in foreign securities are increased with respect to investments in emerging market countries. Political and economic structures in many emerging market countries, especially Russia and those in Eastern Europe, the Middle East, Asia, Latin America and Africa, are undergoing significant evolutionary changes and rapid development, and may lack the social, political and economic stability of more developed countries. Investing in emerging market securities also involves risks beyond the risks applicable to foreign investments. In addition, a Fund’s investments in frontier markets carry heightened risks as compared with investments in traditional emerging markets. Frontier market countries (for example, Vietnam, Colombia, Nigeria and Kazakhstan) generally have smaller economies and even less developed capital markets than typical emerging market countries (which themselves have increased investment risk relative to investing in more developed markets) and, as a result, the risks of investing in emerging market countries are magnified in frontier market countries.

Operational and Settlement Risks of Securities in Emerging Markets. In addition to having less developed securities markets, banks in emerging markets that are eligible foreign sub-custodians may be recently organized, lack extensive operating experience or lack effective government oversight or regulation. In addition, there may be legal restrictions or limitations on the ability of a Fund to recover assets held in custody by a foreign sub-custodian in the event of the bankruptcy of the sub-custodian. Because settlement systems may be less organized than in developed markets and because delivery versus payment settlement may not be possible or reliable, there may be a greater risk that settlement may be delayed and that cash or securities of a Fund may be lost because of failures of or defects in the system, including fraud or corruption. Settlement systems in emerging markets also have a higher risk of failed trades.

Risks Related to Currencies and Corporate Actions in Emerging Markets. Risks related to currencies and corporate actions are also greater in emerging market countries than in developed countries. For example, some emerging market countries may have fixed or managed currencies that are not free-floating against the U.S. dollar. Further, certain currencies may not be traded internationally, or countries may have varying exchange rates. Some emerging market countries have a higher risk of currency devaluations, and some of these countries may experience sustained periods of high inflation or rapid changes in inflation rates which can have negative effects on a country’s economy and securities markets. Corporate action procedures in emerging market countries may be less reliable and have limited or no involvement by the depositories and central banks. Lack of standard practices and payment systems can lead to significant delays in payment.

Risks Related to Corporate and Securities Laws in Emerging Markets. Securities laws in emerging markets may be relatively new and unsettled and, consequently, there is a risk of rapid and unpredictable change in laws regarding foreign investment, securities regulation, title to securities and shareholder rights. Accordingly, foreign investors may be adversely affected by new or amended laws and regulations. In addition, the systems of corporate governance to which issuers in certain emerging markets are subject may be less advanced than the systems to which issuers located in more developed countries are subject, and therefore, shareholders of such issuers may not receive many of the protections available to shareholders of issuers located in more developed countries. These risks may be heightened in certain countries, including, without limitation, Russia.

Under normal conditions, the Funds’ investments in foreign companies (as a percent of total assets) are allocated as follows:

<u>Fund</u>	<u>Total</u>	<u>Developed Countries</u>	<u>Emerging Markets</u>
Wanger USA	up to 20%*	no additional limit	no additional limit
Wanger Select	up to 33%	no additional limit	no additional limit
Wanger International	at least 65%	no additional limit	no additional limit
Wanger International Select	at least 75%	at least 65%	up to 35%

* Not including American Depositary Receipts.

Liquidity and Trading Volume Risks of Foreign Investing. A Fund that invests a significant percentage of its assets in foreign securities may be subject to the liquidity and trading volume risks associated with international investing. Due to market conditions, including uncertainty regarding the price of a security, it may be difficult for the Fund to buy or sell foreign portfolio securities at a desirable time or price, which could result in investment losses. This risk of portfolio illiquidity is heightened with respect to small- and mid-cap securities, generally, and foreign small- and mid-cap securities in particular. The Fund may have to lower the selling price, liquidate other investments, or forego another, more appealing investment opportunity as a result of illiquidity in the markets. The Investment Manager will fair value in good faith any securities it deems to be illiquid under consistently applied procedures established by the Fund's Board. Market conditions are always changing and vary by country and industry sector, and investing in international markets involves unique risks. In the wake of the 2007-2009 financial crisis, trading volumes in both emerging and developed international markets declined significantly and have stayed at generally reduced levels since then. Although it is difficult to accurately assess trends in trading volumes in foreign markets, because some amount of activity has migrated to alternative trading venues, a reduction in trading volumes poses challenges to the Fund. This is particularly so because the Fund focuses on small- and mid-cap companies that usually have lower trading volumes and often takes sizeable positions in portfolio companies. As a result of lower trading volumes, it may take longer to buy or sell the securities of such companies, which can exacerbate the Fund's exposure to volatile markets. The Fund may also be limited in its ability to execute favorable trades in foreign portfolio securities in response to changes in company prices and fundamentals. If the Fund is forced to sell securities to meet redemption requests or other cash needs, or in the case of an event affecting liquidity in a particular market or markets, it may be forced to dispose of those securities under disadvantageous circumstances and at a loss. As a Fund grows in size, these considerations take on increasing significance and may adversely impact performance.

High Yield Securities

High yield and low and below investment grade securities (below investment grade securities are also known as "junk bonds") are debt securities with the lowest investment grade rating (e.g., BBB by S&P and Fitch or Baa by Moody's), that are below investment grade (e.g., lower than BBB by S&P and Fitch or Baa by Moody's) or that are unrated but determined by the Investment Manager to be of comparable quality. These types of securities may be issued to fund corporate transactions or restructurings, such as leveraged buyouts, mergers, acquisitions, debt reclassifications or similar events, are more speculative in nature than securities with higher ratings and tend to be more sensitive to credit risk, particularly during a downturn in the economy. These types of securities generally are issued by unseasoned companies without long track records of sales and earnings, or by companies or municipalities that have questionable credit strength. Low and below investment grade securities and comparable unrated securities: (i) likely will have some quality and protective characteristics that, in the judgment of one or more NRSROs, are outweighed by large uncertainties or major risk exposures to adverse conditions; (ii) are speculative with respect to the issuer's capacity to pay interest and repay principal in accordance with the terms of the obligation; and (iii) may have a less liquid secondary market, potentially making it difficult to value or sell such securities. Credit ratings issued by credit rating agencies are designed to evaluate the safety of principal and interest payments of rated securities. They do not, however, evaluate the market value risk of lower-quality securities and, therefore, may not fully reflect the true risks of an investment. In addition, credit rating agencies may or may not make timely changes in a rating to reflect changes in the economy or in the condition of the issuer that affect the market value of the securities. Consequently, credit ratings are used only as a preliminary indicator of investment quality. Low and below investment grade securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind or step-coupon securities and may be privately placed or publicly offered. See ***Permissible Fund Investments — Zero Coupon, Pay-in-Kind and Step-Coupon Securities and Permissible Fund Investments — Private Placement and Other Restricted Securities*** for more information.

Investing in low and below investment grade securities and comparable unrated securities is subject to certain risks. The rates of return on these types of securities generally are higher than the rates of return available on more highly rated securities, but generally involve greater volatility of price and risk of loss of principal and

income, including the possibility of default by or insolvency of the issuers of such securities. Accordingly, a Fund may be more dependent on the Investment Manager's credit analysis with respect to these types of securities than is the case for more highly rated securities.

The market values of certain low and below investment grade securities and comparable unrated securities tend to be more sensitive to individual corporate developments and changes in economic conditions than are the market value of more highly rated securities. In addition, issuers of low and below investment grade and comparable unrated securities often are highly leveraged and may not have more traditional methods of financing available to them, so that their ability to service their debt obligations during an economic downturn or during sustained periods of rising interest rates may be impaired.

The risk of loss due to default is greater for low and below investment grade and comparable unrated securities than it is for higher rated securities because low and below investment grade securities and comparable unrated securities generally are unsecured and frequently are subordinated to more senior indebtedness. A Fund may incur additional expenses to the extent that it is required to seek recovery upon a default in the payment of principal or interest on its holdings of such securities. The existence of limited markets for lower-rated debt securities may diminish a Fund's ability to: (i) obtain accurate market quotations for purposes of valuing such securities and calculating portfolio net asset value; and (ii) sell the securities at fair market value to meet redemption requests or to respond to changes in the economy or in financial markets.

Many lower-rated securities are not registered for offer and sale to the public under the 1933 Act. Investments in these restricted securities may also be determined to be illiquid (i.e., not able to be sold within seven days at approximately the price at which they are valued by a Fund) pursuant to policies approved by the Board. These restricted securities may be less liquid than other lower-rated securities, potentially making it difficult to value or sell such securities.

Illiquid Securities

Illiquid securities are defined by a Fund consistent with the SEC staff's current guidance and interpretations which provide that an illiquid security is an asset which may not be sold or disposed of in the ordinary course of business within seven days at approximately the value at which a Fund has valued the investment on its books. Some securities, such as those not registered under U.S. securities laws, cannot be sold in public transactions. Some securities are deemed to be illiquid because they are subject to contractual or legal restrictions on resale. Subject to its investment policies, a Fund may invest in illiquid investments and may invest in certain restricted securities that are deemed to be illiquid securities. Investments in illiquid securities, including restricted securities that have not been determined to be liquid, may not exceed 15% of a Fund's net assets.

Initial Public Offerings

A Fund may invest in initial public offerings (IPOs) of common stock or other primary or secondary syndicated offerings of equity or debt securities issued by a corporate issuer. A purchase of IPO securities often involves higher transaction costs than those associated with the purchase of securities already traded on exchanges or markets. IPO securities are subject to market risk and liquidity risk. The market value of recently issued IPO securities may fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading and speculation, a potentially small number of securities available for trading, limited information about the issuer, and other factors. A Fund may hold IPO securities for a period of time, or may sell them soon after the purchase. Investments in IPOs could have a magnified impact — either positive or negative — on a Fund's performance while the Fund's assets are relatively small. The impact of an IPO on a Fund's performance may tend to diminish as the Fund's assets grow. In circumstances when investments in IPOs make a significant contribution to a Fund's performance, there can be no assurance that similar contributions from IPOs will continue in the future.

Investments in Other Investment Companies (Including ETFs)

Investing in other investment companies may be a means by which a Fund seeks to achieve its investment objective. A Fund may invest in securities issued by other investment companies within the limits prescribed by the 1940 Act, the rules and regulations thereunder and any exemptive orders currently or in the future obtained by a Fund, or an investment company in which a Fund invests, from the SEC. These securities include shares of other open-end investment companies (*i.e.*, mutual funds), closed-end funds, exchange-traded funds (ETFs) and business development companies.

Except with respect to funds structured as funds-of-funds and master-feeder funds whose strategies otherwise allow such investments, the 1940 Act generally requires that a fund limit its investments in another investment company or series thereof so that, as determined at the time a securities purchase is made: (i) no more than 5% of the value of its total assets will be invested in the securities of any one investment company; (ii) no more than 10% of the value of its total assets will be invested in the aggregate in securities of other investment companies; and (iii) no more than 3% of the outstanding voting stock of any one investment company or series thereof will be owned by a fund or by companies controlled by the fund. Such other investment companies may include ETFs, which are shares of publicly traded unit investment trusts, open-end funds or depositary receipts that may be passively managed (e.g. they seek to track the performance of specific indexes or companies in related industries) or they may be actively managed. The SEC has granted orders for exemptive relief to certain ETFs that permit investments in those ETFs by other investment companies in excess of these limits.

Investing in other investment companies is subject to certain risks. Although a Fund may derive certain advantages from being able to invest in shares of other investment companies, such as to be fully invested, there may be potential disadvantages. Investing in other investment companies may result in higher fees and expenses for a Fund and its shareholders. A shareholder may be charged fees not only on Fund shares held directly but also on the investment company shares that a Fund purchases.

ETF shares are sold at net asset value only in large blocks called creation units and are redeemed at net asset value only in large blocks called redemption units. ETFs are listed on an exchange and trade in the secondary market on a per-share basis, which allows investors to purchase and sell ETF shares at their market price throughout the day. ETFs generally are subject to the same risks as the underlying securities the ETFs are designed to track as well as to the risks of the specific sector or industry to which the ETF relates. ETFs also are subject to the risk that their prices may not totally correlate to the prices of the underlying securities the ETFs are designed to track and the risk of possible trading halts due to market conditions or for other reasons. Certain ETFs, such as passively managed ETFs, are designed to track the performance of a specified market index. The performance of an index-tracking ETF may vary from that of the specified index due to transaction costs and other expenses, including those borne the ETF. Under the 1940 Act, a Funds' ability to redeem units of an ETF may be limited in that in any period of less than 30 days an ETF is not obligated to redeem units representing more than 1% of its total outstanding securities.

Under the 1940 Act and rules and regulations thereunder, a Fund may purchase shares of affiliated funds subject to certain conditions. Investing in affiliated Funds may present certain actual or potential conflicts of interest. For more information about such actual and potential conflicts of interest, see ***Investment Advisory and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest.***

Money Market Instruments

Money market instruments include cash equivalents and short-term debt obligations, which include: (i) bank obligations, including certificates of deposit (CDs), time deposits and bankers' acceptances, and letters of credit of banks or savings and loan associations having capital surplus and undivided profits (as of the date of its most recently published annual financial statements) in excess of \$100 million (or the equivalent in the instance of a foreign branch of a U.S. bank) at the date of investment; (ii) funding agreements; (iii) repurchase agreements;

(iv) obligations of the United States, foreign countries and supranational entities, and each of their subdivisions, agencies and instrumentalities; (v) certain corporate debt securities, such as commercial paper, short-term corporate obligations and extendible commercial notes; (vi) participation interests; and (vii) municipal securities. Money market instruments may be structured as fixed-, variable- or floating-rate obligations and may be privately placed or publicly offered. A Fund may also invest in affiliated and unaffiliated money market mutual funds. See *Permissible Fund Investments — Variable- and Floating-Rate Obligations* and *Permissible Fund Investments — Private Placement and Other Restricted Securities* for more information.

Investing in money market instruments is subject to certain risks. Money market instruments (other than certain U.S. Government obligations) are not backed or insured by the U.S. Government, its agencies or its instrumentalities. Accordingly, only the creditworthiness of an issuer, or guarantees of that issuer, support such instruments.

Participation Interests

Participation interests (also called pass-through certificates or securities) represent an interest in a pool of debt obligations, such as municipal bonds or notes, that have been “packaged” by an intermediary, such as a bank or broker-dealer. Participation interests typically are issued by partnerships or trusts through which a Fund receives principal and interest payments that are passed through to the holder of the participation interest from the payments made on the underlying debt obligations. The purchaser of a participation interest receives an undivided interest in the underlying debt obligations. The issuers of the underlying debt obligations make interest and principal payments to the intermediary, as an initial purchaser, which are passed through to purchasers in the secondary market, such as a Fund. Mortgage-backed securities are a common type of participation interest. Participation interests may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See *Permissible Fund Investments — Variable- and Floating-Rate Obligations*, *Permissible Fund Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities* and *Permissible Fund Investments — Private Placement and Other Restricted Securities* for more information.

Loan participations also are a type of participation interest. Loans, loan participations and interests in securitized loan pools are interests in amounts owned by a corporate, governmental or other borrower to a lender or consortium of lenders (typically banks, insurance companies, investment banks, government agencies or international agencies).

Investing in participation interests is subject to certain risks. Participation interests generally are subject to the credit risk associated with the underlying borrowers. If the underlying borrower defaults, a Fund may be subject to delays, expenses and risks that are greater than those that would have been involved if a Fund had purchased a direct obligation of the borrower. A Fund also may be deemed a creditor of the lending bank or syndicate members and be subject to the risk that the lending bank or syndicate members may become insolvent.

Preferred Stock

Preferred stock represents units of ownership of a corporation that frequently have dividends that are set at a specified rate. Preferred stock has preference over common stock in the payment of dividends and the liquidation of assets. Preferred stock shares some of the characteristics of both debt and equity. Preferred stock ordinarily does not carry voting rights. Most preferred stock is cumulative; if dividends are passed (i.e., not paid for any reason), they accumulate and must be paid before common stock dividends. Participating preferred stock entitles its holders to share in profits above and beyond the declared dividend, along with common shareholders, as distinguished from nonparticipating preferred stock, which is limited to the stipulated dividend. Convertible preferred stock is exchangeable for a given number of shares of common stock and thus tends to be more volatile than nonconvertible preferred stock, which generally behaves more like a fixed income bond. Preferred stock may be privately placed or publicly offered. The price of a preferred stock is generally determined by earnings, type of products or services, projected growth rates, experience of management, liquidity, and general market conditions of the markets in which the stock trades. See *Permissible Fund Investments — Private Placement and Other Restricted Securities* for more information.

Auction preferred stock (APS) is a type of adjustable-rate preferred stock with a dividend determined periodically in a Dutch auction process by corporate bidders. An APS is distinguished from standard preferred stock because its dividends change from time to time. Holders of APS may not be able to sell their shares if an auction fails, such as when there are more shares of APS for sale at an auction than there are purchase bids. Shares typically are bought and sold at face values generally ranging from \$100,000 to \$500,000 per share.

In addition to reinvestment risk if interest rates fall, some specific risks with regard to APS include:

- **Failed auction:** A breakdown in the auction process can occur; in the event that the process fails, the rate is reset at the maximum applicable rate, which is usually described in the prospectuses and typically is influenced by the issuer's credit rating. In a failed auction, current shareholders generally are unable to sell some, or all, of the shares when the auction is completed. Typically, the liquidity for APS that have experienced a failed auction becomes very limited. If a failed auction were to occur, the shareholder generally would hold his or her shares until the next auction. Should there not be subsequent auctions that "cure" the failed process, the shareholder may: (1) hold the APS in anticipation of a refinancing by the issuer that would cause the APS to be called, or (2) hold securities either indefinitely or in anticipation of the development of a secondary market.
- **Early call risk:** APS generally is redeemable at any time, usually upon notice, at the issuer's option, at par plus accrued dividends.

Investing in preferred stock is subject to certain risks. For example, stock market risk is the risk that the value of such stocks, like the broader stock markets, may decline over short or even extended periods. Domestic and foreign stock markets tend to be cyclical, with periods when prices generally rise and periods when prices generally decline. The value of individual stocks will rise and decline based on factors specific to each corporation, such as changes in earnings or management.

Investing in preferred stock also may involve the risks applicable to investing in a particular company. For example, stocks of smaller companies tend to have greater price fluctuations than stocks of larger companies because, among other things, they trade less frequently and in lower volumes, are more susceptible to changes in economic conditions, are more reliant on singular products or services and are more vulnerable to larger competitors. Stocks of these companies may have a higher potential for gains but also are subject to greater risk of loss.

Investing in preferred stock also may involve the risks applicable to investing in a particular industry, such as technology, financial services, consumer goods or natural resources (e.g., oil and gas). To some extent, the prices of stocks tend to move by industry sector. When market conditions favorably affect, or are expected to favorably affect, an industry, the prices of the stocks of companies in that industry tend to rise. Conversely, negative news or a poor outlook for a particular industry can cause the value of those companies' stock to decline.

Private Placement and Other Restricted Securities

Private placement securities are securities that have been privately placed and are not registered under the 1933 Act. They are eligible for sale only to certain eligible investors. Private placements often may offer attractive opportunities for investment not otherwise available on the open market. Private placement and other "restricted" securities often cannot be sold to the public without registration under the 1933 Act or the availability of an exemption from registration (such as Rules 144 or 144A), or they are "not readily marketable" because they are subject to other legal or contractual delays in or restrictions on resale. Asset-backed securities, common stock, convertible securities, corporate debt securities, foreign securities, low and below investment grade securities, money market instruments, mortgage-backed securities, municipal securities, participation interests, preferred stock and other types of equity and debt instruments may be privately placed or restricted securities.

Private placements typically may be sold only to qualified institutional buyers (or, in the case of the initial sale of certain securities, such as those issued in collateralized debt obligations or collateralized loan obligations, to accredited investors (as defined in Rule 501(a) under the 1933 Act)), or in a privately negotiated transaction or to a limited number of purchasers, or in limited quantities after they have been held for a specified period of time and other conditions are met pursuant to an exemption from registration. In instances in which the restricted securities are in certificated form, the certificates may bear a restrictive legend, stating the applicable restrictions and time periods. Securities sold outside the United States in reliance on Regulation S under the 1933 Act or pursuant to the securities laws of foreign jurisdictions may also bear restrictive legends. It may be necessary to have these restrictive legends removed or to deliver an opinion of counsel prior to resale of the security.

Investing in private placement and other restricted securities is subject to certain risks. Private placements may be considered illiquid securities. Private placements typically are subject to restrictions on resale as a matter of contract or under federal securities laws. Because there may be relatively few potential purchasers for such securities, especially under adverse market or economic conditions or in the event of adverse changes in the financial condition of the issuer, a Fund could find it more difficult to sell such securities when it may be advisable to do so or it may be able to sell such securities only at prices lower than if such securities were more widely held. At times, it also may be more difficult to determine the fair value of such securities for purposes of computing a Fund's NAV due to the absence of a trading market.

Real Estate Investment Trusts and Master Limited Partnerships

Real estate investment trusts (REITs) are pooled investment vehicles that manage a portfolio of real estate or real estate related loans to earn profits for their shareholders. REITs are generally classified as equity REITs, mortgage REITs or a combination of equity and mortgage REITs. Equity REITs invest the majority of their assets directly in real property, such as shopping centers, nursing homes, office buildings, apartment complexes, and hotels, and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of interest payments. REITs can be subject to extreme volatility due to fluctuations in the demand for real estate, changes in interest rates, and adverse economic conditions.

Partnership units of real estate and other types of companies sometimes are organized as master limited partnerships or limited liability companies (MLPs) in which ownership interests are publicly traded. These entities may be publicly traded on stock exchanges or markets such as the NYSE, the NYSE Alternext US LLC ("NYSE Alternext") (formerly the American Stock Exchange) and NASDAQ. MLPs often own businesses or properties relating to energy, natural resources or real estate, or may be involved in the film industry or research and development activities. Generally, MLPs are operated under the supervision of one or more managing partners or members. Limited partners, unit holders, or members (such as a Fund that invests in a partnership) are not involved in the day-to-day management of the company. Limited partners, unit holders, or members are allocated income and capital gains associated with the partnership project in accordance with the terms of the partnership or limited liability company agreement. At times MLPs may potentially offer relatively high yields compared to common stocks. Because MLPs are generally treated as partnerships or similar limited liability "pass-through" entities for tax purposes, they do not ordinarily pay income taxes, but pass their earnings on to unit holders (except in the case of some publicly traded firms that may be taxed as corporations). For tax purposes, unit holders may initially be deemed to receive only a portion of the distributions attributed to them because certain other portions may be attributed to the repayment of initial investments and may thereby lower the cost basis of the units or shares owned by unit holders. As a result, unit holders may effectively defer taxation on the receipt of some distributions until they sell their units. These tax consequences may differ for different types of entities.

Similar to investment companies, REITs are not taxed on income distributed to shareholders provided they comply with certain requirements under the Code. The failure of a REIT to continue to qualify as a REIT for tax

purposes can materially affect its value. A Fund will indirectly bear its proportionate share of any expenses paid by a REIT in which it invests. REITs often do not provide complete tax information until after the calendar year-end.

Equity investments in REITs are subject to certain risks associated with direct ownership of real estate, including, for example, declines in the value of real estate, risks related to general and local economic conditions, overbuilding and increased competition, increases in property taxes and operating expenses, and variations in rental income. REITs also may be subject to interest rate risk. In general, increases in interest rates will decrease the value of high-yield securities and increase the costs of obtaining financing, which could decrease the value of a REIT's investments. In addition, equity REITs may be affected by changes in the value of the underlying property owned by the REITs, while mortgage REITs may be affected by the quality of credit extended. Both equity and mortgage REITs are dependent upon management skills. REITs also may be subject to heavy cash flow dependency, defaults by borrowers, and the possibility of failing to qualify for preferential tax treatment under the Code, which could adversely affect dividend payments. REITs also may not be diversified. To the extent a Fund may concentrate its investments in REITs that invest in a particular country or region, the Fund may have greater exposure to the risk of loss in the event of a drop in real estate values in that country or region.

Equity investments in master limited partnerships generally are subject to the risks applicable to investing in a partnership as opposed to a corporation, which may include fewer protections afforded to investors. Additional risks include those associated with the specific industries in which a master limited partnership invests, such as the risks associated with investing in the real estate or oil and gas industries.

Repurchase Agreements

Repurchase agreements are agreements under which a Fund acquires a security for a relatively short period of time (usually within seven days) subject to the obligation of a seller to repurchase and a Fund to resell such security at a fixed time and price (representing the Fund's cost plus interest). The repurchase agreement specifies the yield during the purchaser's holding period. Repurchase agreements also may be viewed as loans made by a Fund that are collateralized by the securities subject to repurchase, which may consist of a variety of security types. A Fund typically will enter into repurchase agreements only with commercial banks, registered broker-dealers and the Fixed Income Clearing Corporation. Such transactions are monitored to ensure that the value of the underlying securities will be at least equal at all times to the total amount of the repurchase obligation, including any accrued interest.

Repurchase agreements generally are subject to counterparty risk. If a counterparty defaults, a Fund could realize a loss on the sale of the underlying security to the extent that the proceeds of the sale are less than the resale price provided in the repurchase agreement including interest. In the event that a counterparty fails to perform because it is insolvent or otherwise subject to insolvency proceedings against it, a Fund's right to take possession of the underlying securities would be subject to applicable insolvency law and procedure, including an automatic stay (which would preclude immediate enforcement of a Fund's rights) and exemptions thereto (which would permit a Fund to take possession of the underlying securities or to void a repurchase agreement altogether). Since it is possible that an exemption from the automatic stay would not be available, a Fund might be prevented from immediately enforcing its rights against the counterparty. Accordingly, if a counterparty becomes insolvent or otherwise subject to insolvency proceedings against it, a Fund may incur delays in or be prevented from liquidating the underlying securities and could experience losses, including the possible decline in value of the underlying securities during the period in which a Fund seeks to enforce its rights thereto, possible subnormal levels of income or lack of access to income during such time, as well as the costs incurred in enforcing a Fund's rights. For example, if a Fund enters into a repurchase agreement with a broker that becomes insolvent, it is possible for the Securities Investor Protection Corporation (SIPC) to institute a liquidation proceeding in federal court against the broker counterparty which could lead to a foreclosure by SIPC of the

underlying securities or SIPC may stay, or preclude, a Fund's ability under contract to terminate the repurchase agreement.

Reverse Repurchase Agreements

Reverse repurchase agreements are agreements under which a Fund temporarily transfers possession of a portfolio instrument to another party, such as a bank or broker-dealer, in return for cash. At the same time, the Fund agrees to repurchase the instrument at an agreed-upon time (normally within 7 days) and price which reflects an interest payment. A Fund generally retains the right to interest and principal payments on the security. Reverse repurchase agreements also may be viewed as borrowings made by a Fund.

Reverse repurchase agreements involve the risk that the market value of the securities a Fund is obligated to repurchase under the agreement may decline below the repurchase price. In the event the buyer of securities under a reverse repurchase agreement files for bankruptcy or becomes insolvent, a Fund's use of proceeds of the agreement may be restricted pending a determination by the other party, or its trustee or receiver, whether to enforce a Fund's obligation to repurchase the securities. In addition, reverse repurchase agreements are techniques involving leverage, and are subject to asset coverage requirements. Under the requirements of the 1940 Act, a Fund is required to maintain an asset coverage (including the proceeds of the borrowings) of at least 300% of all borrowings.

Sovereign Debt

Sovereign debt obligations are issued or guaranteed by foreign governments or their agencies. It may be in the form of conventional securities or other types of debt instruments such as loans or loan participations. A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by a variety of factors, including its cash flow situation, the extent of its reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject. (See also *Permissible Fund Investments — Foreign Securities*.) In addition, there may be no legal recourse against a sovereign debtor in the event of a default.

With respect to sovereign debt of emerging market issuers, investors should be aware that certain emerging market countries are among the largest debtors to commercial banks and foreign governments. At times, certain emerging market countries have declared moratoria on the payment of principal and interest on external debt. Certain emerging market countries have experienced difficulty in servicing their sovereign debt on a timely basis that led to defaults and the restructuring of certain indebtedness.

Sovereign debt includes Brady Bonds, which are securities issued under the framework of the Brady Plan, an initiative announced by former U.S. Treasury Secretary Nicholas F. Brady in 1989 as a mechanism for debtor nations to restructure their outstanding external commercial bank indebtedness.

Stripped Securities

Stripped securities are the separate income or principal payments of a debt security and evidence ownership in either the future interest or principal payments on an instrument. There are many different types and variations of stripped securities. For example, Separate Trading of Registered Interest and Principal Securities (STRIPS) can be component parts of a U.S. Treasury security where the principal and interest components are traded independently through DTC, a clearing agency registered pursuant to Section 17A of the 1934 Act, as amended, and created to hold securities for its participants, and to facilitate the clearance and settlement of securities transactions between participants through electronic computerized book-entries, thereby eliminating the need for physical movement of certificates. Treasury Investor Growth Receipts (TIGERS) are U.S. Treasury securities stripped by brokers. Stripped mortgage-backed securities (SMBS) also can be issued by the U.S. Government or its agencies.

SMBS usually are structured with two or more classes that receive different proportions of the interest and principal distributions from a pool of mortgage-backed assets. Common types of SMBS will be structured so that one class receives some of the interest and most of the principal from the mortgage-backed assets, while another class receives most of the interest and the remainder of the principal.

Investing in stripped securities is subject to certain risks. If the underlying obligations experience greater than anticipated prepayments of principal, a Fund may fail fully to recoup its initial investment in such securities. The market value of the class consisting primarily or entirely of principal payments can be especially volatile in response to changes in interest rates. The rates of return on a class of SMBS that receives all or most of the interest are generally higher than prevailing market rates of return on other mortgage-backed obligations because their cash flow patterns also are volatile and there is a greater risk that the initial investment will not be recouped fully.

U.S. Government and Related Obligations

U.S. Government obligations include U.S. Treasury obligations and securities issued or guaranteed by various agencies of the U.S. Government or by various agencies or instrumentalities established or sponsored by the U.S. Government. U.S. Treasury obligations and securities issued or guaranteed by various agencies or instrumentalities of the U.S. Government differ in their interest rates, maturities and time of issuance, as well as with respect to whether they are guaranteed by the U.S. Government. U.S. Government and related obligations may be structured as fixed-, variable- or floating-rate obligations.

Investing in U.S. Government and related obligations is subject to certain risks. While U.S. Treasury obligations are backed by the “full faith and credit” of the U.S. Government, such securities are nonetheless subject to credit risk (*i. e.*, the risk that the U.S. Government maybe, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may or may not be backed by the full faith and credit of the U.S. Government. These securities may be supported by the ability to borrow from the U.S. Treasury or only by the credit of the issuing agency or instrumentality and, as a result, may be subject to greater credit risk than securities issued or guaranteed by the U.S. Treasury. Obligations of U.S. Government agencies, authorities, instrumentalities and sponsored enterprises historically have involved limited risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. Government would provide financial support if it is not obligated to do so by law.

Government-sponsored entities issuing securities include privately owned, publicly chartered entities created to reduce borrowing costs for certain sectors of the economy, such as farmers, homeowners, and students. They include the Federal Farm Credit Bank System, Farm Credit Financial Assistance Corporation, Fannie Mae, Freddie Mac, Federal National Mortgage Association (FNMA), Student Loan Marketing Association (SLMA), and Resolution Trust Corporation (RTC). Government-sponsored entities may issue discount notes (with maturities ranging from overnight to 360 days) and bonds. On Sept. 7, 2008, the Federal Housing Finance Agency (FHFA), an agency of the U.S. Government, placed the Freddie Mac and Fannie Mae into conservatorship, a statutory process with the objective of returning the entities to normal business operations. FHFA will act as the conservator to operate the enterprises until they are stabilized.

On August 5, 2011, S&P lowered its long-term sovereign credit rating for the United States of America to “AA+” from “AAA”. Because a Fund may invest in U.S. Government obligations, the value of a Fund’s shares may be adversely affected by S&P’s downgrade or any future downgrades of the U.S. Government’s credit rating. See Appendix A for a description of securities ratings.

Warrants and Rights

Warrants and rights are types of securities that give a holder a right to purchase shares of common stock. Warrants usually are issued together with a bond or preferred stock and entitle a holder to purchase a specified amount of common stock at a specified price typically for a period of years. Rights usually have a specified purchase price that is lower than the current market price and entitle a holder to purchase a specified amount of common stock typically for a period of only weeks. Warrants may be used to enhance the marketability of a bond or preferred stock.

Warrants do not carry with them the right to dividends or voting rights and they do not represent any rights in the assets of the issuer. Warrants may be considered to have more speculative characteristics than certain other types of investments. In addition, the value of a warrant does not necessarily change with the value of the underlying securities, and a warrant ceases to have value if it is not exercised prior to its expiration date, if any. The potential exercise price of warrants or rights may exceed their market price, such as when there is no movement in the market price or the market price of the common stock declines.

When-Issued, Delayed Delivery and Forward Commitment Transactions

When-issued, delayed delivery and forward commitment transactions involve the purchase or sale of securities by a Fund, with payment and delivery taking place in the future after the customary settlement period for that type of security. Normally, the settlement date occurs within 45 days of the purchase although in some cases settlement may take longer. The investor does not pay for the securities or receive dividends or interest on them until the contractual settlement date. When engaging in when-issued, delayed delivery and forward commitment transactions, a Fund typically will designate liquid assets in an amount equal to or greater than the purchase price. The payment obligation and, if applicable, the interest rate that will be received on the securities, are fixed at the time that a Fund agrees to purchase the securities. A Fund generally will enter into when-issued, delayed delivery and forward commitment transactions only with the intention of completing such transactions. However, the Investment Manager may determine not to complete a transaction if it deems it appropriate to close out the transaction prior to its completion. In such cases, a Fund may realize short-term gains or losses.

When-issued, delayed delivery and forward commitment transactions involve the risks that the securities purchased may fall in value by the time they actually are issued or that the other party may fail to honor the contract terms. A Fund that invests in delayed delivery securities may rely on a third party to complete the transaction. Failure by a third party to deliver a security purchased on a delayed delivery basis may result in a financial loss to a Fund or the loss of an opportunity to make an alternative investment.

Zero-Coupon, Pay-in-Kind and Step-Coupon Securities

Zero-coupon, pay-in-kind and step-coupon securities are types of debt instruments that do not necessarily make payments of interest in fixed amounts or at fixed intervals. Asset-backed securities, convertible securities, corporate debt securities, foreign securities, low and below investment grade securities, participation interests, stripped securities, U.S. Government and related obligations and other types of debt instruments may be structured as zero-coupon, pay-in-kind and step-coupon securities.

Zero-coupon securities do not pay interest on a current basis but instead accrue interest over the life of the security. These securities include, among others, zero-coupon bonds, which either may be issued at a discount by a corporation or government entity or may be created by a brokerage firm when it strips the coupons from a bond or note and then sells the bond or note and the coupon separately. This technique is used frequently with U.S. Treasury bonds, and zero-coupon securities are marketed under such names as CATS (Certificate of Accrual on Treasury Securities), TIGERs or STRIPS. Zero-coupon bonds also are issued by municipalities. Buying a municipal zero-coupon bond frees its purchaser of the obligation to pay regular federal income tax on imputed interest, since the interest is exempt for regular federal income tax purposes. Zero-coupon certificates of deposit

and zero-coupon mortgages are generally structured in the same fashion as zero-coupon bonds; the certificate of deposit holder or mortgage holder receives face value at maturity and no payments until then.

Pay-in-kind securities normally give the issuer an option to pay cash at a coupon payment date or to give the holder of the security a similar security with the same coupon rate and a face value equal to the amount of the coupon payment that would have been made.

Step-coupon securities trade at a discount from their face value and pay coupon interest that gradually increases over time. The coupon rate is paid according to a schedule for a series of periods, typically lower for an initial period and then increasing to a higher coupon rate thereafter. The discount from the face amount or par value depends on the time remaining until cash payments begin, prevailing interest rates, liquidity of the security and the perceived credit quality of the issue.

Zero-coupon, step-coupon and pay-in-kind securities holders generally have substantially all the rights and privileges of holders of the underlying coupon obligations or principal obligations. Holders of these securities typically have the right upon default on the underlying coupon obligations or principal obligations to proceed directly and individually against the issuer and are not required to act in concert with other holders of such securities.

Investing in zero-coupon, pay-in-kind and step-coupon securities is subject to certain risks, including that market prices of zero-coupon, pay-in-kind and step-coupon securities generally are more volatile than the prices of securities that pay interest periodically and in cash, and are likely to respond to changes in interest rates to a greater degree than other types of debt securities.

Because zero-coupon securities bear no interest, they are volatile. Since zero-coupon bondholders do not receive interest payments, zero-coupon securities fall more dramatically than bonds paying interest on a current basis when interest rates rise. However, when interest rates fall, zero-coupon securities rise more rapidly in value than interest paying bonds.

See Appendix A for a discussion of securities ratings.

Borrowings

Each Fund has a fundamental policy with respect to borrowing that can be found under the heading ***About the Funds' Investments — Fundamental and Non-Fundamental Investment Policies***. Specifically, each Fund may not borrow money or issue senior securities except to the extent permitted by the 1940 Act, the rules and regulations thereunder and any exemptive relief obtained by the Funds. In general, pursuant to the 1940 Act, a Fund may borrow money only from banks in an amount not exceeding 33 1/3% of its total assets (including the amount borrowed) less liabilities (other than borrowings). Any borrowings that come to exceed this amount must be reduced within three days (not including Sundays and holidays) to the extent necessary to comply with the 33 1/3% limitation.

The Trust maintains a line of credit in order to permit borrowing on a temporary basis to meet share redemption requests in circumstances in which temporary borrowing may be preferable to liquidation of portfolio securities. Any borrowings under that line of credit by the Funds would be subject to each Fund's restrictions on borrowing. See ***About the Funds' Investments — Fundamental and Non-Fundamental Investment Policies***.

Short Sales

A Fund may sometimes sell securities short when it owns an equal amount of such securities as those securities sold short. This is a technique known as selling short "against the box." If a Fund makes a short sale "against the box," it would not immediately deliver the securities sold and would not receive the proceeds from

the sale. The seller is said to have a short position in the securities sold until it delivers the securities sold, at which time it receives the proceeds of the sale. To secure its obligation to deliver securities sold short, a Fund will deposit in escrow in a separate account with the custodian an equal amount of the securities sold short or securities convertible into or exchangeable for such securities. A Fund can close out its short position by purchasing and delivering an equal amount of the securities sold short, rather than by delivering securities already held by a Fund, because a Fund might want to continue to receive interest and dividend payments on securities in its portfolio that are convertible into the securities sold short.

Wanger USA and Wanger International may not sell securities short or maintain a short position. Other Funds, under certain circumstances, may engage in short sales that are not “against the box,” in which the Fund owns at least an equal amount of such securities, contracts or instruments, or owns securities that are convertible or exchangeable into, without payment of further consideration, at least an equal amount of such securities, contracts or instruments. The technique is also used to protect a profit in a long-term position in a security, contract or instrument. To make delivery to the buyer, a Fund must borrow or purchase the security. If borrowed, a Fund is then obligated to replace the security borrowed from the third party, so a Fund must purchase the security at the market price at a later time. If the price of the security has increased during this time, then a Fund will incur a loss equal to the increase in price of the security from the time of the short sale plus any premiums and interest paid to the third party. (Until the security is replaced, a Fund is required to pay to the lender amounts equal to any dividends or interest which accrue during the period of the loan. To borrow the security, a Fund also may be required to pay a premium, which would increase the cost of the security sold. The proceeds of the short sale will be retained by the broker, to the extent necessary to meet the margin requirements, until the short position is closed out.)

Short sales by a Fund that are not made “against the box” create opportunities to increase a Fund’s return but, at the same time, involve specific risk considerations and may be considered a speculative technique. Because a Fund in effect profits from a decline in the price of the securities sold short without the need to invest the full purchase price of the securities on the date of the short sale, a Fund’s net asset value (NAV) per share tends to increase more when the securities it has sold short decrease in value, and to decrease more when the securities it has sold short increase in value, than if it had not engaged in such short sales. The amount of any gain will be decreased, and the amount of any loss increased, by the amount of any premium, dividends or interest a Fund may be required to pay in connection with the short sale. Short sales could potentially involve unlimited loss, as the market price of securities sold short may continually increase, although a Fund can mitigate any such losses by replacing the securities sold short. Under adverse market conditions, a Fund might have difficulty purchasing securities to meet its short sale delivery obligations, and might have to sell portfolio securities to raise the capital necessary to meet its short sale obligations at a time when fundamental investment considerations would not favor such sales. There is also the risk that the third party to the short sale may fail to honor its contract terms, causing a loss to a Fund.

Short sales “against the box” entail many of the same risks and considerations described above regarding short sales not “against the box.” However, when a Fund sells short “against the box” it typically limits the amount of securities that it has leveraged. A Fund’s decision to make a short sale “against the box” may be a technique to hedge against market risks when the Investment Manager believes that the price of a security may decline, causing a decline in the value of a security owned by a Fund or a security convertible into or exchangeable for such security. In such case, any future losses in a Fund’s long position would be reduced by a gain in the short position. The extent to which such gains or losses in the long position are reduced will depend upon the amount of securities sold short relative to the amount of the securities a Fund owns, either directly or indirectly, and, in the case where a Fund owns convertible securities, changes in the investment values or conversion premiums of such securities.

A Fund’s successful use of short sales also will be subject to the ability of the Investment Manager to predict movements in the directions of the relevant market. A Fund therefore bears the risk that the Investment Manager will incorrectly predict future price directions. In addition, if a Fund sells a security short, and that security’s price goes up, a Fund will have to make up the margin on its open position (i.e., purchase more

securities on the market to cover the position). It may be unable to do so and thus its position may not be closed out. There can be no assurance that a Fund will not incur significant losses in such a case.

In the view of the SEC, a short sale involves the creation of a “senior security” as such term is defined in the 1940 Act, unless the sale is “against the box” and the securities sold short are placed in a segregated account (not with the broker), or unless a Fund’s obligation to deliver the securities sold short is “covered” by placing in a segregated account (not with the broker) cash, U.S. Government securities or other liquid debt or equity securities in an amount equal to the difference between the market value of the securities sold short at the time of the short sale and any such collateral required to be deposited with a broker in connection with the sale (not including the proceeds from the short sale), which difference is adjusted daily for changes in the value of the securities sold short. The total value of the cash, U.S. Government securities or other liquid debt or equity securities deposited with the broker and otherwise segregated may not at any time be less than the market value of the securities sold short at the time of the short sale.

Lending Securities

Securities lending refers to the lending of a Fund’s portfolio securities. GSAL serves as the Funds’ securities lending agent pursuant to a securities lending agreement approved by the Board. Each Fund may lend portfolio securities representing up to one-third of the value of its total assets to broker-dealers, banks or other institutional borrowers of securities that the Funds’ securities lending agent has determined are creditworthy under guidelines established by the Board. A lending Fund pays a portion of income earned on lending transactions to its GSAL, and also may pay administrative and custodial fees in connection with loans of securities.

The Funds receive collateral equal to at least 102% for domestic issuers and 105% for foreign issuers of the value of the securities loaned. Collateral is invested by the Funds in a third-party institutional government money market fund in accordance with investment guidelines contained in the securities lending agreement and approved by the Board. If the market value of the loaned securities goes up, the securities lending agent will require additional collateral from the borrower. If the market value of the loaned securities goes down, the borrower may request that some collateral be returned. Funds participating in securities lending bear the risk of loss in connection with investment of collateral received from the borrowers. To the extent that the value, including any investment return, of a Fund’s investment of the collateral declines below the amount owed to a borrower, a Fund may incur losses that exceed the amount it earned on lending the security.

Securities lending involves counterparty risk, including the risk that a borrower may not return a loaned security and the proceeds from the sale of the collateral will not be sufficient to replace the borrowed security. Counterparty risk also includes a potential loss of rights in the collateral if the borrower or the securities lending agent defaults or enters bankruptcy. This risk is increased if a Fund’s loans are concentrated with a single borrower or limited number of borrowers. In the event of bankruptcy or other default of a borrower, a Fund could experience delays both in liquidating the loan collateral and in recovering the loaned securities. A Fund could also sustain losses arising from expenses of enforcing the Fund’s rights. GSAL has agreed to indemnify the Funds from losses resulting from a borrower’s failure to return a loaned security when due, but such indemnification does not extend to losses associated with declines in the value of collateral investments.

Loans are subject to termination at any time by the Funds or a borrower. A lending Fund does not have the right to vote loaned securities. In accordance with the procedures adopted by the Board, a lending Fund will attempt to call all loaned securities back to permit the exercise of voting rights, if time and jurisdictional restrictions permit. There is no guarantee that all loans can be recalled.

During the existence of the loan, the borrower must pay over to the lender amounts equivalent to any dividends, interest or other distributions on the loaned securities, as well as interest on such amounts, less applicable taxes. Such payments to the Fund do not constitute “qualified dividends” taxable at the same rate as long-term capital gains, even if the actual dividends would have constituted qualified dividends had the Fund held the securities.

Portfolio Turnover

A change in the securities held by a Fund is known as “portfolio turnover.” High portfolio turnover (*e.g.*, over 100% annually) involves correspondingly greater expenses to a Fund, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestments in other securities. The trading costs and tax effects associated with portfolio turnover may adversely affect a Fund’s performance.

For each Fund’s portfolio turnover rate, see the *Financial Highlights* section in the prospectuses for that Fund. During the fiscal years ended December 31, 2013 and December 31, 2012, the portfolio turnover rates for each Fund did not vary significantly.

Disclosure of Portfolio Information

The Board and the Investment Manager believe that the investment ideas and trading strategies of the Investment Manager with respect to portfolio management of a Fund should benefit the Fund and its shareholders, and do not want to afford speculators an opportunity to profit by anticipating Fund trading strategies or by using Fund portfolio holdings information for stock picking. However, the Board also believes that knowledge of a Fund’s portfolio holdings can assist shareholders in monitoring their investments, making asset allocation decisions, and evaluating portfolio management techniques.

The Board has therefore adopted policies and procedures relating to disclosure of the Funds’ portfolio securities. These policies and procedures are intended to protect the confidentiality of Fund portfolio holdings information and generally prohibit the release of such information until it is made available to the general public. It is the policy of the Funds not to provide or permit others to provide portfolio holdings on a selective basis, and the Investment Manager does not intend to selectively disclose portfolio holdings in advance of public dissemination. The Investment Manager does not expect that such holdings information will be selectively disclosed, except where necessary for the Funds’ operation or where there are other legitimate business purposes for doing so and, in any case, where conditions are met that are designed to protect the interests of the Funds and their shareholders, including that the recipients are subject to a duty of confidentiality, including a duty not to trade on the nonpublic information. These policies and procedures prohibit Ameriprise Financial, the Investment Manager and the Funds’ other service providers from entering into any agreement to disclose Fund portfolio holdings information or trading strategies in violation of the policies and procedures and from entering into any agreement to disclose portfolio information in exchange for any form of consideration. The policies and procedures incorporate and adopt the supervisory controls and recordkeeping requirements established in the Investment Manager’s policies and procedures. The Investment Manager has also adopted policies and procedures to monitor for compliance with the Funds’ portfolio holdings disclosure policies and procedures.

Although the Investment Manager seeks to limit the selective disclosure of portfolio holdings information and such selective disclosure is monitored under the Funds’ compliance program for conformity with the policies and procedures, there can be no assurance that the policies and procedures will protect the Funds from the potential misuse of holdings information by individuals or firms in possession of that information.

Public Disclosures

The Funds’ portfolio holdings are currently disclosed to the public through required filings with the SEC and on the Columbia Funds website. Once posted, the portfolio holdings information will remain available on the website until at least the date on which a Fund files a Form N-CSR or Form N-Q for the period that includes the date as of which the information is current. The Funds’ complete holdings are disclosed on the Columbia Funds website as of a month-end no earlier than 30 to 40 calendar days after such month-end. Purchases and sales of the Funds’ portfolio securities can take place at any time, so the portfolio holdings information available on the website may not always be current. The scope of the information disclosed pursuant to the policies and procedures described above also may change from time to time, without prior notice.

The Funds file their portfolio holdings with the SEC for each fiscal quarter on either Form N-CSR (with respect to each annual period and semiannual period) or Form N-Q (with respect to the first and third quarters of the Funds' fiscal year). Shareholders may obtain the Funds' Forms N-CSR and N-Q filings on the SEC's website at www.sec.gov, a link to which is provided at the Columbia Funds website. In addition, the Funds' Forms N-CSR and N-Q filings may be reviewed and copied at the SEC's public reference room in Washington, D.C. You may call the SEC at 202.551.8090 for information about the SEC's website or the operation of the public reference room.

The Funds, the Investment Manager, Ameriprise Financial or their affiliates may include portfolio holdings information that has already been made public through a web posting or SEC filing in marketing literature and other communications to shareholders, financial advisors or other parties. In addition, certain advisory clients of the Investment Manager that follow a strategy similar to that of a Fund have access to their own custodial account portfolio holdings information before the Fund posts its holdings on the Columbia Funds website. It is possible that when clients observe transactions in their own accounts, they may infer transactions of the Funds prior to public disclosure of Fund transactions.

Other Disclosures

Pursuant to the policies and procedures described above, the Funds may selectively disclose their portfolio holdings information in advance of public disclosure on a confidential basis to various Fund service providers that require such information for the legitimate business purpose of assisting the Funds with day-to-day business affairs.

In determining the existence of a legitimate business purpose for making portfolio disclosures, the following factors, among others, are considered: (i) any prior disclosure must be consistent with the anti-fraud provisions of the federal securities laws and the fiduciary duties of the Investment Manager; (ii) any conflicts of interest between the interests of Fund shareholders, on the one hand, and those of the Investment Manager, the Distributor or any affiliated person of a Fund, the Investment Manager or Distributor on the other; and (iii) any prior disclosure to a third party, although subject to a confidentiality agreement, would not make conduct lawful that is otherwise unlawful.

In addition, the Funds periodically disclose their portfolio information on a confidential basis to various service providers that require such information to assist the Funds with their day-to-day business affairs. In addition to the Investment Manager and its affiliates, these service providers include, but are not limited to, affiliates of the Investment Manager, the Funds' custodian and any sub-custodians, independent registered public accounting firm, legal counsel, operational system vendors, financial printers, proxy solicitor and proxy voting service provider, as well as ratings agencies that maintain ratings on certain Funds. These service providers are required to keep such information confidential, and are prohibited from trading based on the information or otherwise using the information except as necessary in providing services to the Funds. The Funds also may disclose portfolio holdings information to broker-dealers and certain other entities in connection with potential transactions and management of the Funds, provided that reasonable precautions, including limitations on the scope of the portfolio holdings information disclosed, are taken to avoid any potential misuse of the disclosed information.

The Fund also discloses portfolio holdings information as required by federal, state or international securities laws, and may disclose portfolio holdings information in response to requests by governmental authorities, or in connection with litigation or potential litigation, a restructuring of a holding, where such disclosure is necessary to participate or explore participation in a restructuring of the holding (*e.g.*, as part of a bondholder group), or to the issuer of a holding, pursuant to a request of the issuer or any other party who is duly authorized by the issuer.

Neither the Funds nor Ameriprise Financial, the Investment Manager or their affiliates receive compensation or consideration from the service providers for the portfolio holdings information. In addition to Ameriprise Financial, the Investment Manager and their affiliates, including Threadneedle International Limited, these service providers are listed below. Portfolio holdings information disclosed to such recipients is current as of the time of its disclosure, is disclosed to each recipient solely for purposes consistent with the services described below, and has been authorized in accordance with the policy.

<u>IDENTITY OF RECIPIENT</u>	<u>ROLE OF RECIPIENT/ PURPOSE OF DISCLOSURE</u>	<u>FREQUENCY OF DISCLOSURE</u>
Wilshire Associates	Provides supportive performance analysis software.	Daily
JPMorgan	Funds' Custodian; receives trade files containing information for the Funds.	Daily
FactSet Research Data Systems, Inc.	Provides quantitative analysis, charting and fundamental data to investment, marketing, performance and distribution personnel.	Daily
Interactive Data Corporation (IDC)	Provides statistical fair valuation services to support the Investment Manager.	As needed
Merrill Corporation	Printer for the Funds' prospectuses, SAIs, supplements and sales materials.	As needed
RR Donnelley Financial	Printer for the Funds' prospectuses, SAIs, supplements and sales materials.	As needed
Abel Noser	Evaluation and assessment of trading activity, execution and practices by the Investment Manager.	As needed, generally no less than quarterly
Bloomberg, L.P.	Provides support for the Investment Manager's trading system; evaluation and assessment of trading activity, execution and practices by the Investment Manager.	Daily
Financial Tracking, LLC	Provides automated review for purposes of Code of Ethics and other compliance monitoring.	Daily
GSAL	Funds' securities lending agent.	As needed in connection with the Funds' securities lending program
Institutional Shareholder Services, Inc. (ISS)	Proxy service provider. Holdings are only redistributed by ISS through voting the shares held and within the Funds' N-PX filings.	Daily

<u>IDENTITY OF RECIPIENT</u>	<u>ROLE OF RECIPIENT/ PURPOSE OF DISCLOSURE</u>	<u>FREQUENCY OF DISCLOSURE</u>
Perkins Coie LLP	Legal counsel to the Funds.	As needed
Drinker Biddle & Reath LLP	Legal counsel to the Independent Trustees.	As needed
ING Insurance Company	Provides quarterly fact sheets.	Quarterly
PricewaterhouseCoopers LLP	Funds' independent registered public accounting firm, providing audit services, tax return review services and assistance in connection with the review of various SEC filings.	As needed
BarraOne/MSCI Barra	Provides risk analysis and reporting.	Daily
MoneyMate, Ltd.	Provides returns and analytics reporting for client facing materials.	Daily
Sungard InvestOne	Provides portfolio accounting system.	Daily

Pursuant to agreements in such form as the Chief Compliance Officer (CCO) of the Funds may require, these service providers are required to keep such information confidential, and are prohibited from trading based on the information or otherwise using the information except as necessary in providing services to the Funds.

The Funds have authorized the Investment Manager's President (and his designated subordinates) to make appropriate disclosures of the Funds' holdings to certain Ameriprise Financial affiliates (to provide monitoring of compliance with codes of ethics and to monitor risk and various holdings limitations that must be aggregated with affiliated funds, among other purposes), to provide the Custodian, sub-custodians and pricing service with daily trade information, to disclose necessary portfolio information to the Funds' proxy service. The Funds have also authorized the Investment Manager's President and Chief Operating Officer (and their designated subordinates) to disclose portfolio information to independent auditors in connection with audit procedures. In addition, the Funds have authorized Ameriprise Financial and the Investment Manager's President (and his designated subordinates) to disclose necessary information to printing firms engaged by Ameriprise Financial to prepare periodic reports to Fund shareholders.

The Investment Manager uses a variety of broker-dealers and other agents to effect securities transactions on behalf of the Funds. These broker-dealers become aware of the Funds' intentions, transactions and positions, in performing their functions. Further, the Funds' ability to identify and execute transactions in securities is dependent, in part, on information provided to the Investment Manager by broker-dealers who are market makers in certain securities or otherwise have the ability to assist the Funds in executing their orders. To facilitate that process, the Board has authorized the Investment Manager's President (and his designated subordinates) to disclose portfolio information or anticipated transactions to broker-dealers who may execute Fund transactions. This disclosure is limited to that information necessary to effect the Funds' securities transactions and assist the Investment Manager in seeking to obtain best execution.

The CCO is responsible for implementation of the Funds' portfolio holdings disclosure policies and procedures. The CCO is required to report to the Board any violations of the policies and procedures that come to his attention and may approve non-public disclosures of a Fund's portfolio holdings. Such disclosure must be consistent with the policies and procedures in that it furthers a legitimate business purpose of a Fund, is therefore in the best interests of that Fund's shareholders and is appropriately reported to the Board.

INVESTMENT ADVISORY AND OTHER SERVICES

The Investment Manager and Investment Advisory Services

Columbia Wanger Asset Management, LLC (CWAM or the Investment Manager) (operating as a limited partnership prior to May 1, 2010 and named Wanger Asset Management, L.P. prior to September 29, 2000), serves as the investment adviser for the Funds, the series of Columbia Acorn Trust and other institutional accounts. The Investment Manager and its predecessors have managed mutual funds, including the Funds, since 1992.

As of March 31, 2014, the Investment Manager had assets under management of approximately \$38.8 billion.

The Investment Manager is located at 227 West Monroe Street, Suite 3000, Chicago, Illinois 60606, and is a registered investment adviser and wholly owned subsidiary of Columbia Management, which is a wholly owned subsidiary of Ameriprise Financial. Prior to May 1, 2010, when the long-term asset management business of Columbia Management Group, LLC, including 100% of the Investment Manager, was acquired by Ameriprise Financial, the Investment Manager was a wholly owned subsidiary of Bank of America. Prior to April 1, 2004, when FleetBoston Financial Corporation (Fleet) was acquired by Bank of America, Columbia Management Group, LLC was a wholly owned subsidiary of Fleet.

At a special meeting held on May 27, 2010, as recommended by the Board, shareholders approved the Advisory Agreement, which initially took effect immediately and continued in effect through July 31, 2011. The Advisory Agreement continues from year to year until terminated by either the Trust or the Investment Manager, as long as it is specifically approved at least annually by either the Board or by a vote of the majority of the outstanding shares of the Fund and by the vote of a majority of the Independent Trustees, cast in person at a meeting called for the purpose of voting on such approval.

The Advisory Agreement generally provides that, subject to the overall supervision and control of the Board, the Investment Manager shall have supervisory responsibility for the general management and investment of the Funds' assets and will endeavor to preserve the autonomy of the Trust. Under the Advisory Agreement, the Investment Manager is authorized to make decisions to buy and sell securities and other assets for the Funds, to place the Funds' portfolio transactions with broker-dealers and to negotiate the terms of such transactions including brokerage commissions on brokerage transactions on behalf of the Funds. The Investment Manager is authorized to exercise discretion within the Trust's policy concerning allocation of its portfolio brokerage, as permitted by law, and in so doing shall not be required to make any reduction in its investment advisory fees. The Investment Manager is required to use its best efforts to seek to obtain the best overall terms available for portfolio transactions for each Fund. See ***Brokerage Allocation and Other Practices — General Brokerage Policy, Brokerage Transactions and Broker Selection.***

The Investment Manager, at its own expense, provides office space, facilities and supplies, equipment and personnel for the performance of its functions under the Advisory Agreement. The Trust pays all compensation of the Independent Trustees.

Under the Advisory Agreement, the Investment Manager is not liable for any loss suffered by a Fund or its shareholders as a result of any error of judgment, or any loss arising out of any investment, or as a consequence of any other act or omission of the Investment Manager or any of its affiliates in the performance of the Investment Manager's duties under the agreement, except for (i) with respect to acts or omissions in respect of investment activities, liability resulting from willful misfeasance, bad faith, reckless disregard or gross negligence, and (ii) with respect to all other matters, liability resulting from bad faith, intentional misconduct or negligence, on the part of the Investment Manager or its affiliates.

A discussion regarding the Board's approval of the continuation, through July 31, 2014, of the Advisory Agreement with respect to each Fund is available in the Fund's semiannual report to shareholders for the fiscal

period June 30, 2013. A discussion regarding the basis of the Board's approval of the continuation of the Advisory Agreement through July 31, 2015 is expected to be available in the Fund's semiannual report to shareholders for the fiscal period ending June 30, 2014.

Advisory Fee Rates

The Funds pay the Investment Manager an annual fee for its investment advisory services as shown in the section entitled *Fees and Expenses — Annual Fund Operating Expenses* in each Fund's prospectus. The advisory fee is calculated as a percentage of the average daily net assets of each Fund and is paid monthly. The Investment Manager may pay amounts from its own assets to the Distributor and/or to selling agents for services they provide.

The Investment Manager receives a monthly investment advisory fee based on each Fund's average daily net assets at the following annual rates:

	<u>Assets</u>	<u>Rate of Fee</u>
<u>Wanger USA</u>	First \$100 million	0.940%
	\$100 million to \$250 million	0.890%
	\$250 million to \$2 billion	0.840%
	\$2 billion and over	0.800%
<u>Wanger International</u>	First \$100 million	1.100%
	\$100 million to \$250 million	0.950%
	\$250 million to \$500 million	0.900%
	\$500 million to \$1 billion	0.800%
	\$1 billion and over	0.720%
<u>Wanger Select</u>	First \$500 million	0.800%
	\$500 million and over	0.780%
<u>Wanger International Select</u>	First \$500 million	0.940%
	\$500 million and over	0.890%

The Investment Manager received fees from the Funds for its services as reflected in the following chart, which shows the advisory fees paid to the Investment Manager and the fees waived/reimbursed by the Investment Manager, where applicable, for the three most recently completed fiscal years.

Gross Advisory Fee	\$ 232,105	\$ 236,056	\$ 269,600
Amount Waived/Reimbursed by the Investment Manager	\$ 15,919	—	\$ 15,651
Net Advisory Fee	\$ 216,186	\$ 236,056	\$ 253,949

The Investment Manager has contractually agreed to bear a portion of ordinary operating expenses, on an annualized basis (excluding transaction costs and certain other investment-related expenses, interest and fees on borrowings and expenses associated with the Fund's investment in other investment companies, if any), after giving effect to any balance credits from the Custodian, as follows:

<u>Fund</u>	<u>Expense Limitation</u>
Wanger Select	1.35% of average daily net assets
Wanger International Select	1.45% of average daily net assets

Each of the above expense arrangements may be modified or amended only with approval from the Fund and the Investment Manager, and each arrangement will terminate on April 30, 2015. There is no guarantee that these arrangements will continue thereafter.

Portfolio Managers

The following provides additional information about the portfolio managers of the Investment Manager who are responsible for making the day-to-day investment decisions for the Funds. As described in the *Management of the Fund — Primary Service Providers* section of each Fund's prospectus, the portfolio managers of the Investment Manager who are responsible for the Funds are:

Portfolio Managers of the Investment Manager

<u>Portfolio Manager</u>	<u>Fund</u>
Robert A. Chalupnik, CFA	Wanger Select
William J. Doyle, CFA	Wanger USA
Louis J. Mendes, CFA	Wanger International
Robert A. Mohn, CFA	Wanger USA
Christopher J. Olson, CFA	Wanger International
	Wanger International Select

Compensation

For services performed for the 2013 calendar year and incentives paid in early 2014, Messrs. Chalupnik, Doyle, Mendes, Mohn and Olson and analysts and other key employees of the Investment Manager received all of their compensation in the form of salary and incentive compensation provided in whole by Ameriprise Financial. Typically, a high proportion of an analyst's or portfolio manager's incentive compensation is paid in cash with a smaller proportion going into two separate incentive plans. The first plan is a notional investment based on the performance of certain Columbia Funds, including the Columbia Acorn Funds. The second plan consists of Ameriprise Financial restricted stock and/or options. Both plans vest over three years from the date of issuance.

Portfolio managers and key analysts are positioned in compensation tiers based on cumulative performance of the portfolios/stocks that they manage and their total responsibilities, the objective being to provide very competitive total compensation for high performing analysts and portfolio managers. Portfolio manager performance is measured versus primary portfolio benchmarks. Analyst performance is measured versus a custom benchmark for each analyst. The Fund's portfolio managers are compensated both as portfolio managers (versus their primary portfolio benchmarks) and as analysts (versus their custom analyst benchmarks). One-, three- and five-year performance periods primarily drove incentive levels through 2013, with the three-year period carrying the highest weight. Incentive compensation varies by tier and can range from zero on the low end to a multiple of base pay on the high end. Incentives are adjusted up or down by as much as 15% of high/low ranges based on qualitative performance factors, which include investment performance impacts not included in benchmarks such as industry (or country) weighting recommendations, plus adherence to compliance standards, business building, and citizenship. Less seasoned analysts' incentives are also based on performance versus benchmarks, though they are less formulaic in order to emphasize investment process instead of initial investment results. The qualitative factors discussed above are also considered. These analysts participate in an incentive pool which is based on a formula primarily driven by firm-wide investment performance.

In addition, the incentive amounts available for the entire pool are adjusted up or down based upon the increase/decrease in Investment Manager revenues versus an agreed upon base revenue amount. Investment performance, however, impacts incentives far more than revenues. The Investment Manager determines incentive compensation adhering to the formulas, subject to review by Columbia Management and Ameriprise Financial.

Performance Benchmarks

<u>Portfolio Manager</u>	<u>Benchmark(s)</u>
Robert A. Chalupnik (Wanger Select)	S&P MidCap 400® Index (primary benchmark), S&P 500® Index and Lipper Variable Underlying Mid-Cap Core Funds Index
William J. Doyle (Wanger USA)	Russell 2000 Index (primary benchmark) and Lipper Variable Underlying Small-Cap Growth Funds Index
Louis J. Mendes (Wanger International)	S&P Global Ex-U.S. Between \$500 Million and \$5 Billion® Index (primary benchmark), MSCI Europe, Australasia, and Far East (MSCI EAFE) Index (Net) and Lipper Variable Underlying International Growth Funds Index
Robert A. Mohn (Wanger USA)	Russell 2000 Index (primary benchmark) and Lipper Variable Underlying Small-Cap Growth Funds Index
Christopher J. Olson (Wanger International)	S&P Global Ex-U.S. Between \$500 Million and \$5 Billion® Index (primary benchmark), MSCI EAFE Index (Net) and Lipper Variable Underlying International Growth Funds Index
Christopher J. Olson (Wanger International Select)	S&P Developed Ex-U.S. Between \$2 Billion and 10 Billion® Index (primary benchmark), MSCI EAFE Index (Net) and Lipper Variable Underlying International Growth Funds Index

Other Accounts

The following table shows the number and assets of other investment accounts (or portions of investment accounts) that the portfolio managers of the Investment Manager managed in addition to the Funds.

Other Accounts Managed by the Portfolio Managers as of December 31, 2013

Portfolio Manager	Other SEC-registered open-end and closed-end funds		Other pooled investment vehicles		Other accounts	
	Number of accounts	Assets	Number of accounts	Assets	Number of accounts	Assets
Robert A. Chalupnik	2	\$ 1,097,451,231	0	—	1	\$ 522,776
William J. Doyle*	1	\$ 1,800,286,403	0	—	6	\$ 2,850,000
Louis J. Mendes	4	\$ 9,845,136,109	0	—	5	\$ 4,850,000
Robert A. Mohn	3	\$23,204,941,243	1	\$53,683,642	5	\$1,122,153,639
Christopher J. Olson	2	\$ 1,071,837,818	0	—	1	\$ 613,337

* Mr. Doyle became co-portfolio manager of Wanger USA effective January 1, 2014.

Other Accounts Managed by the Portfolio Managers for which the Advisory Fee is Based on Performance

As of December 31, 2013, none of the Funds' portfolio managers managed an account for which the advisory fee was based on performance.

Ownership of Securities

The table below shows the dollar ranges of shares of each Fund beneficially owned (as determined pursuant to Rule 16a-1(a)(2) under the 1934 Act) by each Fund's portfolio manager(s).

Portfolio Manager Ownership of the Funds as of December 31, 2013

Portfolio Manager	Fund	Dollar Range of Equity Securities in the Fund Beneficially Owned*
Robert A. Chalupnik	Wanger Select	—
William J. Doyle**	Wanger USA	—
Louis J. Mendes	Wanger International	—
Robert A. Mohn	Wanger USA	—
Christopher J. Olson	Wanger International	—
Christopher J. Olson	Wanger International Select	—

* None of the portfolio manager of the Funds own any Fund shares; shares of the Funds are issued only in connection with investments in and payments under Contracts and Qualified Plans. The portfolio managers own shares of the Columbia Acorn Funds.

** Mr. Doyle became co-portfolio manager of Wanger USA effective January 1, 2014.

The Investment Manager's Portfolio Managers and Potential Conflicts of Interests

Like other investment professionals with multiple clients, a Fund's portfolio manager(s) may face certain potential conflicts of interest in connection with managing both the Fund and other accounts at the same time. The Investment Manager and the Funds have adopted compliance policies and procedures that attempt to address certain of the potential conflicts that portfolio managers face in this regard. Certain of these conflicts of interest are summarized below.

The management of accounts with different advisory fee rates and/or fee structures may raise potential conflicts of interest for a portfolio manager by creating an incentive to favor higher fee accounts.

Potential conflicts of interest also may arise when a portfolio manager has personal investments in other accounts that may create an incentive to favor those accounts. As a general matter and subject to the Investment Manager's Code of Ethics and certain limited exceptions, the Investment Manager's investment professionals do not have the opportunity to invest in client accounts, other than the Funds and the series of Columbia Acorn Trust.

A portfolio manager who is responsible for managing multiple funds and/or accounts may devote unequal time and attention to the management of those funds and/or accounts. The effects of this potential conflict may be more pronounced where funds and/or accounts managed by a particular portfolio manager have different investment strategies.

A portfolio manager may be able to select or influence the selection of the broker-dealers that are used to execute securities transactions for the Funds. A portfolio manager's decision as to the selection of broker-dealers could produce disproportionate costs and benefits among the Funds and the other accounts the portfolio manager manages.

A potential conflict of interest may arise when a portfolio manager buys or sells the same securities for a Fund and other accounts. On occasions when a portfolio manager considers the purchase or sale of a security to be in the best interests of a Fund as well as other accounts, the Investment Manager's trading desk may, to the extent consistent with applicable laws and regulations, aggregate the securities to be sold or bought in order to obtain the best execution and lower brokerage commissions, if any. Aggregation of trades may create the potential for unfairness to a Fund or another account if a portfolio manager favors one account over another in allocating the securities bought or sold.

"Cross trades," in which a portfolio manager sells a particular security held by a Fund to another account (potentially saving transaction costs for both accounts), could involve a potential conflict of interest if, for example, a portfolio manager is permitted to sell a security from one account to another account at a higher price than an independent third party would pay. The Investment Manager and the Funds have adopted compliance procedures that provide that any transactions between a Fund and another account managed by the Investment Manager are to be made at an independent current market price, consistent with applicable laws and regulation.

Another potential conflict of interest may arise based on the different investment objectives and strategies of a Fund and other accounts managed by its portfolio manager(s). Depending on another account's objectives and other factors, a portfolio manager may give advice to and make decisions for a Fund that may differ from advice given, or the timing or nature of decisions made, with respect to another account. A portfolio manager's investment decisions are the product of many factors in addition to basic suitability for the particular account involved. Thus, a portfolio manager may buy or sell a particular security for certain accounts, and not for a Fund, even though it could have been bought or sold for the Fund at the same time. A portfolio manager also may buy a particular security for one or more accounts when one or more other accounts are selling the security (including short sales). There may be circumstances when a portfolio manager's purchases or sales of portfolio securities for one or more accounts may have an adverse effect on other accounts, including the Funds.

A Fund's portfolio manager(s) also may have other potential conflicts of interest in managing the Fund, and the description above is not a complete description of every conflict that could exist in managing the Fund and other accounts. Many of the potential conflicts of interest to which the Investment Manager's portfolio managers are subject are essentially the same as or similar to the potential conflicts of interest related to the investment management activities of the Investment Manager and its affiliates. See *Investment Advisory and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest* for more information about conflicts of interest, including those that relate to the Investment Manager and its affiliates.

The Administrator

CWAM (which is also the Investment Manager) serves as Administrator of the Funds.

Services Provided

Pursuant to the terms of the Administration Agreement, the Administrator provides certain administrative services to each Fund, including: (i) maintaining the books and records, including financial and corporate records, of the Trust, and providing pricing and bookkeeping services to the Funds; (ii) supervising the preparation and filing of registration statements, notices, reports, proxy statements, tax returns and other documents as deemed necessary or desirable by the Trust; (iii) overseeing and assisting in the coordination of the performance of administrative and third party professional services rendered to the Funds, including the Funds' securities lending agent; (iv) overseeing and assisting with communications with Participating Insurance Companies; (v) providing corporate secretarial services and data processing facilities and calculating and arranging for notice and payment of distributions to shareholders; (vi) developing and implementing procedures to monitor each Fund's compliance with regulatory requirements and with each Fund's investment policies and restrictions; (vii) providing for the services of employees of the Administrator who may be appointed as officers of the Trust; and (viii) providing services to shareholders of the Funds. The Administration Agreement may be terminated by the Board or the Administrator upon 60 days written notice. The Administrator has the power under the Administration Agreement to delegate some or all of its responsibilities to others, at the Administrator's expense. The Administrator retains responsibility for any services it delegates.

The Administrator has delegated a majority of its responsibilities under the Administration Agreement to Columbia Management as the Funds' Sub-Administrator. The Sub-Administrator provides certain of the above enumerated services to the Funds, including fund accounting services, and receives a fee from the Administrator for such services.

Administration Fee Rates and Fees Paid

The Administrator receives compensation for its administration services, which are computed daily and paid monthly as a percentage of the average daily net assets of each Fund at the annual rates shown in each Fund's prospectus.

The following chart shows the administration fees paid to the Administrator for the three most recently completed fiscal years.

Administration Fees Paid by the Funds

<u>Fund</u>	<u>Fiscal Year Ended December 31, 2013</u>	<u>Fiscal Year Ended December 31, 2012</u>	<u>Fiscal Year Ended December 31, 2011</u>
Wanger USA			
Administration Fee	\$428,839	\$397,878	\$430,769
Wanger International			
Administration Fee	\$370,936	\$353,880	\$416,586
Wanger Select			
Administration Fee	\$123,564	\$125,943	\$149,111
Wanger International Select			
Administration Fee	\$ 12,346	\$ 12,556	\$ 14,340

The Administrator did not waive or reimburse any Fund's administration fees for the fiscal years ended December 31, 2013, December 31, 2012 or December 31, 2011.

The Principal Underwriter/Distributor

Columbia Management Investment Distributors, Inc. (the Distributor) serves as the principal underwriter and distributor of the shares of the Funds. The Distributor is a wholly owned subsidiary of Ameriprise Financial. Its address is: 225 Franklin Street, Boston, MA 02110.

Distribution Obligations

Shares of the Funds are offered for sale on a continuous basis through the Distributor on a best efforts basis without any sales commission or charges to the Funds or Participating Insurance Companies or Qualified Plans purchasing Fund shares. However, each Contract imposes its own charges and fees on Contract owners and Qualified Plans may impose such charges on Qualified Plan participants.

Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest

As described above in the *Investment Advisory and Other Services* section of this SAI, and in the *Management of the Fund — Primary Service Providers* section of each Fund's prospectus, the Investment Manager, Administrator, Sub-Administrator, Distributor and Transfer Agent, all affiliates of Ameriprise Financial, receive compensation from the Funds for the various services they provide to the Funds. Additional information as to the specific terms regarding such compensation is set forth in these affiliated service providers' contracts with the Funds, each of which typically is included as an exhibit to Part C of each Fund's registration statement.

In many instances, the compensation paid to the Investment Manager and other Ameriprise Financial affiliates for the services they provide to the Funds is based, in some manner, on the size of the Funds' assets under management. As the size of the Funds' assets under management grows, so does the amount of compensation paid to the Investment Manager and other Ameriprise Financial affiliates for providing services to the Funds. This relationship between Fund assets and affiliated service provider compensation may create economic and other conflicts of interests of which Fund investors should be aware. These potential conflicts of interest, as well as additional ones, are discussed in detail below and also are addressed in other disclosure materials, including the Funds' prospectuses. These conflicts of interest also are highlighted in account documentation and other disclosure materials of Ameriprise Financial affiliates that make available or offer the Columbia Funds as investments in connection with their respective products and services. In addition, the Investment Manager's Form ADV, which it must file with the SEC as an investment adviser registered under the Investment Advisers Act of 1940, provides information about the Investment Manager's business, assets under management, affiliates and potential conflicts of interest. Parts 1 and 2 of the Investment Manager's Form ADV are available online through the SEC's website at www.adviserinfo.sec.gov.

Additional actual or potential conflicts of interest and certain investment activity limitations that could affect the Funds may arise from the financial services activities of Ameriprise Financial and its affiliates, including, for example, the investment advisory/management services provided for clients and customers other than the Funds. In this regard, Ameriprise Financial is a major financial services company. Ameriprise Financial and its affiliates, are engaged in a wide range of financial activities beyond the mutual fund-related activities of the Investment Manager, including, among others, broker-dealer (sales and trading), asset management, insurance and other financial activities. The broad range of financial services activities of Ameriprise Financial and its affiliates may involve multiple advisory, transactional, lending, financial and other interests in securities and other instruments, and in companies, that may be bought, sold or held by the Funds. The following describes certain actual and potential conflicts of interest that may be presented.

Actual and Potential Conflicts of Interest Related to the Investment Advisory/Management Activities of Ameriprise Financial and its Affiliates in Connection With Other Advised/Managed Funds and Accounts

The Investment Manager and other affiliates of Ameriprise Financial may advise or manage funds and accounts other than the Funds. In this regard, Ameriprise Financial and its affiliates may provide investment advisory/management and other services to other advised/managed funds and accounts that are similar to those provided to the Funds. The Investment Manager and Ameriprise Financial's other investment adviser affiliates (including, for example, Columbia Management) will give advice to and make decisions for all advised/managed funds and accounts, including the Funds, as they believe to be in that fund's and/or account's best interests, consistent with their fiduciary duties. The Funds and the other advised/managed funds and accounts of Ameriprise Financial and its affiliates are separately and potentially divergently managed, and there is no assurance that any investment advice Ameriprise Financial and its affiliates give to other advised/managed funds and accounts will also be given simultaneously or otherwise to the Funds.

A variety of other actual and potential conflicts of interest may arise from the advisory relationships of the Investment Manager and other Ameriprise Financial affiliates with other clients and customers. Advice given to the Funds and/or investment decisions made for the Funds by the Investment Manager or other Ameriprise Financial affiliates may differ from, or may conflict with, advice given to and/or investment decisions made for other advised/managed funds and accounts. As a result, the performance of the Funds may differ from the performance of other funds or accounts advised/managed by the Investment Manager or other Ameriprise Financial affiliates. Similarly, a position taken by Ameriprise Financial and its affiliates, including the Investment Manager, on behalf of other funds or accounts may be contrary to a position taken on behalf of the Funds. Moreover, Ameriprise Financial and its affiliates, including the Investment Manager, may take a position on behalf of other advised/managed funds and accounts, or for their own proprietary accounts, that is adverse to companies or other issuers in which the Funds are invested. For example, the Funds may hold equity securities of a company while another advised/managed fund or account may hold debt securities of the same company. If the portfolio company were to experience financial difficulties, it might be in the best interest of the Funds for the company to reorganize while the interests of the other advised/managed fund or account might be better served by the liquidation of the company. This type of conflict of interest could arise as the result of circumstances that cannot be generally foreseen within the broad range of investment advisory/management activities in which Ameriprise Financial and its affiliates engage.

Investment transactions made on behalf of other funds or accounts advised/managed by the Investment Manager or other Ameriprise Financial affiliates also may have a negative effect on the value, price or investment strategies of the Funds. For example, this could occur if another advised/managed fund or account implements an investment decision ahead of, or at the same time as, the Funds and causes the Funds to experience less favorable trading results than they otherwise would have experienced based on market liquidity factors. In addition, the other funds and accounts advised/managed by the Investment Manager and other Ameriprise Financial affiliates, including the other Columbia Funds, may have the same or very similar investment objective and strategies as the Funds. In this situation, the allocation of, and competition for, investment opportunities among the Funds and other funds and/or accounts advised/managed by the Investment Manager or other Ameriprise Financial affiliates may create conflicts of interest especially where, for example, limited investment availability is involved. The Investment Manager has adopted policies and procedures addressing the allocation of investment opportunities among the Funds and other funds and accounts advised by the Investment Manager and other affiliates of Ameriprise Financial. For more information, see ***Investment Advisory and Other Services — The Investment Manager and Investment Advisory Services — Portfolio Managers — The Investment Manager's Portfolio Managers and Potential Conflicts of Interests***.

Sharing of Information among Advised/Managed Accounts

Ameriprise Financial and its affiliates also may possess information that could be material to the management of a Fund and may not be able to, or may determine not to, share that information with the Fund,

even though the information might be beneficial to the Fund. This information may include actual knowledge regarding the particular investments and transactions of other advised/managed funds and accounts, as well as proprietary investment, trading and other market research, analytical and technical models, and new investment techniques, strategies and opportunities. Depending on the context, Ameriprise Financial and its affiliates generally will have no obligation to share any such information with the Funds. In general, employees of Ameriprise Financial and its affiliates, including the portfolio managers of the Investment Manager, will make investment decisions without regard to information otherwise known by other employees of Ameriprise Financial and its affiliates, and generally will have no obligation to access any such information and may, in some instances, not be able to access such information because of legal and regulatory constraints or the internal policies and procedures of Ameriprise Financial and its affiliates. For example, if the Investment Manager or another Ameriprise Financial affiliate, or their respective employees, come into possession of non-public information regarding another advised/managed fund or account, they may be prohibited by legal and regulatory constraints, or internal policies and procedures, from using that information in connection with transactions made on behalf of the Funds. For more information, see *Investment Advisory and Other Services — The Investment Manager and Investment Advisory Services — Portfolio Managers — The Investment Manager’s Portfolio Managers and Potential Conflicts of Interests*.

Soft Dollar Benefits

Certain products and services, commonly referred to as “research products” (including, to the extent permitted by law, research reports, economic and financial data, financial publications, proxy analysis, computer databases and other research-oriented materials), that the Investment Manager may receive in connection with brokerage services provided to a Fund may have the inadvertent effect of disproportionately benefiting other advised/managed funds or accounts. This could happen because of the relative amount of brokerage services provided to a Fund as compared to other advised/managed funds or accounts, as well as the relative compensation paid by a Fund. For more information, see *Brokerage Allocation and Other Practices — Brokerage Commissions*.

Services Provided to Other Advised/Managed Accounts

Ameriprise Financial and its affiliates also may act as an investment adviser, investment manager, administrator, transfer agent, custodian, trustee, broker-dealer, agent, or in another capacity, for advised/managed funds and accounts other than the Funds, and may receive compensation for acting in such capacity. This compensation that the Investment Manager, Distributor and Transfer Agent and other Ameriprise Financial affiliates receive could be greater than the compensation Ameriprise Financial and its affiliates receive for acting in the same or similar capacity for the Funds. In addition, the Investment Manager, Distributor and Transfer Agent and other Ameriprise Financial affiliates may receive other benefits, including enhancement of new or existing business relationships. This compensation and/or the benefits that Ameriprise Financial and its affiliates may receive from other advised/managed funds and accounts and other relationships could potentially create incentives to favor other advised/managed funds and accounts over the Funds. Trades made by Ameriprise Financial and its affiliates for the Funds may be, but are not required to be, aggregated with trades made for other funds and accounts advised/managed by the Investment Manager and other Ameriprise Financial affiliates. If trades are aggregated among the Funds and those other funds and accounts, the various prices of the securities being traded may be averaged, which could have the potential effect of disadvantaging the Funds as compared to the other funds and accounts with which trades were aggregated.

Proxy Voting

Although the Investment Manager endeavors to make all proxy voting decisions with respect to the interests of the Funds for which it is responsible in accordance with its proxy voting policies and procedures, the Investment Manager’s proxy voting decisions with respect to a Fund’s portfolio securities may nonetheless benefit other advised/managed funds and accounts, and/or clients, of Ameriprise Financial and its affiliates. The Investment Manager has adopted proxy voting policies and procedures that are designed to provide that all proxy

voting is done in the best interests of its clients, including the Funds, without any resulting benefit or detriment to the Investment Manager and/or its affiliates, including Ameriprise Financial and its affiliates. For more information about the Investment Manager's proxy voting policies and procedures, see *Investment Advisory and Other Services — Proxy Voting Policies and Procedures*.

Certain Trading Activities

The directors/trustees, officers and employees of Ameriprise Financial and its affiliates may buy and sell securities or other investments for their own accounts, and in doing so may take a position that is adverse to the Funds. In order to reduce the possibility that such personal investment activities of the directors/trustees, officers and employees of Ameriprise Financial and its affiliates will materially adversely affect the Funds, Ameriprise Financial and its affiliates have adopted policies and procedures, and the Funds, the Board, the Investment Manager and the Distributor have each adopted a Code of Ethics that addresses such personal investment activities. For more information, see *Investment Advisory and Other Services — Codes of Ethics*.

Affiliate Transactions

Subject to applicable legal and regulatory requirements, the Funds may enter into transactions in which Ameriprise Financial and/or its affiliates may have an interest that potentially conflicts with the interests of the Funds. For example, an affiliate of Ameriprise Financial may sell securities to the Funds from an offering in which it is an underwriter or from securities that it owns as a dealer, subject to applicable legal and regulatory requirements.

Investment Limitations on Ameriprise Financial and its Affiliates

Regulatory and other restrictions applicable to Ameriprise Financial and its affiliates may limit the Funds' investment activities in various ways. For example, certain securities may be subject to ownership limitations due to regulatory limits on investments in certain industries (such as, for example, banking and insurance) and markets (such as emerging or international markets), or certain transactions (such as those involving certain derivatives or other instruments) or mechanisms imposed by certain issuers (such as, among others, poison pills). Certain of these restrictions may impose limits on the aggregate amount of investments that may be made by affiliated investors in the aggregate or in individual issuers. In these circumstances, the Investment Manager may be prevented from acquiring securities for a Fund that it might otherwise prefer to acquire if the acquisition would cause the Fund and/or its affiliated investors to exceed an applicable limit. These types of regulatory and other applicable limits are complex and vary significantly in different contexts including, among others, from country to country, industry to industry and issuer to issuer. The Investment Manager has policies and procedures in place designed to monitor and interpret these limits. Nonetheless, given the complexity of these limits, the Investment Manager and/or its affiliates may inadvertently breach these limits, and a Fund may therefore be required to sell securities that it might otherwise prefer to hold in order to comply with such limits. In addition, aggregate ownership limitations could cause performance dispersion among funds and accounts managed by the Investment Manager with similar investment objectives and strategies and portfolio management teams. For example, if further purchases in an issuer are restricted due to regulatory or other reasons, a portfolio manager would not be able to acquire securities or other assets of an issuer for a new fund that may already be held by other funds and accounts with the same/similar investment objectives and strategies. The Investment Manager may also choose to limit purchases in an issuer to a certain threshold for risk management purposes. If the holdings of the Investment Manager's affiliates are included in calculating that limitation, a Fund may be more limited in its ability to purchase a particular security or other asset than if the holdings of the Investment Manager's affiliates had been excluded from the calculation. At certain times, a Fund may be restricted in its investment activities because of relationships that an affiliate of the Fund, which may include Ameriprise Financial and its affiliates, may have with the issuers of securities. This could happen, for example, if a Fund desired to buy a security issued by a company for which Ameriprise Financial or an affiliate serves as underwriter. In any of these scenarios, a Fund's inability to participate (or participate further) in a particular investment, despite a portfolio manager's desire to so participate, may negatively impact Fund performance. The

internal policies and procedures of Ameriprise Financial and its affiliates covering these types of restrictions and addressing similar issues also may at times restrict a Fund's investment activities. See also *About the Funds' Investments — Certain Investment Activity Limits*.

Actual and Potential Conflicts of Interest Related to Ameriprise Financial and its Affiliates' Non-Advisory Relationships with Clients and Customers other than the Funds

The financial relationships that Ameriprise Financial and its affiliates may have with companies and other entities in which a Fund may invest can give rise to actual and potential conflicts of interest. Subject to applicable legal and regulatory requirements, a Fund may invest (a) in the securities of Ameriprise Financial and/or its affiliates and/or in companies in which Ameriprise Financial and its affiliates have an equity, debt or other interest, and/or (b) in the securities of companies held by other Columbia Funds. The purchase, holding and sale of such securities by a Fund may enhance the profitability and the business interests of Ameriprise Financial and/or its affiliates and/or other Columbia Funds. There also may be limitations as to the sharing with the Investment Manager of information derived from the non-investment advisory/management activities of Ameriprise Financial and its affiliates because of legal and regulatory constraints and internal policies and procedures (such as information barriers and ethical walls). Because of these limitations, Ameriprise Financial and its affiliates generally will not share information derived from its non-investment advisory/management activities with the Investment Manager.

Actual and Potential Conflicts of Interest Related to Ameriprise Financial Affiliates' Marketing and Use of the Columbia Funds as Investment Options

Ameriprise Financial and its affiliates also provide a variety of products and services that, in some manner, may utilize the Columbia Funds as investment options. For example, the Columbia Funds may be offered as investments in connection with brokerage and other securities products offered by affiliates of Ameriprise Financial, and may be utilized as investments in connection with fiduciary, investment management and other accounts offered by Ameriprise Financial, and its affiliates, as well as for other Columbia Funds structured as "funds of funds." The use of the Columbia Funds in connection with other products and services offered by Ameriprise Financial and its affiliates may introduce economic and other conflicts of interest. These conflicts of interest are highlighted in account documentation and other disclosure materials for the other products and services offered by Ameriprise Financial and its affiliates.

Ameriprise Financial and its affiliates, including the Investment Manager, may make payments to their affiliates in connection with the promotion and sale of the Funds' shares, in addition to the sales-related and other compensation that these parties may receive from the Funds. As a general matter, personnel of Ameriprise Financial and its affiliates do not receive compensation in connection with their sales or use of the Funds that is greater than that paid in connection with their sales of other comparable products and services. Nonetheless, because the compensation that the Investment Manager and other affiliates of Ameriprise Financial may receive for providing services to the Funds is generally based on the Funds' assets under management and those assets will grow as shares of the Funds are sold, potential conflicts of interest may exist. See *Brokerage Allocation and Other Practices — Additional Selling Agent Payments* for more information.

Other Service Providers

The Transfer Agent

Columbia Management Investment Services Corp. acts as the Transfer Agent for each Fund's shares and can be contacted at P.O. Box 8081, Boston, MA 02266-8081. The Transfer Agent is a subsidiary of Ameriprise Financial. Under the Transfer Agency Agreement, the Funds pay the Transfer Agent a monthly fee based on the annual rate of \$21 per open account, plus certain out-of-pocket expenses.

The Transfer Agent retains BFDS/DST, 2 Heritage Drive, North Quincy, MA 02171 as the Funds' sub-transfer agent. BFDS/DST assists the Transfer Agent in carrying out its duties.

The Custodian

JPMorgan, One Chase Manhattan Plaza, New York, New York 10005, is the Custodian of the Funds' assets. It is responsible for holding all securities and cash of the Funds, receiving and paying for securities purchased, delivering against payment securities sold, receiving and collecting income from investments and performing other administrative duties, all as directed by authorized persons of the Funds. The Investment Manager and Columbia Management supervise JPMorgan in such matters as the purchase and sale of portfolio securities. Portfolio securities purchased in the United States are maintained in the custody of JPMorgan or other domestic banks or depositories. Portfolio securities purchased outside of the United States are maintained in the custody of foreign banks and trust companies who are members of JPMorgan's foreign depository and foreign sub-custodian network.

With respect to foreign depositories and foreign sub-custodians, there can be no assurance that a Fund, and the value of its shares, will not be adversely affected by acts of foreign governments, financial or operational difficulties of the foreign sub-custodians, difficulties and costs of obtaining jurisdiction over, or enforcing judgments against, the foreign sub-custodians or application of foreign law to a Fund's foreign sub-custodial arrangements. Accordingly, an investor should recognize that the non-investment risks involved in holding assets abroad are greater than those associated with holding assets in the U.S.

The Funds may invest in obligations of JPMorgan and may purchase securities from or sell securities to JPMorgan.

Independent Registered Public Accounting Firm

PricewaterhouseCoopers LLP, located at One North Wacker, Chicago, Illinois 60606, serves as the Funds' independent registered public accounting firm, providing audit services, tax return review services and assistance and consultation in connection with the review of various SEC filings. The reports of the Funds' independent registered public accounting firm and the audited financial statements included in the Funds' annual reports to shareholders dated December 31, 2013 are incorporated herein by reference. No other parts of the annual reports or semiannual reports to shareholders are incorporated by reference herein. The financial statements incorporated by reference into the Fund's prospectuses and this SAI have been so incorporated in reliance upon the report of the independent registered public accounting firm, given on its authority as an expert in auditing and accounting.

Counsel

Perkins Coie LLP serves as counsel to the Funds and Drinker Biddle & Reath LLP serves as counsel to the Independent Trustees. Perkins Coie LLP is located at 700 13th Street, N.W., Washington, DC 20005. Drinker Biddle & Reath LLP is located at One Logan Square, Suite 2000, Philadelphia, PA 19103.

Securities Lending Agent

GSAL, 125 High Street, Oliver Street Tower, Suite 1700, Boston, MA 02110, is the Funds' securities lending agent. As such, GSAL is responsible, among other things for: entering into and maintaining securities loan agreements with borrowers; negotiating fees with borrowers; delivering securities to borrowers; receiving collateral from borrowers in connection with loans; and investing cash collateral in accordance with instructions received from the Investment Manager. See *About the Funds' Investments — Lending Securities* for more information.

Codes of Ethics

The Funds, the Investment Manager and the Distributor have adopted Codes of Ethics pursuant to the requirements of the 1940 Act, including Rule 17j-1 under the 1940 Act. These Codes of Ethics permit personnel subject to the Codes of Ethics to invest in securities, including securities that may be bought or held by the Funds. These Codes of Ethics are included as exhibits to Part C of the Funds' registration statement. These Codes of Ethics can be reviewed and copied at the SEC's Public Reference Room and may be obtained by calling the SEC at 202.551.8090; they also are available on the SEC's website at www.sec.gov, and may be obtained, after paying a duplicating fee, by electronic request to publicinfo@sec.gov or by writing to the SEC's Public Reference Room, 100 F Street N.E., Washington, D.C. 20549-1520.

Proxy Voting Policies and Procedures

The Funds have delegated to the Investment Manager the responsibility to vote proxies relating to portfolio securities held by the Funds. In deciding to delegate this responsibility to the Investment Manager, the Board reviewed and approved the policies and procedures adopted by the Investment Manager. These included the procedures that the Investment Manager follows when a vote presents a conflict between the interests of the Funds and their shareholders and the Investment Manager, its affiliates, its other clients or other persons.

The Investment Manager's policy is that all proxies for Fund securities must be voted in a manner considered by the Investment Manager to be in the best interest of the Funds and their shareholders without regard to any benefit to the Investment Manager, its affiliates, its other clients or other persons. The Investment Manager examines each proposal and votes against the proposal, if, in its judgment, approval or adoption of the proposal would be expected to have an adverse impact on the current or potential market value of the issuer's securities. The Investment Manager also examines each proposal and votes the proxies against the proposal, if, in its judgment, the proposal would be expected to affect adversely the best interest of the Funds. The Investment Manager determines the best interest of the Funds in light of the potential economic return on the Funds' investment. The Investment Manager submits an annual report to the Board addressing various proxy voting matters, including, among other matters, votes cast contrary to the Investment Manager's general voting guidelines, votes involving potential conflicts of interest and significant issues considered by the Investment Manager's Proxy Voting Committee (Proxy Committee). In certain circumstances, the Investment Manager's policies permit the Investment Manager to abstain on votes or refrain from voting with respect to shares of foreign stocks.

The Investment Manager seeks to address potential material conflicts of interest by having predetermined voting guidelines and by having each individual stock analyst review and vote each proxy for the stocks that he or she follows. For those proposals that require special consideration or in instances where special circumstances may require varying from the predetermined guideline, the Proxy Committee determines the vote in the best interest of the Funds, without consideration of any benefit to the Investment Manager, its affiliates, its other clients or other persons. The Proxy Committee is composed of representatives of the Investment Manager's equity investments, equity research, compliance and administration functions. In addition to the responsibilities described above, the Proxy Committee has the responsibility to review, on an annual basis, the Investment Manager's proxy voting policies to ensure consistency with internal and regulatory agency policies, and to develop additional predetermined voting guidelines to assist in the review of proxy proposals.

The Proxy Committee may vary from a predetermined guideline if it determines that voting on the proposal according to the predetermined guideline would be expected to have an adverse impact on the current or potential market value of the issuer's securities or to affect adversely the best interest of the client. References to the best interest of a client refer to the interest of the client in terms of the potential economic return on the client's investment. In determining the vote on any proposal, the Proxy Committee does not consider any benefit other than benefits to the owner of the securities to be voted. A member of the Proxy Committee is prohibited from voting on any proposal for which he or she has a conflict of interest by reason of a direct relationship with the issuer or other party affected by a given proposal. Persons making recommendations to the Proxy Committee or its members are required to disclose to the Committee any relationship with a party making a proposal or other matter known to the person that would create a potential conflict of interest.

The Investment Manager has retained Institutional Shareholder Services (ISS), a third party vendor, to implement its proxy voting process. ISS provides proxy analysis, record keeping services, vote disclosure services and independent proxy voting services.

Information about how the Funds voted proxies relating to portfolio securities during the most recent twelve month period ended June 30 will be available by August 31 of this year free of charge: (i) by calling Columbia Funds at 800.426.3750 or (ii) through the SEC's website at www.sec.gov. For a copy of the Investment Manager's policies and procedures that are used to determine how to vote proxies relating to portfolio securities held by the Fund, see Appendix B to this SAI.

FUND GOVERNANCE

The Board

The following table provides basic information about the Trustees, including their names, the date each was first elected or appointed to office, the principal business occupations of each during at least the last five years and other directorships held. Each Trustee serves a term of unlimited duration and also serves as a trustee of Columbia Acorn Trust, another open-end investment company, the series of which also are managed by the Investment Manager. The mailing address of each Trustee is: c/o Columbia Wanger Asset Management, LLC, 227 West Monroe Street, Suite 3000, Chicago, Illinois 60606.

Charles P. McQuaid, 60, Trustee ⁽¹⁾	1992	Portfolio manager and/or analyst, CWAM or its predecessors since 1978; Vice President of Columbia Acorn Trust and Wanger Advisors Trust since April 2014; Formerly, President and Chief Investment Officer, CWAM or its predecessors, October 2003-March 2014; President of Columbia Acorn Trust and Wanger Advisors Trust, October 2003-March 2014.	12	Columbia Acorn Trust
Ralph Wanger, 79, Trustee Emeritus ⁽²⁾	1970	Founder, CWAM. Formerly, President, Chief Investment Officer and portfolio manager, CWAM or its predecessors, July 1992-September 2003; Director, Wanger Investment Company PLC; Consultant, CWAM or its predecessors, September 2003-September 2005.	12	Columbia Acorn Trust

* Dates prior to April 1992 correspond to the date first elected or appointed as a director or officer of The Acorn Fund Inc., the predecessor trust to Columbia Acorn Trust.

⁽¹⁾ Mr. McQuaid is an “interested person” of the Trust and of the Investment Manager, as defined in the 1940 Act, because he is an officer of the Trust and an employee of the Investment Manager.

⁽²⁾ As permitted under the Trust’s Bylaws, Mr. Wanger serves as a non-voting Trustee Emeritus of the Trust.

The Board and its Committees

Responsibilities

The Board has overall management responsibility for the Funds. The Trustees are responsible for supervising and overseeing the management and operation of the Trust. Each Trustee serves a term of unlimited duration, provided that at all times a majority of Trustees has been elected by shareholders. The Trustees appoint their own successors, provided that at least two-thirds of the Trustees, after such appointment, have been elected by shareholders. Shareholders may remove a Trustee, with or without cause, upon the vote of two-thirds of the Trust’s outstanding shares at any meeting called for that purpose. A Trustee may be removed with or without cause upon the vote of a majority of the Trustees.

Leadership Structure

The Board is currently composed of nine Trustees, eight of whom are Independent Trustees and one of whom is an Interested Trustee. In addition to the nine Trustees, Ralph Wanger serves as a non-voting Trustee Emeritus of the Trust. The Chair of the Board, Laura M. Born, is an Independent Trustee.

Charles P. McQuaid is considered an Interested Trustee because he is an officer of the Funds and an employee of the Investment Manager.

The Board met four times during 2013.

Each Trustee was nominated to serve on the Board because of his or her experience, skills and qualifications. See ***Trustee Experience*** below. The Board believes that its leadership structure is consistent with industry practices and is appropriate in light of the size of the Trust and the nature and complexity of its business. In particular:

- ***Board Composition.*** The Trustees believe that maintaining a Board composed of a super-majority of at least 75% Independent Trustees is appropriate and in the best interest of Fund shareholders. The Trustees also believe that having Mr. McQuaid serve as an Interested Trustee and Mr. Wanger serve as a non-voting Trustee Emeritus brings management and financial insight that is important to certain of the Board's decisions and also in the best interest of shareholders.
- ***Independent Trustee Meetings and Executive Sessions.*** The Trustees believe that meetings of the Independent Trustees and meetings in executive session help mitigate conflicts of interest and allow the Independent Trustees to deliberate candidly, constructively and separately from management, in a manner that affords honest disagreement and critical questioning.
- ***Executive Committee.*** The Trustees believe that having an Executive Committee allows for expeditious action when the delay necessary to convene a full Board meeting could cause the Funds to miss business opportunities, fail to fulfill regulatory obligations or for other reasons. Actions taken by the Executive Committee generally are ratified by the full Board at its next meeting, ensuring that the Executive Committee acts in the best interests of Fund shareholders and in the absence of conflicts of interest.

The Board has established seven standing committees: the Audit Committee; the Compliance Committee; the Contract Committee; the Executive Committee; the Governance Committee; the Investment Performance Analysis Committee; and the Valuation Committee. The Board has also established an Ad Hoc Committee on IT/ Data Security. During 2013, the Board had a Securities Lending Committee, which met twice. The Board determined to dissolve the Securities Lending Committee and to transfer its oversight responsibilities to the Investment Performance Analysis Committee. The Trustees believe that the number of standing committees, as well as the composition and scope of activities of each committee, is appropriate. The functions, responsibilities and composition of each committee are set forth below.

<u>Committee</u>	<u>Members</u>	<u>Function</u>	<u>Number of Meetings in 2013</u>
Audit	Michelle L. Collins (chair and Audit Committee financial expert) John C. Heaton David R. Rudis	Makes recommendations to the Board regarding the selection of independent auditors for the Trust; confers with the independent auditors regarding the scope and results of each audit; oversees the quality, objectivity and integrity of disclosure controls and processes and procedures employed by the Funds' service providers in preparing the Funds' financial statements; and carries out the provisions of its charter.	4

<u>Committee</u>	<u>Members</u>	<u>Function</u>	<u>Number of Meetings in 2013</u>
Compliance	Margaret M. Eisen (chair) Michelle L. Collins Steven N. Kaplan David J. Rudis	Provides oversight of the monitoring processes and controls regarding the Trust with respect to legal, regulatory and internal rules, policies, procedures and standards (other than those relating to audit matters); oversees compliance and risk management by the Funds' service providers, including with respect to the Transfer Agent's sub-transfer agent compliance program; and carries out the provisions of its charter.	5
Contract	David J. Rudis (chair) Laura M. Born Maureen M. Culhane Margaret M. Eisen David B. Small	Makes recommendations to the Board regarding the continuation or amendment of the investment advisory agreements between the Trust and the Investment Manager and other agreements with third party service providers; and carries out the provisions of its charter.	6
Executive	Laura M. Born (chair) Steven N. Kaplan Charles P. McQuaid	Exercises powers of the Board during intervals between meetings of the Board, with certain exceptions.	0
Governance	Steven N. Kaplan (chair) Laura M. Born Michelle L. Collins	Makes recommendations to the Board regarding committees of the Board and committee assignments, the composition of the Board, the compensation of the Independent Trustees and candidates for election as Independent Trustees; oversees the process for evaluating the functioning of the Board, including addressing potential conflicts of interest; monitors the performance of the CCO and makes recommendations to the Board regarding the selection and compensation of the CCO; monitors the performance of counsel to the Funds and the Independent Trustees and makes recommendations to the Independent Trustees regarding the selection of their counsel; and carries out the provisions of its charter.	6

<u>Committee</u>	<u>Members</u>	<u>Function</u>	<u>Number of Meetings in 2013</u>
Investment Performance Analysis	Maureen M. Culhane (chair) John C. Heaton Steven N. Kaplan David B. Small	Monitors and reviews the investment performance of each Fund; develops an appropriate framework for measuring, comparing and assessing Fund performance; provides interpretation of performance information in connection with Fund advisory contracts; makes proposals to the Investment Manager regarding Fund investment objectives, policies and limitations; acts as a liaison between the Investment Manager and the Board in overseeing and discussing investment-related issues; oversees the Funds' securities lending program, including by reviewing the performance of the program, the Investment Manager's oversight of the program and GSAL's compliance with established securities lending policies, and by approving vehicles for the investment of securities lending cash collateral; and carries out the provisions of its charter.	5
IT/Data Security	Laura M. Born (chair) Michelle L. Collins Margaret M. Eisen David J. Rudis	Oversees information technology and data security matters affecting the Funds.	None – established during 2014
Valuation	Charles P. McQuaid (chair) Margaret M. Eisen John C. Heaton Laura M. Born (alternate) Michelle L. Collins (alternate) Maureen M. Culhane (alternate) Steven N. Kaplan (alternate) David J. Rudis (alternate) David B. Small (alternate) Bruce H. Lauer (alternate, representative of the Investment Manager)	Determines in good faith the fair valuation of portfolio securities held by any Fund in instances as required by the Trust's Portfolio Pricing Policy adopted by the Board, and carries out the provisions of its charter.	31

The Governance Committee's policy with respect to considering Trustee candidates recommended by shareholders and the procedures to be followed by shareholders in submitting such recommendations are set forth in the charter. The Governance Committee has stated that the principal criterion for the selection of candidates is their ability to contribute to the overall functioning of the Board and to carry out the responsibilities of the Trustees.

The Governance Committee believes that the Board should be comprised of Trustees who represent a broad cross section of backgrounds, skills and experience, and that each Trustee should generally exhibit stature and experience commensurate with the responsibility of representing the Funds. The Governance Committee

periodically reviews the membership of the Board to determine whether it may be appropriate to add individuals with backgrounds or skill sets different from those of the current Trustees. The Governance Committee follows the process it deems appropriate under the circumstances. Generally, the Committee identifies Trustee candidates from references provided by the Independent Trustees and others, including nominees recommended by shareholders, and evaluates them through a process of questionnaires and multiple interviews. Through this process, the Governance Committee seeks to identify candidates who meet the particular needs of the Board at the time based on the existing make up of the Board. In addition, counsel to the Independent Trustees analyzes each Independent Trustee candidate to ensure that the candidate meets the independence requirements of the 1940 Act. The Trustees believe that the Board's process for nominating Trustees effectively produces the best candidates with a diversity of qualities, experience, backgrounds and complementary skills, and that the composition of the Board allows the Board, as a body, to oversee the Funds in a manner that is consistent with the best interests of Fund shareholders.

Although the Investment Manager, the Trustees, or shareholders may submit suggestions for Independent Trustee candidates to the Governance Committee, neither the Governance Committee nor the Independent Trustees as a group shall consider those candidates on a preferential basis as opposed to other possible candidates. Any shareholder may submit the name of a candidate for consideration by the Governance Committee by submitting the recommendation to the Trust's Secretary. The Secretary will forward any such recommendation to the Chairman of the Governance Committee promptly upon receipt.

Risk Oversight

The Compliance Committee, working with the Funds' CCO and the Investment Manager, has developed a detailed risk reporting methodology that includes a dashboard report relating to, among other matters, investment risk, credit risk, liquidity risk, counterparty risk, compliance risk and operational risk. Currently, the Investment Manager compiles and monitors relevant risk data on an ongoing basis and the Board and the Compliance Committee receive and review the risk reporting data on a quarterly basis or more frequently if circumstances warrant. The Board will continue to assess the most effective means of implementing this risk oversight process so that it provides the data that is most relevant to the Board in the exercise of its risk oversight role.

The Audit Committee also plays an important role in the Board's risk oversight. Working with the Funds' independent registered accountants, the Audit Committee ensures that the Funds' annual audit scope includes risk-based considerations, such that the auditors consider the risks potentially impacting the audit findings as well as risks to the Funds' financial position and operations. In addition, the Investment Performance Analysis Committee provides the Board with information relevant to assessing risk oversight by monitoring and reviewing the Funds' performance metrics, including measurements of risk-adjusted returns, and by regularly conferring with the Investment Manager on performance-related issues. The Investment Performance Analysis Committee also receives regular reports from GSAL regarding the risks associated with the Funds' securities lending program, including counterparty risk and liquidity.

The Funds' CCO reports to the Compliance Committee and to the Board at least quarterly regarding compliance, operational, investment and legal risk concerns. In addition to his quarterly reports, the CCO provides an annual report to the Board in accordance with the Funds' compliance policies and procedures. The CCO regularly discusses relevant compliance and legal risk issues affecting the Funds during meetings with the Independent Trustees and consults with counsel. The CCO updates the Board on the application of the Funds' compliance policies and procedures and discusses how they mitigate risk. The CCO also reports to the Board immediately regarding any problems associated with the Funds' compliance policies and procedures that could expose (or that might have the potential to expose) the Funds to material risk.

Trustee Experience

The following is a description of the material attributes, skills and experiences that relate to the suitability of each Trustee to serve on the Board. In addition to these factors, a Trustee is required to possess certain other

qualities such as integrity, intelligence, the ability to critically discuss and analyze issues presented to the Board and an understanding of a Trustee's fiduciary obligations with respect to a registered investment company. The Board and Governance Committee believe that each of the Trustees possesses these characteristics in addition to other attributes discussed below.

Laura M. Born. Ms. Born has experience with financial, accounting, regulatory and investment matters, as well as an understanding of the securities markets and industry, through her educational background, position for many years as an investment banker at a major investment banking firm and through her position with the University of Chicago, Booth School of Business where she serves as an adjunct associate professor of finance. Ms. Born has experience analyzing and evaluating financial statements of issuers as a result of her investment banking experience. Ms. Born has experience with board functions through her position as a director of a public company. She also is familiar with the functions of the Board and its oversight responsibilities with respect to the Investment Manager and other Fund service providers as a result of her service as an Independent Trustee for the past seven years.

Michelle L. Collins. Ms. Collins has investment, business, regulatory and finance experience, having worked as a general partner and managing director of a private equity firm and as principal in an investment banking firm, advising mid-sized growth companies on capital formation and business combinations. She has experience preparing, analyzing and evaluating financial statements, including financial statements of investment advisers and private equity funds. Ms. Collins has served as an audit committee member in many instances and as the audit committee chair of two operating companies. Therefore, the Board believes that Ms. Collins is qualified to serve on the Audit Committee and as Chair of the Audit Committee. Ms. Collins has experience serving as a board member, including as a current director of public and private operating companies and several non-profit boards. Ms. Collins has served as an Independent Trustee for the past six years and therefore understands the functions of the Board and its oversight responsibilities with respect to the Investment Manager and other Fund service providers.

Maureen M. Culhane. Ms. Culhane has financial, regulatory and investment experience through her position as an executive with a large asset management firm, as a vice president of finance and treasurer of a Fortune 100 company and as a principal of a pension and investment management consulting firm whose clients included, among others, Fortune 100 companies and state pension plans. Ms. Culhane has experience serving as a board member of a public operating company. She also is experienced in Board operations as well as oversight of the Investment Manager and other Fund service providers as a result of her service as an Independent Trustee for the past seven years.

Margaret M. Eisen. Ms. Eisen has experience with financial, regulatory and investment matters as a result of her position as a managing director with responsibility for multibillion dollar portfolios of equities, both public and private, at two of the largest corporate pension funds in the United States. She also acquired such experience through her position as a managing director of the CFA Institute, which sets standards for measuring competence and integrity in the fields of portfolio management and investment analysis. Ms. Eisen has experience with board functions through her position as a director of a public operating company and her position as the lead trustee of another registered investment company. Ms. Eisen also is familiar with the operations of the Board and oversight of the Investment Manager and other Fund service providers through her service as an Independent Trustee for the past 12 years.

John C. Heaton. Mr. Heaton is experienced with investment matters as a result of his educational background and academic experience as a professor of finance at the University of Chicago, Booth School of Business. Mr. Heaton has particular experience analyzing investment performance as a result of his financial consulting positions with the investment committees of certain private funds. His consulting experience has focused on matters involving trading litigation, securities pricing, pension fund allocation and fund management. Mr. Heaton also has numerous academic publications in the fields of economics and finance. Mr. Heaton also is familiar with the operations of the Board and oversight of the Investment Manager and other Fund service providers through his service as an Independent Trustee for the past four years.

Steven N. Kaplan. Mr. Kaplan has experience with investment, accounting and finance matters through his educational background and academic position as a professor of finance at the University of Chicago, Booth School of Business where he teaches finance and business economics classes to masters and doctoral candidates. Mr. Kaplan has experience with board functions, as well as experience in the investment management industry, through his position as a director of a public operating company that provides independent investment research regarding mutual funds and investment advisers. Mr. Kaplan also is familiar with the operations of the Board and oversight of the Investment Manager and other Fund service providers through his service as an Independent Trustee for the past 15 years.

David J. Rudis. Mr. Rudis has financial, banking, investment, and management experience through more than 30 years of working in the financial services industry. He has held various senior executive positions at regional and national banks, most recently serving as an executive of a Fortune 100 financial institution. Mr. Rudis has familiarity with complex financial, regulatory and banking issues. He also has extensive experience with operations management and business development. Mr. Rudis also is familiar with the operations of the Board and oversight of the Investment Manager and other Fund service providers through his service as a Trustee for the past four years.

David B. Small. Mr. Small has experience with investments, investment performance analysis, compliance and risk management issues faced by investment advisers and mutual funds, as well as the general operations of these firms, as a result of his position as a portfolio manager and principal of a large registered investment adviser. In his position, Mr. Small has shared management responsibility for portfolio and risk management as well as for evaluation, selection, and monitoring of investment strategies and managers. Prior to his current position, Mr. Small was founder, chief executive officer and chief financial engineer of a software firm specializing in the development of portfolio risk management and trading support software. Mr. Small also is familiar with the operations of the Board and oversight of the Investment Manager and other Fund service providers through his service as an Independent Trustee for the past four years.

Charles P. McQuaid. Mr. McQuaid has investment, business, finance and regulatory experience through his former positions as president, chief investment officer and director of research of the Investment Manager, as well as through his more than 30 years of experience as a portfolio manager and/or analyst of the Investment Manager. Mr. McQuaid has served as an Interested Trustee for over 20 years and therefore has significant experience with Board operations and understands the business of the Investment Manager.

Ralph Wanger. Mr. Wanger has investment, business, finance and regulatory experience through his position as founder of the Investment Manager as well as his position as former chief investment officer and portfolio manager of the firm. Mr. Wanger understands Board operations through his service on the Board for over 40 years. Mr. Wanger serves as a non-voting Trustee Emeritus of the Trust.

Compensation

Trustees are compensated for their services to the Columbia Funds Family on a complex-wide basis, as shown in the table below.

Independent Trustee Compensation for the Fiscal Year Ended December 31, 2013

<u>Name of Trustee</u>	<u>Wanger USA</u>	<u>Wanger International</u>	<u>Wanger Select</u>	<u>Wanger International Select</u>	<u>Aggregate Compensation from the Trust</u>	<u>Total Compensation from Columbia Funds Complex Paid to Independent Trustees</u>

At December 31, 2013, the value of Mr. Rudis's account under the plan was \$571,307.
- ⁽⁶⁾ During the fiscal year ended December 31, 2013, Mr. Small deferred all of his compensation from the Trust and all of his total compensation from the Columbia Funds Complex through the deferred compensation plan. At December 31, 2013, the value of Mr. Small's account under the plan was \$477,050.

Interested Trustee and Trustee Emeritus Compensation for the Fiscal Year Ended December 31, 2013

<u>Name of Trustee</u>	<u>Wanger USA</u>	<u>Wanger International</u>	<u>Wanger Select</u>	<u>Wanger International Select</u>	<u>Aggregate Compensation from the Trust</u>	<u>Total Compensation from Columbia Funds Complex Paid to Trustees</u>
Charles P. McQuaid	—	—	—	—	—	—
Ralph Wanger*	\$1,976	\$1,734	\$582	\$ 59	\$4,351	\$76,400

* During the fiscal year ended December 31, 2013, Mr. Wanger deferred all of his compensation from the Trust and all of his total compensation from the Columbia Funds Complex through the deferred compensation plan. At December 31, 2013, the value of Mr. Wanger's account under the plan was \$1,036,479.

The officers and Trustees affiliated with the Investment Manager serve without any compensation from the Trust. The Trust and Columbia Acorn Trust have adopted a deferred compensation plan for the Independent Trustees and Mr. Wanger. Under the plan, any Trustee who is not an "interested person" of the Trust or the Investment Manager (participating Trustees) and Mr. Wanger may defer receipt of all or a portion of their compensation as Trustees in order to defer payment of income taxes or for other reasons. The deferred compensation payable to a participating Trustee is credited to a book reserve account as of the business day such compensation would have been paid to such Trustee. The value of a participant's deferral account at any time is equal to the value that the account would have had if the contributions to the account had been invested in Class Z shares of one or more of the Columbia Acorn Funds, or in shares of Columbia Money Market Fund — or, prior to May 1, 2010, other affiliated money market funds — as designated by the participant. Upon retirement, the Trustee may receive payments under the plan in a lump sum or in equal annual installments over a period of five years depending on his or her election in accordance with the terms of the plan. If a participating Trustee dies, any amount payable under the plan will be paid to that Trustee's designated beneficiaries. Each Fund's obligation to make payments under the plan is a general obligation of that Fund. No Fund is liable for any other Fund's obligations to make payments under the plan.

The Agreement and Declaration of Trust (the Declaration of Trust) provides that the Trust will indemnify its Trustees and officers against liabilities and expenses incurred in connection with litigation in which they may be involved because of their offices with the Trust but that such indemnification will not relieve any officer or Trustee of any liability to the Trust or its shareholders by reason of willful misfeasance, bad faith, gross negligence or reckless disregard of his or her duties. The Trust, at its expense, provides liability insurance for the benefit of its Trustees and officers.

Beneficial Equity Ownership

The table below shows, for each Trustee, the amount of equity securities of the Funds beneficially owned by the Trustee and the aggregate value of all investments in equity securities of the Columbia Funds Family, including notional amounts through the deferred compensation plan, stated as one of the following ranges: A = \$0; B = \$1—\$10,000; C = \$10,001—\$50,000; D = \$50,001—\$100,000; and E = over \$100,000.

Certain of the Trustees beneficially own more than 1% of the outstanding shares of certain Funds. For details, see *Control Persons and Principal Shareholders – Management Ownership of the Funds*.

Independent Trustee Ownership for the Calendar Year Ended December 31, 2013

<u>Trustee</u>	<u>Dollar Range of Equity Securities in the Funds*</u>	<u>Aggregate Dollar Range of Equity Securities in all Funds in the Columbia Funds Family</u>
Laura M. Born	A	E
Michelle L. Collins	A	E
Maureen M. Culhane	A	E
Margaret M. Eisen	A	E
John C. Heaton	A	E
Steven N. Kaplan	A	E
David J. Rudis	A	E
David B. Small	A	E

* None of the Independent Trustees or officers of the Funds own any Fund shares; shares of the Funds are issued only in connection with investments in and payments under Contracts and Qualified Plans. The Independent Trustees own shares of the Columbia Acorn Funds.

Interested Trustee and Trustee Emeritus Ownership for the Calendar Year Ended December 31, 2013

<u>Trustee</u>	<u>Dollar Range of Equity Securities in the Funds**</u>	<u>Aggregate Dollar Range of Equity Securities in all Funds in the Columbia Funds Family</u>
Charles P. McQuaid	E	E
Ralph Wanger	E	E

** As of December 31, 2013, Messrs. McQuaid and Wanger owned Contracts which held shares of the Funds (which shares are also reported under the names of the issuing Participating Insurance Company); as of that date, the aggregate dollar range of equity securities in the Funds attributable to the Contracts of each of Messrs. McQuaid and Wanger was over \$100,000.

The Officers

The following table provides basic information about the officers of the Trust, other than Mr. McQuaid, including their principal occupations during the past five years, although their specific titles may have varied over the period. The mailing address of each officer is: c/o Columbia Wanger Asset Management, LLC, 227 West Monroe Street, Suite 3000, Chicago, Illinois 60606, except for Messrs. Clarke and DiMaria, whose address is Columbia Management Investment Advisers, LLC, 225 Franklin Street, Boston, MA 02110 and Messrs. Plummer and Petersen whose address is Ameriprise Financial, Inc., 5060 Ameriprise Financial Center, Minneapolis, MN 55474.

Officer Biographical Information

<u>Name and Age at March 31, 2014</u>	<u>Position with the Trust</u>	<u>Year First Appointed or Elected to Office</u>	<u>Principal Occupation(s) During the Past Five Years</u>
Robert A. Chalupnik, 48	Vice President	2011	Portfolio manager and/or analyst, CWAM or its predecessors since 2000; Vice President, Columbia Acorn Trust and Wanger Advisors Trust since May 2011.
Michael G. Clarke, 44	Assistant Treasurer	2004	Vice President — Mutual Fund Administration, Columbia Management since May 2010; Managing Director of Fund Administration, Columbia Management Advisors, LLC, from September 2004 to April 2010; Senior officer, Columbia Funds and affiliated funds since 2002.
Joseph F. DiMaria, 45	Assistant Treasurer	2010	Vice President — Mutual Fund Administration, Columbia Management since May 2010; Director of Fund Administration, Columbia Management Advisors, LLC from January 2006 to April 2010.
William J. Doyle, 49	Vice President	2014	Portfolio manager and/or analyst, CWAM or its predecessors since 2006; Vice President, Columbia Acorn Trust and Wanger Advisors Trust since March 2014.
P. Zachary Egan, 45	President	2014	President and International Chief Investment Officer, CWAM since April 2014; Formerly, Director of International Research, CWAM December 2004-March 2014; Formerly, Vice President, Columbia Acorn Trust, 2003-2014 and Wanger Advisors Trust, 2007-2014; portfolio manager and/or analyst, CWAM or its predecessors since 1999.
David L. Frank, 50	Vice President	2014	Portfolio manager and/or analyst, CWAM or its predecessors since 2002; Vice President, Columbia Acorn Trust and Wanger Advisors Trust since March 2014.
Fritz Kaegi, 42	Vice President	2011	Portfolio manager and/or analyst, CWAM or its predecessors since 2004; Vice President, Columbia Acorn Trust and Wanger Advisors Trust since September 2011.

<u>Name and Age at March 31, 2014</u>	<u>Position with the Trust</u>	<u>Year First Appointed or Elected to Office</u>	<u>Principal Occupation(s) During the Past Five Years</u>
John Kunka, 43	Assistant Treasurer	2006	Director of Accounting and Operations, CWAM since May 2006; Assistant Treasurer, Columbia Acorn Trust and Wanger Advisers Trust since 2006.
Stephen Kusmierczak, 46	Vice President	2011	Portfolio manager and/or analyst, CWAM or its predecessors since 2001; Vice President, Columbia Acorn Trust and Wanger Advisers Trust since September 2011.
Joseph C. LaPalm, 44	Vice President	2006	Chief Compliance Officer, CWAM since 2005.
Bruce H. Lauer, 56	Vice President, Secretary and Treasurer	1995	Chief Operating Officer, CWAM or its predecessors since April 2000; Vice President, Treasurer (Chief Financial and Accounting Officer) and Secretary, Columbia Acorn Trust and Wanger Advisers Trust since 1995; formerly, Director, Wanger Investment Company PLC; formerly, Director, Banc of America Capital Management (Ireland) Ltd.; and formerly, Director, Bank of America Global Liquidity Funds, PLC.
Louis J. Mendes III, 49	Vice President	2005	Portfolio manager and/or analyst, CWAM or its predecessors since 2001; Vice President, Columbia Acorn Trust since 2003 and Wanger Advisers Trust since 2005.
Robert A. Mohn, 52	Vice President	1997	Domestic Chief Investment Officer, CWAM since April 2014; Formerly, Director of Domestic Research, CWAM or its predecessors March 2004-March 2014; Vice President, Columbia Acorn Trust and Wanger Advisers Trust since 1997; portfolio manager and/or analyst, CWAM or its predecessors since 1992.
Christopher J. Olson, 49	Vice President	2001	Portfolio manager and/or analyst, CWAM or its predecessors since January 2001; Vice President, Columbia Acorn Trust and Wanger Advisers Trust since 2001.

<u>Name and Age at March 31, 2014</u>	<u>Position with the Trust</u>	<u>Year First Appointed or Elected to Office</u>	<u>Principal Occupation(s) During the Past Five Years</u>
Christopher O. Petersen, 44	Assistant Secretary	2010	Vice President and Chief Counsel, Ameriprise Financial since January 2010 (formerly Vice President and Group Counsel or Counsel from April 2004-January 2010); officer, Columbia Funds and affiliated funds since 2007.
Scott R. Plummer, 54	Assistant Secretary	2010	Senior Vice President and Assistant General Counsel — Global Asset Management, Ameriprise Financial since February 2014 (previously, Senior Vice President and Lead Chief Counsel — Asset Management, January 2012-February 2014; Vice President and Lead Chief Counsel — Asset Management, 2010-2012; and Vice President and Chief Counsel — Asset Management, 2005-2010); Senior Vice President, Chief Legal Officer and Assistant Secretary, Columbia Management Investment Advisers, LLC since June 2005; Vice President, Chief Counsel and Assistant Secretary, Columbia Management Investment Distributors, Inc. since 2008; Vice President, General Counsel and Secretary, Ameriprise Certificate Company since 2005; Chief Counsel, RiverSource Distributors, Inc. since 2006; Senior officer of Columbia Funds and affiliated funds since 2006.
Robert P. Scales, 61	Chief Compliance Officer, Chief Legal Officer, Senior Vice President and General Counsel	2004	Chief Compliance Officer, Chief Legal Officer, Senior Vice President and General Counsel, Columbia Acorn Trust and Wanger Advisors Trust since 2004.
Andreas Waldburg-Wolfegg, 48	Vice President	2011	Portfolio manager and/or analyst, CWAM or its predecessors since 2002; Vice President, Columbia Acorn Trust and Wanger Advisors Trust since September 2011.
Linda Roth-Wiszowaty, 44	Assistant Secretary	2006	Business support analyst, CWAM since April 2007; prior thereto, executive administrator, CWAM or its predecessors, and executive assistant to the Chief Operating Officer, CWAM or its predecessors.

BROKERAGE ALLOCATION AND OTHER PRACTICES

The Investment Manager places the orders for the purchase and sale of portfolio securities and options and futures contracts for the Funds, subject to the oversight of the Board. In doing so, it seeks to place buy and sell orders in a manner that is fair and reasonable to each Fund. The Investment Manager's overriding objective in selecting broker-dealers to effect portfolio transactions is to seek the best combination of net price and execution, reasonably attainable, provided that the Investment Manager may occasionally pay higher commissions to obtain research products and services as described below. The best net price, giving effect to brokerage commissions, if any, and other transaction costs, is a significant factor in this decision; however, a number of other judgmental factors may also enter into the analysis. These factors include the Investment Manager's knowledge of negotiated commission rates currently available and other current transaction costs; the nature of the security being purchased or sold; the size and type of the transaction; the desired timing of the transaction; the actual and expected activity in the market for the particular security; confidentiality concerns; the execution, clearance and settlement capabilities of the broker-dealer selected and others considered; the Investment Manager's knowledge of the reliability, reputation and financial stability of the broker-dealer selected and such other broker-dealers; evaluation of competing markets, including exchanges, over-the-counter markets, electronic communications networks (ECNs) or other alternative trading facilities; the broker-dealer's responsiveness to the Investment Manager; the Investment Manager's knowledge of actual or apparent operational problems of any broker-dealer; and the value of any research products or services provided by the broker-dealer. With respect to a Fund's purchases and sales of portfolio securities transacted with a broker-dealer on a net basis, the Investment Manager may also consider the part, if any, played by the broker-dealer in bringing the securities to the Investment Manager's attention, including investment research related to the securities.

Recognizing the value of these factors, the Investment Manager will use its best judgment in evaluating the terms of a transaction, which may result in a Fund paying a brokerage commission in excess of what another broker-dealer might have charged for effecting the same transaction. The Investment Manager has discretion for all trades of the Funds, and periodically reviews and modifies, as appropriate, its trading guidelines, as well as the general level of brokerage commissions paid by the Funds. Evaluations of the reasonableness of brokerage commissions, based on the factors described in the preceding paragraph, are made by the Investment Manager's trading personnel while effecting portfolio transactions. Reports on brokerage commissions are provided at least annually to the Board.

The Investment Manager maintains and periodically updates a list of approved broker-dealers that, in the Investment Manager's judgment, are generally capable of providing best price and execution and are financially stable. The Investment Manager's traders are directed to use only broker-dealers on the approved list. The Investment Manager may place trades for the Funds through a registered broker-dealer that is an affiliate of the Investment Manager — including, in the case of agency transactions, broker-dealers and financial institutions that are affiliated with Ameriprise Financial — pursuant to procedures adopted by the Board pursuant to Rule 17e-1 under the 1940 Act. Such trades, for which the affiliate would receive a commission, will only be effected consistent with the Investment Manager's obligation to seek best execution for its clients and in accordance with the Funds' Rule 17e-1 procedures.

Under certain circumstances, a Fund may buy securities from a member of an underwriting syndicate in which an affiliate of Ameriprise Financial is a member. The Board has approved procedures pursuant to Rule 10f-3 under the 1940 Act for the Funds, and the Investment Management intends to comply with these procedures in connection with any purchase of securities that may be subject to Rule 10f-3.

The Investment Manager's decisions for a Fund are not always made independently from those for other Funds or accounts advised or managed by the Investment Manager. When a purchase or sale of the same security is made at substantially the same time on behalf of one or more of the Funds and/or another account, the transaction will be allocated in a manner which the Investment Manager believes to be equitable to the Funds and such other account(s). In some instances, this investment procedure may adversely affect the price paid or

received by a Fund or the size of the position obtained or sold by the Fund. It is the Investment Manager's practice, when feasible and to the extent permitted by law, to aggregate for execution as a single transaction orders for the purchase or sale of a particular security, with the same terms and conditions, for the accounts of its clients, including the Funds, in order to seek a lower commission or more advantageous net price. All Funds and other clients participating in the aggregated execution receive the same execution price, and transaction costs are shared pro-rata, whenever possible.

Investment Research Products and Services Furnished by Broker-Dealers

The Investment Manager engages in the long-standing practice in the asset management industry of acquiring research and brokerage products and services (together, "research products") from broker-dealer firms in return for directing trades for the Funds and other clients to those firms. In effect, the Investment Manager is using the commission dollars paid by its clients, including the Funds, to pay for these research products. The asset management industry uses the term "soft dollars" to refer to this industry practice. The Board reviews the Investment Manager's soft dollar practices at least annually.

The Investment Manager uses soft dollars to acquire two types of research products: (i) proprietary research created by broker-dealer firms executing trades for the Funds and other clients of the Investment Manager; and (ii) research created by third parties that is supplied to the Investment Manager through executing broker-dealer firms (or other broker-dealers who "step in" to a transaction and receive a portion of the brokerage commission for the trade). These research products consist primarily of traditional research reports, recommendations and similar materials produced by the in-house research staffs of broker-dealer firms. It includes evaluations and recommendations of specific companies or industry groups, as well as analyses of general economic and market conditions and trends, market data, contacts and other related information and assistance. Research products also may include the arranging of meetings with management of companies and the provision of access to consultants who supply research information. Some research products may be used for both investment decision-making and non-investment-decision-making purposes (referred to in the asset management industry as "mixed use" products). While it currently does not obtain mixed use products using soft dollars, the Investment Manager has procedures in place to assure that to the extent it acquires mixed use products, Fund commissions are used only to pay for the investment decision-making portion of the mixed use products. In the case of third party research, the third party is paid by the broker-dealer and not by the Investment Manager.

Soft dollar research products are useful to the Investment Manager for a number of reasons, including that, in certain instances, the broker-dealers utilized by the Investment Manager may follow a different universe of securities issuers and other matters than those followed by the Investment Manager's research analysts. In addition, such research products can provide the Investment Manager with a different perspective on financial markets, even if the research obtained relates to securities followed by the Investment Manager. Research products that are provided to the Investment Manager by broker-dealers are available for the benefit of all clients advised by the Investment Manager, including the Funds. In some cases, a research product may be available only from the broker-dealer providing it. In other cases, a research product may be obtainable from alternative sources. The Investment Manager is of the opinion that soft dollar research products are beneficial in supplementing its research and analysis and may therefore benefit the Funds by improving the quality of the investment advice provided to them.

The Investment Manager has a duty to seek the best combination of net price and execution, and thus faces a potential conflict of interest with it uses soft dollars to obtain research products. This conflict exists because the Investment Manager pays for the research products using brokerage commissions paid by the Funds and does not pay for the products using its own assets. The Investment Manager is able to use the research products in managing its client accounts without paying cash ("hard dollars") for the product, which reduces the Investment Manager's cost of managing the accounts to the extent the Investment Manager would have bought such products had they not been provided. The Investment Manager does not reduce the advisory fees paid by the Funds commensurately with its receipt of soft dollar research products.

The practice of using soft dollars to obtain research products and services is explicitly sanctioned by a provision of the 1934 Act that creates a “safe harbor” for soft dollar transactions conducted in a specified manner. Under Section 28(e) of the 1934 Act, the Investment Manager shall not be “deemed to have acted unlawfully or to have breached its fiduciary duty” solely because under certain circumstances it has caused a Fund or other client to pay a higher commission than the lowest available. To obtain the benefit of Section 28(e), the Investment Manager must make a good faith determination that the commissions paid are “reasonable in relation to the value of the brokerage and research services provided by such member or broker-dealer, viewed in terms of either that particular transaction or his overall responsibilities with respect to the accounts as to which he exercises investment discretion.” Within the safe harbor of Section 28(e), the Investment Manager may cause a Fund to pay a brokerage commission in a soft dollar trade in excess of that which another broker-dealer might have charged for the same transaction.

Moreover, under Section 28(e), the Investment Manager is not required to use a research product only in managing the accounts that generated the trade. Thus, a Fund that generates the brokerage commission used to acquire a research product will not necessarily benefit directly from that product; in effect, the Fund may be cross-subsidizing the Investment Manager’s management of the other Funds and other clients that do benefit directly from the product. Conversely, the Fund may benefit from research products received by the Investment Manager through the placement of transactions for other Funds or other clients of the Investment Manager. Although it is inherently difficult if not impossible to document, the Investment Manager believes that over time each Fund benefits because the cross-subsidization of the Investment Manager’s receipt of research products improves the overall quality of the Investment Manager’s investment advice.

Some broker-dealers may indicate that the provision of research products is dependent upon the generation of certain specified levels of commission by the Funds. The Investment Manager’s research analysts periodically rate the quality of research products provided by various broker-dealer firms. Based on these evaluations, the Investment Manager develops target levels of commission dollars on a firm-by-firm basis. The Investment Manager attempts to direct trades to each individual approved broker-dealer firm to meet those targets. The targets that the Investment Manager establishes for various broker-dealers for both proprietary and for third party research typically reflect discussions that the Investment Manager has with the broker-dealer providing the research regarding the level of commissions it expects to receive for the research. However, those targets, which are established on a calendar year basis, are not binding commitments, and the Investment Manager does not agree to direct a minimum amount of commissions to any broker-dealer for soft dollar research. In setting those targets, the Investment Manager makes a determination that the value of the research is reasonably commensurate with the cost of acquiring it. The Investment Manager will receive the research whether or not commissions directed to the applicable broker-dealer are less than, equal to or in excess of the target. The Investment Manager generally will carry over target shortages and excesses to the next year’s target. The Investment Manager believes that this practice reduces the conflicts of interest associated with soft dollar transactions since the Investment Manager can meet the non-binding expectations of broker-dealers providing soft dollar research over flexible time periods.

In certain instances, the Investment Manager pays for research products with commissions on trades executed through ECNs. The Investment Manager may direct a portion of the commissions from these trades to an introducing broker through a Commission Sharing Agreement (CSA). Where the Investment Manager has executed a CSA with an introducing broker-dealer, the Investment Manager will place a trade with the ECN, and pay the negotiated commission to the ECN. The ECN will then credit a negotiated portion of the commission to the introducing broker-dealer as requested by the Investment Manager for the purpose of funding a pool to be used to pay for research products or services received by the Investment Manager from other third parties. In addition, the ECN will credit a further portion of the commission negotiated by the ECN and the introducing broker-dealer to the introducing broker-dealer for its services in administering the CSA. The ECN makes periodic lumpsum payments to the introducing broker-dealer. CSAs are a permitted form of soft dollar transaction under Section 28(e) of the 1934 Act.

Neither the Trust nor any Fund nor the Investment Manager has entered into any agreement with, or made any commitment to, any unaffiliated broker-dealer which would bind the Investment Manager, the Trust or any

Fund to compensate any such broker-dealer, directly or indirectly, for sales of Contracts. The Investment Manager has entered into arrangements with sponsors of programs for the sale of Contracts issued by Participating Insurance Companies that are not affiliates of the Investment Manager. The Investment Manager pays the sponsor from the Investment Manager's fee for managing the Funds. The fee is based on the amount of the Funds' assets allocable to the Fund shares held in separate accounts of such unaffiliated Participating Insurance Companies. The Investment Manager does not cause the Trust or any Fund to pay brokerage commissions higher than those obtainable from other broker-dealers in recognition of such sales of Contracts.

In certain cases, the Investment Manager will direct a trade to one broker-dealer with the instruction that it execute the trade and pay over a portion of the commission from the trade to another broker-dealer who provides the Investment Manager with a soft dollar research product or service. The broker-dealer executing the trade "steps out" of a portion of the commission in favor of the other broker-dealer providing the research product. The Investment Manager may engage in step out transactions in order to direct soft dollar commissions to a broker-dealer which provides research but may not be able to provide best execution. Broker-dealers that receive step out commissions typically are broker-dealers providing third party soft dollar research that is not available by paying cash for the research. The Investment Manager does not engage in step out transactions as a manner of compensating broker-dealers that sell shares of investment companies managed by the Investment Manager.

The Trust's purchases and sales of securities not traded on securities exchanges generally are placed by the Investment Manager with market makers for those securities on a net basis, without any brokerage commissions being paid by the Trust. Net trading does involve, however, transaction costs. Included in the price paid to an underwriter of portfolio securities is the spread between the price paid by the underwriter to the issuer and the price paid by the purchasers. Each Fund's purchases and sales of portfolio securities in the over-the-counter market usually are transacted with a broker-dealer on a net basis without any brokerage commission being paid by such Fund, but do reflect the spread between the bid and asked prices. The Investment Manager may also transact purchases of some portfolio securities directly with the issuers.

Brokerage Commissions

The following table sets forth the amounts of brokerage commissions paid by the Funds during their three most recently completed fiscal years. In certain instances the Funds may pay brokerage commissions to broker-dealers that are affiliates of Ameriprise Financial. As indicated above, all such transactions involving the payment of brokerage commissions to affiliates are done in compliance with Rule 17e-1 under the 1940 Act.

Aggregate Brokerage Commissions Paid by the Funds

<u>Fund</u>	<u>Fiscal Year Ended December 31, 2013</u>	<u>Fiscal Year Ended December 31, 2012</u>	<u>Fiscal Year Ended December 31, 2011</u>
Wanger USA	\$302,000	\$357,000	\$460,000
Wanger International	\$965,000	\$683,000	\$975,000
Wanger Select	\$141,000	\$195,000	\$303,000
Wanger International Select	\$ 43,000	\$ 33,000	\$ 35,000

The Funds paid no brokerage commissions to affiliated broker-dealers for the fiscal years ended December 31, 2013, December 31, 2012 and December 31, 2011.

Directed Brokerage

The Funds or the Investment Manager, through an agreement or understanding with a broker-dealer, or otherwise through an internal allocation procedure, may direct, subject to applicable legal requirements, the Funds' brokerage transactions to a broker-dealer because of the research services it provides the Funds or the Investment Manager.

During the fiscal year ended December 31, 2013, the Funds directed brokerage transactions in the dollar amounts shown in the following table, which also shows the commissions paid to broker-dealers in connection with those transactions:

	<u>Directed Transactions</u>	<u>Directed Commissions</u>
Wanger USA	\$ 176,983,000	\$ 150,000
Wanger International	\$ 314,657,000	\$ 430,000
Wanger Select	\$ 80,085,000	\$ 68,000
Wanger International Select	\$ 16,873,000	\$ 20,000

Securities of Regular Broker-Dealers

In certain cases, the Funds, as part of their principal investment strategies, or otherwise as a permissible investment, will invest in the common stock or debt obligations of the regular broker-dealers that the Investment Manager uses to transact brokerage for the Columbia Funds Family.

As of December 31, 2013, no Fund owned securities of “regular broker or dealers” or their parents, as defined in Rule 10b-1 under the 1940 Act.

Additional Selling Agent Payments

Selling agents may receive different commissions, sales charge reallowances and other payments with respect to sales of shares of the Funds.

The Distributor and other Ameriprise Financial affiliates may pay additional compensation to selected selling agents, including other Ameriprise Financial affiliates, under the categories described below. These categories are not mutually exclusive, and a single selling agent may receive payments under all categories. Such payments may create an incentive for a selling agent or its representatives to recommend or offer shares of a Fund to its customers. The amount of payments made to selling agents may vary. In determining the amount of payments to be made, the Distributor and other Ameriprise Financial affiliates may consider a number of factors, including, without limitation, asset mix and length or relationship with the selling agent, the size of the customer/ shareholder base of the selling agent, the manner in which customers of the selling agent make investments in the Funds, the nature and scope of marketing support or services provided by the selling servicing agent (as described more fully below) and the costs incurred by the selling agent in connection with maintaining the infrastructure necessary or desirable to support investments in the Funds.

These additional payments by the Distributor and other Ameriprise Financial affiliates are made pursuant to agreements between the Distributor and other Ameriprise Financial affiliates and selling agents, and do not change the price paid by investors for the purchase of a share or the amount a Fund will receive as proceeds from such sales.

Marketing Support Payments

The Distributor and its affiliates make payments, from their own resources, to certain selling agents, including other Ameriprise Financial affiliates, for marketing support services relating to the Columbia Funds, including, but not limited to, business planning assistance, educating selling agent personnel about the Funds and shareholder financial planning needs, placement on the selling agent’s preferred or recommended fund list or otherwise identifying the Funds as being part of a complex to be accorded a higher degree of marketing support than complexes not making such payments, access to sales meetings, sales representatives and management representatives of the selling agent, client servicing and systems infrastructure support. These payments are generally based upon one or more of the following factors: average net assets of the Columbia Funds distributed

by the Distributor attributable to that selling agent; gross sales of the Columbia Funds distributed by the Distributor attributable to that selling agent; reimbursement of ticket charges (fees that a selling agent firm charges its representatives for effecting transactions in Fund shares); or a negotiated lump sum payment.

While the financial arrangements may vary for each selling agent, the marketing support payments to each selling agent generally are expected to be between 0.05% and 0.50% on an annual basis for payments based on average net assets of the Funds attributable to the selling agent. The Distributor and other Ameriprise affiliates may make payments in materially larger amounts or on a basis materially different from those described above when dealing with certain selling agents. Such increased payments may enable such selling agents to offset credits that they may provide to their customers.

As of April 2014, the Distributor, the Investment Manager or their affiliates had agreed to make payments relating to the Funds to the following financial intermediaries or their affiliates:

- ING USA Life Insurance Company
- Monumental Life Insurance Company
- Phoenix Home Life Mutual Insurance Company
- PHL Variable Insurance Company
- RiverSource Life Insurance Company
- RiverSource Life Insurance Company of New York
- SunAmerica Annuity & Life Assurance Company
- Sun Life Assurance Company of Canada
- Sun Life Insurance & Annuity Company of New York
- Symetra Life Insurance Company
- TIAA-CREF Life Insurance Company
- Transamerica Financial Life Insurance Company
- Transamerica Advisors Life Insurance Company
- Transamerica Advisors Life Insurance Company of New York

The Distributor, the Investment Manager and/or their affiliates may enter into similar arrangements with other financial intermediaries from time to time. Therefore, the preceding list is subject to change at any time without notice.

Other Payments

From time to time, the Distributor, from its own resources, may provide additional compensation to certain selling agents that sell or arrange for the sale of shares of the Funds to the extent not prohibited by laws or the rules of any self-regulatory agency, such as the Financial Industry Regulatory Authority (FINRA). Such compensation provided by the Distributor may include financial assistance to selling agents that enable the Distributor to participate in and/or present at selling agent-sponsored conferences or seminars, sales or training programs for invited registered representatives and other selling agent employees, selling agent entertainment and other selling agent-sponsored events, and travel expenses, including lodging incurred by registered representatives and other employees in connection with prospecting, retention and due diligence trips. The Distributor makes payments for entertainment events it deems appropriate, subject to the Distributor's internal guidelines and applicable law. These payments may vary depending upon the nature of the event.

Your selling agent may charge you fees or commissions in addition to those disclosed in this SAI. You should consult with your selling agent and review carefully any disclosure your selling agent provides regarding its services and compensation. Depending on the financial arrangement in place at any particular time, a selling agent and its financial consultants may have a financial incentive for recommending a particular fund or a particular share class over other funds or share classes. See ***Investment Advisory and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest*** for more information.

CAPITAL STOCK AND OTHER SECURITIES

Description of the Trust's Shares

The Funds offer one class of shares. Subject to certain limited exceptions discussed in each Fund's prospectus, a Fund may no longer be accepting new investments from current shareholders or prospective investors. The Funds, however, may at any time and without notice, offer or stop offering shares to the general public for investment.

The Trust's Declaration of Trust permits it to issue an unlimited number of full and fractional shares of beneficial interest of each Fund, without par value, and to divide or combine the shares of any series into a greater or lesser number of shares of that Fund without thereby changing the proportionate beneficial interests in that Fund and to divide such shares into classes. Each share of a class of a Fund represents an equal proportional interest in that Fund with each other share in the same class and is entitled to such distributions out of the income earned on the assets belonging to that Fund as are declared in the discretion of the Board. Each time a distribution is made, the net asset value per share is reduced by the amount of the distribution.

Restrictions on Holding or Disposing of Shares

There are no restrictions on the right of shareholders to retain or dispose of the Funds' shares, other than the possible future termination of the Funds. The Funds may be terminated by reorganization into another mutual fund or by liquidation and distribution of their assets. Unless terminated by reorganization or liquidation, the Fund will continue indefinitely.

Liability

Under Massachusetts law, shareholders could, under certain circumstances, be held personally liable for the obligations of the Trust. However, the Trust's Declaration of Trust disclaims any shareholder liability for acts or obligations of the Funds and the Trust and requires that notice of such disclaimer be given in each agreement, obligation, or instrument entered into or executed by a Fund or the Trustees. The Declaration of Trust provides for indemnification out of Fund property for all loss and expense of any shareholder held personally liable for the obligations of a Fund. Thus, the risk of a shareholder incurring financial loss on account of shareholder liability is limited to circumstances (which are considered remote) in which a Fund would be unable to meet its obligations and the disclaimer was inoperative. The risk of a Fund incurring financial loss on account of another series of the Trust also is believed to be remote, because it would be limited to circumstances in which the disclaimer was inoperative and the other series of the Trust was unable to meet its obligations.

Dividend Rights

The shareholders of a Fund are entitled to receive any dividends or other distributions declared for the Fund. No shares have priority or preference over any other shares of a Fund with respect to distributions. Distributions will be made from the assets of a Fund, and will be paid pro rata to all shareholders of the Fund according to the number of shares of the Fund held by shareholders on the record date.

Voting Rights and Shareholder Meetings

As described in *About the Trust*, the Trust is not required to hold annual shareholder meetings, but special meetings may be called for certain purposes. Previously, the Trust had voluntarily undertaken to adhere to certain governance measures contemplated by a 2005 SEC settlement order with respect to the former affiliates of the Investment Manager. Over the past several years, the SEC has adopted many rules under the 1940 Act and the Investment Advisers Act of 1940 to strengthen fund governance and compliance oversight of mutual funds and their service providers. Accordingly, although the Trust may continue to follow certain governance practices noted in the 2005 settlement order, it will do so as the Board deems appropriate and not pursuant to any undertakings. The Board

will convene meetings of shareholders to elect trustees as required by the 1940 Act or as deemed otherwise appropriate by the Board.

Shareholders of a Fund are entitled to one vote for each share of that Fund held on any matter presented to shareholders. Shares of the Funds will vote separately as individual series when required by the 1940 Act, or other applicable law or when the Board determines that the matter affects only the interests of one or more Funds, such as, for example, a proposal to approve an amendment to that Fund's Investment Advisory Agreement, but shares of all the Funds vote together, to the extent required by the 1940 Act, in the election or selection of Trustees.

Fund shares do not have cumulative voting rights, which means that the holders of more than 50% of the shares of the Funds voting for the election of Trustees can elect all of the Trustees, and, in such event, the holders of the remaining shares will not be able to elect any Trustees.

The Trustees may fill any vacancies on the Board except that the Trustees may not fill a vacancy if, immediately after filling such vacancy, fewer than two-thirds of the Trustees then in office would have been elected to such office by the shareholders. In addition, at such times as fewer than a majority of the Trustees then in office have been elected to such office by the shareholders, the Trustees must call a meeting of shareholders. Trustees may be removed from office a vote of the holders of a majority of the outstanding shares at a meeting duly called for the purpose, or otherwise as specified in the Trust's organizational documents. Except as otherwise disclosed in a Fund's prospectuses and this SAI, the Trustees shall continue to hold office and may appoint their successors.

Liquidation Rights

In the event of the liquidation or dissolution of the Trust or a Fund, all shares have equal rights and shareholders are entitled to receive the assets attributable to the relevant class of shares that are available for distribution and to a distribution of any general assets not attributable to a particular investment portfolio that are available for distribution in such manner and on such basis as the Board may determine.

Preemptive Rights

There are no preemptive rights associated with Fund shares.

Redemptions

Each Fund's dividend, distribution and redemption policies can be found in its prospectuses under the headings *Buying, Selling and Transferring Shares* and *Distributions and Taxes*. The Trust may not suspend shareholders' right of redemption or postpone payment for more than seven days unless the NYSE is closed for other than customary weekends or holidays, or if permitted by the rules of the SEC during periods when trading on the NYSE is restricted or during any emergency which makes it impracticable for the Funds to dispose of their securities or to determine fairly the value of its net assets, or during any other period permitted by order of the SEC for the protection of investors.

Sinking Fund Provisions

The Trust has no sinking fund provisions.

Calls or Assessment

All Fund shares are issued in uncertificated form only and when issued will be fully paid and non-assessable by the Trust.

PURCHASE, REDEMPTION AND PRICING OF SHARES

Purchase and Redemption

The Funds are available to the owners of Contracts issued by Participating Insurance Companies and to the participants in certain Qualified Plans. See *Buying, Selling and Transferring Shares* in the Funds' prospectuses for details. The following information supplements the information in the Funds' prospectuses.

The Funds have authorized one or more broker-dealers to accept buy and sell orders on the Funds' behalf. These broker-dealers are authorized to designate other intermediaries, including Participating Insurance Companies, to accept buy and sell orders on the Funds' behalf. The Funds will be deemed to have received a buy or sell order when an authorized broker-dealer, or, if applicable, a broker-dealer's authorized designee, accepts the order. Customer orders will be priced at each Fund's net asset value (NAV) next computed after they are accepted by an authorized broker-dealer or the broker's authorized designee.

The Trust also may honor redemption requests with in-kind distributions of readily marketable securities or other property if it is appropriate to do so in light of the Trust's responsibilities under the 1940 Act.

Under the 1940 Act, the Funds may suspend the right of redemption or postpone the date of payment for shares during any period when (i) trading on the NYSE is restricted by applicable rules and regulations of the SEC; (ii) the NYSE is closed for other than customary weekend and holiday closings; (iii) the SEC has by order permitted such suspension; (iv) an emergency exists as determined by the SEC. (The Funds may also suspend or postpone the recordation of the transfer of their shares upon the occurrence of any of the foregoing conditions).

The Trust has elected to be governed by Rule 18f-1 under the 1940 Act, as a result of which each Fund is obligated to redeem shares, subject to the exceptions listed above, with respect to any one shareholder during any 90-day period, solely in cash up to the lesser of \$250,000 or 1% of the NAV of each Fund at the beginning of the period.

Redemptions in excess of the above amounts will normally be paid in cash, but may be paid wholly or partly by a distribution in-kind of securities. If a redemption is made in-kind, the redeeming shareholder would bear any transaction costs incurred in selling the securities received. The Agreement and Declaration of Trust also authorizes the Trust to redeem shares under certain other circumstances as may be specified by the Board.

The Trust does not have any arrangements with shareholders or other individuals that would permit frequent purchases or redemptions of Fund shares.

In addition, to the methods of buying Fund shares described in the prospectuses, you may, subject to the approval of the Trust, purchase shares of a Fund with securities that are held in the Fund's portfolio (or, rarely, with securities that are not currently held in the portfolio but that are eligible for purchase by the Fund, consistent with the Fund's investment objectives and restrictions) that have a value that is readily ascertainable in accordance with the Trust's valuation policies. Should the Trust approve your purchase of a Fund's shares with securities, the Trust would follow its purchase-in-kind procedures and would value the securities tendered in payment (determined as of the next close of regular session trading on the NYSE after receipt of the purchase order) pursuant to the Trust's valuation procedures as then in effect, and you would receive the number of Fund shares having a net asset value on the purchase date equal to the aggregate purchase price.

Potential Adverse Effects of Large Investors

Each Fund may from time to time sell to one or more investors a substantial amount of its shares, and may thereafter be required to satisfy redemption requests by such investors. Such sales and redemptions may be very substantial relative to the size of the Fund. While it is not possible to predict the overall effect of such sales and

redemptions over time, such transactions may adversely affect the Fund's performance to the extent that the Fund is required to invest cash received in connection with a sale or to sell portfolio securities to facilitate a redemption at, in either case, a time when the Fund otherwise would not invest or sell. Such transactions also may increase a Fund's transaction costs, which would detract from Fund performance.

Anti-Money Laundering Compliance

The Funds are required to comply with various anti-money laundering laws and regulations. Consequently, the Funds may request additional required information from you to verify your identity. Your application will be rejected if it does not contain your name, social security number, date of birth and permanent street address. If at any time the Funds believe a shareholder may be involved in suspicious activity or if certain account information matches information on government lists of suspicious persons, the Funds may choose not to establish a new account or may be required to "freeze" a shareholder's account. The Funds also may be required to provide a governmental agency with information about transactions that have occurred in a shareholder's account or to transfer monies received to establish a new account, transfer an existing account or transfer the proceeds of an existing account to a governmental agency. In some circumstances, the law may not permit the Funds to inform the shareholder that it has taken the actions described above.

Offering Price

Each Fund determines its NAV per share as of the close of regular trading on the NYSE (generally 4:00 p.m. Eastern Time). NAV will not be determined on days when the NYSE is closed unless, in the judgment of the Board, the NAV of a Fund should be determined on any such day, in which case the determination will be made at 4:00 p.m. Eastern Time. Participating Insurance Companies and Qualified Plans may not purchase or redeem shares, on days that the NYSE is closed for trading.

Participating Insurance Companies and Qualified Plans may charge transaction fees for their services in connection with accepting share purchase and redemption orders on behalf of the Funds. For purchase orders placed through a Participating Insurance Company or Qualified Plan, a shareholder will pay the Fund's NAV next determined after the Participating Insurance Company or Qualified Plan, receives such purchase order, plus any applicable transaction charge imposed by the Participating Insurance Company or Qualified Plan. For redemption orders placed through a Participating Insurance Company or Qualified Plan, a shareholder will receive redemption proceeds, which reflect the NAV next determined after the Participating Insurance Company or Qualified Plan receives the redemption order, less any redemption fees imposed by the Participating Insurance Company or Qualified Plan.

In some instances, a Participating Insurance Company or Qualified Plan will not charge any transaction fees directly to investors in a Fund. However, for certain shareholder servicing services provided by the Participating Insurance Company or Qualified Plan with respect to Fund share accounts held on behalf of its customers, the Participating Insurance Company or Qualified Plan may charge a fee based on net assets that is paid by the Investment Manager out of its resources.

In addition, you may, subject to the approval of the Trust, purchase shares of a Fund with securities that are held in the Funds' portfolio (or, rarely, with securities that are not currently held in the portfolio but that are eligible for purchase by the Fund, consistent with the Fund's investment objectives and restrictions) that have a value that is readily ascertainable in accordance with the Trust's valuation policies. Should the Trust approve your purchase of a Fund's shares with securities, the Trust would follow its purchase in-kind procedures and would value the securities tendered in payment (determined as of the next close of regular session trading on the NYSE after receipt of the purchase order) pursuant to the Trust's valuation procedures as then in effect, and you would receive the number of Fund shares having a net asset value on the purchase date equal to the aggregate purchase price.

The value of each Fund's portfolio securities is determined in accordance with the Trust's Portfolio Pricing Policy, which is approved by the Board. As described under the heading *Fair Valuation of Portfolio Securities* below, Fund positions for which market quotations are not readily available are valued at a fair value as determined in good faith by the Valuation Committee of the Board under consistently applied procedures established by the Board. Principal valuation methodologies employed by the Funds are as follows:

Domestic Equity Securities; Portfolio Companies. To calculate the NAV on a given day, a Fund generally values each security in its portfolio for which a market quotation is readily available at the latest sale price quoted for the security that day on its principal exchange. If there are no sales that day, a Fund generally values the security at the mean of the latest bid and ask quotations. If a security is traded on NASDAQ, the security is priced using the SEC approved NASDAQ official closing price, or, if there are no sales, the security is priced at the mean of the closing bid and ask quotations. The Valuation Committee of the Board values securities which have halted or temporarily stopped trading at the last sale price, adjusted by a premium or discount to account for the anticipated re-opening price. The Valuation Committee values securities for which there is no bid or ask prices. Equity securities that are not listed on any national exchange or NASDAQ are generally valued at the last sale price. Shares of open-end investment companies (other than ETFs but including the Portfolio Funds in which Columbia Thermostat Fund invests) are valued at the latest NAV reported by those companies. The Portfolio Funds generally value securities in their portfolios for which market quotations are readily available at the current market values of those securities (as determined by the policies of each Portfolio Fund) and all other securities and assets at fair value pursuant to methods established in good faith by the board of directors or trustees of each Portfolio Fund.

Foreign Equity Securities. Certain of the Funds and the Portfolio Funds may invest in securities that are primarily listed on foreign exchanges. Foreign securities are generally priced at the last sale price on the primary foreign exchange or may be priced using the closing price. However, because of differences in time zones between the United States and foreign securities markets, the prices of foreign securities may not fully reflect events that impact their current value. Generally, trading in foreign securities is substantially completed each day at various times prior to the time at which the Fund's NAV is calculated and the values of the foreign securities used in determining the NAV are computed as of such different times. Foreign securities markets are sometimes open on days when U.S. markets are closed and the Fund's NAV is not calculated. Although the value of foreign securities owned by the Funds could change on days when Fund shares cannot be bought or sold, Fund NAVs are not calculated, and therefore a Fund's foreign holdings are not priced, on such days. In addition, foreign securities markets may be closed on days when U.S. markets are open and the Fund's NAV is calculated. This means that the NAV may be based on prices for the underlying foreign securities that are not current. If appropriate, the Valuation Committee of the Board may determine the fair value. In addition, the Funds utilize a statistical fair valuation process to adjust prices of the foreign securities under certain circumstances. See *Fair Valuation of Portfolio Securities* below.

Foreign Currencies; Forward Foreign Currency Contracts. The values of foreign securities quoted in foreign currencies are translated into U.S. dollars at the intraday spot rate provided by the data service set forth in the pricing procedures of the Investment Manager. Forward foreign currency contracts are valued in U.S. dollars based on the intraday spot rate as of the NYSE close, adjusted by the forward points as of the time of pricing quoted by the data service specified in the pricing procedures of the Investment Manager.

Fair Valuation of Portfolio Securities

Rather than using the methods described above, in the event that price quotations or valuations are not readily available or are deemed unreliable, the security will be valued in good faith based on a determination of the security's fair value pursuant to the Trust's Portfolio Pricing Policy approved by the Board. For example, a security may be fair valued when trading is halted or if the security is not actively traded, such as is the case with restricted, illiquid and nonpublic securities. The fair value of a security is likely to be different from the quoted or published price and fair value determinations often require significant judgment.

Fair values of securities are determined following the Trust's Portfolio Pricing Policy, utilizing the valuation methodology set forth in the Policy and deemed most appropriate in the circumstances and considering all available, relevant factors and indications of value in reaching its decision. To the extent a factor is deemed relevant, the following non-exhaustive list of factors is used in reaching a fair value determination for a security under the Policy: the value of other financial instruments, including derivative securities; trading volumes; values of baskets of securities; changes in interest rates; observations from financial institutions; government (domestic or foreign) actions or pronouncements; other news events; and, with respect to securities traded in foreign markets, the value of foreign securities traded in other foreign markets, ADR trading, closed-end fund trading, foreign currency exchange activity, and the trading prices of financial products that are tied to baskets of foreign securities. Significant events occurring after the close of a foreign exchange but before the time at which a Fund calculates the price of its foreign portfolio securities may lead to a determination that it is appropriate to fair value the affected foreign securities. Such significant events affecting a foreign security may include, but are not limited to: (i) extraordinary corporate events such as a reorganization, redemption, conversion; (ii) a trading halt in a domestic or foreign exchange; (iii) stale prices; (iv) suspension of trading in an individual security or market; (v) extraordinary market, economic or political events; (vi) scheduled and unscheduled foreign market closures; and (vii) such other instances as the Investment Manager or the Valuation Committee may determine.

In addition, foreign securities traded on foreign exchanges in time zones different from the United States are subject to fair value pricing in the event of a significant movement in Standard & Poor's 500 E-Mini Index (the "S&P 500 E-Mini"). In the event of such a movement, under the Trust's Portfolio Pricing Policy adjusted or "fair value" prices must be obtained from a designated pricing vendor for each of the Funds' foreign securities covered by the vendor. The fair value methodology applied by the vendor, in general, generates a factor applied to the closing price of the security on the foreign market that reflects that security's expected price movement in response to the change in the S&P 500 E-Mini. When a foreign security is fair valued, the fair valuation adjustment factor supplied by the vendor may be applied, depending on the circumstances. Although the use of statistical fair valuation is intended to and may decrease opportunities for time zone arbitrage transactions, there can be no assurance that it will successfully decrease arbitrage opportunities.

TAXATION

The following information supplements and should be read in conjunction with the section in the Funds' prospectuses entitled *Distributions and Taxes*. The prospectuses generally describe the U.S. federal income tax treatment of the Funds and their shareholders. This section of the SAI provides additional information concerning U.S. federal income taxes. It is based on the Code, applicable Treasury Regulations, judicial authority, and administrative rulings and practice, all as in effect as of the date of this SAI and all of which are subject to change, including changes with retroactive effect. The following discussion does not address any state, local or foreign tax matters.

The following discussion is generally based on the assumption that the shares of each Fund will be respected as owned by Participating Insurance Companies through their separate accounts, Qualified Plans, and other eligible persons or plans permitted to hold shares of a Fund pursuant to the applicable Treasury Regulations ("Other Eligible Investors") without impairing the ability of the Participating Insurance Company separate accounts to satisfy the diversification requirements of Section 817(h) of the Code. If this is not the case, the person(s) determined to own the Fund shares will not be eligible for tax deferral and, instead, will be taxed currently on Fund distributions and on the proceeds of any sale, transfer or redemption of Fund shares under applicable U.S. federal income tax rules that may not be discussed herein.

The Trust has not requested and will not request an advance ruling from the IRS as to the U.S. federal income tax matters described below. The IRS could adopt positions contrary to those discussed below and such positions could be sustained. In addition, the following discussion and the discussions in the Funds' prospectuses address only some of the U.S. federal income tax considerations generally affecting investments in the Funds.

In particular, because Participating Insurance Company separate accounts, Qualified Plans and Other Eligible Investors will be the only shareholders of a Fund, only certain U.S. federal tax aspects of an investment in a Fund are described herein. Holders of VA contracts and VLI policies (together, "Contracts"), Qualified Plan participants, or persons investing through an Other Eligible Investor are urged to consult the Participating Insurance Company, Qualified Plan, or Other Eligible Investor through which their investment is made, as well as to consult their own tax advisors and financial planners, regarding the U.S. federal tax consequences to them of an investment in a Fund, the application of state, local, or foreign laws, and the effect of any possible changes in applicable tax laws on an investment in a Fund.

Qualification as a Regulated Investment Company

It is intended that each Fund qualify as a "regulated investment company" under Subchapter M of Subtitle A, Chapter 1 of the Code. Each Fund will be treated as a separate entity for U.S. federal income tax purposes. Thus, the provisions of the Code applicable to regulated investment companies generally will apply separately to each Fund, even though each Fund is a series of the Trust. Furthermore, each Fund will separately determine its income, gains, losses, and expenses for U.S. federal income tax purposes.

In order to qualify for the special tax treatment accorded regulated investment companies and their shareholders, each Fund must, among other things, derive at least 90% of its gross income each taxable year generally from (i) dividends, interest, certain payments with respect to securities loans, gains from the sale or other disposition of stock, securities or foreign currencies, or other income attributable to its business of investing in such stock, securities or foreign currencies (including, but not limited to, gains from options, futures or forward contracts) and (ii) net income derived from an interest in a qualified publicly traded partnership, as defined below. In general, for purposes of this 90% gross income requirement, income derived from a partnership (other than a qualified publicly traded partnership) will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership which would be qualifying income if realized directly by the regulated investment company. However, 100% of the net income derived from an interest in a qualified publicly traded partnership (very generally, defined as a partnership (x) the interests in which are traded on an established securities market or readily tradable on a secondary market or the substantial

equivalent thereof, (y) that derives at least 90% of its gross income from the passive income sources defined in Code Section 7704(d), and (z) that derives less than 90% of its income from the qualifying income described in clause (i) above) will be treated as qualifying income. Certain of a Fund's investments in master limited partnerships (MLPs) and ETFs, if any, may qualify as interests in qualified publicly traded partnerships, as described further below. In addition, although in general the passive loss rules do not apply to a regulated investment company, such rules do apply to a regulated investment company with respect to items attributable to an interest in a qualified publicly traded partnership.

Each Fund must also diversify its holdings so that, at the end of each quarter of the Fund's taxable year: (i) at least 50% of the fair market value of its total assets consists of (A) cash and cash items (including receivables), U.S. Government securities and securities of other regulated investment companies, and (B) securities, of any one issuer (other than those described in clause (A)) to the extent such securities do not exceed 5% of the value of the Fund's total assets and are not more than 10% of the outstanding voting securities of such issuer, and (ii) not more than 25% of the value of the Fund's total assets consists of the securities of any one issuer (other than those described in clause (i)(A)), the securities of two or more issuers the Fund controls and which are engaged in the same, similar, or related trades or businesses, or the securities of one or more qualified publicly traded partnerships. In addition, for purposes of meeting this diversification requirement, the term "outstanding voting securities of such issuer" includes the equity securities of a qualified publicly traded partnership and in the case of a Fund's investments in loan participations, the Fund shall treat both the financial intermediary and the issuer of the underlying loan as an issuer. The qualifying income and diversification requirements described above may limit the extent to which a Fund can engage in certain derivatives transactions, as well as the extent to which it can invest in MLPs.

In addition, each Fund generally must distribute to its shareholders at least 90% of its investment company taxable income for the taxable year, which generally includes its ordinary income and the excess of any net short-term capital gain over net long-term capital loss, and at least 90% of its net tax-exempt interest income (if any) for the taxable year.

If a Fund qualifies as a regulated investment company that is accorded special tax treatment, it generally will not be subject to U.S. federal income tax on any of the investment company taxable income and net capital gain (i.e., the excess of net long-term capital gain over net short-term capital loss) it distributes to its shareholders. Each Fund generally intends to distribute at least annually substantially all of its investment company taxable income (computed without regard to the dividends-paid deduction) and its net capital gain. However, no assurance can be given that a Fund will not be subject to U.S. federal income taxation. Any investment company taxable income or net capital gain retained by the Fund will be subject to tax at regular corporate rates.

In determining its net capital gain, including in connection with determining the amount available to support a Capital Gain Dividend (as defined below), its taxable income, and its earnings and profits, a regulated investment company generally may elect to treat part or all of any post-October capital loss (defined as the greatest of net capital loss, net long-term capital loss, or net short-term capital loss, in each case attributable to the portion of the taxable year after October 31) or late-year ordinary loss (generally, (i) net ordinary loss from the sale, exchange or other taxable disposition of property, attributable to the portion of the taxable year after October 31, plus (ii) other net ordinary loss attributable to the portion of the taxable year after December 31) as if incurred in the succeeding taxable year.

In order to comply with the distribution requirements described above applicable to regulated investment companies, a Fund generally must make the distributions in the same taxable year that it realizes the income and gain, although in certain circumstances, a Fund may make the distributions in the following taxable year in respect of income and gains from the prior taxable year. If a Fund declares a distribution to shareholders of record in October, November or December of one calendar year and pays the distribution by January 31 of the following calendar year the Fund and its shareholders will be treated as if the Fund paid the distribution on December 31 of the earlier year.

If a Fund were to fail to meet the income, diversification or distribution test described above, the Fund could in some cases cure such failure including by paying a fund-level tax or interest, making additional distributions, or disposing of certain assets. If the Fund were ineligible to or otherwise did not cure such failure for any year, or otherwise were to fail to qualify as a regulated investment company accorded special tax treatment under the Code for such year, (i) it would be taxed in the same manner as an ordinary corporation without any deduction for its distributions to shareholders, and (ii) each Participating Insurance Company separate account invested in the Fund would fail to satisfy the diversification requirements described below (under *Taxation of a Separate Account of a Participating Insurance Company*), with the result that the Contracts supported by that account would no longer be eligible for tax deferral. In addition, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest and make substantial distributions before requalifying as a regulated investment company.

Excise Tax

Amounts not distributed on a timely basis by regulated investment companies in accordance with a calendar year distribution requirement are subject to a nondeductible 4% excise tax at the Fund level. This excise tax, however, is generally inapplicable to any regulated investment company whose sole shareholders are separate accounts of Participating Insurance Companies funding Contracts, Qualified Plans, or Other Eligible Investors or other regulated investment companies that are also exempt from the excise tax. If a Fund is subject to the excise tax requirements and the Fund fails to distribute by December 31 of each calendar year at least the sum of 98% of its ordinary income for that year (excluding capital gains and losses) and 98.2% of its capital gain net income (adjusted for net ordinary losses) for the one-year period ending on October 31 of that year (or November 30 or December 31 of that year if the Fund is permitted to elect and so elects), and any of its ordinary income and capital gain net income from previous years that were not distributed during such years, the Fund will be subject to a nondeductible 4% excise tax on the undistributed amounts. For these purposes, ordinary gains and losses from the sale, exchange, or other taxable disposition of property that would be properly taken into account after October 31 of a calendar year (or November 30 or December 31 if the Fund is permitted to elect and so elects) are generally treated as arising on January 1 of the following calendar year. For purposes of the excise tax, a Fund will be treated as having distributed any amount on which it has been subject to corporate income tax in the taxable year ending within the calendar year. Each Fund generally intends to actually distribute or be deemed to have distributed substantially all of its ordinary income and capital gain net income, if any, by the end of each calendar year and, thus, expects not to be subject to the excise tax. However, no assurance can be given that a Fund will not be subject to the excise tax. Moreover, each Fund reserves the right to pay an excise tax rather than make an additional distribution when circumstances warrant (for example, if the amount of excise tax to be paid is deemed de minimis by a Fund).

Capital Loss Carryforwards

Capital losses in excess of capital gains (“net capital losses”) are not permitted to be deducted against a Fund’s net investment income. Instead, subject to certain limitations, a Fund is permitted to carry forward a net capital loss from any taxable year to offset its capital gains, if any, realized during a subsequent taxable year. If a Fund has incurred net capital losses in taxable years beginning after December 22, 2010 (“post-2010 losses”), those losses will be carried forward to one or more subsequent taxable years without expiration; any such carryforward losses will retain their character as short-term or long-term. If a Fund incurred net capital losses in a taxable year beginning on or before December 22, 2010 (“pre-2011 losses”), the Fund is permitted to carry such losses forward for eight taxable years; in the year to which they are carried forward, such losses are treated as short-term capital losses that first offset short-term capital gains, and then offset any long-term capital gains. The Fund must use any post 2010-losses, which will not expire, before it uses any pre-2011 losses. This increases the likelihood that pre-2011 losses will expire unused at the conclusion of the eight-year carryforward period. Capital gains that are offset by carried forward capital losses are not subject to fund-level U.S. federal income taxation, regardless of whether they are distributed to shareholders. Accordingly, the Funds do not expect to distribute any such capital gains. The Funds cannot carry back or carry forward any net operating losses.

Taxation of Fund Investments

In general, realized gains or losses on the sale of securities held by a Fund will be treated as capital gains or losses, and long-term capital gains or losses if the Fund has held or is deemed to have held the securities for more than one year at the time of disposition.

If a Fund purchases a debt obligation with original issue discount (OID) (generally a debt obligation with an issue price less than its stated principal amount, such as a zero-coupon bond), the Fund may be required to annually include in its income a portion of the OID as ordinary income, even though the Fund will not receive cash payments for such discount until maturity or disposition of the obligation, and depending on market conditions and the credit quality of the bond, might never receive cash for such discount. Inflation-protected bonds generally can be expected to produce OID income as their principal amounts are adjusted upward for inflation. A Fund generally will be required to make distributions to shareholders representing the OID or market discount (if an election is made by the Fund to include market discount over the holding period of the applicable debt obligation) on debt securities that is currently includible in income, even though the cash representing such income may not have been received by the Fund, and depending on market conditions and the credit quality of the bond, might never be received. Cash to pay such distributions may be obtained from borrowing or from sales proceeds of securities held by a Fund which the Fund otherwise might have continued to hold; obtaining such cash might be disadvantageous for the Fund. In addition, payment-in-kind securities similarly will give rise to income which is required to be distributed and is taxable even though a Fund receives no cash interest payment on the security during the year.

If a Fund invests in debt obligations that are in the lowest rating categories or are unrated, including debt obligations of issuers not currently paying interest or who are in default, special tax issues may exist for the Fund. Tax rules are not entirely clear about issues such as: (i) whether a Fund should recognize market discount on a debt obligation and, (ii) if so, the amount of market discount the Fund should recognize, (iii) when a Fund may cease to accrue interest, OID or market discount, (iv) when and to what extent deductions may be taken for bad debts or worthless securities and (v) how payments received on obligations in default should be allocated between principal and income. These and other related issues will be addressed by a Fund when, as and if it invests in such securities, in order to seek to ensure that it distributes sufficient income to preserve its status as a regulated investment company and does not become subject to U.S. federal income or excise tax.

If an option granted by a Fund is sold, lapses or is otherwise terminated through a closing transaction, such as a repurchase by the Fund of the option from its holder, the Fund generally will realize a short-term capital gain or loss, depending on whether the premium income is greater or less than the amount paid by the Fund in the closing transaction. Some capital losses realized by a Fund in the sale, exchange, exercise or other disposition of an option may be deferred if they result from a position that is part of a “straddle,” discussed below. If securities are sold by a Fund pursuant to the exercise of a covered call option granted by it, the Fund generally will add the premium received to the sale price of the securities delivered in determining the amount of gain or loss on the sale. If securities are purchased by a Fund pursuant to the exercise of a put option written by it, the Fund generally will subtract the premium received from its cost basis in the securities purchased.

Some regulated futures contracts, foreign currency contracts, and non-equity, listed options that may be used by a Fund will be deemed “Section 1256 contracts.” A Fund will be required to “mark to market” any such

contracts held at the end of the taxable year by treating them as if they had been sold on the last day of that year at market value. Sixty percent of any net gain or loss realized on all dispositions of Section 1256 contracts, including deemed dispositions under the “mark-to-market” rule, generally will be treated as long-term capital gain or loss, and the remaining 40% will be treated as short-term capital gain or loss, although certain foreign currency gains and losses from such contracts may be treated as entirely ordinary income or loss as described below. These provisions may require a Fund to recognize income or gains without a concurrent receipt of cash. Transactions that qualify as designated hedges are exempt from the mark-to-market rule and the “60%/40%” rule and may require the Fund to defer the recognition of losses on certain futures contracts, foreign currency contracts, and non-equity options.

Foreign exchange gains and losses realized by a Fund in connection with certain transactions involving foreign currency-denominated debt securities, certain options, futures contracts, forward contracts and similar instruments relating to foreign currencies, or payables or receivables denominated in a foreign currency are subject to Section 988 of the Code, which generally causes such gains and losses to be treated as ordinary income or loss and may affect the amount and timing of recognition of the Fund’s income. Under future U.S. Treasury Regulations, any such transactions that are not directly related to a Fund’s investments in stock or securities (or its options contracts or futures contracts with respect to stock or securities) may have to be limited in order to enable the Fund to satisfy the 90% qualifying income test described above. If the net foreign exchange loss exceeds a Fund’s net investment company taxable income (computed without regard to such loss) for a taxable year, the resulting ordinary loss for such year will not be available as a carryforward and thus cannot be deducted by the Fund in future years.

Offsetting positions held by a Fund involving certain derivative instruments, such as forward, futures and options contracts, may be considered, for U.S. federal income tax purposes, to constitute “straddles.” “Straddles” are defined to include “offsetting positions” in actively traded personal property. The tax treatment of “straddles” is governed by Section 1092 of the Code which, in certain circumstances, overrides or modifies the provisions of Section 1256. If a Fund is treated as entering into a “straddle” and at least one (but not all) of the Fund’s positions in derivative contracts comprising a part of such straddle is governed by Section 1256 of the Code, described above, then such straddle could be characterized as a “mixed straddle.” A Fund may make one or more elections with respect to “mixed straddles.” Depending upon which election is made, if any, the results with respect to a Fund may differ. Generally, to the extent the straddle rules apply to positions established by a Fund, losses realized by the Fund may be deferred to the extent of unrealized gain in any offsetting positions. Moreover, as a result of the straddle rules, short-term capital loss on straddle positions may be recharacterized as long-term capital loss, and long-term capital gain may be characterized as short-term capital gain. In addition, the existence of a straddle may affect the holding period of the offsetting positions. As a result, the straddle rules could cause distributions that would otherwise constitute “qualified dividend income” or qualify for the dividends-received deduction to fail to satisfy the applicable holding period requirements (as described below). Furthermore, the Fund may be required to capitalize, rather than deduct currently, any interest expense and carrying charges applicable to a position that is part of a straddle, including any interest on indebtedness incurred or continued to purchase or carry any positions that are part of a straddle. The application of the straddle rules to certain offsetting Fund positions can therefore affect the amount, timing, and character of distributions to shareholders, and may result in significant differences from the amount, timing and character of distributions that would have been made by the Fund if it had not entered into offsetting positions in respect of certain of its portfolio securities.

If a Fund enters into a “constructive sale” of any appreciated financial position in stock, a partnership interest, or certain debt instruments, the Fund will be treated as if it had sold and immediately repurchased the property and must recognize gain (but not loss) with respect to that position. A constructive sale of an appreciated financial position occurs when a Fund enters into certain offsetting transactions with respect to the same or substantially identical property, including, but not limited to: (i) a short sale; (ii) an offsetting notional principal contract; (iii) a futures or forward contract; or (iv) other transactions identified in future Treasury Regulations. The character of the gain from constructive sales will depend upon a Fund’s holding period in the appreciated financial position. Losses realized from a sale of a position that was previously the subject of a

constructive sale will be recognized when the position is subsequently disposed of. The character of such losses will depend upon a Fund's holding period in the position beginning with the date the constructive sale was deemed to have occurred and the application of various loss deferral provisions in the Code. Constructive sale treatment does not apply to certain closed transactions, including if such a transaction is closed on or before the 30th day after the close of the Fund's taxable year and the Fund holds the appreciated financial position unhedged throughout the 60-day period beginning with the day such transaction was closed.

The amount of long-term capital gain a Fund may recognize from certain derivative transactions with respect to interests in certain pass-through entities is limited under the Code's constructive ownership rules. The amount of long-term capital gain is limited to the amount of such gain the Fund would have had if the Fund directly invested in the pass-through entity during the term of the derivative contract. Any gain in excess of this amount is treated as ordinary income. An interest charge is imposed on the amount of gain that is treated as ordinary income.

In addition, a Fund's transactions in securities and certain types of derivatives (e.g., options, futures contracts, forward contracts and swap agreements) may be subject to other special tax rules, such as wash-sale or short-sale rules, the effect of which may be to accelerate income to the Fund or defer losses to the Fund, cause adjustments in the holding periods of the Fund's securities, convert long-term capital gains into short-term capital gains, and/or convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing and character of distributions to shareholders.

Certain of a Fund's investments in derivative instruments and foreign currency-denominated instruments, as well as any of its foreign currency transactions and hedging activities, are likely to produce a difference between its book income and its taxable income. If a Fund's book income exceeds the sum of its taxable income and net tax-exempt income (if any), the distribution (if any) of such excess generally will be treated as (i) a dividend to the extent of the Fund's remaining earnings and profits (including earnings and profits arising from tax-exempt income), (ii) thereafter, as a return of capital to the extent of the recipient's basis in its shares, and (iii) thereafter, as gain from the sale or exchange of a capital asset. If a Fund's book income is less than the sum of its taxable income and net tax-exempt income (if any), the Fund could be required to make distributions exceeding book income to qualify as a regulated investment company that is accorded special tax treatment.

Rules governing the U.S. federal income tax aspects of derivatives, including with respect to swap agreements and certain commodity-linked investments, are in a developing stage and are not entirely clear in certain respects. Accordingly, while each Fund intends to account for such transactions in a manner it deems to be appropriate, an adverse determination or future guidance by the IRS with respect to these rules (which determination or guidance could be retroactive) may affect whether a Fund has made sufficient distributions, and otherwise satisfied the relevant requirements to maintain its qualification as a regulated investment company and avoid fund-level tax. Certain requirements that must be met under the Code in order for a Fund to qualify as a regulated investment company may limit the extent to which a Fund will be able to engage in certain derivatives or commodity-linked transactions.

A Fund may invest directly or indirectly in residual interests in REMICs or equity interests in taxable mortgage pools (TMPs). Under an IRS notice, and Treasury Regulations that have yet to be issued but may apply retroactively, a portion of a Fund's income (including income allocated to the Fund from a REIT, a regulated investment company or other pass-through entity) that is attributable to a residual interest in a REMIC or an equity interest in a TMP (referred to in the Code as an "excess inclusion") will be subject to U.S. federal income tax in all events. This notice also provides, and the regulations are expected to provide, that excess inclusion income of a regulated investment company, such as a Fund, will be allocated to shareholders of the regulated investment company in proportion to the dividends received by such shareholders, with the same consequences as if the shareholders held the related interest directly. As a result, a Participating Insurance Company separate account supporting a Contract may be taxed currently to the extent of its share of the Fund's excess inclusion income.

In general, excess inclusion income allocated to shareholders (i) cannot be offset by net operating losses (subject to a limited exception for certain thrift institutions), (ii) will constitute unrelated business taxable income (UBTI) to entities (including a Qualified Plan, an individual retirement account, a 401(k) plan, a Keogh plan or certain other tax-exempt entities) subject to tax on UBTI, thereby potentially requiring such an entity that is allocated excess inclusion income, and otherwise might not be required to file a tax return, to file a tax return and pay tax on such income, (iii) in the case of a foreign shareholder, will not qualify for any reduction in U.S. federal withholding tax, and (iv) in the case of a Participating Insurance Company separate account supporting a Contract, cannot be offset by an adjustment to the reserves and thus is currently taxed notwithstanding the more general tax deferral available to Participating Insurance Company separate accounts funding Contracts. Income of a Fund that would be UBTI if earned directly by a tax-exempt entity will not generally be attributed as UBTI to a tax-exempt shareholder of the Fund. Notwithstanding this “blocking” effect, a tax-exempt shareholder could realize UBTI by virtue of its investment in the Fund if shares in the Fund constitute debt-financed property in the hands of the tax-exempt shareholder within the meaning of Code Section 514(b).

Some amounts received by a Fund from its investments in MLPs will likely be treated as returns of capital because of accelerated deductions available with respect to the activities of MLPs. On the disposition of an investment in such an MLP, the Fund will likely realize taxable income in excess of economic gain from that asset (or if, in later periods, a Fund does not dispose of the MLP, the Fund will likely realize taxable income in excess of cash flow received by the Fund from the MLP), and the Fund must take such income into account in determining whether the Fund has satisfied its regulated investment company distribution requirements. The Fund may have to borrow or liquidate securities to satisfy its distribution requirements and meet its redemption requests, even though investment considerations might otherwise make it undesirable for the Fund to borrow money or sell securities at the time.

As noted above, certain of the ETFs and MLPs in which a Fund may invest qualify as qualified publicly traded partnerships. In such cases, the net income derived from such investments will constitute qualifying income for purposes of the 90% gross income requirement described earlier for qualification as a regulated investment company. If, however, such a vehicle were to fail to qualify as a qualified publicly traded partnership in a particular year, a portion of the gross income derived from it in such year could constitute nonqualifying income to a Fund for purposes of the 90% gross income requirement and thus could adversely affect the Fund’s ability to qualify as a regulated investment company for a particular year. In addition, as described above, the diversification requirement for regulated investment company qualification will limit a Fund’s investments in one or more vehicles that are qualified publicly traded partnerships to 25% of the Fund’s total assets as of the end of each quarter of the Fund’s taxable year.

“Passive foreign investment companies” (PFICs) are generally defined as foreign corporations where at least 75% of their gross income for their taxable year is income from passive sources (such as certain interest, dividends, rents and royalties, or capital gains) or at least 50% of their assets on average produce such passive income or are held for the production of such passive income. If a Fund acquires any equity interest in a PFIC, the Fund could be subject to U.S. federal income tax and interest charges on “excess distributions” received from the PFIC or on gain from the sale of such equity interest in the PFIC, even if all income or gain actually received by the Fund is timely distributed to its shareholders. Excess distributions and gain from the sale of interests in PFICs may be characterized as ordinary income even though, absent the application of PFIC rules, these amounts may otherwise have been classified as capital gain.

A Fund will not be permitted to pass through to its shareholders any credit or deduction for these special taxes and interest charges incurred with respect to a PFIC. Elections may be available that would ameliorate these adverse tax consequences, but such elections would require a Fund to include its share of the PFIC’s income and net capital gains annually, regardless of whether it receives any distribution from the PFIC (in the case of a “QEF election”), or to mark the gains (and to a limited extent losses) in its interests in the PFIC “to the market” as though the Fund had sold and repurchased such interests on the last day of the Fund’s taxable year, treating such gains and losses as ordinary income and loss (in the case of a “mark-to-market election”). The QEF

and mark-to-market elections may require a Fund to recognize taxable income or gain without the concurrent receipt of cash and increase the amount required to be distributed by the Fund to avoid taxation. Making either of these elections therefore may require a Fund to liquidate other investments prematurely to meet the minimum distribution requirements described above, which also may accelerate the recognition of gain and adversely affect the Fund's total return. Each Fund may attempt to limit and/or manage its holdings in PFICs to minimize tax liability and/or maximize returns from these investments but there can be no assurance that it will be able to do so. Moreover, because it is not always possible to identify a foreign corporation as a PFIC in advance of acquiring shares in the corporation, a Fund may incur the tax and interest charges described above in some instances.

In addition to the investments described above, prospective shareholders should be aware that other investments made by a Fund may involve complex tax rules that may result in income or gain recognition by the Fund without corresponding current cash receipts. Although each Fund seeks to avoid significant noncash income, such noncash income could be recognized by a Fund, in which case the Fund may distribute cash derived from other sources in order to meet the minimum distribution requirements described above. In this regard, a Fund could be required at times to liquidate investments prematurely in order to satisfy its minimum distribution requirements, which may accelerate the recognition of gain and adversely affect the Fund's total return. Furthermore, amounts realized by a Fund from sources within foreign countries may be subject to withholding and other taxes imposed by such countries, thereby reducing the amount available for distribution to shareholders.

Corporate Shareholders

Subject to limitations and other rules, a corporate shareholder of a Fund may be eligible for the dividends-received deduction on Fund distributions attributable to dividends received by the Fund from domestic corporations, which, if received directly by the corporate shareholder would qualify for such a deduction. For eligible corporate shareholders, the dividends-received deduction may be subject to certain reductions, and a distribution by a Fund attributable to dividends of a domestic corporation will be eligible for the deduction only if certain holding period and other requirements are met. These requirements are complex; therefore, corporate shareholders of the Funds are urged to consult their own tax advisors and financial planners.

As discussed above, a portion of the interest paid or accrued on certain high-yield discount obligations that a Fund may own may not be deductible to the issuer. If a portion of the interest paid or accrued on these obligations is not deductible, that portion will be treated as a dividend. In such cases, if the issuer of the obligation is a domestic corporation, dividend payments by a Fund may be eligible for the dividends received deduction to the extent of the dividend portion of such interest.

Tax Shelter Reporting Regulations

Under Treasury Regulations, if a shareholder recognizes a loss of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder, such as a Participating Insurance Company holding the separate accounts to which reference is made in this SAI, the shareholder must file with the IRS a disclosure statement on IRS Form 8886. Direct shareholders of portfolio securities are in many cases excepted from this reporting requirement, but under current guidance, shareholders of a regulated investment company, such as Participating Insurance Companies that own shares in a Fund through their separate accounts, are not excepted. Future guidance may extend the current exception from this reporting requirement to shareholders of most or all regulated investment companies. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their tax advisors to determine the applicability of these regulations in light of their individual circumstances.

Special Considerations For Taxation of a Separate Account of a Participating Insurance Company

Under the Code, if the investments of a segregated asset account, such as the separate accounts of Participating Insurance Companies, are “adequately diversified,” and certain other requirements are met, a Contract owner supported by the account will receive favorable tax treatment in the form of deferral of tax until a distribution is made under the Contract.

In general, the investments of a segregated asset account are considered to be “adequately diversified” only if: (i) no more than 55% of the value of the total assets of the account is represented by any one investment; (ii) no more than 70% of the value of the total assets of the account is represented by any two investments; (iii) no more than 80% of the value of the total assets of the account is represented by any three investments; and (iv) no more than 90% of the value of the total assets of the account is represented by any four investments. Section 817(h) provides as a safe harbor that a segregated asset account is also considered to be “adequately diversified” if it meets the regulated investment company diversification tests described earlier and no more than 55% of the value of the total assets of the account is attributable to cash, cash items (including receivables), U.S. Government securities, and securities of other regulated investment companies.

In general, all securities of the same issuer are treated as a single investment for such purposes, and each U.S. Government agency and instrumentality is considered a separate issuer. However, U.S. Treasury Regulations provide a “look-through rule” with respect to a segregated asset account’s investments in a regulated investment company for purposes of the applicable diversification requirements, provided certain conditions are satisfied by the regulated investment company. In particular, (i) if the beneficial interests in the regulated investment company are held by one or more segregated asset accounts of one or more Participating Insurance Companies, and (ii) if public access to such regulated investment company is available exclusively through the purchase of a Contract or certain Qualified Plans, then a segregated asset account’s beneficial interest in the regulated investment company is not treated as a single investment. Instead, a pro rata portion of each asset of the regulated investment company is treated as an asset of the segregated asset account. Look-through treatment is also available if the two requirements above are met and notwithstanding the fact that beneficial interests in the regulated investment company are also held by Qualified Plans and Other Eligible Investors. Additionally, to the extent a Fund meeting the above conditions invests in underlying regulated investment companies or partnerships that themselves are owned exclusively by insurance company separate accounts, Qualified Plans, or Other Eligible Investors, the assets of those underlying regulated investment companies or partnerships generally should be treated as assets of the separate accounts investing in the Fund.

As indicated above, the Trust intends that each Fund will continue to qualify as a regulated investment company under the Code. The Trust also intends to cause each Fund to continue to satisfy the separate diversification requirements imposed by Section 817(h) of the Code and the regulations thereunder at all times to enable the corresponding separate accounts to be “adequately diversified.” In addition, the Trust intends that each Fund will qualify for the “look-through rule” described above by limiting the investment in each Fund’s shares to Participating Insurance Company separate accounts and other permitted investors. Accordingly, the Trust intends that each Participating Insurance Company, through its separate accounts, will be able to treat its interests in a Fund as ownership of a pro rata portion of each asset of the Fund, so that individual Contract owners underlying the separate account will qualify for favorable U.S. federal income tax treatment under the Code. However, no assurance can be made in that regard.

Failure by a Fund to satisfy the Section 817(h) requirements by failing to comply with the “55%-70%-80%-90%” diversification test or the safe harbor described above, or by failing to comply with the “look-through rule,” could cause the Contracts to lose their favorable tax status and require a Contract owner to include currently in ordinary income any income accrued under the contracts for the current and all prior taxable years. Under certain circumstances described in the applicable U.S. Treasury Regulations, inadvertent failure to satisfy the Section 817(h) diversification requirements may be corrected; such a correction would require a payment to the IRS. Any such failure could also result in adverse tax consequences for the Participating Insurance Company issuing the contracts.

The IRS has indicated that a degree of investor control over the investment options underlying a Contract may interfere with the tax-deferred treatment of the Contract. The Treasury Department has issued rulings addressing the circumstances in which a Contract owner's control of the investments of the separate account may cause the Contract owner, rather than the Participating Insurance Company, to be treated as the owner of the assets held by the separate account, and is likely to issue additional rulings in the future. If the Contract owner is considered the owner of the securities underlying the separate account, income and gains produced by those securities would be included currently in the Contract owner's gross income.

In determining whether an impermissible level of investor control is present, one factor the IRS considers is whether a Fund's investment strategies are sufficiently broad to prevent a Contract owner from being deemed to be making particular investment decisions through its investment in the separate account. For this purpose, current IRS guidance indicates that typical fund investment strategies, even those with a specific sector or geographical focus, are generally considered sufficiently broad. Most, although not necessarily all, of the Funds have objectives and strategies that are not materially narrower than the investment strategies held not to constitute an impermissible level of investor control in recent IRS rulings (such as large company stocks, international stocks, small company stocks, mortgage-backed securities, money market securities, telecommunications stocks and financial services stocks).

The above discussion addresses only one of several factors that the IRS considers in determining whether a Contract owner has an impermissible level of investor control over a separate account. Contract owners should consult with their Participating Insurance Company and their tax adviser, as well as the prospectus relating to their particular Contract for more information concerning this investor control issue.

In the event that additional rules, regulations or other guidance is issued by the IRS or the Treasury Department concerning this issue, such guidance could affect the treatment of a Fund as described above, including retroactively. In addition, there can be no assurance that a Fund will be able to continue to operate as currently described, or that the Fund will not have to change its investment objective or investment policies in order to prevent, on a prospective basis, any such rules and regulations from causing Contract owners to be considered the owners of the shares of the Fund.

Special Considerations for Contract Owners and Qualified Plan Participants

The foregoing discussion does not address the U.S. federal income tax consequences to Contract owners or Qualified Plan participants. Such individuals should consult the prospectuses and other materials used in connection with the issuance of their Contract or Qualified Plan and should consult their own tax advisers and financial planners.

CONTROL PERSONS AND PRINCIPAL SHAREHOLDERS

All the shares of the Funds are held of record by sub-accounts of separate accounts of Participating Insurance Companies on behalf of the Contract owners, or by Qualified Plans on behalf of the participants therein. At all meetings of shareholders of the Funds each Participating Insurance Company will vote the shares held of record by sub-accounts of its separate accounts only in accordance with the instructions received from the Contract owners on behalf of whom such shares are held, and each Qualified Plan will vote the shares held of record by participants in the Qualified Plan only in accordance with the instructions received from the participants on behalf of whom such shares are held. All such shares as to which no instructions are received will be voted in the same proportion as shares as to which instructions are received. Accordingly, each Participating Insurance Company disclaims beneficial ownership of the shares of the Funds held of record by the sub-accounts of its separate accounts, and each Qualified Plan disclaims beneficial ownership of the shares of the Funds held of record by its participants.

Management Ownership of the Funds

As of March 31, 2014, the Trustees and the officers of the Trust, as a group, owned less than 1% of the outstanding equity securities of each Fund except that (i) Mr. McQuaid beneficially owned 1.49% of the outstanding shares of Wanger International Select, (ii) Mr. Wanger beneficially owned 8.67% of the outstanding shares of Wanger International Select and (iii) Messrs. McQuaid and Wanger together beneficially owned approximately 1.00% of the outstanding shares of Wanger Select.

Principal Holder Ownership of the Funds

As of March 31, 2014, the name, address and percentage of ownership of each person who may be deemed to be a “principal holder” of a Fund (*i.e.*, owns of record or is known by the Trust to own beneficially 5% or more of any class of a Fund’s outstanding shares) is listed below.

<u>Fund</u>	<u>Shareholder Account Registration</u>	<u>Share Balance</u>	<u>Percentage of Fund/Class</u>

As of March 31, 2014, the name, address and percentage of ownership of each person who may be deemed to be a “control person” (as that term is defined in the 1940 Act) of a Fund because it owns greater than 25% of the outstanding shares, either beneficially or by virtue of its fiduciary or trust roles or otherwise, is shown below. A controlling person’s vote could have a more significant effect on matters presented to shareholders for approval than the vote of other Fund shareholders.

Control Person Ownership of the Funds

APPENDIX A — DESCRIPTIONS OF SECURITIES RATINGS

This Appendix summarizes the various descriptions of securities ratings applicable to securities purchased by the Columbia Funds Family. The ratings of S&P, Moody's and Fitch represent their opinions as to quality. These ratings are not absolute standards of quality and are not recommendations to purchase, sell or hold a security. Issuers and issues are subject to risks that are not evaluated by the rating agencies. Please refer to a Fund's prospectus and this statement of additional information to determine whether the Fund may invest in securities that have ratings described in this Appendix.

STANDARD & POOR'S (S&P)

Long-Term Issue Credit Ratings

An obligation rated 'AAA' has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

An obligation rated 'AA' differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

An obligation rated 'A' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

An obligation rated 'BBB' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated 'BB', 'B', 'CCC', 'CC', and 'C' are regarded as having significant speculative characteristics. 'BB' indicates the least degree of speculation and 'C' the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

An obligation rated 'BB' is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

An obligation rated 'B' is more vulnerable to nonpayment than obligations rated 'BB', but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

An obligation rated 'CCC' is currently vulnerable to nonpayment, and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

An obligation rated 'CC' is currently highly vulnerable to nonpayment.

A 'C' rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents, or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the 'C' rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have

been suspended in accordance with the instrument's terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

An obligation rated '**D**' is in payment default. The '**D**' rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within five business days, irrespective of any grace period. The '**D**' rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation's rating is lowered to '**D**' upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

Short-Term Issue Credit Ratings

Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the U.S., for example, that means obligations with an original maturity of no more than 365 days — including commercial paper.

A short-term obligation rated '**A-1**' is rated in the highest category by S&P. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

A short-term obligation rated '**A-2**' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

A short-term obligation rated '**A-3**' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

A short-term obligation rated '**B**' is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor's inadequate capacity to meet its financial commitments.

A short-term obligation rated '**C**' is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

A short-term obligation rated '**D**' is in payment default. The '**D**' rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The '**D**' rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

Municipal Short-Term Note Ratings

An '**SP-1**' rating indicates strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

An '**SP-2**' rating indicates satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

An '**SP-3**' rating indicates speculative capacity to pay principal and interest.

MOODY'S INVESTORS SERVICE, INC. (MOODY'S)

Global Long-Term Rating Scale

Aaa — Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa — Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A — Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa — Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba — Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B — Obligations rated B are considered speculative and are subject to high credit risk.

Caa — Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca — Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C — Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Global Short-Term Rating Scale

Issuers (or supporting institutions) rated **Prime-1 (P-1)** have a superior ability to repay short-term debt obligations.

Issuers (or supporting institutions) rated **Prime-2 (P-2)** have a strong ability to repay short-term debt obligations.

Issuers (or supporting institutions) rated **Prime-3 (P-3)** have an acceptable ability to repay short-term obligations.

Issuers (or supporting institutions) rated **Not Prime (NP)** do not fall within any of the Prime rating categories.

U.S. Municipal Short-Term Debt and Demand Obligation Ratings

While the global short-term 'prime' rating scale is applied to U.S. municipal tax-exempt commercial paper, these programs are typically backed by external letters of credit or liquidity facilities and their short-term prime ratings usually map to the long-term rating of the enhancing bank or financial institution and not to the municipality's rating. Other short-term municipal obligations, which generally have different funding sources for repayment, are rated using two additional short-term rating scales (i.e., the MIG and VMIG scales discussed below).

The Municipal Investment Grade (MIG) scale is used to rate US municipal bond anticipation notes of up to three years maturity. Municipal notes rated on the MIG scale may be secured by either pledged revenues or

proceeds of a take-out financing received prior to note maturity. MIG ratings expire at the maturity of the obligation, and the issuer's long-term rating is only one consideration in assigning the MIG rating. MIG ratings are divided into three levels — MIG 1 through MIG 3 — while speculative grade short-term obligations are designated SG.

The **MIG 1** designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

The **MIG 2** designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

The **MIG 3** designation denotes acceptable credit quality. Liquidity and cash-flow protection may be narrow, and market access for refinancing is likely to be less well-established.

The **SG** designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

In the case of variable rate demand obligations (VRDOs), a two-component rating is assigned: a long or short-term debt rating and a demand obligation rating. The first element represents Moody's evaluation of risk associated with scheduled principal and interest payments. The second element represents Moody's evaluation of risk associated with the ability to receive purchase price upon demand ("demand feature"). The second element uses a rating from a variation of the MIG scale called the Variable Municipal Investment Grade (VMIG) scale. The rating transitions on the VMIG scale, as shown in the diagram below, differ from those on the Prime scale to reflect the risk that external liquidity support generally will terminate if the issuer's long-term rating drops below investment grade.

The **VMIG 1** designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

The **VMIG 2** designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

The **VMIG 3** designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

The **SG** designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.

FITCH, INC. (FITCH)

Corporate Finance Obligations — Long-Term Rating Scales

AAA: Highest credit quality. 'AAA' ratings denote the lowest expectation of credit risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA: Very high credit quality. 'AA' ratings denote expectations of very low credit risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A: High credit quality. ‘A’ ratings denote expectations of low credit risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB: Good credit quality. ‘BBB’ ratings indicate that expectations of credit risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

BB: Speculative. ‘BB’ ratings indicate an elevated vulnerability to credit risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial alternatives may be available to allow financial commitments to be met.

B: Highly speculative. ‘B’ ratings indicate that material credit risk is present.

CCC: Substantial credit risk. ‘CCC’ ratings indicate that substantial credit risk is present.

CC: Very high levels of credit risk. ‘CC’ ratings indicate very high levels of credit risk.

C: Exceptionally high levels of credit risk. ‘C’ indicates exceptionally high levels of credit risk.

Defaulted obligations typically are not assigned ‘RD’ or ‘D’ ratings, but are instead rated in the ‘B’ to ‘C’ rating categories, depending upon their recovery prospects and other relevant characteristics.

Short-Term Ratings Assigned to Issuers or Obligations in Corporate, Public and Structured Finance

F1: Highest short-term credit quality. Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

F2: Good short-term credit quality. Good intrinsic capacity for timely payment of financial commitments.

F3: Fair short-term credit quality. The intrinsic capacity for timely payment of financial commitments is adequate.

B: Speculative short-term credit quality. Minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

C: High short-term default risk. Default is a real possibility.

RD: Restricted default. Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Typically applicable to entity ratings only.

D: Default. Indicates a broad-based default event for an entity, or the default of a short-term obligation.

**APPENDIX B — THE INVESTMENT MANAGER’S PROXY VOTING POLICY AND PROCEDURES
MANUAL**

**Columbia Wanger Asset Management, LLC (“CWAM”)
Proxy Policy and Procedures Manual**

A. ADMINISTRATION

VOTING CLIENT AND FUND PROXIES

Primary Responsibility	CWAM Stock Analyst/Portfolio Manager
Secondary Responsibility	CWAM Chief Investment Officer
Oversight Responsibility	CWAM Chief Operating Officer and Chief Compliance Officer
Issue Date	8/01/03; as amended on 4/09/10, 12/08/10, 8/22/11,8/25/11 11/4/11, 11/7/12, and 4/24/14

POLICY:

All proxies for client securities for which Columbia Wanger Asset Management, LLC (“CWAM”) has been granted authority to vote shall be voted in a manner considered to be in the best interests of CWAM’s clients, including the Columbia Acorn Funds (“Acorn”) and Wanger Advisor Trust Funds (“WAT”) and their shareholders, without regard to any benefit to CWAM or its affiliates. Where CWAM retains voting authority, as for most client securities, CWAM shall examine each recommendation and vote against management’s recommendation, if, in its judgment, approval or adoption of the recommendation would be expected to impact adversely the current or potential market value of the issuer’s securities. References to the best interest of a client refer to the interest of the client in terms of the potential economic return on the client’s investment. In the event a client believes that its other interests require a different vote, CWAM shall vote as the client instructs. In limited cases where in CWAM is required to adhere to regulatory restrictions over ownership limits of certain securities, CWAM may delegate voting authority to an independent third party to vote in the shareholders best interest.

CWAM addresses potential material conflicts of interest by having each individual stock analyst review and vote each proxy for the stocks that he/she follows. For those proposals where the analyst is voting against management’s recommendation or where there is a variance from the guidelines contained herein, the CWAM Proxy Committee will determine the vote in the best interest of CWAM’s clients, without consideration of any benefit to CWAM, its affiliates or its other clients.

OVERVIEW:

CWAM’s policy is based upon its fiduciary obligation to act in its clients’ best interests and rules under the Investment Company Act of 1940 and the Investment Advisers Act of 1940, which impose obligations with respect to proxy voting on investment advisers and investment companies.

PROCEDURES:

I. ACCOUNT POLICIES

Except as otherwise directed by the client, CWAM or ISS, an independent third party delegated to vote in place of CWAM, shall vote as follows:

Separately Managed Accounts

CWAM or ISS shall vote proxies on securities held in its separately managed accounts where the client has given CWAM proxy voting authority. CWAM currently has authority to vote proxies for the Fairfax County Employees’ Retirement System but does not have authority to vote proxies for the State of Oregon or the 1199 SEIU Healthcare Employees Pension Fund.

Columbia Acorn Trust/Wanger Advisors Trust

CWAM or ISS shall vote proxies for portfolio securities held in the Acorn and WAT funds.

Columbia Thermostat Fund

To avoid any potential conflict of interest CWAM shall vote “echo vote” proxies for Columbia Thermostat Fund. Echo voting means that CWAM will vote the shares in the same proportion as the other shareholders of those funds.

CWAM Offshore Funds

CWAM or ISS shall vote proxies on securities held in the Montlake UCITS (Wanger US Smaller Companies and Wanger European Smaller Companies).

CWAM Subadvised Mutual Fund Accounts

The authority to vote proxies on securities held in the VP Wanger Funds are reserved to the client. CWAM or ISS has authority to vote proxies on securities held in the Optimum Small Cap Growth Fund.

II. PROXY COMMITTEE

CWAM has established a Proxy Committee, which consists of the Chief Compliance Officer, Domestic Chief Investment Officer, the Director of Accounting and Operations and a designated International Portfolio Manager. The Chief Compliance Officer of CWAM serves as a non-voting member. For proxy voting purposes only, the Proxy Committee will also include the analyst who follows the portfolio security on which to be voted. The International Chief Investment Officer may serve as alternate members for proxy voting purposes and to break a voting tie. Please see Appendix A of the Proxy Committee Charter for Proxy Committee membership and voting eligibility.

The functions of the Proxy Committee shall include, in part,

- (a) determine proxy votes as warranted under CWAM’s Proxy Voting Policy.
- (b) annual review of this *Policy and Procedures Manual* to ensure consistency with internal policies and legal and regulatory requirements,
- (c) annual review of existing Voting Guidelines and development of additional Voting Guidelines to assist in the review of proxy proposals, and
- (d) development and modification of Voting Procedures as it deems appropriate or necessary.

In determining the vote on any proposal for which it has responsibility, the Proxy Committee shall act in accordance with the policy stated above.

The Proxy Committee shall create a charter, which shall be consistent with this policy and procedure. The charter shall set forth the Committee’s purpose, membership and operation. The charter shall include procedures prohibiting a member from voting on a matter for which he or she has a conflict of interest by reason of a direct relationship with the issuer or other party affected by a given proposal, e.g., is a portfolio manager for an account of the issuer.

The Proxy Committee shall furnish to the trustees of Columbia Acorn Trust and of Wanger Advisors Trust copies of any modifications of this *Policy and Procedures Manual* (including any modification of the Voting Guidelines or Voting Procedures).

III. VOTING GUIDELINES

Except under limited circumstances (described in Section IV) where CWAM delegates voting power to ISS, the stock analyst who follows the stock reviews all proxies and ballot items for which CWAM has authority to vote. The analyst will consider the views of management on each proposal, and if these views are consistent with the CWAM Proxy Policy, will vote in favor of management. However, each analyst has the responsibility of independently analyzing each proposal and voting each proxy item on a case-by-case basis. CWAM votes, to the best of its ability, all proxies for which it receives ballots. However, CWAM will abstain from voting proxies when a ballot is received for a company CWAM no longer owns.

Following are some guidelines CWAM uses with respect to voting on specific matters:

Election of the Board of Directors

CWAM generally supports management's recommendation for proposals for the election of directors or for an increase or decrease in the number of directors provided a majority of directors would be independent. Should an analyst believe a director has or will be detrimental to shareholder interest, or when director elections are contested, the analyst's recommendation and vote should be forwarded to the Proxy Committee for a full vote.

Approval of Independent Auditors

CWAM will generally support management in its annual appointment or approval of independent corporate auditors. An auditor will usually be thought of as independent unless the auditor receives more than 50% of its revenues from non-audit, non-tax, activities from the company and its affiliates. In those cases, the vote should be forwarded to the Proxy Committee for a full vote.

Compensation and Equity-Based Compensation Plans

While CWAM recognizes companies need to compete for talent, CWAM is generally opposed to compensation plans that substantially dilute ownership interest in a company, provide participants with excessive awards, or have inherently objectionable structural features. Specifically, for equity-based plans, if the proposed number of shares authorized for stock incentive or option programs (excluding authorized shares of expired or exercised options) exceed 10% of the currently outstanding shares overall or 3% for directors only, the proposal should be referred to the Proxy Committee. The Committee will then consider the circumstances surrounding the issue and vote in the best interests of the client.

Stock Purchase Plans

CWAM is generally in favor of employee stock purchase plans where employees are able to purchase stock at or near the market price. Except when excessive dilution is proposed analysts should vote in favor of these proposals without consulting the Proxy Committee.

Advisory Votes on Executive Compensation

CWAM is generally in favor of proposals to ratify executive compensation unless total compensation obviously appears excessive. In such instances analyst should vote against such proposals without referring them to the Proxy Committee.

CWAM will generally vote against proposals to ratify Golden Parachutes without referring them to the Proxy Committee.

CWAM analyst will vote on the frequency of advisory votes on executive compensation on a case-by-case basis without referring them to the Proxy Committee. However, when CWAM votes against executive compensation analyst should vote for annual advisory votes.

Corporate Governance Issues

CWAM will generally support resolutions to improve shareholder democracy and reduce the likelihood of management entrenchment or conflict-of-interest. All matters relating to corporate governance will be voted by CWAM on a case-by-case basis using this basic premise. Analyst should vote in favor of proxy items under this premise without consulting the Proxy Committee. If an Analyst is uncertain or believes that a vote should be made contrary to this premise, then the recommendation should be brought to the Proxy Committee for a full vote.

Social and Corporate Responsibility Issues

CWAM believes that “ordinary business matters” are primarily the responsibility of management and should be approved solely by the corporation’s board of directors. However, proposals regarding social issues initiated by shareholders asking the company to disclose or amend certain business practices will be analyzed by the appropriate CWAM stock analyst and evaluated on a case-by-case basis. If an analyst believes that a vote against management is appropriate, he/she should refer the proposal to the full vote by the Proxy Committee.

“Blank Check” Proposals

Occasionally proxy statements ask that shareholders allow proxies to approve any other items in a “blank check” manner. Analysts should vote against such proposals without referring those to the Proxy Committee.

Majority Election or Annual Election Requirement for Directors

Occasionally proxy statements ask the shareholders to vote on whether to require a majority vote in the case of election of directors, or whether all directors should be elected annually (eliminating staggered boards). Analysts should vote in favor of these proposals without consulting the Proxy Committee.

Abstention Votes

Voting proxies with respect to shares of foreign stocks may involve significantly greater effort and corresponding cost due to the variety of regulatory schemes and corporate practices in foreign countries. Oftentimes, there may be language barriers, which will mean that an English translation of proxy information may not be available. Or, a translation must be obtained or commissioned before the relevant shareholder meeting. Time frames between shareholder notification, distribution of proxy materials, book-closure and the actual meeting date may be too short to allow timely action. In situations like these and in others where CWAM believes that it is uncertain with regards to the information received or because the cost of voting a proxy could exceed the expected benefit, the CWAM analyst may elect to abstain from voting. If an analyst believes that an abstention vote is appropriate, he/she should refer the proposal to the full vote by the Proxy Committee.

Special Issues Voting Foreign Proxies

To vote shares in some countries, shares must be “blocked” by the custodian or depository for a specified number of days before the shareholder meeting. Blocked shares typically may not be traded until the day after the shareholder meeting. CWAM may refrain from voting a portion or all shares of foreign stocks subject to blocking restrictions where, in the judgment of the CWAM analyst, the benefit from voting the shares is outweighed by the interest of maintaining client liquidity in the shares. The decision to vote/not vote is made by the CWAM analyst and is generally made on a case-by-case basis based on relevant factors, including the length of the blocking period, the significance of the holding, and whether the stock is considered a long-term holding.

In cases where the CWAM analyst determines that CWAM should not vote a portion or all foreign proxy shares due to blocking markets, the CWAM librarian (or a substitute) should document the reasons for not voting the proxy.

Mutual Funds, ETF's and Money Market Funds

From time to time, the Funds may be invested in other Mutual Funds, ETF's or Money Market Funds. Those Funds may also have proxy votes for CWAM to vote. CWAM's Director of Accounting and Operations may vote these proxies, according to this policy, if the vote is routine. If such proxies are not routine, then those would be voted either by CWAM's Domestic CIO (for Money Market Funds) or the relevant Portfolio Manager (for non-Money Market Mutual Funds or ETF's held in their Funds). As previously stated, Thermostat "echo votes" and is an exception from this policy.

IV. VOTING PROCEDURES

The Proxy Committee has developed the following procedures to assist in the voting of proxies according to the Voting Guidelines set forth in Section III above. The Proxy Committee may revise these procedures from time to time, as it deems appropriate or necessary to effect the purposes of this Policy and Procedures.

For Columbia Acorn Trust and Wanger Advisors Trust

- CWAM shall use Institutional Shareholder Services ("ISS"), a third party vendor, to implement its proxy voting process. ISS shall provide record keeping services. ISS also will provide its internally generated proxy analysis, which can be used to help supplement the CWAM analyst's research in the proxy voting process. In limited instances as described later in this section, CWAM may delegate voting power to ISS.
- On a daily basis, the funds' custodian shall send ISS a holding file detailing each domestic equity holding held in the funds. Information on equity holdings for the international portfolio shall be sent weekly.
- ISS shall receive proxy material information from Proxy Edge or J.P. Morgan Chase Bank, N.A. for the funds. This shall include issues to be voted upon, together with a breakdown of holdings for the funds.
- Whenever a vote is solicited, ISS shall send CWAM a request to vote over a secure website. The CWAM librarian (or a substitute) will be responsible to check this website daily. The librarian will forward all materials to the appropriate CWAM analyst, who will review and complete the proxy ballot and return to the CWAM librarian or will refer one or more proposals to the Proxy Committee. The analyst will keep documentation (usually copies of email correspondence) of any proposals brought before the Proxy Committee and will instruct the CWAM librarian to vote the proposal in accordance with the Proxy Committee decision. The analyst will file Proxy Committee documentation under G:\Shared\ProxyComm. The CWAM librarian will promptly provide ISS the final instructions as how to vote the proxy. The Librarian will also periodically check to make sure analysts have filed the relevant documentation.
- ISS shall have procedures in place to ensure that a vote is cast on every security holding maintained by the funds on which a vote is solicited unless otherwise directed by the analyst. On a yearly basis (or when requested), CWAM shall receive a report from ISS detailing CWAM's voting for the previous period on behalf of the funds.

For All Other Accounts For Which CWAM Has Voting Authority

- CWAM shall use the respective custodian for the account it advises to vote proxies. CWAM shall separately maintain voting records for these accounts.
- The CWAM librarian will be responsible for obtaining all proxy materials from the custodian, forward these to the appropriate CWAM analyst who will review and complete the proxy ballot and return to the librarian or will refer one or more proposals to the Proxy Committee. The analyst will keep documentation (usually copies of email correspondence) of any proposals brought before the Proxy Committee and will instruct the CWAM librarian to vote the proposal in accordance with the Proxy Committee decision. The analyst will file Proxy Committee documentation under G:\Shared\ProxyComm. The CWAM librarian will promptly provide ISS the final instructions as how to vote the proxy. The Librarian will also periodically check to make sure analysts have filed the relevant documentation.

- The CWAM librarian will be responsible for recording all voting records onto a spreadsheet, which will comprise the detail of how CWAM voted each proxy on behalf of the respective client. This spreadsheet shall comply with the appropriate record keeping requirements of the applicable rules and will be available to clients upon request.

Delegation of Proxy Voting to an Independent Third Party

From time to time, CWAM may face regulatory or compliance limits on the types or amounts of voting securities that it may purchase or hold for client accounts. Among other limits, federal, state, foreign regulatory restrictions, or company-specific ownership limits may restrict the total percentage of an issuer's voting securities that CWAM can hold for clients (collectively, "Ownership Limits").

The regulations or company-specific documents governing a number of these Ownership Limits Often focus upon holdings in voting securities. As a result, in limited circumstances in order to comply with such Ownership Limits and/or internal policies designed to comply with such limits, CWAM may delegate proxy voting in certain issuers to ISS, as a qualified, independent third party.

V. ANNUAL REPORT

CWAM shall submit an annual report to the Chief Compliance Officer of the Funds for his distribution to the Board of Directors of the Columbia Acorn Trust and Wanger Advisors Trust addressing the following:

1. A summary of the Funds' voting history for the period;
2. Votes cast contrary to the guidelines of this Policy;
3. Votes cast in opposition to management recommendations;
4. Votes cast in conformity with and in opposition to ISS recommendations;
5. Votes that involved potential conflict of interests;
6. The circumstances surrounding all voting abstentions, no votes and missed votes;
7. An assessment of the quality of service provided by ISS, as well as the reasonableness of its fees;
8. Significant matters considered by CWAM's Proxy Committee; and
9. Recommendations for changes to this Policy.

The annual report should be submitted as soon as practicable after the close of the proxy voting season which normally concludes in June.

APPENDIX C — INFORMATION REGARDING PENDING AND SETTLED LEGAL PROCEEDINGS

In December 2005, without admitting or denying the allegations, American Express Financial Corporation (AEFC, which is now known as Ameriprise Financial, Inc. (Ameriprise Financial)), entered into settlement agreements with the Securities and Exchange Commission (SEC) and Minnesota Department of Commerce (MDOC) related to market timing activities. As a result, AEFC was censured and ordered to cease and desist from committing or causing any violations of certain provisions of the Investment Advisers Act of 1940, the Investment Company Act of 1940, and various Minnesota laws. AEFC agreed to pay disgorgement of \$10 million and civil money penalties of \$7 million. AEFC also agreed to retain an independent distribution consultant to assist in developing a plan for distribution of all disgorgement and civil penalties ordered by the SEC in accordance with various undertakings detailed at <http://www.sec.gov/litigation/admin/ia-2451.pdf>. Ameriprise Financial and its affiliates have cooperated with the SEC and the MDOC in these legal proceedings, and have made regular reports to the funds' Board of Trustees.

Ameriprise Financial and certain of its affiliates have historically been involved in a number of legal, arbitration and regulatory proceedings, including routine litigation, class actions, and governmental actions, concerning matters arising in connection with the conduct of their business activities. Ameriprise Financial believes that the Funds are not currently the subject of, and that neither Ameriprise Financial nor any of its affiliates are the subject of, any pending legal, arbitration or regulatory proceedings that are likely to have a material adverse effect on the Funds or the ability of Ameriprise Financial or its affiliates to perform under their contracts with the Funds. Ameriprise Financial is required to make 10-Q, 10-K and, as necessary, 8-K filings with the Securities and Exchange Commission on legal and regulatory matters that relate to Ameriprise Financial and its affiliates. Copies of these filings may be obtained by accessing the SEC website at www.sec.gov.

There can be no assurance that these matters, or the adverse publicity associated with them, will not result in increased fund redemptions, reduced sale of fund shares or other adverse consequences to the Funds. Further, although we believe proceedings are not likely to have a material adverse effect on the Funds or the ability of Ameriprise Financial or its affiliates to perform under their contracts with the Funds, these proceedings are subject to uncertainties and, as such, we are unable to estimate the possible loss or range of loss that may result. An adverse outcome in one or more of these proceedings could result in adverse judgments, settlements, fines, penalties or other relief that could have a material adverse effect on the consolidated financial condition or results of operations of Ameriprise Financial.

HISTORICAL FUND INFORMATION

On March 25, 1999, the Board of Trustees of Norwest Select Funds ("Norwest"), the Board of Trustees of Life & Annuity Trust ("Annuity Trust") and the Board of Trustees of the Trust (the "Board") approved an Agreement and Plan of Reorganization providing for, among other things, the transfer of the assets and stated liabilities of various predecessor Norwest and Annuity Trust portfolios to certain Funds of the Trust (the "Reorganization"). Prior to September 17, 1999, the effective date of the Reorganization, the Funds had only nominal assets.

In August and September 2004, the Boards of Directors of the Strong family of funds ("Strong") and the Board approved an Agreement and Plan of Reorganization providing for, among other things, the transfer of the assets and stated liabilities of various predecessor Strong mutual funds into various Funds of the Trust. The effective date of the reorganization was April 8, 2005.

On March 1, 2010, the Board of Trustees of Evergreen Funds ("Evergreen") and the Board approved an Agreement and Plan of Reorganization providing for, among other things, the transfer of the assets and stated liabilities of various predecessor Evergreen portfolios and Wells Fargo Advantage Funds portfolios to certain Funds of the Trust.

The **VT Discovery Fund** commenced operations on April 11, 2005, as successor to the Strong Discovery Fund II. The predecessor Strong Discovery Fund II commenced operations on May 8, 1992.

The **VT Index Asset Allocation Fund** commenced operations on September 20, 1999, as successor to the Annuity Trust Asset Allocation Fund. The predecessor Annuity Trust Asset Allocation Fund commenced operations on April 15, 1994.

The **VT International Equity Fund** commenced operations on July 3, 2000. The VT International Core Fund changed its name from the VT International Equity Fund to the VT International Core Fund effective April 11, 2005, and changed its name back to the VT International Equity Fund on May 1, 2010. On July 19, 2010, the predecessor Evergreen VA International Equity Fund, which is considered the surviving entity for accounting purposes, and was a series of Evergreen Variable Annuity Trust ("EVAT"), merged with the VT International Equity Fund. The predecessor fund Evergreen VA International Equity Fund commenced operations on August 10, 1998.

The **VT Intrinsic Value Fund** commenced operations on July 19, 2010, as successor to Wells Fargo VT Equity Income Fund. The predecessor fund VT Equity Income Fund commenced operations on September 20, 1999, as successor to the Norwest Advantage Income Equity Fund. The predecessor Norwest Advantage Income Equity Fund commenced operations on May 6, 1996.

The **VT Omega Growth Fund** commenced operations on July 19, 2010, as successor to Evergreen VA Omega Fund. The predecessor fund Evergreen VA Omega Fund changed its name from Evergreen VA Aggressive Growth Fund on 10/1/99. Evergreen VA Aggressive Growth Fund commenced operations on March 6, 1997. The predecessor fund Evergreen VA Aggressive Growth Fund had been reorganized as a series under EVAT on or about 5/1/98. Prior to reorganization the predecessor fund Evergreen VA Omega Growth Fund was a series under Evergreen Variable Trust, a Massachusetts business trust.

The **VT Opportunity Fund** commenced operations on April 11, 2005, as the successor to the Strong Opportunity Fund II. The predecessor Strong Opportunity Fund II commenced operations on May 8, 1992.

The **VT Small Cap Growth Fund** commenced operations on September 20, 1999, as successor to the Annuity Trust Strategic Growth Fund and the Norwest Advantage Small Company Stock Fund. For accounting purposes, the Norwest Small Company Stock predecessor portfolio is considered the surviving entity. The predecessor Norwest Small Company Stock Fund commenced operations on May 1, 1995.

The **VT Small Cap Value Fund** commenced operations on April 11, 2005, as the successor to the Strong Multi Cap Value Fund II. The predecessor Strong Multi Cap Value Fund II commenced operations on December 10, 1997. The VT Small/Mid Cap Value Fund changed its name from the Multi Cap Value Fund to the VT Small/Mid Cap Value Fund effective May 1, 2006. The VT Small Cap Value Fund changed its name from the VT Small/Mid Cap Value Fund to the VT Small Cap Value Fund effective May 1, 2010.

The **VT Total Return Bond Fund** commenced operations on September 20, 1999. The Fund changed its name from the Corporate Bond Fund to the VT Total Return Bond Fund effective May 1, 2003.

Fundamental Investment Policies

Each Fund has adopted the following fundamental investment policies; that is, they may not be changed without approval by the holders of a majority (as defined under the 1940 Act) of the outstanding voting securities of such Fund.

The Funds may not:

- (1) purchase the securities of issuers conducting their principal business activity in the same industry if, immediately after the purchase and as a result thereof, the value of a Fund's investments in that industry would equal 25% of the current value of the Fund's total assets, provided that there is no limitation with respect to investment in (i) securities issued or guaranteed by the United States Government, its agencies or instrumentalities, and (ii) in municipal securities;
- (2) purchase securities of any issuer if, as a result, with respect to 75% of a Fund's total assets, more than 5% of the value of its total assets would be invested in the securities of any one issuer or, with respect to 100% of its assets, the Fund's ownership would be more than 10% of the outstanding voting securities of such issuer. This policy does not restrict a Fund's ability to invest in securities issued or guaranteed by the U.S. Government, its agencies and instrumentalities;
- (3) borrow money, except to the extent permitted under the 1940 Act, including the rules, regulations and any orders obtained thereunder;
- (4) issue senior securities, except to the extent permitted under the 1940 Act, including the rules, regulations and any orders obtained thereunder;
- (5) make loans to other parties if, as a result, the aggregate value of such loans would exceed one-third of a Fund's total assets. For the purposes of this limitation, entering into repurchase agreements, lending securities and acquiring any debt securities are not deemed to be the making of loans;
- (6) underwrite securities of other issuers, except to the extent that the purchase of permitted investments directly from the issuer thereof or from an underwriter for an issuer and the later disposition of such securities in accordance with a Fund's investment program may be deemed to be an underwriting;
- (7) purchase or sell real estate unless acquired as a result of ownership of securities or other instruments (but this shall not prevent the Funds from investing in securities or other instruments backed by real estate or securities of companies engaged in the real estate business); or
- (8) purchase or sell physical commodities unless acquired as a result of ownership of securities or other instruments (but this shall not prevent the Funds from purchasing or selling options and futures contracts, or from investing in securities or other instruments backed by physical commodities).

Non-Fundamental Investment Policies

Each Fund has adopted the following non-fundamental policies; that is, they may be changed by the Trustees at any time without approval of such Fund's shareholders.

- (1) Each Fund may invest in shares of other investment companies to the extent permitted under the 1940 Act, including the rules, regulations and any exemptive orders obtained thereunder, provided however, that no Fund that has knowledge that its shares are purchased by another investment company investor pursuant to Section 12(d)(1)(G) of the 1940 Act will acquire any securities of registered open-end management investment companies or registered unit investment trusts in reliance on Section 12(d)(1)(F) or 12(d)(1)(G) of the 1940 Act.
- (2) Each Fund may not invest or hold more than 15% of the Fund's net assets in illiquid securities. For this purpose, illiquid securities include, among others, (a) securities that are illiquid by virtue of the absence of a readily available market or legal or contractual restrictions on resale, (b) fixed time deposits that are subject to withdrawal penalties and that have maturities of more than seven days, and (c) repurchase agreements not terminable within seven days.
- (3) Each Fund may invest in financial instruments subject to the Commodity Exchange Act of 1936, as amended ("CEA"), including futures, options on futures, and swaps ("commodity interests"), consistent with its investment policies and the 1940 Act, including the rules, regulations and interpretations of the Securities and Exchange Commission ("SEC") thereunder or any exemptive orders obtained thereunder, and consistent with investment in commodity interests that would allow the Fund's investment adviser to claim an exclusion from being a "commodity pool operator" as defined by the CEA.
- (4) Each Fund (i) will not hedge more than 50% of its total assets by selling futures contracts, buying put options, and writing call options (so-called "short positions"), (ii) will not buy futures contracts or write put options whose underlying value exceeds 25% of the Fund's total assets, except for VT Index Asset Allocation Fund which will not buy futures contracts or write put options

whose underlying value exceeds 50% of the Fund's total assets, and (iii) will not buy call options with a value exceeding 5% of the Fund's total assets.

(5) Each Fund may lend securities from its portfolio to approved brokers, dealers and financial institutions, to the extent permitted under the 1940 Act, including the rules, regulations and exemptions thereunder, which currently limit such activities to one-third of the value of a Fund's total assets (including the value of the collateral received). Any such loans of portfolio securities will be fully collateralized based on values that are marked-to-market daily.

(6) Each Fund may not make investments for the purpose of exercising control or management, provided that this restriction does not limit a Fund's investments in securities of other investment companies or investments in entities created under the laws of foreign countries to facilitate investment in securities of that country.

(7) Each Fund may not purchase securities on margin (except for short-term credits necessary for the clearance of transactions).

(8) Each Fund may not sell securities short, unless it owns or has the right to obtain securities equivalent in kind and amount to the securities sold short (short sales "against the box"), and provided that transactions in futures contracts and options are not deemed to constitute selling securities short.

(9) Each Fund may not purchase interests, leases, or limited partnership interests in oil, gas, or other mineral exploration or development programs.

(10) Each Fund that is subject to Rule 35d-1 (the "Names Rule") under the 1940 Act, and that has a non-fundamental policy or policies in place to comply with the Names Rule, has adopted the following policy:

Shareholders will receive at least 60 days notice of any change to a Fund's non-fundamental policy complying with the Names Rule. The notice will be provided in Plain English in a separate written document, and will contain the following prominent statement or similar statement in bold-face type: "Important Notice Regarding Change in Investment Policy." This statement will appear on both the notice and the envelope in which it is delivered, unless it is delivered separately from other communications to investors, in which case the statement will appear either on the notice or the envelope in which the notice is delivered.

Further Explanation Of Investment Policies

Notwithstanding the foregoing policies, any other investment companies in which the Funds may invest have adopted their own investment policies, which may be more or less restrictive than those listed above, thereby allowing a Fund to participate in certain investment strategies indirectly that are prohibited under the fundamental and non-fundamental investment policies listed above.

ADDITIONAL APPROVED INVESTMENT STRATEGIES

In addition to the principal investment strategies set forth in the Prospectuses, the Funds may also use futures, options or swap agreements, as well as other derivatives, to manage risk or to enhance return. Please refer to a Fund's Prospectuses for information regarding the Fund's anticipated use of derivatives, if any, as a principal investment strategy. Please note that even if a Fund's Prospectuses do not currently include information regarding derivatives, or only includes information regarding certain derivative instruments, the Fund may use any of the derivative securities described below, at any time, and to any extent consistent with the Fund's other principal investment strategies.

DERIVATIVES

Derivative Securities

Derivative securities are securities that derive their value, at least in part, from the price of another security or asset, or the level of an index, such as the S&P 500 Index, or a rate, such as the London Interbank Offered Rate ("LIBOR"), including structured notes, bonds or other instruments with interest rates that are determined by reference to changes in the value of other interest rates, indices or financial indicators ("References") or the relative change in two or more References. Some forms of derivatives, such as exchange-traded futures and options on securities, commodities, or indices, are traded on regulated exchanges. These types of derivatives are standardized contracts that can easily be bought and sold, and whose market values are determined and published daily. Non-standardized derivatives, on the other hand, tend to be more specialized or complex, and may be harder to value. Futures contracts and options are also considered types of derivative securities, and are described more fully under the heading "Futures and Options Contracts" below. Other common types of derivatives include forward foreign currency exchange contracts,

forward contracts on securities and securities indices, linked securities and structured products, collateralized mortgage obligations, stripped securities, warrants, swap agreements, and swaptions.

An investment is often made in derivative securities as a "hedge" against fluctuations in the market value of the other securities in a Fund's portfolio due to currency exchange rate fluctuations or other factors in the securities markets, although a Fund may also invest in certain derivative securities for investment purposes only. Other reasons why a Fund may use derivative securities include protecting its unrealized gains reflected in the value of its portfolio of securities, facilitating the sale of such securities for investment purposes, reducing transaction costs, and/or managing the effective maturity or duration of its portfolio.

While derivative securities are useful for hedging and investment, they also carry additional risks. A hedging policy may fail if the correlation between the value of the derivative securities and the other investments in a Fund's portfolio does not follow the adviser's expectations. If the adviser's expectations are not met, it is possible that the hedging strategy will not only fail to protect the value of a Fund's investments, but the Fund may also lose money on the derivative security itself. In addition, some derivative securities represent relatively recent innovations in the bond markets. The trading market for these instruments is less developed than the markets for traditional types of debt instruments. It is uncertain how these derivative securities will perform under different economic interest-rate scenarios. Because certain of these instruments are leveraged, their market values may be more volatile than other types of securities and may present greater potential for capital gain or loss. Derivative securities and their underlying instruments may experience periods of illiquidity, which could cause a Fund to hold a security it might otherwise sell or a Fund could be forced to sell a security at inopportune times or for prices that do not reflect current market value. The possibility of default by the issuer or the issuer's credit provider may be greater for structured and derivative instruments than for other types of instruments. As new types of derivative securities are developed and offered to investors, the adviser will, consistent with a Fund's investment objective, policies, restrictions and quality standards, consider making investments in such new types of derivative securities.

Additional risks of derivative securities include, but are not limited to: the risk of disruption of a Fund's ability to trade in derivative securities because of regulatory compliance problems or regulatory changes; credit risk of counterparties to derivative contracts, and market risk (i.e., exposure to adverse price changes).

The adviser uses a variety of internal risk management procedures to ensure that derivatives are closely monitored and that their use is consistent with a particular Fund's investment objective, policies, restrictions and quality standards, and does not expose such Fund to undue risk.

A Fund's use of derivatives also is subject to broadly applicable investment policies. For example, a Fund may not invest more than a specified percentage of its assets in "illiquid securities," including those derivatives that do not have active secondary markets. A Fund also may not use certain derivatives without establishing adequate "cover" in compliance with the Securities and Exchange Commission (the "SEC") rules limiting the use of leverage. Consistent with SEC staff guidance, a Fund will consider its obligations involving such derivatives as "covered" when a Fund (i) maintains an offsetting financial position, or (ii) segregates liquid assets (which may include, but are not limited to, cash, cash equivalents, equities and debt securities) equal to a Fund's exposures relating to the derivative, as determined on a daily basis. If a Fund chooses to establish a "covered" position by segregating liquid assets, the amount that must be segregated will be determined in accordance with current SEC staff guidance, and will thus vary based on the specific derivative instrument being used. For example, for futures and forward contracts that require only cash settlement, and swap agreements that call for periodic netting between a Fund and its counterparty, the segregated amount will be the net amount due under the contract, as determined daily on a mark-to-market basis. For other kinds of futures, forwards and swaps, a Fund must segregate a larger amount of assets to cover its obligations, which essentially limits a Fund's ability to use these instruments.

Both equity and credit derivatives include options, futures and options on futures, which may be used to hedge a Fund's portfolio, increase returns or maintain exposure to a market without buying individual securities. These investments may pose risks in addition to those associated with investing directly in securities or other investments. Such risks may include illiquidity of the derivative and imperfect correlation of the derivative with underlying investments for which it is being substituted or the Fund's other portfolio holdings. Accordingly, there is the risk that such practices may fail to serve their intended purposes, and may reduce returns or increase volatility. These practices also entail transactional expenses.

Additionally, the use of derivatives can lead to losses because of adverse movements in the price or value of the underlying security, asset, index or reference rate, which may be magnified by certain features of the derivatives. These risks are heightened when a Fund uses derivatives to enhance its return or as a substitute for a position or security, rather than solely to hedge or offset the risk of a position or security held by a Fund. A Fund's use of derivatives to leverage risk also may exaggerate a loss, potentially causing a Fund to lose more money than if it had invested in the underlying security, or limit a potential gain.

The success of management's derivative strategies will depend on its ability to assess and predict the impact of market or economic developments on the underlying security, asset, index or reference rate and the derivative itself, without necessarily the benefit of observing the performance of the derivative under all possible market conditions. Other risks arise from a Fund's potential inability to terminate or sell its derivative positions as a liquid secondary market for such positions may not exist at times when a Fund may wish to terminate or sell them. Over-the-counter instruments (investments not traded on an exchange) may be illiquid. Derivatives traded in the over-the-counter market are subject to the risk that the other party will not meet its obligations. Also, with some derivative strategies, there is the risk that a Fund may not be able to find a suitable counterparty for the derivative transaction, and therefore may be unable to invest in derivatives altogether. The use of derivatives may also increase the amount and accelerate the timing of taxes payable by shareholders.

A Fund that is authorized to invest in derivatives may use any or all of the above investment techniques and may purchase different types of derivative instruments at any time and in any combination. There is no particular strategy that dictates the use of one technique over another, as the use of derivatives is a function of numerous variables, including market conditions.

Credit Derivatives. A credit derivative is a form of derivative that is divided into two categories: credit default swaps and total return swaps. Both such categories of credit derivatives are usually governed by the standard terms and conditions of an ISDA Master Agreement.

A credit default swap involves a protection buyer and a protection seller. A Fund may be either a protection buyer or seller. The protection buyer makes periodic premium payments to the protection seller during the swap term in exchange for the protection seller agreeing to make certain defined payments to the protection buyer in the event certain defined credit events occur with respect to a particular security, issuer or basket of securities. A total return swap involves a total return receiver and a total return payor. A Fund may either be a total return receiver or payor. Generally, the total return payor sells to the total return receiver an amount equal to all cash flows and price appreciation on a defined security or asset payable at periodic times during the swap term (i.e., credit risk) in return for a periodic payment from the total return receiver based on designated index (e.g., LIBOR) and spread plus the amount of any price depreciation on the reference security or asset. The total return payor does not need to own the underlying security or asset to enter into a total return swap. The final payment at the end of the swap term includes final settlement of the current market price of the underlying reference security or asset, and payment by the applicable party for any appreciation or depreciation in value. Usually, collateral must be posted by the total return receiver to secure the periodic interest-based and market price depreciation payments depending on the credit quality of the underlying reference security and creditworthiness of the total return receiver, and the collateral amount is marked-to-market daily equal to the market price of the underlying reference security or asset between periodic payment dates.

Other types of credit derivatives include credit-linked notes and other forms of debt obligations having an embedded credit default swap component. In such type of credit derivative, payments of principal and interest are tied to the performance of one or more reference obligations or assets.

In all of the above-referenced credit derivative transactions, the same general risks inherent to derivative transactions are present. However, credit derivative transactions also carry with them greater risks of imperfect correlation between the performance and price of the underlying reference security or asset, and the general performance of the designated interest rate or index which is the basis for the periodic payment. If a Fund writes a credit default swap, it receives an up-front premium. A Fund's exposure under a credit default swap, though, is a form of leverage and will be subject to the restrictions on leveraged derivatives.

Inverse Floaters. A Fund may invest in inverse floating rate municipal securities or "inverse floaters," sometimes also referred to as a "residual interest certificates." Inverse floaters are issued by tender option bond trusts ("trusts") that are established by a third party sponsor in connection with the transfer of municipal bonds to the trusts. In addition to inverse floaters, these trusts typically issue short-term floating rate notes which are usually sold to money market funds ("floating rate notes"). An inverse floater is a type of "derivative" debt instrument with a floating or variable interest rate that moves in the opposite direction of the interest rate on another security, normally the floating rate note. Because changes in the interest rate on the note inversely affect the rate of interest received on an inverse floater, and because inverse floaters essentially represent a leveraged investment in a long-term bond, the value of an inverse floater is generally more volatile than that of a conventional fixed-rate municipal bond having similar credit quality, redemption provisions and maturity. Inverse floaters may have interest rate adjustment formulas which generally reduce or eliminate the interest paid to a Fund when short-term interest rates rise, and increase the interest paid to a Fund when short-term interest rates fall. The value of inverse floaters also tends to fall faster than the value of fixed rate municipal bonds when interest rates rise, and conversely, their value tends to rise more rapidly when interest rates fall. Inverse floaters have varying degrees of liquidity, and the market for these securities is relatively volatile. Inverse floaters tend to underperform the market for fixed rate municipal bonds in a rising long-term interest rate environment, but tend to outperform that market when long-term interest rates decline.

An investment in inverse floaters may involve greater risk than an investment in a fixed-rate municipal security. All inverse floaters entail some degree of leverage. The interest rate on inverse floaters varies inversely at a pre-set multiple of the change in short-term rates. An inverse floater that has a higher multiple, and therefore more leverage, will be more volatile with respect to both price and income than an inverse floater with a lower degree of leverage or than the underlying security. The markets for inverse floating rate securities may be less developed and have less liquidity than the markets for conventional securities.

Under applicable financial accounting standards, inverse floater transactions in which the Fund has transferred a municipal security it owned to a trust are considered a form of secured borrowing for financial reporting purposes, requiring expenses and income to be shown in gross amount on the statement of operations. This increases a fund's overall expense ratio. This accounting treatment does not apply to any inverse floaters acquired by the Fund that were created by a third-party's transfer of a municipal security to the issuing trust.

Futures and Options Contracts

In General. A futures transaction involves a firm agreement to buy or sell a commodity or financial instrument at a particular price on a specified future date, while an option transaction generally involves a right, which may or may not be exercised, to buy or sell a commodity or financial instrument at a particular price on a specified future date. Futures contracts and options are standardized and exchange-traded, where the exchange serves as the ultimate counterparty for all contracts. Consequently, the primary credit risk on futures contracts is the creditworthiness of the exchange. Futures contracts, however, are subject to market risk (i.e., exposure to adverse price changes).

Initially, when purchasing or selling futures contracts, the Fund will be required to deposit with the Fund's custodian in the broker's name or with the broker as required an amount of cash or cash equivalents. This amount is subject to change by the exchange or board of trade on which the contract is traded, and members of such exchange or board of trade may impose their own higher requirements. This amount is known as "initial margin" and is in the nature of a performance bond or good faith deposit on the contract that is returned to the Fund upon termination of the futures position, assuming all contractual obligations have been satisfied. Subsequent payments, known as "variation margin," to and from the broker will be made daily as the price of the index or securities underlying the futures contract fluctuates, making the long and short positions in the futures contract more or less valuable. At any time prior to the expiration of a futures contract, a Fund may elect to close the position by taking an opposite position, at the then prevailing price, thereby terminating its existing position in the contract.

Although a Fund intends to purchase or sell futures contracts only if there is an active market for such contracts, no assurance can be given that a liquid market will exist for any particular contract at any particular time. Many futures exchanges and boards of trade limit the amount of fluctuation permitted in futures contract prices during a single trading day. Once the daily limit has been reached in a particular contract, no trades may be made that day at a price beyond that limit or trading may be suspended for specified periods during the trading day. Futures contract prices could move to the limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of futures positions and potentially subjecting a Fund to substantial losses. If it is not possible, or a Fund determines not to close a futures position in anticipation of adverse price movements, the Fund will be required to make daily cash payments of variation margin.

An option on a futures contract gives the purchaser the right, in return for the premium paid, to assume a position in a futures contract (a long position if the option is a call and a short position if the option is a put) at a specified exercise price at any time during the option exercise period. The writer (i.e., seller) of the option is required upon exercise to assume an offsetting futures position (a short position if the option is a call and a long position if the option is a put). Upon exercise of the option, the assumption of offsetting futures positions by both the writer and the holder of the option will be accompanied by delivery of the accumulated cash balance in the writer's futures margin account in the amount by which the market price of the futures contract, at exercise, exceeds (in the case of a call) or is less than (in the case of a put) the exercise price of the option on the futures contract. The potential loss related to the purchase of options on futures contracts is limited to the premium paid for the option (plus transaction costs). Because the value of the option is fixed at the time of sale, there are no daily cash payments to reflect changes in the value of the underlying contract; however, the value of the option may change daily, and that change would be reflected in the net asset value ("NAV") of the Fund.

A Fund may trade futures contracts and options on futures contracts in U.S. domestic markets, such as the Chicago Board of Trade and the International Monetary Market of the Chicago Mercantile Exchange. Pursuant to regulations and/or published positions of the SEC, a Fund may be required to segregate cash or high-quality money-market instruments in connection with its futures transactions in an amount generally equal to the entire value of the underlying security.

Each Fund has claimed an exclusion from the definition of "commodity pool operator" ("CPO") under the Commodity Exchange Act of 1936, as amended ("CEA") pursuant to Rule 4.5. The Adviser is currently not subject to registration as a CPO with respect

to the Fund. If the Fund is no longer able to rely on the exclusion, the Adviser would be required to register as a CPO with respect to the Fund with the Commodity Futures Trading Commission ("CFTC"), and therefore, be subject to regulation as a CPO under the CEA.

A Fund may engage in futures contracts sales to maintain the income advantage from continued holding of a long-term security while endeavoring to avoid part or all of the loss in market value that would otherwise accompany a decline in long-term security prices. If, however, securities prices rise, a Fund would realize a loss in closing out its futures contract sales that would offset any increases in prices of the long-term securities they hold.

Another risk in employing futures contracts and options thereon to protect against cash market price volatility is the possibility that futures prices will correlate imperfectly with the behavior of the prices of the securities in such portfolio (the portfolio securities will not be identical to the debt instruments underlying the futures contracts).

Options Trading. Options on individual securities or options on indices of securities may be purchased or sold. The purchaser of an option risks a total loss of the premium paid for the option if the price of the underlying security does not increase or decrease sufficiently to justify the exercise of such option. The seller of an option, on the other hand, will recognize the premium as income if the option expires unrecognized but foregoes any capital appreciation in excess of the exercise price in the case of a call option and may be required to pay a price in excess of current market value in the case of a put option.

A call option for a particular security gives the purchaser of the option the right to buy, and a writer the obligation to sell, the underlying security at the stated exercise price at any time prior to the expiration of the option, regardless of the market price of the security. The premium paid to the writer is in consideration for undertaking the obligation under the option contract. A put option for a particular security gives the purchaser the right to sell, and the writer the option to buy, the security at the stated exercise price at any time prior to the expiration date of the option, regardless of the market price of the security.

A Fund will write call options only if they are "covered." In the case of a call option on a security or currency, the option is "covered" if a Fund owns the instrument underlying the call or has an absolute and immediate right to acquire that instrument without additional cash consideration (or, if additional cash consideration is required, cash, U.S. Government securities or other liquid high-grade debt obligations, in such amount are held in a segregated account by such Fund's custodian) upon conversion or exchange of other securities held by it. For a call option on an index, the option is covered if a Fund maintains with its custodian a diversified portfolio of securities comprising the index or liquid assets equal to the contract value. A call option is also covered if a Fund holds an offsetting call on the same instrument or index as the call written. A Fund may buy put and call options and write covered call and secured put options. Options trading is a highly specialized activity which entails greater than ordinary investment risk. Options may be more volatile than the underlying instruments, and therefore, on a percentage basis, an investment in options may be subject to greater fluctuation than an investment in the underlying instruments themselves. Purchasing options is a specialized investment technique that entails a substantial risk of a complete loss of the amounts paid as premiums to the writer of the option. If the adviser is incorrect in its forecast of market value or other factors when writing options, the Fund would be in a worse position than it would have been had if it had not written the option. If a Fund wishes to sell an underlying instrument (in the case of a covered call option) or liquidate assets in a segregated account (in the case of a secured put option), the Fund must purchase an offsetting option if available, thereby incurring additional transactions costs.

Below is a description of some of the types of futures and options in which the Funds may invest.

Stock Index Options. A Fund may purchase and write (i.e., sell) put and call options on stock indices only as a substitute for comparable market positions in the underlying securities. A stock index fluctuates with changes of the market values of the stocks included in the index. The effectiveness of purchasing or writing stock index options will depend upon the extent to which price movements of the securities in a Fund's portfolio correlate with price movements of the stock index selected. Because the value of an index option depends upon movements in the level of the index rather than the price of a particular stock, whether a Fund will realize a gain or loss from purchasing or writing stock index options depends upon movements in the level of stock prices in the stock market generally or, in the case of certain indices, in an industry or market segment, rather than movements in the price of particular stock. When a Fund writes an option on a stock index, such Funds will place in a segregated account with the Fund's custodian cash or liquid securities in an amount at least equal to the market value of the underlying stock index and will maintain the account while the option is open or otherwise will cover the transaction.

Stock Index Futures and Options on Stock Index Futures. A Fund may invest in stock index futures and options on stock index futures only as a substitute for a comparable market position in the underlying securities. A stock index future obligates the seller to deliver (and the purchaser to take), effectively, an amount of cash equal to a specific dollar amount times the difference between the value of a specific stock index at the close of the last trading day of the contract and the price at which the agreement is made. No physical delivery of the underlying stocks in the index is made. With respect to stock indices that are permitted investments,

each Fund intends to purchase and sell futures contracts on the stock index for which it can obtain the best price with consideration also given to liquidity.

Foreign Currency Futures Contracts. A Fund may invest in foreign currency futures contracts which entail the same risks as other futures contracts as described above, but have the additional risks associated with international investing (see "Foreign Obligations and Securities" below). Similar to other futures contracts, a foreign currency futures contract is an agreement for the future delivery of a specified currency at a specified time and at a specified price that will be secured by margin deposits, is regulated by the Commodity Futures Trading Commission ("CFTC") and is traded on designated exchanges. A Fund will incur brokerage fees when it purchases and sells futures contracts.

To the extent that a Fund may invest in securities denominated in currencies other than the U.S. dollar and may temporarily hold funds in bank deposits or other money market investments denominated in foreign currencies, it may be affected favorably or unfavorably by exchange control regulations or changes in the exchange rate between such currencies and the dollar. The rate of exchange between the U.S. dollar and other currencies is determined by the forces of supply and demand in the foreign exchange markets. The international balance of payments and other economic and financial conditions, government intervention, speculation and other factors affect these forces.

If a fall in exchange rates for a particular currency is anticipated, a Fund may sell a foreign currency futures contract as a hedge. If it is anticipated that exchange rates will rise, a Fund may purchase a foreign currency futures contract to protect against an increase in the price of securities denominated in a particular currency the Fund intends to purchase. These foreign currency futures contracts will be used only as a hedge against anticipated currency rate changes. Although such contracts are intended to minimize the risk of loss due to a decline in the value of the hedged currency, at the same time, they tend to limit any potential gain which might result should the value of such currency increase.

The use of foreign currency futures contracts involves the risk of imperfect correlation between movements in futures prices and movements in the price of currencies which are the subject of the hedge. The successful use of foreign currency futures contracts also depends on the ability of the adviser to correctly forecast interest rate movements, currency rate movements and general stock market price movements. There can be no assurance that the adviser's judgment will be accurate. The use of foreign currency futures contracts also exposes a Fund to the general risks of investing in futures contracts, including: the risk of an illiquid market for the foreign currency futures contracts and the risk of adverse regulatory actions. Any of these events may cause a Fund to be unable to hedge its currency risks, and may cause a Fund to lose money on its investments in foreign currency futures contracts.

Interest Rate Futures Contracts and Options on Interest Rate Futures Contracts. A Fund may invest in interest rate futures contracts and options on interest rate futures contracts as a substitute for a comparable market position in the underlying securities. The Fund may also sell options on interest rate futures contracts as part of closing purchase transactions to terminate its options positions. No assurance can be given that such closing transactions can be effected or as to the degree of correlation between price movements in the options on interest rate futures and price movements in the Fund's portfolio securities which are the subject of the transaction.

Future Developments. A Fund may take advantage of opportunities in the areas of options and futures contracts and options on futures contracts and any other derivative investments which are not presently contemplated for use by the Fund or which are not currently available but which may be developed, to the extent such opportunities are both consistent with a Fund's investment objective and legally permissible for the Fund.

Swap Agreements and Swaptions

Swap agreements are derivative instruments that can be individually negotiated and structured to address exposure to a variety of different types of investments or market factors. Depending on their structure, swap agreements may increase or decrease a Fund's exposure to long- or short-term interest rates, foreign currency values, mortgage securities, corporate borrowing rates, or other factors such as security prices or inflation rates. A Fund may enter into a variety of swap agreements, including interest rate, index, commodity, equity, credit default and currency exchange rate swap agreements, and other types of swap agreements such as caps, collars and floors. A Fund also may enter into swaptions, which are options to enter into a swap agreement. In a swaption, in exchange for an option premium, the purchaser of the swaption acquires the right, but not the obligation, to enter into a specified swap agreement with a counterparty on a specified future date. If there is a default by the other party to a swap agreement or swaption, the Fund will have contractual remedies pursuant to the agreements related to the transaction.

The use of swaps and swaptions is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio security transactions. These transactions generally do not involve the delivery of securities or other underlying assets or principal. Accordingly, the risk of loss with respect to swap agreements and swaptions generally is limited

to the net amount of payments that the Fund is contractually obligated to make. There is also a risk of a default by the other party to a swap agreement or swaption, in which case a Fund may not receive the net amount of payments that such Fund contractually is entitled to receive.

Interest Rate Swap Agreements. In a typical interest rate swap, one party agrees to make regular payments equal to a floating interest rate times a "notional principal amount," in return for payments equal to a fixed rate times the same amount, for a specified period of time. The exchange commitment can involve payments to be made in the same currency or in different currencies. A Fund will usually enter into swap agreements on a net basis. In so doing, the two payment streams under the swap agreement are netted out, with the Fund receiving or paying, as the case may be, only the net amount of the two payments. If the Fund enters into a swap agreement, it will maintain a segregated account on a gross basis, unless the contract provides for a segregated account on a net basis. If a swap agreement provides for payments in different currencies, the parties might agree to exchange notional principal amount as well. In a total return swap agreement, the non-floating rate side of the swap is based on the total return of an individual security, a basket of securities, an index or another reference asset. Swaps may also depend on other prices or rates, such as the value of an index or mortgage prepayment rates.

In a typical cap or floor agreement, one party agrees to make payments only under specified circumstances, usually in return for payment of a fee by the other party. For example, the buyer of an interest rate cap obtains the right to receive payments to the extent that a specified interest rate exceeds an agreed-upon level, while the seller of an interest rate floor is obligated to make payments to the extent that a specified interest rate falls below an agreed-upon level. Caps and floors have an effect similar to buying or writing options. A collar combines elements of buying a cap and selling a floor.

Swap agreements will tend to shift a Fund's investment exposure from one type of investment to another. For example, if a Fund agreed to pay fixed rates in exchange for floating rates while holding fixed-rate bonds, the swap would tend to decrease a Fund's exposure to long-term interest rates. Another example is if a Fund agreed to exchange payments in dollars for payments in foreign currency, the swap agreement would tend to decrease a Fund's exposure to U.S. interest rates and increase its exposure to foreign currency and interest rates.

Swap agreements are sophisticated hedging instruments that typically involve a small investment of cash relative to the magnitude of risks assumed. As a result, swaps can be highly volatile and may have a considerable impact on a Fund's performance. Depending on how they are used, swap agreements may increase or decrease the overall volatility of a Fund's investments and its share price and yield. Additionally, whether a Fund's use of swap agreements will be successful in furthering its investment objective will depend on the adviser's ability correctly to predict whether certain types of investments likely are to produce greater returns than other investments. Because they are two party contracts and because they may have terms of greater than seven days, swap agreements may be considered to be illiquid. Moreover, a Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty. The most significant factor in the performance of swap agreements is the change in the specific interest rate, currency, or other factor that determines the amounts of payments due to and from a Fund. If a swap agreement calls for payments by a Fund, a Fund must be prepared to make such payments when due. In addition, if the counterparty's creditworthiness declines, the value of a swap agreement likely would decline, potentially resulting in losses for a Fund. A Fund will closely monitor the credit of a swap agreement counterparty in order to attempt to minimize this risk. A Fund may also suffer losses if it is unable to terminate outstanding swap agreements (either by assignment or other disposition) or reduce its exposure through offsetting transactions (i.e., by entering into an offsetting swap agreement with the same party or a similarly creditworthy party).

Credit Default Swap Agreements. A Fund may enter into credit default swap agreements, which may have as reference obligations one or more securities or a basket of securities that are or are not currently held by a Fund. The protection "buyer" in a credit default swap agreement is generally obligated to pay the protection "seller" an upfront or a periodic stream of payments over the term of the contract provided that no credit event, such as a default, on a reference obligation has occurred. If a credit event occurs, the seller generally must pay the buyer the "par value" (full notional value) of the swap in exchange for an equal face amount of deliverable obligations of the reference entity described in the swap, or the seller may be required to deliver the related net cash amount, if the swap is cash settled. A Fund may be either the buyer or seller in the transaction. If a Fund is a buyer and no credit event occurs, a Fund may recover nothing if the swap is held through its termination date. However, if a credit event occurs, the buyer generally may elect to receive the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity whose value may have significantly decreased. As a seller, a Fund generally receives an upfront payment or a fixed rate of income throughout the term of the swap provided that there is no credit event. As the seller, a Fund would effectively add leverage to its portfolio because, in addition to its total net assets, a Fund would be subject to investment

exposure on the notional amount of the swap.

Credit default swap agreements may involve greater risks than if a Fund had invested in the reference obligation directly since, in addition to risks relating to the reference obligation, credit default swaps are subject to illiquidity risk, counterparty risk and credit risk. A Fund will enter into credit default swap agreements generally with counterparties that meet certain standards of creditworthiness. A buyer generally also will lose its investment and recover nothing should no credit event occur and the swap is held to its termination date. If a credit event were to occur, the value of any deliverable obligation received by the seller, coupled with the upfront or periodic payments previously received, may be less than the full notional value it pays to the buyer, resulting in a loss of value to the seller.

Equity Swaps. A Fund may engage in equity swaps. Equity swaps allow the parties to the swap agreement to exchange components of return on one equity investment (e.g., a basket of equity securities or an index) for a component of return on another non-equity or equity investment, including an exchange of differential rates of return. Equity swaps may be used to invest in a market without owning or taking physical custody of securities in circumstances where direct investment may be restricted for legal reasons or is otherwise impractical. Equity swaps also may be used for other purposes, such as hedging or seeking to increase total return.

The values of equity swaps can be very volatile. To the extent that the adviser does not accurately analyze and predict the potential relative fluctuation on the components swapped with the other party, a Fund may suffer a loss. The value of some components of an equity swap (such as the dividend on a common stock) may also be sensitive to changes in interest rates. Furthermore, during the period a swap is outstanding, a Fund may suffer a loss if the counterparty defaults.

Total Return Swap Agreements. Total return swap agreements are contracts in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to a Fund's portfolio because, in addition to its total net assets, a Fund would be subject to investment exposure on the notional amount of the swap.

Total return swap agreements are subject to the risk that a counterparty will default on its payment obligations to a Fund thereunder, and conversely, that a Fund will not be able to meet its obligation to the counterparty. Generally, a Fund will enter into total return swaps on a net basis (i.e., the two payment streams are netted against one another with a Fund receiving or paying, as the case may be, only the net amount of the two payments). The net amount of the excess, if any, of a Fund's obligations over its entitlements with respect to each total return swap will be accrued on a daily basis, and an amount of liquid assets having an aggregate net asset value at least equal to the accrued excess will be segregated by a Fund. If the total return swap transaction is entered into on other than a net basis, the full amount of a Fund's obligations will be accrued on a daily basis, and the full amount of a Fund's obligations will be segregated by a Fund in an amount equal to or greater than the market value of the liabilities under the total return swap agreement or the amount it would have cost a Fund initially to make an equivalent direct investment, plus or minus any amount a Fund is obligated to pay or is to receive under the total return swap agreement.

Variance, Volatility and Correlation Swap Agreements. Variance and volatility swaps are contracts that provide exposure to increases or decreases in the volatility of certain referenced assets. Correlation swaps are contracts that provide exposure to increases or decreases in the correlation between the prices of different assets or different market rates.

Participation Notes

The Funds may purchase participation notes, also known as participation certificates. Participation notes are issued by banks or broker-dealers and are designed to replicate the performance of foreign companies or foreign securities markets and can be used by a Fund as an alternative means to access the securities market of a country. The performance results of participation notes will not replicate exactly the performance of the foreign companies or foreign securities markets that they seek to replicate due to transaction costs and other expenses. Investments in participation notes involve the same risks associated with a direct investment in the underlying foreign companies or foreign securities markets that they seek to replicate. There can be no assurance that the trading price of participation notes will equal the underlying value of the foreign companies or foreign securities markets that they seek to replicate. Participation notes are generally traded over-the-counter. Participation notes are subject to counterparty risk, which is the risk that the broker-dealer or bank that issues them will not fulfill its contractual obligation to complete the transaction with the Fund. Participation notes constitute general unsecured contractual obligations of the banks or broker-dealers that issue them, the counterparty, and the Fund is relying on the creditworthiness of such counterparty and has no rights under a participation note against the issuer of the underlying security. Participation notes involve transaction cost. Participation notes may

be illiquid and therefore subject to the Fund's percentage limitation for investments in illiquid securities. Participation notes offer a return linked to a particular underlying equity, debt or currency.

For temporary defensive purposes, the Funds may invest in fixed-income securities of non-U.S. governmental and private issuers. Such investments may include bonds, notes, debentures and other similar debt securities, including convertible securities.

PERMITTED INVESTMENT ACTIVITIES AND CERTAIN ASSOCIATED RISKS

Set forth below are descriptions of permitted investment activities for the Funds and certain of their associated risks. The activities are organized into various categories. To the extent that an activity overlaps two or more categories, the activity is referenced only once in this section. Not all of the Funds participate in all of the investment activities described below. In addition, with respect to any particular Fund, to the extent that an investment activity is described in such Fund's Prospectus as being part of its principal investment strategy, the information provided below regarding such investment activity is intended to supplement, but not supersede, the information contained in the Prospectus, and the Fund may engage in such investment activity in accordance with the limitations set forth in the Prospectus. To the extent an investment activity is described in this SAI that is not referenced in the Prospectus, a Fund under normal circumstances will not engage in such investment activity with more than 15% of its assets unless otherwise specified below. Unless otherwise noted or required by applicable law, the percentage limitations included in this SAI apply at the time of purchase of a security.

For purposes of monitoring the investment policies and restrictions of the Funds (with the exception of the loans of portfolio securities policy described below), the amount of any securities lending collateral held by a Fund will be excluded in calculating total assets.

DEBT SECURITIES

Asset-Backed Securities

Asset-backed securities are securities that are secured or "backed" by pools of various types of assets on which cash payments are due at fixed intervals over set periods of time. Asset-backed securities are created in a process called securitization. In a securitization transaction, an originator of loans or an owner of accounts receivable of a certain type of asset class sells such underlying assets in a "true sale" to a special purpose entity, so that there is no recourse to such originator or owner. Payments of principal and interest on asset-backed securities typically are tied to payments made on the pool of underlying assets in the related securitization. Such payments on the underlying assets are effectively "passed through" to the asset-backed security holders on a monthly or other regular, periodic basis. The level of seniority of a particular asset-backed security will determine the priority in which the holder of such asset-backed security is paid, relative to other security holders and parties in such securitization. Examples of underlying assets include consumer loans or receivables, home equity loans, automobile loans or leases, and timeshares, although other types of receivables or assets also may be used as underlying assets.

While asset-backed securities typically have a fixed, stated maturity date, low prevailing interest rates may lead to an increase in the prepayments made on the underlying assets. This may cause the outstanding balances due on the underlying assets to be paid down more rapidly. As a result, a decrease in the originally anticipated interest from such underlying securities may occur, causing the asset-backed securities to pay-down in whole or in part prior to their original stated maturity date. Prepayment proceeds would then have to be reinvested at the lower prevailing interest rates. Conversely, prepayments on the underlying assets may be less than anticipated, causing an extension in the duration of the asset-backed securities.

Delinquencies or losses that exceed the anticipated amounts for a given securitization could adversely impact the payments made on the related asset-backed securities. This is a reason why, as part of a securitization, asset-backed securities are often accompanied by some form of credit enhancement, such as a guaranty, insurance policy, or subordination. Credit protection in the form of derivative contracts may also be purchased. In certain securitization transactions, insurance, credit protection, or both may be purchased with respect to only the most senior classes of asset-backed securities, on the underlying collateral pool, or both. The extent and type of credit enhancement varies across securitization transactions.

In addition to the normal risks associated with debt securities discussed elsewhere in this SAI and the Prospectus(es), asset-backed securities carry additional risks including, but not limited to, the possibility that (i) the pace of payments on underlying assets may be faster or slower than anticipated or payments may be in default; (ii) the creditworthiness of the credit support provider may deteriorate; and (iii) such securities may become less liquid or harder to value as a result of market conditions or other circumstances.

Bank Obligations

Bank obligations include certificates of deposit, time deposits, bankers' acceptances and other short-term obligations of domestic banks, foreign subsidiaries of domestic banks, foreign branches of domestic banks, domestic and foreign branches of foreign banks, domestic savings and loan associations and other banking institutions. With respect to such obligations issued by foreign branches of domestic banks, foreign subsidiaries of domestic banks, and domestic and foreign branches of foreign banks, a Fund may be subject to additional investment risks that are different in some respects from those incurred by a Fund that invests only in debt obligations of domestic issuers. Such risks include possible future political, regulatory or economic developments, the possible imposition of foreign withholding and other taxes (at potentially confiscatory levels) on amounts realized on such obligations, the possible establishment of exchange controls or the adoption of other foreign governmental restrictions that might adversely affect the payment of principal and interest on these obligations and the possible seizure or nationalization of foreign deposits. In addition, foreign branches of U.S. banks and foreign banks may be subject to less stringent reserve requirements and to different regulatory, accounting, auditing, reporting and recordkeeping standards than those applicable to domestic branches of U.S. banks.

Certificates of deposit are negotiable certificates evidencing the obligation of a bank to repay funds deposited with it for a specified period of time.

Time deposits are non-negotiable deposits maintained in a banking institution for a specified period of time at a stated interest rate. Time deposits that may be held by a Fund will not benefit from insurance from the Bank Insurance Fund or the Savings Association Insurance Fund administered by the Federal Deposit Insurance Corporation ("FDIC"). Bankers' acceptances are credit instruments evidencing the obligation of a bank to pay a draft drawn on it by a customer. These instruments reflect the obligation both of the bank and of the drawer to pay the face amount of the instrument upon maturity. The other short-term obligations may include uninsured, direct obligations, bearing fixed, floating or variable interest rates.

Collateralized Debt Obligations

Collateralized debt obligations ("CDOs") are composed of two main categories: cash and synthetic. Cash CDOs are further subdivided into the following two types: cash flow and market value. The two structures differ from each other in the manner by which cash flow is generated to pay the security holders, the manner in which the structure is credit-enhanced, and how the pool of underlying collateral is managed. Cash flow CDOs are backed, or "collateralized," by a pool of high-yield bonds or loans, which pay principal and interest on a regular basis. Credit enhancement is achieved by having multiple classes of securities. The most senior/highest-rated class will be the last to be affected by any interruption of cash flow from the underlying assets. In a cash flow CDO, the collateral manager endeavors to maintain a minimum level of diversification and weighted average rating among the underlying assets in an effort to keep severity of loss low. In a market value CDO, classes of securities receive payments based on the mark-to-market returns on the underlying collateral. Credit enhancement is achieved by specific overcollateralization levels in the form of advance rates assigned to each underlying collateral asset. Because principal and interest payments on the securities come from collateral cash flows and sales of collateral, which the collateral manager monitors, returns on a market value CDO are substantially related to the collateral manager's performance.

Certain products that are similar in structure to CDOs include collateralized loan obligations ("CLOs") and collateralized bond obligations ("CBOs"). Similar to CDOs, CLOs are structured such that each CDO and CLO typically has a foreign issuer, which is generally a special purpose vehicle, and a domestic co-issuer. Certain securities, such as notes, issued in a particular CDO or CLO are generally co-issued by the foreign issuer and the co-issuer, and are rated by one or more Nationally Recognized Statistical Ratings Organization (each, a "NRSRO"). Other securities, such as preference shares, preferred shares, or subordinated notes, issued in a particular CDO or CLO are generally issued only by the foreign issuer and are not rated by any NRSROs. Securities issued in CBOs, too, are issued by foreign issuers or other separate legal entities.

CDOs, CLOs, and CBOs are typically collateralized by a pool of loans. These underlying loans may include pools of other securities. Generally, CDOs and CLOs have collateral quality tests and eligibility criteria that must be satisfied before a security may be selected as collateral for the CDO or CLO. The collateral selected for a particular CDO depends on both the sector of securities the CDO's collateral manager wants to manage, as well as the objectives of the CDO itself. For example, a trust preferred CDO is generally collateralized by combination of some or all of the following types of securities: trust preferred securities issued by trust subsidiaries of bank holding companies or of insurance holding companies; subordinated notes issued by banks, thrifts, or other depository institutions, or by holding companies of insurance companies; surplus notes issued by insurance companies; or senior securities issued by holding companies of one or more insurance companies or insurance intermediaries. In contrast, an ABS CDO has as its collateral various concentrations of different types of asset-backed securities. Securities issued in CLOs generally are backed by portfolios of primarily leveraged loans and high yield bonds. Typically, securities issued in CBOs are backed by a diversified pool of high risk, below investment grade fixed income securities. In addition to the foregoing, a particular CDO, CLO, or CBO may have as its collateral, among others, domestic and foreign senior secured loans, senior unsecured loans, and

subordinate corporate loans, including loans that may be rated below investment grade or may be the unrated equivalent of such loans.

Similar to asset-backed securities, payments are made on CDO, CLO, and CBO securities in order of their seniority among other classes of securities issued from the same issuing entity. Also, similar to securitization transactions, fees, including administrative expenses, are generally paid to various parties in the CDO prior to payments being made on the CDO securities. Generally, CDOs and CLOs will pay certain management fees to the collateral manager. Unlike securitizations, securities issued in CDOs, CLOs, and CBOs generally have quarterly, rather than monthly, payment dates.

CDOs, CLOs and CBOs are privately offered and sold, and are not publicly registered with the SEC. As a result, CDO, CLO, and CBO securities may be characterized as being illiquid. However, an active dealer market may exist for such securities, thereby allowing such securities to qualify for an exemption from registration under Rule 144A of the Securities Act of 1933, as amended (the "1933 Act").

Classes, or "tranches," of CDO, CLO and CBO securities vary in level of risk and yield. The most junior tranche is generally the tranche that bears the highest level of risk, but also generally bears the highest rate of return. This is because tranches bear losses in the reverse order of their seniority with respect to one another. For this reason, the most junior tranche is the tranche that bears losses first from the defaults on the underlying collateral. Because the more junior tranches absorb losses prior to the more senior tranches, the most subordinate tranches serve to protect the more senior tranches from default in all but the most severe circumstances. Due to this type of protection from losses, a senior CDO, CLO, or CBO tranche generally bears the lowest risk, and has a smaller coupon, corresponding lower yield, and higher rating from nationally recognized statistical ratings organizations than tranches of more junior securities. Despite the protection the most subordinated tranches provide, CDO, CLO, or CBO tranches can experience substantial losses due to the rate of actual defaults on the underlying collateral. The type of collateral used as underlying securities in a particular CDO, CLO, or CBO therefore may substantially impact the risk associated with purchasing the securities such CDO, CLO, or CBO issues. Other factors that may influence the value or yield or return on a CDO, CLO, or CBO security include the disappearance of tranches from a particular issuance in reverse order of seniority, as such tranches would otherwise have protected the more senior tranches from losses, market anticipation of defaults, and loss of investor appetite for CDO, CLO and CBO securities generally.

In addition to the risks generally associated with debt securities, including asset-backed securities and derivatives, discussed elsewhere in this SAI and the Prospectus(es), CDOs, CLOs, and CBOs each carry additional risks including, but not limited to the possibility that (i) distributions from the underlying collateral securities will be inadequate to make interest or principal payments on the related CDO, CLO, or CBO securities; (ii) for collateral that has NRSRO ratings, such ratings may be downgraded; and (iii) the CDOs, CLOs, or CBOs may themselves purchase as underlying collateral securities issued by other CDOs.

Commercial Paper

Commercial paper (including variable amount master demand notes, see "Floating and Variable Rate Obligations" below), refers to short-term, unsecured promissory notes issued by corporations to finance short-term credit needs. Commercial paper is usually sold on a discount basis and typically has a maturity at the time of issuance not exceeding nine months. Variable amount master demand notes are demand obligations which permit the investment of fluctuating amounts at varying market rates of interest pursuant to arrangements between the issuer and a commercial bank acting as agent for the payee of such notes whereby both parties have the right to vary the amount of the outstanding indebtedness on the notes.

Asset-Backed Commercial Paper. Securities that are issued from commercial paper conduits are called asset-backed commercial paper securities. Credit support for such securities falls into two categories: liquidity protection and protection against ultimate default under the underlying assets. Liquidity protection refers to the provision of advances, generally by the entity administering the pool of assets, to ensure that scheduled payments on the securities or underlying pool are made in a timely fashion. Protection against ultimate default ensures payment on at least a portion of the assets in the pool. This protection may be provided through guarantees, insurance policies or letters of credit obtained from third parties, through various means of structuring the transaction, such as by issuing senior and subordinated instruments or through a combination of these approaches. The degree of credit support provided on each issue is based generally on historical information relating to the level of credit risk associated with the payments. Delinquency or loss that exceeds the anticipated amount or a downgrade or loss of credit support could adversely impact the value of or return on an investment in an asset-backed commercial paper security.

Commercial paper is also subject to the risks generally associated with debt securities discussed elsewhere in this SAI and the Prospectus(es).

Convertible Securities

A convertible security is generally a debt obligation or preferred stock that may be converted within a specified period of time into a certain amount of common stock of the same or a different issuer. A convertible security provides a fixed-income stream and the opportunity, through its conversion feature, to participate in the capital appreciation resulting from a market price advance in its underlying common stock. As with a straight fixed-income security, a convertible security tends to increase in market value when interest rates decline and decrease in value when interest rates rise. Like a common stock, the value of a convertible security also tends to increase as the market value of the underlying stock rises, and it tends to decrease as the market value of the underlying stock declines. Because its value can be influenced by both interest-rate and market movements, a convertible security tends not to be as sensitive to interest rates as a similar fixed-income security, and tends not to be as sensitive to changes in share price as its underlying stock.

Investing in convertible securities is subject to certain risks in addition to those generally associated with debt securities discussed elsewhere in this SAI and the Prospectus(es). Certain convertible securities, particularly securities that are convertible into securities of an issuer other than the issuer of the convertible security, may be or become illiquid and, therefore, may be more difficult to resell in a timely fashion or for a fair price, which could result in investment losses.

The creditworthiness of the issuer of a convertible security is important because the holder of a convertible security will have recourse only to the issuer. In addition, a convertible security may be subject to conversion or redemption by the issuer, but only after a specified date and under circumstances established at the time the security is issued. This feature may require a holder to convert the security into the underlying common stock, even if the value of the underlying common stock has declined substantially. In addition, companies that issue convertible securities frequently are small- and mid-capitalization companies and, accordingly, carry the risks associated with investments in such companies.

While the Funds use the same criteria to evaluate the credit quality of a convertible debt security that they would use for a more conventional debt security, a convertible preferred stock is treated like a preferred stock for a Fund's credit evaluation, as well as financial reporting and investment limitation purposes. Preferred stock is subordinated to all debt obligations in the event of insolvency, and an issuer's failure to make a dividend payment is generally not an event of default entitling the preferred shareholders to take action. Preferred stock generally has no maturity date, so its market value is dependent on the issuer's business prospects for an indefinite period of time. In addition, distributions on preferred stock generally are taxable as dividend income, rather than interest payments, for federal income tax purposes.

Corporate Debt Securities

Certain of the debt instruments purchased by the Funds may be interest-bearing securities issued by a company, called corporate debt securities. The issuer of a corporate debt security has a contractual obligation to pay interest at a stated rate on specific dates and to repay principal periodically or on a specified maturity date. An issuer may have the right to redeem or "call" a corporate debt security before maturity, in which case the investor may have to reinvest the proceeds at lower market rates. The value of fixed-rate corporate debt securities will tend to fall when interest rates rise and rise when interest rates fall. The value of "floating-rate" or "variable-rate" corporate debt securities, on the other hand, fluctuate much less in response to market interest rate movements than the value of fixed-rate securities. Corporate debt securities may be senior or subordinated obligations. Senior obligations generally have the first claim on a corporation's earnings and assets and, in the event of liquidation, are paid before subordinated debt. Corporate debt securities may be unsecured (backed only by the issuer's general creditworthiness) or secured (also backed by specified collateral).

Investors should be aware that even though interest-bearing securities are investments which promise a stable stream of income, the prices of such securities are inversely affected by changes in interest rates and, therefore, are subject to the risk of market price fluctuations. Longer-term securities are affected to a greater extent by interest rates than shorter-term securities. The values of fixed-income corporate debt securities also may be affected by changes in the credit rating or financial condition of the issuing entities. Certain corporate debt securities that may be purchased by the Fund, such as those rated "Baa" or lower by Moody's Investors Service, Inc. ("Moody's") and "BBB" or lower by Standard & Poor's Rating Group ("S&P") tend to be subject to greater issuer credit risk, to greater market fluctuations and pricing uncertainty, and to less liquidity than lower yielding, higherrated fixed-income securities. If a security held by a Fund is downgraded, such Fund may continue to hold the security until such time as the adviser determines it to be advantageous for the Fund to sell the security. The ratings of S&P, Fitch and Moody's are more fully described in the section entitled Credit Ratings. Investing in corporate debt securities is subject to certain risks including, among others, credit and interest rate risk, as more fully described in the Prospectus(es).

Custodial Receipts for Treasury Securities

These securities are typically represented by participations in trusts that hold U.S. Treasury securities, such as Treasury Investors Growth Receipts and Certificates of Accrual on Treasury Securities, or other obligations where the trust participations evidence

ownership in either the future interest payments or the future principal payments on the obligations. These participations are normally issued at a discount to their "face value," and can exhibit greater price volatility than ordinary debt securities because of the way in which their principal and interest are returned to investors.

Dollar Roll Transactions

Dollar roll transactions are transactions wherein a Fund sells fixed-income securities, typically mortgage-backed securities, and makes a commitment to purchase similar, but not identical, securities at a later date from the same party. Like a forward commitment, during the roll period no payment is made for the securities purchased and no interest or principal payments on the security accrue to the purchaser, but the Fund assumes the risk of ownership. A Fund is compensated for entering into dollar roll transactions by the difference between the current sales price and the forward price for the future purchase, as well as by the interest earned on the cash proceeds of the initial sale. Like other when-issued securities or firm commitment agreements, dollar roll transactions involve the risk that the market value of the securities sold by a Fund may decline below the price at which the Fund is committed to purchase similar securities. In the event the buyer of securities from a Fund under a dollar roll transaction becomes insolvent, the Fund's use of the proceeds of the transaction may be restricted pending a determination by the other party, or its trustee or receiver, whether to enforce the Fund's obligation to repurchase the securities. A Fund will engage in dollar roll transactions for the purpose of acquiring securities for its portfolio and not for investment leverage.

Floating- and Variable-Rate Obligations

Floating- and variable-rate obligations include obligations such as demand notes and bonds. Variable-rate demand notes include master demand notes that are obligations that permit a Fund to invest fluctuating amounts, which may change daily without penalty, pursuant to direct arrangements between the Fund, as lender, and the borrower. The interest rate on a floating-rate demand obligation is based on a referenced lending rate, such as a bank's prime rate, and is adjusted automatically each time such rate is adjusted. The interest rate on a variable-rate demand obligation is adjusted automatically at specified intervals. The issuer of such obligations ordinarily has a right, after a given period, to prepay at its discretion the outstanding principal amount of the obligations plus accrued interest upon a specified number of days notice to the holders of such obligations. Frequently, such obligations are secured by letters of credit or other credit support arrangements provided by banks. Such features often include unconditional and irrevocable letters of credit that are issued by a third party, usually a bank, savings and loan association or insurance company which assumes the obligation for payment of principal and interest in the event of default by the issuer. Letters of credit are designed to enhance liquidity and ensure repayment of principal and any accrued interest if the underlying variable-rate demand obligation should default. Some variable rate obligations feature other credit enhancements, such as standby bond purchase agreements ("SBPAs"). An SBPA can feature a liquidity facility that is designed to provide funding for the purchase price of variable rate obligations that are unable to be successfully remarketed for resale. The liquidity facility provider is obligated solely to advance funds for the purchase of tendered variable rate bonds that fail to be remarketed and does not guarantee the repayment of principal or interest. The liquidity facility provider's obligations under the SBPA are subject to conditions, including the continued creditworthiness of the underlying borrower or issuer, and the facility may terminate upon the occurrence of certain events of default or at the expiration of its term. In addition, a liquidity facility provider may be unable or unwilling to perform its obligations. A Fund may be unable to timely dispose of a variable rate obligation if the underlying issuer defaults and the letter of credit or liquidity facility provider is unable or unwilling to perform its obligations or the facility otherwise terminates and a successor letter of credit or liquidity provider is not immediately obtained. The potential adverse impact to a Fund resulting from the inability of a letter of credit or liquidity facility provider to meet its obligations could be magnified to the extent the provider also furnishes credit support for other variable-rate obligations held by the Fund.

There generally is no established secondary market for certain variable-rate obligations, such as those not supported by letters of credit, SBPAs or other credit support arrangements, because they are direct lending arrangements between the lender and borrower. Accordingly, where these obligations are not secured by letters of credit, SBPAs or other credit support arrangements, a Fund is dependent on the ability of the borrower to pay principal and interest on demand. Such obligations may not be rated by credit rating agencies and a Fund may invest in obligations which are not so rated only if the adviser determines that at the time of investment the obligations are of comparable quality to the other obligations in which such Fund may invest. The adviser, on behalf of a Fund, monitors the creditworthiness of the issuers of the floating- and variable-rate demand obligations in such Fund's portfolio. Floating- and variable-rate instruments are subject to interest-rate and credit risks and other risks generally associated with debt securities. The floating- and variable-rate instruments that the Funds may purchase include certificates of participation in such instruments.

Insurance Funding Agreements

A Fund may invest in funding agreements issued by domestic insurance companies. Funding agreements are short-term, privately placed, debt obligations of insurance companies that offer a fixed- or floating-rate of interest. These investments are not readily marketable and therefore are considered to be illiquid securities. (See the section entitled "Illiquid Securities").

Guaranteed Investment Contracts

The Funds may invest in guaranteed investment contracts ("GICs") issued by insurance companies. Pursuant to such contracts, a Fund makes cash contributions to a deposit fund of the insurance company's general account. The insurance company then credits to the deposit fund on a monthly basis guaranteed interest at a rate based on an index. The GICs provide that this guaranteed interest will not be less than a certain minimum rate. The insurance company may assess periodic charges against a GIC for expense and service costs allocable to it, and these charges will be deducted from the value of the deposit fund. A Fund will purchase a GIC only when the adviser has determined that the GIC presents minimal credit risks to the Fund and is of comparable quality to instruments in which the Fund may otherwise invest. Because a Fund may not receive the principal amount of a GIC from the insurance company on seven days' notice or less, a GIC may be considered an illiquid investment. The term of a GIC will be one year or less.

High Yield Securities

Each Fund may invest in high-yield securities. High yield securities (also known as "junk bonds") are debt securities that are rated below investment-grade, are unrated and deemed by the adviser to be below investment-grade, or in default at the time of purchase. These securities have a much greater risk of default (or in the case of bonds currently in default, of not returning principal) and tend to be more volatile than higher-rated securities of similar maturity. The value of these debt securities can be affected by overall economic conditions, interest rates, and the creditworthiness of the individual issuers. These securities tend to be less liquid and more difficult to value than higher-rated securities.

The market values of certain high yield and comparable unrated securities tend to be more sensitive to individual corporate developments and changes in economic conditions than investment-grade securities. In addition, issuers of high yield and comparable unrated securities often are highly leveraged and may not have more traditional methods of financing available to them. Their ability to service their debt obligations, especially during an economic downturn or during sustained periods of high interest rates, may be impaired.

The risk of loss due to default by such issuers is significantly greater because high yield and comparable unrated securities generally are unsecured and frequently are subordinated to senior indebtedness. A Fund may incur additional expenses to the extent that it is required to seek recovery upon a default in the payment of principal or interest on its portfolio holdings. The existence of limited markets for high yield and comparable unrated securities may diminish the Fund's ability to: (i) obtain accurate market quotations for purposes of valuing such securities and calculating its net asset value; and (ii) sell the securities either to meet redemption requests or to respond to changes in the economy or in financial markets.

Letters of Credit

Certain of the debt obligations (including certificates of participation, commercial paper and other short-term obligations) which a Fund may purchase may be backed by an unconditional and irrevocable letter of credit of a bank, savings and loan association or insurance company which assumes the obligation for payment of principal and interest in the event of default by the issuer. Only banks, savings banks and insurance companies which, in the opinion of the adviser, are of comparable quality to issuers of other permitted investments of the Fund, may be used for letter of credit-backed investments.

Loans

Loans in which a Fund may invest are subject generally to the same risks as debt securities in which the Fund may invest. Loans in which a Fund invests may be made to finance highly leveraged corporate acquisitions. The highly leveraged capital structure of the borrowers in such transactions may make such loans especially vulnerable to adverse changes in economic or market conditions. Loans generally are subject to restrictions on transfer, and only limited opportunities may exist to sell such participations in secondary markets. As a result, a Fund may be unable to sell loans at a time when it may otherwise be desirable to do so or may be able to sell them only at a price that is less than their fair market value. Market bids may be unavailable for loans from time to time; a Fund may find it difficult to establish a fair value for loans held by it. If a Fund only acquires an assignment or a participation in a loan made by a third party, the Fund may not be able to control the exercise of any remedies that the lender would have under the corporate loan. In addition, a Fund may have to rely on the assignor(s) or participating institution(s) to demand and receive payments in respect of the loans, and to pay those amounts on to the Fund; the Fund will be subject to the risk that the assignor(s) may be unwilling or unable to do so. Many loans in which a Fund invests may be unrated, and the

portfolio manager will be required to rely exclusively on its analysis of the borrower in determining whether to acquire, or to continue to hold, a loan. In addition, under legal theories of lender liability, a Fund potentially might be held liable as a co-lender.

Money Market Instruments

Investments in the following types of high-quality money market instruments are permitted: (i) U.S. Government obligations; (ii) negotiable certificates of deposit, bankers' acceptances and fixed time deposits and other obligations of domestic banks (including foreign branches) that have more than \$1 billion in total assets at the time of investment and are members of the Federal Reserve System or are examined by the Comptroller of the Currency or whose deposits are insured by the FDIC; (iii) commercial paper; and (iv) repurchase agreements. A Fund also may invest in short-term U.S. dollar-denominated obligations of foreign banks (including U.S. branches) that at the time of investment: (i) have more than \$10 billion, or the equivalent in other currencies, in total assets; and (ii) in the opinion of the adviser, are of comparable quality to obligations of U.S. banks which may be purchased by the Funds.

Mortgage-Related Securities

Mortgage-Backed Securities. Mortgage-backed securities, also called mortgage pass-through securities, are issued in securitizations (see "Asset-Backed Securities" section) and represent interests in "pools" of underlying residential mortgage loans that serve as collateral for such securities. Similar to asset-backed securities, the monthly payments made by the individual borrowers on the underlying residential mortgage loans are effectively "passed through" to the mortgage-backed securities (net of administrative and other fees paid to various parties) as monthly principal and interest payments.

The stated maturities of mortgage-backed securities may be shortened by unscheduled prepayments of principal on the underlying mortgage loans, and the expected maturities may be extended in rising interest-rate environments. Therefore, it is not possible to predict accurately the maturity of a particular mortgage-backed security. Variations in the maturities of mortgage-backed securities will affect the yield of each such security and the portfolio as a whole. Rates of prepayment of principal on the underlying mortgage loans in mortgage-backed securitizations that are faster than expected may expose the mortgage-backed securities issued in such securitizations to a lower rate of return and require reinvestment of proceeds at lower prevailing interest rates. Also, if a mortgage-backed security has been purchased at a premium, but is backed by underlying mortgage loans that are subject to prepayment, if prepayments are made on such underlying collateral, then the value of the premium effectively would be lost or reduced.

Like other fixed-income securities, when interest rates rise, the value of mortgage-backed securities generally will decline and may decline more than other fixed-income securities as the expected maturity extends. Conversely, when interest rates decline, the value of mortgage-backed securities having underlying collateral with prepayment features may not increase as quickly as other fixed-income securities as the expected maturity shortens. Payment of principal and interest on some mortgage-backed securities issued or guaranteed by a government agency (but not the market value of the securities themselves) is guaranteed by a government association, such as the Government National Mortgage Association ("GNMA" or "Ginnie Mae"), or by a government-sponsored entity, such as the Federal Home Loan Mortgage Corporation ("FHLMC" or "Freddie Mac") or Federal National Mortgage Association ("FNMA" or "Fannie Mae"). Unlike FHLMC and FNMA, which act as both issuers and guarantors of mortgage-backed securities, GNMA only provides guarantees of mortgage-backed securities. Only GNMA guarantees are backed by the full faith and credit of the U.S. Government. Mortgage-backed securities issued or guaranteed by FHLMC or FNMA are not backed by the full faith and credit of the U.S. Government. FHLMC and FNMA are authorized to borrow money from the U.S. Treasury or the capital markets, but there can be no assurance that they will be able to raise funds as needed or that their existing capital will be sufficient to satisfy their guarantee obligations. Mortgage-backed securities created by private issuers (such as commercial banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers and other secondary market issuers) may be supported by various forms of insurance or guarantees, including individual loan, title, pool and hazard insurance. Collateralized mortgage obligations, commercial mortgage-backed securities, adjustable rate mortgage securities and mortgage participation certificates are the primary types of mortgage-backed securities utilized by the Funds.

Collateralized Mortgage Obligations ("CMOs"). CMOs are debt obligations that may be collateralized by whole mortgage loans but are more typically collateralized by portfolios of mortgage pass-through securities guaranteed by GNMA, FHLMC, or FNMA. Each CMO is structured so that multiple classes of securities are issued from such CMO, with each class bearing a different stated maturity. Payments of principal on the underlying securities, including prepayments, are first "passed through" to investors holding the class of securities with the shortest maturity; investors holding classes of securities with longer maturities receive payments on their securities only after the more senior classes have been retired. A longer duration or greater sensitivity to interest rate fluctuations generally increases the risk level of the CMO.

Commercial Mortgage-Backed Securities ("CMBS"). CMBS are securities that are secured by mortgage loans on commercial real property. Many of the risks of investing in CMBS reflect the risks of investing in the real estate securing the underlying mortgage loans, such as office buildings, hotels, and shopping malls. These risks include the effects of local and other economic conditions on real estate markets, the ability of tenants to make loan payments, and the ability of a commercial property to attract and retain tenants. While CMBS are sold both in public transactions registered with the SEC and in private placement transactions, CMBS may be less liquid and exhibit greater price volatility than other types of mortgage-backed or asset-backed securities.

Adjustable Rate Mortgage Securities ("ARMS"). ARMS are securities that are secured by mortgage loans with adjustable interest rates and may be issued or guaranteed by a government agency such as GNMA, by government-sponsored entities such as FNMA or FHLMC, or by a private issuer. The mortgage loans underlying ARMS guaranteed by GNMA are typically federally insured by the Federal Housing Administration or guaranteed by the Department of Veterans Affairs, whereas the mortgage loans underlying ARMS issued by FNMA or FHLMC are typically conventional residential mortgages which are not so insured or guaranteed, but which conform to specific underwriting, size and maturity standards.

ARMS are also offered by private issuers. These securities generally offer a higher rate of return in the form of interest payments, but because they offer no direct or indirect governmental guarantees, they also involve greater credit and interest rate risk. However, many private issuers or servicers of ARMS guarantee or provide private insurance for timely payment of interest and principal. In addition, the Funds may purchase some mortgage-related securities through private placements that are restricted as to further sale. The value of these securities may fluctuate more than that of other mortgage-related securities.

Mortgage Participation Certificates ("PCs"). Mortgage PCs and guaranteed mortgage certificates ("GMCs") are both issued by the FHLMC. PCs resemble GNMA certificates in that each PC represents a pro rata share of all interest and principal payments made and owed on an underlying pool of mortgages. GMCs also represent a pro rata interest in a pool of mortgages, but pay interest semi-annually and return principal once a year in guaranteed minimum payments. PCs and GMCs differ from bonds in that principal is paid back by the borrower over the length of the loan rather than returned in a lump sum at maturity.

Other Mortgage-Backed Securities. As new types of mortgage-backed securities are developed and offered to investors, the adviser will, consistent with each Fund's investment objective, policies, restrictions and quality standards, consider making investments in such new types of mortgage-backed securities.

Credit Risk. Credit risk reflects the risk that a holder of mortgage-backed securities may not receive all or part of its principal because the issuer, or any credit enhancer and/or the underlying mortgage borrowers have defaulted on their obligations. Credit risk is increased for mortgage-backed securities that are subordinated to another security (i.e., if the holder of a mortgage-backed security is entitled to receive payments only after payment obligations to holders of the other security are satisfied). The more deeply subordinated the security, the greater the credit risk associated with the security will be. Mortgage-backed securities issued by private issuers, whether or not such obligations are subject to guarantees by the private issuer, typically entail greater credit risk than mortgage-backed securities guaranteed by a government association or government-sponsored enterprise. The performance of mortgage-backed securities issued by private issuers generally depends on the financial health of those institutions and the performance of the mortgage pool backing such securities. An unexpectedly high rate of defaults on mortgages held by a mortgage pool may limit substantially the pool's ability to make payments of principal or interest to the holder of such mortgage-backed securities, particularly if such securities are subordinated, thereby reducing the value of such securities and in some cases rendering them worthless. The risk of such defaults is generally higher in the case of mortgage pools that include so-called "subprime" mortgages.

Interest Rate Risk. The interest rates on mortgage loans underlying ARMS generally are readjusted at periodic intervals ranging from one year or less to several years in response to changes in a predetermined, commonly recognized interest rate index. The adjustable rate feature should reduce, but will not eliminate, price fluctuations in such securities resulting from actual or anticipated fluctuations in market interest rates. The value of each Fund's ARMS may fluctuate to the extent interest rates on underlying mortgages differ from prevailing market interest rates during periods between interest rate reset dates. Accordingly, investors could experience some loss if they redeem their shares of the Funds or if the Funds sell these portfolio securities before the interest rates on the underlying mortgages are adjusted to reflect prevailing market interest rates. The interest rates on mortgages underlying other types of mortgage-backed securities generally do not reset at periodic intervals. Accordingly, non-ARMS have greater exposure to interest rate risk than ARMS.

Municipal Bonds

Municipal bonds are debt obligations issued to obtain funds for various public purposes. The two principal classifications of municipal bonds are "general obligation" and "revenue" bonds. General obligation bonds are typically, but not always, supported by the municipality's general taxing authority, while revenue bonds are supported by the revenues from one or more particular

project or activity. Industrial development bonds are a specific type of revenue bond backed by the credit and security of a private user. Certain types of industrial development bonds are issued by or on behalf of public authorities to obtain funds to finance privately operated facilities. Under the Internal Revenue Code, certain revenue bonds are considered "private activity bonds" and interest paid on such bonds is treated as an item of tax preference for purposes of calculating federal alternative minimum tax liability.

Certain of the municipal obligations held by the Funds may be insured as to the timely payment of principal and interest. The insurance policies usually are obtained by the issuer of the municipal obligation at the time of its original issuance. In the event that the issuer defaults on interest or principal payment, the insurer will be notified and will be required to make payment to the bondholders. Although the insurance feature is designed to reduce certain financial risks, the premiums for insurance and the higher market price sometimes paid for insured obligations may reduce a Fund's current yield. To the extent that securities held by a Fund are insured as to principal and interest payments by insurers whose claims-paying ability rating is downgraded by Moody's, S&P or Fitch, the value of such securities may be affected. There is, however, no guarantee that the insurer will meet its obligations. Moreover, the insurance does not guarantee the market value of the insured obligation or the net asset value of the Fund's shares. In addition, such insurance does not protect against market fluctuations caused by changes in interest rates and other factors. A Fund also may purchase municipal obligations that are additionally secured by bank credit agreements or escrow accounts. The credit quality of companies which provide such credit enhancements will affect the value of those securities.

From time to time, proposals have been introduced before Congress for the purpose of restricting or eliminating the federal income tax exemption for interest on municipal obligations. For example, under federal tax legislation enacted in 1986, interest on certain private activity bonds must be included in a shareholder's federal alternative minimum taxable income. Moreover, a Fund cannot predict what legislation, if any, may be proposed in the state legislature regarding the state income tax status of interest on such obligations, or which proposals, if any, might be enacted. Such proposals, while pending or if enacted, might materially and adversely affect the availability of municipal obligations generally for investment by the Fund and the liquidity and value of the Fund's portfolio. In such an event, the Fund would re-evaluate its investment objective and policies and consider possible changes in its structure or possible dissolution.

A Fund invests in municipal securities in reliance at the time of purchase on an opinion of bond counsel to the issuer that the interest paid on those securities will be excludable from gross income for federal income tax purposes. Such opinion may have been issued as of a date prior to the date that the Fund acquires the municipal security. Subsequent to a Fund's acquisition of such a municipal security, however, the security may be determined to pay, or to have paid, taxable income. As a result, the treatment of dividends previously paid or to be paid by a Fund as "exempt-interest dividends" could be adversely affected, subjecting the Fund's shareholders to increased federal income tax liabilities. Under highly unusual circumstances, the Internal Revenue Service may determine that a municipal bond issued as tax-exempt should in fact be taxable. If any Fund held such a bond, it might have to distribute taxable income or reclassify as taxable, ordinary income that was previously distributed as exempt-interest dividends.

Taxable Municipal Obligations. There is another type of municipal obligation that is subject to federal income tax for a variety of reasons. These municipal obligations do not qualify for the federal income exemption because (a) they did not receive necessary authorization for tax-exempt treatment from state or local government authorities, (b) they exceed certain regulatory limitations on the cost of issuance for tax-exempt financing or (c) they finance public or private activities that do not qualify for the federal income tax exemption. These non-qualifying activities might include, for example, certain types of multi-family housing, certain professional and local sports facilities, refinancing of certain municipal debt, and borrowing to replenish a municipality's underfunded pension plan.

Preferred Securities

The Funds may invest in securities that are known as "preferred securities" or "hybrid securities". Certain of these securities are deemed to be debt obligations although they may have one or more characteristics found in equity securities (e.g., no stated maturity date). The Funds will treat a preferred security as a corporate debt obligation so long as it has some combination of the following characteristics: the security pays interest; the security is priced relative to a U.S. Treasury security; the security is rated by one or more of the Nationally Recognized Statistical Rating Organizations; the security is callable; the security is issued by a corporation or similar for-profit entity; and/or other factors.

Stripped Securities

Securities issued by the U.S. Treasury and certain securities issued by government authorities and government-sponsored enterprises are eligible to be stripped into interest components and principal components. Stripped securities are purchased by the Funds at a discount to their face value. These securities generally are structured to make a lump-sum payment at maturity and do not make periodic payments of principal or interest. Hence, the duration of these securities tends to be longer and they are

therefore more sensitive to interest-rate fluctuations than similar securities that offer periodic payments over time. The Funds may not purchase stripped mortgage-backed securities.

Stripped securities may also include participations in trusts that hold U.S. Treasury securities where the trust participations evidence ownership in either the future interest payments or the future principal payments on the obligations. These participations are normally issued at a discount to their "face value," and can exhibit greater price volatility than ordinary debt securities.

Supranational Agency Securities

Debt security investments may include the debt securities of "supranational" entities if the adviser believes that the securities do not present risks inconsistent with a Fund's investment objective. Supranational entities include international organizations designated or supported by governmental entities to promote economic reconstruction or development and international banking institutions and related government agencies. Examples include the International Bank for Reconstruction and Development (an agency of the World Bank), the Asian Development Bank and the InterAmerican Development Bank.

Synthetic Convertible Securities

"Synthetic" convertible securities, are derivative positions composed of two or more different securities whose investment characteristics, taken together, resemble those of convertible securities. For example, a Fund may purchase a non-convertible debt security and a warrant or option, which enables a Fund to have a convertible-like position with respect to a company, group of companies or stock index. Synthetic convertible securities are typically offered by financial institutions and investment banks in private placement transactions. Upon conversion, a Fund generally receives an amount in cash equal to the difference between the conversion price and the then current value of the underlying security. Unlike a true convertible security, a synthetic convertible comprises two or more separate securities, each with its own market value. Therefore, the market value of a synthetic convertible is the sum of the values of its fixed-income component and its convertible component. For this reason, the values of a synthetic convertible and a true convertible security may respond differently to market fluctuations. A Fund only invests in synthetic convertibles with respect to companies whose corporate debt securities are rated "A" or higher by Moody's or S&P and will not invest more than 15% of its net assets in such synthetic securities and other illiquid securities.

U.S. Government Obligations

U.S. Government obligations include securities issued by the U.S. Treasury, U.S. Government agencies or U.S. Government sponsored entities. While U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. Government, securities issued by U.S. Government agencies or government-sponsored entities may not be backed by the full faith and credit of the U.S. Government. The Government National Mortgage Association ("GNMA"), a wholly owned U.S. Government corporation, is authorized to guarantee, with the full faith and credit of the U.S. Government, the timely payment of principal and interest on securities issued by institutions approved by GNMA and backed by pools of mortgages insured by the Federal Housing Administration or the Department of Veterans Affairs. Government-sponsored entities (whose obligations are not backed by the full faith and credit of the U.S. Government) include the Federal National Mortgage Association ("FNMA") and the Federal Home Loan Mortgage Corporation ("FHLMC"). Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA but are not backed by the full faith and credit of the U.S. Government. FHLMC guarantees the timely payment of interest and ultimate collection or scheduled payment of principal, but its participation certificates are not backed by the full faith and credit of the U.S. Government. If a government-sponsored entity is negatively impacted by legislative or regulatory action, is unable to meet its obligations, or its creditworthiness declines, the performance of a Fund that holds securities of the entity will be adversely impacted. U.S. Government obligations are subject to low but varying degrees of credit risk, and are still subject to interest rate and market risk. U.S. Government obligations may be adversely affected by a default by, or decline in the credit quality of, the U.S. Government.

Regulatory Events Related to FNMA and FHLMC

On September 7, 2008, both FNMA and FHLMC were placed under the conservatorship of the Federal Housing Finance Agency ("FHFA"). Under the plan of conservatorship, the FHFA assumed control of the operations of FNMA and FHLMC. In connection with the actions taken by the FHFA, the U.S. Treasury has been providing financial contributions to FNMA and FHLMC in return for shares of a new class of senior preferred stock in FNMA and FHLMC issued under certain preferred stock purchase agreements ("SPAs"). The SPAs impose significant restrictions on the activities of FNMA and FHLMC.

The value of securities guaranteed by FNMA and FHLMC may be impacted by (among other things), actions taken by the FHFA in its role as conservator and the U.S. Treasury as a purchaser of senior preferred securities, as well as by future legislation or regulatory actions.

Zero-Coupon, Step-Up Coupon, and Pay-in-Kind Securities

These securities are debt securities that do not make regular cash interest payments. Zero-coupon securities are securities that make no periodic interest payments, but are instead sold at discounts from face value. Step-up coupon bonds are debt securities that may not pay interest for a specified period of time and then, after the initial period, may pay interest at a series of different rates. Pay-in-kind securities pay bondholders in more bonds instead of cash interest. If these securities do not pay current cash income, the market prices of these securities would generally be more volatile and likely to respond to a greater degree to changes in interest rates than the market prices of securities that pay cash interest periodically having similar maturities and credit qualities.

FOREIGN SECURITIES AND CURRENCY TRANSACTIONS

Emerging Market Securities

The Funds consider countries with emerging markets to include the following: (i) countries included in the MSCI Emerging Markets Index; and (ii) countries with low- to middle-income economies according to the International Bank for Reconstruction and Development (more commonly referred to as the World Bank). Examples of countries that are commonly considered to have emerging markets include, but are not limited to, Brazil, Chile, China, Colombia, Czech Republic, Egypt, Hungary, India, Indonesia, Malaysia, Mexico, Peru, the Philippines, Poland, Russia, South Africa, South Korea, Taiwan, Thailand and Turkey.

Equity securities of emerging market issuers may include common stock, preferred stocks (including convertible preferred stocks) and warrants, bonds, notes and debentures convertible into common or preferred stock, equity interests in foreign investment funds or trusts and real estate investment trust ("REIT") securities. The Funds may invest in American Depositary Receipts ("ADRs"), Canadian Depositary Receipts ("CDRs"), European Depositary Receipts ("EDRs"), Global Depositary Receipts ("GDRs") and International Depositary Receipts ("IDRs") of such issuers.

There are special risks involved in investing in emerging-market countries. Many investments in emerging markets can be considered speculative, and their prices can be much more volatile than in the more developed nations of the world. This difference reflects the greater uncertainties of investing in less established markets and economies. The financial markets of emerging markets countries are generally less well capitalized and thus securities of issuers based in such countries may be less liquid. Most are heavily dependent on international trade, and some are especially vulnerable to recessions in other countries. Many of these countries are also sensitive to world commodity prices. Some countries may still have obsolete financial systems, economic problems or archaic legal systems. The currencies of certain emerging market countries, and therefore the value of securities denominated in such currencies, may be more volatile than currencies of developed countries. In addition, many of these nations are experiencing political and social uncertainties.

Furthermore, with respect to certain foreign countries, taxes may be withheld at the source under foreign tax laws, and there is a possibility of expropriation or potentially confiscatory levels of taxation, political, social and monetary instability or diplomatic developments that could adversely affect investments in, the liquidity of, and the ability to enforce contractual obligations with respect to, securities of issuers located in those countries. Amounts realized on foreign securities in which a Fund may invest may be subject to foreign withholding or other taxes that could reduce the return on these securities. Applicable tax treaties between the United States and foreign countries, however, may reduce or eliminate the amount of foreign taxes to which the Funds would otherwise be subject.

Foreign Obligations and Securities

The Funds consider equity securities of foreign issuers (or foreign securities) to be equity securities: (1) issued by companies with their principal place of business or principal office or both, as determined in the adviser's reasonable discretion, in a country, other than the U.S.; or (2) issued by companies for which the principal securities trading market is a country other than the U.S. Foreign company stocks may lose value or be more difficult to trade as a result of adverse changes in currency exchange rates or other developments in the issuer's home country. Concentrated investment by a Fund in any single country, especially a less developed country, would make such Fund's value more sensitive to economic, currency and regulatory changes within that country.

Investments in foreign obligations and securities include high-quality, short-term debt obligations of foreign issuers, including foreign branches of U.S. banks, U.S. branches of foreign banks, and short-term debt obligations of foreign governmental agencies and foreign companies that are denominated in and pay interest in U.S. dollars. Investments in foreign obligations involve certain considerations that are not typically associated with investing in domestic obligations. There may be less publicly available information about a foreign issuer than about a domestic issuer and the available information may be less reliable. Foreign issuers also are not generally subject to the same accounting, auditing and financial reporting standards or governmental supervision as domestic issuers. In addition, with respect to certain foreign countries, taxes may be withheld at the source under foreign tax laws, and there is a possibility of expropriation or potentially confiscatory levels of taxation, political or social instability or diplomatic

developments that could adversely affect investments in, the liquidity of, and the ability to enforce contractual obligations with respect to, obligations of issuers located in those countries. Amounts realized on certain foreign securities in which a Fund may invest may be subject to foreign withholding or other taxes that could reduce the return on these securities. Tax treaties between the United States and foreign countries, however, may reduce or eliminate the amount of foreign taxes to which the Fund would otherwise be subject.

There are increasing concerns regarding the ability of multiple sovereign entities to continue to meet their debt obligations. In particular, ratings agencies have recently downgraded the credit ratings of various countries and may downgrade the credit ratings of other countries. Many economies are facing acute fiscal pressures as they struggle to balance budgetary austerity with stagnant growth. Many observers predict that a depressed economic environment will cause budget deficits in these economies to expand in the short term and further increase the perceived risk of a default, thereby rendering access to capital markets even more expensive and compounding the debt problem. In particular, the Eurozone is currently undergoing a collective debt crisis. Greece, Ireland and Portugal have already received one or more "bailouts" from other Eurozone member states ("Member States"), and it is unclear how much additional funding they will require or if additional Member States will require bailouts in the future. Investor confidence in other Member States, as well as European banks exposed to risky sovereign debt, has been severely impacted, threatening capital markets throughout the Eurozone. Although the resources of various financial stability mechanisms in the Eurozone continue to be bolstered, many market participants have expressed doubt that the level of funds being committed to such facilities will be sufficient to resolve the crisis. There also appears to be a lack of political consensus in the Eurozone concerning whether and how to restructure sovereign debt, particularly Greek sovereign bonds. The consequences of any sovereign default would likely be severe and wide-reaching, and could include the removal of a Member State from the Eurozone, or even the abolition of the Euro. Such events could have adverse consequences on the market values of various securities, currencies and derivatives, and could create conditions of volatility and limited liquidity in various currency, securities and other markets.

Foreign securities include, among others, ADRs and similar investments, including CDRs, EDRs, GDRs, and IDRs. ADRs, CDRs, EDRs, GDRs, and IDRs are depositary receipts for foreign company stocks issued by a bank and held in trust at that bank, and which entitle the owner of such depositary receipts to any capital gains or dividends from the foreign company stocks underlying the depositary receipts. These securities may not necessarily be denominated in the same currency as the securities into which they may be converted. ADRs (sponsored or unsponsored) are receipts typically issued by a U.S. bank or trust company and traded on a U.S. stock exchange, and CDRs are receipts typically issued by a Canadian bank or trust company that evidence ownership of underlying foreign securities. Issuers of unsponsored ADRs are not contractually obligated to disclose material information in the U.S. and, therefore, such information may not correlate to the market value of the unsponsored ADR. EDRs and IDRs are receipts typically issued by European banks and trust companies, and GDRs are receipts issued by either a U.S. or non-U.S. banking institution, that evidence ownership of the underlying foreign securities. Generally, ADRs in registered form are designed for use in U.S. securities markets and EDRs and IDRs in bearer form are designed primarily for use in Europe.

Foreign securities also include securities denominated in currencies other than the U.S. dollar and may temporarily hold funds in bank deposits or other money market investments denominated in foreign currencies. Therefore, the Funds may be affected favorably or unfavorably by exchange control regulations or changes in the exchange rate between such currencies and the dollar.

Because a Fund may invest in securities denominated in currencies other than the U.S. dollar and may temporarily hold funds in bank deposits or other money market investments denominated in foreign currencies, it may be affected favorably or unfavorably by exchange control regulations or changes in the exchange rate between such currencies and the dollar. Changes in foreign currency exchange rates influence values within the Fund from the perspective of U.S. investors. The rate of exchange between the U.S. dollar and other currencies is determined by a wide range of political and economic factors, including the forces of supply and demand in the foreign exchange markets. The international balance of payments and other economic and financial conditions, government intervention and stability, speculation and other factors also affect exchange rates.

A Fund may engage in foreign currency transactions in order to hedge its portfolio and to protect it against possible variations in foreign exchange rates pending the settlement of securities transactions. If a fall in exchange rates for a particular currency is anticipated, a Fund may enter into a forward contract to protect against a decrease in the price of securities denominated in a particular currency a Fund intends to purchase. If it is anticipated that exchange rates will rise, a Fund may enter into a forward contract to protect against an increase in the price of securities denominated in a particular currency the Fund intends to purchase. These forward contracts will be used only as a hedge against anticipated currency rate changes. Although such contracts are intended to minimize the risk of loss due to a decline in the value of the hedged currency, at the same time, they tend to limit any potential gain which might result should the value of such currency increase.

Foreign currency transactions, such as forward foreign currency exchange contracts, are contracts for the future delivery of a specified currency at a specified time and at a specified price. These transactions differ from futures contracts in that they are

usually conducted on a principal basis instead of through an exchange, and therefore there are no brokerage fees, margin deposits are negotiated between the parties, and the contracts are settled through different procedures. The Adviser considers on an ongoing basis the creditworthiness of the institutions with which the Fund enters into foreign currency transactions.

The use of foreign currency transactions involves the risk of imperfect correlation between movements in futures prices and movements in the price of currencies which are the subject of the hedge. The successful use of foreign currency transactions strategies also depends on the ability of the adviser to correctly forecast interest rate movements, currency rate movements and general stock market price movements. There can be no assurance that the adviser's judgment will be accurate. The use of foreign currency transactions also exposes a Fund to the general risks of investing in futures contracts, including: the risk of an illiquid market for the foreign currency transactions and the risk of adverse regulatory actions. Any of these events may cause a Fund to be unable to hedge its securities, and may cause a Fund to lose money on its investments in foreign currency transactions. The Funds will either cover a position in such a transaction or maintain, in a segregated account with their custodian bank, cash or high-grade marketable money market securities having an aggregate value equal to the amount of any such commitment until payment is made.

EQUITY SECURITIES

Initial Public Offerings

Smaller companies may offer initial public offerings which typically have additional risks including more limited product lines, markets and financial resources than larger, more seasoned companies and their securities may trade less frequently and in more limited volume than those of larger, more mature companies.

Preferred Stock

Preferred stocks represent an equity or ownership interest in an issuer that pay dividends at a specified rate and that has precedence over common stock in the payment of dividends. In the event an issuer is liquidated or declares bankruptcy, the claims of owners of bond take precedence over the claims of those who own preferred securities and common stock.

Smaller Company Securities

Investments in smaller capitalization companies carry greater risk than investments in larger capitalization companies. Smaller capitalization companies generally experience higher growth rates and higher failure rates than do larger capitalization companies; and the trading volume of smaller capitalization companies' securities is normally lower than that of larger capitalization companies and, consequently, generally has a disproportionate effect on market price (tending to make prices rise more in response to buying demand and fall more in response to selling pressure).

Securities owned by a Fund that are traded in the over-the-counter market or on a regional securities exchange may not be traded every day or in the volume typical of securities trading on a national securities exchange. As a result, disposition by a Fund of a portfolio security, to meet redemption requests by other investors or otherwise, may require the Fund to sell these securities at a discount from market prices, to sell during periods when disposition is not desirable, or to make many small sales over a lengthy period of time.

Investments in smaller, less seasoned issuers generally carry greater risk than is customarily associated with larger, more seasoned companies. Such issuers often have products and management personnel that have not been tested by time or the marketplace and their financial resources may not be as substantial as those of more established companies. Their securities (which a Fund may purchase when they are offered to the public for the first time) may have a limited trading market that can adversely affect their sale by a Fund and can result in such securities being priced lower than otherwise might be the case. If other institutional investors were to engage in trading this type of security, a Fund may be forced to dispose of its holdings in this type of security at prices lower than might otherwise be obtained in the absence of institutional trading in such security.

OTHER INVESTMENTS AND TECHNIQUES

Borrowing

Money may be borrowed for temporary or emergency purposes, including the meeting of redemption requests. Borrowing involves special risk considerations. Interest costs on borrowings may fluctuate with changing market rates of interest and may partially offset or exceed the return earned on borrowed funds (or on the assets that were retained rather than sold to meet the needs for which funds were borrowed). Under adverse market conditions, a Fund might have to sell portfolio securities to meet interest or principal payments at a time when investment considerations would not favor such sales. Reverse repurchase agreements, dollar roll transactions and other similar investments that involve a form of leverage have characteristics similar to borrowings, but are not considered borrowings if the Fund maintains a segregated account.

Closed-End Investment Companies

A Fund may invest in the securities of closed-end investment companies that invest primarily in foreign securities. Because of restrictions on direct investment by U.S. entities in certain countries, other investment companies may provide the most practical or only way for the Fund to invest in certain markets.

A Fund will invest in such companies when, in the adviser's judgment, the potential benefits of the investment justify the payment of any applicable premium or sales charge. Other investment companies incur their own fees and expenses.

Forward Commitments, When-Issued and Delayed-Delivery Transactions

Securities may be purchased or sold on a when-issued or delayed-delivery basis and contracts to purchase or sell securities for a fixed price at a future date beyond customary settlement time may also be made. Delivery and payment on such transactions normally take place within 120 days after the date of the commitment to purchase. Securities purchased or sold on a when-issued, delayed-delivery or forward commitment basis involve a risk of loss if the value of the security to be purchased declines, or the value of the security to be sold increases, before the settlement date.

The Funds have a segregated account in which they may maintain cash, U.S. Government obligations or other high-quality debt instruments in an amount at least equal in value to each Fund's commitments to purchase when-issued securities. If the value of these assets declines, a Fund will place additional liquid assets in the account on a daily basis so that the value of the assets in the account is at least equal to the amount of such commitments.

Illiquid Securities

Securities not registered under the 1933 Act, and other securities subject to legal or other restrictions on resale may be less liquid than other investments and may be difficult to sell promptly at an acceptable price. Delay or difficulty in selling securities may result in a loss or be costly to a Fund. No Fund may invest or hold more than 15% of its net assets in illiquid securities.

Interest Rate Protection Transactions

To manage its exposure to different types of investments, the VT Index Allocation Fund may enter into interest-rate, currency and mortgage (or other asset) swap agreements and may purchase and sell interest-rate "caps," "floors" and "collars." In a typical interest-rate swap agreement, one party agrees to make regular payments equal to a floating interest rate on a specific amount in return for payments equal to a fixed interest rate on the same amount for a specified period. In a cap or floor, one party agrees, usually in return for a fee, to make payments under particular circumstances. A collar entitles the purchaser to receive payments to the extent a specified interest rate falls outside an agreed upon range.

Loans of Portfolio Securities

Portfolio securities of a Fund may be loaned pursuant to guidelines approved by the Board to brokers, dealers and financial institutions, provided: (i) the loan is secured continuously by collateral consisting of cash, securities of the U.S. Government, its agencies or instrumentalities, or an irrevocable letter of credit issued by a bank organized under the laws of the United States, organized under the laws of a state, or a foreign bank that has filed an agreement with the Federal Reserve Board to comply with the same rules and regulations applicable to U.S. banks in securities credit transactions, initially in an amount at least equal to 100% of the value of the loaned securities (which includes any accrued interest or dividends), with the borrower being obligated, under certain circumstances, to post additional collateral on a daily marked-to-market basis, all as described in further detail in the following paragraph; although the loans may not be fully supported at all times if, for example, the instruments in which cash collateral is invested decline in value or the borrower fails to provide additional collateral when required in a timely manner or at all; (ii) the Fund may at any time terminate the loan and request the return of the loaned securities upon sufficient prior notification; (iii) the Fund will receive any interest or distributions paid on the loaned securities; and (iv) the aggregate market value of loaned securities will not at any time exceed the limits established under the 1940 Act.

The following provides additional detail on the requirement described in (i) above. The market value of the collateral delivered in connection with a securities loan must be equal to at least 102% of the market value of any domestic securities loaned or 105% of the market value of any foreign securities loaned. The loaned securities are marked to market on a daily basis, and additional collateral is required to be paid to maintain coverage equal to at least 102% of the market value of domestic securities loaned, and at least 105% of the market value of foreign securities loaned, without taking into account any increase or decrease in the value of instruments in which cash collateral is invested. For loans of U.S. Government Securities, the initial collateral required is 102% of the market value of the loaned securities, but additional collateral is required only if the market value of the loaned securities

increases such that the collateral coverage (without taking into account any increase or decrease in the value of instruments in which the cash collateral is invested) falls below 100% of the market value of the loaned securities.

For lending its securities, a Fund will earn either a fee payable by the borrower (on loans that are collateralized by U.S. Government securities or a letter of credit) or the income on instruments purchased with cash collateral (after payment of a rebate fee to the borrower and a portion of the investment revenue to the securities lending agent). Cash collateral is invested on behalf of the Funds by the Funds' adviser in U.S. dollar-denominated short-term money market instruments that are permissible investments for the Fund and that, at the time of investment, are considered high-quality. Currently, cash collateral generated from securities lending is invested in shares of Wells Fargo Securities Lending Cash Investments, LLC (the "Cash Collateral Fund"). The Cash Collateral Fund is a Delaware limited liability company that is exempt from registration under the 1940 Act. The Cash Collateral Fund is managed by Wells Fargo Funds Management, LLC ("Funds Management") and is sub-advised by Wells Capital Management Incorporated ("Wells Capital Management"). The Cash Collateral Fund is required to comply with the credit quality, maturity and other limitations set forth in Rule 2a-7 under the 1940 Act. The Cash Collateral Fund seeks to provide preservation of principal and daily liquidity by investing in high-quality, U.S. dollar-denominated short-term money market instruments. The Cash Collateral Fund may invest in securities with fixed, variable, or floating rates of interest. The Cash Collateral Fund seeks to maintain a stable price per share of \$1.00, although there is no guarantee that this will be achieved. Income on shares of the Cash Collateral Fund is reinvested in shares of the Cash Collateral Fund. The investments of the Cash Collateral Fund are valued at amortized cost. The net asset value of a Fund will be affected by an increase or decrease in the value of the securities loaned by it, and by an increase or decrease in the value of instruments purchased with cash collateral received by it. Thus, the current net asset value of each Fund reflects the current valuations assigned to shares of the Cash Collateral Fund held on behalf of such Fund.

Loans of securities involve a risk that the borrower may fail to return the securities when due or when recalled by a Fund or may fail to provide additional collateral when required. In either case, a Fund could experience delays in recovering securities or could lose all or part of the value of the loaned securities. Although voting rights, or rights to consent, attendant to securities on loan pass to the borrower, loans may be recalled at any time and generally will be recalled if a material event affecting the investment is expected to be presented to a shareholder vote, so that the securities may be voted by the Fund.

Each lending Fund pays a portion of the income (net of rebate fees) or fees earned by it from securities lending to a securities lending agent. Goldman Sachs Bank USA, an unaffiliated third party doing business as Goldman Sachs Agency Lending, currently acts as securities lending agent for the Funds, subject to the overall supervision of the Funds' adviser.

Other Investment Companies

A Fund may invest in shares of other open-end and closed-end management investment companies up to the limits prescribed in Section 12(d) under the 1940 Act, subject to the fund's non-fundamental investment policies. Currently, under the 1940 Act, a fund that invests directly in a portfolio of securities is limited to, subject to certain exceptions: (i) 3% of the total voting stock of any one investment company; (ii) 5% of such fund's total assets with respect to any one investment company; and (iii) 10% of such fund's total assets.

Other investment companies in which the Fund invests can be expected to charge fees for operating expenses, such as investment advisory and administration fees, that would be in addition to those charged by the Fund. Other investment companies may include exchange-traded funds ("ETFs"), which are shares of publicly traded unit investment trusts, open-end funds or depositary receipts that seek to track the performance of specific indexes or companies in related industries. ETFs generally are subject to the same risks as the underlying securities the ETFs are designed to track and to the risks of the specific sector or industry tracked by the ETF. ETFs also are subject to the risk that their prices may not totally correlate to the prices of the underlying securities the ETFs are designed to track and the risk of possible trading halts due to market conditions or for other reasons. Although ETFs that track broad market indexes are typically large and their shares are fairly liquid, ETFs that track more specific indexes tend to be newer and smaller, and all ETFs have limited redemption features. Pursuant to certain exemptive relief granted by the SEC, the Fund's investments in certain ETFs may exceed certain of the limits described above.

Under the 1940 Act and rules and regulations thereunder, a Fund may purchase shares of other affiliated Funds, including the money market Funds, subject to certain conditions. Investing in affiliated Funds may present certain actual or potential conflicts of interest.

iShares. iShares Trust and iShares, Inc. ("iShares") are registered investment companies that consist of numerous separate series (each, an "iShares Fund"), each of which seeks investment results similar to the performance of a single stock market or of a group of stock markets in a single geographic location. iShares combine characteristics of stocks with those of index funds. Like stocks, iShares are liquid and can be traded in any number of shares; like index funds, they provide diversification and market tracking.

iShares trade on the American Stock Exchange, the Chicago Board of Options Exchange and the New York Stock Exchange in the same way as shares of a publicly held company.

Private Placement and Other Restricted Securities

Private placement securities are not registered under the 1933 Act. Private placements often may offer attractive opportunities for investment not otherwise available on the open market. However, private placement and other "restricted" securities typically cannot be resold without registration under the 1933 Act or the availability of an exemption from registration (such as Rules 144 or 144A (a "Rule 144A Security")), and may not be readily marketable.

Private placement and other restricted securities typically may be resold only to qualified institutional buyers, or in a privately negotiated transaction, or to a limited number of purchasers, or in limited quantities after they have been held for a specified period of time and other conditions are met for an exemption from registration. Investing in private placement and other restricted securities is subject to certain additional risks. They may be considered illiquid securities as they typically are subject to restrictions on resale as a matter of contract or under federal securities laws. Because there may be relatively few potential purchasers for such securities, especially under adverse market or economic conditions or in the event of adverse changes in the financial condition of the issuer, a Fund could find it more difficult to sell such securities when it may be advisable to do so or it may be able to sell such securities only at prices lower than if such securities were more widely held and traded. At times, it also may be more difficult to determine the fair value of such securities for purposes of computing a Fund's net asset value due to the absence of an active trading market. Delay or difficulty in selling such securities may result in a loss to a Fund. Restricted securities, including Rule 144A Securities, that are "illiquid" are subject to a Fund's policy of not investing or holding more than 15% of its net assets in illiquid securities. The adviser will evaluate the liquidity characteristics of each Rule 144A Security proposed for purchase by a Fund on a case-by-case basis and will consider the following factors, among others, in its evaluation: (i) the frequency of trades and quotes for the Rule 144A Security; (ii) the number of dealers willing to purchase or sell the Rule 144A Security and the number of other potential purchasers; (iii) dealer undertakings to make a market in the Rule 144A Security; and (iv) the nature of the Rule 144A Security and the nature of the marketplace trades (e.g., the time needed to dispose of the Rule 144A Security, the method of soliciting offers and the mechanics of transfer). The adviser will apply a similar process to evaluating the liquidity characteristics of other restricted securities. There can be no assurance that a restricted security that is deemed to be liquid when purchased will continue to be liquid for as long as it is held by a Fund.

Repurchase Agreements

Repurchase agreements are agreements wherein the seller of a security to a Fund agrees to repurchase that security from a Fund at a mutually agreed upon time and price. All repurchase agreements will be fully "collateralized," as defined under the 1940 Act. A Fund may enter into repurchase agreements only with respect to securities that could otherwise be purchased by such Fund. The maturities of the underlying securities in a repurchase agreement transaction may be greater than twelve months, although the maximum term of a repurchase agreement will always be less than twelve months. Repurchase agreements generally are subject to counterparty risk. If the seller defaults and the value of the underlying securities has declined, a Fund may incur a loss. In addition, if bankruptcy proceedings are commenced with respect to the seller of the security, a Fund's disposition of the underlying securities may be delayed or limited.

A Fund may not enter into a repurchase agreement with a maturity of more than seven days, if, as a result, more than 15% of the market value of such Fund's net assets would be invested in repurchase agreements with maturities of more than seven days, and other illiquid securities. A Fund will only enter into repurchase agreements with broker-dealers and commercial banks that meet guidelines established by the Board and that are not affiliated with the Fund's adviser. The Funds may participate in pooled repurchase agreement transactions with other funds advised by the adviser.

Reverse Repurchase Agreements

A reverse repurchase agreement is an agreement under which a Fund sells a portfolio security and agrees to repurchase it at an agreed-upon date and price. At the time a Fund enters into a reverse repurchase agreement, it will place in a segregated custodial account liquid assets such as U.S. Government securities or other liquid high-grade debt securities having a value equal to or greater than the repurchase price (including accrued interest) and will subsequently monitor the account to ensure that such value is maintained. Reverse repurchase agreements involve the risk that the market value of the securities sold by a Fund may decline below the price at which a Fund is obligated to repurchase the securities. In the event the buyer of securities under a reverse repurchase agreement files for bankruptcy or becomes insolvent, a Fund's use of proceeds of the agreement may be restricted pending a determination by the other party, or its trustee or receiver, whether to enforce a Fund's obligation to repurchase the securities. Reverse repurchase agreements may be viewed as a form of borrowing.

Short Sales

A short sale is a transaction in which a Fund sells a security it does not own in anticipation of a decline in market price. When a Fund makes a short sale, the proceeds it receives are retained by the broker until a Fund replaces the borrowed security. In order to deliver the security to the buyer, a Fund must arrange through a broker to borrow the security and, in so doing, a Fund becomes obligated to replace the security borrowed at its market price at the time of replacement, whatever that price may be. Short sales "against the box" means that a Fund owns the securities, which are placed in a segregated account until the transaction is closed out, or has the right to obtain securities equivalent in kind and amount to the securities sold short. A Fund's ability to enter into short sales transactions is limited by the requirements of the 1940 Act.

Short sales by a Fund that are not made "against the box" are limited to transactions in futures and options. Such transactions create opportunities to increase a Fund's return but, at the same time, involve special risk considerations and may be considered a speculative technique. Since a Fund in effect profits from a decline in the price of the futures or options sold short without the need to invest the full purchase price of the futures or options on the date of the short sale, a Fund's NAV per share will tend to increase more when the futures or options it has sold short decrease in value, and to decrease more when the futures or options it has sold short increase in value, than would otherwise be the case if it had not engaged in such short sales. Short sales theoretically involve unlimited loss potential, as the market price of futures or options sold short may continuously increase, although a Fund may mitigate such losses by replacing the futures or options sold short before the market price has increased significantly. Under adverse market conditions, a Fund might have difficulty purchasing futures or options to meet its short sale delivery obligations, and might have to sell portfolio securities to raise the capital necessary to meet its short sale obligations at a time when fundamental investment considerations would not favor such sales.

If a Fund makes a short sale "against the box," a Fund would not immediately deliver the securities sold and would not receive the proceeds from the sale. The seller is said to have a short position in the securities sold until it delivers the securities sold, at which time it receives the proceeds of the sale. A Fund's decision to make a short sale "against the box" may be a technique to hedge against market risks when the investment manager believes that the price of a security may decline, causing a decline in the value of a security owned by the Fund or a security convertible into or exchangeable for such security. In such case, any future losses in the Fund's long position would be reduced by a gain in the short position. Short sale transactions may have adverse tax consequences to the Fund and its shareholders.

In the view of the SEC, a short sale involves the creation of a "senior security" as such term is defined under the 1940 Act, unless the sale is "against the box" and the securities sold are placed in a segregated account (not with the broker), or unless the Fund's obligation to deliver the securities sold short is "covered" by segregating (not with the broker) cash, U.S. Government securities or other liquid debt or equity securities in an amount equal to the difference between the market value of the securities sold short at the time of the short sale and any cash or securities required to be deposited as collateral with a broker in connection with the sale (not including the proceeds from the short sale), which difference is adjusted daily for changes in the value of the securities sold short. The total value of the cash and securities deposited with the broker and otherwise segregated may not at any time be less than the market value of the securities sold short at the time of the short sale.

To avoid limitations under the 1940 Act on borrowing by investment companies, all short sales by a Fund will be "against the box," or the Fund's obligation to deliver the futures or options sold short not "against the box" will be "covered" by segregating cash, U.S. Government securities or other liquid debt or equity securities in an amount equal to the market value of its delivery obligation. A Fund will not make short sales of futures or options not "against the box" or maintain a short position if doing so could create liabilities or require collateral deposits and segregation of assets aggregating more than 25% of the value of the Fund's total assets.

Unrated Investments

A Fund may purchase instruments that are not rated if, in the opinion of the adviser, such obligations are of investment quality comparable to other rated investments that are permitted to be purchased by such Fund. After purchase by a Fund, a security may cease to be rated or its rating may be reduced below the minimum required for purchase by such Funds. Neither event will require a sale of such security by the Fund. To the extent the ratings given by Moody's, Fitch, or S&P may change as a result of changes in such organizations or their rating systems, a Fund will attempt to use comparable ratings as standards for investments in accordance with the investment policies contained in its Prospectus and in this SAI. The ratings of Moody's, Fitch, and S&P are more fully described in the section entitled "Credit Ratings."

Warrants

Warrants are instruments, typically issued with preferred stock or bonds, that give the holder the right to purchase a given number of shares of common stock at a specified price, usually during a specified period of time. The price usually represents a premium over the applicable market value of the common stock at the time of the warrant's issuance. Warrants have no voting rights with

respect to the common stock, receive no dividends and have no rights with respect to the assets of the issuer. Warrants do not pay a fixed dividend. Investments in warrants involve certain risks, including the possible lack of a liquid market for the resale of the warrants, potential price fluctuations as a result of speculation or other factors and failure of the price of the common stock to rise. A warrant becomes worthless if it is not exercised within the specified time period.

MANAGEMENT

The following information supplements, and should be read in conjunction with, the section in each Prospectus entitled "Organization and Management of the Funds."

General

The following table provides basic information about the Trustees and Officers of the Trust. Each of the Trustees and Officers listed below acts in identical capacities for the Wells Fargo Advantage family of funds which consists of, as of December 31, 2013, 132 series comprising the Trust, Wells Fargo Funds Trust, Wells Fargo Master Trust and four closed-end funds (collectively the "Fund Complex" or the "Trusts"). The business address of each Trustee and Officer is 525 Market Street, 12th Floor, San Francisco, CA 94105. Each Trustee and Officer serves an indefinite term, with the Trustees subject to retirement from service as required pursuant to the Trust's retirement policy at the end of the calendar year in which a Trustee turns 75.

Information for Trustees, all of whom are not "interested" persons of the Trust, as that term is defined under the 1940 Act ("Independent Trustees"), appears below. In addition to the Officers listed below, the Funds have appointed an Anti-Money Laundering Compliance Officer.

Name and Year of Birth	Position Held with Registrant/ Length of Service ¹	Principal Occupation(s) During Past 5 Years	Other Public Company or Investment Company Directorships During Past 5 Years
INDEPENDENT TRUSTEES			
Peter G. Gordon (Born 1942)	Trustee, since 1998, Chairman since 2005	Co-Founder, Retired Chairman, President and CEO of Crystal Geyser Water Company. Trustee Emeritus, Colby College.	Asset Allocation Trust
Isaiah Harris, Jr. (Born 1952)	Trustee, since 2009	Retired. Prior thereto, President and CEO of BellSouth Advertising and Publishing Corp. from 2005 to 2007, President and CEO of BellSouth Enterprises from 2004 to 2005 and President of BellSouth Consumer Services from 2000 to 2003. Emeritus member of the Iowa State University Foundation Board of Governors. Emeritus Member of the Advisory Board of Iowa State University School of Business. Advisory Board Member, Palm Harbor Academy (charter school). Mr. Harris is a certified public accountant.	CIGNA Corporation; Deluxe Corporation; Asset Allocation Trust
Judith M. Johnson (Born 1949)	Trustee, since 2008 Audit Committee Chairman, since 2008	Retired. Prior thereto, Chief Executive Officer and Chief Investment Officer of Minneapolis Employees Retirement Fund from 1996 to 2008. Ms. Johnson is an attorney, certified public accountant and a certified managerial accountant.	Asset Allocation Trust
Leroy Keith, Jr. (Born 1939)	Trustee, since 2010	Chairman, Bloc Global Services (development and construction). Trustee of the Evergreen Funds from 1983 to 2010. Former Managing Director, Almanac Capital Management (commodities firm), former Partner, Stonington Partners, Inc. (private equity fund), former Director, Obagi Medical Products Co. and former Director, Lincoln Educational Services.	Trustee, Virtus Fund Complex (consisting of 50 portfolios as of 12/16/13); Asset Allocation Trust

Name and Year of Birth	Position Held with Registrant/ Length of Service ¹	Principal Occupation(s) During Past 5 Years	Other Public Company or Investment Company Directorships During Past 5 Years
David F. Larcker (Born 1950)	Trustee, since 2009	James Irvin Miller Professor of Accounting at the Graduate School of Business, Stanford University, Morgan Stanley Director of the Center for Leadership Development and Research and Senior Faculty of The Rock Center for Corporate Governance since 2006. From 2005 to 2008, Professor of Accounting at the Graduate School of Business, Stanford University. Prior thereto, Ernst & Young Professor of Accounting at The Wharton School, University of Pennsylvania from 1985 to 2005.	Asset Allocation Trust
Olivia S. Mitchell (Born 1953)	Trustee, since 2006	International Foundation of Employee Benefit Plans Professor, Wharton School of the University of Pennsylvania since 1993. Director of Wharton's Pension Research Council and Boettner Center on Pensions & Retirement Research, and Research Associate at the National Bureau of Economic Research. Previously, Cornell University Professor from 1978 to 1993.	Asset Allocation Trust
Timothy J. Penny (Born 1951)	Trustee, since 1996	President and CEO of Southern Minnesota Initiative Foundation, a non-profit organization, since 2007 and Senior Fellow at the Humphrey Institute Policy Forum at the University of Minnesota since 1995. Member of the Board of Trustees of NorthStar Education Finance, Inc., a non-profit organization, since 2007.	Asset Allocation Trust
Michael S. Scofield (Born 1943)	Trustee, since 2010	Served on the Investment Company Institute's Board of Governors and Executive Committee from 2008-2011 as well the Governing Council of the Independent Directors Council from 2006-2011 and the Independent Directors Council Executive Committee from 2008-2011. Chairman of the IDC from 2008-2010. Institutional Investor (Fund Directions) Trustee of Year in 2007. Trustee of the Evergreen Funds (and its predecessors) from 1984 to 2010. Chairman of the Evergreen Funds from 2000-2010. Former Trustee of the Mentor Funds. Retired Attorney, Law Offices of Michael S. Scofield.	Asset Allocation Trust
Donald C. Willeke (Born 1940)	Trustee, since 1996	Principal of the law firm of Willeke & Daniels. General Counsel of the Minneapolis Employees Retirement Fund from 1984 until its consolidation into the Minnesota Public Employees Retirement Association on June 30, 2010. Director and Vice Chair of The Tree Trust (non-profit corporation). Director of the American Chestnut Foundation (non-profit corporation).	Asset Allocation Trust

Manager of Fund Reporting and Control for Evergreen Investment Management Company, LLC from 2004 to 2010.

The Trust's Declaration of Trust does not set forth any specific qualifications to serve as a Trustee other than that no person shall stand for initial election or appointment as a Trustee if such person has already reached the age of 72. The Charter and the Statement of Governance Principles of the Governance Committee also do not set forth any specific qualifications, but do set forth certain factors that the Governance Committee may take into account in considering Trustee candidates and a process for evaluating potential conflicts of interest, which identifies certain disqualifying conflicts. All of the current Trustees are Independent Trustees. Among the attributes or skills common to all Trustees are their ability to review critically, evaluate, question and discuss information provided to them, to interact effectively with the other Trustees, Funds Management, sub-advisers, other service providers, counsel and the independent registered public accounting firm, and to exercise effective and independent business judgment in the performance of their duties as Trustees. Each Trustee's ability to perform his or her duties effectively has been attained through the Trustee's business, consulting, public service, professional and/or academic positions and through experience from service as a board member of the Trust and the other Trusts in the Fund Complex (and/or in other capacities, including for any predecessor funds), other registered investment companies, public companies, or non-profit entities or other organizations as set forth below. Each Trustee's ability to perform his or her duties effectively also has been enhanced by his or her educational background, professional training, and/or other life experiences.

Peter G. Gordon. Mr. Gordon has been a Trustee since 1998, Chairman of the Board of Trustees since 2005, Chairman of the Governance Committee since 2005, and was the Lead Independent Trustee from 2001 through 2005, with respect to all of the Trusts in the Fund Complex. He has also served as a Trustee, Chairman of the Board of Trustees and Chairman of the Governance Committee of Asset Allocation Trust since 2010. In addition, he has over 30 years of executive and business experience as the co-founder, and retired Chairman, President and CEO of Crystal Geyser Water Company.

Isaiah Harris, Jr. Mr. Harris has served as a Trustee of the Trusts in the Fund Complex since 2009 and was an Advisory Board Member from 2008 to 2009. He has also served as a Trustee of Asset Allocation Trust since 2010. He has been the Chairman of the Board of CIGNA Corporation since 2009, and has been a director of CIGNA Corporation since 2005. He also has been a director of Deluxe Corporation since 2003. As a director of these and other public companies, he has served on board committees, including Governance, Audit and Compensation Committees. Mr. Harris served in senior executive positions, including as president, chief executive officer, vice president of finance and/or chief financial officer, of operating companies for approximately 20 years.

Judith M. Johnson. Ms. Johnson has served as a Trustee of the Trusts in the Fund Complex since 2008 and as Chair of the Audit Committee since 2009. She has also served as a Trustee and Chair of the Audit Committee of Asset Allocation Trust since 2010. She served as the Chief Executive Officer and Chief Investment Officer of the Minneapolis Employees Retirement Fund for twelve

years until her retirement in 2008. Ms. Johnson is a licensed attorney, as well as a certified public accountant and a certified managerial accountant. Ms. Johnson has been determined by the Board to be an audit committee financial expert as such term is defined in the applicable rules of the SEC.

Leroy Keith, Jr. Mr. Keith has served as a Trustee of the Trusts in the Fund Complex since 2010. He has also served as a Trustee of Asset Allocation Trust since 2005. He previously served as a Trustee of the Evergreen fund complex from 1983 to 2010. He is a Trustee of the Virtus fund complex, Former Managing Director of Almanac Capital Management, Former Director of Diversapack Co., Former Partner of Stonington Partners, Inc. and Former Director of Obagi Medical Products, Inc. He is also Chairman of Bloc Global Services, a development and constructions firm.

David F. Larcker. Mr. Larcker has served as a Trustee of the Trusts in the Fund Complex since 2009 and was an Advisory Board Member from 2008 to 2009. He has also served as a Trustee of Asset Allocation Trust since 2010. Mr. Larcker is the James Irvin Miller Professor of Accounting at the Graduate School of Business of Stanford University. He is also the Morgan Stanley Director of the Center for Leadership Development and Research and Co-director of The Rock Center for Corporate Governance at Stanford University. He has been a professor of accounting for over 30 years. He has written numerous articles on a range of topics, including managerial accounting, financial statement analysis and corporate governance.

Olivia S. Mitchell. Ms. Mitchell has served as a Trustee of the Trusts in the Fund Complex since 2006. She has also served as a Trustee of Asset Allocation Trust since 2010. Ms. Mitchell is the International Foundation of Employee Benefit Plans Professor at the Wharton School of the University of Pennsylvania, where she is also Professor of Insurance/Risk Management and Business Economics/Policy. She also serves in senior positions with academic and policy organizations that conduct research on pensions, retirement, insurance, risk management, and related topics including as Executive Director of the Pension Research Council and Director of the Boettner Center on Pensions and Retirement Research, both at the University of Pennsylvania. She has taught on and served as a consultant on economics, insurance, and risk management, served as Department Chair, advised numerous governmental entities, and written numerous articles and books on topics including retirement systems, private and social insurance, and health and retirement policy.

Timothy J. Penny. Mr. Penny has been a Trustee of the Trusts in the Fund Complex and their predecessor funds since 1996. He has also served as a Trustee of Asset Allocation Trust since 2010. He has been President and CEO of Southern Minnesota Initiative Foundation since 2007 and a Senior Fellow at the Humphrey Institute Policy Forum at the University of Minnesota since 1995. He also serves as a member of the board of another non-profit organization. Mr. Penny was a member of the U.S. House of Representatives for 12 years representing Southeastern Minnesota's First Congressional District.

Michael S. Scofield. Mr. Scofield has served as a Trustee of the Trusts in the Fund Complex since 2010. He has also served as a Trustee of Asset Allocation Trust since 2005. He previously served on the Investment Company Institute's Board of Governors and Executive Committee. Mr. Scofield previously served as a Trustee of the Evergreen fund complex from 1984 to 2010, where he served as Chairman of the Board. He also served as a member and former chairman of the Independent Directors Counsel, an organization dedicated to serving the independent investment company director community, and other leadership positions in the investment company industry. He previously worked as an attorney with the Law Offices of Michael S. Scofield.

Donald C. Willeke. Mr. Willeke has been a Trustee of the Trusts in the Fund Complex and their predecessor funds since 1996. He has also served as a Trustee of Asset Allocation Trust since 2010. He is an attorney in private practice and served as General Counsel of the Minneapolis Employees Retirement Fund for more than 25 years.

Board of Trustees - Leadership Structure and Oversight Responsibilities

Overall responsibility for oversight of the Trust and the Funds rests with the Board of Trustees. The Board has engaged Funds Management to manage the Funds on a day-to day basis. The Board is responsible for overseeing Funds Management and other service providers in the operation of the Trust in accordance with the provisions of the 1940 Act, applicable provisions of Delaware law, other applicable laws and the Fund's charter. The Board is currently composed of nine members, each of whom is an Independent Trustee. The Board currently conducts regular meetings five times a year. In addition, the Board holds special in-

person or telephonic meetings or informal conference calls to discuss specific matters that may arise or require action between regular meetings. The Independent Trustees have engaged independent legal counsel to assist them in performing their oversight responsibilities.

The Board has appointed an Independent Trustee to serve in the role of Chairman. The Chairman's role is to preside at all meetings of the Board and to act as a liaison with service providers, officers, attorneys, and other Trustees generally between meetings. The Chairman may also perform such other functions as may be delegated by the Board from time to time. In order to assist the Chairman in maintaining effective communications with the other Trustees and Funds Management, the Board has appointed a Chair Liaison to work with the Chairman to coordinate Trustee communications and to assure timely responses to Trustee inquiries, board governance and fiduciary matters. The Chair Liaison serves for a one-year term, which may be extended with the approval of the Board. Except for any duties specified herein or pursuant to the Trust's charter document, the designation of Chairman or Chair Liaison does not impose on such Independent Trustee any duties, obligations or liability that are greater than the duties, obligations or liability imposed on such person as a member of the Board generally.

The Board also has established a Governance Committee, an Audit Committee and a Dividend Committee to assist the Board in the oversight and direction of the business and affairs of the Trust, and from time to time may establish informal working groups to review and address the policies and practices of the Trust with respect to certain specified matters. Additionally, the Board has established investment teams to review in detail the performance of each of the Funds, in light of each Fund's investment objectives and strategies, to meet with portfolio managers, and to report back to the full Board. The Board occasionally engages independent consultants to assist it in evaluating initiatives or proposals. The Board believes that the Board's current leadership structure is appropriate because it allows the Board to exercise informed and independent judgment over matters under its purview, and it allocates areas of responsibility among committees of Trustees and the full Board in a manner that enhances effective oversight. The leadership structure of the Board may be changed, at any time and at the discretion of the Board, including in response to changes in circumstances or the characteristics of the Trust.

The Funds and Trusts are subject to a number of risks, including investment, compliance, operational, and valuation risks, among others. Day-to-day risk management functions are subsumed within the responsibilities of Funds Management, the subadvisers and other service providers (depending on the nature of the risk), who carry out the Funds' investment management and business affairs. Each of Funds Management, the sub-advisers and other service providers have their own, independent interest in risk management, and their policies and methods of carrying out risk management functions will depend, in part, on their individual priorities, resources and controls.

Risk oversight forms part of the Board's general oversight of the Funds and Trusts and is addressed as part of various Board and Committee activities. The Board recognizes that it is not possible to identify all of the risks that may affect a Fund or to develop processes and controls to eliminate or mitigate their occurrence or effects. As part of its regular oversight of the Trusts, the Board, directly or through a Committee, interacts with and reviews reports from, among others, Funds Management, subadvisers, the Chief Compliance Officer of the Funds, the independent registered public accounting firm for the Funds, and internal auditors for Funds Management or its affiliates, as appropriate, regarding risks faced by the Funds and relevant risk functions. The Board, with the assistance of its investment teams, reviews investment policies and risks in connection with its review of the Funds' performance. The Board has appointed a Chief Compliance Officer who oversees the implementation and testing of the Funds' compliance program and regularly reports to the Board regarding compliance matters for the Funds and their principal service providers. In addition, as part of the Board's periodic review of the Funds' advisory, subadvisory and other service provider agreements, the Board may consider risk management aspects of their operations and the functions for which they are responsible. With respect to valuation, the Board oversees a management valuation team comprised of officers of Funds Management, has approved and periodically reviews valuation policies and procedures applicable to valuing the Fund shares and has established a valuation committee of Trustees. The Board may, at any time and in its discretion, change the manner in which it conducts its risk oversight role.

Committees.

As noted above, the Board has established a standing Governance Committee, a standing Audit Committee, a standing Valuation Committee and a standing Dividend Committee to assist the Board in the oversight and direction of the business and affairs of the

Trust. Each such Committee operates pursuant to a charter approved by the Board and is chaired by an Independent Trustee. Each Independent Trustee is a member of the Trust's Governance Committee, Audit Committee and Valuation Committee.

(1) *Governance Committee.* Whenever a vacancy occurs on the Board, the Governance Committee is responsible for recommending to the Board persons to be appointed as Trustees by the Board, and persons to be nominated for election as Trustees in circumstances where a shareholder vote is required by or under the 1940 Act. Generally, the Governance Committee selects the candidates for consideration to fill Trustee vacancies, or considers candidates recommended by the other Trustees or by the Trust's management. Pursuant to the Trust's charter document, only Independent Trustees may nominate and select persons to become Independent Trustees for the Trust, so long as the Trust has in effect one or more plans pursuant to Rule 12b-1 under the 1940 Act. The Governance Committee meets only as necessary and met four times during the Fund's most recently completed fiscal year. Peter Gordon serves as the chairman of the Governance Committee.

The Governance Committee has adopted procedures by which a shareholder may properly submit a nominee recommendation for the Committee's consideration, which are set forth in the Trusts' Governance Committee Charter. The shareholder must submit any such recommendation (a "Shareholder Recommendation") in writing to the Trust, to the attention of the Trust's Secretary, at the address of the principal executive offices of the Trust. The Shareholder Recommendation must be delivered to, or mailed and received at, the principal executive offices of the Trust not less than forty-five calendar days nor more than seventy-five calendar days prior to the date of the Governance Committee meeting at which the nominee would be considered. The Shareholder Recommendation must include: (i) a statement in writing setting forth (A) the name, age, date of birth, business address, residence address, and nationality of the person recommended by the shareholder (the "candidate"), (B) the series (and, if applicable, class) and number of all shares of the Trust owned of record or beneficially by the candidate, as reported to such shareholder by the candidate; (C) any other information regarding the candidate called for with respect to director nominees by paragraphs (a), (d), (e), and (f) of Item 401 of Regulation S-K or paragraph (b) of Item 22 of Rule 14a-101 (Schedule 14A) under the Securities Exchange Act of 1934, as amended (the "Exchange Act"), adopted by the SEC (or the corresponding provisions of any regulation or rule subsequently adopted by the SEC or any successor agency applicable to the Trust); (D) any other information regarding the candidate that would be required to be disclosed if the candidate were a nominee in a proxy statement or other filing required to be made in connection with solicitation of proxies for election of directors pursuant to Section 14 of the Exchange Act and the rules and regulations promulgated thereunder; and (E) whether the recommending shareholder believes that the candidate is or will be an "interested person" of the Trust (as defined in the 1940 Act) and, if not an "interested person," information regarding the candidate that will be sufficient for the Trust to make such determination; (ii) the written and signed consent of the candidate to be named as a nominee and to serve as a Trustee if elected; (iii) the recommending shareholder's name as it appears on the Trust's books; (iv) the series (and, if applicable, class) and number of all shares of the Trust owned beneficially and of record by the recommending shareholder; and (v) a description of all arrangements or understandings between the recommending shareholder and the candidate and any other person or persons (including their names) pursuant to which the recommendation is being made by the recommending shareholder. In addition, the Governance Committee may require the candidate to interview in person or furnish such other information as it may reasonably require or deem necessary to determine the eligibility of such candidate to serve as a Trustee of the Trust. The Governance Committee has full discretion to reject nominees recommended by shareholders, and there is no assurance that any such person properly recommended and considered by the Committee will be nominated for election to the Board.

The Governance Committee may from time-to-time propose nominations of one or more individuals to serve as members of an "advisory board," as such term is defined in Section 2(a)(1) of the 1940 Act ("Advisory Trustees"). An individual may be eligible to serve as an Advisory Trustee only if that individual meets the requirements to be a "non-interested" Trustee under the 1940 Act and does not otherwise serve the Trust in any other capacity. Any Advisory Trustee shall serve at the pleasure of the Board and may be removed, at any time, with or without cause, by the Board. An Advisory Trustee may be nominated and elected as a Trustee, at which time he or she shall cease to be an Advisory Trustee. Advisory Trustees shall perform solely advisory functions. Unless otherwise specified by the Committee or the Board, Advisory Trustees are invited to attend meetings of the Board and all committees of the Board. Advisory Trustees shall participate in meeting discussions but do not have a vote upon any matter presented to the Board or any committee of the Board, nor do they have any power or authority to act on behalf of or to bind the Board, any committee of the Board or the Trust. Advisory Trustees shall not have any responsibilities or be subject to any liabilities imposed upon Trustees by law or otherwise. Advisory Trustees shall be entitled, to the maximum extent permitted by law, to be indemnified by the Trust and shall be covered by any liability insurance coverage that extends to Trustees and officers of the Trust.

Advisory Trustees shall be paid the same meeting fees payable to Trustees and shall have their expenses reimbursed in accordance with existing Board expense reimbursement policies. Advisory Trustees shall not receive any retainer fees.

(2) *Audit Committee.* The Audit Committee oversees the Funds' accounting and financial reporting policies and practices, reviews the results of the annual audits of the Funds' financial statements, and interacts with the Funds' independent registered public accounting firm on behalf of the full Board. The Audit Committee operates pursuant to a separate charter, and met seven times during the Fund's most recently completed fiscal year. Judith M. Johnson serves as the chairperson of the Audit Committee.

(3) *Valuation Committee.* The Board has delegated to the Valuation Committee the authority to take any necessary or appropriate action and address any issues regarding the valuation of Fund portfolio securities under the Trust's valuation procedures, including determining the fair value of securities between Board regularly scheduled meetings in instances where that determination has not otherwise been delegated to the valuation team ("Management Valuation Team") of Funds Management. The Board considers for ratification at each quarterly meeting any valuation actions taken by the Valuation Committee or the Management Valuation Team during the previous quarter that require ratification. Any one member of the Valuation Committee may constitute a quorum for a meeting of the committee. The Valuation Committee did not meet during the Fund's most recently completed fiscal year.

(4) *Dividend Committee.* The Board has delegated to the Dividend Committee the responsibility to review and approve certain dividend amount determinations made by a separate committee composed of representatives from Funds Management and certain sub-advisers ("Management Open-End Dividend Committee"). The Board also has delegated to the Management Open-End Dividend Committee the authority to determine periodic dividend amounts subject to certain Board-approved thresholds ("Thresholds") to be paid by each of the Emerging Markets Equity Income Fund, Emerging Markets Local Bond Fund, International Bond Fund, Inflation-Protected Bond Fund and Strategic Income Fund. To the extent the Management Open-End Dividend Committee makes a dividend amount determination that does exceeds the Thresholds, the Dividend Committee must review and approve such determination. The Dividend Committee is composed of three Independent Trustees and did not meet during the Funds' most recently completed fiscal year.

Compensation. The Trustees do not receive any retirement benefits or deferred compensation from the Trust or any other member of the Fund Complex. The Trust's Officers are not compensated by the Trust for their services. For the fiscal year ended December 31, 2013 the Trustees received the following compensation:

Trustee Compensation

Trustee	Compensation From the Fund	Total Compensation from the Fund Complex ¹
Peter G. Gordon	\$2,265	\$299,000
Isaiah Harris, Jr.	\$1,924	\$254,000
Judith M. Johnson	\$2,152	\$284,000
Leroy Keith, Jr.	\$1,924	\$254,000
David F. Larcker	\$1,913	\$252,500
Olivia S. Mitchell	\$1,924	\$254,000
Timothy J. Penny	\$1,970	\$260,000
Michael S. Scofield	\$1,924	\$254,000
Donald C. Willeke	\$1,924	\$254,000

¹ As of December 31, 2013, there were 132 funds in the Fund Complex.

Beneficial Equity Ownership Information. As of the calendar year ended December 31, 2013, the Trustees and Officers of the Trust, as a group, beneficially owned less than 1% of the outstanding shares of the Trust. The table below shows for each Trustee, the dollar value of the Funds' equity securities beneficially owned by the Trustee, and the aggregate value of all investments in equity securities of the Fund Complex, stated as one of the following ranges: \$0; \$1-\$10,000; \$10,001- \$50,000; \$50,001-\$100,000; and over \$100,000.

Beneficial Ownership

Trustee	Dollar Investment in Each Fund	Aggregate Dollar Range of Equity Securities of Fund Complex ¹
Peter G. Gordon	\$0	Over \$100,000
Isaiah Harris, Jr.	\$0	Over \$100,000
Judith M. Johnson	\$0	Over \$100,000
Leroy Keith, Jr.	\$0	Over \$100,000
David F. Larcker	\$0	Over \$100,000
Olivia S. Mitchell	\$0	Over \$100,000
Timothy J. Penny	\$0	Over \$100,000
Michael S. Scofield	\$0	Over \$100,000
Donald C. Willeke	\$0	Over \$100,000

¹ Includes Trustee ownership in shares of funds within the entire Wells Fargo Advantage Fund Complex (consisting of 132 funds) as of December 31, 2013.

Ownership of Securities of Certain Entities. As of the calendar year ended December 31, 2013, none of the Independent Trustees and/or their immediate family members owned securities of the adviser, any sub-advisers, or the distributor, or any entity directly or indirectly controlling, controlled by, or under common control with the adviser, any sub-advisers, or the distributor.

Adviser

Funds Management, an indirect wholly owned subsidiary of Wells Fargo & Company and an affiliate of Wells Fargo Bank, is the adviser for the Funds. Funds Management is responsible for implementing the investment policies and guidelines for the Funds, and for supervising the sub-advisers.

Wells Fargo & Company is a diversified financial services company providing banking, insurance, investments, mortgage and consumer financial services. The involvement of various subsidiaries of Wells Fargo & Company, including Funds Management, in the management and operation of the Fund and in providing other services or managing other accounts gives rise to certain actual and potential conflicts of interest.

For example, certain investments may be appropriate for a Fund and also for other clients advised by Funds Management and its affiliates, and there may be market or regulatory limits on the amount of such investments, which may cause competition for limited positions. Also, various clients and proprietary accounts of Funds Management and its affiliates may at times take positions that are adverse to a Fund. Funds Management applies various policies to address these situations, but a Fund may nonetheless incur losses or underperformance during periods when Wells Fargo & Company, its affiliates and their clients achieve gains or outperformance.

Wells Fargo & Company may have interests in or provide services to portfolio companies or Fund shareholders or intermediaries that may not be fully aligned with the interests of all investors. Funds Management and its affiliates serve in multiple roles, including as adviser and, for most *Wells Fargo Advantage Funds*, sub-adviser, as well as administrator and principal underwriter.

These are all considerations of which an investor should be aware and which may cause conflicts that could disadvantage a Fund. Funds Management has instituted business and compliance policies, procedures and disclosures that are designed to identify, monitor and mitigate such conflicts of interest.

As compensation for its advisory services, Funds Management is entitled to receive a monthly fee at the annual rates indicated below of each Fund's average daily net assets:

Fund	Fee	
VT Discovery Fund	First \$500 million	0.700%
	Next \$500 million	0.650%

General. Each Fund's Advisory Agreement will continue in effect provided the continuance is approved annually (i) by the holders of a majority of the respective Fund's outstanding voting securities or by the Board and (ii) by a majority of the Trustees who are not parties to the Advisory Agreement or "interested persons" (as defined under the 1940 Act) of any such party. A Fund's Advisory Agreement may be terminated on 60 days' written notice by either party and will terminate automatically if assigned.

Sub-Adviser(s)

Funds Management has engaged Metropolitan West Capital Management, LLC (MWCM), a subsidiary of Wells Fargo & Company, and Wells Capital Management Incorporated ("Wells Capital Management"), an affiliate of Funds Management, to serve as investment sub-adviser to the Funds (each, a "Sub-Adviser" and, collectively, the "Sub-Advisers"). Subject to the direction of the Trust's Board and the overall supervision and control of Funds Management and the Trust, the Sub-Advisers make decisions with respect to all purchases and sales of securities and other investment assets for the Funds. The Sub-Advisers furnish to the Board and Funds Management periodic reports on the investment activity and performance of the Funds. The Sub-Advisers also furnish such additional reports and information as Funds Management and the Trust's Board and Officers may reasonably request. Subject to the Board's approval, Funds Management may, from time to time and in its sole discretion, allocate and reallocate services provided by and fees paid to the Sub-Advisers.

For providing investment sub-advisory services to the Funds, the Sub-Advisers are entitled to receive monthly fees at the annual rates indicated below of each Fund's average daily net assets. These fees may be paid by Funds Management or directly by the Funds. If a sub-advisory fee is paid directly by a Fund, the compensation paid to Funds Management for advisory fees will be reduced accordingly.

Fund	Sub-Adviser	Fee

General. Each Fund's Sub-Advisory Agreement will continue in effect provided the continuance is approved annually (i) by the holders of a majority of the respective Fund's outstanding voting securities or (ii) by the Trust's Board, including a majority of the Trustees of the Trust who are not parties to the Sub-Advisory Agreement or "interested persons" (as defined under the 1940 Act) of any such party.

Portfolio Managers

The following information supplements, and should be read in conjunction with, the section in each Prospectus entitled "Portfolio Managers." The information in this section is provided as of December 31, 2013, the most recent fiscal year end for the Funds managed by the portfolio managers listed below (each, a "Portfolio Manager" and, together, the "Portfolio Managers"). The Portfolio Managers manage the investment activities of the Funds on a day-to-day basis as follows:

Fund	Sub-Adviser	Portfolio Managers
VT Discovery Fund	Wells Capital Management	Thomas J. Pence, CFA Michael T. Smith, CFA Christopher J. Warner, CFA
VT Index Asset Allocation Fund	Wells Capital Management	Kandarp Acharya, CFA, FRM Christian Chan, CFA

Material Conflicts of Interest. The Portfolio Managers face inherent conflicts of interest in their day-to-day management of the Funds and other accounts because the Funds may have different investment objectives, strategies and risk profiles than the other accounts managed by the Portfolio Managers. For instance, to the extent that the Portfolio Managers manage accounts with different investment strategies than the Funds, they may from time to time be inclined to purchase securities, including initial public offerings, for one account but not for a Fund. Additionally, some of the accounts managed by the Portfolio Managers may have different fee structures, including performance fees, which are or have the potential to be higher or lower, in some cases significantly higher or lower, than the fees paid by the Funds. The differences in fee structures may provide an incentive to the Portfolio Managers to allocate more favorable trades to the higher-paying accounts.

To minimize the effects of these inherent conflicts of interest, the Sub-Advisers has adopted and implemented policies and procedures, including brokerage and trade allocation policies and procedures, that it believes address the potential conflicts associated with managing portfolios for multiple clients and are designed to ensure that all clients are treated fairly and equitably. Accordingly, security block purchases are allocated to all accounts with similar objectives in a fair and equitable manner. Furthermore, the Sub-Advisers have adopted a Code of Ethics under Rule 17j-1 of the 1940 Act and Rule 204A-1 under the Investment Advisers Act of 1940 (the "Advisers Act") to address potential conflicts associated with managing the Funds and any personal accounts the Portfolio Managers may maintain.

Wells Capital Management. Wells Capital Management's Portfolio Managers often provide investment management for separate accounts advised in the same or similar investment style as that provided to mutual funds. While management of multiple accounts could potentially lead to conflicts of interest over various issues such as trade allocation, fee disparities and research acquisition, Wells Capital Management has implemented policies and procedures for the express purpose of ensuring that clients are treated fairly and that potential conflicts of interest are minimized.

MWCM. MWCM portfolio managers face inherent conflicts of interest in their day-to-day management of funds and other accounts because the funds may have different investment objectives, strategies and risk profiles than the other accounts managed by the portfolio managers. For instance, to the extent that the portfolio managers manage accounts with different investment strategies than the funds, they may from time to time be inclined to purchase securities, including initial public offerings, for one account but not for a fund. Additionally, some of the accounts managed by the portfolio managers may have different fee structures, including performance fees, which are or have the potential to be higher or lower, in some cases significantly higher or lower, than the fees paid by the funds. The differences in fee structures may provide an incentive to the portfolio managers to allocate more favorable trades to the higher-paying accounts.

To minimize the effects of these inherent conflicts of interest, MWCM has adopted and implemented policies and procedures, including brokerage and trade allocation policies and procedures, that it believes address the potential conflicts associated with managing portfolios for multiple clients and ensure that all clients are treated fairly and equitably. Additionally, MWCM minimizes inherent conflicts of interest by assigning the portfolio managers to accounts having similar objectives. Accordingly, security block purchases are allocated to all accounts with similar objectives in proportionate weightings. Furthermore, MWCM has adopted a Code of Ethics under Rule 17j-1 of the 1940 Act and Rule 204A-1 under the Advisers Act to address potential conflicts associated with managing the funds and any personal accounts the portfolio managers may maintain.

The Portfolio Managers often provide investment management for separate accounts advised in the same or similar investment style as that provided to mutual funds. While management of multiple accounts could potentially lead to conflicts of interest over various issues such as trade allocation, fee disparities and research acquisition, MWCM has implemented policies and procedures for the express purpose of ensuring that clients are treated fairly and that potential conflicts of interest are minimized.

Compensation. The Portfolio Managers were compensated by the Sub-Adviser from the fees Funds Management paid the Sub-Adviser using the following compensation structure:

Wells Capital Management Compensation. The compensation structure for Wells Capital Management's Portfolio Managers includes a competitive fixed base salary plus variable incentives (Wells Capital Management utilizes investment management compensation surveys as confirmation). Incentive bonuses are typically tied to relative investment performance of all accounts under his or her management within acceptable risk parameters. Relative investment performance is generally evaluated for 1-, 3-, and 5-year performance results, with a predominant weighting on the 3- and 5- year time periods, versus the relevant benchmarks and/or peer groups consistent with the investment style. This evaluation takes into account relative performance of the accounts to each account's individual benchmark and/or the relative composite performance of all accounts to one or more relevant benchmarks consistent with the overall investment style. In the case of each Fund, the benchmark(s) against which the performance of the Fund's portfolio may be compared for these purposes generally are indicated in the "Performance" sections of the Prospectuses.

MWCM. Compensation for investment professionals consists of a base salary and revenue-sharing bonus. A material portion of each professional's annual compensation is in the form of a bonus tied to firm revenues, results relative to clients' benchmarks, overall client satisfaction and individual contribution.

MWCM's compensation system is not determined on an account-specific basis. Rather, bonuses are tied to overall firm revenues and composite performance relative to the benchmark. To reinforce long-term focus, performance is measured over longer time periods (typically three to five years). Portfolio Managers and Analysts are encouraged to maintain a long-term focus and are not compensated for the number of their recommendations that are purchased in the portfolio. Rather, their bonuses are tied to overall strategy performance.

Long-term retention agreements have been put in place for eligible members of MWCM's investment team. These agreements augment those incentive opportunities already in place.

Beneficial Ownership in the Funds. None of the Portfolio Managers of the Funds beneficially owned shares of the Fund(s) they manage.

Administrator

The Trust has retained Funds Management, the adviser for the Funds, located at 525 Market Street, 12th Floor, San Francisco, CA 94105, as administrator on behalf of the Funds pursuant to an Administration Agreement. Under the Administration Agreement with the Trust, Funds Management provides, among other things: (i) general supervision of the Funds' operations, including communication, coordination, and supervision services with regard to the Funds' transfer agent, custodian, fund accountant and other service organizations that render record-keeping or shareholder communication services; (ii) coordination of the preparation and filing of reports and other information materials regarding the Funds, including prospectuses, proxies and other shareholder communications; (iii) development and implementation of procedures for monitoring compliance with regulatory requirements and compliance with the Funds' investment objectives, policies and restrictions; and (iv) any other administrative services reasonably necessary for the operation of the Funds other than those services that are provided by the Funds' transfer agent, custodian, and fund accountant. Funds Management also furnishes office space and certain facilities required for conducting the Funds' business together with ordinary clerical and bookkeeping services.

In addition, Funds Management has agreed to pay all of the Funds' fees and expenses for services provided by the Funds' transfer agent and various sub-transfer agents and omnibus account servicers and record-keepers out of the fees it receives as administrator. For providing administrative services, including paying the Funds' fees and expenses for services provided by the Funds' transfer agent and various sub-transfer agents and omnibus account servicers and record-keepers, Funds Management is entitled to receive an annual fee at the rates indicated below, as a percentage of each Fund's average daily net assets:

	Total Administrative Services Fee
First \$5 Billion	0.13%
Next \$5 Billion	0.12%
Over \$10 Billion	0.11%

Administrative Fees Paid. Below are the aggregate administrative fees paid by the Fund and the aggregate administrative fees waived by the Administrator for the last three fiscal years or periods.

Distributor

Wells Fargo Funds Distributor, LLC (the "Distributor"), an affiliate of Funds Management located at 525 Market Street, San Francisco, California 94105, serves as the distributor to the Funds.

The Funds have adopted a distribution plan (a "Plan") under Section 12(b) of the 1940 Act and Rule 12b-1 thereunder (the "Rule") for their shares. The Plan was adopted by the Board, including a majority of the Independent Trustees who had no direct or indirect financial interest in the operation of the Plan or in any agreement related to the Plan.

Under the Plan and pursuant to the related Distribution Agreement, the Class 2 shares of these Funds pay the Distributor, on a monthly basis, an annual fee of up to 0.25% of the average daily net assets attributable to the Class as compensation for distribution related services or as reimbursement for distribution-related expenses.

The actual fee payable to the Distributor by these Funds is determined, within such limit, from time to time by mutual agreement between the Trust and the Distributor and will not exceed the maximum sales charges payable by mutual funds sold by members of the Financial Industry Regulatory Authority ("FINRA") under the Conduct Rules of the National Association of Securities Dealers. The Distributor may enter into selling agreements with one or more broker-dealers under which such broker-dealers may receive compensation for distribution-related services from the Distributor, including, but not limited to, commissions or other payments to such agents based on the average daily net assets of Fund shares attributable to their customers. The Trustees believe that these relationships and distribution channels provide potential for increased Fund assets and ultimately corresponding economic efficiencies (i.e., lower per-share transaction costs and fixed expenses) that are generated by increased assets under management. In addition to payments received from the Fund, selling or servicing agents may receive significant additional payments directly from Funds Management in connection with the sale of Fund shares. The Distributor may retain any portion of the total distribution fee payable thereunder to compensate it for distribution-related services provided by it or to reimburse it for other distribution-related expenses.

For the fiscal period ended December 31, 2013, the Funds paid the Distributor the following fees for distribution-related services. The Distributor's distribution-related revenues from the Plan may be more or less than distribution-related expenses incurred during the period. As a result, the compensation paid to broker/dealers by the Distributor may exceed the compensation paid to the Distributor by the Fund.

Class 2	\$227,877	\$9,717	\$218,160

General. The Plan will continue in effect from year to year if such continuance is approved by a majority vote of both the Trustees of the Trust and the Independent Trustees. Any Distribution Agreement related to the Plan also must be approved by such vote of the Trustees and the Independent Trustees. Such agreement will terminate automatically if assigned, and may be terminated at any time, without payment of any penalty, by a vote of a majority of the outstanding voting securities of the relevant class of a Fund or by vote of a majority of the Independent Trustees on not more than 60 days written notice. The Plan may not be amended to increase materially the amounts payable thereunder without the approval of a majority of the outstanding voting securities of a Fund, and no material amendment to the Plan may be made except by a majority of both the Trustees and the Independent Trustees.

The Plan provides that the Treasurer of the Trust shall provide to the Trustees, and the Trustees shall review, at least quarterly, a written report of the amounts expended (and purposes therefore) under the Plan. The Rule also requires that the selection and nomination of Trustees who are not "interested persons" of the Trust be made by such Independent Trustees.

Custodian and Fund Accountant

State Street Bank and Trust Company ("State Street"), located at State Street Financial Center, One Lincoln Street, Boston, Massachusetts 02111, acts as Custodian and fund accountant for the Fund. As Custodian, State Street, among other things, maintains a custody account or accounts in the name of the Fund, handles the receipt and delivery of securities, selects and monitors foreign sub custodians as the Fund's global custody manager, determines income and collects interest on the Fund's investments and maintains certain books and records. As fund accountant, State Street is responsible for calculating the Fund's daily net asset value per share and for maintaining its portfolio and general accounting records. For its services, State Street is entitled to receive certain transaction fees, asset-based fees and out-of-pocket costs.

Transfer and Distribution Disbursing Agent

Boston Financial Data Services, Inc. ("BFDS"), located at Two Thousand Crown Colony Drive, Quincy, Massachusetts 02169, acts as transfer and distribution disbursing agent for the Funds. For providing such services, BFDS is entitled to receive fees from the Administrator.

Underwriting Commissions

The Distributor serves as the principal underwriter distributing securities of the Funds on a continuous basis.

For the fiscal periods listed below, the aggregate amounts of underwriting commissions paid to and retained by the Distributor are as follows:

Underwriting Commissions

Fund/Fiscal Year or Period	Aggregate Total Underwriting Commissions		Underwriting Commissions Retained

Code of Ethics

The Fund Complex, Funds Management, the Distributor and the Sub-Advisers each has adopted a code of ethics which contains policies on personal securities transactions by "access persons" as defined in each of the codes. These policies comply with Rule 17j-1 under the 1940 Act and Rule 204A-1 under the Advisers Act, as applicable. Each code of ethics, among other things, permits access persons to invest in certain securities, subject to various restrictions and requirements. To facilitate enforcement, the codes of ethics generally require that an access person submit reports to a designated compliance person regarding personal securities transactions. The codes of ethics for the Fund Complex, the Adviser, the Distributor and the Sub-Advisers are on public file with, and are available from, the SEC.

DETERMINATION OF NET ASSET VALUE

The NAV per share for each Fund is determined as of the close of regular trading (currently 4:00 p.m. (Eastern time)) on each day the New York Stock Exchange ("NYSE") is open for business. Expenses and fees, including advisory fees, are accrued daily and are taken into account for the purpose of determining the NAV of each Fund's shares.

Each Fund's investments are generally valued at current market prices. Securities are generally valued based on the last sales price during the regular trading session if the security trades on an exchange ("closing price"). Securities that are not traded primarily on an exchange generally are valued using latest quoted bid prices obtained by an independent pricing service. Securities listed on the Nasdaq Stock Market, Inc., however, are valued at the Nasdaq Official Closing Price ("NOCP"), and if no NOCP is available, then at the last reported sales price. A Fund is required to depart from these general valuation methods and use fair value pricing methods to determine the value of certain investments if it is determined that the closing price or the latest quoted bid price of a security, including securities that trade primarily on a foreign exchange, does not accurately reflect its current value when the Fund calculates its NAV. In addition, we also use fair value pricing to determine the value of investments in securities and other assets, including illiquid securities, for which current market quotations are not readily available. The closing price or the latest quoted bid price of a security may not reflect its current value if, among other things, a significant event occurs after the closing price or latest quoted bid price but before a Fund calculates its NAV that materially affects the value of the security. We use various criteria, including a systematic evaluation of U.S. market moves after the close of foreign markets, in deciding whether a foreign security's market price is still reliable and, if not, what fair market value to assign to the security. With respect to any portion of a Fund's assets that are invested in other mutual funds, the Fund's NAV is calculated based upon the net asset values of the other mutual funds in which the Fund invests, and the prospectuses for those companies explain the circumstances under which those companies will use fair value pricing and the effects of using fair value pricing. In light of the judgment involved in fair value decisions, there can be no assurance that a fair value assigned to a particular security is accurate. Such fair value pricing may result in NAVs that are higher or lower than NAVs based on the closing price or latest quoted bid price.

The VT International Equity Fund uses an independent service provider to review U.S. market moves after the close of foreign markets and assist with the decision whether to substitute fair values for foreign security market prices. This service provider applies a multi-factor methodology, which uses factors such as ADRs, sector indices and futures, to each foreign portfolio security as part of this process.

Money market instruments and debt instruments maturing in 60 days or less generally are valued at amortized cost. Futures contracts will be marked to market daily at their respective settlement prices determined by the relevant exchange. Prices may be furnished by a reputable independent pricing service. Prices provided by an independent pricing service may be determined without exclusive reliance on quoted prices and may take into account appropriate factors such as institutional-size trading in similar groups of securities, yield, quality, coupon rate, maturity, type of issue, trading characteristics and other market data.

ADDITIONAL PURCHASE AND REDEMPTION INFORMATION

Shares of the Funds may be purchased on any day a Fund is open for business. Generally, each Fund is open for business each day the NYSE is open for trading (a "Business Day"). The NYSE is currently scheduled to be closed in observance of New Year's Day, Martin Luther King Jr. Day, Washington's Birthday, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day, and Christmas Day (each a "Holiday"). When any Holiday falls on a weekend, the NYSE typically is closed on the weekday immediately before or after such Holiday.

Purchase orders for a Fund received before such Fund's NAV calculation time, generally are processed at such time on that Business Day. Purchase orders received after a Fund's NAV calculation time generally are processed at such Fund's NAV calculation time on the next Business Day. Selling Agents may establish earlier cut-off times for processing your order. Requests received by a Selling Agent after the applicable cut-off time will be processed on the next Business Day. On any day the NYSE closes early, the Funds will close early. On these days, the NAV calculation time and the distribution, purchase and redemption cut-off times for the Funds may be earlier than their stated NAV calculation time described above.

Payment for shares may, in the discretion of the Adviser, be made in the form of securities that are permissible investments for the Fund. For further information about this form of payment, please contact the Distributor. In connection with an in-kind securities payment, the Funds will require, among other things, that the securities be valued on the day of purchase in accordance with the pricing methods used by a Fund and that such Fund receives satisfactory assurances that (i) it will have good and marketable title

to the securities received by it; (ii) that the securities are in proper form for transfer to the Fund; and (iii) adequate information will be provided concerning the basis and other matters relating to the securities.

Each Fund reserves the right to reject any purchase orders, and under the 1940 Act, may suspend the right of redemption or postpone the date of payment upon redemption for any period during which the NYSE is closed (other than customary weekend and holiday closings), or during which trading is restricted, or during which, as determined by SEC rule, regulation or order, an emergency exists as a result of which disposal or valuation of portfolio securities is not reasonably practicable, or for such periods as the SEC may permit. The Fund may also redeem shares involuntarily or make payment for redemption in securities or other property if it appears appropriate to do so in light of the Fund's responsibilities under the 1940 Act. In addition, the Fund may redeem shares involuntarily to reimburse the Fund for any losses sustained by reason of the failure of a shareholder to make full payment for shares purchased or to collect any charge relating to a transaction effected for the benefit of a shareholder which is applicable to shares of the Fund as provided from time to time in the Prospectuses.

Investors Eligible to Purchase the VT Small Cap Growth Fund. The VT Small Cap Growth Fund is closed to new investors. However, insurance companies that are parties to existing participation agreements as well as insurance companies that are parties to new participation agreements entered into with Funds Management in order to effect a merger will be allowed to continue to add new investors.

Investors Eligible to Purchase the VT Discovery Fund. The VT Discovery Fund is closed to new investors. However, insurance companies that are parties to existing participation agreements will be allowed to add new investors and insurance companies that enter into new participation agreements with Funds Management in order to effect a merger with VT Discovery Fund will be allowed to continue to add new investors.

Compensation to Insurance Companies. Set forth below is a list of the insurance companies and their affiliates to which Funds Management made payments out of its revenues in connection with certain administrative services provided by such insurance companies during the year ended December 31, 2013 ("Additional Payments"). (Such payments are in addition to any amounts paid by Class 2 shares of the Funds to such insurance companies in the form of fees for distribution-related services. The Additional Payments are discussed in further detail in the Prospectuses under the title "Additional Payments to Insurance Companies"). Any additions, modifications, or deletions to the member firms identified in this list that have occurred since December 31, 2013, are not reflected:

- Fidelity Investments Life Insurance Company
- First Great-West Life & Annuity Insurance Company
- First Security Benefit Life Insurance and Annuity Company of New York
- Great-West Life & Annuity Insurance Company
- The Guardian Insurance & Annuity Company, Inc.
- Hartford Life and Annuity Insurance Company
- Hartford Life Insurance Company
- Jefferson National Life Insurance Company
- The Lincoln National Life Insurance Company
- Nationwide Financial Services, Inc.
- Pruco Life Insurance Company
- Pruco Life Insurance Company of New Jersey
- Prudential Annuities Life Assurance Corporation
- Riversource Life Insurance Company
- Riversource Life Insurance Co. of New York
- MetLife Insurance Company of Connecticut
- Metropolitan Life Insurance Company
- Security Benefit Life Insurance Company
- Sun Life Assurance Company of Canada (U.S.)
- Sun Life Insurance and Annuity Company of New York

PORTFOLIO TRANSACTIONS

The Trust has no obligation to deal with any broker-dealer or group of broker-dealers in the execution of transactions in portfolio securities. Subject to the supervision of the Trust's Board and the supervision of the Adviser, the Sub-Advisers are responsible for the Funds' portfolio decisions and the placing of portfolio transactions. In placing orders, it is the policy of the Sub-Advisers to seek to obtain the best overall results taking into account various factors, including, but not limited to, the size and type of transaction involved; the broker-dealer's risk in positioning the securities involved; the nature and character of the market for the security; the confidentiality, speed and certainty of effective execution required for the transaction, the general execution and operational capabilities of the broker-dealer; the reputation, reliability, experience and financial condition of the firm, the value and quality of the services rendered by the firm in this and other transactions; and the reasonableness of the spread or commission. While the Sub-Advisers generally seek reasonably competitive spreads or commissions, the Funds will not necessarily be paying the lowest spread or commission available.

Purchases and sales of equity securities on a securities exchange are effected through broker-dealers who charge a negotiated commission for their services. Orders may be directed to any broker-dealer including, to the extent and in the manner permitted by applicable law, affiliated broker-dealers. However, the Funds and Funds Management have adopted a policy pursuant to Rule 12b-1(h) under the 1940 Act that prohibits the Funds from directing portfolio brokerage to brokers who sell Fund shares as compensation for such selling efforts. In the over-the-counter market, securities are generally traded on a "net" basis with broker-dealers acting as principal for their own accounts without a stated commission, although the price of the security usually includes a profit to the broker-dealer. In underwritten offerings, securities are purchased at a fixed price that includes an amount of compensation to the underwriter, generally referred to as the underwriter's concession or discount.

Purchases and sales of non-equity securities usually will be principal transactions. Portfolio securities normally will be purchased or sold from or to broker-dealers serving as market makers for the securities at a net price. The Funds also will purchase portfolio securities in underwritten offerings and may purchase securities directly from the issuer. Generally, municipal obligations and taxable money market securities are traded on a net basis and do not involve brokerage commissions. The cost of executing a Fund's portfolio securities transactions will consist primarily of broker-dealer spreads and underwriting commissions. Under the 1940 Act, persons affiliated with the Trust are prohibited from dealing with the Trust as a principal in the purchase and sale of securities unless an exemptive order allowing such transactions is obtained from the SEC or an exemption is otherwise available. A Fund may purchase securities from underwriting syndicates of which the Distributor or Funds Management is a member under certain conditions in accordance with the provisions of a rule adopted under the 1940 Act and in compliance with procedures adopted by the Trustees.

In placing orders for portfolio securities of a Fund, the Fund's Sub-Adviser is required to give primary consideration to obtaining the most favorable price and efficient execution. This means that the Sub-Adviser will seek to execute each transaction at a price and commission, if any, that provide the most favorable total cost or proceeds reasonably attainable in the circumstances. Commission rates are established pursuant to negotiations with the broker-dealer based, in part, on the quality and quantity of execution services provided by the broker-dealer and in the light of generally prevailing rates. Furthermore, the Adviser oversees the trade execution procedures of the Sub-Adviser to ensure that such procedures are in place, that they are adhered to, and that adjustments are made to the procedures to address ongoing changes in the marketplace.

A Sub-Adviser may, in circumstances in which two or more broker-dealers are in a position to offer comparable results for a portfolio transaction, give preference to a broker-dealer that has provided statistical or other research services to the Sub-Adviser. In selecting a broker-dealer under these circumstances, the Sub-Adviser will consider, in addition to the factors listed above, the quality of the research provided by the broker-dealer.

A Sub-Adviser may pay higher commissions than those obtainable from other broker-dealers in exchange for such research services. The research services generally include: (1) furnishing advice as to the value of securities, the advisability of investing in, purchasing, or selling securities, and the advisability of securities or purchasers or sellers of securities; (2) furnishing analyses and reports concerning issuers, industries, securities, economic factors and trends, portfolio strategy, and the performance of accounts; and (3) effecting securities transactions and performing functions incidental thereto. By allocating transactions in this manner, a Sub-Adviser is able to supplement its research and analysis with the views and information of securities firms. Information so received will be in addition to, and not in lieu of, the services required to be performed by the Sub-Adviser under the advisory contracts, and the expenses of the Sub-Adviser will not necessarily be reduced as a result of the receipt of this supplemental research information. Furthermore, research services furnished by broker-dealers through which a sub-adviser places securities transactions

for a Fund may be used by the Sub-Adviser in servicing its other accounts, and not all of these services may be used by the Sub-Adviser in connection with advising the Funds.

Portfolio Turnover. The portfolio turnover rate is not a limiting factor when a Sub-Adviser deems portfolio changes appropriate. Changes may be made in the portfolios consistent with the investment objectives and policies of the Fund's whenever such changes are believed to be in the best interests of the Funds and their shareholders. The portfolio turnover rate is calculated by dividing the lesser of purchases or sales of portfolio securities by the average monthly value of a Fund's portfolio securities. For purposes of this calculation, portfolio securities exclude all securities having a maturity when purchased of one year or less. Portfolio turnover generally involves some expenses to the Funds, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and the reinvestment in other securities. Portfolio turnover may also result in adverse tax consequences to a Fund's shareholders.

The table below shows the Fund's portfolio turnover rates for the two most recent fiscal years:

Fund	December 31, 2013	December 31, 2012
VT Discovery Fund	88%	98%
VT Index Asset Allocation Fund	11%	8%
VT International Equity Fund	32%	140%
VT Intrinsic Value Fund	22%	22%
VT Omega Growth Fund	95%	93%
VT Opportunity Fund	26%	36%
VT Small Cap Growth Fund	67%	65%
VT Small Cap Value Fund	18%	17%
VT Total Return Bond Fund	613%	574%

Brokerage Commissions. Below are the brokerage commissions paid for the last three fiscal years by each Fund to: (1) all brokers and; (2) Wells Fargo Advisors, LLC (formerly Wachovia Securities, LLC), an affiliate of Wells Fargo & Company that places trades through its wholly owned subsidiary, First Clearing Corp.

Fiscal Year Ended/Fund	Total Paid to Brokers	Total Paid to Wells Fargo Advisors, LLC
December 2013		
VT Discovery Fund	\$190,945	\$0
VT Index Asset Allocation Fund	\$7,644	\$0
VT International Equity Fund	\$368,977	\$0
VT Intrinsic Value Fund	\$23,371	\$0
VT Omega Growth Fund	\$146,571	\$0
VT Opportunity Fund	\$143,913	\$0
VT Small Cap Growth Fund	\$369,987	\$0
VT Small Cap Value Fund	\$59,414	\$251
VT Total Return Bond Fund	\$0	\$0
December 31, 2012		
VT Discovery Fund	\$160,174	\$0
VT Index Asset Allocation Fund	\$8,916	\$0
VT International Equity Fund	\$837,630	\$0

Fiscal Year Ended/Fund	Total Paid to Brokers	Total Paid to Wells Fargo Advisors, LLC
VT Intrinsic Value Fund	\$26,464	\$0
VT Omega Growth Fund	\$124,908	\$0

VT Small Cap Growth Fund	\$869,769	\$0
VT Small Cap Value Fund	\$65,173	\$125
VT Total Return Bond Fund	\$0	\$0

Directed Brokerage Commissions. For the fiscal year ended December 31, 2013, the Sub-Advisers listed below directed brokerage transactions to a broker for research services provided, and paid the following commissions based on the stated total amount of transactions.

Fund	Commissions Paid	Transactions Value
VT Discovery Fund	\$20,001.14	\$35,247,794.50
VT Index Asset Allocation Fund	\$0	\$0
VT International Equity Fund	\$174,227.41	\$138,632,026.84
VT Intrinsic Value Fund	\$23,456.84	\$30,289,758.13
VT Omega Growth Fund	\$12,433.77	\$31,102,134.76
VT Opportunity Fund	\$28,637.65	\$45,264,157.66
VT Small Cap Growth Fund	\$18,630.24	\$24,162,019.12
VT Small Cap Value Fund	\$6,415.74	\$3,401,550.25
VT Total Return Bond Fund	\$0	\$0

Securities of Regular Broker-Dealers. The Funds are required to identify any securities of their "regular brokers or dealers" (as defined under the 1940 Act) or of their parents that the Funds may hold at the close of their most recent fiscal year. As of December 31, 2013, the following Funds held securities of their regular broker-dealers or of their parents as indicated in the amounts shown below.

Fund	Regular Broker or Dealer	Value
VT Index Asset Allocation Fund	Goldman Sachs Group Incorporated	\$243,378
	Citigroup Incorporated	\$512,971
VT Total Return Bond Fund	Bank of America Corporation	\$1,459,897

Fund	Regular Broker or Dealer	Value
	Citigroup Incorporated	\$482,532
	Goldman Sachs Group Incorporated	\$101,609
	JPMorgan Chase & Company	\$2,068,715
	Morgan Stanley	\$1,188,090
VT Intrinsic Value Fund	JPMorgan Chase & Company	\$1,294,513
	UBS AG	\$1,086,971
	Goldman Sachs Group Incorporated	\$1,444,492

FUND EXPENSES

From time to time, Funds Management may waive fees from a Fund in whole or in part. Any such waiver will reduce expenses and, accordingly, have a favorable impact on a Fund's performance.

Except for the expenses borne by Funds Management, the Trust bears all costs of its operations, including the compensation of the Independent Trustees; advisory, shareholder servicing and administration fees; payments pursuant to any Plan; interest charges; taxes; fees and expenses of its independent auditors, legal counsel, transfer agent and distribution disbursing agent; expenses of redeeming shares; expenses of preparing and printing prospectuses (except the expense of printing and mailing prospectuses used for promotional purposes, unless otherwise payable pursuant to a Plan), shareholders' reports, notices, proxy statements and reports to regulatory agencies; insurance premiums and certain expenses relating to insurance coverage; trade association membership dues (including membership dues in the Investment Company Institute allocable to a Fund); brokerage and other expenses connected with the execution of portfolio transactions; fees and expenses of its custodian, including those for keeping books and accounts and calculating the NAV per share of a Fund; expenses of shareholders' meetings; expenses relating to the issuance, registration and qualification of a Fund's shares; pricing services, organizational expenses and any extraordinary expenses. Expenses attributable to a Fund are charged against the Fund's assets. General expenses of the Trust are allocated among all of the series of the Trust, including the Funds, in a manner proportionate to the net assets of each Fund, on a transactional basis, or on such other basis as the Trust's Board deems equitable.

U.S. FEDERAL INCOME TAXES

The following information supplements and should be read in conjunction with the section in each Prospectus entitled "Taxes." Each Prospectus generally describes the U.S. federal income tax treatment of distributions by the Funds. This section of the SAI provides additional information concerning U.S. federal income taxes. It is based on the Internal Revenue Code of 1986, as amended (the "Code"), applicable Treasury Regulations, judicial authority, and administrative rulings and practice, all as of the date of this SAI and all of which are subject to change, including changes with retroactive effect. Except as specifically set forth below, the following discussion does not address any state, local or foreign tax matters.

A shareholder's tax treatment may vary depending upon the shareholder's particular situation. This discussion applies only to shareholders holding Fund shares as capital assets within the meaning of the Code. A shareholder may also be subject to special rules not discussed below if they are a certain kind of shareholder, including, but not limited to: an insurance company; a tax-exempt organization; a financial institution or broker-dealer; a person who is neither a citizen nor resident of the United States or entity that is not organized under the laws of the United States or political subdivision thereof; a shareholder who holds Fund shares as part of a hedge, straddle or conversion transaction; or an entity taxable as a partnership for U.S. federal income tax purposes and investors in such an entity.

The Trust has not requested and will not request an advance ruling from the Internal Revenue Service (the "IRS") as to the U.S. federal income tax matters described below. The IRS could adopt positions contrary to those discussed below and such positions could be sustained. In addition, the following discussion and the discussions in each Prospectus applicable to each shareholder address only some of the U.S. federal income tax considerations generally affecting investments in the Funds. Prospective shareholders are urged to consult their own tax advisers and financial planners regarding the U.S. federal tax consequences of an

investment in a Fund, the application of state, local or foreign laws, and the effect of any possible changes in applicable tax laws on their investment in the Funds.

Qualification as a Regulated Investment Company. It is intended that each Fund qualify as a regulated investment company ("RIC") under Subchapter M of Subtitle A, Chapter 1 of the Code. Each Fund will be treated as a separate entity for U.S. federal income tax purposes. Thus, the provisions of the Code applicable to RICs generally will apply separately to each Fund even though each Fund is a series of the Trust. Furthermore, each Fund will separately determine its income, gains, losses and expenses for U.S. federal income tax purposes.

In order to qualify as a RIC under the Code, each Fund must, among other things, derive at least 90% of its gross income each taxable year generally from (i) dividends, interest, certain payments with respect to securities loans, gains from the sale or other disposition of stock, securities or foreign currencies, and other income attributable to its business of investing in such stock, securities or foreign currencies (including, but not limited to, gains from options, futures or forward contracts) and (ii) net income derived from an interest in a qualified publicly traded partnership, as defined in the Code. Future U.S. Treasury regulations may (possibly retroactively) exclude from qualifying income foreign currency gains that are not directly related to a Fund's principal business of investing in stock, securities or options and futures with respect to stock or securities. In general, for purposes of this 90% gross income requirement, income derived from a partnership, except a qualified publicly traded partnership, will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership which would be qualifying income if realized by the RIC.

Each Fund must also diversify its holdings so that, at the end of each quarter of the Fund's taxable year: (i) at least 50% of the fair market value of its assets consists of (A) cash and cash items (including receivables), U.S. government securities and securities of other RICs, and (B) securities of any one issuer (other than those described in clause (A)) to the extent such securities do not exceed 5% of the value of the Fund's total assets and do not exceed 10% of the outstanding voting securities of such issuer, and (ii) not more than 25% of the value of the Fund's total assets consists of the securities of any one issuer (other than those described in clause (i)(A)), the securities of two or more issuers the Fund controls and which are engaged in the same, similar or related trades or businesses, or the securities of one or more qualified publicly traded partnerships. In addition, for purposes of meeting this diversification requirement, the term "outstanding voting securities of such issuer" includes the equity securities of a qualified publicly traded partnership. The qualifying income and diversification requirements applicable to a Fund may limit the extent to which it can engage in transactions in options, futures contracts, forward contracts and swap agreements.

If a Fund fails to satisfy the qualifying income or diversification requirements in any taxable year, such Fund may be eligible for relief provisions if the failures are due to reasonable cause and not willful neglect and if a penalty tax is paid with respect to each failure to satisfy the applicable requirements. Additionally, relief is provided for certain de minimis failures of the diversification requirements where the Fund corrects the failure within a specified period. If the applicable relief provisions are not available or cannot be met, such Fund will be taxed in the same manner as an ordinary corporation, described below.

In addition, with respect to each taxable year, each Fund generally must distribute to its shareholders at least 90% of its investment company taxable income, which generally includes its ordinary income and the excess of any net short-term capital gain over net long-term capital loss, and at least 90% of its net tax-exempt interest income earned for the taxable year. If a Fund meets all of the RIC qualification requirements, it generally will not be subject to U.S. federal income tax on any of the investment company taxable income and net capital gain (i.e., the excess of net long-term capital gain over net short-term capital loss) it distributes to its shareholders. For this purpose, a Fund generally must make the distributions in the same year that it realizes the income and gain, although in certain circumstances, a Fund may make the distributions in the following taxable year. Shareholders generally are taxed on any distributions from a Fund in the year they are actually distributed. However, if a Fund declares a distribution to shareholders of record in October, November or December of one year and pays the distribution by January 31 of the following year, the Fund and its shareholders will be treated as if the Fund paid the distribution by December 31 of the first taxable year. Each Fund intends to distribute its net income and gain in a timely manner to maintain its status as a RIC and eliminate fund-level U.S. federal income taxation of such income and gain. However, no assurance can be given that a Fund will not be subject to U.S. federal income taxation.

Moreover, the Funds may retain for investment all or a portion of their net capital gain. If a Fund retains any net capital gain, it will be subject to a tax at regular corporate rates on the amount retained, but may report the retained amount as undistributed capital gain in a written statement furnished to its shareholders, who (i) will be required to include in income for U.S. federal income tax purposes, as long-term capital gain, their shares of such undistributed amount, and (ii) will be entitled to credit their proportionate shares of the tax paid by the Fund on such undistributed amount against their U.S. federal income tax liabilities, if any, and to claim refunds to the extent the credit exceeds such liabilities. For U.S. federal income tax purposes, the tax basis of shares owned by a shareholder of the Fund will be increased by an amount equal to the difference between the amount of undistributed capital gain included in the shareholder's gross income and the tax deemed paid by the shareholder under clause (ii) of the preceding sentence. A Fund is not required to, and there can be no assurance that it will, make this designation if it retains all or a portion of its net capital gain in a taxable year.

If, for any taxable year, a Fund fails to qualify as a RIC, and is not eligible for relief as described above, it will be taxed in the same manner as an ordinary corporation without any deduction for its distributions to shareholders, and all distributions from the Fund's current and accumulated earnings and profits (including any distributions of its net tax-exempt income and net long-term capital gain) to its shareholders will be taxable as dividend income. To re-qualify to be taxed as a RIC in a subsequent year, the Fund may be required to distribute to its shareholders its earnings and profits attributable to non-RIC years reduced by an interest charge on 50% of such earnings and profits payable by the Fund to the IRS. In addition, if a Fund initially qualifies as a RIC but subsequently fails to qualify as a RIC for a period greater than two taxable years, the Fund generally would be required to recognize and pay tax on any net unrealized gain (the excess of aggregate gain, including items of income, over aggregate loss that would have been realized if the Fund had been liquidated) or, alternatively, to be subject to tax on such unrealized gain recognized for a period of ten years, in order to re-qualify as a RIC in a subsequent year.

Equalization Accounting. Each Fund may use the so-called "equalization method" of accounting to allocate a portion of its "earnings and profits," which generally equals a Fund's undistributed investment company taxable income and net capital gain, with certain adjustments, to redemption proceeds. This method permits a Fund to achieve more balanced distributions for both continuing and redeeming shareholders. Although using this method generally will not affect a Fund's total returns, it may reduce the amount that the Fund would otherwise distribute to continuing shareholders by reducing the effect of redemptions of Fund shares on Fund distributions to shareholders. However, the IRS may not have expressly sanctioned the particular equalization method used by a Fund, and thus a Fund's use of this method may be subject to IRS scrutiny.

Capital Loss Carry-Forwards. For net capital losses realized in taxable years beginning before January 1, 2011, a Fund is permitted to carry forward a net capital loss to offset its capital gain, if any, realized during the eight years following the year of the loss, and such capital loss carry-forward is treated as a short-term capital loss in the year to which it is carried. For net capital losses realized in taxable years beginning on or after January 1, 2011, a Fund is permitted to carry forward a net capital loss to offset its capital gain indefinitely. For capital losses realized in taxable years beginning after January 1, 2011, the excess of a Fund's net short-term capital loss over its net long-term capital gain is treated as a short-term capital loss arising on the first day of the Fund's next taxable year and the excess of a Fund's net long-term capital loss over its net short-term capital gain is treated as a long-term capital loss arising on the first day of the Fund's next taxable year. If future capital gain is offset by carried-forward capital losses, such future capital gain is not subject to fund-level U.S. federal income tax, regardless of whether it is distributed to shareholders. Accordingly, the Funds do not expect to distribute any such offsetting capital gain. The Funds cannot carry back or carry forward any net operating losses.

As of a Fund's most recent fiscal year end, the Fund had capital loss carry-forwards approximating the amount indicated for U.S. federal income tax purposes, expiring in the year indicated (if applicable):

Fund	Year Expires	Pre-January 1, 2011 Capital Loss Carry Forwards
VT Index Asset Allocation Fund	2016	\$7,159,155
	2017	\$3,724,567
VT International Equity Fund	2017	\$2,669,056

Fund	Year Expires	Pre-January 1, 2011 Capital Loss Carry Forwards
VT Intrinsic Value Fund	2017	\$900,203
VT Omega Growth Fund	2015	\$2,930,118
	2016	\$2,303,740
	2017	\$771,379
VT Opportunity Fund	2015	\$721,350
	2016	\$360,675
	2017	\$11,824,665
VT Small Cap Value Fund	2017	\$8,642,152
VT Total Return Bond Fund	2016	\$4,157,782

Fund	Post-January 1, 2011 Capital Loss Carryforwards
	Short-term
VT Total Return Bond Fund	\$877,635

If a Fund engages in a reorganization, either as an acquiring fund or acquired fund, its capital loss carry-forwards (if any), its unrealized losses (if any), and any such losses of other funds participating in the reorganization may be subject to severe limitations that could make such losses, in particular losses realized in taxable years beginning before January 1, 2011, substantially unusable. The Funds have engaged in reorganizations in the past and/or may engage in reorganizations in the future.

Excise Tax. If a Fund fails to distribute by December 31 of each calendar year at least the sum of 98% of its ordinary income for that year (excluding capital gains and losses), 98.2% of its capital gain net income (adjusted for certain net ordinary losses) for the 12-month period ending on October 31 of that year, and any of its ordinary income and capital gain net income from previous years that was not distributed during such years, the Fund will be subject to a nondeductible 4% U.S. federal excise tax on the undistributed amounts (other than to the extent of its tax-exempt interest income, if any). For these purposes, a Fund will be treated as having distributed any amount on which it is subject to corporate level U.S. federal income tax for the taxable year ending within the calendar year. Each Fund generally intends to actually, or be deemed to, distribute substantially all of its ordinary income and capital gain net income, if any, by the end of each calendar year and thus expects not to be subject to the excise tax. However, no assurance can be given that a Fund will not be subject to the excise tax. Moreover, each Fund reserves the right to pay an excise tax rather than make an additional distribution when circumstances warrant (for example, the amount of excise tax to be paid by a Fund is determined to be de minimis).

Investment through Master Portfolio. A Fund that invests its assets through one or more master portfolios will seek to continue to qualify as a RIC. Each master portfolio will be treated as a non-publicly traded partnership (or, in the event that a Fund is the sole investor in the corresponding master portfolio, as disregarded from the Fund) for U.S. federal income tax purposes rather than as a RIC or a corporation under the Code. Under the rules applicable to a non-publicly traded partnership (or disregarded entity), a proportionate share of any interest, dividends, gains and losses of a master portfolio will be deemed to have been realized (i.e., "passed-through") to its investors, including the corresponding Fund, regardless of whether any amounts are actually distributed by the master portfolio. Each investor in a master portfolio will be taxed on such share, as determined in accordance with the governing instruments of the particular master portfolio, the Code and U.S. Treasury regulations, in determining such investor's U.S. federal income tax liability. Therefore, to the extent a master portfolio were to accrue but not distribute any income or gains, the corresponding Fund would be deemed to have realized its proportionate share of such income or gains without receipt of any corresponding distribution. However, each of the master portfolios will seek to minimize recognition by its investors (such as a corresponding Fund) of income and gains without a corresponding distribution. Furthermore, each master portfolio intends to manage its assets, income and distributions in such a way that an investor in a master portfolio will be able to continue to qualify as a RIC by investing its assets through the master portfolio.

Taxation of Investments. In general, realized gains or losses on the sale of securities held by a Fund will be treated as capital gains or losses, and long-term capital gains or losses if the Fund has held the disposed securities for more than one year at the time of disposition.

If a Fund purchases a debt obligation with original issue discount ("OID") (generally, a debt obligation with a purchase price at original issuance less than its principal amount, such as a zero-coupon bond), which generally includes "payment-in-kind" or "PIK" bonds, the Fund generally is required to annually include in its taxable income a portion of the OID as ordinary income, even though the Fund may not receive cash payments attributable to the OID until a later date, potentially until maturity or disposition of the obligation. A portion of the OID includible in income with respect to certain high-yield corporate discount obligations may be treated as a dividend for U.S. federal income tax purposes. Similarly, if a Fund purchases a debt obligation with market discount (generally a debt obligation with a purchase price after original issuance less than its principal amount (reduced by any OID)), the Fund generally is required to annually include in its taxable income a portion of the market discount as ordinary income, even though the Acquiring Fund may not receive cash payments attributable to the market discount until a later date, potentially until maturity or disposition of the obligation. A Fund generally will be required to make distributions to shareholders representing the OID or market discount income on debt obligations that is currently includible in income, even though the cash representing such income may not have been received by a Fund. Cash to pay such distributions may be obtained from sales proceeds of securities held by the Fund which a Fund otherwise might have continued to hold; obtaining such cash might be disadvantageous for the Fund.

If a Fund invests in debt obligations that are in the lowest rating categories or are unrated, including debt obligations of issuers not currently paying interest or who are in default, special tax issues may exist for the Fund. U.S. federal income tax rules are not entirely clear about issues such as when a Fund may cease to accrue interest, OID, or market discount, when and to what extent deductions may be taken for bad debts or worthless securities, and how payments received on obligations in default should be allocated between principal and income. These and other related issues will be addressed by a Fund when, as, and if it invests in such securities, in order to seek to ensure that it distributes sufficient income to preserve its status as a RIC and does not become subject to U.S. federal income or excise tax.

If an option granted by a Fund is sold, lapses or is otherwise terminated through a closing transaction, such as a repurchase by the Fund of the option from its holder, the Fund will realize a short-term capital gain or loss, depending on whether the premium income is greater or less than the amount paid by the Fund in the closing transaction. Some capital losses realized by a Fund in the sale, exchange, exercise, or other disposition of an option may be deferred if they result from a position that is part of a "straddle," discussed below. If securities are sold by a Fund pursuant to the exercise of a covered call option granted by it, the Fund generally will add the premium received to the sale price of the securities delivered in determining the amount of gain or loss on the sale. If securities are purchased by a Fund pursuant to the exercise of a put option granted by it, the Fund generally will subtract the premium received from its cost basis in the securities purchased.

Some regulated futures contracts, certain foreign currency contracts, and non-equity, listed options used by a Fund will be deemed "Section 1256 contracts." A Fund will be required to "mark-to-market" any such contracts held at the end of the taxable year by treating them as if they had been sold on the last day of that year at market value. Sixty percent of any net gain or loss realized on all dispositions of Section 1256 contracts, including deemed dispositions under the "mark-to-market" rule, generally will be treated as long-term capital gain or loss, and the remaining 40% will be treated as short-term capital gain or loss, although certain foreign currency gains and losses from such contracts may be treated as ordinary income or loss (as described below). These provisions may require a Fund to recognize income or gains without a concurrent receipt of cash. Transactions that qualify as designated hedges are exempt from the mark-to-market rule and the "60%/40%" rule and may require the Fund to defer the recognition of losses on certain futures contracts, foreign currency contracts and non-equity options.

Foreign currency gains and losses realized by a Fund in connection with certain transactions involving foreign currency-denominated debt obligations, certain options, futures contracts, forward contracts, and similar instruments relating to foreign currency, foreign currencies, or payables or receivables denominated in a foreign currency are subject to Section 988 of the Code, which generally causes such gains and losses to be treated as ordinary income or loss and may affect the amount and timing of recognition of the Fund's income. Under future U.S. Treasury regulations, any such transactions that are not directly related to a

Fund's investments in stock or securities (or its options contracts or futures contracts with respect to stock or securities) may have to be limited in order to enable the Fund to satisfy the 90% income test described above. If the net foreign currency loss exceeds a Fund's net investment company taxable income (computed without regard to such loss) for a taxable year, the resulting ordinary loss for such year will not be deductible by the Fund or its shareholders in future years.

Offsetting positions held by a Fund involving certain derivative instruments, such as financial forward, futures, and options contracts, may be considered, for U.S. federal income tax purposes, to constitute "straddles." "Straddles" are defined to include "offsetting positions" in actively traded personal property. The tax treatment of "straddles" is governed by Section 1092 of the Code which, in certain circumstances, overrides or modifies the provisions of Section 1256. If a Fund is treated as entering into a "straddle" and at least one (but not all) of the Fund's positions in derivative contracts comprising a part of such straddle is governed by Section 1256 of the Code, described above, then such straddle could be characterized as a "mixed straddle." A Fund may make one or more elections with respect to "mixed straddles." Depending upon which election is made, if any, the results with respect to a Fund may differ. Generally, to the extent the straddle rules apply to positions established by a Fund, losses realized by the Fund may be deferred to the extent of unrealized gain in any offsetting positions. Moreover, as a result of the straddle rules, short-term capital loss on straddle positions may be recharacterized as long-term capital loss, and long-term capital gain may be characterized as short-term capital gain. In addition, the existence of a straddle may affect the holding period of the offsetting positions. As a result, the straddle rules could cause distributions that would otherwise constitute qualified dividend income (defined below) to fail to satisfy the applicable holding period requirements (described below) and therefore to be taxed as ordinary income. Furthermore, the Fund may be required to capitalize, rather than deduct currently, any interest expense and carrying charges applicable to a position that is part of a straddle, including any interest expense on indebtedness incurred or continued to purchase or carry any positions that are part of a straddle. Because the application of the straddle rules may affect the character and timing of gains and losses from affected straddle positions, the amount which must be distributed to shareholders, and which will be taxed to shareholders as ordinary income or long-term capital gain, may be increased or decreased substantially as compared to the situation where a Fund had not engaged in such transactions.

If a Fund enters into a "constructive sale" of any appreciated financial position in stock, a partnership interest, or certain debt instruments, the Fund will be treated as if it had sold and immediately repurchased the property and must recognize gain (but not loss) with respect to that position. A constructive sale of an appreciated financial position occurs when a Fund enters into certain offsetting transactions with respect to the same or substantially identical property, including: (i) a short sale; (ii) an offsetting notional principal contract; (iii) a futures or forward contract; or (iv) other transactions identified in future U.S. Treasury regulations. The character of the gain from constructive sales will depend upon a Fund's holding period in the appreciated financial position. Losses realized from a sale of a position that was previously the subject of a constructive sale will be recognized when the position is subsequently disposed of. The character of such losses will depend upon a Fund's holding period in the position and the application of various loss deferral provisions in the Code. Constructive sale treatment does not apply to certain closed transactions, including if such a transaction is closed on or before the 30th day after the close of the Fund's taxable year and the Fund holds the appreciated financial position unhedged throughout the 60-day period beginning with the day such transaction was closed.

The amount of long-term capital gain a Fund may recognize from certain derivative transactions with respect to interests in certain pass-through entities is limited under the Code's constructive ownership rules. The amount of long-term capital gain is limited to the amount of such gain a Fund would have had if the Fund directly invested in the pass-through entity during the term of the derivative contract. Any gain in excess of this amount is treated as ordinary income. An interest charge is imposed on the amount of gain that is treated as ordinary income.

In addition, a Fund's transactions in securities and certain types of derivatives (e.g., options, futures contracts, forward contracts, and swap agreements) may be subject to other special tax rules, such as the wash sale rules or the short sale rules, the effect of which may be to accelerate income to the Fund, defer losses to the Fund, cause adjustments to the holding periods of the Fund's securities, convert long-term capital gains into short-term capital gains, and/or convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing, and character of distributions to shareholders.

Rules governing the U.S. federal income tax aspects of derivatives, including swap agreements, are in a developing stage and are

not entirely clear in certain respects, particularly in light of IRS revenue rulings that held that income from a derivative contract with respect to a commodity index is not qualifying income for a RIC. Accordingly, while each Fund intends to account for such transactions in a manner it deems appropriate, the IRS might not accept such treatment. If it did not, the status of a Fund as a RIC might be jeopardized. Certain requirements that must be met under the Code in order for each Fund to qualify as a RIC may limit the extent to which a Fund will be able to engage in derivatives transactions.

A Fund may invest in real estate investment trusts ("REITs"). Investments in REIT equity securities may require a Fund to accrue and distribute income not yet received. To generate sufficient cash to make the requisite distributions, the Fund may be required to sell securities in its portfolio (including when it is not advantageous to do so) that it otherwise would have continued to hold. A Fund's investments in REIT equity securities may at other times result in the Fund's receipt of cash in excess of the REIT's earnings if the Fund distributes these amounts, these distributions could constitute a return of capital to Fund shareholders for U.S. federal income tax purposes. Dividends received by the Fund from a REIT generally will not constitute qualified dividend income and will not qualify for the dividends-received deduction.

A Fund may invest directly or indirectly in residual interests in real estate mortgage investment conduits ("REMICs") or in other interests that may be treated as taxable mortgage pools ("TMPs") for U.S. federal income tax purposes. Under IRS guidance, a Fund must allocate "excess inclusion income" received directly or indirectly from REMIC residual interests or TMPs to its shareholders in proportion to dividends paid to such shareholders, with the same consequences as if the shareholders had invested in the REMIC residual interests or TMPs directly.

In general, excess inclusion income allocated to shareholders (i) cannot be offset by net operating losses (subject to a limited exception for certain thrift institutions), (ii) constitutes unrelated business taxable income to Keogh, 401(k) and qualified pension plans, as well as investment retirement accounts and certain other tax exempt entities, thereby potentially requiring such an entity, which otherwise might not be required to file a tax return, to file a tax return and pay tax on such income, and (iii) in the case of a foreign shareholder, does not qualify for any reduction, by treaty or otherwise, in the 30% U.S. federal withholding tax. In addition, if at any time during any taxable year a "disqualified organization" (as defined in the Code) is a record holder of a share in a Fund, then the Fund will be subject to a tax equal to that portion of its excess inclusion income for the taxable year that is allocable to the disqualified organization, multiplied by the highest federal corporate income tax rate. To the extent permitted under the 1940 Act, a Fund may elect to specially allocate any such tax to the applicable disqualified organization, and thus reduce such shareholder's distributions for the year by the amount of the tax that relates to such shareholder's interest in the Fund. The Funds have not yet determined whether such an election will be made.

"Passive foreign investment companies" ("PFICs") are generally defined as foreign corporations with respect to which at least 75% of their gross income for their taxable year is income from passive sources (such as interest, dividends, certain rents and royalties, or capital gains) or at least 50% of their assets on average produce such passive income. If a Fund acquires any equity interest in a PFIC, the Fund could be subject to U.S. federal income tax and interest charges on "excess distributions" received from the PFIC or on gain from the sale of such equity interest in the PFIC, even if all income or gain actually received by the Fund is timely distributed to its shareholders. Excess distributions will be characterized as ordinary income even though, absent the application of PFIC rules, some excess distributions may have been classified as capital gain.

A Fund will not be permitted to pass through to its shareholders any credit or deduction for taxes and interest charges incurred with respect to PFICs. Elections may be available that would ameliorate these adverse tax consequences, but such elections could require a Fund to recognize taxable income or gain without the concurrent receipt of cash. Investments in PFICs could also result in the treatment of associated capital gains as ordinary income. The Funds may attempt to limit and/or manage their holdings in PFICs to minimize their tax liability or maximize their returns from these investments but there can be no assurance that they will be able to do so. Moreover, because it is not always possible to identify a foreign corporation as a PFIC in advance of acquiring shares in the corporation, a Fund may incur the tax and interest charges described above in some instances. Dividends paid by PFICs will not be eligible to be treated as qualified dividend income.

In addition to the investments described above, prospective shareholders should be aware that other investments made by the Funds may involve complex tax rules that may result in income or gain recognition by the Funds without corresponding current

cash receipts. Although the Funds seek to avoid significant non-cash income, such non-cash income could be recognized by the Funds, in which case the Funds may distribute cash derived from other sources in order to meet the minimum distribution requirements described above. In this regard, the Funds could be required at times to liquidate investments prematurely in order to satisfy their minimum distribution requirements.

Taxation of Distributions. Except for exempt-interest dividends (defined below) paid out by "Tax-Free Funds", distributions paid out of a Fund's current and accumulated earnings and profits (as determined at the end of the year), whether paid in cash or reinvested in the Fund, generally are deemed to be taxable distributions and must be reported by each shareholder who is required to file a U.S. federal income tax return. Dividends and distributions on a Fund's shares are generally subject to U.S. federal income tax as described herein to the extent they do not exceed the Fund's realized income and gains, even though such dividends and distributions may economically represent a return of a particular shareholder's investment. Such distributions are likely to occur in respect of shares acquired at a time when the Fund's net asset value reflects gains that are either unrealized, or realized but not distributed. For U.S. federal income tax purposes, a Fund's earnings and profits, described above, are determined at the end of the Fund's taxable year and are allocated pro rata to distributions paid over the entire year. Distributions in excess of a Fund's current and accumulated earnings and profits will first be treated as a return of capital up to the amount of a shareholder's tax basis in the shareholder's Fund shares and then as capital gain. A Fund may make distributions in excess of its earnings and profits, from time to time.

For U.S. federal income tax purposes, distributions of investment income are generally taxable as ordinary income, and distributions of gains from the sale of investments that a Fund owned for one year or less will be taxable as ordinary income. Distributions properly designated by a Fund as capital gain dividends will be taxable to shareholders as long-term capital gain (to the extent such distributions do not exceed the Fund's net capital gain for the taxable year), regardless of how long a shareholder has held Fund shares, and do not qualify as dividends for purposes of the dividends-received deduction or as qualified dividend income. Each Fund will report capital gain dividends, if any, in a written statement furnished to its shareholders after the close of the Fund's taxable year.

Fluctuations in foreign currency exchange rates may result in foreign exchange gain or loss on transactions in foreign currencies, foreign currency-denominated debt obligations, and certain foreign currency options, futures contracts and forward contracts. Such gains or losses are generally characterized as ordinary income or loss for tax purposes. The Fund must make certain distributions in order to qualify as a Regulated Investment Company, and the timing of and character of transactions such as foreign currency-related gains and losses may result in the fund paying a distribution treated as a return of capital. Such distribution is nontaxable to the extent of the recipient's basis in its shares.

Some states will not tax distributions made to individual shareholders that are attributable to interest a Fund earned on direct obligations of the U.S. government if the Fund meets the state's minimum investment or reporting requirements, if any. Investments in GNMA or FNMA securities, bankers' acceptances, commercial paper and repurchase agreements collateralized by U.S. government securities generally do not qualify for tax-free treatment. This exemption may not apply to corporate shareholders.

Sales and Exchanges of Fund Shares. If a shareholder sells, pursuant to a cash or in-kind redemption, or exchanges the shareholder's Fund shares, subject to the discussion below, the shareholder generally will recognize a taxable capital gain or loss on the difference between the amount received for the shares (or deemed received in the case of an exchange) and the shareholder's tax basis in the shares. This gain or loss will be long-term capital gain or loss if the shareholder has held such Fund shares for more than one year at the time of the sale or exchange, and short-term otherwise.

If a shareholder sells or exchanges Fund shares within 90 days of having acquired such shares and if, before January 31 of the calendar year following the calendar year of the sale or exchange, as a result of having initially acquired those shares, the shareholder subsequently pays a reduced sales charge on a new purchase of shares of the Fund or a different RIC, the sales charge previously incurred in acquiring the Fund's shares generally shall not be taken into account (to the extent the previous sales charges do not exceed the reduction in sales charges on the new purchase) for the purpose of determining the amount of gain or loss on the disposition, but generally will be treated as having been incurred in the new purchase. Also, if a shareholder recognizes a loss on a disposition of Fund shares, the loss will be disallowed under the "wash sale" rules to the extent the shareholder purchases

substantially identical shares within the 61-day period beginning 30 days before and ending 30 days after the disposition. Any disallowed loss generally will be reflected in an adjustment to the tax basis of the purchased shares.

If a shareholder receives a capital gain dividend with respect to any Fund share and such Fund share is held for six months or less, then (unless otherwise disallowed) any loss on the sale or exchange of that Fund share will be treated as a long-term capital loss to the extent of the capital gain dividend. If such loss is incurred from the redemption of shares pursuant to a periodic redemption plan then U.S. Treasury regulations may permit an exception to this six-month rule. No such regulations have been issued as of the date of this SAI.

In addition, if a shareholder of a Tax-Free Fund holds such Fund shares for six months or less, any loss on the sale or exchange of those shares will be disallowed to the extent of the amount of exempt-interest dividends (defined below) received with respect to the shares. If such loss is incurred from the redemption of shares pursuant to a periodic redemption plan then U.S. Treasury regulations may permit an exception to this six-month rule. Such a loss will also not be disallowed where the loss is incurred with respect to shares of a Fund that declares exempt-interest dividends on a daily basis in an amount equal to at least 90% of its net-tax exempt interest and distributes such dividends on a monthly, or more frequent, basis. Additionally, where a Fund regularly distributes at least 90% of its net tax-exempt interest, if any, the Treasury Department is authorized to issue regulations reducing the six month holding period requirement to a period of not less than the greater of 31 days or the period between regular distributions. No such regulations have been issued as of the date of this filing.

Foreign Taxes. Amounts realized by a Fund from sources within foreign countries may be subject to withholding and other taxes imposed by such countries. Tax conventions between certain countries and the United States may reduce or eliminate such taxes. If more than 50% of the value of a Fund's total assets at the close of its taxable year consists of securities of foreign corporations, the Fund will be eligible to file an annual election with the IRS pursuant to which the Fund may pass-through to its shareholders on a pro rata basis certain foreign income and similar taxes paid by the Fund, and such taxes may be claimed, subject to certain limitations, either as a tax credit or deduction by the shareholders. However, even if a Fund qualifies for the election for any year, it may not make the election for such year. If a Fund does not so elect, then shareholders will not be entitled to claim a credit or deduction with respect to foreign taxes paid or withheld. If a Fund does elect to "pass through" its foreign taxes paid in a taxable year, the Fund will furnish a written statement to its shareholders reporting such shareholders proportionate share of the Funds' foreign taxes paid.

Even if a Fund qualifies for the election, foreign income and similar taxes will only pass through to the Fund's shareholders if the Fund and its shareholders meet certain holding period requirements. Specifically, (i) the shareholders must have held the Fund shares for at least 16 days during the 31-day period beginning 15 days prior to the date upon which the shareholders became entitled to receive Fund distributions corresponding with the pass through of such foreign taxes paid by the Fund, and (ii) with respect to dividends received by the Fund on foreign shares giving rise to such foreign taxes, the Fund must have held the shares for at least 16 days during the 31-day period beginning 15 days prior to the date upon which the Fund became entitled to the dividend. These holding periods increase for certain dividends on preferred stock. A Fund may choose not to make the election if the Fund has not satisfied its holding requirement.

If a Fund makes the election, the Fund will not be permitted to claim a credit or deduction for foreign taxes paid in that year, and the Fund's dividends-paid deduction will be increased by the amount of foreign taxes paid that year. Fund shareholders that have satisfied the holding period requirements and certain other requirements shall include their proportionate share of the foreign taxes paid by the Fund in their gross income and treat that amount as paid by them for the purpose of the foreign tax credit or deduction. If the shareholder claims a credit for foreign taxes paid, the credit will be limited to the extent it exceeds the shareholder's federal income tax attributable to foreign source taxable income. If the credit is attributable, wholly or in part, to qualified dividend income (as defined below), special rules will be used to limit the credit in a manner that reflects any resulting dividend rate differential.

In general, an individual with \$300 or less of creditable foreign taxes may elect to be exempt from the foreign source taxable income and qualified dividend income limitations if the individual has no foreign source income other than qualified passive income. This \$300 threshold is increased to \$600 for joint filers. A deduction for foreign taxes paid may only be claimed by

shareholders that itemize their deductions.

U.S. Federal Income Tax Rates. Noncorporate Fund shareholders (i.e., individuals, trusts and estates) are taxed at a maximum rate of 39.6% on ordinary income and 20% on long-term capital gain for taxable years beginning after December 31, 2012.

In general, "qualified dividend income" realized by noncorporate Fund shareholders is taxable at the same rate as net capital gain. Generally, qualified dividend income is dividend income attributable to certain U.S. and foreign corporations, as long as certain holding period requirements are met. After this date, all dividend income generally will be taxed at the same rate as ordinary income. If 95% or more of a Fund's gross income (excluding net long-term capital gain over net short-term capital loss) constitutes qualified dividend income, all of its distributions (other than capital gain dividends) will be generally treated as qualified dividend income in the hands of individual shareholders, as long as they have owned their Fund shares for at least 61 days during the 121-day period beginning 60 days before the Fund's ex-dividend date (or, in the case of certain preferred stock, 91 days during the 181-day period beginning 90 days before such date). In general, if less than 95% of a Fund's income is attributable to qualified dividend income, then only the portion of the Fund's distributions that is attributable to qualified dividend income and designated as such in a timely manner will be so treated in the hands of individual shareholders. Payments received by a Fund from securities lending, repurchase, and other derivative transactions ordinarily will not qualify. The rules attributable to the qualification of Fund distributions as qualified dividend income are complex, including the holding period requirements. Individual Fund shareholders therefore are urged to consult their own tax advisers and financial planners. Income and bond Funds typically do not distribute significant amounts of "qualified dividend income" eligible for reductions in individual U.S. federal income tax rates applicable to certain dividend income.

The maximum stated corporate U.S. federal income tax rate applicable to ordinary income and net capital gain is 35%. Actual marginal tax rates may be higher for some shareholders, for example, through reductions in deductions. Distributions from an Income Fund generally will not qualify for the "dividends-received deduction" applicable to corporate shareholders with respect to certain dividends. Distributions from an Equity Fund may qualify for the "dividends-received deduction" applicable to corporate shareholders with respect to certain dividends. Naturally, the amount of tax payable by any taxpayer will be affected by a combination of tax laws covering, for example, deductions, credits, deferrals, exemptions, sources of income and other matters. U.S. federal income tax rates are set to increase in future years under various "sunset" provisions of U.S. federal income tax laws.

Under recently enacted legislation, for taxable years beginning after December 31, 2012, noncorporate Fund shareholders generally will be subject to a 3.8% tax on their "net investment income," which ordinarily includes taxable distributions received from the Funds and taxable gain on the disposition of Fund shares.

For taxable years beginning after December 31, 2012, a U.S. withholding tax at a 30% rate will be imposed on dividends and proceeds of sales in respect of Fund shares received by Fund shareholders who own their shares through foreign accounts or foreign intermediaries if certain disclosure requirements related to U.S. accounts or ownership are not satisfied. The Funds will not pay any additional amounts in respect to any amounts withheld.

Backup Withholding. A Fund is generally required to withhold and remit to the U.S. Treasury, subject to certain exemptions (such as for certain corporate or foreign shareholders), an amount equal to 28% of all distributions and redemption proceeds (including proceeds from exchanges and redemptions in-kind) paid or credited to a Fund shareholder if (i) the shareholder fails to furnish the Fund with a correct "taxpayer identification number" ("TIN"), (ii) the shareholder fails to certify under penalties of perjury that the TIN provided is correct, (iii) the shareholder fails to make certain other certifications, or (iv) the IRS notifies the Fund that the shareholder's TIN is incorrect or that the shareholder is otherwise subject to backup withholding. Backup withholding is not an additional tax imposed on the shareholder. The shareholder may apply amounts withheld as a credit against the shareholder's U.S. federal income tax liability and may obtain a refund of any excess amounts withheld, provided that the required information is furnished to the IRS. If a shareholder fails to furnish a valid TIN upon request, the shareholder can also be subject to IRS penalties. A shareholder may generally avoid backup withholding by furnishing a properly completed IRS Form W-9. State backup withholding may also be required to be withheld by the Funds under certain circumstances.

Corporate Shareholders. Subject to limitation and other rules, a corporate shareholder of a Fund may be eligible for the dividends

received deduction on Fund distributions attributable to dividends received by the Fund from domestic corporations, which, if received directly by the corporate shareholder, would qualify for such a deduction. For eligible corporate shareholders, the dividends-received deduction may be subject to certain reductions, and a distribution by a Fund attributable to dividends of a domestic corporation will be eligible for the deduction only if certain holding period and other requirements are met. These requirements are complex; therefore, corporate shareholders of the Funds are urged to consult their own tax advisers and financial planners.

Foreign Shareholders. For purposes of this discussion, "foreign shareholders" include: (i) nonresident alien individuals, (ii) foreign trusts (i.e., a trust other than a trust with respect to which a U.S. court is able to exercise primary supervision over administration of that trust and one or more U.S. persons have authority to control substantial decisions of that trust), (iii) foreign estates (i.e., the income of which is not subject to U.S. tax regardless of source), and (iv) foreign corporations.

Generally, subject to certain exceptions described below, distributions made to foreign shareholders will be subject to non-refundable U.S. federal income tax withholding at a 30% rate (or such lower rate provided under an applicable income tax treaty) even if they are funded by income or gains (such as portfolio interest, short-term capital gain, or foreign-source dividend and interest income) that, if paid to a foreign person directly, would not be subject to withholding. However, with respect to certain distributions made to foreign shareholders in taxable years beginning before January 1, 2014, no withholding will be required and the distributions generally will not be subject to U.S. federal income tax if (i) the distributions are reported as "interest related dividends" or "short term capital gain dividends" in a written statement furnished to shareholders (ii) the distributions are derived from sources specified in the Code for such dividends and (iii) certain other requirements are satisfied. No assurance can be given that a Fund would designate any of its distributions as interest related dividends or short term capital gain dividends, even if it is permitted to do so. In the case of shares held through an intermediary, even if a Fund makes a designation with respect to a payment, no assurance can be made that the intermediary will respect such a designation. Capital gains dividends and gains recognized by a foreign shareholder on the redemption of Fund shares generally will not be subject to U.S. federal income tax withholding, provided that certain requirements are satisfied. Tax-exempt dividends (described below) paid by a Tax-Free Fund to a foreign shareholders also should be exempt from U.S. federal income tax withholding.

With respect to payments made after December 31, 2013, a withholding tax of 30% will be imposed on dividends from, and the gross proceeds of a disposition of, Fund shares paid to certain foreign entities unless various information reporting requirements are satisfied. Such withholding tax will generally apply to non-U.S. financial institutions, which are generally defined for this purpose as non-U.S. entities that (i) accept deposits in the ordinary course of a banking or similar business, (ii) are engaged in the business of holding financial assets for the account of others, or (iii) are engaged or hold themselves out as being engaged primarily in the business of investing, reinvesting, or trading in securities, partnership interests, commodities, or any interest in such assets. Prospective foreign shareholders are encouraged to consult their tax advisors regarding the implications of this legislation on their investment in a Fund.

Before investing in a Fund's shares, a prospective foreign shareholder should consult with its own tax advisors, including whether the shareholder's investment can qualify for benefits under an applicable income tax treaty.

Tax-Deferred Plans. Shares of the Funds may be available for a variety of tax-deferred retirement and other tax-advantaged plans and accounts. However, shares of a Tax-Free Fund may not be suitable for tax-deferred, retirement and other tax-advantaged plans and accounts, since such plans and accounts are generally tax-exempt and, therefore, would not benefit from the tax-exempt status of certain distributions from the Tax-Free Fund (discussed below). Such distributions may ultimately be taxable to the beneficiaries when distributed to them. Prospective investors should contact their tax advisers and financial planners regarding the tax consequences to them of holding Fund shares through such plans and/or accounts.

Tax-Exempt Shareholders. Shares of a Tax-Free Fund may not be suitable for tax-exempt shareholders since such shareholders generally would not benefit from the tax-exempt status of distributions from the Tax-Free Funds (discussed below). Tax-exempt shareholders should contact their tax advisers and financial planners regarding the tax consequences to them of an investment in the Funds.

Any investment in residual interests of a collateralized mortgage obligation that has elected to be treated as a REMIC can create

complex U.S. federal income tax consequences, especially if a Fund has state or local governments or other tax-exempt organizations as shareholders.

Special tax consequences apply to charitable remainder trusts ("CRTs") (as defined in Section 664 of the Code) that invest in RICs that invest directly or indirectly in residual interests in REMICs or equity interests in TMPs. CRTs are urged to consult their own tax advisers and financial planners concerning these special tax consequences.

Tax Shelter Reporting Regulations. Generally, under U.S. Treasury regulations, if an individual shareholder recognizes a loss of \$2 million or more or if a corporate shareholder recognizes a loss of \$10 million or more, the shareholder must file with the IRS a disclosure statement on Form 8886. Direct shareholders of securities are in many cases exempt from this reporting requirement, but under current guidance, shareholders of a RIC are not exempt. Future guidance may extend the current exemption from this reporting requirement to shareholders of most or all RICs. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their own tax advisers to determine the applicability of these regulations in light of their individual circumstances.

Additional Considerations for the Tax-Free Funds. If at least 50% of the value of a Fund's total assets at the close of each quarter of its taxable years consists of debt obligations that generate interest exempt from U.S. federal income tax under Section 103 of the Internal Revenue Code, then the Fund may qualify to pass through to its shareholders the tax-exempt character of its income from such debt obligations by paying exempt-interest dividends. The Tax-Free Funds intend to so qualify and are designed to provide shareholders with income exempt from U.S. federal income tax in the form of exempt-interest dividends. "Exempt-interest dividends" are dividends (other than capital gain dividends) paid by a RIC that are properly reported as such in a written statement furnished to shareholders.

Each Tax-Free Fund will report to its shareholders the portion of the distributions for the taxable year that constitutes exempt-interest dividends. The designated portion cannot exceed the excess of the amount of interest excludable from gross income under Section 103 of the Internal Revenue Code received by a Tax-Free Fund during the taxable year over any amounts disallowed as deductions under Sections 265 and 171(a)(2) of the Internal Revenue Code. Interest on indebtedness incurred to purchase or carry shares of the Tax-Free Funds will not be deductible to the extent that the Tax-Free Funds' distributions are exempt from U.S. federal income tax. In addition, an investment in a Tax-Free Fund may result in liability for U.S. federal alternative minimum tax ("AMT"). Certain deductions and exemptions have been designated "tax preference items" which must be added back to taxable income for purposes of calculating the U.S. federal AMT. Tax preference items include tax-exempt interest on certain "private activity bonds." To the extent a Tax-Free Fund invests in certain private activity bonds, its shareholders will be required to report that portion of the Fund's distributions attributable to income from the bonds as a tax preference item in determining their U.S. federal AMT, if any. Shareholders will be notified of the tax status of distributions made by a Tax-Free Fund.

Persons who may be "substantial users" (or "related persons" of substantial users) of facilities financed by private activity bonds should consult their tax advisers before purchasing shares in a Tax-Free Fund. Furthermore, shareholders will not be permitted to deduct any of their share of a Tax-Free Fund's expenses in computing their U.S. federal AMT. In addition, exempt-interest dividends paid by a Tax-Free Fund to a corporate shareholder are included in the shareholder's "adjusted current earnings" as part of its U.S. federal AMT calculation, and may also affect its U.S. federal "environmental tax" liability. As of the date of this filing, individuals are subject to the U.S. federal AMT at a maximum rate of 28% and corporations are subject to the U.S. federal AMT at a maximum rate of 20%. Shareholders with questions or concerns about the U.S. federal AMT should consult their own tax advisers.

The IRS is paying increased attention to whether debt obligations intended to produce interest exempt from U.S. federal income tax in fact meet the requirements for such exemption. Ordinarily, the Tax-Free Funds rely on opinions from the issuer's bond counsel that interest on the issuer's debt obligation will be exempt from U.S. federal income tax. However, no assurance can be given that the IRS will not successfully challenge such exemption, which could cause interest on the debt obligation to be taxable and could jeopardize a Tax-Free Fund's ability to pay any exempt-interest dividends. Similar challenges may occur as to state-specific exemptions.

A shareholder who receives Social Security or railroad retirement benefits should consult the shareholder's own tax adviser to determine what effect, if any, an investment in a Tax-Free Fund may have on the U.S. federal taxation of such benefits. Exempt-interest dividends are included in income for purposes of determining the amount of benefits that are taxable.

Distributions of a Tax-Free Fund's income other than exempt-interest dividends generally will be taxable to shareholders. Gains realized by a Tax-Free Fund on the sale or exchange of investments that generate tax-exempt income will also be taxable to shareholders.

Although exempt-interest dividends are generally exempt from U.S. federal income tax, there may not be a similar exemption under the laws of a particular state or local taxing jurisdiction. Thus, exempt-interest dividends may be subject to state and local taxes. You should consult your own tax advisor to discuss the tax consequences of your investment in a Tax-Free Fund.

Legislative Proposals. Prospective shareholders should recognize that the present U.S. federal income tax treatment of the Funds and their shareholders may be modified by legislative, judicial or administrative actions at any time, which may be retroactive in effect. The rules dealing with U.S. federal income taxation are constantly under review by Congress, the IRS and the Treasury Department, and statutory changes as well as promulgation of new regulations, revisions to existing statutes, and revised interpretations of established concepts occur frequently. You should consult your advisors concerning the status of legislative proposals that may pertain to holding Fund shares.

Cost Basis Reporting

The Emergency Economic Stabilization Act of 2008 and provisions from the Energy Improvement and Extension Act of 2008 require each Fund or its delegate to report cost basis information to shareholders and the Internal Revenue Service for 1099-B reportable redemptions of covered Fund shares acquired on or after January 1, 2012. Shares purchased on or after January 1, 2012 are generally treated as covered shares. Shares purchased before January 1, 2012 or shares without complete cost basis information are generally treated as noncovered shares.

Fund shareholders should consult their tax advisors to obtain more information about how the new cost basis rules apply to them and determine which cost basis method allowed by the Internal Revenue Service is best for their tax situation. Methods allowed by the IRS include, but are not limited to:

- **Average Cost.** The cost per share is determined by dividing the aggregate cost amount by the total shares in the account. The basis of the shares redeemed is determined by multiplying the shares redeemed by the cost per share. Starting in 2012, accounts may maintain two separate average costs: one average for covered shares and a separate average for noncovered shares. Under the Average Cost method, noncovered shares are generally depleted first.
- **First in first out (FIFO).** Shares acquired first in the shareholder's account are the first shares depleted and determine the shareholder's cost basis. The basis of the shares redeemed is determined by the adjusted purchase price of each date the shares were acquired.
- **Specific Identification.** A shareholder selects the shares to be redeemed from any of the purchase lots that still have shares remaining. The basis of the shares redeemed is determined by the adjusted purchase price of each date the shares were acquired.

In the absence of a shareholder method election, the Fund will apply its default method, Average Cost. If the Average Cost method is applied either by default or at the shareholder's election, the shareholder's ability to change such election once a sale occurs will be limited under the IRS rules. After an election has been made, but before a disposition of shares occurs, a shareholder may make a retroactive change to an alternate method. The cost basis method a shareholder elects may not be changed with respect to a redemption of shares after the settlement date of the redemption. At any time, a shareholder may designate a new election for future purchases.

Redemptions of noncovered shares (shares acquired prior to January 1, 2012) will continue to be reported using the Average Cost method, if available, and will not be reported to the IRS.

PROXY VOTING POLICIES AND PROCEDURES

The Trusts and Funds Management have adopted policies and procedures ("Proxy Voting Procedures") that are used to vote proxies relating to portfolio securities held by the Funds of the Trusts. The Proxy Voting Procedures are designed to ensure that

proxies are voted in the best interests of Fund shareholders, without regard to any relationship that any affiliated person of the Fund (or an affiliated person of such affiliated person) may have with the issuer of the security.

The responsibility for voting proxies relating to the Funds' portfolio securities has been delegated to Funds Management. In accordance with the Proxy Voting Procedures, Funds Management exercises its voting responsibility with the goal of maximizing value to shareholders consistent with governing laws and the investment policies of each Fund. While each Fund does not purchase securities to exercise control or to seek to effect corporate change through share ownership, it supports sound corporate governance practices within companies in which it invests and reflects that support through its proxy voting process.

Funds Management has established a Proxy Voting Committee (the "Proxy Committee") that is responsible for overseeing the proxy voting process and ensuring that the voting process is implemented in conformance with the Proxy Voting Procedures. Funds Management has retained an independent, unaffiliated nationally recognized proxy voting company as proxy voting agent. The Proxy Committee monitors the proxy voting agent and the voting process and, in certain situations, votes proxies or directs the proxy voting agent how to vote.

The Proxy Voting Procedures set out guidelines regarding how Funds Management and the proxy voting agent will vote proxies. Where the guidelines specify a particular vote on a particular matter, the proxy voting agent handles the proxy, generally without further involvement by the Proxy Committee. Where the guidelines specify a case-by-case determination, the proxy voting agent forwards the proxy to the Proxy Committee for a vote determination by the Proxy Committee. To the extent the guidelines do not address a proxy voting proposal, Funds Management will vote pursuant to the proxy voting agent's current U.S. and International proxy voting guidelines. In addition, even where the guidelines specify a particular vote, the Proxy Committee may exercise a discretionary vote if it determines that a case-by-case review of a particular matter is warranted. As a general matter, proxies are voted consistently in the same matter when securities of an issuer are held by multiple Funds of the Trusts.

The Proxy Voting Procedures set forth Funds Management's general position on various proposals, such as:

- Routine Items – Funds Management will generally vote for uncontested director or trustee nominees, changes in company name, and other procedural matters related to annual meetings.
- Corporate Governance – Funds Management will generally vote for charter and bylaw amendments proposed solely to conform with modern business practices or for purposes of simplification or to comply with what management's counsel interprets as applicable law.
- Anti-Takeover Matters – Funds Management generally will vote for proposals that require shareholder ratification of poison pills, and on a case-by-case basis on proposals to redeem a company's poison pill.
- Mergers/Acquisitions and Corporate Restructurings – Funds Management's Proxy Committee will examine these items on a case-by-case basis.
- Shareholder Rights – Funds Management will generally vote against proposals that may restrict shareholder rights.
- Capital Structure Changes - Funds Management will follow the proxy voting agent's capital structure model in evaluating requested increases in authorized common stock. In addition, even if capital requests of less than or equal to 300% of outstanding shares fail the calculated allowable cap, Funds Management will vote for proposals to increase the number of authorized common shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.
- Executive and Director Compensation Plans - Funds Management will analyze on a case-by-case basis proposals on executive or director compensation plans, with the view that viable compensation programs reward the creation of shareholder wealth by having high payout sensitivity to increases in shareholder value.
- Disclosure on Executive or Director Compensation Cap or Restrict Executive or Director Compensation - Funds Management will generally vote for shareholder proposals requiring companies to report on their executive retirement benefits (deferred compensation, split-dollar life insurance, SERPs, and pension benefits). Funds Management will generally vote for shareholder proposals requesting to put extraordinary benefits contained in SERP agreements to a shareholder vote, unless the company's executive pension plans do not contain excessive benefits beyond what is offered under employee-wide plans. Funds Management will generally vote against proposals that seek to limit executive and director pay.

In all cases where the Proxy Committee makes the decision regarding how a particular proxy should be voted, the Proxy Committee exercises its voting discretion in accordance with the voting philosophy of the Funds and in the best interests of Fund shareholders. In deciding how to vote, the Proxy Committee may rely on independent research, input and recommendations from

third parties including independent proxy services, other independent sources, sub-advisers, company managements and shareholder groups as part of its decision-making process.

In most cases, any potential conflicts of interest involving Funds Management or any affiliate regarding a proxy are avoided through the strict and objective application of the Fund's voting guidelines. However, when the Proxy Committee is aware of a material conflict of interest regarding a matter that would otherwise be considered on a case-by-case basis by the Proxy Committee, the Proxy Committee shall address the material conflict by using any of the following methods: (i) instructing the proxy voting agent to vote in accordance with the recommendation it makes to its clients; (ii) disclosing the conflict to the Board and obtaining their consent before voting; (iii) submitting the matter to the Board to exercise its authority to vote on such matter; (iv) engaging an independent fiduciary who will direct the Proxy Committee on voting instructions for the proxy; (v) consulting with outside legal counsel for guidance on resolution of the conflict of interest; (vi) erecting information barriers around the person or persons making voting decisions; (vii) voting in proportion to other shareholders; or (viii) voting in other ways that are consistent with each Fund's obligation to vote in the best interests of its shareholders. Additionally, the Proxy Committee does not permit its votes to be influenced by any conflict of interest that exists for any other affiliated person of the Funds (such as a subadviser or principal underwriter) and the Proxy Committee votes all such matters without regard to the conflict. The Proxy Voting Procedures may reflect voting positions that differ from practices followed by other companies or subsidiaries of Wells Fargo & Company.

While Funds Management uses its best efforts to vote proxies, in certain circumstances it may be impractical or impossible for Funds Management to vote proxies (e.g., limited value or unjustifiable costs). For example, in accordance with local law or business practices, many foreign companies prevent the sales of shares that have been voted for a certain period beginning prior to the shareholder meeting and ending on the day following the meeting ("share blocking"). Due to these restrictions, Funds Management must balance the benefits to its clients of voting proxies against the potentially serious portfolio management consequences of a reduced flexibility to sell the underlying shares at the most advantageous time. As a result, Funds Management will generally not vote those proxies in the absence of an unusual, significant vote or compelling economic importance. Additionally, Funds Management may not be able to vote proxies for certain foreign securities if Funds Management does not receive the proxy statement in time to vote the proxies due to custodial processing delays.

As a general matter, securities on loan will not be recalled to facilitate proxy voting (in which case the borrower of the security shall be entitled to vote the proxy). However, if the Proxy Committee is aware of an item in time to recall the security and has determined in good faith that the importance of the matter to be voted upon outweighs the loss in lending revenue that would result from recalling the security (i.e., if there is a controversial upcoming merger or acquisition, or some other significant matter), the security will be recalled for voting.

Information regarding how the Funds voted proxies relating to portfolio securities held during the most recent 12-month period ended June 30 may be obtained on the Funds' Web site at wellsfargoadvantagefunds.com or by accessing the SEC's Web site at sec.gov.

POLICIES AND PROCEDURES FOR DISCLOSURE OF FUND PORTFOLIO HOLDINGS

I. Scope of Policies and Procedures. The following policies and procedures (the "Portfolio Holdings Procedures") govern the disclosure of portfolio holdings and any ongoing arrangements to make available information about portfolio holdings for the separate series of Wells Fargo Funds Trust ("Funds Trust"), Wells Fargo Master Trust ("Master Trust"), Wells Fargo Variable Trust ("Variable Trust") and Asset Allocation Trust (each of Funds Trust, Master Trust, Variable Trust and Asset Allocation Trust referred to collectively herein in the Portfolio Holdings Procedures as the "Funds" or individually as the "Fund") now existing or hereafter created.

II. Disclosure Philosophy. The Funds have adopted these Portfolio Holdings Procedures to ensure that the disclosure of a Fund's portfolio holdings is accomplished in a manner that is consistent with a Fund's fiduciary duty to its shareholders. For purposes of these Portfolio Holdings Procedures, the term "portfolio holdings" means the stock, bonds and derivative positions held by a non-money market Fund and does not include the cash investments held by the Fund. For money market funds, the term "portfolio holdings" includes cash investments, such as investments in repurchase agreements.

Under no circumstances shall Funds Management or the Funds receive any compensation in return for the disclosure of information about a Fund's portfolio securities or for any ongoing arrangements to make available information about a Fund's portfolio securities.

III. Disclosure of Fund Portfolio Holdings. The complete portfolio holdings and top ten holdings information referenced below (except for the Funds of Master Trust, Variable Trust and Asset Allocation Trust) will be available on the Funds' website until updated for the next applicable period. Funds Management may withhold any portion of a Fund's portfolio holdings from online disclosure when deemed to be in the best interest of the Fund. Once holdings information has been posted on the website, it may be further disseminated without restriction.

A. Complete Holdings. The complete portfolio holdings for each Fund (except for money market funds and funds that operate as fund of funds) shall be made publicly available monthly on the Funds' website (wellsfargo.com/advantagefunds), on a one-month delayed basis. Money market Fund portfolio holdings shall be made publicly available on the Fund's website, on a 1-day delayed basis. In addition to the foregoing, each money market Fund shall post on its website, for a period of not less than six months, beginning no later than the fifth business day of the month, a schedule of its investments, as of the last business day of the prior month, that includes the following information required by rule 2a-7(c)(12) under the Investment Company Act of 1940. The categories of information included on the website may differ slightly from what is included in the Funds' Statement of Investments.

B. Top Ten Holdings. Top ten holdings information (excluding derivative positions) for each Fund (except for money market funds) shall be made publicly available on the Funds' website on a monthly, seven-day or more delayed basis.

C. Fund of Funds Structures.

1. The underlying funds held by a Fund that operates as a fund of funds and invests exclusively in unaffiliated underlying funds or exclusively in a combination of affiliated and unaffiliated underlying funds (in both cases, an "unaffiliated fund of funds") shall be posted to the Funds' website on a monthly, one-month delayed basis.

2. The individual holdings of the underlying funds held by a Fund that operates as a fund of funds and invests exclusively in affiliated underlying funds (an "affiliated fund of funds") shall be posted to the Funds' website on a monthly, one-month delayed basis.

3. A change to the underlying funds held by an affiliated or unaffiliated fund of funds or changes in an affiliated or unaffiliated fund of funds' target allocations between or among its fixed-income and/or equity investments may be posted to the Funds' website simultaneous with the occurrence of the change.

Furthermore, as required by the SEC each Fund shall file its complete portfolio holdings schedule in public filings made with the SEC on a quarterly basis. Each Fund is required to file its complete portfolio schedules for the second and fourth fiscal quarter on Form N-CSR, and each Fund is required to file its complete portfolio schedules for the first and third fiscal quarters on Form N-Q, in each instance within 60 days of the end of the Fund's fiscal quarter. Through Form N-CSR and Form N-Q filings made with the SEC, the Funds' full portfolio holdings will be publicly available to shareholders on a quarterly basis. Such filings shall be made on or shortly before the 60th day following the end of a fiscal quarter. In addition, each money market Fund is required to file with the SEC by the fifth business day of each month, a report on Form N-MFP of portfolio holdings that is current as of the last business day of the previous month; the SEC makes each Form N-MFP publicly available on a delayed basis (presently 60 days after the end of the month to which the information in the report relates).

Each Fund's complete portfolio schedules for the second and fourth fiscal quarter, required to be filed on Form N-CSR, shall be delivered to shareholders in the Fund's semi-annual and annual reports. Each Fund's complete portfolio schedule for the first and third fiscal quarters, required to be filed on Form N-Q, will not be delivered to shareholders. Each Fund, however, shall include appropriate disclosure in its semi-annual and annual reports as to how a shareholder may obtain holdings information for the Fund's first and third fiscal quarters.

IV. List of Approved Recipients. The following list describes the limited circumstances in which a Fund's portfolio holdings may be disclosed to selected third parties in advance of the monthly release on the Funds' website. In each instance, a determination will be made by Funds Management that such advance disclosure is supported by a legitimate business purpose and that the recipients, where feasible, are subject to an independent duty not to disclose or trade on the nonpublic information.

A. Sub-Advisers. Sub-advisers shall have full daily access to fund holdings for the Fund(s) for which they have direct management responsibility. Sub-advisers may also release and discuss portfolio holdings with various broker/dealers for purposes of analyzing the impact of existing and future market changes on the prices, availability/demand and liquidity of such securities, as well as for the purpose of assisting portfolio managers in the trading of such securities. A new Fund sub-adviser may periodically receive full portfolio holdings information for such Fund from the date of Board approval through the date upon which they take over day-to-day investment management activities. Such disclosure will be subject to confidential treatment.

B. Money Market Portfolio Management Team. The money market portfolio management team at Wells Capital Management Incorporated ("Wells Capital Management") shall have full daily access to daily transaction information across the Wells Fargo Advantage Funds for purposes of anticipating money market sweep activity which in turn helps to enhance liquidity management within the money market funds.

C. Funds Management/Wells Fargo Funds Distributor, LLC.

1. Funds Management personnel that deal directly with the processing, settlement, review, control, auditing, reporting, and/ or valuation of portfolio trades shall have full daily access to Fund portfolio holdings through access to PNC's Datapath system.
2. Funds Management personnel that deal directly with investment review and analysis of the Funds shall have full daily access to Fund portfolio holdings through Factset, a program that is used to, among other things, evaluate portfolio characteristics against available benchmarks.
3. Funds Management and Funds Distributor personnel may be given advance disclosure of any changes to the underlying funds in a fund of funds structure or changes in a Fund's target allocations that result in a shift between or among its fixed-income and/ or equity investments.

D. External Servicing Agents. Appropriate personnel employed by entities that assist in the review and/or processing of Fund portfolio transactions, employed by the fund accounting agent, the custodian and the trading settlement desk at Wells Capital Management (only with respect to the Funds that Wells Capital Management sub-advises), shall have daily access to all Fund portfolio holdings. In addition, certain of the sub-advisers utilize the services of software provider Advent to assist with portfolio accounting and trade order management. In order to provide the contracted services to the sub-adviser, Advent may receive full daily portfolio holdings information directly from the Funds' accounting agent however, only for those Funds in which such subadviser provides advisory services. Funds Management also utilizes the services of Institutional Shareholder Services ("ISS") to assist with proxy voting. ISS may receive full Fund portfolio holdings on a weekly basis for the Funds for which it provides services.

E. Rating Agencies. Nationally Recognized Statistical Ratings Organizations ("NRSROs") may receive full Fund holdings for rating purposes.

F. Reorganizations. Entities hired as trading advisors that assist with the analysis and trading associated with transitioning portfolios may receive full portfolio holdings of both the target fund and the acquiring fund. In addition, the portfolio managers of the target fund and acquiring fund may receive full portfolio holdings of the acquiring fund and target fund, respectively, in order to assist with aligning the portfolios prior to the closing date of the reorganization.

G. Investment Company Institute. The Investment Company Institute may receive information about full money market Fund holdings concurrently at the time each money market Fund files with the SEC a report on Form N-MFP.

V. Additions to List of Approved Recipients. Any additions to the list of approved recipients requires approval by the President and Chief Legal Officer of the Funds based on a review of: (i) the type of fund involved; (ii) the purpose for receiving the holdings information; (iii) the intended use of the information; (iv) the frequency of the information to be provided; (v) the length of the lag, if any, between the date of the information and the date on which the information will be disclosed; (vi) the proposed recipient's relationship to the Funds; (vii) the ability of Funds Management to monitor that such information will be used by the proposed recipient in accordance with the stated purpose for the disclosure; (viii) whether a confidentiality agreement will be in place with such proposed recipient; and (ix) whether any potential conflicts exist regarding such disclosure between the interests of Fund shareholders, on the one hand, and those of the Fund's adviser, principal underwriter, or any affiliated person of the Fund.

VI. Funds Management Commentaries. Funds Management may disclose any views, opinions, judgments, advice or commentary, or any analytical, statistical, performance or other information in connection with or relating to a Fund or its portfolio holdings (including historical holdings information), or any changes to the portfolio holdings of a Fund. The portfolio commentary and

statistical information may be provided to members of the press, shareholders in the Funds, persons considering investment in the Funds or representatives of such shareholders or potential shareholders. The content and nature of the information provided to each of these persons may differ.

Certain of the information described above will be included in periodic fund commentaries (e.g. quarterly, monthly, etc.) and will contain information that includes, among other things, top contributors/detractors from fund performance and significant portfolio changes during the relevant period (e.g. calendar quarter, month, etc.). This information will be posted contemporaneously with their distribution on the Funds' website.

No person shall receive any of the information described above if, in the sole judgment of Funds Management, the information could be used in a manner that would be harmful to the Funds.

VII. Board Approval. The Board shall review and reapprove these Portfolio Holdings Procedures, including the list of approved recipients, as often as they deem appropriate, but not less often than annually, and make any changes that they deem appropriate.

VIII. Education Component. In order to promote strict compliance with these Portfolio Holdings Procedures, Funds Management has informed its employees, and other parties possessing Fund portfolio holdings information (such as sub-advisers, the fund accounting agent and the custodian), of the limited circumstances in which the Funds' portfolio holdings may be disclosed in advance of the monthly disclosure on the Funds' website and the ramifications, including possible dismissal, if disclosure is made in contravention of these Portfolio Holdings Procedures.

CAPITAL STOCK

The Funds are nine series of the Trust which was organized as a Delaware statutory trust on March 10, 1999.

The Trust's series are authorized to issue two classes of shares, Class 1 shares with no 12b-1 fee or sales load, and Class 2 shares with a 12b-1 fee and no sales load, offered to participants of variable life insurance policies or variable contracts. Each share in a class represents an equal, proportionate interest in the class with all other shares. Shareholders bear their pro rata portion of the class's operating expenses.

All shares of a Fund have equal voting rights and will be voted in the aggregate, and not by series or class, except where voting by a series or class is required by law or where the matter involved only affects one series or class. For example, a change in a Fund's fundamental investment policy affects only one series and would be voted upon only by shareholders of the Fund involved. Additionally, approval of an advisory agreement, since it affects only one Fund, is a matter to be determined separately by series. Approval by the shareholders of one series is effective as to that series whether or not sufficient votes are received from the shareholders of the other series to approve the proposal as to those series.

As used in the Prospectuses and in this SAI, the term "majority," when referring to approvals to be obtained from shareholders of a class of a Fund, means the vote of the lesser of (i) 67% of the shares of such class of the Fund represented at a meeting if the holders of more than 50% of the outstanding shares of such class of the Fund are present in person or by proxy, or (ii) more than 50% of the outstanding shares of such class of the Fund. The term "majority," when referring to approvals to be obtained from shareholders of the Fund, means the vote of the lesser of (i) 67% of the shares of the Fund represented at a meeting if the holders of more than 50% of the outstanding shares of the Fund are present in person or by proxy, or (ii) more than 50% of the outstanding shares of the Fund. The term "majority," when referring to the approvals to be obtained from shareholders of the Trust as a whole, means the vote of the lesser of (i) 67% of the Trust's shares represented at a meeting if the holders of more than 50% of the Trust's outstanding shares are present in person or by proxy, or (ii) more than 50% of the Trust's outstanding shares.

With regard to Fund matters for which the 1940 Act requires a shareholder vote, insurance companies sponsoring a separate account holding shares of a Fund vote such shares in accordance with instructions received from owners of variable contracts (or annuitants or beneficiaries thereunder) having a voting interest in that separate account. Each share has one vote and votes are counted on an aggregate basis except as to matters where the interests of one Fund may differ from another (such as approval of an investment advisory agreement or a change in a Fund's fundamental policies). In such a case, the voting is on a Fund-by-Fund basis or, if applicable, on a Fund class basis. Matters that affect only one class of shares of a Fund (such as approval of a plan of distribution) are voted on separately for that class by the holders of the shares of that class of the Fund. Fractional shares are counted. Shares held by a separate account for which no instructions are received are generally voted by the participating insurance company sponsor of the account, for or against any propositions, or in abstention, in the same proportion as the shares for which

instructions have been received. Due to this proportional voting, the disposition of a particular proposition could be determined by a small number of contract owners.

Shareholders are not entitled to any preemptive rights. All shares are issued in uncertificated form only, and, when issued, will be fully paid and non-assessable by the Trust. The Trust may dispense with an annual meeting of shareholders in any year in which it is not required to elect directors under the 1940 Act.

Each share of a class of a Fund represents an equal proportional interest in the Fund with each other share and is entitled to such dividends and distributions out of the income earned on the assets belonging to the Fund as are declared in the discretion of the Trustees. In the event of the liquidation or dissolution of the Trust, shareholders of a Fund are entitled to receive the assets attributable to that Fund that are available for distribution, and a distribution of any general assets not attributable to a particular Fund or investment portfolio that are available for distribution in such manner and on such basis as the Trustees in their sole discretion may determine.

Set forth below as of April 3, 2014 is the name, address and share ownership of each person with record ownership of 5% or more of a class of a Fund or its predecessor and each person known by the Trust to have beneficial ownership of 25% or more of the voting securities of a Fund or its predecessor as a whole. Except as identified below, no person with record ownership of 5% or more of a class of a Fund or its predecessor is known by the Trust to have beneficial ownership of such shares.

For purposes of the 1940 Act, any person who owns directly or through one or more controlled companies more than 25% of the voting securities of a company is presumed to "control" such company. Accordingly, to the extent that a person identified in the foregoing table is identified as the beneficial owner of more than 25% of a Fund, or is identified as the record owner of more than 25% of a Fund and has voting and/or investment powers, it may be presumed to control such Fund. A controlling person's vote could have a more significant effect on matters presented to shareholders for approval than the vote of other Fund shareholders.

OTHER INFORMATION

The Trust's Registration Statement, including the Prospectus(es) and SAI for the Funds and the exhibits filed therewith, may be examined at the office of the SEC, located at 100 "F" Street NE, in Washington, D.C., 20549-0102. Statements contained in the Prospectus(es) or the SAI as to the contents of any contract or other document referred to herein or in the Prospectus(es) are not necessarily complete, and, in each instance, reference is made to the copy of such contract or other document filed as an exhibit to the Registration Statement, each such statement being qualified in all respects by such reference.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

KPMG LLP has been selected as the independent registered public accounting firm for the Trust. KPMG LLP provides audit services, tax return preparation and assistance and consultation in connection with review of certain SEC filings. KPMG LLP's address is Two Financial Center, 60 South Street, Boston, MA 02111.

FINANCIAL INFORMATION

Audited financial statements for the Funds, which include the portfolios of investments and report of the independent registered public accounting firm, are hereby incorporated by reference into this document by reference to each Fund's Annual Report dated as of December 31, 2013.

CREDIT RATINGS

The ratings of Standard & Poor's ("S&P"), Moody's Investors Services ("Moody's"), Fitch Investor Services ("Fitch"), represent their opinion as to the quality of debt securities. It should be emphasized, however, that ratings are general and not absolute standards of quality, and debt securities with the same maturity, interest rate and rating may have different yields while debt securities of the same maturity and interest rate with different ratings may have the same yield. Subsequent to purchase by the Funds, an issue of debt securities may cease to be rated or its rating may be reduced below the minimum rating required for purchase by the Funds. The adviser will consider such an event in determining whether the Fund involved should continue to hold the obligation.

The following is a description of the ratings given by S&P, Fitch, and Moody's to corporate and municipal bonds and corporate and municipal commercial paper and variable rate demand obligations.

Corporate Bonds

S&P

S&P rates the long-term debt obligations issued by various entities in categories ranging from "AAA" to "D," according to quality, as described below. The first four ratings denote investment-grade securities. The ratings from AA to CCC may be modified by the addition of a plus or minus sign to show relative standing within the major rating categories.

AAA - This is the highest rating assigned by S&P to a debt obligation and indicates an extremely strong capacity to pay interest and repay principal.

AA - Debt rated AA is considered to have a very strong capacity to pay interest and repay principal and differs from AAA issues only in a small degree.

A - Debt rated A has a strong capacity to pay interest and repay principal although it is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than debt in higher-rated categories.

BBB - Debt rated BBB is regarded as having an adequate capacity to pay interest and repay principal. Whereas it normally exhibits adequate protection parameters, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity to pay interest and repay principal for debt in this category than for those in higher-rated categories.

BB - Debt rated BB has less near-term vulnerability to default than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to inadequate capacity to meet timely interest and principal payments.

B - Debt rated B has greater vulnerability to default but currently has the capacity to meet interest payments and principal repayments. Adverse business, financial, or economic conditions will likely impair capacity or willingness to pay interest and repay principal.

CCC - Debt CCC is currently vulnerable and is dependent upon favorable business, financial, and economic conditions to meet timely interest and principal payments.

CC - Debt rated CC is currently highly vulnerable to nonpayment. Debt rated CC is subordinate to senior debt rated CCC.

C - Debt rated C is currently highly vulnerable to nonpayment. Debt rated C is subordinate to senior debt rated CCC-. The C rating may be used to cover a situation where a bankruptcy petition has been filed or similar action taken, but payments on this obligation are being continued. Debt rated C also will be assigned to a preferred stock issue in arrears on dividends or sinking fund payments, but that is currently paying.

D - Debt rated D is currently in default, where payment of interest and/or repayment of principal is in arrears.

Moody's

Moody's rates the long-term debt obligations issued by various entities in categories ranging from "Aaa" to "C," according to quality, as described below. The first four denote investment-grade securities.

Aaa - Bonds rated Aaa are judged to be of the best quality. They carry the smallest degree of investment risk, and interest payments are protected by a large or by an exceptionally stable margin and principal is secure. While the various protective elements are likely to change, such changes as can be visualized are most unlikely to impair the fundamentally strong position of such issues.

Aa - Bonds rated Aa are judged to be of high quality by all standards. Together with the Aaa group, such bonds comprise what are generally known as high grade bonds. They are rated lower than the best bonds because margins of protection may not be as large as in Aaa securities or fluctuation of protective elements may be of greater amplitude or there may be other elements present which make the long-term risks appear somewhat larger than in Aaa securities.

A - Bonds rated A possess many favorable investment attributes and are to be considered upper to medium investment-grade obligations. Factors giving security to principal and interest are considered adequate, but elements may be present which suggest a susceptibility to impairment sometime in the future.

Baa - Bonds rated Baa are considered medium-grade (and still investment-grade) obligations, i.e., they are neither highly protected nor poorly secured. Interest payments and principal security appear adequate for the present but certain protective elements may be lacking or may be characteristically unreliable over any great length of time. Such bonds lack outstanding investment characteristics and in fact have speculative characteristics as well.

Ba - Bonds rated Ba are judged to have speculative elements; their future cannot be considered as well assured. Often the protection of interest and principal payments may be very moderate and thereby not as well safeguarded during both good times and bad times over the future. Uncertainty of position characterizes bonds in this class.

B - Bonds rated B generally lack characteristics of a desirable investment. Assurance of interest and principal payments or of maintenance of other terms of the contract over any long period of time may be small.

Caa - Bonds rated Caa are of poor standing. Issues may be in default or there may be present elements of danger with respect to principal or interest.

Ca - Bonds rated Ca are speculative in a high degree. Such bonds are often in default or have other marked shortcomings.

C - Bonds rated C are the lowest rated class of bonds. Such bonds can be regarded as having extremely poor prospects of ever attaining any real investment standing.

Moody's applies numerical modifiers (1, 2 and 3) to rating categories. The modifier 1 indicates that the bond being rated ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates that the bond ranks in the lower end of its generic rating category. With regard to municipal bonds, those bonds in the Aa, A and Baa groups which Moody's believes possess the strongest investment attributes are designated by the symbols Aa1, A1 or Baa1, respectively.

Fitch

National Long-Term Credit Ratings. A special identifier for the country concerned will be added at the end of all national ratings. For illustrative purposes, (xxx) has been used, below.

AAA(xxx) - 'AAA' national ratings denote the highest rating assigned in its national rating scale for that country. This rating is assigned to the "best" credit risk relative to all other issuers or issues in the same country and will normally be assigned to all financial commitments issued or guaranteed by the sovereign state.

AA(xxx) - 'AA' national ratings denote a very strong credit risk relative to other issuers or issues in the same country. The credit risk inherent in these financial commitments differs only slightly from the country's highest rated issuers or issues.

A(xxx) - 'A' national ratings denote a strong credit risk relative to other issuers or issues in the same country. However, changes in circumstances or economic conditions may affect the capacity for timely repayment of these financial commitments to a greater degree than for financial commitments denoted by a higher rated category.

BBB(xxx) - 'BBB' national ratings denote an adequate credit risk relative to other issuers or issues in the same country. However, changes in circumstances or economic conditions are more likely to affect the capacity for timely repayment.

BB(xxx) - 'BB' national ratings denote a fairly weak credit risk relative to other issuers or issues in the same country. Within the context of the country, payment of these financial commitments is uncertain to some degree and capacity for timely repayment remains more vulnerable to adverse economic change over time.

B(xxx) - 'B' national ratings denote a significantly weak credit risk relative to other issuers or issues in the same country. Financial commitments are currently being met but a limited margin of safety remains and capacity for continued timely payment is contingent upon a sustained, favorable business and economic environment.

CCC(xxx), CC(xxx), C(xxx) - These categories of national ratings denote an extremely weak credit risk relative to other issuers or issues in the same country. Capacity for meeting financial commitments is solely reliant upon sustained, favorable business or economic developments.

DDD(xxx), DD(xxx), D(xxx) - These categories of national ratings are assigned to entities or financial commitments which are currently in default.

Short-Term Issue Credit Ratings (including Commercial Paper)

S&P:

A-1 - Debt rated A-1 is rated in the highest category by S&P. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

A-2 - Debt rated A-2 is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

A-3 - Debt rated A-3 exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

B - Debt rated B is regarded as having significant speculative characteristics. The obligor currently has the capacity to meet its financial commitment on the obligation; however, it faces major ongoing uncertainties which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

C - Debt rated C is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

D - Debt rated D is in payment default. The D rating category is used when payments on an obligation are not made on the date due even if the applicable grace period has not expired, unless S&P believes that such payments will be made during such grace period. The D rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

Moody's:

Prime-1: Issuers rated Prime-1 have a superior ability for repayment of senior short-term debt obligations.

Prime-2: Issuers rated Prime-2 have a strong ability to repay senior short-term debt obligations, but earnings trends, while sound, will be subject to more variation.

Prime-3: Issuers rated Prime-3 have acceptable credit quality and an adequate capacity for timely payment of short-term deposit obligations.

Not Prime: Issuers rated Not Prime have questionable to poor credit quality and an uncertain capacity for timely payment of short-term deposit obligations.

Fitch

National Short-Term Credit Ratings. A special identifier for the country concerned will be added at the end of all national ratings. For illustrative purposes, (xxx) has been used, below.

F1(xxx) - Indicates the strongest capacity for timely payment of financial commitments relative to other issuers or issues in the same country. Under their national rating scale, this rating is assigned to the "best" credit risk relative to all others in the same country and is normally assigned to all financial commitments issued or guaranteed by the sovereign state. Where the credit risk is particularly strong, a "+" is added to the assigned rating.

F2(xxx) - Indicates a satisfactory capacity for timely payment of financial commitments relative to other issuers or issues in the same country. However, the margin of safety is not as great as in the case of the higher ratings.

F3(xxx) - Indicates an adequate capacity for timely payment of financial commitments relative to other issuers or issues in the same country. However, such capacity is more susceptible to near-term adverse changes than for financial commitments in higher rated categories.

B(xxx) - Indicates an uncertain capacity for timely payment of financial commitments relative to other issuers or issues in the same country. Such capacity is highly susceptible to near-term adverse changes in financial and economic conditions.

C(xxx) - Indicates a highly uncertain capacity for timely payment of financial commitments relative to other issuers or issues in the same country. Capacity or meeting financial commitments is solely reliant upon a sustained, favorable business and economic environment.

D(xxx) - Indicates actual or imminent payment default.

Note to National Short-Term ratings: In certain countries, regulators have established credit rating scales, to be used within their domestic markets, using specific nomenclature. In these countries, our National Short-Term Ratings definitions for F1+(xxx), F1(xxx), F2(xxx) and F3(xxx) may be substituted by those regulatory scales, e.g. A1+, A1, A2 and A3.

Variable Rate Demand Obligations

SP:

SP-1 - Strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

SP-2 - Satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

SP-3 - Speculative capacity to pay principal and interest.

Moody's:

VMIG 1: This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

VMIG 2: This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

VMIG 3: This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

SG: This designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.
