

TFLIC SEPARATE ACCOUNT VNY
STATEMENT OF ADDITIONAL INFORMATION
for the
THE ADVISOR'S EDGE[®] NY VARIABLE ANNUITY
Offered by
Transamerica Financial Life Insurance Company
(A New York Stock Company)

This Statement of Additional Information expands upon subjects discussed in the current Prospectus for the Advisor's Edge[®] NY Variable Annuity policy (the "Policy") offered by Transamerica Financial Life Insurance Company (the "Company" or "TFLIC"). You may obtain a copy of the Prospectus dated May 1, 2014, by calling 800-525-6205 or by writing to our Administrative Office, at 4333 Edgewood Road, NE, Cedar Rapids, Iowa 52499. Terms used in the current Prospectus for the Policy are incorporated in this Statement of Additional Information.

THIS STATEMENT OF ADDITIONAL INFORMATION IS NOT A PROSPECTUS AND SHOULD BE READ ONLY IN CONJUNCTION WITH THE PROSPECTUS FOR THE POLICY.

GLOSSARY OF TERMS

Accumulation Unit – An accounting unit of measure used in calculating the policy value in the separate account before the annuity commencement date.

Administrative Office – Transamerica Financial Life Insurance Company, Variable Annuity Department, 4333 Edgewood Road, N.E., Cedar Rapids, Iowa 52499. 800-525-6205

Annuitant – The person during whose life, annuity payments involving life contingencies will continue.

Annuity Commencement Date – The date upon which annuity payments are to commence.

Annuity Payment Option – A method of receiving a stream of annuity payments selected by the owner.

Annuity Unit – An accounting unit of measure used in the calculation of the amount of the second and each subsequent variable annuity payment.

Beneficiary – The person who has the right to the death benefit set forth in the Policy.

Business Day – A day when the New York Stock Exchange is open for business.

Code – The Internal Revenue Code of 1986, as amended.

Enrollment form – A written application, order form, or any other information received electronically or otherwise upon which the policy is issued and/or is reflected on the data or specifications page.

Good Order – An instruction that TFLIC receives that is sufficiently complete and clear – along with all necessary forms, information and supporting legal documentation, including any required spousal or joint owner's consents – so that TFLIC does not need to exercise any discretion to follow such instruction. All requests for a partial or full withdrawal, a transfer, a death benefit, or other transaction or change, must be in good order.

Nonqualified Policy – A Policy other than a qualified policy.

Owner (Policy Owner, You, Your) – The individual who (or entity that) may exercise all rights and privileges under an individual Policy.

Policy – The individual Policy.

Policy Date – The date shown on the policy data page attached to the Policy and the date on which the Policy becomes effective.

Policy Value – On or before the annuity commencement date, the policy value is equal to the owner's:

- premium Payments; minus
- partial withdrawals; plus or minus
- accumulated gains or losses in the separate account; minus
- services charges, premium taxes, if applicable, rider fees, and transfer fees, if any.

Policy Year – A policy year begins on the policy date and on each anniversary thereof.

Premium Payment – An amount paid to TFLIC by the Owner or on the Owner's behalf as consideration for the benefits provided by the Policy.

Qualified Policy – A Policy issued in connection with retirement plans that qualify for special federal income tax treatment under the Code.

Separate Account – TFLIC Separate Account VNY, a separate account established and registered as a unit investment trust under the Investment Company Act of 1940, as amended (the “1940 Act”), to which Premium Payments under the policies may be allocated.

Service Charge – An annual charge on each Policy Anniversary for policy maintenance and related administrative expenses.

Subaccount – A subdivision within the separate account, the assets of which are invested in specified portfolios of the underlying funds.

Successor Owner – A person appointed by the Owner to succeed to ownership of the Policy in the event of the death of the Owner who is not the Annuitant before the annuity commencement date.

Valuation Period – The period of time from one determination of accumulation unit values and annuity unit values to the next subsequent determination of those values. Such determination shall be made on each business day.

Variable Annuity Payments – Payments made pursuant to an annuity payment option which fluctuate as to dollar amount or payment term in relation to the investment performance of the specified subaccounts within the separate account.

Written Notice or Written Request – Written notice that is signed by the owner, is in good order and received at the Administrative Office, and that gives TFLIC the information it requires. For some transactions, TFLIC may accept an electronic notice such as telephone instructions. Such electronic notice must meet the requirements for good order that TFLIC establishes for such notices.

[THIS SPACE INTENTIONALLY LEFT BLANK]

THE POLICY – GENERAL PROVISIONS

OWNER

The Policy shall belong to the owner upon issuance of the Policy after completion of an enrollment form and delivery of the Initial Premium Payment. While the annuitant is living, the owner may: (1) assign the Policy; (2) surrender the policy; (3) amend or modify the Policy with the consent of TFLIC; (4) receive annuity payments or name a payee to receive the payments; and (5) exercise, receive and enjoy every other right and benefit contained in the policy. The exercise of these rights may be subject to the consent of any assignee or irrevocable beneficiary, and of your spouse in a community or marital property state.

Unless TFLIC has been notified of a community or marital property interest in the policy, it will rely on its good faith belief that no such interest exists and will assume no responsibility for inquiry.

A successor owner can be named in the enrollment form, information provided in lieu thereof, or in a written notice. The successor owner will become the new owner upon your death, if you predecease the annuitant. If no successor owner survives you and you predecease the annuitant, your estate will become the owner.

Note Carefully. If the owner does not name a contingent owner, the owner's estate will become the new owner. If no probate estate is opened because the owner has precluded the opening of a probate estate by means of a trust or other instrument, unless TFLIC has received written notice of the trust as a successor owner signed before the owner's death, that trust may not exercise ownership rights to the policy. It may be necessary to open a probate estate in order to exercise ownership rights to the policy if no contingent owner is named in a written notice received by TFLIC.

The owner may change the ownership of the policy in a written notice. When the change takes effect, all rights of ownership in the policy will pass to the new owner. A change of ownership may have tax consequences.

When there is a change of owner or successor owner, the change will not be effective until it is recorded in our records. Once recorded, it will take effect as of the date the owner signs the written notice, however, TFLIC is not responsible for payments made or other action taken before the change is recorded. Changing the owner or naming a new successor owner cancels any prior choice of successor owner, but does not change the designation of the beneficiary or the annuitant.

If ownership is transferred (except to the owner's spouse) because the owner dies before the annuitant, the policy value generally must be distributed to the successor owner within five years of the owner's death, or payments must be made for a period certain or for the successor owner's lifetime so long as any period certain does not exceed that successor owner's life expectancy, if the first payment begins within one year of your death.

ENTIRE POLICY

The policy, any endorsements thereon, the enrollment form, or information provided in lieu thereof constitute the entire Policy between TFLIC and the owner. All statements in the enrollment form are representations and not warranties. No statement will cause the policy to be void or to be used in defense of a claim unless contained in the enrollment form or information provided in lieu thereof. No registered representative has authority to change or waive any provision of the policy.

NON-PARTICIPATING

The Policies are non-participating. No dividends are payable and the Policies will not share in the profits or surplus earnings of TFLIC.

MISSTATEMENT OF AGE OR GENDER

TFLIC may require proof of age and gender before making Annuity Payments. If the Annuitant's stated age, gender or both in the Policy are incorrect, TFLIC will change the annuity benefits payable to those benefits which the Premium Payments would have purchased for the correct age and gender. In the case of correction of the stated age and/or gender after payments have commenced, TFLIC will: (1) in the case of underpayment, pay the full amount due with the next payment; and (2) in the case of overpayment, deduct the amount due from one or more future payments.

ASSIGNMENT

Any Non-Qualified Policy may be assigned by you before the Annuity Date and during the Annuitant's lifetime. TFLIC is not responsible for the validity of any assignment. No assignment will be recognized until TFLIC receives, in good order at the Administrative Office, the appropriate TFLIC form notifying TFLIC of such assignment. The interest of any beneficiary which the assignor has the right to change shall be subordinate to the interest of an assignee. Any amount paid to the assignee shall be paid in one sum notwithstanding any settlement agreement in effect at the time assignment was executed. TFLIC shall not be liable as to any payment or other settlement made by TFLIC before receipt of the appropriate TFLIC form.

COMPUTATION OF VARIABLE ANNUITY INCOME PAYMENTS

In order to supplement the description in the Prospectus, the following provides additional information about the Policy which may be of interest to Policy Owners.

The amounts shown in the Annuity Tables contained in your Policy represent the guaranteed minimum for each Annuity Payment under a Fixed Payment Option. Variable annuity income payments are computed as follows. First, the Accumulated Value (or the portion of the Accumulated Value used to provide variable payments) is applied under the Annuity Tables contained in your Policy corresponding to the Annuity Payment Option elected by the Policy Owner and based on an assumed interest rate of 5%. This will produce a dollar amount which is the first monthly payment.

The amount of each Annuity Payment after the first is determined by means of Annuity Units. The number of Annuity Units is determined by dividing the first Annuity Payment by the Annuity Unit Value for the selected Subaccount ten Business Days before the Annuity Date. The number of Annuity Units for the Subaccount then remains fixed, unless an exchange of Annuity Units (as set forth below) is made. After the first Annuity Payment, the dollar amount of each subsequent Annuity Payment is equal to the number of Annuity Units multiplied by the Annuity Unit Value for the Subaccount ten Business Days before the due date of the Annuity Payment.

The Annuity Unit Value for each Subaccount was initially established at \$10.00 on the date money was first deposited in that Subaccount. The Annuity Unit Value for any subsequent Business Day is equal to (a) times (b) times (c), where

- (a) = the Annuity Unit Value for the immediately preceding Business Day;
- (b) = the Net Investment Factor for the day;
- (c) = the investment result adjustment factor (.99986634 per day), which recognizes an assumed interest rate of 5% per year used in determining the Annuity Payment amounts.

The Net Investment Factor is a factor applied to a Subaccount that reflects daily changes in the value of the Subaccount resulting from:

- (a) = any increase or decrease in the value of the Subaccount attributable to investment results;
- (b) = a daily charge assessed at an annual rate of 0.40% for the mortality and expense risks assumed by TFLIC of the value of the Subaccount;

- (c) = a daily charge for the cost of administering the Policy corresponding to an annual charge of 0.15% of the value of the Subaccount.

The Annuity Tables contained in the Policy are based on the A2000 Table, using an assumed annuity commencement date of 2005 (static projection to this point) with dynamic projection using scale G from that point (100% of G for male, 50% of G for females) at the minimum guaranteed interest rate..

EXCHANGES

After the Annuity Date you may, by making a written request, exchange the current value of an existing subaccount to Annuity Units of any other subaccount(s) then available. The written request for an exchange must be received by us, however, in good order at least ten Business Days before the first payment date on which the exchange is to take effect. An exchange shall result in the same dollar amount as that of the Annuity Payment on the date of exchange (the "Exchange Date"). Each year you may make an unlimited number of free exchanges between Subaccounts. We reserve the right to charge a \$10 fee in the future for exchanges in excess of twelve per Policy Year.

Exchanges will be made using the Annuity Unit Value for the subaccounts on the date the written request for exchange is received. On the Exchange Date, TFLIC will establish a value for the current subaccounts by multiplying the Annuity Unit Value by the number of Annuity Units in the existing subaccounts and compute the number of Annuity Units for the new subaccounts by dividing the Annuity Unit Value of the new subaccounts into the value previously calculated for the existing subaccounts.

PERFORMANCE INFORMATION

MONEY MARKET SUBACCOUNT YIELDS

Current yield for the Federated Prime Money Fund II will be based on the change in the value of a hypothetical investment (exclusive of capital changes) over a particular 7-day period, less a pro-rata share of Subaccount expenses accrued over that period (the "base period"), and stated as a percentage of the investment at the start of the base period (the "base period return"). The base period return is then annualized by multiplying by $^{365/7}$, with the resulting yield figure carried to at least the nearest hundredth of one percent.

Calculation of "effective yield" begins with the same "base period return" used in the calculation of yield, which is then annualized to reflect weekly compounding pursuant to the following formula:

$$\text{Effective Yield} = [((\text{Base Period Return})+1)^{365/7}]-1$$

30-DAY YIELD FOR NON-MONEY MARKET SUBACCOUNTS

Quotations of yield for the remaining subaccounts will be based on all investment income per Unit earned during a particular 30-day period, less expenses accrued during the period ("net investment income"), and will be computed by dividing net investment income by the value of a Unit on the last day of the period, according to the following formula:

$$\text{YIELD} = \frac{2[(\underline{a-b} + 1)^6 - 1]}{cd}$$

Where:

- [a] equals the net investment income earned during the period by the Portfolio attributable to shares owned by a subaccount;
- [b] equals the expenses accrued for the period (net of reimbursement);
- [c] equals the average daily number of Units outstanding during the period; and
- [d] equals the maximum offering price per Accumulation Unit on the last day of the period.

Yield on a subaccount is earned from the increase in net asset value of shares of the Portfolio in which the subaccount invests and from dividends declared and paid by the Portfolio, which are automatically reinvested in shares of the Portfolio.

STANDARDIZED AVERAGE ANNUAL TOTAL RETURN FOR SUBACCOUNTS

When advertising performance of the subaccounts, TFLIC will show the “Standardized Average Annual Total Return,” calculated as prescribed by the rules of the SEC, for each Subaccount. The Standardized Average Annual Total Return is the effective annual compounded rate of return that would have produced the cash redemption value over the stated period had the performance remained constant throughout. The calculation assumes a single \$1,000 payment made at the beginning of the period and full redemption at the end of the period. It reflects the deduction of the Annual Policy Fee and all other Portfolio, Separate Account and Policy level charges except Premium Taxes, if any.

Quotations of average annual total return for any Subaccount will be expressed in terms of the average annual compounded rate of return of a hypothetical investment in a Policy over a period of one, five and ten years (or, if less, up to the life of the Subaccount), calculated pursuant to the formula:

$$P(1+T)^n=ERV$$

Where:

- [P] equals a hypothetical initial Premium Payment of \$1,000;
- [T] equals an average annual total return;
- [n] equals the number of years; and
- [ERV] equals the ending redeemable value of a hypothetical \$1,000 Premium Payment made at the beginning of the period (or fractional portion thereof).

There are no average annual total returns for periods from inception of the subaccounts to December 31, 2005 because the subaccounts had not commenced operations as of December 31, 2005

NON-STANDARDIZED AVERAGE ANNUAL TOTAL RETURN

In addition to the standard data discussed above, similar performance data for other periods may also be shown.

TFLIC may also advertise or disclose average annual total return or other performance data in non-standard formats for a subaccount of the separate account. The non-standard performance data may also make other assumptions, such as the amount invested in a subaccount, differences in time periods to be shown, or the effect of partial surrenders or annuity payments.

All non-standard performance data will be advertised only if the standard performance data is also disclosed.

NON-STANDARDIZED ADJUSTED HISTORICAL AVERAGE ANNUAL TOTAL RETURN

TFLIC may show Non-Standardized Adjusted Historical Average Annual Total Return, calculated on the basis of the historical performance of the Portfolios (calculated beginning from the end of the year of inception for each Portfolio) and may assume the Policy was in existence prior to its inception date (which it was not). After the Policy's inception date, the calculations will reflect actual Accumulation Unit Values. These returns are based on specified Premium Payment patterns which produce the resulting Accumulated Values. They reflect a deduction for the Separate Account expenses and Portfolio expenses, and 12b-1 fee, if applicable, restated as if the 12b-1 fee had been in existence from the inception date. However, they do not include the Annual Policy Fee, any Premium Taxes (if any), which, if included, would reduce the percentages reported.

INDIVIDUALIZED COMPUTER GENERATED ILLUSTRATIONS

TFLIC may from time to time use computer-based software available through Morningstar, CDA/Wiesnberger and/or other firms to provide registered representatives and existing and/or potential owners of Policies with individualized hypothetical performance illustrations for some or all of the Portfolios. Such illustrations may include, without limitation, graphs, bar charts and other types of formats presenting the following information: (i) the historical results of a hypothetical investment in a single Portfolio; (ii) the historical fluctuation of the value of a single Portfolio (actual and hypothetical); (iii) the historical results of a hypothetical investment in more than one Portfolio; (iv) the historical performance of two or more market indices in relation to one another and/or one or more Portfolios; (v) the historical performance of two or more market indices in comparison to a single Portfolio or a group of Portfolios; (vi) a market risk/reward scatter chart showing the historical risk/reward relationship of one or more mutual funds or Portfolios to one or more indices and a broad category of similar anonymous variable annuity subaccounts; and (vii) Portfolio data sheets showing various information about one or more Portfolios (such as information concerning total return for various periods, fees and expenses, standard deviation, alpha and beta, investment objective, inception date and net assets).

PERFORMANCE

We periodically advertise performance of the various subaccounts. Performance figures might not reflect charges for options, riders, or endorsements. We may disclose at least three different kinds of non-standard performance. First, we may calculate performance by determining the percentage change in the value of an accumulation unit by dividing the increase (decrease) for that unit by the value of the accumulation unit at the beginning of the period. This performance number reflects the deduction of the mortality and expense risk fees and administrative charges. It does not reflect the deduction of any applicable premium taxes, surrender charges, or fees for any optional riders or endorsements. Any such deduction would reduce the percentage increase or make greater any percentage decrease.

Second, advertisements may also include total return figures, which reflect the deduction of the mortality and expense risk fees and administrative charges. These figures may also include or exclude surrender charges. These figures may also reflect any applicable premium enhancement.

Third, for certain investment portfolios, performance may be shown for the period commencing from the inception date of the investment portfolio (i.e., before commencement of subaccount operations). These figures should not be interpreted to reflect actual historical performance of the subaccounts.

Not all types of performance data presented reflect all of the fees and charges that may be deducted (such as fees for optional benefits); performance figures would be lower if these charges were included.

SAFEKEEPING OF ACCOUNT ASSETS

Title to assets of the Separate Account is held by TFLIC. The assets are kept physically segregated and held separate and apart from TFLIC's general account assets. The general account contains all of the assets of TFLIC. Records are maintained of all purchases and redemptions of eligible Portfolio shares held by each of the subaccounts and the general account.

STATE REGULATION OF TFLIC

TFLIC is a stock life insurance company organized under the laws of New York, and is subject to regulation by the New York Department of Insurance. An annual statement is filed with the New York Commissioner of Insurance on or before March 1st of each year covering the operations and reporting on the financial condition of TFLIC as of December 31st of the preceding calendar year. Periodically, the New York Commissioner of Insurance examines the financial condition of TFLIC, including the liabilities and reserves of the Separate Account the operations of TFLIC are also examined periodically by the National Association of Insurance Commissioners. In addition, TFLIC is subject to regulation under the insurance laws of the other jurisdictions in which it may operate.

RECORDS AND REPORTS

All records and accounts relating to the Separate Account will be maintained by TFLIC. As presently required by the Investment Company Act of 1940 and regulations promulgated thereunder, TFLIC will mail to all Policy Owners at their last known address of record, at least annually, reports containing such information as may be required under that Act or by any other applicable law or regulation. Policy Owners will also receive confirmation of each financial transaction and any other reports as required by law or regulation. However, for certain routine transactions (for example, regular monthly premiums deducted from your checking account, or regular annuity payments TFLIC sends to you) you may only receive quarterly confirmations.

DISTRIBUTION OF THE POLICIES

We currently offer the Policies on a continuous basis. We anticipate continuing to offer the Policies, but reserve the right to discontinue the offering.

Transamerica Capital, Inc. ("TCI") serves as principal underwriter for the policies. TCI's home office is located at 4600 S. Syracuse St. Suite 1100 Denver, Colorado 80237-2719. TCI, like TFLIC, is an indirect, wholly owned subsidiary of Aegon USA. TCI is registered as a broker-dealer with the Securities and Exchange Commission under the Securities Exchange Act of 1934, and is a member of FINRA. TCI is not a member of the Securities Investor Protection Corporation.

The Policies are offered to the public through fee-only advisors who are not paid a commission. The Policies are also offered to the public through broker-dealers ("selling firms") that are licensed under the federal securities laws; the selling firm and/or its affiliates are also licensed under state insurance laws. The selling firms have entered into written selling agreements with us and with TCI as principal underwriter for the Policies. During fiscal year 2013, 2012 and 2011, TCI paid no amounts in commissions in connection with the sale of the Policies.

ADMINISTRATIVE SERVICES CONTRACT

We have contracted with Low Load Insurance Services, Inc. ("Low Load"), to provide certain administrative services. The administrative services include customer application or order form processing, ongoing customer service and marketing support. We pay Low Load an annual fee equal to 0.10% of the amount of assets in the Policies that Low Load provides administrative services for registered representatives. During 2011, 2012, and 2013 we paid Low Load \$419.74, \$444.10 and \$534.52 respectively, in connection with this contract.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The financial statements of the Separate Account at December 31, 2013 and for the periods disclosed in the financial statements, and the statutory-basis financial statements and schedules of TFLIC at December 31, 2013 and 2012, and for each of the three years in the period ended December 31, 2013, appearing herein, have been audited by Ernst & Young LLP, 801 Grand Avenue, Suite 3000, Des Moines, Iowa 50309, Independent Registered Public Accounting Firm, as set forth in their respective reports thereon appearing elsewhere herein, and are included in reliance upon such reports given upon the authority of such firm as experts in accounting and auditing.

OTHER INFORMATION

A Registration Statement has been filed with the Securities and Exchange Commission, under the Securities Act of 1933 as amended, with respect to the Policy discussed in this Statement of Additional Information. Not all of the information set forth in the Registration Statement, amendments and exhibits thereto has been included in this Statement of Additional Information. Statements contained in this Statement of Additional Information concerning the content of the Policy and other legal instruments are intended to be summaries. For a complete statement of the terms of these documents, reference should be made to the instruments filed with the Securities and Exchange Commission.

FINANCIAL STATEMENTS

The audited financial statements of certain subaccounts of the Separate Account which are available for investment by Advisor's Edge NY Policy Owners as of December 31, 2013, and for the periods indicated thereon, including the Report of Independent Registered Public Accounting Firm thereon, are included in this Statement of Additional Information.

The audited statutory-basis financial statements and schedules of Transamerica Financial Life Insurance Company as of December 31, 2013, and 2012, and for each of the three years in the period ended December 31, 2013, including the Reports of Independent Registered Public Accounting Firm thereon, also are included in this Statement of Additional Information. They should be distinguished from the financial statements of the subaccounts of the Separate Account which are available for investment by Advisor's Edge NY Policy Owners and should be considered only as bearing on the ability of TFLIC to meet its obligations under the Policies. They should not be considered as bearing on the safety or investment performance of the assets held in the Separate Account.

Report of Independent Auditors

The Board of Directors
Transamerica Financial Life Insurance Company

We have audited the accompanying statutory-basis financial statements of Transamerica Financial Life Insurance Company, which comprise the balance sheets as of December 31, 2013 and 2012, the related statutory-basis statements of operations, changes in capital and surplus, and cash flow for each of the three years in the period ended December 31, 2013, and the related notes to the financial statements. Our audits also included the statutory-basis financial statement schedules required by Regulation S-X, Article 7.

Management's Responsibility for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in conformity with accounting practices prescribed or permitted by the New York Department of Financial Services. Management also is responsible for the design, implementation and maintenance of internal control relevant to the preparation and fair presentation of financial statements that are free of material misstatement, whether due to fraud or error.

Auditor's responsibility

Our responsibility is to express an opinion on these financial statements based on our audits. We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Accordingly, we express no such opinion. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Basis for Adverse Opinion on U.S. Generally Accepted Accounting Principles

As described in Note 1, to meet the requirements of New York the financial statements have been prepared in conformity with accounting practices prescribed or permitted by the New York Department of Financial Services, which practices differ from U.S. generally accepted accounting principles. The variances between such practices and U.S. generally accepted accounting principles are described in Note 1. The effects on the accompanying financial statements of these variances are not reasonably determinable but are presumed to be material.

Adverse Opinion on U.S. Generally Accepted Accounting Principles

In our opinion, because of the effects of the matter described in the preceding paragraph, the statutory-basis financial statements referred to above do not present fairly, in conformity with U.S. generally accepted accounting principles, the financial position of Transamerica Financial Life Insurance Company at December 31, 2013 and 2012, or the results of its operations or its cash flows for each of the three years in the period ended December 31, 2013.

Opinion on Statutory-Basis of Accounting

However, in our opinion, the statutory-basis financial statements referred to above present fairly, in all material respects, the financial position of Transamerica Financial Life Insurance Company at December 31, 2013 and 2012, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2013 in conformity with accounting practices prescribed or permitted by the New York Department of Financial Services. Also in our opinion, the related financial statement schedules, when considered in relation to the basic statutory-basis financial statements taken as a whole, present fairly in all material respects the information set forth therein.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (Dollars in Thousands, Except per Share Data)

December 31, 2013

1. Organization and Summary of Significant Accounting Policies

Organization

Transamerica Financial Life Insurance Company (the Company) is a stock life insurance company and is majority owned by Aegon USA, LLC. (Aegon) and minority owned by Transamerica Life Insurance Company (TLIC). Both Aegon and TLIC are indirect, wholly owned subsidiaries of Aegon N.V., a holding company organized under the laws of The Netherlands.

Nature of Business

The Company sells fixed and variable pension and annuity products, group life coverages, life insurance, investment contracts, structured settlements and guaranteed interest contracts and funding agreements. The Company is licensed in 50 states and the District of Columbia. Sales of the Company's products are primarily through brokers.

Basis of Presentation

The preparation of financial statements of insurance companies requires management to make estimates and assumptions that affect amounts reported in the financial statements and accompanying notes. Such estimates and assumptions could change in the future as more information becomes known, which could impact the amounts reported and disclosed herein.

The accompanying financial statements have been prepared in conformity with accounting practices prescribed or permitted by the New York Department of Financial Services (formerly known as the Department of Insurance of the State of New York), which practices differ from accounting principles generally accepted in the United States (GAAP). The more significant variances from GAAP are:

Investments: Investments in bonds and mandatory redeemable preferred stocks are reported at amortized cost or fair value based on their National Association of Insurance Commissioners (NAIC) rating; for GAAP, such fixed maturity investments would be designated at purchase as held-to-maturity, trading or available-for-sale. Held-to-maturity fixed investments would be reported at amortized cost, and the remaining fixed maturity investments would be reported at fair value with unrealized holding gains and losses reported in earnings for those designated as trading and as a separate component of other comprehensive income (OCI) for those designated as available-for-sale. Fair value for GAAP is based on indexes, third party pricing services, brokers,

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

external fund managers and internal models. For statutory reporting, the NAIC allows insurance companies to report the fair value determined by the Securities Valuation Office of the NAIC (SVO) or determine the fair value by using a permitted valuation method.

All single class and multi-class mortgage-backed/asset-backed securities (e.g., CMOs) are adjusted for the effects of changes in prepayment assumptions on the related accretion of discount or amortization of premium of such securities using either the retrospective or prospective methods. If the fair value of the mortgage-backed/asset-backed security is less than amortized cost, an entity shall assess whether the impairment is other-than-temporary. An other-than-temporary impairment is considered to have occurred if the fair value of the mortgage-backed/asset-backed security is less than its amortized cost basis and the entity intends to sell the security or the entity does not have the intent and ability to hold the security for a period of time sufficient to recover the amortized cost basis. An other-than-temporary impairment is also considered to have occurred if the discounted estimated future cash flows are less than the amortized cost basis of the security.

If it is determined an other-than-temporary impairment has occurred as a result of the cash flow analysis, the security is written down to the discounted estimated future cash flows. If an other-than-temporary impairment has occurred due to intent to sell or lack of intent and ability to hold, the security is written down to fair value.

For GAAP, all securities, purchased or retained, that represent beneficial interests in securitized assets (e.g., CMO, CBO, CDO, CLO, MBS and ABS securities), other than high credit quality securities, are adjusted using the prospective method when there is a change in estimated future cash flows. If high credit quality securities are adjusted, the retrospective method is used. If it is determined that a decline in fair value is other-than-temporary and the entity intends to sell the security or more likely than not will be required to sell the security before recovery of its amortized cost basis less any current period credit loss, the other-than-temporary impairment should be recognized in earnings equal to the entire difference between the amortized cost basis and its fair value at the impairment date. If the entity does not intend to sell the security and it is not more likely than not that the entity will be required to sell the security before recovery, the other-than-temporary impairment should be separated into a) the amount representing the credit loss, which is recognized in earnings, and b) the amount related to all other factors, which is recognized in OCI, net of applicable taxes.

Derivative instruments used in hedging transactions that meet the criteria of an effective hedge are valued and reported in a manner that is consistent with the hedged asset or liability. Embedded derivatives are not accounted for separately from the host contract. Derivative instruments used in hedging transactions that do not meet or no longer meet

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

the criteria of an effective hedge are accounted for at fair value, and the changes in the fair value are recorded in unassigned surplus as unrealized gains and losses. Under GAAP, the effective and ineffective portions of a single hedge are accounted for separately, and the change in fair value for cash flow hedges is credited or charged directly to a separate component of OCI rather than to income as required for fair value hedges, and an embedded derivative within a contract that is not clearly and closely related to the economic characteristics and risk of the host contract is accounted for separately from the host contract and valued and reported at fair value.

Derivative instruments are also used in replication transactions. In these transactions, the derivative is valued in a manner consistent with the cash investment and replicated asset. For GAAP, the derivative is reported at fair value, with the changes in fair value reported in income.

Investments in real estate are reported net of related obligations rather than on a gross basis as for GAAP. Real estate owned and occupied by the Company is included in investments rather than reported as an operating asset as under GAAP, and investment income and operating expenses for statutory reporting include rent for the Company's occupancy of those properties. Changes between depreciated cost and admitted amounts are credited or charged directly to unassigned surplus rather than to income as would be required under GAAP.

Valuation allowances are established for mortgage loans, if necessary, based on the difference between the net value of the collateral, determined as the fair value of the collateral less estimated costs to obtain and sell, and the recorded investment in the mortgage loan. Under GAAP, such allowances are based on the present value of expected future cash flows discounted at the loan's effective interest rate or, if foreclosure is probable, on the estimated fair value of the collateral.

The initial valuation allowance and subsequent changes in the allowance for mortgage loans are charged or credited directly to unassigned surplus as part of the change in asset valuation reserve (AVR), rather than being included as a component of earnings as would be required under GAAP.

Valuation Reserves: Under a formula prescribed by the NAIC, the Company defers the portion of realized capital gains and losses on sales of fixed income investments, principally bonds and mortgage loans, attributable to changes in the general level of interest rates and amortizes those deferrals over the remaining period to maturity of the bond or mortgage loan based on groupings of individual securities sold in five year bands. That net deferral is reported as the interest maintenance reserve (IMR) in the accompanying balance sheets. Realized capital gains and losses are reported in income net of federal income tax and transfers to the IMR. Under GAAP, realized capital gains

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

and losses are reported in the statement of operations on a pre-tax basis in the period that the assets giving rise to the gains or losses are sold.

The AVR provides a valuation allowance for invested assets. The AVR is determined by an NAIC prescribed formula with changes reflected directly in unassigned surplus; AVR is not recognized for GAAP.

Subsidiaries: The accounts and operations of the Company's subsidiaries are not consolidated with the accounts and operations of the Company as would be required under GAAP.

Policy Acquisition Costs: The costs of acquiring and renewing business are expensed when incurred. Under GAAP, incremental costs directly related to the successful acquisition of traditional life insurance and certain long-duration accident and health insurance, to the extent recoverable from future policy revenues, would be deferred and amortized over the premium-paying period of the related policies using assumptions consistent with those used in computing policy benefit reserves; for universal life insurance and investment products, to the extent recoverable from future gross profits, deferred policy acquisition costs are amortized generally in proportion to the present value of expected gross profits from surrender charges and investment, mortality and expense margins.

Separate Accounts with Guarantees: Some of the Company's separate accounts provide policyholders with a guaranteed return. In accordance with the guarantees provided, if the investment proceeds are insufficient to cover the rate of return guaranteed for the product, the policyholder proceeds will be remitted by the general account. These separate accounts are included in the general account for GAAP due to the nature of the guaranteed return.

Nonadmitted Assets: Certain assets designated as "nonadmitted", primarily net deferred tax assets and other assets not specifically identified as an admitted asset within the NAIC *Accounting Practices and Procedures Manual* (NAIC SAP), are excluded from the accompanying balance sheets and are charged directly to unassigned surplus. Under GAAP, such assets are included in the balance sheet to the extent they are not impaired.

Universal Life and Annuity Policies: Revenues for universal life and annuity policies with mortality or morbidity risk (including annuities with purchase rate guarantees) consist of the entire premium received. Benefits incurred represent surrenders and death benefits paid and the change in policy reserves. Premiums received and benefits incurred for annuity policies without mortality or morbidity risk and guaranteed interest in group annuity contracts are recorded directly to a policy reserve account using deposit accounting, without recognizing premium income or benefits expense. Interest on these policies is reflected in other benefits. Under GAAP, for universal life policies,

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

premiums received in excess of policy charges would not be recognized as premium revenue and benefits would represent interest credited to the account values and the excess of benefits paid over the policy account value. Under GAAP, for all annuity policies without significant mortality risk, premiums received and benefits paid would be recorded directly to the reserve liability.

Benefit Reserves: Certain policy reserves are calculated based on statutorily required interest and mortality assumptions rather than on estimated expected experience or actual account balances as would be required under GAAP.

Reinsurance: Any reinsurance amounts deemed to be uncollectible have been written off through a charge to operations. In addition, a liability for reinsurance balances would be established for unsecured policy reserves ceded to reinsurers not authorized to assume such business. Changes to the liability are credited or charged directly to unassigned surplus. Under GAAP, an allowance for amounts deemed uncollectible would be established through a charge to earnings.

Losses associated with an indemnity reinsurance transaction are reported within income when incurred rather than being deferred and amortized over the remaining life of the underlying reinsured contracts as would be required under GAAP.

Policy and contract liabilities ceded to reinsurers have been reported as reductions of the related reserves rather than as assets as would be required under GAAP.

Commissions allowed by reinsurers on business ceded are reported as income when incurred rather than being deferred and amortized with deferred policy acquisition costs as required under GAAP.

Deferred Income Taxes: The Company computes deferred income taxes in accordance with Statement of Statutory Accounting Principle (SSAP) No. 101, *Income Taxes, A Replacement of SSAP No. 10R and SSAP No. 10*. Under SSAP No. 101, admitted adjusted deferred income tax assets are limited to 1) the amount of federal income taxes paid in prior years that can be recovered through loss carrybacks for existing temporary differences that reverse during a timeframe corresponding with the Internal Revenue Service tax loss carryback provisions, not to exceed three years, plus 2) the amount of adjusted gross deferred income tax assets expected to be realized within three years limited to an amount that is no greater than 15% of current period's adjusted statutory capital and surplus, plus 3) the amount of remaining adjusted gross deferred income tax assets that can be offset against existing gross deferred income tax liabilities after considering the character (i.e., ordinary versus capital) and reversal patterns of the deferred tax assets and liabilities. The remaining adjusted deferred income tax assets are nonadmitted.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Deferred income taxes do not include amounts for state taxes. Under GAAP, state taxes are included in the computation of deferred income taxes, a deferred income tax asset is recorded for the amount of gross deferred income tax assets expected to be realized in all future years, and a valuation allowance is established for deferred income tax assets not realizable.

Goodwill: Goodwill is admitted subject to an aggregate limitation of ten percent of the capital and surplus in the most recently filed annual statement excluding electronic data processing equipment, operating system software, net deferred income tax assets and net positive goodwill. Excess goodwill is nonadmitted. Goodwill is amortized over ten years. Under GAAP, goodwill is measured as the excess of the consideration transferred plus the fair value of any noncontrolling interest in the acquiree at the acquisition date as compared to the fair values of the identifiable net assets acquired. Goodwill is not amortized but is assessed for impairment on an annual basis, or more frequently if circumstances indicate that a possible impairment has occurred.

Policyholder Dividends: Policyholder dividends are recognized when declared rather than over the term of the related policies as would be required under GAAP.

Surplus Notes: Surplus notes are reported as surplus rather than liabilities as would be required under GAAP.

Statements of Cash Flow: Cash, cash equivalents and short-term investments in the statements of cash flow represent cash balances and investments with initial maturities of one year or less. Under GAAP, the corresponding caption of cash and cash equivalents includes cash balances and investments with initial maturities of three months or less.

Securities Lending Assets and Liabilities: For securities lending programs, cash collateral received which may be sold or repledged by the Company is reflected as a one-line entry on the balance sheet (securities lending reinvested collateral assets) and a corresponding liability is established to record the obligation to return the cash collateral. Collateral received which may not be sold or repledged is not recorded on the Company's balance sheet. Under GAAP, the reinvested collateral is included within invested assets (i.e. it is not one-line reported).

The effects of the foregoing variances from GAAP on the accompanying statutory-basis financial statements have not been determined by the Company, but are presumed to be material.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Other significant accounting policies are as follows:

Investments

Investments in bonds, except those to which the SVO has ascribed an NAIC designation of 6, are reported at amortized cost using the interest method.

Hybrid securities, as defined by the NAIC, are securities designed with characteristics of both debt and equity and provide protection to the issuer's senior note holders. These securities meet the definition of a bond, in accordance with SSAP No. 26, *Bonds, excluding Loan-backed and Structured Securities* and therefore, are reported at amortized cost or fair value based upon their NAIC rating.

Single class and multi-class mortgage-backed/asset-backed securities are valued at amortized cost using the interest method, including anticipated prepayments, except for those with an initial NAIC designation of 6, which are valued at the lower of amortized cost or fair value. Prepayment assumptions are obtained from dealer surveys or internal estimates and are based on the current interest rate and economic environment. The retrospective adjustment method is used to value all such securities, except principal-only and interest-only securities, which are valued using the prospective method.

The Company closely monitors below investment grade holdings and those investment grade issuers where the Company has concerns. The Company also regularly monitors industry sectors. The Company considers relevant facts and circumstances in evaluating whether the impairment is other-than-temporary including: (1) the probability of the Company collecting all amounts due according to the contractual terms of the security in effect at the date of acquisition; (2) the Company's decision to sell a security prior to its maturity at an amount below its carrying amount; and (3) the Company's ability to hold a structured security for a period of time to allow for recovery of the value to its carrying amount. Additionally, financial condition, near term prospects of the issuer and nationally recognized credit rating changes are monitored. Non-structured securities in unrealized loss positions that are considered other-than-temporary are written down to fair value. Structured securities considered other-than-temporarily impaired are written down to discounted estimated cash flows if the impairment is the result of cash flow analysis. If the Company has an intent to sell or lack of ability to hold a structured security, it is written down to fair value. For structured securities, cash flow trends and underlying levels of collateral are monitored. The Company will record a charge to the statement of operations to the extent that these securities are determined to be other-than-temporarily impaired.

Investments in preferred stocks in good standing are reported at cost or amortized cost. Investments in preferred stocks not in good standing are reported at the lower of cost or

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

fair value, and the related net unrealized capital gains (losses) are reported in unassigned surplus along with any adjustment for federal income taxes.

Common stocks of unaffiliated companies are reported at fair value and the related net unrealized capital gains or losses are reported in unassigned surplus along with any adjustment for federal income taxes.

If the Company determines that a decline in the fair value of a common stock or a preferred stock is other-than-temporary, the Company writes it down to fair value as the new cost basis and the amount of the write down is accounted for as a realized loss in the statement of operations. The Company considers the following factors in determining whether a decline in value is other-than-temporary: (a) the financial condition and prospects of the issuer; (b) whether or not the Company has made a decision to sell the investment; and (c) the length of time and extent to which the value has been below cost.

Common stocks of affiliated noninsurance subsidiaries are reported based on underlying audited GAAP equity. The net change in the subsidiaries' equity is included in the change in net unrealized capital gains or losses, reported in unassigned surplus along with any adjustment for federal income taxes.

There are no restrictions on common or preferred stock.

Short-term investments include investments with remaining maturities of one year or less at the time of acquisition and are principally stated at amortized cost.

Cash equivalents are short-term highly liquid investments with original maturities of three months or less and are principally stated at amortized cost.

Mortgage loans are reported at unpaid principal balances, less an allowance for impairment. A mortgage loan is considered to be impaired when it is probable that the Company will be unable to collect all principal and interest amounts due according to the contractual terms of the mortgage agreement. When management determines that the impairment is other-than-temporary, the mortgage loan is written down to realizable value and a realized loss is recognized.

Policy loans are reported at unpaid principal balances.

The Company has minority ownership interests in joint ventures and limited partnerships. The Company carries these investments based on its interest in the underlying audited GAAP equity of the investee. For a decline in the fair value of an investment in a joint venture or limited partnership which is determined to be other-than-temporary, the Company writes it down to fair value as the new cost basis and the amount of the write down is accounted for as a realized loss in the statement of operations. The Company

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

considers an impairment to have occurred if it is probable that the Company will be unable to recover the carrying amount of the investment or if there is evidence indicating inability of the investee to sustain earnings which would justify the carrying amount of the investment.

Investments in Low Income Housing Tax Credit (LIHTC) properties are valued at amortized cost. Tax credits are recognized in operations in the tax reporting year in which the tax credit is utilized by the Company.

Other “admitted assets” are valued principally at cost, as required or permitted by New York Insurance Laws.

Realized capital gains and losses are determined using the specific identification method and are recorded net of related federal income taxes. Changes in admitted asset carrying amounts of bonds, mortgage loans, common and preferred stocks are credited or charged directly to unassigned surplus.

Interest income is recognized on an accrual basis. The Company does not accrue income on bonds in default, mortgage loans on real estate in default and/or foreclosure or which are delinquent more than twelve months, or real estate where rent is in arrears for more than three months. Income is also not accrued when collection is uncertain. In addition, accrued interest is excluded from investment income when payment exceeds 90 days past due. At December 31, 2013 and 2012, the Company excluded investment income due and accrued of \$902 and \$568, respectively, with respect to such practices.

For dollar repurchase agreements, the Company receives cash collateral in an amount at least equal to the fair value of the securities transferred by the Company in the transaction as of the transaction date. Cash received as collateral will be invested as needed or used for general corporate purposes of the Company.

Derivative Instruments

Overview: The Company may use various derivative instruments (options, caps, floors, swaps, foreign currency forwards and futures) to manage risks related to its ongoing business operations. On the transaction date of the derivative instrument, the Company designates the derivative as either (A) hedging (fair value, foreign currency fair value, cash flow, foreign currency cash flow, forecasted transactions or net investment in a foreign operation), (B) replication, (C) income generation or (D) held for other investment/risk management activities, which do not qualify for hedge accounting under SSAP No. 86, *Accounting for Derivative Instruments and Hedging Activities* (SSAP No. 86).

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Derivative instruments used in hedging relationships are accounted for on a basis that is consistent with the hedged item (amortized cost or fair value). Derivative instruments used in replication relationships are accounted for on a basis that is consistent with the cash instrument and the replicated asset (amortized cost or fair value). Derivative instruments used in income generation relationships are accounted for on a basis that is consistent with the associated covered asset or underlying interest to which the derivative indicates (amortized cost or fair value). Derivative instruments held for other investment/risk management activities receive fair value accounting.

Derivative instruments are subject to market risk, which is the possibility that future changes in market prices may make the instruments less valuable. The Company uses derivatives as hedges, consequently, when the value of the derivative changes, the value of a corresponding hedged asset or liability will move in the opposite direction. Market risk is a consideration when changes in the value of the derivative and the hedged item do not completely offset (correlation or basis risk) which is mitigated by active measuring and monitoring.

The Company is exposed to credit-related losses in the event of non-performance by counterparties to financial instruments, but it does not expect any counterparties to fail to meet their obligations given their high credit rating of 'A' or better. The credit exposure of interest rate swaps and currency swaps is represented by the fair value of contracts, aggregated at a counterparty level, with a positive fair value at the reporting date. The Company has entered into collateral agreements with certain counterparties wherein the counterparty is required to post assets on the Company's behalf. The posted amount is equal to the difference between the net positive fair value of the contracts and an agreed upon threshold that is based on the credit rating of the counterparty. Inversely, if the net fair value of all contracts with this counterparty is negative, then the Company is required to post assets instead.

Instruments: Interest rate swaps are the primary derivative financial instruments used in the overall asset/liability management process to modify the interest rate characteristics of the underlying asset or liability. These interest rate swaps generally provide for the exchange of the difference between fixed and floating rate amounts based on an underlying notional amount. Typically, no cash is exchanged at the outset of the swap contract and a single net payment is exchanged at each due date. Swaps that meet hedge accounting rules are carried in a manner consistent with the hedged item, generally at amortized cost, on the financial statements. If the swap is terminated prior to maturity, proceeds are exchanged equal to the fair value of the contract. These gains and losses may be included in IMR or AVR if the underlying instrument receives that treatment. Swaps not meeting hedge accounting rules are carried at fair value with fair value adjustments recorded in unassigned surplus.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Cross currency swaps are utilized to mitigate risks when the Company holds foreign denominated assets or liabilities therefore converting the asset or liability to a U.S. dollar (USD) denominated security. These cross currency swap agreements involve the exchange of two principal amounts in two different currencies at the prevailing currency rate at contract inception. During the life of the swap, the counterparties exchange fixed or floating rate interest payments in the swapped currencies. At maturity, the principal amounts are again swapped at a pre-determined rate of exchange. Each asset or liability is hedged individually where the terms of the swap must meet the terms of the hedged instrument. For swaps qualifying for hedge accounting, the premium or discount is amortized into income over the life of the contract and the foreign currency translation adjustment is recorded as unrealized gain/loss in unassigned surplus. Swaps not meeting hedge accounting rules are carried at fair value with fair value adjustments recorded in unassigned surplus. If a swap is terminated prior to maturity, proceeds are exchanged equal to the fair value of the contract. These gains and losses may be included in IMR or AVR if the hedged instrument receives that treatment.

Futures contracts are used to hedge the liability risk associated when the Company issues products providing the customer a return based on various global equity market indices. Futures are marked to market on a daily basis whereby a cash payment is made or received by the Company. These payments are recognized as realized gains or losses in the financial statements.

The Company may purchase foreign denominated assets or issue foreign denominated liabilities and use forward rate agreements to hedge foreign currency risk associated with these products. These forward agreements are marked to the current forward rate on the financial statements and cash payments and/or receipts are recognized as realized gains or losses.

A replication transaction is a derivative transaction entered into in conjunction with a cash instrument to reproduce the investment characteristics of an otherwise permissible investment. The Company replicates investment grade corporate bonds by combining a highly rated security as a cash component with a credit default swap which, in effect, converts the high quality asset into a lower rated investment grade asset. The benefits of using the swap market to replicate credit include possible enhanced relative values as well as ease of executing larger transactions in a shortened time frame. Generally, a premium is received by the Company on a periodic basis and recognized in investment income. In the event the representative issuer defaults on its debt obligation referenced in the contract, a payment equal to the notional amount of the contract will be made by the Company and recognized as a capital loss. Generally these swaps are carried at amortized cost with periodic interest payments beginning at a future date. Any early terminations are recognized as capital gains or losses. The Company complies with the specific rules established in AVR for replication transactions.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Separate Accounts

The majority of the separate accounts held by the Company represent funds which are administered for pension plans. The assets in the managed separate accounts consist of common stock, long-term bonds, real estate and short-term investments. The non-managed separate accounts are invested by the Company in a corresponding portfolio of Diversified Investors Portfolios. The portfolios are registered under the Investment Company Act of 1940, as amended, as open-ended, diversified, management investment companies.

Except for some guaranteed separate accounts, which are carried at amortized cost, the assets are carried at fair value, and the investment risks associated with fair value changes are borne entirely by the policyholder. Some of the guaranteed separate accounts provide a guarantee of principal and some include an interest guarantee of 4% or less, so long as the contract is in effect. Separate account asset performance less than guaranteed requirements is transferred from the general account and reported in the statements of operations.

Assets held in trust for purchases of separate account contracts and the Company's corresponding obligation to the contract owners are shown separately in the balance sheets. Income and gains and losses with respect to these assets accrue to the benefit of the contract owners and, accordingly, the operations of the separate accounts are not included in the accompanying financial statements. The Company received variable contract premiums of \$4,481,656, \$4,163,452 and \$4,218,991, in 2013, 2012 and 2011, respectively. In addition, the Company received \$139,375, \$125,160 and \$114,076, in 2013, 2012 and 2011, respectively, related to fees associated with investment management, administration and contractual guarantees for separate accounts.

Aggregate Reserves for Policies and Contracts

Life, annuity and accident and health benefit reserves are developed by actuarial methods and are determined based on published tables using statutorily specified interest rates and valuation methods that will provide, in the aggregate, reserves that are greater than or equal to the minimum or guaranteed cash value, or the amount required by law.

The Company waives deduction of deferred fractional premiums upon death of the insured and returns any portion of the final premium for periods beyond the date of death.

The aggregate policy reserves for life insurance policies are based principally upon the 1941, 1958, 1980 and 2001 Commissioners' Standard Ordinary Mortality Tables. The reserves are calculated using interest rates ranging from 2.00 to 6.00 percent and are computed principally on the Net Level Premium Valuation and the Commissioner's

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Reserve Valuation Method. Reserves for universal life policies are based on account balances adjusted for the Commissioner's Reserve Valuation Method.

Additional premiums are charged or additional mortality charges are assessed for policies issued on substandard lives according to underwriting classification. Generally, mean reserves are determined by computing the regular mean reserve for the plan at the true age and holding, in addition, one-half (1/2) of the extra premium charge for the year. For certain flexible premium and fixed premium universal life insurance products, reserves are calculated utilizing the Commissioner's Reserve Valuation Method for universal life policies and recognizing any substandard ratings.

Deferred annuity reserves are calculated according to the Commissioner's Annuity Reserve Valuation Method including excess interest reserves to cover situations where the future interest guarantees plus the decrease in surrender charges are in excess of the maximum valuation rates of interest. Reserves for immediate annuities and supplementary contracts with and without life contingencies are equal to the present value of future payments assuming interest rates ranging from 3.50 to 11.00 percent and mortality rates, where appropriate, from a variety of tables.

Annuity reserves also include guaranteed interest contracts (GICs) and funding agreements classified as life-type contracts as defined in SSAP No. 50, *Classifications and Definitions of Insurance or Managed Care Contracts In Force*. These liabilities have annuitization options at guaranteed rates and consist of floating interest rate and fixed interest rate contracts. The contract reserves are carried at the greater of the account balance or the value as determined for an annuity with a cash settlement option, on a change in fund basis, according to the Commissioner's Annuity Reserve Valuation Method.

Accident and health policy reserves are equal to the greater of the gross unearned premiums or any required mid-terminal reserves plus net unearned premiums and the present value of amounts not yet due on both reported and unreported claims.

Tabular interest, tabular less actual reserves released and tabular cost have been determined by formula. On group annuity deposit funds not involving life contingencies, tabular interest has been determined by adjusting the interest credited to group annuity deposits. On other funds not involving life contingencies, tabular interest has been determined by formula.

During 2011, the Company implemented a new actuarial valuation system, ARCVAl. This system allows for a more accurate calculation of continuous reserves and the use of select factors in calculating deficiency reserves. As a result of implementing the new system, the Company recorded a decrease in deficiency and non-deduction reserves of

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

\$520, which had a corresponding adjustment to unassigned surplus.

Policy and Contract Claim Reserves

Claim reserves represent the estimated accrued liability for claims reported to the Company and claims incurred but not yet reported through the balance sheet date. These reserves are estimated using either individual case-basis valuations or statistical analysis techniques. These estimates are subject to the effects of trends in claim severity and frequency. The estimates are continually reviewed and adjusted as necessary as experience develops or new information becomes available.

Liability for Deposit-Type Contracts

Deposit-type contracts do not incorporate risk from the death or disability of policyholders. These types of contracts may include GICs, funding agreements and other annuity contracts. Deposits and withdrawals on these contracts are recorded as a direct increase or decrease, respectively, to the liability balance, and are not reported as premiums, benefits or changes in reserves in the statement of operations.

Premiums and Annuity Considerations

Revenues for policies with mortality or morbidity risk (including annuities with purchase rate guarantees) consist of the entire premium received and are recognized over the premium paying periods of the related policies. Considerations received and benefits paid for annuity policies without mortality or morbidity risk are recorded using deposit accounting, and recorded directly to an appropriate policy reserve account, without recognizing premium revenue.

Claims and Claim Adjustment Expense

Liabilities for losses and loss/claim adjustment expenses for accident and health contracts are estimated using statistical claim development models to develop best estimates of liabilities for medical expense business and using tabular reserves employing mortality/morbidity tables and discount rates meeting minimum regulatory requirements for other business.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Activity in the liability for unpaid claims and related processing costs net of reinsurance is summarized as follows:

	Unpaid Claims Liability			Unpaid Claims Liability
	Beginning of Year	Claims Incurred	Claims Paid	End of Year
Year ended December 31, 2013				
2013	\$ –	\$ 51,583	\$ 25,596	\$ 25,987
2012 and prior	33,843	(5,347)	20,270	8,226
	33,843	\$ 46,236	\$ 45,866	34,213
Active life reserve	103,059			108,146
Total accident and health reserves	\$ 136,902			\$ 142,359

	Unpaid Claims Liability			Unpaid Claims Liability
	Beginning of Year	Claims Incurred	Claims Paid	End of Year
Year ended December 31, 2012				
2012	\$ –	\$ 50,385	\$ 24,865	\$ 25,520
2011 and prior	36,644	(8,194)	20,127	8,323
	36,644	\$ 42,191	\$ 44,992	33,843
Active life reserve	99,571			103,059
Total accident and health reserves	\$ 136,215			\$ 136,902

The Company's unpaid claims reserve was decreased by \$5,347 and \$8,194 for the years ended December 31, 2013 and 2012, respectively, for health claims that occurred prior to those balance sheet dates. The change in 2013 and 2012 resulted primarily from variances in the estimated frequency of claims and claim severity.

The balance in the liability for unpaid accident and health claim adjustment expenses as of December 31, 2013 and 2012 was \$740 and \$714, respectively. The Company incurred \$1,305 and paid \$1,279 of claim adjustment expenses during 2013, of which \$626 of the paid amount was attributable to insured or covered events of prior years. The Company incurred \$473 and paid \$580 of claim adjustment expenses during 2012, of which \$264 of the paid amount was attributable to insured or covered events of prior years. The Company did not increase or decrease the claim adjustment expense provision for insured events of prior years during 2013 or 2012.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Reinsurance

Coinsurance premiums, commissions, expense reimbursements and reserves related to reinsured business are accounted for on bases consistent with those used in accounting for the original policies and the terms of the reinsurance contracts. Gains associated with reinsurance of in force blocks of business are included in unassigned surplus and amortized into income as earnings emerge on the reinsured block of business. Premiums ceded and recoverable losses have been reported as a reduction of premium income and benefits, respectively. Policy liabilities and accruals are reported in the accompanying financial statements net of reinsurance ceded.

During 2011, the Company entered into a retrocession reinsurance contract and subsequent novation agreements with respect to each of the unaffiliated retroceded reinsurance contracts. The retrocession reinsurance contract transferred the Company's liabilities to SCOR SE (SCOR), a Societas Europaea organized under the laws of France, and subsequently facilitated the ultimate novation of third party retrocession reinsurance contracts in support of the exiting of the reinsurance operations. No additional net consideration was contemplated upon execution of the novation agreements. Therefore, the Company had the same net retained risk of zero both prior to and subsequent to the execution of the novations.

SSAP No. 61, *Life, Deposit-Type and Accident and Health Reinsurance*, defines novation agreements as one which extinguishes one entity's liability and moves it to another entity, which is applicable under this situation. The retrocession agreement had all references to the Company removed and replaced with SCOR upon completion of the novations. SSAP No. 61 does not specifically address novation and releases related to retrocession agreements, however as both cedents and retrocessionaires in this situation are a party to the agreement, the intent of the novation and release appears to be consistent with the application for direct cedents application of the standard. Therefore, the Company reported the novation and release similar to a novation, as outlined in paragraphs 53-56 of SSAP No. 61, with direct adjustments to the balance sheet.

Recent Accounting Pronouncements

Effective December 31, 2013, the Company adopted revisions to SSAP No. 35R, *Guaranty Fund and Other Assessments – Revised* which incorporates subsequent event (Type II) disclosures for entities subject to Section 9010 of the Patient Protection and Affordable Care Act related to assessments payable. The adoption of this revision did not impact the financial position or results of operations of the Company as revisions relate to disclosures only. See Note 16 for further discussion.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Effective January 1, 2013, the Company adopted SSAP No. 92, *Accounting for Postretirement Benefits Other Than Pensions, A Replacement of SSAP No. 14* and SSAP No. 102, *Accounting for Pensions, A Replacement of SSAP No. 89*. This guidance impacts accounting for defined benefit pension plans or other postretirement plans, along with related disclosures. SSAP No. 102 requires recognition of the funded status of the plan based on the projected benefit obligation instead of the accumulated benefit obligation as under SSAP No. 89. In addition, SSAP No. 92 and SSAP No. 102 require consideration of non-vested participants. The adoption of these standards did not impact the Company's results of operations, financial position or disclosures as the Company does not sponsor the pension plan and is not directly liable under the plan. See Note 11 for further discussion of the Company's pension plan and other postretirement plans as sponsored by Aegon.

Effective January 1, 2013, the Company adopted SSAP No. 103, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities* which adopts with modifications the guidance in Accounting Standards Update (ASU) 2009-16, *Transfers and Servicing (Topic 860): Accounting for Transfers of Financial Assets* and supersedes SSAP No. 91R, *Accounting for Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*. The adoption of this standard did not impact the financial position or results of operations of the Company.

Effective January 1, 2013, the Company adopted non-substantive revisions to SSAP No. 36, *Troubled Debt Restructuring*. These revisions adopt guidance from ASU 2011-02, *Receivables – A Creditors' Determination of Whether a Restructuring is a Troubled Debt Restructuring*, which clarifies what constitutes a troubled debt restructuring and adopts with modification troubled debt restructuring disclosures for creditors from ASU 2010-20: *Receivables (Topic 310), Disclosures About the Credit Quality of Financing Receivables and the Allowance for Credit Losses*. The adoption of this revision did not impact the financial position or results of operations of the Company.

Effective December 31, 2012, the Company adopted non-substantive revisions to SSAP No. 86 to require disclosure of embedded credit derivatives within a financial instrument that expose the holder to the possibility of making future payments, and adopted guidance from Accounting Standards Update (ASU) 2010-11, *Derivatives and Hedging – Scope Exception Related to Embedded Credit Derivatives*, to clarify that seller credit derivative disclosures do not apply to embedded derivative features related to the transfer of credit risk that is only in the form of subordination of one financial instrument to another. The adoption of these revisions had no impact to the Company's results of operations or financial position.

Effective December 31, 2012, the Company adopted non-substantive revisions to SSAP No. 86 to move one aspect of the criteria for a hedged forecasted transaction and

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

incorporate it as criteria for a fair value hedge. The adoption of this revision had no impact to the Company's results of operations or financial position.

Effective December 31, 2012, the Company adopted non-substantive revisions to SSAP No. 27, *Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk, Financial Instruments with Concentrations of Credit Risk and Disclosures about Fair Value of Financial Instruments*, which clarifies that embedded derivatives, which are not separately recognized as derivatives under statutory accounting, are included in the disclosures of financial instruments with off-balance-sheet risk. The adoption of this revision had no impact to the Company's results of operations or financial position.

Effective December 31, 2012, the Company adopted non-substantive revisions to SSAP No. 1, *Disclosures of Accounting Policies, Risks and Uncertainties and Other Disclosures*. These revisions require reference to the accounting policy and procedure footnote that describes permitted or prescribed practices when an individual note is impacted by such practices. The adoption of this requirement had no impact to the Company's results of operation or financial position, but did require additional disclosures. See Note 8 Policy and Contract Attributes for further details.

Effective January 1, 2012, the Company adopted revisions to SSAP No. 100, *Fair Value Measurements* (SSAP No. 100). These revisions require new disclosures of fair value hierarchy and the method used to obtain the fair value measurement, a new footnote that summarizes hierarchy levels by type of financial instrument and gross presentation of purchases, sales, issues and settlements within the reconciliation for fair value measurements categorized within Level 3 of the hierarchy. The adoption of these revisions had no impact to the Company's results of operations or financial position, but did require additional disclosures. See Note 4 Fair Values of Financial Instruments for further details.

Effective January 1, 2012, the Company began computing current and deferred income taxes in accordance with SSAP No. 101. This statement established statutory accounting principles for current and deferred federal and foreign income taxes and current state income taxes. The adoption of this statement resulted in the transfer of \$27,930 at December 31, 2011, from Aggregate Write-ins for Other than Special Surplus Funds to Unassigned Funds and updates to the Company's income tax disclosures. See Note 7 Income Taxes for further details.

For the year ended December 31, 2011, the Company adopted SSAP No. 10R, *Income Taxes – Revised, A Temporary Replacement of SSAP No. 10* (SSAP No. 10R). This statement established statutory accounting principles for current and deferred federal and foreign income taxes and current state income taxes. The SSAP temporarily superseded SSAP No. 10, *Income Taxes*. SSAP No. 10R allowed an entity to elect to admit

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

additional deferred tax assets (DTAs) utilizing a three year loss carryback provision, plus the lesser of a look-forward of three years on gross DTAs expected to be realized or 15% of statutory capital and surplus if the entity's risk-based capital is above the 250% risk-based capital level where an action level could occur as a result of a trend test utilizing the old SSAP No. 10 provisions to calculate the DTA. Prior to the adoption of SSAP No. 10R, the admitted DTA was calculated by taking into consideration a one year loss carryback and look-forward on gross DTAs that can be expected to be realized and a 10% capital and surplus limit on the admitted amount of the DTA. The Company elected to admit additional deferred tax assets pursuant to SSAP No. 10R and as a result, the cumulative effect of the adoption of this standard was the difference between the calculation of the admitted DTA per SSAP No.10R and the old SSAP No. 10 methodology at December 31, 2011. This change in accounting principle increased surplus by a net amount of \$27,930, at December 31, 2011, which has been recorded within the statements of changes in capital and surplus.

Effective December 31, 2011, the Company adopted SSAP No. 5R, *Liabilities, Contingencies and Impairments of Assets – Revised*. The revisions require the Company to recognize a liability equal to the greater of (a) the fair value of the guarantee at its inception, even if the likelihood of payment under the guarantee is remote or (b) the contingent liability amount required to be recognized if it is probable that a liability has been incurred at the financial statement date and the amount of loss can reasonably be determined. While this guidance does not exclude guarantees issued as intercompany transactions or between related parties from the initial liability recognition requirement, there are a couple exceptions. Guarantees made to/or on behalf of a wholly-owned subsidiary and related party guarantees that are considered “unlimited” (for example, in response to a rating agency's requirement to provide a commitment to support) are exempt from the initial liability recognition. Additional disclosures are also required under this new guidance for all guarantees, whether or not they meet the criteria for initial liability recognition. The adoption of this new accounting principle had no material impact to the Company's results of operations or financial position and did not require any additional disclosures.

Effective December 31, 2011, the Company adopted non-substantive revisions to SSAP No. 100 to incorporate the provisions of ASU 2010-06, *Improving Disclosures about Fair Value Measurements*. This revision requires a new disclosure for assets and liabilities for which fair value is not measured and reported in the statement of financial position but is otherwise disclosed. The adoption of these revisions had no impact to the Company's results of operations or financial position. See Note 4 for further details.

Effective December 31, 2011, the Company adopted non-substantive changes to SSAP No. 32, *Investments in Preferred Stock (including investments in preferred stock of subsidiary, controlled, or affiliated entities)*. The amendment was made to clarify the

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

definition of preferred stock. Under the revised SSAP No. 32, a preferred stock is defined as any class or series of shares the holders of which have any preference, either as to the payment of dividends or distribution of assets on liquidation, over the holder of common stock [as defined in SSAP No. 30, *Investments in Common Stock (excluding investments in common stock of subsidiary, controlled, or affiliated entities)*] issued by an entity. This revised definition had no impact to the Company.

Effective January 1, 2011, the Company adopted SSAP No. 35R, *Guaranty Fund and Other Assessments – Revised*. This statement modified the conditions required for recognizing a liability for insurance-related assessments and required additional disclosures. See Note 14 for disclosures related to guaranty fund assessments. The adoption of this accounting principle had no financial impact to the Company.

Effective January 1, 2011, the Company adopted revisions to certain paragraphs of SSAP No. 43R, *Loan-backed and Structured Securities* to clarify the accounting for gains and losses between AVR and IMR. The revisions clarify that an AVR/IMR bifurcation analysis should be performed when SSAP No. 43R securities are sold (not just as a result of impairment). These changes were applied on a prospective basis and had no financial impact to the Company upon adoption.

Effective January 1, 2011, the Company adopted revisions to SSAP No. 43R to clarify the definitions of loan-backed and structured securities. The clarified guidance was applied prospectively and had no financial impact to the Company upon adoption.

Effective January 1, 2014, the Company will adopt SSAP No. 105, *Working Capital finance Investments*, which allows working capital finance investments to be admitted assets if certain criteria are met. The adoption of this standard had no impact to the financial position or results of operations of the Company.

Effective December 31, 2014, the Company will adopt revisions of SSAP No. 104R, *Share-Based Payments*, which provides guidance for share-based payments transactions with non-employees. The adoption of this revision is expected to be immaterial to the financial position and results of operations of the Company.

2. Prescribed and Permitted Statutory Accounting Practices

The New York Department of Financial Services recognizes only statutory accounting practices prescribed or permitted by the State of New York for determining and reporting the financial condition and results of operations of an insurance company, and for determining its solvency under the New York Insurance Law.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

The State of New York has adopted a prescribed accounting practice that differs from that found in the NAIC SAP related to the reported value of the assets supporting the Company's guaranteed separate accounts. As prescribed by Section 1414 of the New York Insurance Law, the Commissioner found that the Company is entitled to value the assets of the guaranteed separate account at amortized cost, whereas the assets would be required to be reported at fair value under SSAP No. 56, *Separate Accounts*, of the NAIC SAP. There is no impact to the Company's income or surplus as a result of utilizing this prescribed practice.

3. Accounting Changes and Correction of Errors

During 2013, the Company discovered an investment in a guaranteed investment contract within the Company's separate account was not included in the calculation of the AVR as of December 31, 2012. The impact of this omission was an understatement of the asset valuation reserve and overstatement of capital and surplus of \$5,080 as of December 31, 2012. This was corrected in 2013 and is reflected as a correction of an error in the capital and surplus accounts of the Summary of Operations.

During 2012, the Company determined that the model used for a particular guaranteed minimum withdrawal benefit product was not appropriately calculating the correct policyholder benefit guarantee values which are used when determining benefit reserves. The correction of this error resulted in an increase in the reserves associated with this product in the amount of \$19,946 as of December 31, 2011, and is presented as a separate charge in capital and surplus within the statement of changes in capital and surplus.

The Company incorrectly calculated the mortgages component of the AVR as of December 31, 2010. The maximum Mortgage Experience Adjustment Factor (MEAF) was used in the calculation when lower factors should have been used. As a result, the AVR balance was overstated by \$6,248. This was corrected in 2011, and the Company reflected the surplus impact of the correction as a separate change in unassigned surplus within the statement of changes in capital and surplus.

During 2011, the Company determined that too many contracts were novated to TLIC, an affiliated company, in a reinsurance transaction that was effective January 1, 2010. Correcting this error resulted in a reduction in the initial gain recognized on the novation of \$7,765, partially offset by an adjustment to the statement of operations for retention of the policies that should have been retained by the Company of \$5,175. The net amount of \$2,590 is reflected as a separate change in unassigned surplus within the statement of changes in capital and surplus.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

4. Fair Values of Financial Instruments

The fair value of a financial instrument is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Determination of fair value

The fair values of financial instruments are determined by management after taking into consideration several sources of data. When available, the Company uses quoted market prices in active markets to determine the fair value of its investments. The Company's valuation policy utilizes a pricing hierarchy which dictates that publicly available prices are initially sought from indices and third-party pricing services. In the event that pricing is not available from these sources, those securities are submitted to brokers to obtain quotes. Lastly, securities are priced using internal cash flow modeling techniques. These valuation methodologies commonly use reported trades, bids, offers, issuer spreads, benchmark yields, estimated prepayment speeds, and/or estimated cash flows.

To understand the valuation methodologies used by third-party pricing services, the Company reviews and monitors their applicable methodology documents. Any changes to their methodologies are noted and reviewed for reasonableness. In addition, the Company performs in-depth reviews of prices received from third-party pricing services on a sample basis. The objective for such reviews is to demonstrate that the Company can corroborate detailed information such as assumptions, inputs and methodologies used in pricing individual securities against documented pricing methodologies. Only third-party pricing services and brokers with a substantial presence in the market and with appropriate experience and expertise are used.

Each month, the Company performs an analysis of the information obtained from indices, third-party services, and brokers to ensure that the information is reasonable and produces a reasonable estimate of fair value. The Company considers both qualitative and quantitative factors as part of this analysis, including but not limited to, recent transactional activity for similar securities, review of pricing statistics and trends, and consideration of recent relevant market events. Other controls and procedures over pricing received from indices, third-party pricing services, or brokers include validation checks such as exception reports which highlight significant price changes, stale prices or un-priced securities.

Fair value hierarchy

The Company's financial assets and liabilities carried at fair value are classified, for disclosure purposes, based on a hierarchy defined by SSAP No. 100. The hierarchy gives

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

the highest ranking to fair values determined using unadjusted quoted prices in active markets for identical assets and liabilities (Level 1), and the lowest ranking to fair values determined using methodologies and models with unobservable inputs (Level 3). An asset's or a liability's classification is based on the lowest level input that is significant to its measurement. For example, a Level 3 fair value measurement may include inputs that are both observable (Levels 1 and 2) and unobservable (Level 3). The levels of the fair value hierarchy are as follows:

Level 1 - Unadjusted quoted prices for identical assets or liabilities in active markets accessible at the measurement date.

Level 2 - Quoted prices in markets that are not active or inputs that are observable either directly or indirectly for substantially the full term of the asset or liability. Level 2 inputs include the following:

- a) Quoted prices for similar assets or liabilities in active markets
- b) Quoted prices for identical or similar assets or liabilities in non-active markets
- c) Inputs other than quoted market prices that are observable
- d) Inputs that are derived principally from or corroborated by observable market data through correlation or other means

Level 3 - Prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. They reflect the Company's own assumptions about the assumptions a market participant would use in pricing the asset or liability.

The following methods and assumptions were used by the Company in estimating its fair value disclosures for financial instruments:

Cash Equivalents and Short-Term Investments: The carrying amounts reported in the accompanying balance sheets for these financial instruments approximate their fair values. Cash is not included in the below tables.

Short-Term Notes Receivable from Affiliates: The carrying amounts reported in the accompanying balance sheets for these financial instruments approximate their fair value.

Bonds and Stocks: The NAIC allows insurance companies to report the fair value determined by the SVO or to determine the fair value by using a permitted valuation method. The fair values of bonds and stocks are reported or determined using the following pricing sources: indexes, third party pricing services, brokers, external fund managers and internal models.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Fair values for fixed maturity securities (including redeemable preferred stock) actively traded are determined from third-party pricing services, which are determined as discussed above in the description of level one and level two values within the fair value hierarchy. For fixed maturity securities (including redeemable preferred stock) not actively traded, fair values are estimated using values obtained from third-party pricing services, or are based on non-binding broker quotes or internal models. In the case of private placements, fair values are estimated by discounting the expected future cash flows using current market rates applicable to the coupon rate, credit and maturity of the investments.

Mortgage Loans on Real Estate: The fair values for mortgage loans on real estate are estimated utilizing discounted cash flow analyses, using interest rates reflective of current market conditions and the risk characteristics of the loans.

Other Invested Assets: The fair values for other invested assets, which include investments in surplus notes issued by other insurance companies and fixed or variable rate investments with underlying characteristics of bonds, were determined primarily by using indexes, third party pricing services and internal models.

Derivative Financial Instruments: The estimated fair values of interest rate caps and options are based upon the latest quoted market price at the balance sheet date. The estimated fair values of swaps, including interest rate and currency swaps are based on pricing models or formulas using current assumptions. The estimated fair value of credit default swaps are based upon the pricing differential as of the balance sheet date for similar swap agreements. The Company accounts for derivatives that receive and pass hedge accounting in the same manner as the underlying hedged instrument. If that instrument is held at amortized cost, then the derivative is also held at amortized cost.

Policy Loans: The fair value of policy loans is equal to the book value of the loan, which is stated at unpaid principal balance.

Securities Lending Reinvested Collateral: The cash collateral from securities lending is reinvested in various short-term and long-term debt instruments. The fair values of these investments are determined using the methods described above under *Cash, Cash Equivalents and Short-Term Investments* and *Bonds and Stocks*.

Receivable From/Payable to Parents, Subsidiaries and Affiliates: The carrying amount of receivable from/payable to affiliates approximates their fair value.

Separate Account Assets and Annuity Liabilities: The fair value of separate account assets are based on quoted market prices when available. When not available, they are primarily valued either using third party pricing services or are valued in the same manner as the

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

general account assets as further described in this note. However, some separate account assets are valued using non-binding broker quotes, which cannot be corroborated by other market observable data, or internal modeling which utilizes input that are not market observable. The fair value of separate account annuity liabilities is based on the account value for separate accounts business without guarantees. For separate accounts with guarantees, fair value is based on discounted cash flows.

Investment Contract Liabilities: Fair value for the Company's liabilities under investment contracts, which include deferred annuities and GICs, are estimated using discounted cash flow calculations. For those liabilities that are short in duration, carrying amount approximates fair value. For investment contracts with no defined maturity, fair value is estimated to be the present surrender value.

Deposit-Type Contracts: The carrying amounts of deposit-type contracts reported in the accompanying balance sheets approximate their fair values.

Surplus Notes: Fair values for surplus notes are estimated using a discounted cash flow analysis based on the Company's current incremental borrowing rate for similar types of borrowing arrangements.

The Company accounts for its investments in affiliated common stock using the equity method of accounting; as such, they are not included in the following disclosures.

Fair values for the Company's insurance contracts other than investment-type contracts (including separate account universal life liabilities) are not required to be disclosed. However, the fair values of liabilities under all insurance contracts are taken into consideration in the Company's overall management of interest rate risk, such that the Company's exposure to changing interest rates is minimized through the matching of investment maturities with amounts due under insurance contracts.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

The following tables set forth a comparison of the estimated fair values and carrying amounts of the Company's financial instruments, including those not measured at fair value in the balance sheets, as of December 31, 2013 and 2012, respectively:

	December 31 2013					Not Practicable (Carrying Value)

Total liabilities at fair value	\$ –	\$ 350	\$ –	\$ 350

Bonds classified in Level 2 are valued using inputs from third party pricing services or broker quotes. Level 3 measurements for bonds are primarily those valued using non-binding broker quotes, which cannot be corroborated by other marketable observable data or internal modeling which utilize inputs that are not market observable.

Common stock in Level 3 is comprised primarily of warrants valued using broker quotes.

Short-term investments are classified as Level 2 as they are carried at amortized cost, which approximates fair value.

Derivatives classified as Level 2 represent over-the-counter (OTC) contracts valued using pricing models based on the net present value of estimated future cash flows, directly observed prices from exchange-traded derivatives, other OTC trades or external pricing services.

Separate account assets in Level 2 are valued using inputs from third party pricing services or are valued and classified in the same way as general account assets (described above).

Transamerica Financial Life Insurance Company

(a) Recorded as a component of Net Realized Capital Gains/Losses on Investments in the Statements of Operations

(b) Recorded as a component of Change in Net Unrealized Capital Gains/Losses in the Statements of Changes in Capital and Surplus

The Company's policy is to recognize transfers in and out of levels as of the beginning of the reporting period.

Transfers in for bonds were attributable to securities being valued using third party vendor inputs at December 31, 2011, subsequently changing to being internally modeled, thus causing the transfer into Level 3 during 2012.

Transfers out for bonds were partly attributable to securities being valued using broker quotes which utilize unobservable inputs at December 31, 2012, subsequently changing to being valued using third party vendor inputs during 2013. In addition, transfers out for bonds were the result of securities being valued using internal models at December 31, 2011, subsequently changing to being valued using third party vendor inputs during 2012. Also, transfers out for bonds were attributed to securities being carried at fair value at December 31, 2011, subsequently changing to being carried at amortized cost during 2012.

Proceeds from sales and other disposals (excluding maturities) of bonds and preferred stock and related gross realized capital gains and losses were as follows:

	Year Ended December 31		
	2013	2012	2011
Proceeds	\$ 1,131,813	\$ 1,913,219	\$ 1,636,561
Gross realized gains	\$ 16,348	\$ 68,650	\$ 44,316
Gross realized losses	(6,761)	(9,531)	(6,781)
Net realized capital gains	\$ 9,586	\$ 59,119	\$ 37,535

The Company had gross realized losses for the years ended December 31, 2013, 2012 and 2011 of \$4,299, \$6,205 and \$10,422, respectively, which relate to losses recognized on other-than-temporary declines in fair values of bonds and preferred stocks.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Net realized capital gains (losses) on investments are summarized below:

	Realized		
	Year Ended December 31		
	2013	2012	2011
Bonds	\$ 5,397	\$ 52,800	\$ 27,113
Preferred stocks	(110)	115	–
Common stocks	74	91	(995)
Mortgage loans on real estate	(123)	(1,020)	290
Cash, cash equivalents and short-term investments	3	3	–
Derivatives	(65,675)	9,224	(32,729)
Other invested assets	4,140	3,939	3,074
	(56,294)	65,152	(3,247)
Federal income tax effect	(4,221)	(17,772)	(15,802)
Transfer to interest maintenance reserve	(7,377)	(38,563)	(23,955)
Net realized capital gains (losses) on investments	\$ (67,892)	\$ 8,817	\$ (43,004)

At December 31, 2013 and 2012, the Company had recorded investment in restructured securities of \$32 and \$2,940, respectively. The capital gains (losses) taken as a direct result of restructures in 2013, 2012 and 2011 were \$(16), \$886 and \$(603), respectively. The Company often has impaired a security prior to the restructure date. These impairments are not included in the calculation of restructure related losses and are accounted for as a realized loss, reducing the cost basis of the security involved.

The changes in net unrealized capital gains and losses on investments, including the changes in net unrealized foreign capital gains and losses were as follows:

	Change in Unrealized		
	Year Ended December 31		
	2013	2012	2011
Bonds	\$ 1,542	\$ 12,303	\$ (7,611)

Taxes on unrealized capital gains/losses	23,527	25,092	(25,928)
Change in unrealized capital gains (losses), net of tax	\$ (44,446)	\$ (46,646)	\$ 48,008

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

The credit quality of mortgage loans by type of property for the year ended December 31, 2013 were as follows:

	Farm	Commercial	Total
AAA - AA	\$ 16,000	\$ 332,597	\$ 348,597
A	7,073	173,894	180,967
BBB	4,133	14,990	19,123
BB	–	1,976	1,976
B	–	419	419
	\$ 27,206	\$ 523,876	\$ 551,082

The credit quality for commercial and farm mortgage loans was determined based on an internal credit rating model which assigns a letter rating to each mortgage loan in the portfolio as an indicator of the credit quality of the mortgage loan. The internal credit rating model was designed based on rating agency methodology, then modified for credit risk associated with the Company's mortgage lending process, taking into account such factors as projected future cash flows, net operating income, and collateral value. The model produces a credit rating score and an associated letter rating which is intended to align with S&P ratings as closely as possible. Information supporting the credit risk rating process is updated at least annually.

During 2013, the Company issued mortgage loans with a maximum interest rate of 5.31% and a minimum interest rate of 3.11% for commercial loans. During 2012, the Company issued mortgage loans with a maximum interest rate of 4.60% and a minimum interest rate of 3.21% for commercial loans. The maximum percentage of any one mortgage loan to the value of the underlying real estate originated during the year ending December 31, 2013 at the time of origination was 75%. The maximum percentage of any one mortgage loan to the value of the underlying real estate originated during the year ending December 31, 2012 at the time of origination was 70%. During 2013, the Company did not reduce the interest rate on any outstanding mortgage loan. During 2012, the Company reduced the interest rate by 1.0% of one outstanding mortgage loan in the amount of \$8,362.

The Company did not have any impaired loans at December 31, 2013 or 2012. The Company did not hold an allowance for credit losses on mortgage loans at December 31, 2013, 2012 or 2011.

The Company accrues interest income on impaired loans to the extent deemed collectible (delinquent less than 91 days) and the loan continues to perform under its original or restructured contractual terms. Interest income on nonperforming loans generally is recognized on a cash basis. The Company did not recognize any interest income on impaired loans for the years ended December 31, 2013, 2012 or 2011. The Company did not recognize any interest income on a cash basis for the years ended December 31, 2013, 2012 or 2011.

During 2013 and 2012, there were no mortgage loans that were foreclosed and transferred to real estate. At December 31, 2013 and 2012, the Company held a mortgage loan loss reserve in the AVR of \$7,164 and \$5,173, respectively.

During 2013, 2012 and 2011, the Company did not recognize any impairment write-downs for its investments in joint ventures and limited partnerships.

At December 31, 2013, the Company had ownership interest in four LIHTC investments. The remaining years of unexpired tax credits ranged from three to eleven and the properties were not subject to regulatory review. The length of time remaining for the holding period ranged from four to thirteen years. The amount of contingent equity commitments expected to be paid during 2014 to 2015 is \$9,559. There were no impairment losses, write-downs or reclassifications during the year related to any of these credits.

At December 31, 2012, the Company had ownership interest in three LIHTC investments. The remaining years of unexpired tax credits ranged from four to ten and the properties were not subject to regulatory review. The length of time remaining for the holding period ranged from five to fourteen years. The amount of contingent equity commitments expected to be paid during 2013 was \$2,127. There were no impairment losses, write-downs or reclassifications during the year related to any of these credits.

The Company recognized net realized gains (losses) from futures contracts in the amount of \$(70,734), \$77,308 and \$(38,303) for the years ended December 31, 2013, 2012 and 2011, respectively.

At December 31, 2013 and 2012, the Company had replicated assets with a fair value of \$515,990 and \$462,061, respectively, and credit default swaps with a fair value of \$7,454 and \$137, respectively. The Company did not recognize any capital losses related to replication transactions in 2013 or 2011, while the Company recognized capital losses of \$1,477 in 2012.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

As stated in Note 1, the Company replicates investment grade corporate bonds by writing credit default swaps. As a writer of credit swaps, the Company actively monitors the underlying asset, being careful to note any events (default or similar credit event) that would require the Company to perform on the credit swap. If such events would take place, the Company has recourse provisions from the proceeds of the bankruptcy settlement of the underlying entity or by the sale of the underlying bond. As of December 31, 2013, credit default swaps, used in replicating corporate bonds are as follows:

Deal, Receive (Pay), Underlying	Maturity Date	Maximum Future Payout (Estimated)	Current Fair Value

For the years ended December 31, 2013, 2012 and 2011, the Company recorded unrealized gains (losses) of \$(31,835), \$34,383 and \$121,858, respectively, for the component of derivative instruments utilized for hedging purposes that did not qualify for hedge accounting. This has been recorded directly to unassigned surplus as an unrealized gain. The Company did not recognize any unrealized gains or losses during 2013, 2012 or 2011 that represented the component of derivative instruments gain or loss that was excluded from the assessment of hedge effectiveness.

The following tables show the pledged or restricted assets as of December 31, 2013 and 2012, respectively:

6. Reinsurance

Certain premiums and benefits are assumed from and ceded to other insurance companies under various reinsurance agreements. The Company reinsures portions of the risk on certain insurance policies which exceed its established limits, thereby providing a greater diversification of risk and minimizing exposure on larger risks. The Company remains contingently liable with respect to any insurance ceded, and this would become an actual liability in the event that the assuming insurance company became unable to meet its obligation under the reinsurance treaty.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Premiums earned reflect the following reinsurance amounts:

	Year Ended December 31		
	2013	2012	2011
Direct premiums	\$ 5,269,131	\$ 4,960,351	\$ 4,950,537
Reinsurance assumed - affiliates	82	81	104
Reinsurance assumed - non affiliates	531,881	633,476	621,553
Reinsurance ceded - affiliates	(203,917)	(278,372)	(359,404)
Reinsurance ceded - non affiliates	(350,507)	(375,188)	(786,320)
Net premiums earned	\$ 5,246,670	\$ 4,940,348	\$ 4,426,470

Aggregate reserves for policies and contracts were reduced for reserve credits for reinsurance ceded to affiliates at December 31, 2013 and 2012 of \$1,521,643 and \$1,718,959, respectively.

The Company received reinsurance recoveries in the amounts of \$470,789, \$492,249 and \$325,524 during 2013, 2012 and 2011, respectively. At December 31, 2013 and 2012, estimated amounts recoverable from reinsurers that have been deducted from policy and contract claim reserves totaled \$145,050 and \$159,544, respectively. The aggregate reserves for policies and contracts were reduced for reserve credits for reinsurance ceded at December 31, 2013 and 2012 of \$2,010,935 and \$2,201,388, respectively.

The Company would experience no reduction in surplus at December 31, 2013 or 2012 if all reinsurance agreements were cancelled.

The Company did not enter into any new reinsurance agreements in which a reserve credit was taken during the years ended December 31, 2013 or 2012.

During 2013, the Company recaptured certain treaties associated with the divestiture of the Transamerica Reinsurance operations that were previously ceded to an affiliate, for which net consideration received was \$122,047, life and claim reserves recaptured were \$281,190 and other assets recaptured were \$9,615, resulting in a pre-tax loss of \$149,528 which was included in the statement of operations.

During 2013, the Company also recaptured certain treaties associated with the divestiture of the Transamerica Reinsurance operations that were previously ceded to a non-affiliate, for which net consideration paid was \$5,456, life and claim reserves recaptured were \$31,857, other assets recaptured were \$6,677 and the unamortized gain related to these blocks was released into income from surplus of \$2,244 (\$1,458 after tax), resulting in a pre-tax loss of \$28,392, which was included in the statement of operations.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Subsequent to certain 2013 recaptures, the Company novated certain treaties to a non-affiliate, in which consideration paid was \$116,591, life and claim reserves released were \$313,047 and other assets were transferred associated with the business of \$16,292, resulting in a pre-tax gain of \$180,164, which was included in the statement of operations.

The Company novated third party assumed retrocession agreements during 2013 that were previously retroceded to a non-affiliate in which no net consideration was exchanged. Life and claim reserves were exchanged in the amount of \$2,044, other assets were exchanged in the amount of \$103 and other liabilities were exchanged in the amount of \$256. As a result, there was no net financial impact from these transactions on a pre-tax basis, as assumed and ceded reserves along with other assets and other liabilities exchanged were impacted by equivalent amounts.

During 2013, the Company recaptured certain treaties from a non-affiliate, for which net consideration received was \$770, life and claim reserves recaptured were \$1,215, and premiums recaptured were \$255, resulting in a pre-tax loss of \$190, which was included in the statement of operations.

Amortization of previously deferred gains associated with the divestiture of the Transamerica Reinsurance operations was released into income in the amount of \$20,316 (\$13,206 after tax) during 2013.

During 2012, the Company recaptured certain treaties associated with the divestiture of the Transamerica Reinsurance operations that were previously ceded to an affiliate, for which net consideration paid was \$9,487, life and claim reserves recaptured were \$12,438 and other assets recaptured were \$391, resulting in a pre-tax loss of \$21,534 which was included in the statement of operations.

During 2012, the Company recaptured certain treaties associated with the divestiture of the Transamerica Reinsurance operations that were previously ceded to a non-affiliate, for which net consideration paid was \$27,425, life and claim reserves recaptured were \$97,403, other assets recaptured were \$7,410 and the unamortized gain related to these blocks was released into income from surplus of \$9,990, (\$6,556 after tax), resulting in a pre-tax loss of \$107,428, which was included in the statement of operations.

Subsequent to the recaptures that took place during 2012, the Company reinsured to a non-affiliate certain treaties associated with the business that was previously ceded to an affiliate, for which a reinsurance premium and ceding commission were received in the amount of \$843 and \$6,904, respectively, and life and claim reserves transferred were \$7,971, resulting in a pre-tax gain of \$15,718 (\$10,217 net of tax), which was credited directly to unassigned surplus on a net of tax basis.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Subsequent to the recaptures that took place during 2012, the Company reinsured to an affiliate certain treaties associated with the business that was previously ceded to a non-affiliate, for which a reinsurance premium was paid in the amount of \$13,711, ceding commission was received in the amount of \$18,696, life and claim reserves transferred were \$78,778 and other assets were transferred in the amount of \$3,549, resulting in a pre-tax gain of \$80,214 (\$52,139 net of tax), which was credited directly to unassigned surplus on a net of tax basis.

Also subsequent to certain 2012 recaptures, the Company novated certain treaties to a non-affiliate, in which consideration received was \$24,179, life and claim reserves released were \$23,092 and other assets were transferred associated with the business of \$4,251, resulting in a pre-tax gain of \$43,020, which was included in the statement of operations.

On April 26, 2011, Aegon N.V. announced the divestiture of its life reinsurance operations, Transamerica Reinsurance, to SCOR, which was effective August 9, 2011. The life reinsurance business conducted by Transamerica Reinsurance was written through several of Aegon N.V.'s U.S. and international affiliates, all of which remain Aegon N.V. affiliates following the closing, except for Transamerica International Reinsurance Ireland, Limited (TIRI), an Irish reinsurance company. As a result of this transaction, the Company entered into a series of recapture and reinsurance agreements during the third and fourth quarters of 2011 which directly resulted in a pre-tax loss of \$474,720 which was included in the statement of operations, and a net of tax gain of \$400,760 which has been credited directly to unassigned surplus. These amounts include current year amortization of previously deferred gains, as well as releases of previously deferred gains from unassigned surplus into earnings related to these transactions. Additional information surrounding these transactions is outlined below.

Effective August 9, 2011, the Company recaptured business that was associated with the divestiture of the Transamerica Reinsurance operations which was previously retroceded on a coinsurance basis to an affiliate. The Company received recapture consideration of \$55,356, recaptured reserves of \$293,975, recaptured other assets of \$8,586 and released into income a previously deferred unamortized gain resulting from the original transaction in the amount of \$2,297, resulting in a pre-tax loss of \$227,736 which has been included in the statement of operations. Prior to this transaction, the Company amortized \$498, net of tax, of the deferred gain related to the initial transaction into earnings with a corresponding charge directly to unassigned surplus in 2011.

Subsequently, effective August 9, 2011, the Company ceded business that was associated with the divestiture of the Transamerica Reinsurance operations on a coinsurance basis to a non-affiliate. The Company paid a net reinsurance premium of \$549,682, received an initial ceding commission of \$219,000, transferred other assets in the amount of \$12,548

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

and released net reserves of \$790,263. The Company paid an experience refund in the amount of \$84,770 to an affiliate and released IMR associated with certain business in the amount of \$13,086. These transactions resulted in a net of tax gain of \$248,557, which has been credited directly to unassigned surplus. During 2011, the Company amortized \$7,712, net of tax, of the deferred gain into earnings with a corresponding charge directly to unassigned surplus.

Effective October 1, 2011, the Company recaptured business that was associated with the divestiture of the Transamerica Reinsurance operations which was previously retroceded on a coinsurance basis to a non-affiliate. The Company paid recapture consideration of \$9,840, recaptured reserves of \$402,503, recaptured other net assets of \$10,226 and released into income a previously deferred unamortized gain resulting from the original transaction in the amount of \$230,033, resulting in a pre-tax loss of \$172,084, which has been included in the statement of operations. Subsequently, effective October 1, 2011, the Company ceded this business on a coinsurance basis to an affiliate and as a result received cash, transferred other net assets and released reserves consistent with the amounts recaptured, resulting in a net of tax gain of \$262,245, which has been credited directly to unassigned surplus.

Effective October 1, 2011, the Company recaptured business that was associated with the divestiture of the Transamerica Reinsurance operations which was previously retroceded on a coinsurance basis to an affiliate. The Company received recapture consideration of \$30,305, recaptured reserves of \$123,935 and recaptured other assets of \$17,964, resulting in a pre-tax loss of \$75,666, which has been included in the statement of operations. Subsequently, effective October 1, 2011, the Company ceded this business on a coinsurance basis to a non-affiliate and as a result paid cash, transferred other assets and released reserves consistent with the amounts recaptured, resulting in a net of tax gain of \$49,183, which has been credited directly to unassigned surplus.

During the last half of 2011, the Company recaptured the business that was associated with the divestiture of the Transamerica Reinsurance operations from several Aegon N.V. affiliates. This business was subsequently ceded to SCOR entities and in addition, retrocession reinsurance treaties were executed. The Company assigned certain third party retrocession agreements to SCOR entities as a component of the divestiture of the Transamerica Reinsurance operations and the associated Master Retrocession Agreement. As a result, the unaffiliated retrocession reinsurance treaties were assigned from the Company to a SCOR entity, resulting in this risk being ceded to SCOR and subsequently to the unaffiliated third parties. The reserves and assets associated with these assignments were \$87,665, where the counterparty's net reserves ceded exchanged counterparties with no consideration exchanged, resulting in no net income or surplus impact to the Company.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

The Company's current income tax incurred and change in deferred income tax differs from the amount obtained by applying the federal statutory rate of 35% to income before tax as follows:

	Year Ended December 31		
	2013	2012	2011
Current income taxes incurred	\$ 18,378	\$ 128,702	\$ 60,591
Change in deferred income taxes (without tax on unrealized gains and losses)	40,501	12,128	7,754
Total income tax reported	\$ 58,879	\$ 140,830	\$ 68,345
Income before taxes	\$ 251,898	\$ 365,242	\$ (182,234)
	35.00%	35.00%	35.00%
Expected income tax expense (benefit) at 35% statutory rate	\$ 88,164	\$ 127,835	\$ (63,782)
Increase (decrease) in actual tax reported resulting from:			
Dividends received deduction	(4,591)	(4,308)	(3,958)
Tax credits	(2,911)	(3,148)	(2,217)
Tax adjustment for IMR	(16,134)	6,726	(10,326)
Surplus adjustment for in-force ceded	(5,132)	12,782	140,266
Nondeductible expenses	15	15	2,882
Deferred tax benefit on other items in surplus	(371)	(7,149)	(1,343)
Provision to return	(336)	(1,968)	(454)
Life-owned life insurance	–	–	(281)
Dividends from certain foreign corporations	74	39	30
Prior period adjustment	–	10,356	4,791
Other	101	(350)	2,737
Total income tax reported	\$ 58,879	\$ 140,830	\$ 68,345

For federal income tax purposes, the Company joins in a consolidated income tax return filing with its indirect parent company, Transamerica Corporation, and other affiliated companies. The method of allocation between the companies is subject to a written tax allocation agreement. Under the terms of the tax allocation agreement, allocations are based on separate income tax return calculations. The Company is entitled to recoup federal income taxes paid in the event the future losses and credits reduce the greater of the Company's separately computed income tax liability or the consolidated group's income tax liability in the year generated. The Company is also entitled to recoup federal income taxes paid in the event the losses and credits reduce the greater of the Company's separately computed income tax liability or the consolidated group's income tax liability in any carryback or carryforward year when so applied. Intercompany income tax balances are settled within thirty days of payment to or filing with the Internal Revenue Service. A tax return has not yet been filed for 2013.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

As of December 31, 2013 and 2012, the Company had no operating loss, capital loss or tax credit carryforwards available for tax purposes.

The Company incurred income taxes during 2013, 2012 and 2011 of \$14,455, \$93,620 and \$113,223, respectively, which will be available for recoupment in the event of future net losses.

The amount of tax contingencies calculated for the Company as of December 31, 2013 and 2012 is \$17 and \$32, respectively. The total amount of tax contingencies that, if recognized, would affect the effective income tax rate is \$17. The Company classifies interest and penalties related to income taxes as interest expense and penalty expense, respectively. The Company's interest (benefit) expense related to income taxes for the years ending December 31, 2013, 2012 and 2011 is \$25, \$(203) and \$(25), respectively. The total interest payable balance as of December 31, 2013 and 2012 is \$1 and \$2, respectively. The Company recorded no liability for penalties. It is not anticipated that the total amounts of unrecognized tax benefits will significantly increase within twelve months of the reporting date.

The Company's federal income tax returns have been examined by the Internal Revenue Service and closing agreements have been executed through 2004. The examination for the years 2005 through 2006 have been completed and resulted in tax return adjustments that are currently undergoing final calculation at appeal. The examination for the years 2007 through 2008 has been completed and resulted in tax return adjustments that are currently being appealed. An examination is already in progress for the years 2009 and 2010. The Company believes that there are adequate defenses against or sufficient provisions established related to any open or contested tax positions.

8. Policy and Contract Attributes

Participating life insurance policies were issued by the Company which entitle policyholders to a share in the earnings of the participating policies, provided that a dividend distribution, which is determined annually based on mortality and persistency experience of the participating policies, is authorized by the Company.

For the years ended December 31, 2013 and 2012, there were no premiums for participating life insurance policies. For the year ended 2011, premiums for participating life insurance policies were \$111. The Company accounts for its policyholder dividends based on dividend scales and experience of the policies. The Company did not pay any dividends to policyholders during 2013, 2012 or 2011.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

A portion of the Company's policy reserves and other policyholders' funds (including separate account liabilities) relates to liabilities established on a variety of the Company's annuity and deposit fund products. There may be certain restrictions placed upon the amount of funds that can be withdrawn without penalty. The amount of reserves on these products, by withdrawal characteristics, is summarized as follows:

	December 31 2013				
	General Account	Separate Account with Guarantees	Separate Account Non- Guaranteed	Total	Percent

	Year Ended December 31		
	2013	2012	2011
Transfer as reported in the summary of operations of the separate accounts statement:			
Transfers to separate accounts	\$ 4,481,983	\$ 4,163,485	\$ 4,219,645
Transfers from separate accounts	(3,287,943)	(3,220,563)	(3,075,684)
Net transfers to separate accounts	1,194,040	942,922	1,143,961
Miscellaneous reconciling adjustments	(9)	8	(63)
Net transfers as reported in the statements of operations of the life, accident and health annual statement	\$ 1,194,031	\$ 942,930	\$ 1,143,898

The legal insulation of separate account assets prevents such assets from being generally available to satisfy claims resulting from the general account. At December 31, 2013 and 2012, the Company's separate account statement included legally insulated assets of \$20,293,235 and \$17,590,145, respectively. The assets legally insulated from general account claims at December 31, 2013 and 2012 are attributed to the following products:

	2013	2012
Variable life	\$ 98,422	\$ 80,147
Variable annuities	9,040,471	6,288,266
Market value separate accounts	1,759,358	1,550,300
Par annuities	1,958,911	2,220,569
Book value separate accounts	7,436,073	7,450,863
Total separate account assets	\$ 20,293,235	\$ 17,590,145

Some separate account liabilities are guaranteed by the general account. In accordance with the guarantees provided, if the investment proceeds are insufficient to cover the rate of return guaranteed for the product, the policyholder proceeds will be remitted by the general account. As of December 31, 2013 and 2012, the general account of the Company had a maximum guarantee for separate account liabilities of \$32,328 and \$47,317, respectively. To compensate the general account for the risk taken, the separate account paid risk charges of \$32,926, \$31,916 and \$27,094 to the general account in 2013, 2012 and 2011, respectively. During the years ended December 31, 2013, 2012 and 2011, the general account of the Company had paid \$680, \$619 and \$1,542, respectively, toward separate account guarantees.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

At December 31, 2013 and 2012, the Company reported guaranteed separate account assets at amortized cost in the amount of \$7,436,073 and \$7,450,863, respectively, based upon the prescribed practice granted by the State of New York as described in Note 2. These assets had a fair value of \$7,414,425 and \$7,618,858 at December 31, 2013 and 2012, respectively, which would have resulted in an unrealized (loss) gain of \$(21,648) and \$167,995, respectively, had these assets been reported at fair value.

The Company participates in securities lending within the separate account. The Company follows the same policies and procedures as the general account for such transactions conducted from the separate account. See Note 10 for a discussion of securities lending policies and procedures. As of December 31, 2013 and 2012, securities with a book value of \$18,918 and \$21,171, respectively, were on loan under securities lending agreements, which represents less than one percent of total separate account assets. The Company does not obtain approval or otherwise provide notification to contract holders regarding securities lending transactions that occur with separate account assets. However, the Company requires that borrowers pledge collateral worth 102% of the value of the loaned securities. As of December 31, 2013, the Company held collateral from securities lending transactions in the form of cash and on open terms in the amount of \$19,307. This cash collateral is reinvested in a registered money market fund and is not available for general corporate purposes.

For variable annuities with guaranteed living benefits and variable annuities with minimum guaranteed death benefits the Company complies with Actuarial Guideline XLIII (AG 43), which replaces Actuarial Guidelines 34 and 39. AG 43 specifies statutory reserve requirements for variable annuity contracts with benefit guarantees (VACARVM) and without benefit guarantees and related products. The AG 43 reserve calculation includes variable annuity products issued after January 1, 1981. Examples of covered guaranteed benefits include guaranteed minimum accumulation benefits, return of premium death benefits, guaranteed minimum income benefits, guaranteed minimum withdrawal benefits and guaranteed payout annuity floors. The aggregate reserve for contracts falling within the scope of AG 43 is equal to the conditional tail expectation (CTE) Amount, but not less than the standard scenario amount (SSA).

To determine the CTE Amount, the Company used 1,000 of the pre-packaged scenarios developed by the American Academy of Actuaries (AAA) produced in October 2005 and prudent estimate assumptions based on Company experience. The SSA was determined using the assumptions and methodology prescribed in AG 43 for determining the SSA.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

At December 31, 2013 and 2012, the Company had variable annuities with minimum guaranteed benefits as follows:

Benefit and Type of Risk	Subjected Account Value	Amount of Reserve Held	Reinsurance Reserve Credit
December 31, 2013			
Guaranteed Minimum Withdrawal Benefit	\$ 5,310,395	\$ 41,397	\$ –
Guaranteed Minimum Death Benefit	1,600,493	2,659	1,308
December 31, 2012			
Guaranteed Minimum Withdrawal Benefit	\$ 4,849,846	\$ 131,770	\$ –
Guaranteed Minimum Death Benefit	1,373,096	7,639	1,978

Reserves on the Company's traditional life insurance products are computed using mean reserving methodologies. These methodologies result in the establishment of assets for the amount of the net valuation premiums that are anticipated to be received between the policies's paid-through date to the policy's next anniversary date. At December 31, 2013 and 2012, the gross premium and loading amounts related to these assets (which are reported as premiums deferred and uncollected), are as follows:

	Gross	Loading	Net
December 31, 2013			
Life and annuity:			
Ordinary first-year business	\$ 208	\$ 188	\$ 20
Ordinary renewal business	138,879	1,259	137,620
Group life business	527	113	414
Credit life	252	–	252
Reinsurance ceded	(132,124)	–	(132,124)
Total life and annuity	7,742	1,560	6,182
Accident and health	4,284	–	4,284
	\$ 12,026	\$ 1,560	\$ 10,466

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

	Gross	Loading	Net
December 31, 2012			
Life and annuity:			
Ordinary first-year business	\$ 312	\$ 278	\$ 34
Ordinary renewal business	153,131	1,350	151,781
Group life business	664	127	537
Credit life	235	–	235
Reinsurance ceded	(146,264)	–	(146,264)
Total life and annuity	8,078	1,755	6,323
Accident and health	4,974	–	4,974
	\$ 13,052	\$ 1,755	\$ 11,297

The Company anticipates investment income as a factor in premium deficiency calculation, in accordance with SSAP No. 54, *Individual and Group Accident and Health Contracts*. As of December 31, 2013 and 2012, the Company had insurance in force aggregating \$15,580,513 and \$12,243,276, respectively, in which the gross premiums are less than the net premiums required by the valuation standards established by the New York Department of Financial Services. The Company established policy reserves of \$58,739 and \$92,244 to cover these deficiencies as of December 31, 2013 and 2012, respectively.

9. Capital and Surplus

At December 31, 2013 and 2012, the Company had 44,175 shares of 6% non-voting, non-cumulative preferred stock issued and outstanding. Aegon owns 38,609 shares and TLIC owns 5,566 shares. Par value is \$10 per share, and the liquidation value is \$1,286.72 per share.

The preferred stock shareholders are entitled to receive non-cumulative dividends at the rate of 6% per year of an amount equal to the sum of (1) the par value plus (2) any additional paid-in capital for such preferred stock. Dividends are payable annually in December. The amount of dividends unpaid at December 31, 2013 was \$430. The preferred shares have preference as to dividends and upon dissolution or liquidation of the Company.

The Company is subject to limitations, imposed by the State of New York, on the payment of dividends to its stockholders. Generally, dividends during any year may not be paid, without prior regulatory approval, in excess of the lesser of (1) 10 percent of the Company's statutory surplus as of the preceding December 31, or (2) the Company's statutory gain from operations before net realized capital gains on investments for the preceding year. Subject to the availability of unassigned surplus at the time of such a

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

dividend, the maximum payment which may be made in 2014, without prior approval of insurance regulatory authorities, is \$93,458.

On December 21, 2011, the Company paid a preferred stock dividend and a common stock dividend of \$3,410 and \$296,590, respectively, to its parent companies, Aegon and TLIC. Of the common stock dividend amount, \$76,057 was considered an ordinary dividend and \$220,533 was considered an extraordinary dividend. Of the total \$300,000 preferred and common stock dividends, Aegon received \$262,200 and TLIC received \$37,800. The Company did not pay any dividends during 2012 and 2013.

Life and health insurance companies are subject to certain RBC requirements as specified by the NAIC. Under those requirements, the amount of capital and surplus maintained by a life and health insurance company is to be determined based on the various risk factors related to it. At December 31, 2013, the Company meets the minimum RBC requirements.

On May 2, 2008, the Company received \$150,000 from Aegon in exchange for surplus notes. The Company received approval from the Superintendent of Insurance of the New York Department of Financial Services prior to the issuance of the surplus notes, as well as the December 31, 2013, 2012 and 2011 interest payments. These notes are due 20 years from the date of issuance at an interest rate of 6.25% and are subordinate and junior in the right of payment to all obligations and liabilities of the Company. In the event of liquidation of the Company, full payment of the surplus notes shall be made before the holders of common stock become entitled to any distribution of the remaining assets of the Company.

Additional information related to the outstanding surplus notes at December 31, 2013 and 2012 is as follows:

For Year Ending	Balance Outstanding	Interest Paid Current Year	Cumulative Interest Paid	Accrued Interest
2013	\$ 150,000	\$ 9,375	\$ 53,125	–
2012	150,000	9,375	43,750	–

The Company held special surplus funds in the amount of \$8,085 and \$6,660, as of December 31, 2013 and 2012, respectively, for annuitant mortality fluctuations as required under New York Regulation 47, *Separate Account and Separate Account Annuities*.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

10. Securities Lending

The Company participates in an agent-managed securities lending program. The Company receives collateral equal to 102% of the fair value of the loaned domestic securities as of the transaction date. If the fair value of the collateral is at any time less than 102% of the fair value of the loaned securities, the counterparty is mandated to deliver additional collateral, the fair value of which, together with the collateral already held in connection with the lending transaction, is at least equal to 102% of the fair value of the loaned domestic securities. In the event the Company loans a foreign security and the denomination of the currency of the collateral is other than the denomination of the currency of the loaned foreign security, the Company receives and maintains collateral equal to 105% of the fair value of the loaned security.

At December 31, 2013 and 2012, respectively, securities in the amount of \$416,442 and \$238,014 were on loan under securities lending agreements. At December 31, 2013, the collateral the Company received from securities lending was in the form of cash and on open terms. This cash collateral is reinvested and is not available for general corporate purposes. The reinvested cash collateral has a fair value of \$430,659 and \$257,972 at December 31, 2013 and 2012, respectively.

The contractual maturities of the securities lending collateral positions are as follows:

	<u>Fair Value</u>
Open	<u>\$ 430,771</u>
30 days or less	-
31 to 60 days	-
61 to 90 days	-
Greater than 90 days	-
Total	<u>430,771</u>
Securities received	-
Total collateral received	<u><u>\$ 430,771</u></u>

The Company receives primarily cash collateral in an amount in excess of the fair value of the securities lent. The Company reinvests the cash collateral into higher yielding securities than the securities which the Company has lent to other entities under the arrangement.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

The maturity dates of the reinvested securities lending collateral are as follows:

	Amortized Cost	Fair Value
Open	\$ 51,302	\$ 51,302
30 days or less	206,980	206,962
31 to 60 days	65,413	65,413
61 to 90 days	74,097	74,095
91 to 120 days	5,406	5,407
121 to 180 days	27,480	27,480
181 to 365 days	–	–
1 to 2 years	–	–
2-3 years	–	–
Greater than 3 years	–	–
Total	430,678	430,659
Securities received	–	–
Total collateral reinvested	\$ 430,678	\$ 430,659

For securities lending, the Company's sources of cash that it uses to return the cash collateral is dependent upon the liquidity of the current market conditions. Under current conditions, the Company has securities with a par value of \$430,668 (fair value of \$430,659) that are currently tradable securities that could be sold and used to pay for the \$430,771 in collateral calls that could come due under a worst-case scenario.

11. Retirement and Compensation Plans

The Company's employees participate in a qualified defined benefit pension plan sponsored by Aegon. The Company has no legal obligation for the plan. The Company recognizes pension expense equal to its allocation from Aegon. The pension expense is allocated among the participating companies based on International Accounting Standards 19 (IAS 19), *Accounting for Employee Benefits* and based upon actuarial participant benefit calculations. The benefits are based on years of service and the employee's eligible annual compensation. Pension expenses were \$9, \$9 and \$8 for the years ended December 31, 2013, 2012 and 2011, respectively. The plan is subject to the reporting and disclosure requirements of the Employee Retirement Income Security Act of 1974.

The Company's employees also participate in a defined contribution plan sponsored by Aegon which is qualified under Section 401(k) of the Internal Revenue Service Code. Employees of the Company who customarily work at least 1,000 hours during each calendar year and meet the other eligibility requirements are participants of the plan. Participants may elect to contribute up to twenty-five percent of their salary to the plan.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

The Company will match an amount up to three percent of the participant's salary. Participants may direct all of their contributions and plan balances to be invested in a variety of investment options. The plan is subject to the reporting and disclosure requirements of the Employee Retirement Income Security Act of 1974. The Company's allocation of benefits expense for the years ended December 31, 2013, 2012 and 2011 was \$6 for each year, respectively.

Aegon sponsors supplemental retirement plans to provide the Company's senior management with benefits in excess of normal pension benefits. The plans are noncontributory, and benefits are based on years of service and the employee's compensation level. The plans are unfunded and nonqualified under the Internal Revenue Service Code. In addition, Aegon has established incentive deferred compensation plans for certain key employees of the Company. The Company's allocation of expense for these plans for each of the years ended December 31, 2013, 2012 and 2011 was insignificant. Aegon also sponsors an employee stock option plan/stock appreciation rights for employees of the Company and a stock purchase plan for its producers, with the participating affiliated companies establishing their own eligibility criteria, producer contribution limits and company matching formula. These plans have been accrued or funded as deemed appropriate by management of Aegon and the Company.

In addition to pension benefits, the Company participates in plans sponsored by Aegon that provide postretirement medical, dental and life insurance benefits to employees meeting certain eligibility requirements. Portions of the medical and dental plans are contributory. The postretirement plan expenses are charged to affiliates in accordance with an intercompany cost sharing arrangement. The Company's allocation of postretirement expenses was negligible for the years ended December 31, 2013, 2012 and 2011.

12. Related Party Transactions

The Company shares certain officers, employees and general expenses with affiliated companies.

In accordance with an agreement between Aegon and the Company, Aegon will ensure the maintenance of certain minimum tangible net worth, operating leverage and liquidity levels of the Company, as defined in the agreement, through the contribution of additional capital by Aegon as needed.

The Company is party to a service agreement with TLIC, in which the Company receives services, including accounting, data processing and other professional services, in consideration of reimbursement of the actual costs of services rendered. The Company is party to a Management and Administrative and Advisory agreement with Aegon USA

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

Realty Advisors, Inc. (Advisor) whereby Advisor serves as the administrator and advisor for the Company's mortgage loan operations. Aegon USA Investment Management, LLC acts as a discretionary investment manager under an Investment Management Agreement with the Company. During 2013, 2012 and 2011, the Company paid \$31,069, \$24,579 and \$23,065, respectively, for these services, which approximates cost.

The Company has an administration service agreement with Transamerica Asset Management, Inc. to provide administrative services to the Aegon/Transamerica Series Trust. The Company received \$4,380, \$2,699 and \$1,688 for these services during 2013, 2012 and 2011, respectively.

Transamerica Capital, Inc. provides wholesaling distribution services for the Company under a distribution agreement. The Company incurred expenses under this agreement of \$9,336, \$5,633 and \$4,411 for the years ended December 31, 2013, 2012 and 2011, respectively.

Payables to and receivables from affiliates and intercompany borrowings bear interest at the thirty-day commercial paper rate. During 2013, 2012 and 2011, the Company paid (received) net interest of \$7, \$(12) and \$11, respectively, to (from) affiliates. At December 31, 2013 and 2012, the Company reported a net amount of \$365 payable to and \$87,032 due from affiliates, respectively. Terms of settlement require that these amounts are settled within 90 days.

At December 31, 2013 and 2012, the Company had short-term intercompany notes receivable of \$50,000 and \$54,700 as follows. The Company did not have any short-term intercompany notes receivable at December 31, 2011. In accordance with SSAP No. 25, *Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*, these notes are reported as short-term investments.

<u>Receivable from</u>	<u>Amount</u>	<u>Due By</u>	<u>Interest Rate</u>
December 31, 2013			
AEGON	\$ 50,000	May 21, 2014	0.10%
December 31, 2012

13. Managing General Agents

The Company utilizes managing general agents and third-party administrators in its operations. Information regarding these entities is as follows:

Name and Address of Managing General Agent or Third-Party Administrator	FEIN	Exclusive Contract	Types of Business Written	Types of Authority Granted	Total Direct Premiums Written/ Produced By
The Vanguard Group, Inc. 100 Vanguard Blvd. Malvern, PA 19355	23-1945930	No	Deferred and Income Annuities	C,B,P,U	\$ 52,545

- C- Claims Payment
- B- Binding Authority
- P- Premium Collection
- U- Underwriting

For years ended December 31, 2013, 2012 and 2011, the Company had \$52,545, \$36,282 and \$20,974, respectively, of direct premiums written by The Vanguard Group, Inc.

14. Commitments and Contingencies

The Company has contingent commitments of \$21,212 and \$14,317, at December 31, 2013 and 2012, respectively, to provide additional funding for joint ventures, partnerships and limited liability companies, which includes LIHTC commitments of \$9,559 and \$2,127 at December 31, 2013 and 2012, respectively.

Private placement commitments outstanding as of December 31, 2013 and 2012 were \$32,000 and \$11,715, respectively.

There were no securities acquired on a “to be announced” (TBA) basis at December 31, 2013 and 2012.

Cash collateral received from derivative counterparties as well as the obligation to return the collateral is recorded on the Company’s balance sheet. The amount of cash collateral posted to the Company as of December 31, 2013 and 2012, respectively, was \$0 and \$20,331. In addition, securities in the amount of \$8,352 and \$19,891 were also posted to the Company as of December 31, 2013 and 2012, respectively, which were not included in the financials of the Company. Noncash collateral is not to be recognized by the recipient unless that collateral is sold or repledged or the counterparty defaults.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

The Company is a party to legal proceedings involving a variety of issues incidental to its business. Lawsuits may be brought in nearly any federal or state court in the United States or in an arbitral forum. In addition, there continues to be significant federal and state regulatory activity relating to financial services companies. The Company's legal proceedings are subject to many variables, and given its complexity and scope, outcomes cannot be predicted with certainty. Although legal proceedings sometimes include substantial demands for compensatory and punitive damages, and injunctive relief, it is management's opinion that damages arising from such demands will not be material to the Company's financial position.

The Company is subject to insurance guaranty laws in the states in which it writes business. These laws provide for assessments against insurance companies for the benefit of policyholders and claimants in the event of insolvency of other insurance companies. Assessments are charged to operations when received by the Company except where right of offset against other taxes paid is allowed by law. Amounts available for future offsets are recorded as an asset on the Company's balance sheet. The future obligation for known insolvencies has been accrued based on the most recent information available from the National Organization of Life and Health Insurance Guaranty Association. Potential future obligations for unknown insolvencies are not determinable by the Company and are not required to be accrued for financial reporting purposes. The Company has established a reserve of \$8,680 and \$34,002 at December 31, 2013 and 2012, respectively, for its estimated share of future guaranty fund assessments related to several major insurer insolvencies. The Company had an offsetting premium tax benefit of \$4,679 and \$16,319 at December 31, 2013 and 2012, respectively. The guaranty fund expense was \$3,437, \$174 and \$9,674 for the years ended December 31, 2013, 2012 and 2011, respectively.

15. Sales, Transfer and Servicing of Financial Assets and Extinguishments of Liabilities

The Company enters into dollar repurchase agreements in which securities are delivered to the counterparty once adequate collateral has been received. As of December 31, 2013 and 2012, the Company had dollar repurchase agreements outstanding in the amount of \$20,491 and \$63,548, respectively. The Company had an outstanding liability for borrowed money in the amount \$20,029 and \$67,407 at December 31, 2013 and 2012, respectively due to participation in dollar repurchase agreements which includes accrued interest.

Transamerica Financial Life Insurance Company

Notes to Financial Statements – Statutory Basis (continued)

(Dollars in Thousands, Except per Share Data)

The contractual maturities of the dollar repurchase agreement positions are as follows:

	<u>Fair Value</u>
Open	\$ 19,970
30 days or less	–
31 to 60 days	–
61 to 90 days	–
Greater than 90 days	–
Total	<u>19,970</u>
Securities received	–
Total collateral received	<u><u>\$ 19,970</u></u>

In the course of the Company's asset management, securities are sold and reacquired within 30 days of the sale date to enhance the Company's yield on its investment portfolio. There were no securities of NAIC designation 3 or below sold during 2013 and reacquired within 30 days of the sale date.

16. Subsequent Event

The financial statements are adjusted to reflect events that occurred between the balance sheet date and the date when the financial statements are issued, provided they give evidence of conditions that existed at the balance sheet date (Type I). Events that are indicative of conditions that arose after the balance sheet date are disclosed, but do not result in an adjustment of the financial statements themselves (Type II). With the exception of the Affordable Care Act annual fee described below, the Company has not identified any Type I or Type II subsequent events for the year ended December 31, 2013 through the date the financial statements are issued.

On January 1, 2014, the Company will be subject to an annual fee under section 9010 of the Affordable Care Act (ACA). This annual fee will be allocated to individual health insurers based on the ratio of the amount of the entity's net premiums written during the preceding calendar year to the amount of health insurance for any U.S. health risk that is written during the preceding calendar year. A health insurance entity's portion of the annual fee becomes payable once the entity provides health insurance for any U.S. health risk for each calendar year beginning on or after January 1, 2014. As of December 31, 2013, the Company has written health insurance subject to the ACA assessment, expects to conduct health insurance business in 2014, and estimates their portion of the annual health insurance industry fee payable on September 30, 2014 to be \$41. This assessment is not expected to have a material impact on risk based capital in 2014.

The Board of Directors and Contract Owners
Of TFLIC Separate Account VNY
Transamerica Financial Life Insurance Company

We have audited the accompanying statements of assets and liabilities of the subaccounts of Transamerica Financial Life Insurance Company TFLIC Separate Account VNY (the Separate Account), comprised of subaccounts as listed in the accompanying statements of assets and liabilities, as of December 31, 2013, and the related statements of operations and changes in net assets for the periods indicated thereon. These financial statements are the responsibility of the Separate Account's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. We were not engaged to perform an audit of the Separate Account's internal control over financial reporting. Our audits included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Separate Account's internal control over financial reporting. Accordingly, we express no such opinion. An audit also includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our procedures included confirmation of securities owned as of December 31, 2013 by correspondence with the fund companies or their transfer agents. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of each of the respective subaccounts of Transamerica Financial Life Insurance Company TFLIC Separate Account VNY, at December 31, 2013, the results of their operations and changes in their net assets for the periods indicated thereon, in conformity with U.S. generally accepted accounting principles.

December 31, 2013

1. Organization and Summary of Significant Accounting Policies

Organization

Separate Account VNY (the Separate Account) is a segregated investment account of Transamerica Financial Life Insurance Company (TFLIC), an indirect wholly owned subsidiary of AEGON N.V., a holding company organized under the laws of The Netherlands.

The Separate Account is registered with the Securities and Exchange Commission as a Unit Investment Trust pursuant to provisions of the Investment Company Act of 1940. The Separate Account consists of multiple investment subaccounts. Each subaccount invests exclusively in the corresponding portfolio of a Mutual Fund. Each Mutual Fund is registered as an open-end management investment company under the Investment Company Act of 1940, as amended. Activity in these specified investment subaccounts is available to contract owners of the Advisor's Edge® NY Variable Annuity.

 November 19, 2009

The following subaccount name changes were made effective during the fiscal year ended December 31, 2013:

Subaccount

Federated Managed Tail Risk II Primary Shares
 TA Barrow Hanley Dividend Focused Initial Class
 TA TS&W International Equity Initial Class
 TA Vanguard ETF - Balanced Initial Class
 TA Vanguard ETF - Growth Initial Class

Formerly

Federated Capital Appreciation Fund II Primary Shares
 TA BlackRock Large Cap Value Initial Class
 TA Morgan Stanley Active International Initial Class
 TA Vanguard ETF Index - Balanced Initial Class
 TA Vanguard ETF Index - Growth Initial Class

During the current year the following subaccounts were liquidated and subsequently reinvested:

Reinvested Subaccount

TA Vanguard ETF - Growth Initial Class

Liquidated Subaccount

TA Efficient Markets Initial Class

Transamerica Financial Life Insurance Company
TFLIC Separate Account VNY
Notes to Financial Statements
December 31, 2013

1. Organization and Summary of Significant Accounting Policies (continued)

Investments

Net purchase payments received by the Separate Account are invested in the portfolios of the Mutual Funds as selected by the contract owner. Investments are stated at the closing net asset values per share on December 31, 2013.

Realized capital gains and losses from sales of shares in the Separate Account are determined on the first-in, first-out basis. Investment transactions are accounted for on the trade date (date the order to buy or sell is executed) and dividend income is recorded on the ex-dividend date. Unrealized gains or losses from investments in the Mutual Funds are included in the Statements of Operations and Changes in Net Assets.

Dividend Income

Dividends received from the Mutual Fund investments are reinvested to purchase additional mutual fund shares.

Accounting Policy

The financial statements included herein have been prepared in accordance with U.S. generally accepted accounting principles (GAAP) for variable annuity separate accounts registered as unit investment trusts. The preparation of the financial statements in conformity with GAAP requires management to make estimates and assumptions regarding matters that affect the reported amount of assets and liabilities. Actual results could differ from those estimates.

4. Financial Highlights

The Separate Account offers various death benefit options, which have differing fees that are charged against the contract owner's account balance. These charges are discussed in more detail in the individual's policy. Differences in the fee structures for these units result in different unit values, expense ratios, and total returns.

4. Financial Highlights (continued)

⁽¹⁾ See footnote 1

- * These amounts represent the dividends, excluding distributions of capital gains, received by the subaccount from the Mutual Fund, net of management fees assessed by the fund manager, divided by the average net assets. These ratios exclude those expenses, such as mortality and expense charges, that are assessed against contract owner accounts either through reductions in the unit values or the redemption of units. The recognition of investment income by the subaccount is affected by the timing of the declaration of dividends by the Mutual Fund in which the subaccounts invest.

- ** These amounts represent the annualized contract expenses of the subaccount, consisting primarily of mortality and expense charges, for each period indicated. These ratios include only those expenses that result in a direct reduction to unit values. Charges made directly to contract owner accounts through the redemption of units and expenses of the Mutual Fund have been excluded.

- *** These amounts represent the total return for the periods indicated, including changes in the value of the Mutual Fund, and expenses assessed through the reduction of unit values. These ratios do not include any expenses assessed through the redemption of units. Investment options with a date notation indicate the effective date of that investment option in the variable account. The total return is calculated for each period indicated or from the effective date through the end of the reporting period. Effective 2012, total returns reflect a full twelve month period and total returns for subaccounts opened during the year have not been disclosed as they may not be indicative of a full year return. Effective 2011, expense ratios not in effect for the full twelve months are not reflected in the total return as they may not be indicative of a full year return.

5. Administrative and Mortality and Expense Risk Charges

TFLIC deducts a daily administrative charge equal to an annual rate of .15% of the daily net assets value of each subaccount for administrative expenses. TFLIC also deducts an annual charge during the accumulation phase, not to exceed \$30, proportionately from the subaccounts' unit values. An annual charge ranging from .40% to .60% is deducted (based on the death benefit selected) from the unit values of the subaccounts of the Separate Account for TFLIC's assumption of certain mortality and expense risks incurred in connection with the contract. The charge is assessed daily based on the net asset value of the Mutual Fund. Charges for administrative and mortality and expense risk are an expense of the subaccount. Charges reflected above are those currently assessed and may be subject to change. Contract owners should see their actual policy and any related attachments to determine their specific charges.

6. Income Tax

Operations of the Separate Account form a part of TFLIC, which is taxed as a life insurance company under Subchapter L of the Internal Revenue Code of 1986, as amended (the Code). The operations of the Separate Account are accounted for separately from other operations of TFLIC for purposes of federal income taxation. The Separate Account is not separately taxable as a regulated investment company under Subchapter M of the Code and is not otherwise taxable as an entity separate from TFLIC. Under existing federal income tax laws, the income of the Separate Account is not taxable to TFLIC, as long as earnings are credited under the variable annuity contracts.

7. Dividend Distributions

Dividends are not declared by the Separate Account, since the increase in the value of the underlying investment in the Mutual Funds is reflected daily in the accumulation unit price used to calculate the equity value within the Separate Account. Consequently, a dividend distribution by the Mutual Funds does not change either the accumulation unit price or equity values within the Separate Account.

8. Fair Value Measurements and Fair Value Hierarchy

The Accounting Standards Codification™ (ASC) 820 defines fair value, establishes a framework for measuring fair value, establishes a fair value hierarchy based on the nature of inputs used to measure fair value and enhances disclosure requirements for fair value measurements.

The Separate Account has categorized its financial instruments into a three level hierarchy which is based on the priority of the inputs to the valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure fair value fall within different levels of the hierarchy, the category level is based on the lowest priority level input that is significant to the fair value measurement of the instrument.

Financial assets and liabilities recorded at fair value on the Statements of Assets and Liabilities are categorized as follows:

Level 1. Unadjusted quoted prices for identical assets or liabilities in an active market.

Level 2. Quoted prices in markets that are not active or inputs that are observable either directly or indirectly for substantially the full term of the asset or liability. Level 2 inputs include the following:

- a) Quoted prices for similar assets or liabilities in active markets
- b) Quoted prices for identical or similar assets or liabilities in non-active markets
- c) Inputs other than quoted market prices that are observable
- d) Inputs that are derived principally from or corroborated by observable market data

Level 3. Prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. They reflect management's own assumptions about the assumptions a market participant would use in pricing the asset or liability.

All investments in the Mutual Funds included in the Statements of Assets and Liabilities are stated at fair value and are based upon daily unadjusted quoted prices, therefore are considered Level 1.

9. Subsequent Events

The Separate Account has evaluated the financial statements for subsequent events through the date which the financial statements were issued. During this period, there were no subsequent events requiring recognition or disclosure in the financial statements.

STATEMENT OF ADDITIONAL INFORMATION
May 1, 2014

This Statement of Additional Information (“SAI”) is not a prospectus but supplements and should be read in conjunction with the current prospectuses dated May 1, 2014, for AllianceBernstein[®] Variable Products Series (VPS) Fund, Inc. (the “Fund”) that offer Class A shares and Class B shares of the Fund’s Portfolios (each a “Prospectus”, and together, the “Prospectuses”). Financial statements for each Portfolio of the Fund for the year ended December 31, 2013, are included in the Portfolio’s annual report and are incorporated into this SAI by reference. Copies of the Prospectuses and annual reports may be obtained by contacting AllianceBernstein Investor Services, Inc. (“ABIS”) at the address or the “For Literature” telephone number shown above or on the Internet at www.AllianceBernstein.com.

INFORMATION ABOUT THE PORTFOLIOS AND THEIR INVESTMENTS

Introduction to the Portfolios

The Fund is an open-end series investment company designed to fund variable annuity contracts and variable life insurance policies offered by the separate accounts of certain life insurance companies (the “Insurers”). The Fund currently offers an opportunity to choose among the separately managed pools of assets (the “Portfolios”) described in the Portfolios’ Prospectuses, each of which has differing investment objectives and policies. The Fund currently has thirteen Portfolios, all of which are described in this SAI.

Except as noted, the investment objective and policies described below are not “fundamental policies” within the meaning of the Investment Company Act of 1940 (the “1940 Act”), and may, therefore, be changed by the Board of Directors of the Fund (the “Board” or the “Directors”) without shareholder approval. However, no Portfolio will change its investment objective without at least 60 days’ prior written notice to shareholders. There is no guarantee that a Portfolio will achieve its investment objective. Whenever any investment policy or restriction states a minimum or maximum percentage of a Portfolio’s assets that may be invested in any security or other asset, it is intended that such minimum or maximum percentage limitation be determined immediately after and as a result of such Portfolio’s acquisition of such security or other asset. Accordingly, any later increase or decrease in percentage beyond the specified limitations resulting from a change in value or net assets will not be considered a violation of this percentage limitation.

Additional Investment Policies and Practices

The following information about the Portfolios’ investment policies and practices supplements the information set forth in the Prospectuses.

Convertible Securities

Convertible securities include bonds, debentures, corporate notes and preferred stocks that are convertible at a stated exchange ratio into shares of the underlying common stock. Prior to their conversion, convertible securities have the same general characteristics as non-convertible debt securities, which provide a stable stream of income with generally higher yields than those of equity securities of the same or similar issuers. As with all debt securities, the market value of convertible securities tends to decline as interest rates increase and, conversely, to increase as interest rates decline. While convertible securities generally offer lower interest or dividend yields than non-convertible debt securities of similar quality, they do enable the investor to benefit from increases in the market price of the underlying common stock.

When the market price of the common stock underlying a convertible security increases, the price of the convertible security increasingly reflects the value of the underlying common stock and may rise accordingly. As the market price of the underlying common stock declines, the convertible security tends to trade increasingly on a yield basis, and thus may not

depreciate to the same extent as the underlying common stock. Convertible securities rank senior to common stocks in an issuer's capital structure. They are consequently of higher quality and entail less risk than the issuer's common stock, although the extent to which such risk is reduced depends in large measure upon the degree to which the convertible security sells above its value as a fixed-income security.

Depository Receipts

A Portfolio may invest in depository receipts. American Depository Receipts ("ADRs") are depository receipts typically issued by a U.S. bank or trust company that evidence ownership of underlying securities issued by a foreign corporation. European Depository Receipts ("EDRs"), Global Depository Receipts ("GDRs") or other types of depository receipts are typically issued by non-U.S. banks or trust companies and evidence ownership of underlying securities issued by either a U.S. or non-U.S. company. Transactions in these securities may not necessarily be settled in the same currency as transactions in the securities into which they represent. In addition, the issuers of the securities of unsponsored depository receipts are not obligated to disclose material information in the United States. Generally, ADRs, in registered form, are designed for use in the U.S. securities markets; EDRs, in bearer form, are designed for use in European securities markets; and GDRs, in bearer form, are designed for use in two or more securities markets, such as those of Europe and Asia.

Derivatives

A Portfolio may, but is not required to, use derivatives for hedging or other risk management purposes or as part of its investment practices. Derivatives are financial contracts whose value depends on, or is derived from, the value of an underlying asset, reference rate or index. These assets, rates, and indices may include bonds, stocks, mortgages, commodities, interest rates, currency exchange rates, bond indices and stock indices.

There are four principal types of derivatives: options, futures, forwards and swaps. These principal types of derivative instruments, as well as the methods in which they may be used by a Portfolio are described below. Derivatives include listed and cleared transactions where the Portfolio's derivative trade counterparty is an exchange or clearinghouse and non-cleared bilateral "over-the-counter" ("OTC") transactions, where the Portfolio's derivative trade counterparty is a financial institution. Exchange-traded or cleared derivatives transactions tend to be more liquid and subject to less counterparty credit risk than those that are privately negotiated. The Portfolios may use derivatives to earn income and enhance returns, to hedge or adjust the risk profile of a portfolio and either to replace more traditional direct investments or to obtain exposure to otherwise inaccessible markets.

Forward Contracts. A forward contract, which may be standardized and exchange-traded or customized and privately negotiated, is an agreement for one party to buy, and the other party to sell, a specific quantity of an underlying commodity or other tangible asset for an agreed-upon price at a future date. A forward contract generally is settled by physical delivery of the commodity or other tangible asset underlying the forward contract to an agreed-upon location at a future date (rather than settled by cash) or will be rolled forward into a new forward contract. Non-deliverable forwards ("NDFs") specify a cash payment upon maturity.

Futures Contracts and Options on Futures Contracts. A futures contract is an agreement that obligates the buyer to buy and the seller to sell a specified quantity of an underlying asset (or settle for cash the value of a contract based on an underlying asset, rate or index) at a specific price on the contract maturity date. Options on futures contracts are options that call for the delivery of futures contracts upon exercise. Futures contracts are standardized, exchange-traded instruments and are fungible (*i.e.*, considered to be perfect substitutes for each other). This fungibility allows futures contracts to be readily offset or canceled through the acquisition of equal but opposite positions, which is the primary method in which futures contracts are liquidated. A cash-settled futures contract does not require physical delivery of the underlying asset but instead is settled for cash equal to the difference between the values of the contract on the date it is entered into and its maturity date.

Options. An option, which may be standardized and exchange-traded, or customized and privately negotiated, is an agreement that, for a premium payment or fee, gives the option holder (the buyer) the right but not the obligation to buy (a “call”) or sell (a “put”) the underlying asset (or settle for cash an amount based on an underlying asset, rate or index) at a specified price (the exercise price) during a period of time or on a specified date. Likewise, when an option is exercised the writer of the option is obligated to sell (in the case of a call option) or to purchase (in the case of a put option) the underlying asset (or settle for cash an amount based on an underlying asset, rate or index).

Swaps. A swap is an agreement that obligates two parties to exchange a series of cash flows at specified intervals (payment dates) based upon or calculated by reference to changes in specified prices or rates (*e.g.*, interest rates in the case of interest rate swaps, currency exchange rates in the case of currency swaps) for a specified amount of an underlying asset (the “notional” principal amount). Swaps are entered into on a net basis (*i.e.*, the two payment streams are netted out, with a Portfolio receiving or paying, as the case may be, only the net amount of the two payments). Generally, the notional principal amount is used solely to calculate the payment streams but is not exchanged. Certain standardized swaps, including certain interest rate swaps and credit default swaps, are (or soon will be) subject to mandatory central clearing. Cleared swaps are transacted through futures commission merchants (“FCMs”) that are members of central clearinghouses with the clearinghouse serving as central counterparty, similar to transactions in futures contracts. Funds post initial and variation margin to support their obligations under cleared swaps by making payments to their clearing member FCMs. Central clearing is expected to reduce counterparty credit risks and increase liquidity, but central clearing does not make swap transactions risk free. Centralized clearing will be required for additional categories of swaps on a phased-in basis based on Commodity Futures Trading Commission (“CFTC”) approval of contracts for central clearing. Bilateral swap agreements are two-party contracts entered into primarily by institutional investors and are not cleared through a third party.

Risks of Derivatives and other Regulatory Issues. Investment techniques employing such derivatives involve risks different from, and, in certain cases, greater than, the risks presented by more traditional investments. Following is a general discussion of important risk factors and issues concerning the use of derivatives.

— **Market Risk.** This is the general risk attendant to all investments that the value of a particular investment will change in a way detrimental to a Portfolio's interest.

— **Management Risk.** Derivative products are highly specialized instruments that require investment techniques and risk analyses different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but also of the derivative itself, without the benefit of observing the performance of the derivative under all possible market conditions. In particular, the use and complexity of derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to a Portfolio's investment portfolio, and the ability to forecast price, interest rate or currency exchange rate movements correctly.

— **Credit Risk.** This is the risk that a loss may be sustained by a Portfolio as a result of the failure of another party to a derivative (usually referred to as a "counterparty") to comply with the terms of the derivative contract. The credit risk for derivatives traded on an exchange or through a clearinghouse is generally less than for uncleared OTC derivatives, since the exchange or clearinghouse, which is the issuer or counterparty to each derivative, provides a guarantee of performance. This guarantee is supported by a daily payment system (*i.e.*, margin requirements) operated by the clearinghouse in order to reduce overall credit risk. For uncleared OTC derivatives, there is no similar clearing agency guarantee. Therefore, a Portfolio considers the creditworthiness of each counterparty to an uncleared OTC derivative in evaluating potential credit risk.

— **Counterparty Risk.** The value of an OTC derivative will depend on the ability and willingness of a Portfolio's counterparty to perform its obligations under the transaction. If the counterparty defaults, a Portfolio will have contractual remedies but may choose not to enforce them to avoid the cost and unpredictability of legal proceedings. In addition, if a counterparty fails to meet its contractual obligations, a Portfolio could miss investment opportunities or otherwise be required to retain investments it would prefer to sell, resulting in losses for the Portfolio. Participants in OTC derivatives markets generally are not subject to the same level of credit evaluation and regulatory oversight as are exchanges or clearinghouses. As a result, OTC derivatives generally expose a Portfolio to greater counterparty risk than derivatives traded on an exchange or through a clearinghouse.

New regulations affecting derivatives transactions now, or will soon, require certain standardized derivatives, including many types of swaps, to be subject to mandatory central clearing. Under these new requirements, a central clearing organization will be substituted as the counterparty to each side of the derivatives transaction. Each party to derivatives transactions will be required to maintain its positions with a clearing organization through one or more clearing brokers. Central clearing is expected to reduce, but not eliminate, counterparty risk. A

Portfolio will be subject to the risk that its clearing member or clearing organization will itself be unable to perform its obligations.

— **Liquidity Risk.** Liquidity risk exists when a particular instrument is difficult to purchase or sell. If a derivative transaction is particularly large or if the relevant market is illiquid (as is the case with many privately-negotiated derivatives), it may not be possible to initiate a transaction or liquidate a position at an advantageous price.

— **Leverage Risk.** Since many derivatives have a leverage component, adverse changes in the value or level of the underlying asset, rate or index can result in a loss substantially greater than the amount invested in the derivative itself. In the case of swaps, the risk of loss generally is related to a notional principal amount, even if the parties have not made any initial investment. Certain derivatives have the potential for unlimited loss, regardless of the size of the initial investment.

— **Regulatory Risk.** The U.S. Government is in the process of adopting and implementing additional regulations governing derivatives markets, including clearing as discussed above, margin, reporting and registration requirements. While the full extent and cost of these regulations is currently unclear, these regulations could, among other things, restrict a Portfolio's ability to engage in derivatives transactions and/or increase the cost of such derivatives transactions (through increased margin or capital requirements). In addition, Congress, various exchanges and regulatory and self-regulatory authorities have undertaken reviews of options and futures trading in light of market volatility. Among the actions that have been taken or proposed to be taken are new limits and reporting requirements for speculative positions, new or more stringent daily price fluctuation limits for futures and options transactions, and increased margin requirements for various types of futures transactions. These regulations and actions may adversely affect the instruments in which a Portfolio invests and its ability to execute its investment strategy.

— **Other Risks.** Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices. Many derivatives, in particular privately-negotiated derivatives, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to a Portfolio. Derivatives do not always perfectly or even highly correlate or track the value of the assets, rates or indices they are designed to closely track. Consequently, a Portfolio's use of derivatives may not always be an effective means of, and sometimes could be counterproductive to, furthering the Portfolio's investment objective.

Other. A Portfolio may purchase and sell derivative instruments only to the extent that such activities are consistent with the requirements of the Commodity Exchange Act ("CEA") and the rules adopted by the CFTC thereunder. Under CFTC rules, a registered

investment company that conducts more than a minimal amount of trading in futures, commodity options, swaps and other commodity interests is a commodity pool and its adviser must register as a commodity pool operator, or CPO. Under such rules, registered investment companies are subject to additional disclosure and reporting requirements. AllianceBernstein L.P., the Portfolios' adviser (the "Adviser") and the Portfolios, except for the Dynamic Asset Allocation Portfolio, have claimed an exclusion from the definition of CPO under CFTC Rule 4.5 and are not currently subject to these registration, disclosure and reporting requirements. The trading exemption in Rule 4.5 is not available to the Dynamic Asset Allocation Portfolio, and the Adviser has registered as a CPO with respect to this Portfolio. This registration subjects the Dynamic Asset Allocation Portfolio to certain registration and reporting requirements but, under rules recently adopted by the CFTC, compliance with Securities and Exchange Commission ("SEC") disclosure and filing requirements will, for the most part, constitute compliance with comparable CFTC requirements.

Use of Options, Futures, Forwards and Swaps by the Portfolios

– **Forward Currency Exchange Contracts.** A forward currency exchange contract is an obligation by one party to buy, and the other party to sell, a specific amount of a currency for an agreed-upon price at a future date. Forward currency exchange contracts are customized, privately-negotiated agreements designed to satisfy the objectives of each party. A forward currency exchange contract may result in the delivery of the underlying asset upon maturity of the contract in return for the agreed-upon payment. NDFs specify a cash payment upon maturity. NDFs are normally used when the market for physical settlement of the currency is underdeveloped, heavily regulated or highly taxed.

A Portfolio may, for example, enter into forward currency exchange contracts to attempt to minimize the risk to the Portfolio from adverse changes in the relationship between the U.S. Dollar and other currencies. A Portfolio may purchase or sell forward currency exchange contracts for hedging purposes similar to those described below in connection with its transactions in foreign currency futures contracts. A Portfolio may also purchase or sell forward currency exchange contracts for non-hedging purposes as a means of making direct investments in foreign currencies, as described below under "Currency Transactions".

If a hedging transaction in forward currency exchange contracts is successful, the decline in the value of portfolio securities or the increase in the cost of securities to be acquired may be offset, at least in part, by profits on the forward currency exchange contract. Nevertheless, by entering into such forward currency exchange contracts, a Portfolio may be required to forgo all or a portion of the benefits which otherwise could have been obtained from favorable movements in exchange rates.

A Portfolio may also use forward currency exchange contracts to seek to increase total return when the Adviser anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by the Portfolio and do not present attractive investment opportunities. For example, a Portfolio may enter into a foreign currency exchange contract to purchase a currency if the Adviser expects the currency to increase in value. The Portfolio would recognize a gain if the market value of the currency is more than the contract value of the currency at the time of settlement of the contract. Similarly, a Portfolio

may enter into a foreign currency exchange contract to sell a currency if the Adviser expects the currency to decrease in value. The Portfolio would recognize a gain if the market value of the currency is less than the contract value of the currency at the time of settlement of the contract.

The cost of engaging in forward currency exchange contracts varies with such factors as the currencies involved, the length of the contract period and the market conditions then prevailing. Since transactions in foreign currencies are usually conducted on a principal basis, no fees or commissions are involved.

– **Options on Securities.** A Portfolio may write and purchase call and put options on securities. In purchasing an option on securities, the Portfolio would be in a position to realize a gain if, during the option period, the price of the underlying securities increased (in the case of a call) or decreased (in the case of a put) by an amount in excess of the premium paid; otherwise the Portfolio would experience a loss not greater than the premium paid for the option. Thus, a Portfolio would realize a loss if the price of the underlying security declined or remained the same (in the case of a call) or increased or remained the same (in the case of a put) or otherwise did not increase (in the case of a put) or decrease (in the case of a call) by more than the amount of the premium. If a put or call option purchased by a Portfolio were permitted to expire without being sold or exercised, its premium would represent a loss to the Portfolio.

A Portfolio may write a put or call option in return for a premium, which is retained by the Portfolio whether or not the option is exercised. A Portfolio may write covered options or uncovered options. A call option written by a Portfolio is “covered” if the Portfolio owns the underlying security, has an absolute and immediate right to acquire that security upon conversion or exchange of another security it holds, or holds a call option on the underlying security with an exercise price equal to or less than of the call option it has written. A put option written by a Portfolio is covered if the Portfolio holds a put option on the underlying securities with an exercise price equal to or greater than the put option it has written. Uncovered options or “naked options” are riskier than covered options. For example, if a Portfolio wrote a naked call option and the price of the underlying security increased, the Portfolio would have to purchase the underlying security for delivery to the call buyer and sustain a loss, which could be substantial, equal to the difference between the option price and the market price of the security.

A Portfolio may also purchase call options to hedge against an increase in the price of securities that the Portfolio anticipates purchasing in the future. If such increase occurs, the call option will permit the Portfolio to purchase the securities at the exercise price, or to close out the option at a profit. The premium paid for the call option plus any transaction costs will reduce the benefit, if any, realized by the Portfolio upon exercise of the option, and, unless the price of the underlying security rises sufficiently, the option may expire worthless to the Portfolio and the Portfolio will suffer a loss on the transaction to the extent of the premium paid.

A Portfolio may purchase put options to hedge against a decline in the value of portfolio securities. If such decline occurs, the put options will permit the Portfolio to sell the securities at the exercise price or to close out the options at a profit. By using put options in this way, a Portfolio will reduce any profit it might otherwise have realized on the underlying security by the amount of the premium paid for the put option and by transaction costs.

A Portfolio also may, as an example, write combinations of put and call options on the same security, known as “straddles”, with the same exercise and expiration date. By writing a straddle, a Portfolio undertakes a simultaneous obligation to sell and purchase the same security in the event that one of the options is exercised. If the price of the security subsequently rises above the exercise price, the call will likely be exercised and a Portfolio will be required to sell the underlying security at or below market price. This loss may be offset, however, in whole or in part, by the premiums received on the writing of the two options. Conversely, if the price of the security declines by a sufficient amount, the put will likely be exercised. The writing of straddles will likely be effective, therefore, only where the price of the security remains relatively stable and neither the call nor the put is exercised. In those instances where one of the options is exercised, the loss on the purchase or sale of the underlying security may exceed the amount of the premiums received.

A Portfolio may purchase or write options on securities of the types in which it is permitted to invest in privately-negotiated (*i.e.*, over-the-counter) transactions. By writing a call option, a Portfolio limits its opportunity to profit from any increase in the market value of the underlying security above the exercise price of the option. By writing a put option, a Portfolio assumes the risk that it may be required to purchase the underlying security for an exercise price above its then current market value, resulting in a capital loss unless the security subsequently appreciates in value. Where options are written for hedging purposes, such transactions constitute only a partial hedge against declines in the value of portfolio securities or against increases in the value of securities to be acquired, up to the amount of the premium.

A Portfolio will effect such transactions only with investment dealers and other financial institutions (such as commercial banks or savings and loan institutions) deemed creditworthy by the Adviser, and the Adviser has adopted procedures for monitoring the creditworthiness of such entities. Options purchased or written in negotiated transactions may be illiquid and it may not be possible for the Portfolios to effect a closing transaction at a time when the Adviser believes it would be advantageous to do so.

– **Options on Securities Indices.** An option on a securities index is similar to an option on a security except that, rather than taking or making delivery of a security at a specified price, an option on a securities index gives the holder the right to receive, upon exercise of the option, an amount of cash if the closing level of the chosen index is greater than (in the case of a call) or less than (in the case of a put) the exercise price of the option.

A Portfolio may write (sell) call and put options and purchase call and put options on securities indices. If a Portfolio purchases put options on securities indices to hedge its investments against a decline in the value of portfolio securities it will seek to offset a decline in the value of securities it owns through appreciation of the put option. If the value of a Portfolio’s investments does not decline as anticipated, or if the value of the option does not increase, the Portfolio’s loss will be limited to the premium paid for the option. The success of this strategy will largely depend on the accuracy of the correlation between the changes in value of the index and the changes in value of a Portfolio’s security holdings.

A Portfolio may also write put or call options on securities indices to, among other things, earn income. If the value of the chosen index declines below the exercise price of

the put option, the Portfolio has the risk of loss of the amount of the difference between the exercise price and the closing level of the chosen index, which it would be required to pay to the buyer of the put option and which may not be offset by the premium it received upon sale of the put option. Similarly, if the value of the index is higher than the exercise price of the call option, the Portfolio has the risk of loss of the amount of the difference between the exercise price and the closing level of the chosen index, which may not be offset by the premium it received upon sale of the call option. If the decline or increase in the value securities index is significantly below or above the exercise price of the written option, the Portfolio could experience a substantial loss.

The purchase of call options on securities indices may be used by a Portfolio to attempt to reduce the risk of missing a broad market advance, or an advance in an industry or market segment, at a time when the Portfolio holds uninvested cash or short-term debt securities awaiting investment. When purchasing call options for this purpose, a Portfolio will also bear the risk of losing all or a portion of the premium paid if the value of the index does not rise. The purchase of call options on stock indices when a Portfolio is substantially fully invested is a form of leverage, up to the amount of the premium and related transaction costs, and involves risks of loss and of increased volatility similar to those involved in purchasing call options on securities the Portfolio owns.

– **Other Option Strategies.** In an effort to earn extra income, to adjust exposure to individual securities or markets, or to protect all or a portion of its portfolio from a decline in value, sometimes within certain ranges, a Portfolio that invests in equity securities may use option strategies such as the concurrent purchase of a call or put option, including on individual securities and stock indices, futures contracts (including on individual securities and stock indices) or shares of exchange-traded funds (“ETFs”) at one strike price and the writing of a call or put option on the same individual security, stock index, futures contract or ETF at a higher strike price in the case of a call option or at a lower strike price in the case of a put option. The maximum profit from this strategy would result for the call options from an increase in the value of the individual security, stock index, futures contract or ETF above the higher strike price or for the put options the decline in the value of the individual security, stock index, futures contract or ETF below the lower strike price. If the price of the individual security, stock index, futures contract or ETF declines in the case of the call option or increases in the case of the put option, the Portfolio has the risk of losing the entire amount paid for the call or put options.

– **Options on Foreign Currencies.** A Portfolio may purchase and write options on foreign currencies for hedging and non-hedging purposes. For example, a decline in the dollar value of a foreign currency in which portfolio securities are denominated will reduce the dollar value of such securities, even if their value in the foreign currency remains constant. In order to protect against such diminutions in the value of portfolio securities, a Portfolio may purchase put options on the foreign currency. If the value of the currency does decline, the Portfolio will have the right to sell such currency for a fixed amount in dollars and could thereby offset, in whole or in part, the adverse effect on its portfolio which otherwise would have resulted.

Conversely, where a rise in the dollar value of a currency in which securities to be acquired are denominated is projected, thereby increasing the cost of such securities, a Portfolio

may purchase call options thereon. The purchase of such options could offset, at least partially, the effects of the adverse movements in exchange rates. As in the case of other types of options, however, the benefit to a Portfolio from purchases of foreign currency options will be reduced by the amount of the premium and related transaction costs. In addition, where currency exchange rates do not move in the direction or to the extent anticipated, a Portfolio could sustain losses on transactions in foreign currency options which would require it to forgo a portion or all of the benefits of advantageous changes in such rates.

A Portfolio may write options on foreign currencies for hedging purposes or to increase return. For example, where a Portfolio anticipates a decline in the dollar value of non-U.S. Dollar-denominated securities due to adverse fluctuations in exchange rates it could, instead of purchasing a put option, write a call option on the relevant currency. If the expected decline occurs, the option will most likely not be exercised, and the diminution in value of portfolio securities could be offset by the amount of the premium received.

Similarly, instead of purchasing a call option to hedge against an anticipated increase in the dollar cost of securities to be acquired, a Portfolio could write a put option on the relevant currency, which, if rates move in the manner projected, will expire unexercised and allow the Portfolio to hedge such increased cost up to the amount of the premium. As in the case of other types of options, however, the writing of a foreign currency option will constitute only a partial hedge up to the amount of the premium, and only if rates move in the expected direction. If this does not occur, the option may be exercised and a Portfolio will be required to purchase or sell the underlying currency at a loss which may not be offset by the amount of the premium. Through the writing of options on foreign currencies, a Portfolio also may be required to forgo all or a portion of the benefits which might otherwise have been obtained from favorable movements in exchange rates.

In addition to using options for the hedging purposes described above, a Portfolio may also invest in options on foreign currencies for non-hedging purposes as a means of making direct investments in foreign currencies. A Portfolio may use options on currency to seek to increase total return when the Adviser anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by the Portfolio and do not present attractive investment opportunities. For example, a Portfolio may purchase call options in anticipation of an increase in the market value of a currency. The Portfolio would ordinarily realize a gain if, during the option period, the value of such currency exceeded the sum of the exercise price, the premium paid and transaction costs. Otherwise, the Portfolio would realize no gain or a loss on the purchase of the call option. Put options may be purchased by a Portfolio for the purpose of benefiting from a decline in the value of a currency that the Portfolio does not own. The Portfolio would normally realize a gain if, during the option period, the value of the underlying currency decreased below the exercise price sufficiently to more than cover the premium and transaction costs. Otherwise, the Portfolio would realize no gain or loss on the purchase of the put option. For additional information on the use of options on foreign currencies for non-hedging purposes, see “Currency Transactions” below.

Special Risks Associated with Options on Currencies. An exchange-traded options position may be closed out only on an options exchange that provides a secondary market for an option of the same series. Although a Portfolio will generally purchase or sell

options for which there appears to be an active secondary market, there is no assurance that a liquid secondary market on an exchange will exist for any particular option, or at any particular time. For some options, no secondary market on an exchange may exist. In such event, it might not be possible to effect closing transactions in particular options, with the result that a Portfolio would have to exercise its options in order to realize any profit and would incur transaction costs on the purchase or sale of the underlying currency.

– **Futures Contracts and Options on Futures Contracts.** Futures contracts that a Portfolio may buy and sell may include futures contracts on fixed-income or other securities, and contracts based on interest rates, foreign currencies or financial indices, including any index of U.S. Government securities. A Portfolio may, for example, purchase or sell futures contracts and options thereon to hedge against changes in interest rates, securities (through index futures or options) or currencies.

Interest rate futures contracts are purchased or sold for hedging purposes to attempt to protect against the effects of interest rate changes on a Portfolio's current or intended investments in fixed-income securities. For example, if a Portfolio owned long-term bonds and interest rates were expected to increase, that Portfolio might sell interest rate futures contracts. Such a sale would have much the same effect as selling some of the long-term bonds in that Portfolio's portfolio. However, since the futures market is more liquid than the cash market, the use of interest rate futures contracts as a hedging technique allows a Portfolio to hedge its interest rate risk without having to sell its portfolio securities. If interest rates were to increase, the value of the debt securities in the portfolio would decline, but the value of that Portfolio's interest rate futures contracts would be expected to increase at approximately the same rate, thereby keeping the net asset value ("NAV") of that Portfolio from declining as much as it otherwise would have. On the other hand, if interest rates were expected to decline, interest rate futures contracts could be purchased to hedge in anticipation of subsequent purchases of long-term bonds at higher prices. Because the fluctuations in the value of the interest rate futures contracts should be similar to those of long-term bonds, a Portfolio could protect itself against the effects of the anticipated rise in the value of long-term bonds without actually buying them until the necessary cash becomes available or the market has stabilized. At that time, the interest rate futures contracts could be liquidated and that Portfolio's cash reserves could then be used to buy long-term bonds on the cash market.

A Portfolio may purchase and sell foreign currency futures contracts for hedging or risk management purposes in order to protect against fluctuations in currency exchange rates. Such fluctuations could reduce the dollar value of portfolio securities denominated in foreign currencies, or increase the cost of non-U.S. Dollar-denominated securities to be acquired, even if the value of such securities in the currencies in which they are denominated remains constant. A Portfolio may sell futures contracts on a foreign currency, for example, when it holds securities denominated in such currency and it anticipates a decline in the value of such currency relative to the dollar. If such a decline were to occur, the resulting adverse effect on the value of non-U.S. Dollar-denominated securities may be offset, in whole or in part, by gains on the futures contracts. However, if the value of the foreign currency increases relative to the dollar, a Portfolio's loss on the foreign currency futures contract may or may not be offset by an increase in the value of the securities because a decline in the price of the security stated in terms of the

foreign currency may be greater than the increase in value as a result of the change in exchange rates.

Conversely, a Portfolio could protect against a rise in the dollar cost of non-U.S. Dollar-denominated securities to be acquired by purchasing futures contracts on the relevant currency, which could offset, in whole or in part, the increased cost of such securities resulting from a rise in the dollar value of the underlying currencies. When a Portfolio purchases futures contracts under such circumstances, however, and the price in dollars of securities to be acquired instead declines as a result of appreciation of the dollar, the Portfolio will sustain losses on its futures position which could reduce or eliminate the benefits of the reduced cost of portfolio securities to be acquired.

A Portfolio may also engage in currency “cross hedging” when, in the opinion of the Adviser, the historical relationship among foreign currencies suggests that a Portfolio may achieve protection against fluctuations in currency exchange rates similar to that described above at a reduced cost through the use of a futures contract relating to a currency other than the U.S. Dollar or the currency in which the foreign security is denominated. Such “cross hedging” is subject to the same risks as those described above with respect to an unanticipated increase or decline in the value of the subject currency relative to the U.S. Dollar.

A Portfolio may also use foreign currency futures contracts and options on such contracts for non-hedging purposes. Similar to options on currencies described above, a Portfolio may use foreign currency futures contracts and options on such contracts to seek to increase total return when the Adviser anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by the Underlying Portfolio and do not present attractive investment opportunities. The risks associated with foreign currency futures contracts and options on futures are similar to those associated with options on foreign currencies, as described above. For additional information on the use of options on foreign currencies for non-hedging purposes, see “Currency Transactions” below.

Purchases or sales of stock or bond index futures contracts may be used for hedging purposes to attempt to protect a Portfolio’s current or intended investments from broad fluctuations in stock or bond prices. For example, a Portfolio may sell stock or bond index futures contracts in anticipation of or during a market decline to attempt to offset the decrease in market value of the Portfolio’s portfolio securities that might otherwise result. If such decline occurs, the loss in value of portfolio securities may be offset, in whole or in part, by gains on the futures position. When a Portfolio is not fully invested in the securities market and anticipates a significant market advance, it may purchase stock or bond index futures contracts in order to gain rapid market exposure that may, in whole or in part, offset increases in the cost of securities that the Portfolio intends to purchase. As such purchases are made, the corresponding positions in stock or bond index futures contracts will be closed out.

Options on futures contracts are options that call for the delivery of futures contracts upon exercise. Options on futures contracts written or purchased by a Portfolio will be traded on U.S. exchanges.

The writing of a call option on a futures contract constitutes a partial hedge against declining prices of the securities in a Portfolio's portfolio. If the futures price at expiration of the option is below the exercise price, a Portfolio will retain the full amount of the option premium, which provides a partial hedge against any decline that may have occurred in the Portfolio's portfolio holdings. The writing of a put option on a futures contract constitutes a partial hedge against increasing prices of the securities or other instruments required to be delivered under the terms of the futures contract. If the futures price at expiration of the put option is higher than the exercise price, a Portfolio will retain the full amount of the option premium, which provides a partial hedge against any increase in the price of securities which the Portfolio intends to purchase. If a put or call option a Portfolio has written is exercised, the Portfolio will incur a loss which will be reduced by the amount of the premium it receives. Depending on the degree of correlation between changes in the value of its portfolio securities and changes in the value of its options on futures positions, a Portfolio's losses from exercised options on futures may to some extent be reduced or increased by changes in the value of portfolio securities.

A Portfolio may purchase options on futures contracts for hedging purposes instead of purchasing or selling the underlying futures contracts. For example, where a decrease in the value of portfolio securities is anticipated as a result of a projected market-wide decline or changes in interest or exchange rates, a Portfolio could, in lieu of selling futures contracts, purchase put options thereon. In the event that such decrease was to occur, it may be offset, in whole or in part, by a profit on the option. If the anticipated market decline were not to occur, the Portfolio would suffer a loss equal to the price of the put. Where it is projected that the value of securities to be acquired by a Portfolio will increase prior to acquisition due to a market advance or changes in interest or exchange rates, a Portfolio could purchase call options on futures contracts, rather than purchasing the underlying futures contracts. If the market advances, the increased cost of securities to be purchased may be offset by a profit on the call. However, if the market declines, the Portfolio will suffer a loss equal to the price of the call, but the securities that the Portfolio intends to purchase may be less expensive.

– **Credit Default Swap Agreements.** The “buyer” in a credit default swap contract is obligated to pay the “seller” a periodic stream of payments over the term of the contract in return for a contingent payment upon the occurrence of a credit event with respect to an underlying reference obligation. Generally, a credit event means bankruptcy, failure to pay, obligation acceleration or restructuring. A Portfolio may be either the buyer or seller in the transaction. As a seller, a Portfolio receives a fixed rate of income throughout the term of the contract, which typically is between one month and ten years, provided that no credit event occurs. If a credit event occurs, a Portfolio typically must pay the contingent payment to the buyer. The contingent payment will be either (i) the “par value” (face amount) of the reference obligation in which case the Portfolio will receive the reference obligation in return, or (ii) an amount equal to the difference between the par value and the current market value of the obligation. The value of the reference obligation received by a Portfolio as a seller if a credit event occurs, coupled with the periodic payments previously received, may be less than the full notional value it pays to the buyer, resulting in a loss of value to the Fund. If a Portfolio is a buyer and no credit event occurs, the Portfolio will lose its periodic stream of payments over the term of the contract. However, if a credit event occurs, the buyer typically receives full notional value for a reference obligation that may have little or no value.

Credit default swaps may involve greater risks than if a Portfolio had invested in the reference obligation directly. Credit default swaps are subject to general market risk, liquidity risk and credit risk.

– **Currency Swaps.** A Portfolio may enter into currency swaps for hedging purposes in an attempt to protect against adverse changes in exchange rates between the U.S. Dollar and other currencies or for non-hedging purposes as a means of making direct investments in foreign currencies, as described below under “Currency Transactions”. Currency swaps involve the exchange by a Portfolio with another party of a series of payments in specified currencies. Currency swaps may involve the exchange of actual principal amounts of currencies by the counterparties at the initiation, and again upon termination of the transaction. Currency swaps may be bilateral and privately negotiated, with the Portfolio expecting to achieve an acceptable degree of correlation between its portfolio investments and its currency swaps positions. A Portfolio will not enter into any currency swap unless the credit quality of the unsecured senior debt or the claims-paying ability of the counterparty thereto is rated in the highest short-term rating category of at least one nationally recognized statistical rating organization (“NRSRO”) at the time of entering into the transaction.

– **Swaps: Interest Rate Transactions.** A Portfolio may enter into interest rate swap, swaption and cap or floor transactions, which may include preserving a return or spread on a particular investment or portion of its portfolio or protecting against an increase in the price of securities the Portfolio anticipates purchasing at a later date. Unless there is a counterparty default, the risk of loss to a Portfolio from interest rate transactions is limited to the net amount of interest payments that the Portfolio is contractually obligated to make. If the counterparty to an interest rate transaction defaults, the Portfolio’s risk of loss consists of the net amount of interest payments that the Portfolio is contractually entitled to receive.

Interest rate swaps involve the exchange by a Portfolio with another party of payments calculated by reference to specified interest rates (*e.g.*, an exchange of floating-rate payments for fixed-rate payments) computed based on a contractually-based principal (or “notional”) amount.

An option on a swap agreement, also called a “swaption”, is an option that gives the buyer the right, but not the obligation, to enter into a swap on a future date in exchange for paying a market-based “premium”. A receiver swaption gives the owner the right to receive the total return of a specified asset, reference rate, or index. A payer swaption gives the owner the right to pay the total return of a specified asset, reference rate, or index. Swaptions also include options that allow an existing swap to be terminated or extended by one of the counterparties.

Interest rate caps and floors are similar to options in that the purchase of an interest rate cap or floor entitles the purchaser, to the extent that a specified index exceeds (in the case of a cap) or falls below (in the case of a floor) a predetermined interest rate, to receive payments of interest on a notional amount from the party selling the interest rate cap or floor.

Caps and floors are less liquid than swaps. These transactions do not involve the delivery of securities or other underlying assets or principal. A Portfolio will enter into bilateral swap agreements, including interest rate swap, swaption, cap or floor transactions only with

counterparties who have credit ratings of at least A- (or the equivalent) from any one NRSRO or counterparties with guarantors with debt securities having such a rating. For cleared interest rate swaps, the Adviser will monitor the creditworthiness of each of the central clearing counterparty, clearing broker and executing broker but there will be no prescribed NRSRO rating requirements for these entities.

—**Total Return Swaps.** A Portfolio may enter into total return swaps in order to take a “long” or “short” position with respect to an underlying referenced asset. The Portfolio is subject to market price volatility of the referenced asset. A total return swap involves commitments to pay interest in exchange for a market-linked return based on a notional amount. To the extent that the total return of the security, group of securities or index underlying the transaction exceeds or falls short of the offsetting interest obligation, the Portfolio will receive a payment or make a payment to the counterparty.

--*Special Risks Associated with Swaps.* Risks may arise as a result of the failure of the counterparty to a bilateral swap contract to comply with the terms of the swap contract. The loss incurred by the failure of a counterparty is generally limited to the net interim payment to be received by a Portfolio, and/or the termination value at the end of the contract. Therefore, the Portfolio considers the creditworthiness of the counterparty to a bilateral swap contract. The risk is mitigated by having a netting arrangement between the Portfolio and the counterparty and by the posting of collateral by the counterparty to the Portfolio to cover the Portfolio’s exposure to the counterparty. Certain standardized swaps, including interest rate swaps and credit default swaps, are, or soon will be subject to mandatory central clearing. Central clearing is expected, among other things, to reduce counterparty credit risk, but does not eliminate it completely.

Additionally, risks may arise from unanticipated movements in interest rates or in the value of the underlying securities. The Portfolio accrues for the changes in value on swap contracts on a daily basis, with the net amount recorded within unrealized appreciation/depreciation of swap contracts on the statement of assets and liabilities. Once the interim payments are settled in cash, the net amount is recorded as realized gain/(loss) on swaps on the statement of operations, in addition to any realized gain/(loss) recorded upon the termination of swap contracts. Fluctuations in the value of swap contracts are recorded as a component of net change in unrealized appreciation/depreciation of swap contracts on the statement of operations.

– **Synthetic Foreign Equity Securities.** A Portfolio may invest in different types of derivatives generally referred to as synthetic foreign equity securities. These securities may include international warrants or local access products. International warrants are financial instruments issued by banks or other financial institutions, which may or may not be traded on a foreign exchange. International warrants are a form of derivative security that may give holders the right to buy or sell an underlying security or a basket of securities representing an index from or to the issuer of the warrant for a particular price or may entitle holders to receive a cash payment relating to the value of the underlying security or index, in each case upon exercise by the Portfolio. Local access products are similar to options in that they are exercisable by the holder for an underlying security or the value of that security, but are generally exercisable over a longer term than typical options. These types of instruments may be American style, which

means that they can be exercised at any time on or before the expiration date, or European style, which means that they may be exercised only on the expiration date.

Other types of synthetic foreign equity securities in which a Portfolio may invest include covered warrants and low exercise price warrants. Covered warrants entitle the holder to purchase from the issuer, typically a financial institution, upon exercise, common stock of an international company or receive a cash payment (generally in U.S. Dollars). The issuer of the covered warrant usually owns the underlying security or has a mechanism, such as owning equity warrants on the underlying securities, through which they can obtain the securities. The cash payment is calculated according to a predetermined formula, which is generally based on the difference between the value of the underlying security on the date of exercise and the strike price. Low exercise price warrants are warrants with an exercise price that is very low relative to the market price of the underlying instrument at the time of issue (*e.g.*, one cent or less). The buyer of a low exercise price warrant effectively pays the full value of the underlying common stock at the outset. In the case of any exercise of warrants, there may be a time delay between the time a holder of warrants gives instructions to exercise and the time the price of the common stock relating to exercise or the settlement date is determined, during which time the price of the underlying security could change significantly. In addition, the exercise or settlement date of the warrants may be affected by certain market disruption events, such as difficulties relating to the exchange of a local currency into U.S. Dollars, the imposition of capital controls by a local jurisdiction or changes in the laws relating to foreign investments. These events could lead to a change in the exercise date or settlement currency of the warrants, or postponement of the settlement date. In some cases, if the market disruption events continue for a certain period of time, the warrants may become worthless resulting in a total loss of the purchase price of the warrants.

A Portfolio's investments in synthetic foreign equity securities will be those issued by entities deemed to be creditworthy by the Adviser, which will monitor the creditworthiness of the issuers on an ongoing basis. Investments in these instruments involve the risk that the issuer of the instrument may default on its obligation to deliver the underlying security or cash in lieu thereof. These instruments may also be subject to liquidity risk because there may be a limited secondary market for trading the warrants. They are also subject, like other investments in securities of foreign issuers, to foreign risk and currency risk.

International warrants also include equity warrants, index warrants, and interest rate warrants. Equity warrants are generally issued in conjunction with an issue of bonds or shares, although they also may be issued as part of a rights issue or scrip issue. When issued with bonds or shares, they usually trade separately from the bonds or shares after issuance. Most warrants trade in the same currency as the underlying stock (domestic warrants), but also may be traded in different currency (euro-warrants). Equity warrants are traded on a number of foreign exchanges and in over-the-counter markets. Index warrants and interest rate warrants are rights created by an issuer, typically a financial institution, entitling the holder to purchase, in the case of a call, or sell, in the case of a put, respectively, an equity index or a specific bond issue or interest rate index at a certain level over a fixed period of time. Index warrants transactions settle in cash, while interest rate warrants can typically be exercised in the underlying instrument or settle in cash.

A Portfolio also may invest in long-term options of, or relating to, international issuers. Long-term options operate much like covered warrants. Like covered warrants, long term-options are call options created by an issuer, typically a financial institution, entitling the holder to purchase from the issuer outstanding securities of another issuer. Long-term options have an initial period of one year or more, but generally have terms between three and five years. Unlike U.S. options, long-term European options do not settle through a clearing corporation that guarantees the performance of the counterparty. Instead, they are traded on an exchange and subject to the exchange's trading regulations.

– **Eurodollar Instruments.** Eurodollar instruments are essentially U.S. Dollar-denominated futures contracts or options thereon that are linked to the London Interbank Offered Rate and are subject to the same limitations and risks as other futures contracts and options.

– **Currency Transactions.** A Portfolio may invest in non-U.S. Dollar-denominated securities on a currency hedged or un-hedged basis. The Adviser may actively manage a Portfolio's currency exposures and may seek investment opportunities by taking long or short positions in currencies through the use of currency-related derivatives, including forward currency exchange contracts, futures and options on futures, swaps and options. The Adviser may enter into transactions for investment opportunities when it anticipates that a foreign currency will appreciate or depreciate in value but securities denominated in that currency are not held by a Portfolio and do not present attractive investment opportunities. Such transactions may also be used when the Adviser believes that it may be more efficient than a direct investment in a foreign currency-denominated security. The Portfolios may also conduct currency exchange contracts on a spot basis (*i.e.*, for cash at the spot rate prevailing in the currency exchange market for buying or selling currencies).

Event-linked Securities

Event-linked securities are variable rate or fixed rate fixed-income securities or types of equity securities for which the return of principal and payment of interest are contingent on the non-occurrence of various catastrophe exposures, which may be specific trigger events or a diversified group of events, such as hurricanes, typhoons, wind events or earthquakes. The most common type of fixed-income securities are known as "catastrophe" or "CAT" bonds. In some cases, the trigger event(s) will not be deemed to have occurred unless the event(s) happened in a particular geographic area and was of a certain magnitude (based on independent scientific readings) or caused a certain amount of actual or modeled loss. If the trigger event(s) occurs prior to the securities' maturity, a Portfolio may lose all or a portion of its principal and forgo additional interest.

These securities may have a special condition that states that if the issuer (*i.e.*, an insurance or reinsurance company) suffers a loss from a particular pre-defined catastrophe, then the issuer's obligation to pay interest and/or repay the principal is either deferred or completely forgiven. For example, if a Portfolio holds a fixed-income security that covers an insurer's losses due to a hurricane with a "trigger" at \$1 billion and a hurricane hits causing \$1 billion or more in losses to such insurer, then the Portfolio will lose all or a portion of its principal invested in the security and forgo any future interest payments. If the trigger event(s) does not occur, the Portfolio will recover its principal plus interest. Interest typically accrues and is paid on a

quarterly basis. Although principal typically is repaid only on the maturity date, it may be repaid in installments, depending on the terms of the securities.

Event-linked securities may be issued by government agencies, insurance companies, reinsurers, special purpose companies or other on-shore or off-shore entities. Event-linked securities are a relatively new type of financial instrument. As a result, there is no significant trading history of these securities and these securities may be illiquid or the markets for these instruments may not be liquid at all times. These securities may be rated, generally below investment grade or the unrated equivalent, and have the same or equivalent risks as higher yield debt securities (“junk bonds”). The rating primarily reflects the rating agency’s calculated probability that a pre-defined trigger event will occur as well as the overall expected loss to the principal of the security.

Forward Commitments and When-Issued and Delayed Delivery Securities

Forward commitments for the purchase or sale of securities may include purchases on a “when-issued” basis or purchases or sales on a “delayed delivery” basis. In some cases, a forward commitment may be conditioned upon the occurrence of a subsequent event, such as approval and consummation of a merger, corporate reorganization or debt restructuring (*i.e.*, a “when, as and if issued” trade). When forward commitment transactions are negotiated, the price is fixed at the time the commitment is made. A Portfolio assumes the rights and risks of ownership of the security, but does not pay for the securities until they are received. If a Portfolio is fully or almost fully invested when forward commitment purchases are outstanding, such purchases may result in a form of leverage. Leveraging the portfolio in this manner may increase the Portfolio’s volatility of returns.

The use of forward commitments enables a Portfolio to protect against anticipated changes in exchange rates, interest rates and/or prices. For instance, a Portfolio may enter into a forward contract when it enters into a contract for the purchase or sale of a security denominated in a foreign currency in order to “lock in” the U.S. Dollar price of the security (“transaction hedge”). In addition, when a Portfolio believes that a foreign currency may suffer a substantial decline against the U.S. Dollar, it may enter into a forward sale contract to sell an amount of that foreign currency approximating the value of some or all of that Portfolio’s securities denominated in such foreign currency, or when a Portfolio believes that the U.S. Dollar may suffer a substantial decline against a foreign currency, it may enter into a forward purchase contract to buy that foreign currency for a fixed dollar amount (“position hedge”). If the Adviser were to forecast incorrectly the direction of exchange rate movements, a Portfolio might be required to complete such when-issued or forward transactions at prices inferior to the then current market values. When-issued securities and forward commitments may be sold prior to the settlement date, but a Portfolio enters into when-issued and forward commitments only with the intention of actually receiving securities or delivering them, as the case may be. If a Portfolio chooses to dispose of the right to acquire a when-issued security prior to its acquisition or dispose of its right to deliver or receive against a forward commitment, it may incur a gain or loss. Any significant commitment of a Portfolio’s assets to the purchase of securities on a “when, as and if issued” basis may increase the volatility of the Portfolio’s NAV.

At the time a Portfolio intends to enter into a forward commitment, it will record the transaction and thereafter reflect the value of the security purchased or, if a sale, the proceeds to be received, in determining its NAV. Any unrealized appreciation or depreciation reflected in such valuation of a “when, as and if issued” security would be canceled in the event that the required conditions did not occur and the trade was canceled.

Purchases of securities on a forward commitment or when-issued basis may involve more risk than other types of purchases. For example, by committing to purchase securities in the future, a Portfolio subjects itself to a risk of loss on such commitments as well as on its portfolio securities. Also, a Portfolio may have to sell assets which have been set aside in order to meet redemptions. In addition, if a Portfolio determines it is advisable as a matter of investment strategy to sell the forward commitment or “when-issued” or “delayed delivery” securities before delivery, that Portfolio may incur a gain or loss because of market fluctuations since the time the commitment to purchase such securities was made. Any such gain or loss would be treated as a capital gain or loss for tax purposes. When the time comes to pay for the securities to be purchased under a forward commitment or on a “when-issued” or “delayed delivery” basis, a Portfolio will meet its obligations from the then available cash flow or the sale of securities, or, although it would not normally expect to do so, from the sale of the forward commitment or “when-issued” or “delayed delivery” securities themselves (which may have a value greater or less than the Portfolio’s payment obligation). No interest or dividends accrue to the purchaser prior to the settlement date for securities purchased or sold under a forward commitment. In addition, in the event the other party to the transaction files for bankruptcy, becomes insolvent, or defaults on its obligation, a Portfolio may be adversely affected.

Illiquid Securities

A Portfolio will not invest in illiquid securities if immediately after such investment, more than 15% or such other amount permitted by guidance regarding the 1940 Act of the Portfolio’s net assets would be invested in such securities. For this purpose, illiquid securities include, among others, (a) direct placements or other securities which are subject to legal or contractual restrictions on resale or for which there is no readily available market (*e.g.*, trading in the security is suspended or, in the case of unlisted securities, market makers do not exist or will not entertain bids or offers), (b) options purchased by a Portfolio OTC and the cover for options written by the Portfolio OTC, and (c) repurchase agreements not terminable within seven days. Securities that have legal or contractual restrictions on resale but have a readily available market are not deemed illiquid for purposes of this limitation.

Mutual funds do not typically hold a significant amount of restricted securities (securities that are subject to restrictions on resale to the general public) or other illiquid securities because of the potential for delays on resale and uncertainty in valuation. Limitations on resale may have an adverse effect on the marketability of portfolio securities and a mutual fund might be unable to dispose of restricted or other illiquid securities promptly or at reasonable prices and might thereby experience difficulty satisfying redemptions within seven days. A mutual fund may also have to take certain steps or wait a certain amount of time in order to remove the transfer restrictions for such restricted securities in order to dispose of them, resulting in additional expense and delay.

Rule 144A under the Securities Act of 1933, as amended (the “Securities Act”) allows a broader institutional trading market for securities otherwise subject to restriction on resale to the general public. Rule 144A establishes a “safe harbor” from the registration requirements of the Securities Act for resales of certain securities to qualified institutional buyers. To the extent permitted by applicable law, Rule 144A Securities will not be treated as illiquid for purposes of the foregoing restriction so long as such securities meet the liquidity guidelines established by the Board. Pursuant to these guidelines, the Adviser will monitor the liquidity of a Portfolio’s investment in Rule 144A Securities. An insufficient number of qualified institutional buyers interested in purchasing certain restricted securities held by a Portfolio, however, could affect adversely the marketability of such portfolio securities and the Portfolio might be unable to dispose of such securities promptly or at reasonable prices.

The Adviser, acting under the oversight of the Board, will monitor the liquidity of restricted securities in the Portfolio that are eligible for resale pursuant to Rule 144A. In reaching liquidity decisions, the Adviser will consider, among others, the following factors: (1) the frequency of trades and quotes for the security; (2) the number of dealers issuing quotations to purchase or sell the security; (3) the number of other potential purchasers of the security; (4) the number of dealers undertaking to make a market in the security; (5) the nature of the security (including its unregistered nature) and the nature of the marketplace for the security (*e.g.*, the time needed to dispose of the security, the method of soliciting offers and the mechanics of the transfer); and (6) any applicable interpretation or position of the SEC with respect to such type of securities.

Investment in Exchange-Traded Funds and Other Investment Companies

The Portfolios may invest in shares of ETFs, subject to the restrictions and limitations of the 1940 Act or any applicable rules, exemptive orders or regulatory guidance. ETFs are pooled investment vehicles, which may be managed or unmanaged, that generally seek to track the performance of a specific index. ETFs will not track their underlying indices precisely since the ETFs have expenses and may need to hold a portion of their assets in cash, unlike the underlying indices, and the ETFs may not invest in all of the securities in the underlying indices in the same proportion as the underlying indices for various reasons. The Portfolios will incur transaction costs when buying and selling ETF shares, and indirectly bear the expenses of the ETFs. In addition, the market value of an ETF’s shares, which is based on supply and demand in the market for the ETF’s shares, may differ from its NAV. Accordingly, there may be times when an ETF’s shares trade at a discount to its NAV.

The Portfolios may also invest in investment companies other than ETFs as permitted by the 1940 Act or the rules and regulations thereunder. As with ETF investments, if the Portfolios acquire shares in other investment companies, shareholders would bear, indirectly, the expenses of such investment companies (which may include management and advisory fees), which are in addition to the Portfolios’ expenses. The Portfolios intend to invest uninvested cash balances in an affiliated money market fund as permitted by Rule 12d1-1 under the 1940 Act.

Loans of Portfolio Securities

A Portfolio may seek to increase income by lending portfolio securities to brokers, dealers, and financial institutions (“borrowers”) to the extent permitted under the 1940 Act or the rules or regulations thereunder (as such statute, rules, or regulations may be amended from time to time) or by guidance regarding, interpretations of, or exemptive orders under, the 1940 Act. Under the securities lending program, all securities loans will be secured continually by cash collateral. A principal risk in lending portfolio securities is that the borrower will fail to return the loaned securities upon termination of the loan and, that the collateral will not be sufficient to replace the loaned securities upon the borrower’s default.

In determining whether to lend securities to a particular borrower, the Adviser (subject to oversight by the Board) will consider all relevant facts and circumstances, including the creditworthiness of the borrower. The loans would be made only to firms deemed by the Adviser to be creditworthy and when, in the judgment of the Adviser, the consideration that can be earned currently from securities loans of this type justifies the attendant risk. A Portfolio will be compensated for the loan from a portion of the net return from the interest earned on the cash collateral after a rebate paid to the borrower (which may be a negative amount – *i.e.*, the borrower may pay a fee to the Portfolio in connection with the loan) and payments for fees paid to the securities lending agent and for certain other administrative expenses.

A Portfolio will have the right to call a loan and obtain the securities loaned on notice to the borrower within the normal and customary settlement time for the securities. While securities are on loan, the borrower is obligated to pay the Portfolio amounts equal to any income or other distribution from the securities.

A Portfolio will invest any cash collateral in a money market fund that complies with Rule 2a-7 under the 1940 Act, has been approved by the Board and is expected to be advised by the Adviser. Any such investment of cash collateral will be subject to the money market fund’s investment risk. The Portfolio may pay reasonable finders’, administrative, and custodial fees in connection with a loan.

A Portfolio will not have the right to vote any securities having voting rights during the existence of the loan. The Portfolio will have the right to regain record ownership of loaned securities or equivalent securities in order to exercise voting or ownership rights. When the Portfolio lends its securities, its investment performance will continue to reflect the value of securities on loan.

Mortgage-Related Securities, Other Asset-Backed Securities and Structured Securities

The mortgage-related securities in which a Portfolio may invest typically are securities representing interests in pools of mortgage loans made by lenders such as savings and loan associations, mortgage bankers and commercial banks and are assembled for sale to investors (such as a Portfolio) by governmental, government-related or private organizations. Private organizations include commercial banks, savings associations, mortgage companies, investment banking firms, finance companies, special purpose finance entities (called special purpose vehicles or SPVs) and other entities that acquire and package loans for resales as

mortgage-related securities. Specifically, these securities may include pass-through mortgage-related securities, CMOs, CMO residuals, adjustable-rate mortgage securities (“ARMS”), stripped mortgage-backed securities (“SMBSs”), commercial mortgage-backed securities, TBA mortgage-backed securities, mortgage dollar rolls, collateralized obligations, Canadian Government Guaranteed Mortgage Related Securities and other securities that directly or indirectly represent a participation in or are secured by and payable from mortgage loans on real property and other assets.

Pass-Through Mortgage-Related Securities. Interests in pools of mortgage-related securities differ from other forms of debt securities, which normally provide for periodic payment of interest in fixed amounts with principal payments at maturity or specified call dates. Instead, these securities provide a monthly payment consisting of both interest and principal payments. In effect, these payments are a “pass-through” of the monthly payments made by the individual borrowers on their residential mortgage loans, net of any fees paid to the issuer or guarantor of such securities. Additional payments are caused by repayments of principal resulting from the sale of the underlying residential property, refinancing or foreclosure, net of fees or costs that may be incurred. Some mortgage-related securities, such as securities issued by Government National Mortgage Association (“GNMA”), are described as “modified pass-through”. These securities entitle the holder to receive all interest and principal payments owed on the mortgage pool, net of certain fees, regardless of whether or not the mortgagor actually makes the payment.

The average life of pass-through pools varies with the maturities of the underlying mortgage instruments. In addition, a pool’s term may be shortened by unscheduled or early payments of principal and interest on the underlying mortgages. The occurrence of mortgage prepayments is affected by factors including the level of interest rates, general economic conditions, the location and age of the mortgage and other social and demographic conditions. As prepayment rates of individual pools vary widely, it is not possible to accurately predict the average life of a particular pool. For pools of fixed-rate 30-year mortgages, common industry practice is to assume that prepayments will result in a 12-year average life. Pools of mortgages with other maturities or different characteristics will have varying average life assumptions. The assumed average life of pools of mortgages having terms of less than 30 years, is less than 12 years, but typically not less than 5 years.

Yields on pass-through securities are typically quoted by investment dealers and vendors based on the maturity of the underlying instruments and the associated average life assumption. In periods of falling interest rates, the rate of prepayment tends to increase, thereby shortening the actual average life of a pool of mortgage-related securities. Conversely, in periods of rising interest rates the rate of prepayment tends to decrease, thereby lengthening the actual average life of the pool. Historically, actual average life has been consistent with the 12-year assumption referred to above. Actual prepayment experience may cause the yield to differ from the assumed average life yield. Reinvestment of prepayments may occur at higher or lower interest rates than the original investment, thus affecting the yield of a Portfolio. The compounding effect from reinvestment of monthly payments received by a Portfolio will increase the yield to shareholders compared with bonds that pay interest semi-annually.

The principal governmental (*i.e.*, backed by the full faith and credit of the U.S. Government) guarantor of mortgage-related securities is GNMA. GNMA is a wholly-owned U.S. Government corporation within the Department of Housing and Urban Development. GNMA is authorized to guarantee, with the full faith and credit of the U.S. Government, the timely payment of principal and interest on securities issued by institutions approved by GNMA (such as savings and loan institutions, commercial banks and mortgage bankers) and backed by pools of Federal Housing Administration-insured or U.S. Department of Veterans Affairs-guaranteed mortgages.

Government-related (*i.e.*, not backed by the full faith and credit of the U.S. Government) guarantors include the Federal National Mortgage Association (“FNMA”) and the Federal Home Loan Mortgage Corporation (“FHLMC”). FNMA and FHLMC are a government-sponsored corporation or corporate instrumentality of the U.S. Government, respectively, (government-sponsored entities or “GSEs”), which were owned entirely by private stockholders until 2008 when they were placed in conservatorship by the U.S. Government. After being placed in conservatorship, the GSEs issued senior preferred stock and common stock to the U.S. Department of the Treasury (“U.S. Treasury”) in an amount equal to 79.9% of each GSE in return for certain funding and liquidity arrangements. The GSEs continue to operate as going concerns while in conservatorship and each remains liable for all of its obligations associated with its mortgage-backed securities. The U.S. Treasury provided additional funding to the GSEs, but recently the GSEs have been paying dividends to the U.S. Treasury in a cumulative amount almost equal to the payments made to the GSEs by the U.S. Treasury since 2008. The future of the GSEs is unclear as Congress is considering whether to adopt legislation that would severely restrict or even terminate their operations. FNMA purchases residential mortgages from a list of approved seller/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks and credit unions and mortgage bankers. Pass-through securities issued by FNMA are guaranteed as to timely payment of principal and interest by FNMA and are now, in effect, backed by the full faith and credit of the U.S. Government. Participation certificates issued by FHLMC, which represent interests in mortgages from FHLMC’s national portfolio, are guaranteed by FHLMC as to the timely payment of interest and ultimate collection of principal and are now, in effect, backed by the full faith and credit of the U.S. Government.

Commercial banks, savings and loan associations, private mortgage insurance companies, mortgage bankers and other secondary market issuers create pass-through pools of conventional residential mortgage loans. Securities representing interests in pools created by non-governmental private issuers generally offer a higher rate of interest than securities representing interests in pools created by governmental issuers because there are no direct or indirect governmental guarantees of the underlying mortgage payments. However, private issuers sometimes obtain committed loan facilities, lines of credit, letters of credit, surety bonds or other forms of liquidity and credit enhancement to support the timely payment of interest and principal with respect to their securities if the borrowers on the underlying mortgages fail to make their mortgage payments. The ratings of such non-governmental securities are generally dependent upon the ratings of the providers of such liquidity and credit support and would be adversely affected if the rating of such an enhancer were downgraded.

The structuring of the pass-through pool may also provide credit enhancement. Examples of such credit support arising out of the structure of the transaction include the issue of senior and subordinated securities (*e.g.*, the issuance of securities by a SPV in multiple classes or “tranches”, with one or more classes being senior to other subordinated classes as to payment of principal and interest, with the result that defaults on the underlying mortgage loans are borne first by the holders of the subordinated class); creation of “reserve funds” (in which case cash or investments sometimes funded from a portion of the payments on the underlying mortgage loans, are held in reserve against future losses); and “overcollateralization” (in which case the scheduled payments on, or the principal amount of, the underlying mortgage loans exceeds that required to make payment of the securities and pay any servicing or other fees). There can be no guarantee the credit enhancements, if any, will be sufficient to prevent losses in the event of defaults on the underlying mortgage loans.

In addition, mortgage-related securities that are issued by private issuers are not subject to the underwriting requirements for the underlying mortgages that are applicable to those mortgage-related securities that have a government or government-sponsored entity guaranteed. As a result, the mortgage loans underlying private mortgage-related securities may, and frequently do, have less favorable collateral, credit risk or other underwriting characteristics than government or government-sponsored mortgage-related securities and have wider variances in a number of terms, including interest rate, term, size, purposes and borrower characteristics. Privately-issued pools more frequently include second mortgages, high loan-to-value mortgages and manufactured housing loans. The coupon rates and maturities of the underlying mortgage loans in a private-label mortgage-related pool may vary to a greater extent than those included in a government guaranteed pool, and the pool may include subprime mortgage loans. Subprime loans refer to loans made to borrowers with weakened credit histories or with a lower capacity to make timely payments on their loans. For these reasons, the loans underlying these securities have had in many cases higher default rates than those loans that meet government underwriting requirements.

Collateralized Mortgage Obligations. Another form of mortgage-related security is a “pay-through” security, which is a debt obligation. A Portfolio may invest in other forms of mortgage-related securities including CMOs, which are debt obligations of the issuer secured by a pool of mortgage loans pledged as collateral that is legally required to be paid by the issuer, regardless of whether payments are actually made on the underlying mortgages. CMOs are the predominant type of “pay-through” mortgage-related security. In a CMO, a series of bonds or certificates is issued in multiple classes. Each class of a CMO, often referred to as a “tranche”, is issued at a specific coupon rate and has a stated maturity or final distribution date. Principal prepayments on collateral underlying a CMO may cause one or more tranches of the CMO to be retired substantially earlier than the stated maturities or final distribution dates of the collateral. Although payment of the principal of, and interest on, the underlying collateral securing privately issued CMOs may be guaranteed by GNMA, FNMA or FHLMC, these CMOs represent obligations solely of the private issuer and are not insured or guaranteed by GNMA, FNMA, FHLMC, any other governmental agency or any other person or entity.

Adjustable-Rate Mortgage Securities. Another type of mortgage-related security, known as adjustable-rate mortgage securities (“ARMS”), bears interest at a rate determined by reference to a predetermined interest rate or index. ARMS may be secured by fixed-rate

mortgages or adjustable-rate mortgages. ARMS secured by fixed-rate mortgages generally have lifetime caps on the coupon rates of the securities. To the extent that general interest rates increase faster than the interest rates on the ARMS, these ARMS will decline in value. The adjustable-rate mortgages that secure ARMS will frequently have caps that limit the maximum amount by which the interest rate or the monthly principal and interest payments on the mortgages may increase. These payment caps can result in negative amortization (*i.e.*, an increase in the balance of the mortgage loan). Furthermore, since many adjustable-rate mortgages only reset on an annual basis, the values of ARMS tend to fluctuate to the extent that changes in prevailing interest rates are not immediately reflected in the interest rates payable on the underlying adjustable-rate mortgages.

Stripped Mortgage-Related Securities. Stripped mortgage-related securities (SMRS) are mortgage-related securities that are usually structured with separate classes of securities collateralized by a pool of mortgages or a pool of mortgage-backed bonds or pass-through securities, with each class receiving different proportions of the principal and interest payments from the underlying assets. A common type of SMRS has one class of interest-only securities (IOs) receiving all of the interest payments from the underlying assets and one class of principal-only securities (POs) receiving all of the principal payments from the underlying assets. IOs and POs are extremely sensitive to interest rate changes and are more volatile than mortgage-related securities that are not stripped. IOs tend to decrease in value as interest rates decrease and are extremely sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets, and a rapid rate of principal prepayments may have a material adverse effect on the yield to maturity of the IO class. POs generally increase in value as interest rates decrease. If prepayments of the underlying mortgages are greater than anticipated, the amount of interest earned on the overall pool will decrease due to the decreasing principal balance of the assets. Due to their structure and underlying cash flows, SMRS may be more volatile than mortgage-related securities that are not stripped. Changes in the values of IOs and POs can be substantial and occur quickly, such as occurred in the first half of 1994 when the value of many POs dropped precipitously due to increases in interest rates.

A Portfolio will only invest in SMRS that are issued by the U.S. Government, its agencies or instrumentalities and supported by the full faith and credit of the United States. Although SMRS are purchased and sold by institutional investors through several investment banking firms acting as brokers or dealers, the complexity of these instruments and the smaller number of investors in the sector can lend to illiquid markets in the sector.

Commercial Mortgage-Backed Securities. Commercial mortgage-backed securities are securities that represent an interest in, or are secured by, mortgage loans secured by multifamily or commercial properties, such as industrial and warehouse properties, office buildings, retail space and shopping malls, and cooperative apartments, hotels and motels, nursing homes, hospitals and senior living centers. Commercial mortgage-backed securities have been issued in public and private transactions by a variety of public and private issuers using a variety of structures, some of which were developed in the residential mortgage context, including multiclass structures featuring senior and subordinated classes. Commercial mortgage-backed securities may pay fixed or floating rates of interest. The commercial mortgage loans that underlie commercial mortgage-related securities have certain distinct risk characteristics. Commercial mortgage loans generally lack standardized terms, which may complicate their

structure, tend to have shorter maturities than residential mortgage loans and may not be fully amortizing. Commercial properties themselves tend to be unique and are more difficult to value than single-family residential properties. In addition, commercial properties, particularly industrial and warehouse properties, are subject to environmental risks and the burdens and costs of compliance with environmental laws and regulations.

Certain Risks. The value of mortgage-related securities is affected by a number of factors. Unlike traditional debt securities, which have fixed maturity dates, mortgage-related securities may be paid earlier than expected as a result of prepayments of underlying mortgages. Such prepayments generally occur during periods of falling mortgage interest rates. If property owners make unscheduled prepayments of their mortgage loans, these prepayments will result in the early payment of the applicable mortgage-related securities. In that event, a Portfolio may be unable to invest the proceeds from the early payment of the mortgage-related securities in investments that provide as high a yield as the mortgage-related securities. Early payments associated with mortgage-related securities cause these securities to experience significantly greater price and yield volatility than is experienced by traditional fixed-income securities. The level of general interest rates, general economic conditions and other social and demographic factors affect the occurrence of mortgage prepayments. During periods of falling interest rates, the rate of mortgage prepayments tends to increase, thereby tending to decrease the life of mortgage-related securities. Conversely, during periods of rising interest rates, a reduction in prepayments may increase the effective life of mortgage-related securities, subjecting them to greater risk of decline in market value in response to rising interest rates. If the life of a mortgage-related security is inaccurately predicted, the Portfolio may not be able to realize the rate of return it expected.

As with other fixed-income securities, there is also the risk of nonpayment of mortgage-related securities, particularly for those securities that are backed by mortgage pools that contain subprime loans. Market factors adversely affecting mortgage loan repayments include a general economic downturn, high unemployment, a general slowdown in the real estate market, a drop in the market prices of real estate, or higher mortgage payments required to be made by holders of adjustable rate mortgages due to scheduled increases or increases due to higher interest rates.

Subordinated mortgage-related securities may have additional risks. The subordinated mortgage-related security may serve as credit support for the senior securities purchased by other investors. In addition, the payments of principal and interest on these subordinated securities generally will be made only after payments are made to the holders of securities senior to the subordinated securities. Therefore, if there are defaults on the underlying mortgage loans, the holders of subordinated mortgage-related securities will be less likely to receive payments of principal and interest and will be more likely to suffer a loss.

Commercial mortgage-related securities, like all fixed-income securities, generally decline in value as interest rates rise. Moreover, although generally the value of fixed-income securities increases during periods of falling interest rates, this inverse relationship is not as marked in the case of single-family residential mortgage-related securities, due to the increased likelihood of prepayments during periods of falling interest rates, and may not be as marked in the case of commercial mortgage-related securities. The process used to rate

commercial mortgage-related securities may focus on, among other factors, the structure of the security, the quality and adequacy of collateral and insurance, and the creditworthiness of the originators, servicing companies and providers of credit support.

Although the market for mortgage-related securities is becoming increasingly liquid, those issued by certain private organizations may not be readily marketable. There may be a limited market for these securities, especially when there is a perceived weakness in the mortgage and real estate market sectors. In particular, the secondary markets for CMOs, IOs and POs may be more volatile and less liquid than those for other mortgage-related securities, thereby potentially limiting a Portfolio's ability to buy or sell those securities at any particular time. Without an active trading market, mortgage-related securities held in the Portfolio's portfolio may be particularly difficult to value because of the complexities involved in the value of the underlying mortgages. In addition, the rating agencies may have difficulties in rating commercial mortgage-related securities through different economic cycles and in monitoring such ratings on a longer-term basis.

As with fixed-income securities generally, the value of mortgage-related securities can also be adversely affected by increases in general interest rates relative to the yield provided by such securities. Such an adverse effect is especially possible with fixed-rate mortgage securities. If the yield available on other investments rises above the yield of the fixed-rate mortgage securities as a result of general increases in interest rate levels, the value of the mortgage-related securities will decline.

Other Asset-Backed Securities. A Portfolio may invest in other asset-backed securities. The securitization techniques used to develop mortgage-related securities are being applied to a broad range of financial assets. Through the use of trusts and special purpose corporations, various types of assets, including automobile loans and leases, credit card receivables, home equity loans, equipment leases and trade receivables, are being securitized in structures similar to the structures used in mortgage securitizations. For example, a Portfolio may invest in collateralized debt obligations ("CDOs"), which include collateralized bond obligations ("CBOs"), collateralized loan obligations ("CLOs"), and other similarly structured securities. CBOs and CLOs are types of asset-backed securities. A CBO is a trust, which is backed by a diversified pool of high-risk, below investment grade fixed-income securities. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, and subordinate corporate loans, including loans that may be rated below investment grade or equivalent unrated loans. These asset-backed securities are subject to risks associated with changes in interest rates, prepayment of underlying obligations and defaults similar to the risks of investment in mortgage-related securities discussed above.

Each type of asset-backed security also entails unique risks depending on the type of assets involved and the legal structure used. For example, credit card receivables are generally unsecured obligations of the credit card holder and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which give such debtors the right to set off certain amounts owed on the credit cards, thereby reducing the balance due. There have also been proposals to cap the interest rate that a credit card issuer may charge. In some transactions, the value of the asset-backed security is dependent on the

performance of a third party acting as credit enhancer or servicer. Furthermore, in some transactions (such as those involving the securitization of vehicle loans or leases) it may be administratively burdensome to perfect the interest of the security issuer in the underlying collateral and the underlying collateral may become damaged or stolen.

Structured Securities. A Portfolio may invest in securities issued in structured financing transactions, which generally involve aggregating types of debt assets in a pool or special purpose entity and then issuing new securities. Types of structured financings include, for example, mortgage-related and other asset-backed securities. A Portfolio's investments include investments in structured securities that represent interests in entities organized and operated solely for the purpose of restructuring the investment characteristics of debt obligations. This type of restructuring involves the deposit with or purchase by an entity, such as a corporation or trust, of specified instruments (such as commercial bank loans) and the issuance by that entity of one or more classes of securities ("Structured Securities") backed by, or representing interests in, the underlying instruments. The cash flow on the underlying instruments may be apportioned among the newly issued Structured Securities to create securities with different investment characteristics such as varying maturities, payment priorities and interest rate provisions, and the extent of the payments made with respect to Structured Securities is dependent on the extent of the cash flow on the underlying instruments. Because Structured Securities of the type in which a Portfolio anticipates it will invest typically involve no credit enhancement, their credit risk generally will be equivalent to that of the underlying instruments.

A Portfolio is permitted to invest in a class of Structured Securities that is either subordinated or unsubordinated to the right of payment of another class. Subordinated Structured Securities typically have higher yields and present greater risks than unsubordinated Structured Securities.

Under the terms of subordinated securities, payments that would be made to their holders may be required to be made to the holders of more senior securities and/or the subordinated or junior securities may have junior liens, if they have any rights at all, in any collateral (meaning proceeds of the collateral are required to be paid first to holders of more senior securities). As a result, subordinated or junior securities will be disproportionately affected by a default or even a perceived decline in the creditworthiness of the issuer.

Preferred Stock

A Portfolio may invest in preferred stock. Preferred stock is an equity security that has features of debt because it generally entitles the holder to periodic payments at a fixed rate of return. Preferred stock is subordinated to any debt the issuer has outstanding but has liquidation preference over common stock. Accordingly, preferred stock dividends are not paid until all debt obligations are first met. Preferred stock may be subject to more fluctuations in market value, due to changes in market participants' perceptions of the issuer's ability to continue to pay dividends, than debt of the same issuer.

Real Estate Investment Trusts

Real Estate Investment Trusts (“REITs”) are pooled investment vehicles that invest primarily in income-producing real estate or real estate related loans or interests. REITs are generally classified as equity REITs, mortgage REITs or a combination of equity and mortgage REITs. Equity REITs invest the majority of their assets directly in real property and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of principal and interest and payments. Similar to investment companies, such as the Portfolios, REITs are not taxed on income distributed to shareholders provided they comply with several requirements of the United States Internal Revenue Code of 1986, as amended (the “Code”). A Portfolio will indirectly bear its proportionate share of expenses incurred by REITs in which the Portfolio invests in addition to the expenses incurred directly by the Portfolio.

Investing in REITs involves certain unique risks in addition to those risks associated with investing in the real estate industry in general. Equity REITs may be affected by changes in the value of the underlying property owned by the REITs, while mortgage REITs may be affected by the quality of any credit extended. REITs are dependent upon management skills, are not diversified, and are subject to heavy cash flow dependency, default by borrowers and self-liquidation.

Investing in REITs involves risks similar to those associated with investing in small-capitalization companies. REITs may have limited financial resources, may trade less frequently and in a limited volume and may be subject to more abrupt or erratic price movements than larger company securities. Historically, small-capitalization stocks, such as REITs, have had more price volatility than larger capitalization stocks.

REITs are subject to the possibilities of failing to qualify for tax-free pass-through of income under the Code and failing to maintain their exemptions from registration under the 1940 Act. REITs (especially mortgage REITs) also are subject to interest rate risks. When interest rates decline, the value of a REIT’s investment in fixed-rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT’s investment in fixed-rate obligations can be expected to decline. In contrast, as interest rates on adjustable-rate mortgage loans are reset periodically, yields on a REIT’s investments in such loans will gradually align themselves to reflect changes in market interest rates, causing the value of such investments to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed-rate obligations.

Repurchase Agreements and Buy/Sell Back Transactions

A repurchase agreement is an agreement by which a Portfolio purchases a security and obtains a simultaneous commitment from the seller to repurchase the security at an agreed-upon price and date, normally one day or a week later. The purchase and repurchase obligations are transacted under one document. The resale price is greater than the purchase price, reflecting an agreed-upon “interest rate” that is effective for the period of time the buyer’s money is invested in the security, and which is related to the current market rate of the purchased security

rather than its coupon rate. During the term of a repurchase agreement, a Portfolio monitors on a daily basis the market value of the securities subject to the agreement and, if the market value of the securities falls below the resale amount provided under the repurchase agreement, the seller under the repurchase agreement is required to provide additional securities or cash equal to the amount by which the market value of the securities falls below the resale amount. Because a repurchase agreement permits a Portfolio to invest temporarily available cash on a fully collateralized basis, repurchase agreements permit the Portfolio to earn a return on temporarily available cash while retaining “overnight” flexibility in pursuit of investments of a longer-term nature. Repurchase agreements may exhibit the characteristics of loans by a Portfolio.

The obligation of the seller under the repurchase agreement is not guaranteed, and there is a risk that the seller may fail to repurchase the underlying security, whether because of the seller’s bankruptcy or otherwise. In such event, a Portfolio would attempt to exercise its rights with respect to the underlying security, including possible sale of the securities. A Portfolio may incur various expenses in connection with the exercise of its rights and may be subject to various delays and risks of loss, including (a) possible declines in the value of the underlying securities, (b) possible reduction in levels of income and (c) lack of access to the securities (if they are held through a third-party custodian) and possible inability to enforce the Portfolio’s rights. The Board has established procedures, which are periodically reviewed by the Board, pursuant to which the Adviser monitors the creditworthiness of the dealers with which the Portfolio enters into repurchase agreement transactions.

A Portfolio may enter into buy/sell back transactions, which are similar to repurchase agreements. In this type of transaction, a Portfolio enters a trade to buy securities at one price and simultaneously enters a trade to sell the same securities at another price on a specified date. Similar to a repurchase agreement, the repurchase price is higher than the sale price and reflects current interest rates. Unlike a repurchase agreement, however, the buy/sell back transaction, though done simultaneously, is two separate legal agreements. A buy/sell back transaction also differs from a repurchase agreement in that the seller is not required to provide margin payments if the value of the securities falls below the repurchase price because the transaction is two separate transactions. A Portfolio has the risk of changes in the value of the purchased security during the term of the buy/sell back agreement although these agreements typically provide for the repricing of the original transaction at a new market price if the value of the security changes by a specific amount.

Reverse Repurchase Agreements

Reverse repurchase agreements are identical to repurchase agreements except that rather than buying securities for cash subject to their repurchase by the seller, a Portfolio sells portfolio assets concurrently with an agreement by the Portfolio to repurchase the same assets at a later date at a fixed price slightly higher than the sale price. During the reverse repurchase agreement period, the Portfolio continues to receive principal and interest payments on these securities. Generally, the effect of a reverse repurchase agreement is that the Portfolio can recover all or most of the cash invested in the portfolio securities involved during the term of the reverse repurchase agreement, while it will be able to keep the interest income associated with those portfolio securities. Such transactions are advantageous only if the “interest cost” to the Portfolio of the reverse repurchase transaction, *i.e.*, the difference between the sale and

repurchase price for the securities, is less than the cost of otherwise obtaining the cash invested in portfolio securities.

Reverse repurchase agreements involve the risk that the market value of the securities the Portfolio is obligated to repurchase under the agreement may decline below the repurchase price. In the event the buyer of securities under a reverse repurchase agreement files for bankruptcy or becomes insolvent, the Portfolio's use of the proceeds of the agreement may be restricted pending a determination by the other party, or its trustee or receiver, whether to enforce the Portfolio's obligation to repurchase the securities. In addition, the use of these investments results in leveraging the Portfolio's common stocks because the Portfolio uses the proceeds to make investments in other securities. See "Borrowing and Use of Leverage" below.

Rights and Warrants

A Portfolio may invest in rights and warrants, which entitle the holder to buy equity securities at a specific price for a specific period of time but will do so only if the equity securities themselves are deemed appropriate by the Adviser for inclusion in the Portfolio's portfolio. Rights and warrants may be considered more speculative than certain other types of investments in that they do not entitle a holder to dividends or voting rights with respect to the securities which may be purchased nor do they represent any rights in the assets of the issuing company. Also, the value of a right or warrant does not necessarily change with the value of the underlying securities and a right or warrant ceases to have value if it is not exercised prior to the expiration date.

Securities Acquired in Restructurings and Workouts

A Portfolio's investments may include fixed-income securities (particularly lower-rated fixed-income securities) or loan participations that default or are in risk of default ("Distressed Securities"). A Portfolio's investments may also include senior obligations of a borrower issued in connection with a restructuring pursuant to Chapter 11 of the U.S. Bankruptcy Code (commonly known as "debtor-in-possession" or "DIP" financings). Distressed Securities may be the subject of restructurings outside of bankruptcy court in a negotiated workout or in the context of bankruptcy proceedings. In connection with these investments or an exchange or workout of such securities, a Portfolio may determine or be required to accept various instruments. These instruments may include, but are not limited to, equity securities, warrants, rights, participation interests in sales of assets and contingent-interest obligations. Depending upon, among other things, the Adviser's evaluation of the potential value of such securities in relation to the price that could be obtained at any given time if they were sold, a Portfolio may determine to hold the securities in its portfolio.

Securities Ratings

The ratings of fixed-income securities by Moody's Investors Service, Inc. ("Moody's"), Standard & Poor's Ratings Services ("S&P"), Fitch Ratings ("Fitch"), Dominion Bond Rating Service Ltd. and A.M. Best Company are a generally accepted barometer of credit risk. They are, however, subject to certain limitations from an investor's standpoint. The rating of an issuer is heavily weighted by past developments and does not necessarily reflect probable

future conditions. There is frequently a lag between the time a rating is assigned and the time it is updated. In addition, there may be varying degrees of difference in credit risk of securities within each rating category.

Securities rated Baa, BBB+, BBB, or BBB- by S&P or Baa1, Baa2 or Baa3 by Moody's are considered by Moody's to have speculative characteristics. Sustained periods of deteriorating economic conditions or rising interest rates are more likely to lead to a weakening in the issuer's capacity to pay interest and repay principal than in the case of higher-rated securities.

Non-rated securities will also be considered for investment by a Portfolio when the Adviser believes that the financial condition of the issuers of such securities, or the protection afforded by the terms of the securities themselves, limits the risk to a Portfolio to a degree comparable to that of rated securities which are consistent with a Portfolio's objectives and policies.

The Adviser generally uses ratings issued by S&P, Moody's, Fitch and Dominion Bond Rating Service Ltd. Some securities are rated by more than one of these ratings agencies, and the ratings assigned to the security by the rating agencies may differ. In such an event and for purposes of determining compliance with restrictions on investments for the Portfolios, if a security is rated by two or more rating agencies, the Adviser will deem the security to be rated at the highest rating. For example, if a security is rated by Moody's and S&P only, with Moody's rating the security as Ba and S&P as BBB, the Adviser will deem the security to be rated as the equivalent of BBB (*i.e.*, Baa by Moody's and BBB by S&P). Or, if a security is rated by Moody's, S&P and Fitch, with Moody's rating the security as Ba, S&P as BBB and Fitch as BB, the Adviser will deem the security to be rated as the equivalent of BBB (*i.e.*, Ba1 by Moody's, BBB by S&P and BBB by Fitch).

The Adviser will try to reduce the risk inherent in a Portfolio's investment in fixed-income securities through credit analysis, diversification and attention to current developments and trends in interest rates and economic conditions. However, there can be no assurance that losses will not occur. In considering high-yielding investments for a Portfolio, the Adviser will attempt to identify those fixed-income securities whose financial condition is adequate to meet future obligations, has improved or is expected to improve in the future. The Adviser's analysis focuses on relative values based on such factors as interest or dividend coverage, asset coverage earnings prospects and the experience and managerial strength of the issuer.

Unless otherwise indicated, references to securities ratings by one rating agency in this SAI shall include the equivalent rating by another rating agency.

Short Sales

A Portfolio may make short sales of securities or maintain a short position. A short sale is effected by selling a security that a Portfolio does not own, or if the Portfolio does own such security, it is not to be delivered upon consummation of sale. A short sale is against the box to the extent that a Portfolio contemporaneously owns or has the right to obtain securities

identical to those sold. A short sale of a security involves the risk that, instead of declining, the price of the security sold short will rise. If the price of the securities sold short increases between the time of a short sale and the time a Portfolio replaces the borrowed security, the Portfolio will incur a loss; conversely, if the price declines, the Portfolio will realize a gain. The potential for the price of a fixed-income security sold short to rise is a function of both the remaining maturity of the obligation, its creditworthiness and its yield. Unlike short sales of equities or other instruments, potential for the price of a fixed-income security to rise may be limited due to the fact that the security will be no more than par at maturity. However, the short sale of other instruments or securities generally, including fixed-income securities convertible into equities or other instruments, a fixed-income security trading at a deep discount from par or which pays a coupon that is high in relative or absolute terms, or which is denominated in a currency other than the U.S. Dollar, involves the possibility of a theoretically unlimited loss since there is a theoretically unlimited potential for the market price of the security sold short to increase.

Special Situations

A special situation arises when, in the opinion of the Adviser, the securities of a particular company will, within a reasonably estimable period of time, be accorded market recognition at an appreciated value solely by reason of a development particularly or uniquely applicable to that company, and regardless of general business conditions or movements of the market as a whole. Developments creating special situations might include, among others, liquidations, reorganizations, recapitalizations or mergers, material litigation, technological breakthroughs and new management or management policies. Although large and well-known companies may be involved, special situations often involve much greater risk than is inherent in ordinary investment securities.

Standby Commitment Agreements

A Portfolio may, from time to time, enter into standby commitment agreements. Such agreements commit a Portfolio, for a stated period of time, to purchase a stated amount of a security that may be issued and sold to the Portfolio at the option of the issuer. The price and coupon of the security are fixed at the time of the commitment. At the time of entering into the agreement a Portfolio is paid a commitment fee, regardless of whether or not the security is ultimately issued, which is typically approximately 0.5% of the aggregate purchase price of the security which the Portfolio has committed to purchase. The fee is payable whether or not the security is ultimately issued. A Portfolio will enter into such agreements only for the purpose of investing in the security underlying the commitment at a yield and price which are considered advantageous to the Portfolio and which are unavailable on a firm commitment basis.

There can be no assurance that the securities subject to a standby commitment will be issued, and the value of the security, if issued, on the delivery date may be more or less than its purchase price. Since the issuance of the security underlying the commitment is at the option of the issuer, a Portfolio will bear the risk of capital loss in the event the value of the security declines and may not benefit from an appreciation in the value of the security during the commitment period if the issuer decides not to issue and sell the security to the Portfolio.

The purchase of a security subject to a standby commitment agreement and the related commitment fee will be recorded on the date on which the security can reasonably be expected to be issued, and the value of the security will thereafter be reflected in the calculation of a Portfolio's NAV. The cost basis of the security will be adjusted by the amount of the commitment fee. In the event the security is not issued, the commitment fee will be recorded as income on the expiration date of the standby commitment.

Structured Products

A Portfolio may invest in structured products. Structured products, including indexed or structured securities, combine the elements of futures contracts or options with those of debt, preferred equity or a depositary instrument. Generally, the principal amount, amount payable upon maturity or redemption, or interest rate of a structured product is tied (either positively or negatively) to prices, changes in prices, or differences between prices, of underlying assets, such as securities, currencies, intangibles, goods, articles or commodities or by reference to an unrelated benchmark related to an objective index, economic factor or other measure, such as interest rates, currency exchange rates, commodity indices, and securities indices. The interest rate or (unlike most fixed-income securities) the principal amount payable at maturity of a structured product may be increased or decreased depending on changes in the value of the underlying asset or benchmark.

Structured products may take a variety of forms. Most commonly, they are in the form of debt instruments with interest or principal payments or redemption terms determined by reference to the value of a currency or commodity or securities index at a future point in time, but may also be issued as preferred stock with dividend rates determined by reference to the value of a currency or convertible securities with the conversion terms related to a particular commodity.

Investing in structured products may be more efficient and less expensive for a Portfolio than investing in the underlying assets or benchmarks and the related derivative. These investments can be used as a means of pursuing a variety of investment goals, including currency hedging, duration management and increased total return. In addition, structured products may be a tax-advantaged investment in that they generate income that may be distributed to shareholders as income rather than short-term capital gains that may otherwise result from a derivatives transaction.

Structured products, however, have more risk than traditional types of debt or other securities. These products may not bear interest or pay dividends. The value of a structured product or its interest rate may be a multiple of a benchmark and, as a result, may be leveraged and move (up or down) more steeply and rapidly than the benchmark. Under certain conditions, the redemption value of a structured product could be zero. Structured products are potentially more volatile and carry greater market risks than traditional debt instruments. The prices of the structured instrument and the benchmark or underlying asset may not move in the same direction or at the same time. Structured products may be less liquid and more difficult to price than less complex securities or instruments or more traditional debt securities. The risk of these investments can be substantial with the possibility that the entire principal amount is at

risk. The purchase of structured products also exposes a Portfolio to the credit risk of the issuer of the structured product.

Structured Notes and Indexed Securities: A Portfolio may invest in a particular type of structured instrument sometimes referred to as a “structured note”. The terms of these notes may be structured by the issuer and the purchaser of the note. Structured notes are derivative debt instruments, the interest rate or principal of which is determined by an unrelated indicator (for example, a currency, security, commodity or index thereof). Indexed securities may include structured notes as well as securities other than debt securities, the interest rate or principal of which is determined by an unrelated indicator. The terms of structured notes and indexed securities may provide that in certain circumstances no principal is due at maturity, which may result in a total loss of invested capital. Structured notes and indexed securities may be positively or negatively indexed, so that appreciation of the unrelated indicator may produce an increase or a decrease in the interest rate or the value of the structured note or indexed security at maturity may be calculated as a specified multiple of the change in the value of the unrelated indicator. Therefore, the value of such notes and securities may be very volatile. Structured notes and indexed securities may entail a greater degree of market risk than other types of debt securities because the investor bears the risk of the unrelated indicator. Structured notes or indexed securities also may be more volatile, less liquid, and more difficult to accurately price than less complex securities and instruments or more traditional debt securities.

Commodity Index-Linked Notes and Commodity-Linked Notes: Structured products may provide exposure to the commodities markets. These structured notes may include leveraged or unleveraged commodity index-linked notes, which are derivative debt instruments with principal and/or coupon payments linked to the performance of commodity indices. They also include commodity-linked notes with principal and/or coupon payments linked to the value of particular commodities or commodities futures contracts, or a subset of commodities and commodities future contracts. The value of these notes will rise or fall in response to changes in the underlying commodity, commodity futures contract, subset of commodities or commodities futures contracts or commodity index. These notes expose a Portfolio economically to movements in commodity prices. These notes also are subject to risks, such as credit, market and interest rate risks, that in general affect the values of debt securities. In addition, these notes are often leveraged, increasing the volatility of each note’s market value relative to changes in the underlying commodity, commodity futures contract or commodity index. Therefore, a Portfolio might receive interest or principal payments on the note that are determined based upon a specified multiple of the change in value of the underlying commodity, commodity futures contract or index.

Credit-Linked Securities: Credit-linked securities are issued by a limited purpose trust or other vehicle that, in turn, invests in a basket of derivative instruments, such as credit default swaps, interest rate swaps and other securities, in order to provide exposure to certain high-yield or other fixed-income markets. For example, a Portfolio may invest in credit-linked securities as a cash management tool in order to gain exposure to certain high-yield markets and/or to remain fully invested when more traditional income-producing securities are not available. Like an investment in a bond, investments in credit-linked securities represent the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on the trust’s

receipt of payments from, and the trust's potential obligations to, the counterparties to the derivative instruments and other securities in which the trust invests. For instance, the trust may sell one or more credit default swaps, under which the trust would receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a default occurs, the stream of payments may stop and the trust would be obligated to pay the counterparty the par value (or other agreed-upon value) of the referenced debt obligation. This, in turn, would reduce the amount of income and principal that a Portfolio would receive as an investor in the trust. A Portfolio's investments in these instruments are indirectly subject to the risks associated with derivative instruments, including, among others, credit risk, default or similar event risk, counterparty risk, interest rate risk, and leverage risk and management risk. These securities are generally structured as Rule 144A securities so that they may be freely traded among institutional buyers. However, changes in the market for credit-linked securities or the availability of willing buyers may result in the securities becoming illiquid.

Trust Preferred Securities

Trust preferred securities are preferred securities typically issued by a special purpose trust subsidiary and backed by subordinated debt of that subsidiary's parent corporation. Unlike typical asset-backed securities, which have many underlying payors and usually are overcollateralized, trust preferred securities have only one underlying payor and are not overcollateralized. Trust preferred securities may have varying maturity dates, at times in excess of 30 years, or may have no specified maturity date with an onerous interest rate adjustment if not called on the first call date. Dividend payments of the trust preferred securities generally coincide with interest payments on the underlying subordinated debt. Issuers of trust preferred securities and their parents currently enjoy favorable tax treatment. If the tax characterization of trust preferred securities were to change, they could be redeemed by the issuers, resulting in a loss to a Portfolio. Trust preferred securities are subject to special risks. Dividend payments only will be paid if interest payments on the underlying obligations are made. These interest payments are dependent on the financial condition of the parent corporation and may be deferred for up to 20 consecutive quarters. There is also the risk that the underlying obligations, and thus the trust preferred securities, may be prepaid after a stated call date or as a result of certain tax or regulatory events, resulting in a lower yield to maturity.

U.S. Government Securities

U.S. Government securities may be backed by the full faith and credit of the United States, supported only by the right of the issuer to borrow from the U.S. Treasury or backed only by the credit of the issuing agency itself. These securities include: (i) the following U.S. Treasury securities, which are backed by the full faith and credit of the United States and differ only in their interest rates, maturities and times of issuance: U.S. Treasury bills (maturities of one year or less with no interest paid and hence issued at a discount and repaid at full face value upon maturity), U.S. Treasury notes (maturities of one to ten years with interest payable every six months) and U.S. Treasury bonds (generally maturities of greater than ten years with interest payable every six months); (ii) obligations issued or guaranteed by U.S. Government agencies and instrumentalities that are supported by the full faith and credit of the U.S. Government, such as securities issued by GNMA, the Farmers Home Administration, the

Department of Housing and Urban Development, the Export-Import Bank, the General Services Administration and the Small Business Administration, including obligations that are issued by private issuers that are guaranteed as to principal or interest by the U.S. Government, its agencies or instrumentalities; and (iii) obligations issued or guaranteed by U.S. Government agencies and instrumentalities that are not supported by the full faith and credit of the U.S. Government or a right to borrow from the U.S. Treasury, such as securities issued by the FNMA and FHLMC (which are, as described above, now in effect, backed by the full faith and credit of the U.S. Government due to the conservatorship of the agencies), and governmental collateralized mortgage obligations (“CMOs”). The maturities of the U.S. Government securities listed in paragraphs (i) and (ii) above usually range from three months to 30 years. Such securities, except GNMA certificates, normally provide for periodic payments of interest in fixed amount with principal payments at maturity or specified call dates.

U.S. Government securities also include zero-coupon securities and principal-only securities and certain stripped mortgage-related securities. Zero-coupon securities are described in more detail in “Zero-Coupon Treasury Securities” below, and stripped mortgage-related securities and principal-only securities are described in more detail in “Mortgage-Related Securities and Other Asset-Backed Securities-Stripped Mortgage-Related Securities” above. In addition, other U.S. Government agencies and instrumentalities have issued stripped securities that are similar to SMRS.

Inflation-indexed securities such as Treasury Inflation-Protected Securities, or TIPS, are fixed-income securities whose principal value is periodically adjusted according to the rate of inflation. If the index measuring inflation falls, the principal value of these securities will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-protected securities. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal.

Inflation-indexed securities tend to react to changes in real interest rates. In general, the price of these securities can fall when real interest rates rise, and can rise when real interest rates fall. In addition, the value of these securities may be vulnerable to changes in expectations of inflation. Interest payments on these securities can be unpredictable and will vary as the principal and/or interest is adjusted for inflation.

TIPS, which are issued by the U.S Treasury, use the Consumer Price Index for Urban Consumers, or the CPI, as the inflation measure. The principal of TIPS increases with inflation and decreases with deflation, as measured by the CPI. When TIPS mature, the holder is paid the adjusted principal or original principal, whichever is greater. TIPS pay interest twice a year, at a fixed rate, which is determined by auction at the time the TIPS are issued. The rate is applied to the adjusted principal; so, like the principal, interest payments rise with inflation and fall with deflation. TIPS are issued in terms of 5, 10, and 30 years.

Guarantees of securities by the U.S. Government or its agencies or instrumentalities guarantee only the payment of principal and interest on the securities, and do

not guarantee the securities' yield or value or the yield or value of the shares of the Portfolio that holds the securities.

U.S. Government securities are considered among the safest of fixed-income investments. As a result, however, their yields are generally lower than the yields available from other fixed-income securities.

Zero-Coupon Treasury Securities. Zero-coupon Treasury securities are U.S. Treasury bills, notes and bonds which have been stripped of their unmatured interest coupons and receipts or certificates representing interests in such stripped debt obligations and coupons. A zero-coupon security is a debt obligation that does not entitle the holder to any periodic payments prior to maturity but, instead, is issued and traded at a discount from its face amount. The discount varies depending on the time remaining until maturity, prevailing interest rates, liquidity of the security and perceived credit quality of the issuer. The market prices of zero-coupon securities are generally more volatile than those of interest-bearing securities, and are likely to respond to changes in interest rates to a greater degree than otherwise comparable securities that do pay periodic interest. Current federal tax law requires that a holder (such as a Portfolio) of a zero-coupon security accrue a portion of the discount at which the security was purchased as income each year, even though the holder receives no interest payment on the security during the year. As a result, in order to make the distributions necessary for a Portfolio not to be subject to federal income or excise taxes, the Portfolio might be required to pay out as an income distribution each year an amount, obtained by liquidation of portfolio securities if necessary, greater than the total amount of cash that the Portfolio has actually received as interest during the year. The Adviser believes, however, that it is highly unlikely that it would be necessary to liquidate any portfolio securities for this purpose.

Currently the only U.S. Treasury security issued without coupons is the Treasury bill. Although the U.S. Treasury does not itself issue treasury notes and bonds without coupons, under the U.S. Treasury STRIPS program interest and principal on certain long term treasury securities may be maintained separately in the Federal Reserve book entry system and may be separately traded and owned. However, in the last few years a number of banks and brokerage firms have separated ("stripped") the principal portions ("corpus") from the coupon portions of the U.S. Treasury bonds and notes and sold them separately in the form of receipts or certificates representing undivided interests in these instruments (which instruments are generally held by a bank in a custodial or trust account).

Variable, Floating and Inverse Floating-Rate Securities

These securities have interest rates that are reset at periodic intervals, usually by reference to some interest rate index or market interest rate. Although the rate adjustment feature may act as a buffer to reduce sharp changes in the value of these securities, they are still subject to changes in value based on changes in market interest rates or changes in the issuer's creditworthiness. Because the interest rate is reset only periodically, changes in the interest rate on these securities may lag behind changes in prevailing market interest rates. Also, some of these securities (or the underlying mortgages) are subject to caps or floors that limit the maximum change in the interest rate during a specified period or over the life of the security.

Variable Notes

Variable amount master demand notes and variable amount floating-rate notes are obligations that permit the investment of fluctuating amounts by a Portfolio at varying rates of interest pursuant to direct arrangements between the Portfolio, as lender, and the borrower. Master demand notes permit daily fluctuations in the interest rate while the interest rate under variable amount floating rate notes fluctuate on a weekly basis. These notes permit daily changes in the amounts borrowed. A Portfolio has the right to increase the amount under these notes at any time up to the full amount provided by the note agreement, or to decrease the amount, and the borrower may repay up to the full amount of the notes without penalty. Because these types of notes are direct lending arrangements between the lender and the borrower, it is not generally contemplated that such instruments will be traded and there is no secondary market for these notes. Master demand notes are redeemable (and, thus, immediately repayable by the borrower) at face value plus accrued interest at any time. Variable amount floating-rate notes are subject to next-day redemption for 14 days after the initial investment therein. With both types of notes, therefore, a Portfolio's right to redeem depends on the ability of the borrower to pay principal and interest on demand. In connection with both types of note arrangements, the Portfolio considers earning power, cash flow and other liquidity ratios of the issuer. These notes, as such, are not typically rated by credit rating agencies. Unless they are so rated, a Portfolio may invest in them only if, at the time of an investment, the issuer has an outstanding issue of unsecured debt rated Aa3 or better by Moody's or AA- or better by S&P or Fitch.

General

The Fund has voluntarily agreed that each Portfolio with the ability to invest in foreign issuers will adhere to the foreign security diversification guidelines promulgated by certain State Insurance Departments. Pursuant to these guidelines, each such Portfolio will invest in issuers from a minimum of five different foreign countries. This minimum will be reduced to four different foreign countries when securities of foreign issuers comprise less than 80% of the Portfolio's NAV, three different foreign countries when securities of foreign issuers comprise less than 60% of the Portfolio's NAV, two different foreign countries when securities of foreign issuers comprise less than 40% of the Portfolio's NAV and one foreign country when securities of foreign issuers comprise less than 20% of the Portfolio's NAV. The Fund has also voluntarily agreed that each Portfolio that may invest in securities of foreign issuers will limit its investment in the securities of issuers located in any one country to 20% of the Portfolio's NAV, except that the Portfolio may have an additional 15% of its NAV invested in securities of issuers located in Australia, Canada, France, Japan, the United Kingdom or Germany.

In addition, the Fund has adopted an investment policy, which is not designated a "fundamental policy" within the meaning of the 1940 Act, of intending to have each Portfolio comply at all times with the diversification requirements prescribed in Section 817(h) of the Code or any successor thereto and the applicable Treasury Regulations thereunder. This policy may be changed upon notice to shareholders of the Fund, but without their approval. For more information, see "Dividends, Distributions and Taxes" below.

Certain Risk and Other Considerations

Borrowing and Use of Leverage. A Portfolio may use borrowings for investment purposes, subject to the restrictions of the 1940 Act. Borrowings by a Portfolio result in leveraging of the Portfolio's shares of common stock. The proceeds of such borrowings will be invested in accordance with the Portfolio's investment objective and policies. A Portfolio may also create leverage through the use of derivatives or use leverage for investment purposes by entering into transactions such as reverse repurchase agreements and forward contracts. This means that the Portfolio uses the cash proceeds made available during the term of these transactions to make investments in other securities.

Utilization of leverage, which is usually considered speculative, however, involves certain risks to a Portfolio's shareholders. These include a higher volatility of the NAV of a Portfolio's shares of common stock and the relatively greater effect on the NAV of the shares caused by favorable or adverse changes in market conditions or interest rates. So long as a Portfolio is able to realize a net return on the leveraged portion of its investment portfolio that is higher than the interest expense paid on borrowings or the carrying costs of leveraged transactions, the effect of leverage will be to cause a Portfolio's shareholders to realize a higher net return than if the Portfolio were not leveraged. However, to the extent that the interest expense on borrowings or the carrying costs of leveraged transactions approaches the net return on the leveraged portion of a Portfolio's investment portfolio, the benefit of leverage to a Portfolio's shareholders will be reduced, and if the interest expense on borrowings or the carrying costs of leveraged transactions were to exceed the net return to shareholders, a Portfolio's use of leverage would result in a lower rate of return than if the Portfolio were not leveraged. Similarly, the effect of leverage in a declining market would normally be a greater decrease in NAV per share than if a Portfolio were not leveraged. In an extreme case, if a Portfolio's current investment income were not sufficient to meet the interest expense on borrowings or the carrying costs of leveraged transactions, it could be necessary for the Portfolio to liquidate certain of its investments in adverse circumstances, potentially significantly reducing its NAV.

Certain transactions, such as derivatives transactions, forward commitments, reverse repurchase agreements and short sales involve leverage and may expose a Portfolio to potential losses that, in some cases, may exceed the amount originally invested by the Portfolio. When a Portfolio engages in such transactions, it will, in accordance with guidance provided by the SEC or its staff in, among other things, regulations, interpretative releases and no-action letters, deposit in a segregated account certain liquid assets with a value at least equal to the Portfolio's exposure, on a marked-to-market or on another relevant basis, to the transaction. Transactions for which assets have been segregated will not be considered "senior securities" for purposes of the Portfolio's investment restriction concerning senior securities. The segregation of assets is intended to enable the Portfolio to have assets available to satisfy its obligations with respect to these transactions, but will not limit the Portfolio's exposure to loss.

Real Estate Investments

If a Portfolio, including, in particular, the Real Estate Investment Portfolio, receives rental income or income from the disposition of real property acquired as a result of a

default on securities the Portfolio owns, the receipt of such income may adversely affect the Portfolio's ability to retain its tax status as a regulated investment company. Investments by the Real Estate Investment Portfolio in securities of companies providing mortgage servicing will be subject to the risks associated with refinancings and their impact on servicing rights.

Risks of Investments in Securities of Foreign Issuers.

Investors should understand and consider carefully the substantial risks involved in securities of foreign companies and governments of foreign nations, some of which are referred to below, and which are in addition to the usual risks inherent in domestic investments. Investing in securities of non-U.S. companies, which are generally denominated in foreign currencies, and utilization of derivative investment products denominated in, or the value of which is dependent upon movements in the relative value of, a foreign currency, involve certain considerations comprising both risk and opportunity not typically associated with investing in U.S. companies. These considerations include changes in exchange rates and exchange control regulations, political and social instability, expropriation, imposition of foreign taxes, less liquid markets and less available information than are generally the case in the United States, higher transaction costs, less government supervision of exchanges, brokers and issuers, difficulty in enforcing contractual obligations, lack of uniform accounting and auditing standards and greater price volatility.

There is generally less publicly available information about foreign companies comparable to reports and ratings that are published about companies in the United States. Foreign issuers are subject to accounting and financial standards and requirements that differ, in some cases significantly, from those applicable to U.S. issuers. In particular, the assets and profits appearing on the financial statements of a foreign issuer may not reflect its financial position or results of operations in the way they would be reflected had the financial statement been prepared in accordance with U.S. generally accepted accounting principles. In addition, for an issuer that keeps accounting records in local currency, inflation accounting rules in some of the countries in which a Portfolio may invest require, for both tax and accounting purposes, that certain assets and liabilities be restated on the issuer's balance sheet in order to express items in terms of currency of constant purchasing power. Inflation accounting may indirectly generate losses or profits. Consequently, financial data may be materially affected by restatements for inflation and may not accurately reflect the real condition of those issuers and securities markets. Substantially less information is publicly available about certain non-U.S. issuers than is available about U.S. issuers.

It is contemplated that securities of foreign issuers will be purchased in OTC markets or on stock exchanges located in the countries in which the respective principal offices of the issuers of the various securities are located, if that is the best available market. Foreign securities markets are generally not as developed or efficient as those in the United States. While growing in volume, they usually have substantially less volume than the New York Stock Exchange (the "Exchange"), and securities of some foreign companies are less liquid and more volatile than securities of comparable U.S. companies. Similarly, volume and liquidity in most foreign bond markets is less than in the United States and, at times, volatility of price can be greater than in the United States. Fixed commissions on foreign stock exchanges are generally higher than negotiated commissions on U.S. exchanges, although a Portfolio will endeavor to

achieve the most favorable net results on its portfolio transactions. There is generally less government supervision and regulation of stock exchanges, brokers and listed companies than in the United States.

Expropriation, confiscatory taxation, nationalization, political, economic or social instability or other similar developments, such as military coups, have occurred in the past in countries in which a Portfolio may invest and could adversely affect a Portfolio's assets should these conditions or events recur.

Foreign investment in the securities of companies in certain countries is restricted or controlled to varying degrees. These restrictions or controls may at times limit or preclude Portfolio investment in certain securities of foreign issuers and increase the costs and expenses of a Portfolio. Certain countries in which a Portfolio may invest require governmental approval prior to investments by foreign persons, limit the amount of investment by foreign persons in a particular issuer, limit the investment by foreign persons only to a specific class of securities of an issuer that may have less advantageous rights than the classes available for purchase by domiciliaries of the countries and/or impose additional taxes on foreign investors.

Certain countries may require governmental approval for the repatriation of investment income, capital or the proceeds of sales of securities by foreign investors. In addition, if a deterioration occurs in a country's balance of payments, the country could impose temporary restrictions on foreign capital remittances.

Income from certain investments held by a Portfolio could be reduced by foreign income taxes, including withholding taxes. It is impossible to determine the effective rate of foreign tax in advance. A Portfolio's NAV may also be affected by changes in the rates or methods of taxation applicable to that Portfolio or to entities in which that Portfolio has invested. The Adviser generally will consider the cost of any taxes in determining whether to acquire any particular investments, but can provide no assurance that the tax treatment of investments held by the Portfolio will not be subject to change. A shareholder otherwise subject to U.S. federal income taxes may, subject to certain limitations, be entitled to claim a credit or deduction for U.S. federal income tax purposes for his or her proportionate share of such foreign taxes paid by the Portfolio. See "Dividends, Distributions and Taxes".

Investors should understand that the expense ratio of a fund investing in securities of foreign issuers may be higher than investment companies investing only in domestic securities since, among other things, the cost of maintaining the custody of securities of foreign issuers is higher and the purchase and sale of portfolio securities may be subject to higher transaction charges, such as stamp duties and turnover taxes.

For many securities of foreign issuers, there are U.S. Dollar-denominated ADRs that are traded in the United States on exchanges or over-the-counter. ADRs do not lessen the foreign exchange risk inherent in investing in the securities of foreign issuers. However, by investing in ADRs rather than directly in stock of foreign issuers, a Portfolio can avoid currency risks which might occur during the settlement period for either purchases or sales.

Foreign Currency Transactions. A Portfolio may invest in securities denominated in foreign currencies and a corresponding portion of the Portfolio's revenues will be received in such currencies. In addition, a Portfolio may conduct foreign currency transactions for hedging and non-hedging purposes on a spot (*i.e.*, cash) basis or through the use of derivatives transactions, such as forward currency exchange contracts, currency futures and options thereon, and options on currencies as described above. The dollar equivalent of a Portfolio's net assets and distributions will be adversely affected by reductions in the value of certain foreign currencies relative to the U.S. Dollar. Such changes will also affect a Portfolio's income. A Portfolio will, however, have the ability to attempt to protect itself against adverse changes in the values of foreign currencies by engaging in certain of the investment practices listed above. While a Portfolio has this ability, there is no certainty as to whether and to what extent the Portfolio will engage in these practices.

Currency exchange rates may fluctuate significantly over short periods of time causing, along with other factors, a Portfolio's NAV to fluctuate. Currency exchange rates generally are determined by the forces of supply and demand in the foreign exchange markets and the relative merits of investments in different countries, actual or anticipated changes in interest rates and other complex factors, as seen from an international perspective. Currency exchange rates also can be affected unpredictably by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments in the United States or abroad. To the extent a Portfolio's total assets adjusted to reflect the Portfolio's net position after giving effect to currency transactions is denominated or quoted in the currencies of foreign countries, the Portfolio will be more susceptible to the risk of adverse economic and political developments within those countries.

A Portfolio will incur costs in connection with conversions between various currencies. A Portfolio may hold foreign currency received in connection with investments when, in the judgment of the Adviser, it would be beneficial to convert such currency into U.S. Dollars at a later date, based on anticipated changes in the relevant exchange rate. If the value of the foreign currencies in which a Portfolio receives its income falls relative to the U.S. Dollar between receipt of the income and the making of Portfolio distributions, the Portfolio may be required to liquidate securities in order to make distributions if the Portfolio has insufficient cash in U.S. Dollars to meet distribution requirements.

If the value of the foreign currencies in which a Portfolio receives income falls relative to the U.S. Dollar between receipt of the income and the making of Portfolio distributions, a Portfolio may be required to liquidate securities in order to make distributions if a Portfolio has insufficient cash in U.S. Dollars to meet the distribution requirements that the Portfolio must satisfy to qualify as a regulated investment company for federal income tax purposes. Similarly, if the value of a particular foreign currency declines between the time a Portfolio incurs expenses in U.S. Dollars and the time cash expenses are paid, the amount of the currency required to be converted into U.S. Dollars in order to pay expenses in U.S. Dollars could be greater than the equivalent amount of such expenses in the currency at the time they were incurred. In light of these risks, a Portfolio may engage in certain currency hedging transactions, which themselves, involve certain special risks.

Risks of Forward Currency Exchange Contracts, Foreign Currency Futures Contracts and Options thereon, Options on Foreign Currencies and Over-the-Counter Options on Securities. Transactions in forward currency exchange contracts, as well as futures and options on foreign currencies, are subject to all of the correlation, liquidity and other risks outlined above. In addition, however, such transactions are subject to the risk of governmental actions affecting trading in or the prices of currencies underlying such contracts, which could restrict or eliminate trading and could have a substantial adverse effect on the value of positions held by a Portfolio. In addition, the value of such positions could be adversely affected by a number of other complex political and economic factors applicable to the countries issuing the underlying currencies.

Further, unlike trading in most other types of instruments, there is no systematic reporting of last sale information with respect to the foreign currencies underlying contracts thereon. As a result, the available information on which trading decisions will be based may not be as complete as the comparable data on which a Portfolio makes investment and trading decisions in connection with other transactions. Moreover, because the foreign currency market is a global, twenty-four hour market, events could occur on that market but will not be reflected in the forward, futures or options markets until the following day, thereby preventing the Portfolio from responding to such events in a timely manner.

Settlements of exercises of OTC forward currency exchange contracts or foreign currency options generally must occur within the country issuing the underlying currency, which in turn requires traders to accept or make delivery of such currencies in conformity with any U.S. or foreign restrictions and regulations regarding the maintenance of foreign banking relationships and fees, taxes or other charges.

Unlike transactions entered into by a Portfolio in futures contracts and exchange-traded options, options on foreign currencies, forward currency exchange contracts and OTC options on securities and securities indices may not be traded on contract markets regulated by the CFTC or (with the exception of certain foreign currency options) the SEC. Such instruments are instead traded through financial institutions acting as market-makers, although foreign currency options are also traded on certain national securities exchanges, such as the Philadelphia Stock Exchange and the Chicago Board Options Exchange, that are subject to SEC regulation. In an OTC trading environment, many of the protections afforded to exchange participants will not be available. For example, there are no daily price fluctuation limits, and adverse market movements could therefore continue to an unlimited extent over a period of time. Although the purchaser of an option cannot lose more than the amount of the premium plus related transaction costs, this entire amount could be lost. Moreover, the option writer could lose amounts substantially in excess of the initial investment due to the margin and collateral requirements associated with such positions.

In addition, OTC transactions can be entered into only with a financial institution willing to take the opposite side, as principal, of a Portfolio's position unless the institution acts as broker and is able to find another counterparty willing to enter into the transaction with the Portfolio. Where no such counterparty is available, it will not be possible to enter into a desired transaction. There also may be no liquid secondary market in the trading of OTC contracts, and

the Portfolio could be required to retain options purchased or written, or forward currency exchange contracts entered into, until exercise, expiration or maturity. This in turn could limit the Portfolio's ability to profit from open positions or to reduce losses experienced, and could result in greater losses.

Further, OTC transactions are not subject to the guarantee of an exchange clearinghouse, and a Portfolio will therefore be subject to the risk of default by, or the bankruptcy of, the financial institution serving as its counterparty. The Portfolio will enter into an OTC transaction only with parties whose creditworthiness has been reviewed and found to be satisfactory by the Adviser.

Transactions in OTC options on foreign currencies are subject to a number of conditions regarding the commercial purpose of the purchaser of such option. A Portfolio is not able to determine at this time whether or to what extent additional restrictions on the trading of OTC options on foreign currencies may be imposed at some point in the future, or the effect that any such restrictions may have on the hedging strategies to be implemented by them.

Options on foreign currencies traded on national securities exchanges are within the jurisdiction of the SEC, as are other securities traded on such exchanges. As a result, many of the protections provided to traders on organized exchanges will be available with respect to such transactions. In particular, all foreign currency option positions entered into on a national securities exchange are cleared and guaranteed by the Options Clearing Corporation ("OCC"), thereby reducing the risk of counterparty default. Further, a liquid secondary market in options traded on a national securities exchange may be more readily available than in the OTC market, potentially permitting a Portfolio to liquidate open positions at a profit prior to exercise or expiration, or to limit losses in the event of adverse market movements.

The purchase and sale of exchange-traded foreign currency options, however, is subject to the risks of the availability of a liquid secondary market described above, as well as the risks regarding adverse market movements, the margining of options written, the nature of the foreign currency market, possible intervention by governmental authorities and the effects of other political and economic events. In addition, exchange-traded options on foreign currencies involve certain risks not presented by the OTC market. For example, exercise and settlement of such options must be made exclusively through the OCC, which has established banking relationships in applicable foreign countries for this purpose. As a result, if the OCC determines that foreign governmental restrictions or taxes would prevent the orderly settlement of foreign currency option exercises, or would result in undue burdens on the OCC or its clearing member, the OCC may impose special procedures on exercise and settlement, such as technical changes in the mechanics of delivery of currency, the fixing of dollar settlement prices or prohibitions on exercise.

INVESTMENT RESTRICTIONS

Fundamental Investment Policies. The following investment restrictions may not be changed without approval by the vote of (1) 67% or more of the shares of that Portfolio represented at a meeting at which more than 50% of the outstanding shares are present in person or by proxy or (2) more than 50% of the outstanding shares of that Portfolio, whichever is less.

As a fundamental policy, a Portfolio:

(a) may not concentrate investments in an industry as concentration may be defined under the 1940 Act or the rules and regulations thereunder (as such statute, rules or regulations may be amended from time to time) or by guidance regarding, interpretations of, or exemptive orders under, the 1940 Act or the rules or regulations thereunder published by appropriate regulatory authorities;¹

(b) may not issue any senior security (as that term is defined in the 1940 Act) or borrow money, except to the extent permitted by the 1940 Act or the rules and regulations thereunder (as such statute, rules or regulations may be amended from time to time) or by guidance regarding, or interpretations of, or exemptive orders under, the 1940 Act or the rules or regulations thereunder published by appropriate regulatory authorities. For purposes of this restriction, margin and collateral arrangements, including, for example, with respect to permitted borrowings, options, futures contracts, options on futures contracts and other derivatives such as swaps are not deemed to involve the issuance of a senior security;

(c) may not make loans except through (i) the purchase of debt obligations in accordance with its investment objective and policies; (ii) the lending of portfolio securities; (iii) the use of repurchase agreements; or (iv) the making of loans to affiliated funds as permitted under the 1940 Act, the rules and regulations thereunder (as such statutes, rules or regulations may be amended from time to time), or by guidance regarding, and interpretations of, or exemptive orders under, the 1940 Act;

(d) may not purchase or sell real estate except that it may dispose of real estate acquired as a result of the ownership of securities or other instruments. This restriction does not prohibit a Portfolio from investing in securities or other instruments backed by real

¹ The Real Estate Investment Portfolio has not adopted a policy to concentrate investments in any one industry. Although it invests generally in the real estate industry sector, the primary economic characteristics of companies in this sector are materially different. For example, the Real Estate Investment Portfolio invests in equity and mortgage REITs, each of which seeks different types of investments. Equity REITs invest directly in real estate properties, and mortgage REITs make loans to real estate owners and purchase mortgages on real estate. In addition, there are many different types of REITs in which the Real Estate Investment Portfolio may invest, including, for example, those that invest in shopping malls, industrial and office buildings, apartments, warehouses, lodging and hotels, and health care facilities. REITs may also invest in specific regions, states, or countries. Foreign REITs or other non-U.S. real estate investments may have significantly different characteristics than those in the United States.

estate or in securities of companies engaged in the real estate business;

(e) may purchase or sell commodities or options thereon to the extent permitted by applicable law; and

(f) may not act as an underwriter of securities, except that a Portfolio may acquire restricted securities under circumstances in which, if such securities were sold, the Portfolio might be deemed to be an underwriter for purposes of the Securities Act.

As a fundamental policy, each Portfolio is diversified (as that term is defined in the 1940 Act). This means that at least 75% of the Portfolio's assets consist of:

- Cash or cash items;
- Government securities;
- Securities of other investment companies; and
- Securities of any one issuer that represent not more than 10% of the outstanding voting securities of the issuer of the securities and not more than 5% of the total assets of the Portfolio.

Non-Fundamental Investment Policies

As a matter of non-fundamental policy, each Portfolio has adopted a policy that provides that the Portfolio may not purchase securities on margin, except (i) as otherwise provided under rules adopted by the SEC under the 1940 Act or by guidance regarding the 1940 Act, or interpretations thereof, and (ii) that the Portfolio may obtain such short-term credits as are necessary for the clearance of portfolio transactions, and the Portfolio may make margin payments in connection with futures contracts, options, forward contracts, swaps, caps, floors, collars and other financial instruments.

MANAGEMENT OF THE FUND

The Adviser

The Adviser, a Delaware limited partnership with principal offices at 1345 Avenue of the Americas, New York, New York 10105, has been retained under an investment advisory agreement (the "Advisory Agreement") to provide investment advice and, in general, to conduct the management and investment program of the Fund under the supervision of the Board. The Adviser is an investment adviser registered under the Investment Advisers Act of 1940, as amended.

The Adviser is a leading global investment management firm supervising client accounts with assets as of December 31, 2013, totaling approximately \$450 billion. The Adviser provides management services for many of the largest U.S. public and private employee benefit plans, endowments, foundations, public employee retirement funds, banks, insurance companies and high net worth individuals worldwide.

As of December 31, 2013, the ownership structure of the Adviser, expressed as a percentage of general and limited partnership interests, was as follows:

AXA and its subsidiaries	63.1%
Holding	35.4
Unaffiliated holders	1.5
	100.0%

AXA is a *societe anonyme* organized under the laws of France and the holding company for an international group of insurance and related financial services companies, through certain of its subsidiaries (“AXA and its subsidiaries”). AllianceBernstein Holding L.P. (“Holding”) is a Delaware limited partnership the units of which (“Holding Units”), are traded publicly on the Exchange under the ticker symbol “AB”. As of December 31, 2013, AXA owned approximately 1.5% of the issued and outstanding assignments of beneficial ownership of Holding Units.

AllianceBernstein Corporation (an indirect wholly-owned subsidiary of AXA) is the general partner of both Holding and the Adviser. AllianceBernstein Corporation owns 100,000 general partnership units in Holding and a 1% general partnership interest in the Adviser. Including both the general partnership and limited partnership interests in Holding and the Adviser, AXA and its subsidiaries had an approximate 63.7% economic interest in the Adviser as of December 31, 2013.

Advisory Agreement and Expenses

The Adviser serves as investment manager and adviser of each of the Portfolios, continuously furnishes an investment program for each Portfolio, and manages, supervises and conducts the affairs of each Portfolio, subject to the oversight of the Board.

Under the Advisory Agreement, the Adviser furnishes advice and recommendations with respect to the Portfolios’ portfolios of securities and investments, and provides persons satisfactory to the Board to act as officers of the Fund. Such officers or employees may be employees of the Adviser or of its affiliates.

The Adviser is, under each Portfolio’s Advisory Agreement, responsible for certain expenses incurred by the Portfolios, including, for example, office facilities and certain administrative services, and any expenses incurred in promoting the sale of shares of the Portfolios (other than the portion of the promotional expenses borne by the Portfolios in accordance with an effective plan pursuant to Rule 12b-1 under the 1940 Act, and the costs of

printing prospectuses of the Fund and other reports to shareholders and fees related to registration with the SEC and with state regulatory authorities).

The Fund has, under the Advisory Agreement, assumed obligation to payment of all other expenses. As to the obtaining of services other than those specifically provided to the Fund by the Adviser, the Fund may employ its own personnel. For such services, the Fund may also utilize personnel employed by the Adviser or its affiliates and, in such event, the services will be provided to the Fund at cost and the payments therefore must be specifically approved by the Board. The following table shows, for the Portfolios listed, the amounts the Adviser received for such services during the fiscal year ended December 31, 2013.

<u>PORTFOLIO</u>	<u>AMOUNT RECEIVED</u>
Intermediate Bond Portfolio	\$54,102
Large Cap Growth Portfolio	\$54,101
Growth and Income Portfolio	\$54,103
Growth Portfolio	\$54,090
International Growth Portfolio	\$54,097
Global Thematic Growth Portfolio	\$54,101
Small Cap Growth Portfolio	\$57,354
Real Estate Investment Portfolio	\$55,158
International Value Portfolio	\$55,155
Small/Mid Cap Value Portfolio	\$55,161
Value Portfolio	\$55,163
Balanced Wealth Strategy Portfolio	\$55,156
Dynamic Asset Allocation Portfolio	\$54,422

The Advisory Agreement continues in effect with respect to each Portfolio, provided that such continuance is specifically approved at least annually by a vote of a majority of the Fund's outstanding voting securities or by the Board, including in either case approval by a majority of the Directors who are not parties to the Advisory Agreement or "interested persons" of such parties, as defined by the 1940 Act. Most recently, continuance of the Advisory Agreement was approved for an additional annual term by the Board, including a majority of the Directors who are not parties to the Advisory Agreement or interested persons of any such party, at meetings held on April 30-May 2, 2013, August 6-8, 2013 and November 5-7, 2013.

Any material amendment to the Advisory Agreement must be approved by the vote of a majority of the outstanding securities of the relevant Portfolio and by the vote of a majority of the Directors who are not interested persons of the Fund or the Adviser. The Advisory Agreement is terminable without penalty on 60 days' written notice by a vote of a majority of the outstanding voting securities of each Portfolio, by a vote of a majority of the Directors, or by the Adviser on 60 days' written notice, and will automatically terminate in the event of its assignment. The Advisory Agreement provides that in the absence of willful misfeasance, bad faith or gross negligence on the part of the Adviser, or of reckless disregard of its obligations thereunder, the Adviser shall not be liable for any action or failure to act in accordance with its duties thereunder.

Certain other clients of the Adviser may have investment objectives and policies similar to those of the Fund. The Adviser may, from time to time, make recommendations that

result in the purchase or sale of the particular security by its other clients simultaneously with the Fund. If transactions on behalf of more than one client during the same period increase the demand for securities being purchased or the supply of securities being sold, there may be an adverse effect on price. It is the policy of the Adviser to allocate advisory recommendations and the placing of orders in a manner that is deemed equitable by the Adviser to the accounts involved, including the Fund. When two or more of the clients of the Adviser (including the Fund) are purchasing or selling the same security on a given day from the same broker or dealer, such transactions may be averaged as to price.

For services rendered by the Adviser under the Advisory Agreement, the Portfolios paid the Adviser, effective September 7, 2004, the annual percentage rates of the average daily NAV as listed below.

<u>PORTFOLIO</u>	<u>CONTRACTUAL FEE, AS A PERCENTAGE OF THE PORTFOLIO'S AGGREGATE NET ASSETS</u>
Intermediate Bond Portfolio	.45 of 1% of the first \$2.5 billion, .40 of 1% of the excess over \$2.5 billion up to \$5 billion and .35 of 1% of the excess over \$5 billion
Large Cap Growth Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Growth and Income Portfolio	.55 of 1% of the first \$2.5 billion, .45 of 1% of the excess over \$2.5 billion up to \$5 billion and .40 of 1% of the excess over \$5 billion
International Growth Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Growth Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Global Thematic Growth Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Small Cap Growth Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Real Estate Investment Portfolio	.55 of 1% of the first \$2.5 billion, .45 of 1% of the excess over \$2.5 billion up to \$5 billion and .40 of 1% of the excess over \$5 billion
International Value Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion

<u>PORTFOLIO</u>	<u>CONTRACTUAL FEE, AS A PERCENTAGE OF THE PORTFOLIO'S AGGREGATE NET ASSETS</u>
Small/Mid Cap Value Portfolio	.75 of 1% of the first \$2.5 billion, .65 of 1% of the excess over \$2.5 billion up to \$5 billion and .60 of 1% of the excess over \$5 billion
Value Portfolio	.55 of 1% of the first \$2.5 billion, .45 of 1% of the excess over \$2.5 billion up to \$5 billion and .40 of 1% of the excess over \$5 billion
Balanced Wealth Strategy Portfolio	.55 of 1% of the first \$2.5 billion, .45 of 1% of the excess over \$2.5 billion up to \$5 billion and .40 of 1% of the excess over \$5 billion
Dynamic Asset Allocation Portfolio*	.70 of 1% of average net assets

*The Fund commenced operations April 1, 2011

These fees are accrued daily and paid monthly. The Adviser has contractually agreed for the period from the effective date of the Portfolios' Prospectuses to the effective date of the subsequent Prospectuses incorporating the Portfolios' annual financial statements (the "Period") to waive its fee and bear certain expenses so that total expenses do not exceed, on an annual basis, the percentages of average daily net assets for the share classes of the Portfolios listed below. This fee waiver and/or expense reimbursement agreement automatically extends each year unless the Adviser provides notice to the Portfolios at least 60 days prior to the end of the Period.

<u>Portfolios</u>	<u>Expense Caps</u>	
International Value Portfolio	Class A	1.20%
	Class B	1.45%
Small/Mid Cap Value Portfolio	Class A	1.20%
	Class B	1.45%
Value Portfolio	Class A	1.20%
	Class B	1.45%
Balanced Wealth Strategy Portfolio	Class A	.75%
	Class B	1.00%
Dynamic Asset Allocation Portfolio	Class A	.85%
	Class B	1.10%

The following table shows, for each Portfolio, the amounts the Adviser received for such services for the last three fiscal years (or since commencement of operations).

<u>PORTFOLIO</u>	<u>FISCAL YEAR END</u> <u>DECEMBER 31</u>	<u>AMOUNT RECEIVED</u>
Intermediate Bond Portfolio	2011	\$ 663,933
	2012	\$ 537,093
	2013	\$ 434,235

<u>PORTFOLIO</u>	<u>FISCAL YEAR END DECEMBER 31</u>	<u>AMOUNT RECEIVED</u>

	2012	\$ 929,258
	2013	\$ 835,428
International Value Portfolio	2011	\$ 9,735,549
	2012	\$ 8,309,168
	2013	\$ 6,918,754
Balanced Wealth Strategy Portfolio	2011	\$ 3,138,158
	2012	\$ 3,039,523
	2013	\$ 2,977,291
Dynamic Asset Allocation Portfolio	2011	\$ 0
	2012	\$ 715,573
	2013	\$ 1,954,572

The amounts received in the table above are net of the amounts the Adviser waived under a contractual fee waiver or otherwise. Amounts waived were:

	AMOUNT WAIVED UNDER CONTRACTUAL FEE WAIVER OR <u>OTHERWISE</u>	
Dynamic Asset Allocation Portfolio	2011	\$259,480*
	2012	\$268,372
	2013	\$106,958

* Waiver excludes administrative fee waiver. The Adviser reimbursed the Portfolio an additional amount of \$112,620 in 2011 for certain of its non-advisory expenses.

The Adviser may act as an investment adviser to other persons, firms or corporations, including investment companies, and is the investment adviser to AllianceBernstein Blended Style Series, Inc., AllianceBernstein Bond Fund, Inc., AllianceBernstein Cap Fund, Inc., AllianceBernstein Core Opportunities Fund, Inc., AllianceBernstein Corporate Shares, AllianceBernstein Discovery Growth Fund, Inc., AllianceBernstein Equity Income Fund, Inc., AllianceBernstein Exchange Reserves, AllianceBernstein Fixed-Income Shares, Inc., AllianceBernstein Global Bond Fund, Inc., AllianceBernstein Global Real Estate Investment Fund, Inc., AllianceBernstein Global Risk Allocation Fund, Inc., AllianceBernstein Global Thematic Growth Fund, Inc., AllianceBernstein Growth and Income Fund, Inc., AllianceBernstein High Income Fund, Inc., AllianceBernstein Institutional Funds, Inc., AllianceBernstein International Growth Fund, Inc., AllianceBernstein Large Cap Growth Fund, Inc., AllianceBernstein Municipal Income Fund, Inc., AllianceBernstein Municipal Income Fund II, AllianceBernstein Trust, AllianceBernstein Unconstrained Bond Fund, Inc., Sanford C. Bernstein Fund, Inc., Sanford C. Bernstein Fund II, Inc., The AllianceBernstein Pooling Portfolios and The AllianceBernstein Portfolios, all open-end investment companies; and to AllianceBernstein Global High Income Fund, Inc., AllianceBernstein Income Fund, Inc., AllianceBernstein Multi-Manager Alternative Fund, AllianceBernstein National Municipal Income Fund, Inc., Alliance California Municipal Income Fund, Inc., and Alliance New York Municipal Income Fund, Inc., all registered closed-end investment companies. The registered investment companies for which the Adviser serves as investment adviser are referred to collectively below as the “AllianceBernstein Fund Complex”, while all of these investment companies, except the Sanford C. Bernstein Fund, Inc. and the AllianceBernstein Multi-Manager Alternative Fund, are referred to collectively below as the “AllianceBernstein Funds”.

NAME, ADDRESS*, AGE AND (YEAR FIRST ELECTED**)	PRINCIPAL OCCUPATION(S) DURING PAST FIVE YEARS OR LONGER	PORTFOLIOS IN ALLIANCEBERNSTEIN FUND COMPLEX OVERSEEN BY DIRECTOR	OTHER PUBLIC COMPANY DIRECTORSHIPS HELD BY DIRECTOR IN THE PAST FIVE YEARS
	2004.		

* The address for each of the Fund’s Directors is c/o AllianceBernstein L.P., Attention: Philip L. Kirstein, 1345 Avenue of the Americas, New York, NY 10105.

** There is no stated term of office for the Fund’s Directors.

Member of the Audit Committee, the Governance and Nominating Committee and the Independent Directors Committee.

Member of the Fair Value Pricing Committee.

+ Mr. Keith is an “interested person”, as defined in Section 2(a)(19) of the 1940 Act, of the Fund due to his position as a Senior Vice President of the Adviser.

++ The Adviser and ABI are affiliates of the Fund.

^ Mr. Turner became Chairman of the Board on January 1, 2014.

The business and affairs of the Fund are managed under the direction of the Board. Directors who are not “interested persons” of the Fund as defined in the 1940 Act, are referred to as “Independent Directors”, and Directors who are “interested persons” of the Fund are referred to as “Interested Directors”. Certain information concerning the Fund’s governance structure and each Director is set forth below.

Experience, Skills, Attributes, and Qualifications of the Fund’s Directors. The Governance and Nominating Committee of the Board, which is composed of Independent Directors, reviews the experience, qualifications, attributes and skills of potential candidates for nomination or election by the Board, and conducts a similar review in connection with the proposed nomination of current Directors for re-election by shareholders at any annual or special meeting of shareholders. In evaluating a candidate for nomination or election as a Director the Governance and Nominating Committee takes into account the contribution that the candidate would be expected to make to the diverse mix of experience, qualifications, attributes and skills that the Governance and Nominating Committee believes contributes to good governance for the Fund. Additional information concerning the Governance and Nominating Committee’s consideration of nominees appears in the description of the Committee below.

The Board believes that, collectively, the Directors have balanced and diverse experience, qualifications, attributes, and skills, which allow the Board to operate effectively in governing the Fund and protecting the interests of shareholders. The Board has concluded that, based on each Director’s experience, qualifications, attributes or skills on an individual basis and in combination with those of the other Directors, each Director is qualified and should continue to serve as such.

In determining that a particular Director was and continues to be qualified to serve as a Director, the Board has considered a variety of criteria, none of which, in isolation, was controlling. In addition, the Board has taken into account the actual service and

commitment of each Director during his or her tenure (including the Director's commitment and participation in Board and committee meetings, as well as his or her current and prior leadership of standing and ad hoc committees) in concluding that each should continue to serve. Additional information about the specific experience, skills, attributes and qualifications of each Director, which in each case led to the Board's conclusion that the Director should serve (or continue to serve) as a trustee or director of the Fund, is provided in the table above and in the next paragraph.

Among other attributes and qualifications common to all Directors are their ability to review critically, evaluate, question and discuss information provided to them (including information requested by the Directors), to interact effectively with the Adviser, other service providers, counsel and the Fund's independent registered public accounting firm, and to exercise effective business judgment in the performance of their duties as Directors. In addition to his or her service as a Director of the Fund and other AllianceBernstein Funds as noted in the table above: Mr. Dobkin has experience as an executive of a number of organizations and served as Chairman of the Audit Committee of many of the AllianceBernstein Funds from 2001 to 2008; Mr. Downey has experience in the investment advisory business including as Chairman and Chief Executive Officer of a large fund complex and as director of a number of non-AllianceBernstein funds and as Chairman of a non-AllianceBernstein closed-end fund; Mr. Foulk has experience in the investment advisory and securities businesses, including as Deputy Comptroller and Chief Investment Officer of the State of New York (where his responsibilities included bond issuances, cash management and oversight of the New York Common Retirement Fund), has served as Chairman of the Independent Directors Committee from 2003 until early February 2014, served as Chairman of the AllianceBernstein Funds from 2003 through December 2013, and is active in a number of mutual fund-related organizations and committees; Mr. Guzy has experience as a corporate director including as Chairman of a public company and Chairman of the Finance Committee of a large public technology company; Ms. Jacklin has experience as a financial services regulator including as U.S. Executive Director of the International Monetary Fund, which is responsible for ensuring the stability of the international monetary system, and as a financial services lawyer in private practice; Mr. Keith has experience as an executive of the Adviser with responsibility for, among other things, the AllianceBernstein Funds; Mr. Moody has experience as a certified public accountant including experience as Vice Chairman and U.S. and Global Investment Management Practice Partner for a major accounting firm, is a member of both the governing council of an organization of independent directors of mutual funds, and the Trustee Advisory Board of BoardIQ, a biweekly publication focused on issues and news affecting directors of mutual funds, has served as a director of Greenbacker Renewable Energy Company LLC and has served as a director or trustee and Chairman of the Audit Committee of the AllianceBernstein Funds since 2008; Mr. Turner has experience as a director (including as Chairman and Chief Executive officer of a number of companies) and as a venture capital investor including prior service as general partner of three institutional venture capital partnerships, and has served as Chairman of the AllianceBernstein Funds since January 2014 and the Independent Directors Committee of such Funds since February 2014; and Mr. Weiner has experience as a securities lawyer whose practice includes registered investment companies and as Chairman, director or trustee of a number of boards, and has served as Chairman of the Governance and Nominating Committee of the AllianceBernstein Funds since 2007. The disclosure herein of a director's experience, qualifications, attributes and skills does not impose on such director any duties, obligations, or liability that are greater than the duties,

obligations and liability imposed on such director as a member of the Board and any committee thereof in the absence of such experience, qualifications, attributes and skills.

Board Structure and Oversight Function. The Board is responsible for oversight of the Fund. The Fund has engaged the Adviser to manage the Fund's Portfolios on a day-to-day basis. The Board is responsible for overseeing the Adviser and the Fund's other service providers in the operations of the Fund in accordance with each Portfolio's investment objective and policies and otherwise in accordance with its prospectus, the requirements of the 1940 Act and other applicable Federal, state and other securities and other laws, and the Fund's charter and bylaws. The Board typically meets in-person at regularly scheduled meetings eight times throughout the year. In addition, the Directors may meet in-person or by telephone at special meetings or on an informal basis at other times. The Independent Directors also regularly meet without the presence of any representatives of management. As described below, the Board has established four standing committees – the Audit, Governance and Nominating, Independent Directors, and Fair Value Pricing Committees – and may establish ad hoc committees or working groups from time to time, to assist the Board in fulfilling its oversight responsibilities. Each committee is composed exclusively of Independent Directors. The responsibilities of each committee, including its oversight responsibilities, are described further below. The Independent Directors have also engaged independent legal counsel, and may, from time to time, engage consultants and other advisors, to assist them in performing their oversight responsibilities.

An Independent Director serves as Chairman of the Board. The Chairman's duties include setting the agenda for each Board meeting in consultation with management, presiding at each Board meeting, meeting with management between Board meetings, and facilitating communication and coordination between the Independent Directors and management. The Directors have determined that the Board's leadership by an Independent Director and its committees composed exclusively of Independent Directors is appropriate because they believe it sets the proper tone to the relationships between the Fund, on the one hand, and the Adviser and other service providers, on the other, and facilitates the exercise of the Board's independent judgment in evaluating and managing the relationships. In addition, the Fund is required to have an Independent Director as Chairman pursuant to certain 2003 regulatory settlements involving the Adviser.

Risk Oversight. The Fund and its Portfolios are subject to a number of risks, including investment, compliance and operational risks. Day-to-day risk management with respect to the Fund and its Portfolios resides with the Adviser or other service providers (depending on the nature of the risk), subject to supervision by the Adviser. The Board has charged the Adviser and its affiliates with (i) identifying events or circumstances the occurrence of which could have demonstrable and material adverse effects on the Fund or its Portfolios; (ii) to the extent appropriate, reasonable or practicable, implementing processes and controls reasonably designed to lessen the possibility that such events or circumstances occur or to mitigate the effects of such events or circumstances if they do occur; and (iii) creating and maintaining a system designed to evaluate continuously, and to revise as appropriate, the processes and controls described in (i) and (ii) above.

Risk oversight forms part of the Board's general oversight of the Portfolios' investment programs and operations and is addressed as part of various regular Board and

committee activities. The Fund's investment management and business affairs are carried out by or through the Adviser and other service providers. Each of these persons has an independent interest in risk management but the policies and the methods by which one or more risk management functions are carried out may differ from the Fund's and each other's in the setting of priorities, the resources available or the effectiveness of relevant controls. Oversight of risk management is provided by the Board and the Audit Committee. The Directors regularly receive reports from, among others, management (including the Global Heads of Investment Risk and Trading Risk of the Adviser), the Fund's Senior Officer (who is also the Fund's independent compliance officer), the Fund's Chief Compliance Officer, its independent registered public accounting firm, counsel, and internal auditors for the Adviser, as appropriate, regarding risks faced by the Fund and its Portfolios and the Adviser's risk management programs.

Not all risks that may affect the Fund and its Portfolios can be identified, nor can controls be developed to eliminate or mitigate their occurrence or effects. It may not be practical or cost-effective to eliminate or mitigate certain risks, the processes and controls employed to address certain risks may be limited in their effectiveness, and some risks are simply beyond the reasonable control of the Fund or the Adviser, its affiliates or other service providers. Moreover, it is necessary to bear certain risks (such as investment-related risks) to achieve the Portfolios' goals. As a result of the foregoing and other factors the Fund's and its Portfolios' ability to manage risk is subject to substantial limitations.

Board Committees. The Board has four standing committees - an Audit Committee, a Governance and Nominating Committee, a Fair Value Pricing Committee and an Independent Directors Committee. The members of the Audit, Governance and Nominating, Fair Value Pricing, and Independent Directors Committees are identified above.

The function of the Audit Committee is to assist the Board in its oversight of the Portfolios' financial reporting process. The Audit Committee met three times during each Portfolios' most recently completed fiscal year.

The function of the Governance and Nominating Committee includes the nomination of persons to fill any vacancies or newly created positions on the Board. The Governance and Nominating Committee met three times during each Portfolios' most recently completed fiscal year.

The Board has adopted a charter for its Governance and Nominating Committee. Pursuant to the charter, the Committee assists the Board in carrying out its responsibilities with respect to governance of the Fund and identifies, evaluates, selects and nominates candidates for the Board. The Committee may also set standards or qualifications for Directors and reviews at least annually the performance of each Director, taking into account factors such as attendance at meetings, adherence to Board policies, preparation for and participation at meetings, commitment and contribution to the overall work of the Board and its committees, and whether there are health or other reasons that might affect the Director's ability to perform his or her duties. The Committee may consider candidates as Directors submitted by the Fund's current Board members, officers, the Adviser, stockholders and other appropriate sources.

Pursuant to the Charter, the Governance and Nominating Committee will consider candidates for nomination as a Director submitted by a shareholder or group of shareholders who have beneficially owned at least 5% of a Portfolio's common stock or shares of beneficial interest for at least two years prior to the time of submission and who timely provide specified information about the candidates and the nominating shareholder or group. To be timely for consideration by the Governance and Nominating Committee, the submission, including all required information, must be submitted in writing to the attention of the Secretary at the principal executive offices of the Fund no less than 120 days before the date of the proxy statement for the previous year's annual meeting of shareholders. If the Fund did not hold an annual meeting of shareholders in the previous year, the submission must be delivered or mailed and received within a reasonable amount of time before the Fund begins to print and mail its proxy materials. Public notice of such upcoming annual meeting of shareholders may be given in a shareholder report or other mailing to shareholders or by other means deemed by the Governance and Nominating Committee or the Board to be reasonably calculated to inform shareholders.

Shareholders submitting a candidate for consideration by the Governance and Nominating Committee must provide the following information to the Governance and Nominating Committee: (i) a statement in writing setting forth (A) the name, date of birth, business address and residence address of the candidate; (B) any position or business relationship of the candidate, currently or within the preceding five years, with the shareholder or an associated person of the shareholder as defined below; (C) the class or series and number of all shares of a Portfolio owned of record or beneficially by the candidate; (D) any other information regarding the candidate that is required to be disclosed about a nominee in a proxy statement or other filing required to be made in connection with the solicitation of proxies for election of Directors pursuant to Section 20 of the 1940 Act and the rules and regulations promulgated thereunder; (E) whether the shareholder believes that the candidate is or will be an "interested person" of the Fund (as defined in the 1940 Act) and, if believed not to be an "interested person", information regarding the candidate that will be sufficient for the Fund to make such determination; and (F) information as to the candidate's knowledge of the investment company industry, experience as a director or senior officer of public companies, directorships on the boards of other registered investment companies and educational background; (ii) the written and signed consent of the candidate to be named as a nominee and to serve as a Director if elected; (iii) the written and signed agreement of the candidate to complete a directors' and officers' questionnaire if elected; (iv) the shareholder's consent to be named as such by the Fund; (v) the class or series and number of all shares of each Portfolio of the Fund owned beneficially and of record by the shareholder and any associated person of the shareholder and the dates on which such shares were acquired, specifying the number of shares owned beneficially but not of record by each, and stating the names of each as they appear on the Fund's record books and the names of any nominee holders for each; and (vi) a description of all arrangements or understandings between the shareholder, the candidate and/or any other person or persons (including their names) pursuant to which the recommendation is being made by the shareholder. "Associated person of the shareholder" means any person who is required to be identified under clause (vi) of this paragraph and any other person controlling, controlled by or under common control with, directly or indirectly, (a) the shareholder or (b) the associated person of the shareholder.

The Governance and Nominating Committee may require the shareholder to furnish such other information as it may reasonably require or deem necessary to verify any information furnished pursuant to the nominating procedures described above or to determine the qualifications and eligibility of the candidate proposed by the shareholder to serve on the Board. If the shareholder fails to provide such other information in writing within seven days of receipt of written request from the Governance and Nominating Committee, the recommendation of such candidate as a nominee will be deemed not properly submitted for consideration, and will not be considered, by the Committee.

The Governance and Nominating Committee will consider only one candidate submitted by such a shareholder or group for nomination for election at an annual meeting of shareholders. The Governance and Nominating Committee will not consider self-nominated candidates. The Governance and Nominating Committee will consider and evaluate candidates submitted by shareholders on the basis of the same criteria as those used to consider and evaluate candidates submitted from other sources. These criteria include the candidate's relevant knowledge, experience, and expertise, the candidate's ability to carry out his or her duties in the best interests of the Fund, and the candidate's ability to qualify as an Independent Director or Director. When assessing a candidate for nomination, the Committee considers whether the individual's background, skills, and experience will complement the background, skills, and experience of other nominees and will contribute to the diversity of the Board.

The function of the Fair Value Pricing Committee is to consider, in advance if possible, any fair valuation decision of the Adviser's Valuation Committee relating to a security held by a Portfolio made under unique or highly unusual circumstances not previously addressed by the Valuation Committee that would result in a change in the Portfolio's NAV by more than \$0.01 per share. The Fair Value Pricing Committee did not meet during the Portfolios' most recently completed fiscal year.

The function of the Independent Directors Committee is to consider and take action on matters that the Board or Committee believes should be addressed in executive session of the Independent Directors, such as review and approval of the Advisory and Distribution Services Agreements. The Independent Directors Committee met seven times during the Portfolios' most recently completed fiscal year.

The dollar range of the Fund's securities owned by each Director and the aggregate dollar range of securities of funds in the AllianceBernstein Fund Complex owned by each Director are set forth below.

	DOLLAR RANGE OF EQUITY SECURITIES IN THE PORTFOLIOS AS OF <u>DECEMBER 31, 2013*</u>	AGGREGATE DOLLAR RANGE OF EQUITY SECURITIES IN THE ALLIANCEBERNSTEIN FUND COMPLEX AS OF <u>DECEMBER 31, 2013</u>
John H. Dobkin	None	Over \$100,000
Michael J. Downey	None	Over \$100,000
William H. Foulk, Jr.	None	Over \$100,000
D. James Guzy	None	Over \$100,000

* The address for each of the Fund's Officers is 1345 Avenue of the Americas, New York, NY 10105.

** The Adviser, ABI and ABIS are affiliates of the Fund.

The Fund's Portfolios do not pay any fees to, or reimburse expenses of, its Directors who are considered "interested persons" of the Fund. The aggregate compensation paid by the Fund's Portfolios to each of the Directors during each Portfolio's fiscal year ended December 31, 2013, the aggregate compensation paid to each of the Directors during calendar year 2013 by the AllianceBernstein Fund Complex, and the total number of registered investment companies (and separate investment portfolios within those companies) in the AllianceBernstein Fund Complex with respect to which each of the Directors serves as a director or trustee, are set forth below. Neither the Fund or its Portfolios nor any other registered investment company in the AllianceBernstein Fund Complex provides compensation in the form of pension or retirement benefits to any of its directors or trustees. Each of the Directors is a director or trustee of one or more registered investment companies in the AllianceBernstein Fund Complex.

As of April 4, 2014, the Directors and officers of the Fund as a group owned less than 1% of the shares of the Fund.

Additional Information About The Portfolios' Portfolio Managers

Additional information regarding the investment professional(s)² primarily responsible for the day-to-day management of each Portfolio's portfolio may be found below. For additional information about the portfolio management of each Portfolio, see "Management of the Portfolios – Portfolio Managers" in the Portfolio's Prospectuses.

None of the investment professionals identified below owned any equity securities of the Portfolio directly or indirectly because shares of the Portfolio are held through the separate accounts of certain life insurance companies (the "Insurers").

INTERMEDIATE BOND PORTFOLIO

The day-to-day management of, and investment decisions for, the Portfolio are made by the Adviser's U.S. Core Fixed Income Investment Team. Mr. Paul J. DeNoon, Mr. Shawn E. Keegan, Ms. Alison M. Martier, Mr. Douglas J. Peebles and Mr. Greg J. Wilensky are the investment professionals with the most significant responsibility for the day-to-day management of the Portfolio.

The following tables provide information regarding registered investment companies other than the Portfolio, other pooled investment vehicles and other accounts over which Mr. Paul J. DeNoon, Mr. Shawn E. Keegan, Ms. Alison M. Martier, Mr. Douglas J. Peebles and Mr. Greg J. Wilensky also have day-to-day management responsibilities. The tables provide the numbers of such accounts, the total assets in such accounts and the number of accounts and total assets whose fees are based on performance. The information is provided as of December 31, 2013.

REGISTERED INVESTMENT COMPANIES (excluding the Portfolio)				
Portfolio Manager	Total Number of Registered Investment Companies Managed	Total Assets of Registered Investment Companies Managed	Number of Registered Investment Companies Managed with Performance-based Fees	Total Assets of Registered Investment Companies Managed with Performance-based Fees
Paul J. DeNoon	8	\$16,787,000,000	None	None
Shawn E. Keegan	1	\$227,000,000	None	None
Alison M. Martier	39	\$8,576,000,000	None	None
Douglas J. Peebles	32	\$8,520,000,000	None	None
Greg J. Wilensky	39	\$8,576,000,000	None	None

² Investment professionals at the Adviser include portfolio managers and research analysts. Investment professionals are part of investment groups (or teams) that service individual fund portfolios. The number of investment professionals assigned to a particular Portfolio will vary from Portfolio to Portfolio.

INTERNATIONAL VALUE PORTFOLIO

The management of, and investment decisions for, the Portfolio's portfolio are made by the International Value Senior Investment Management Team. Mr. Takeo Aso, Ms. Sharon E. Fay, Mr. Avi Lavi and Mr. Kevin F. Simms are the investment professionals with the most significant responsibility for the day-to-day management of the Portfolio's portfolio.

The following tables provide information regarding registered investment companies other than the Portfolio, other pooled investment vehicles and other accounts over which the Portfolio's portfolio managers also have day-to-day management responsibilities³. The tables provide the numbers of such accounts, the total assets in such accounts and the number of accounts and total assets whose fees are based on performance. The information is provided as of the Portfolio's fiscal year ended December 31, 2013.

³ Each investment vehicle or account represented in the chart, for which the investment professionals have portfolio management responsibility, is based upon one of eleven model portfolios. Each vehicle or account differs from its respective model portfolio only to a limited extent based on specific client requirements relating to tax considerations, cash flows due to the frequency and amount of investments, the client's country of residence and currency strategies related thereto, and/or client-imposed investment restrictions regarding particular types of companies or industries.

Investment Professional Conflict of Interest Disclosure

As an investment adviser and fiduciary, the Adviser owes its clients and shareholders an undivided duty of loyalty. The Adviser recognizes that conflicts of interest are inherent in its business and accordingly has developed policies and procedures (including oversight monitoring) reasonably designed to detect, manage and mitigate the effects of actual or potential conflicts of interest in the area of employee personal trading, managing multiple accounts for multiple clients, including AllianceBernstein Mutual Funds, and allocating investment opportunities. Investment professionals, including portfolio managers and research analysts, are subject to the above-mentioned policies and oversight monitoring to ensure that all clients are treated equitably. The Adviser places the interests of its clients first and expects all of its employees to meet their fiduciary duties.

Employee Personal Trading. The Adviser has adopted a Code of Business Conduct and Ethics that is designed to detect and prevent conflicts of interest when investment professionals and other personnel of the Adviser own, buy or sell securities which may be owned by, or bought or sold for, clients. Personal securities transactions by an employee may raise a potential conflict of interest when an employee owns or trades in a security that is owned or considered for purchase or sale by a client, or recommended for purchase or sale by an employee to a client. Subject to the reporting requirements and other limitations of its Code of Business Conduct and Ethics, the Adviser permits its employees to engage in personal securities transactions, and also allows them to acquire investments in certain Funds managed by the Adviser. The Adviser's Code of Business Conduct and Ethics requires disclosure of all personal accounts and maintenance of brokerage accounts with designated broker-dealers approved by the Adviser. The Code of Business Conduct and Ethics also requires preclearance of all securities transactions (except transactions in U.S. Treasuries and open-end mutual funds) and imposes a 90-day holding period for securities purchased by employees to discourage short-term trading.

Managing Multiple Accounts for Multiple Clients. The Adviser has compliance policies and oversight monitoring in place to address conflicts of interest relating to the management of multiple accounts for multiple clients. Conflicts of interest may arise when an investment professional has responsibilities for the investments of more than one account because the investment professional may be unable to devote equal time and attention to each account. The investment professional or investment professional teams for each client may have responsibilities for managing all or a portion of the investments of multiple accounts with a common investment strategy, including other registered investment companies, unregistered investment vehicles, such as hedge funds, pension plans, separate accounts, collective trusts and charitable foundations. Among other things, the Adviser's policies and procedures provide for the prompt dissemination to investment professionals of initial or changed investment recommendations by analysts so that investment professionals are better able to develop investment strategies for all accounts they manage. In addition, investment decisions by investment professionals are reviewed for the purpose of maintaining uniformity among similar accounts and ensuring that accounts are treated equitably. Investment professional compensation reflects a broad contribution in multiple dimensions to long-term investment success for our clients and is generally not tied specifically to the performance of any particular client's account, nor is it generally tied directly to the level or change in level of assets under management.

Allocating Investment Opportunities. The investment professionals at the Adviser routinely are required to select and allocate investment opportunities among accounts. The Adviser has adopted policies and procedures intended to address conflicts of interest relating to the allocation of investment opportunities. These policies and procedures are designed to ensure that information relevant to investment decisions is disseminated promptly within its portfolio management teams and investment opportunities are allocated equitably among different clients. The policies and procedures require, among other things, objective allocation for limited investment opportunities (*e.g.*, on a rotational basis), and documentation and review of justifications for any decisions to make investments only for select accounts or in a manner disproportionate to the size of the account. Portfolio holdings, position sizes, and industry and sector exposures tend to be similar across similar accounts, which minimizes the potential for conflicts of interest relating to the allocation of investment opportunities. Nevertheless, access to portfolio funds or other investment opportunities may be allocated differently among accounts due to the particular characteristics of an account, such as size of the account, cash position, tax status, risk tolerance and investment restrictions or for other reasons.

The Adviser's procedures are also designed to address potential conflicts of interest that may arise when the Adviser has a particular financial incentive, such as a performance-based management fee, relating to an account. An investment professional may perceive that he or she has an incentive to devote more time to developing and analyzing investment strategies and opportunities or allocating securities preferentially to accounts for which the Adviser could share in investment gains.

Portfolio Manager Compensation

The Adviser's compensation program for portfolio managers is designed to align with clients' interests, emphasizing each portfolio manager's ability to generate long-term investment success for the Adviser's clients, including the Portfolios. The Adviser also strives to ensure that compensation is competitive and effective in attracting and retaining the highest caliber employees.

Portfolio managers receive a base salary, incentive compensation and contributions to AllianceBernstein's 401(k) plan. Part of the annual incentive compensation is generally paid in the form of a cash bonus, and part through an award under the firm's Incentive Compensation Award Plan (ICAP). The ICAP awards vest over a four-year period. Deferred awards are paid in the form of restricted grants of the firm's Master Limited Partnership Units, and award recipients have the ability to receive a portion of their awards in deferred cash. The amount of contributions to the 401(k) plan is determined at the sole discretion of the Adviser. On an annual basis, the Adviser endeavors to combine all of the foregoing elements into a total compensation package that considers industry compensation trends and is designed to retain its best talent.

The incentive portion of total compensation is determined by quantitative and qualitative factors. Quantitative factors, which are weighted more heavily, are driven by investment performance. Qualitative factors are driven by contributions to the investment process and client success.

The quantitative component includes measures of absolute, relative and risk-adjusted investment performance. Relative and risk-adjusted returns are determined based on the benchmark in the Portfolios' Prospectuses and versus peers over one-, three- and five-year calendar periods, with more weight given to longer-time periods. Peer groups are chosen by Chief Investment Officers, who consult with the product management team to identify products most similar to our investment style and most relevant within the asset class. Portfolio managers of the Portfolios do not receive any direct compensation based upon the investment returns of any individual client account, and compensation is not tied directly to the level or change in level of assets under management.

Among the qualitative components considered, the most important include thought leadership, collaboration with other investment colleagues, contributions to risk-adjusted returns of other portfolios in the firm, efforts in mentoring and building a strong talent pool and being a good corporate citizen. Other factors can play a role in determining portfolio managers' compensation, such as the complexity of investment strategies managed, volume of assets managed and experience.

The Adviser emphasizes four behavioral competencies—relentlessness, ingenuity, team orientation and accountability—that support its mission to be the most trusted advisor to its clients. Assessments of investment professionals are formalized in a year-end review process that includes 360-degree feedback from other professionals from across the investment teams and the Adviser.

EXPENSES OF THE PORTFOLIOS

Distribution Services Agreement

The Fund has entered into a Distribution Services Agreement (the “Agreement”) with ABI, the Fund’s principal underwriter, to permit ABI to distribute the Portfolios’ shares and to permit each Portfolio of the Fund to pay distribution services fees to defray expenses associated with distribution of its Class B shares in accordance with a plan of distribution that is included in the Agreement and that has been duly adopted and approved in accordance with Rule 12b-1 adopted by the SEC under the 1940 Act (the “Plan”).

In approving the Plan, the Directors determined that there was a reasonable likelihood that the Plan would benefit each Portfolio and its Class B shareholders. The Adviser may, from time to time, and from its own funds or such other resources as may be permitted by rules of the SEC, make payments for distribution services to ABI; the latter may in turn pay part or all of such compensation to brokers or other persons for their distribution assistance.

The Plan will continue in effect for successive one-year periods, provided that each such continuance is specifically approved at least annually by a majority of the Independent Directors of the Fund who have no direct or indirect financial interest in the operation of the Plan or in any agreement relating to the Plan (“Qualified Directors”) and by a vote of a majority of the entire Board at a meeting called for that purpose. Most recently, continuance of the Agreement

was approved for an additional annual term by the Board, including a majority of the Directors who are not parties to the Agreement or interested persons of such party, at a meeting held on April 30-May 2, 2013.

All material amendments to the Plan will become effective only on approval as specified in the preceding paragraph and the Plan may not be amended in order to materially increase the costs that the Portfolios may bear pursuant to the Plan without the approval of a majority of the holders of the outstanding voting shares of the Class B shares of the Portfolios.

The Agreement may be terminated with respect to a Portfolio (i) by ABI or (ii) by a Portfolio without payment of any penalty upon the vote of a majority of the outstanding voting securities of the Portfolio, voting separately by class, or by vote of a majority of the Qualified Directors. To terminate an Agreement, any party must give the other 60 days' written notice; to terminate a Plan only, a Portfolio is not required to give prior notice to ABI. The Agreement will terminate automatically in the event of an assignment. The Plan is of a type known as a "compensation plan", which means that it compensates the distributor for services rendered even if the amount paid exceeds the distributor's expenses.

In the event that the Agreement is terminated by either party or not continued with respect to the Class B shares of a Portfolio, (i) no distribution services fees (other than current amounts accrued but not yet paid) would be owed by the Fund to ABI with respect to Class B shares of such Portfolio and (ii) the Fund would not be obligated to pay ABI for any amounts expended under the Agreement not previously recovered by ABI from distribution services fees in respect of shares of such class.

During the fiscal year ended December 31, 2013, the Portfolios paid distribution services fees for expenditures under the Agreement, with respect to Class B shares, in aggregate amounts as described in the table below.

<u>Fund</u>	<u>Distribution services fees for expenditures payable to ABI</u>	<u>Percentage per annum of the aggregate average daily net assets attributable to Class B shares</u>
Intermediate Bond Portfolio	\$65,150	.25%
Large Cap Growth Portfolio	\$517,869	.25%
Growth and Income Portfolio	\$1,799,452	.25%
Growth Portfolio	\$122,506	.25%

PURCHASE AND REDEMPTION OF SHARES

The following information supplements that set forth in the Portfolios' Prospectuses under the heading "Investing in the Portfolios".

Shares of each Portfolio are offered at NAV on a continuous basis to the separate accounts of the Insurers without any sales or other charge. The separate accounts of insurance companies place orders to purchase shares based on, among other things, the amount of premium payments to be invested and surrendered and transfer requests to be effected pursuant to variable contracts funded by shares of the Portfolio. The Fund reserves the right to suspend the sale of its shares in response to conditions in the securities markets or for other reasons. See the prospectus of the separate account of the participating insurance company for more information on the purchase of shares.

The Insurers maintain omnibus account arrangements with the Fund in respect of one or more Portfolios and place aggregate purchase, redemption and exchange orders for shares of a Portfolio corresponding to orders placed by the Insurers' customers ("Contractholders") who have purchased contracts from the Insurers, in each case, in accordance with the terms and conditions of the relevant contract. Omnibus account arrangements maintained by the Insurers are discussed below.

Frequent Purchase and Sales of Portfolio Shares

The Board has adopted policies and procedures designed to detect and deter frequent purchases and redemptions of Portfolio shares or excessive or short-term trading that may disadvantage long-term Contractholders. These policies are described below. There is no guarantee that a Portfolio will be able to detect excessive or short-term trading or to identify Contractholders engaged in such practices. Contractholders engaged in such practices, particularly with respect to transactions in omnibus accounts. Contractholders should be aware that application of these policies may have adverse consequences, as described below, and should avoid frequent trading in Portfolio shares through purchases, sales and exchanges of shares. Each Portfolio reserves the right to restrict, reject or cancel, without any prior notice, any purchase or exchange order for any reason, including any purchase or exchange order accepted by any Insurer or a Contractholder's financial intermediary.

Risks Associated with Excessive or Short-Term Trading Generally. While the Fund will try to prevent market timing by utilizing the procedures described below, these procedures may not be successful in identifying or stopping excessive or short-term trading attributable to particular Contractholders in all circumstances. By realizing profits through short-term trading, Contractholders that engage in rapid purchases and sales or exchanges of a Portfolio's shares dilute the value of shares held by long-term Contractholders. Volatility resulting from excessive purchases and sales or exchanges of shares of a Portfolio, especially involving large dollar amounts, may disrupt efficient portfolio management and cause a Portfolio to sell portfolio securities at inopportune times to raise cash to accommodate redemptions relating to short-term trading activity. In particular, a Portfolio may have difficulty

implementing its long-term investment strategies if it is forced to maintain a higher level of its assets in cash to accommodate significant short-term trading activity. In addition, a Portfolio may incur increased administrative and other expenses due to excessive or short-term trading and increased brokerage costs.

Investments in securities of foreign issuers may be particularly susceptible to short-term trading strategies. This is because securities of foreign issuers are typically traded on markets that close well before the time a Portfolio ordinarily calculates its NAV at 4:00 p.m., Eastern Time, which gives rise to the possibility that developments may have occurred in the interim that would affect the value of these securities. The time zone differences among international stock markets can allow a Contractholder engaging in a short-term trading strategy to exploit differences in share prices that are based on closing prices of securities of foreign issuers established some time before a Portfolio calculates its own share price (referred to as “time zone arbitrage”). Each of the Portfolios has procedures, referred to as fair value pricing, designed to adjust closing market prices of securities of foreign issuers to reflect what is believed to be fair value of those securities at the time the Portfolio calculates its NAV. While there is no assurance, each of the Portfolios expects that the use of fair value pricing, in addition to the short-term trading policies discussed below, will significantly reduce a Contractholder’s ability to engage in time zone arbitrage to the detriment of other Contractholders.

Contractholders engaging in a short-term trading strategy may also target a Portfolio that does not invest primarily in securities of foreign issuers. Any Portfolio that invests in securities that are, among other things, thinly traded, traded infrequently, or relatively illiquid has the risk that the current market price for the securities may not accurately reflect current market values. Contractholders may seek to engage in short-term trading to take advantage of these pricing differences (referred to as “price arbitrage”). All Portfolios may be adversely affected by price arbitrage.

Policy Regarding Short-term Trading. Purchases and exchanges of shares of the Portfolios should be made for investment purposes only. The Fund seeks to prevent patterns of excessive purchases and sales or exchanges of shares of the Portfolios. The Fund seeks to prevent such practices to the extent they are detected by the procedures described below, subject to the Fund’s ability to monitor purchase, sale and exchange activity. Insurers utilizing omnibus account arrangements may not identify to the Fund, ABI or ABIS Contractholders’ transaction activity relating to shares of a particular Portfolio on an individual basis. Consequently, the Fund, ABI and ABIS may not be able to detect excessive or short-term trading in shares of a Portfolio attributable to a particular Contractholder who effects purchase and redemption and/or exchange activity in shares of the Portfolio through an Insurer acting in an omnibus capacity. In seeking to prevent excessive or short-term trading in shares of the Portfolios, including the maintenance of any transaction surveillance or account blocking procedures, the Fund, ABI and ABIS consider the information actually available to them at the time. The Fund reserves the right to modify this policy, including any surveillance or account blocking procedures established from time to time to effectuate this policy, at any time without notice.

Transaction Surveillance Procedures. The Portfolios, through their agents, ABI and ABIS, maintain surveillance procedures to detect excessive or short-term trading in Portfolio shares. This surveillance process involves several factors, which include

scrutinizing individual Insurers' omnibus transaction activity in Portfolio shares in order to seek to ascertain whether any such activity attributable to one or more Contractholders might constitute excessive or short-term trading. Insurers' omnibus transaction activity identified by these surveillance procedures, or as a result of any other information actually available at the time, will be evaluated to determine whether such activity might indicate excessive or short-term trading activity attributable to one or more Contractholders. These surveillance procedures may be modified from time to time, as necessary or appropriate to improve the detection of excessive or short-term trading or to address specific circumstances.

Account Blocking Procedures. If the Fund determines, in its sole discretion, that a particular transaction or pattern of transactions identified by the transaction surveillance procedures described above is excessive or short-term trading in nature, the relevant Insurers' omnibus account(s) will be immediately "blocked" and no future purchase or exchange activity will be permitted, except to the extent the Fund, ABI or ABIS has been informed in writing that the terms and conditions of a particular contract may limit the Fund's ability to apply its short-term trading policy to Contractholder activity as discussed below. As a result, any Contractholder seeking to engage through an Insurer in purchase or exchange activity in shares of one or more Portfolios under a particular contract will be prevented from doing so. However, sales of Portfolio shares back to the Portfolio or redemptions will continue to be permitted in accordance with the terms of the Portfolio's current Prospectus. In the event an account is blocked, certain account-related privileges, such as the ability to place purchase, sale and exchange orders over the internet or by phone, may also be suspended. As a result, unless the Contractholder redeems his or her shares, the Contractholder effectively may be "locked" into an investment in shares of one or more of the Portfolios that the Contractholder did not intend to hold on a long-term basis or that may not be appropriate for the Contractholder's risk profile. To rectify this situation, a Contractholder with a "blocked" account may be forced to redeem Portfolio shares, which could be costly if, for example, these shares have declined in value. To avoid this risk, a Contractholder should carefully monitor the purchases, sales, and exchanges of Portfolio shares and should avoid frequent trading in Portfolio shares. An Insurer's omnibus account that is blocked will generally remain blocked unless and until the Insurer provides evidence or assurance acceptable to the Fund that one or more Contractholders did not or will not in the future engage in excessive or short-term trading.

Applications of Surveillance Procedures and Restrictions to Omnibus Accounts. The Portfolios apply their surveillance procedures to Insurers. As required by SEC rules, the Portfolios have entered into agreements with all of their financial intermediaries that require the financial intermediaries to provide the Portfolios, upon the request of the Portfolios or their agents, with individual account level information about their transactions. If the Portfolios detect excessive trading through their monitoring of omnibus accounts, including trading at the individual account level, Insurers will also execute instructions from the Portfolios to take actions to curtail the activity, which may include applying blocks to accounts to prohibit future purchases and exchanges of Portfolio shares.

Redemption of Shares

An insurance company separate account may redeem all or any portion of the shares in its account at any time at the NAV next determined after a redemption request in the proper form is furnished to the Fund. Any certificates representing shares being redeemed must be submitted with the redemption request. Shares do not earn dividends on the day they are redeemed, regardless of whether the redemption request is received before or after the time of computation of NAV that day. There is no redemption charge. The redemption proceeds will normally be sent within 7 days.

The right of redemption may be suspended or the date of payment may be postponed for any period during which the Exchange is closed (other than customary weekend and holiday closings) or during which the SEC determines that trading thereon is restricted, or for any period during which an emergency (as determined by the SEC) exists as a result of which disposal by the Fund of securities owned by a Portfolio is not reasonably practicable or as a result of which it is not reasonably practicable for the Fund fairly to determine the value of a Portfolio's net assets, or for such other periods as the SEC may by order permit for the protection of security holders of the Portfolios. For information regarding how to redeem shares in the Portfolios, please see your insurance company's separate account prospectus.

The value of a shareholder's shares on redemption or repurchase may be more or less than the cost of such shares to the shareholder, depending upon the market value of the Portfolio's securities at the time of such redemption or repurchase. Payment either in cash or in portfolio securities received by a shareholder upon redemption or repurchase of his shares, assuming the shares constitute capital assets in his hands, will result in long-term or short-term capital gains (or losses) depending upon the shareholder's holding period and basis in respect of the shares redeemed.

Payments to Financial Intermediaries

Financial intermediaries, such as the Insurers, market and sell shares of the Portfolios and typically receive compensation for selling shares of the Portfolios. This compensation is paid from various sources, including any Rule 12b-1 fee that you or the Portfolios may pay.

In the case of Class B shares, up to 100% of the Rule 12b-1 fee applicable to Class B shares each year may be paid to the financial intermediary that sells Class B shares.

Insurers or your financial intermediary receive compensation from the Portfolios, ABI and/or the Adviser in several ways from various sources, which include some or all of the following:

- Rule 12b-1 fees;
- defrayal of costs for educational seminars and training;
- additional distribution support; and

- payments related to providing Contractholder recordkeeping and/or administrative services.

Please read your Portfolio's Prospectus carefully for information on this compensation.

ABI and/or the Adviser may pay Insurers or other financial intermediaries to perform recordkeeping and administrative services in connection with the Portfolios. Such payments will generally not exceed 0.35% of the average daily net assets of each Portfolio attributable to the Insurer.

Other Payments for Educational Support and Distribution Assistance. In addition to the fees described above, ABI, at its expense, currently provides additional payments to the Insurers. These sums include payments to reimburse directly or indirectly the costs incurred by the Insurers and their employees in connection with educational seminars and training efforts about the Portfolios for the Insurers' employees and/or their clients and potential clients. The costs and expenses associated with these efforts may include travel, lodging, entertainment and meals.

For 2014, ABI's additional payments to these firms for distribution services and educational support are expected to be approximately \$600,000. In 2013, ABI paid additional payments of approximately \$600,000 for the Portfolios.

If one mutual fund sponsor that offers shares to separate accounts of an Insurer makes greater distribution assistance payments than another, the Insurer may have an incentive to recommend or offer the shares of funds of one fund sponsor over another.

Please speak with your financial intermediary to learn more about the total amounts paid to your financial intermediary by the Funds, the Adviser, ABI and by other mutual fund sponsors that offer shares to Insurers that may be recommended to you. You should also consult disclosures made by your financial intermediary at the time of purchase.

ABI anticipates that the Insurers or their affiliates that will receive additional payments for educational support include:

Great West Life & Annuity Company
ING
Lincoln Financial
MetLife Investors Group, Inc.
Nationwide
New York Life
Ohio National Financial Services
Principal Financial Group
Riversource Distributors
Sun America
Transamerica Life Insurance
UBS Financial Services

Although the Portfolios may use brokers and dealers who sell shares of the Portfolios to effect portfolio transactions, the Portfolios do not consider the sale of AllianceBernstein Mutual Fund Shares as a factor when selecting brokers or dealers to effect portfolio transactions.

NET ASSET VALUE

For all of the Portfolios the NAV of each Portfolio is computed each day the Exchange is open at the close of regular trading (ordinarily 4:00 p.m., Eastern Time, but sometimes earlier, as in the case of scheduled half-day trading or unscheduled suspensions of trading) following receipt of a purchase or redemption order by a Portfolio on each Portfolio business day on which such an order is received and on such other days as the Board deems appropriate or necessary in order to comply with Rule 22c-1 under the 1940 Act. Each Portfolio's per share NAV is calculated by dividing the value of a Portfolio's total assets, less its liabilities, by the total number of its shares then outstanding. A Portfolio business day is any weekday on which the Exchange is open for trading.

Portfolio securities are valued at current market value or at fair value as determined in accordance with applicable rules under the 1940 Act and the Portfolio's pricing policies and procedures (the "Pricing Policies") established by and under the general supervision of the Board. The Board has delegated to the Adviser, subject to the Board's continuing oversight, certain of the Board's duties with respect to the Pricing Policies. The Adviser has established a Valuation Committee, which operates under policies and procedures approved by the Board, to value a Portfolio's assets on behalf of the Portfolio.

Whenever possible, securities are valued based on market information on the business day as of which the value is being determined, as follows:

(a) an equity security listed on the Exchange, or on another national or foreign exchange (other than securities listed on the NASDAQ Stock Exchange ("NASDAQ")) is valued at the last sale price reflected on the consolidated tape at the close of the exchange. If there has been no sale on the relevant business day, the security is valued at the last traded price from the previous day. On the following day, the security is valued in good faith at fair value by, or in accordance with procedures approved by, the Board;

(b) an equity security traded on NASDAQ is valued at the NASDAQ Official Closing Price. An OTC equity security is valued at the mid level between the current bid and asked prices. If the mid price is not available, the security will be valued at the bid price. An equity security traded on more than one exchange is valued in accordance with paragraph (a) above by reference to the principal exchange (as determined by the Adviser) on which the security is traded;

(c) a listed or OTC put or call option is valued at the mid level between the current bid and asked prices (for options or futures contracts, see item (e)). If neither a current bid nor current ask price is available, the Adviser will have discretion to determine the best valuation (*e.g.*, last trade price) and then bring the issue to the Board's Valuation Committee the next day;

(d) an open futures contract and any option thereon is valued at the closing settlement price or, in the absence of such a price, the most recent quoted bid price. If there are no quotations available for the relevant business day, the security is valued at the last available closing settlement price;

(e) a listed right is valued at the last traded price provided by approved pricing vendors. If there has been no sale on the relevant business day, the right is valued at the last traded price from the previous day. On the following day, the security is valued in good faith at fair value. For an unlisted right, the calculation used in determining a value is the price of the reference security minus the subscription price multiplied by the terms of the right. There may be some instances when the subscription price is greater than the referenced security right. In such instances, the right would be valued as worthless;

(f) a listed warrant is valued at the last traded price provided by approved vendors. If there is no sale on the relevant business day, the warrant is valued at the last traded price from the previous day. On the following day, the security is valued in good faith at fair value. All unlisted warrants are valued in good faith at fair value. Once a warrant has expired, it will no longer be valued;

(g) preferred securities are valued based on prices received from approved vendors that use last trade data for listed preferreds and evaluated bid prices for non-listed preferreds, as well as for listed preferreds when there is no trade activity;

(h) U.S. Government securities and any other debt instrument having 60 days or less remaining until maturity are generally valued at amortized cost if their original maturity was 60 days or less. If the original term to maturity exceeded 60 days, the securities are valued by an independent pricing vendor, if a market price is available. If a market price is not available, the securities are valued by using amortized cost as of the 61st day prior to maturity if the original term to maturity exceeded 60 days. The Adviser is responsible for monitoring whether any circumstances have occurred that indicate that the use of the amortized cost method for any security is not appropriate due to such factors as, but not limited to, an impairment of the creditworthiness of the issuer or material changes in interest rates;

(i) a fixed-income security is typically valued on the basis of bid prices provided by an approved pricing vendor when the Adviser reasonably believes that such prices reflect the market value of the security. In certain markets, the market convention may be to use the mid price between bid and offer. Fixed-income securities may be valued on the basis of mid prices when the approved pricing vendor normally provides mid prices, reflecting the convention of the particular markets. The prices provided by an approved pricing vendor may take into account many factors, including institutional size, trading in similar groups of securities and any developments related to specific securities. If the Adviser determines that an appropriate pricing

vendor does not exist for a security in a market that typically values such securities on the basis of a bid price, the security is valued on the basis of a quoted bid price or spread over the applicable yield curve (a bid spread) by a broker-dealer in such security. If the Adviser receives multiple broker quotes that are deemed to be reliable, then the Adviser will utilize the second highest broker quote. If an appropriate pricing vendor does not exist for a security in a market where convention is to use the mid price, the security is valued on the basis of a quoted mid price by a broker-dealer in such security;

(j) bank loans are valued on the basis of bid prices provided by a pricing vendor;

(k) bridge loans are valued at fair value, which equates to the outstanding loan amount, unless it is determined by the Valuation Committee that any particular bridge loan should be valued at something other than outstanding loan amount. This may occur due to, for example, a significant change in the high-yield market and/or a significant change in the status of any particular issuer or issuers of bridge loans;

(l) whole loans: residential and commercial mortgage whole loans and whole loan pools are fair market priced by an approved vendor;

(m) forward and spot currency pricing is provided by an independent pricing vendor. The rate provided by the approved vendor is a mid price for forward and spot rates. In most instances whenever both an “onshore” rate and an “offshore” (*i.e.*, non deliverable forward “NDF”) rate is available, the Adviser will use the offshore (NDF) rate. NDF contracts are used for currencies where it is difficult (and sometimes impossible) to take actual delivery of the currency;

(n) swap pricing: various approved external vendors are used to obtain pricing information and analysis. This information is placed into various pricing models (depending on the type of derivative) to devise a price for each investment. These pricing models are monitored/reviewed on an ongoing basis by the Adviser;

(o) interest rate caps, floors and swaptions are valued at the present value of the terms of the agreements, which are provided by approved vendors; and

(p) open-end mutual funds are valued at the closing NAV per share and closed-end funds and ETFs are valued at the closing market price per share.

Each Portfolio values its securities at their current market value determined on the basis of market quotations as described above or, if market quotations are not readily available or are unreliable, at “fair value” as determined in accordance with procedures established by and under the general supervision of the Board. When a Portfolio uses fair value pricing, it may take into account any factors it deems appropriate. A Portfolio may determine fair value based upon developments related to a specific security, current valuations of foreign stock indices (as reflected in U.S. futures markets) and/or U.S. sector or broader stock market indices. The prices of securities used by a Portfolio to calculate its NAV may differ from quoted or published prices for the same securities. Fair value pricing involves subjective judgments and it is possible that

the fair value determined for a security is materially different than the value that could be realized upon the sale of that security.

Each Portfolio expects to use fair value pricing for securities primarily traded on U.S. exchanges only under very limited circumstances, such as the early closing of the exchange on which a security is traded or suspension of trading in the security. A Portfolio may use fair value pricing more frequently for securities primarily traded in non-U.S. markets because, among other things, most foreign markets close well before each Portfolio ordinarily values its securities at 4:00 p.m., Eastern Time. The earlier close of these foreign markets gives rise to the possibility that significant events, including broad market moves, may have occurred in the interim. For example, a Portfolio believes that foreign security values may be affected by events that occur after the close of foreign securities markets. To account for this, the Portfolio may frequently value many of its foreign equity securities using fair value prices based on third party vendor modeling tools to the extent available.

Each Portfolio may suspend the determination of its NAV (and the offering and sales of shares), subject to the rules of the SEC and other governmental rules and regulations, at a time when: (1) the Exchange is closed, other than customary weekend and holiday closings, (2) an emergency exists as a result of which it is not reasonably practicable for a Portfolio to dispose of securities owned by it or to determine fairly the value of its net assets, or (3) for the protection of shareholders, the SEC by order permits a suspension of the right of redemption or a postponement of the date of payment on redemption.

For purposes of determining each Portfolio's NAV per share, all assets and liabilities initially expressed in a foreign currency will be converted into U.S. Dollars at the mean of the current bid and asked prices of such currency against the U.S. Dollar last quoted by a major bank that is a regular participant in the relevant foreign exchange market or on the basis of a pricing service that takes into account the quotes provided by a number of such major banks. If such quotations are not available as of the close of the Exchange, the rate of exchange will be determined in good faith by, or under the direction of, the Board.

The assets attributable to the Class A shares and Class B shares are invested together in a single portfolio for each Portfolio. The NAV of each class will be determined separately by subtracting the liabilities allocated to that class from the assets belonging to that class in conformance with the provisions of a plan adopted by each Portfolio in accordance with Rule 18f-3 under the 1940 Act (the "18f-3 Plan").

PORTFOLIO TRANSACTIONS

Subject to the general oversight of the Board, the Adviser is responsible for the investment decisions and of placing of orders for portfolio transactions of the Portfolios. The Adviser determines the broker or dealer to be used in each specific transaction with the objective of negotiating a combination of the most favorable commission (for transactions on which a commission is payable) and the best price obtainable on each transaction (generally defined as

“best execution”). In connection with seeking best price and execution, the Portfolios do not consider sales of shares of the Portfolios or other investment companies managed by the Adviser as a factor in the selection of brokers and dealers to effect portfolio transactions and has adopted a policy and procedures reasonably designed to preclude such considerations.

When consistent with the objective of obtaining best execution, brokerage may be directed to persons or firms supplying investment information to the Adviser. There may be occasions where the transaction cost charged by a broker may be greater than that which another broker may charge if a Portfolio determines in good faith that the amount of such transaction cost is reasonable in relation to the value of the brokerage, research and statistical services provided by the executing broker.

Neither the Portfolios nor the Adviser has entered into agreements or understandings with any brokers or dealers regarding the placement of securities transactions because of research or statistical services they provide. A broker-dealer may provide the Adviser with research or related services with an expectation, but not necessarily an explicit agreement or contract, that the investment adviser will use the broker-dealer to execute client transactions in the future. To the extent that such persons or firms supply investment information to the Adviser for use in rendering investment advice to a Portfolio, such information may be supplied at no cost to the Adviser and, therefore, may have the effect of reducing the expenses of the Adviser in rendering advice to the Portfolio. While it is impracticable to place an actual dollar value on such investment information, the Adviser believes that its receipt probably does not reduce the overall expenses of the Adviser to any material extent.

The investment information provided to the Adviser is of the type described in Section 28(e) of the Securities Exchange Act of 1934, as amended, and is designed to augment the Adviser’s own internal research and investment strategy capabilities. Research and statistical services furnished by brokers through which the Fund effects securities transactions are used by the Adviser in carrying out its investment management responsibilities with respect to all its client accounts but not all such services may be utilized by the Adviser in connection with the Portfolios.

The extent to which commissions that will be charged by broker-dealers selected by a Portfolio may reflect an element of value for research cannot presently be determined. To the extent that research services of value are provided by broker-dealers with or through whom the Portfolio places portfolio transactions, the Adviser may be relieved of expenses which it might otherwise bear. Research services furnished by broker-dealers as a result of the placement of portfolio transactions could be useful and of value to the Adviser in servicing its other clients as well as the Portfolio; on the other hand, certain research services obtained by the Adviser as a result of the placement of portfolio brokerage of other clients could be useful and of value to it in servicing the Portfolio.

A Portfolio may deal in some instances in equity securities which are not listed on a national securities exchange but are traded in the OTC market. In addition, most transactions for the Intermediate Bond Portfolio are executed in the OTC market. Where transactions are executed in the over-the-counter market, a Portfolio will seek to deal with the primary market

makers, but when necessary in order to obtain the best price and execution, it will utilize the services of others. In all cases, the Portfolio will attempt to negotiate best execution.

The Portfolios' portfolio transactions in equity securities may occur on foreign stock exchanges. Transactions on stock exchanges involve the payment of brokerage commissions. On many foreign stock exchanges these commissions are fixed. Securities traded in foreign over-the-counter markets (including most fixed-income securities) are purchased from and sold to dealers acting as principal. Over-the-counter transactions generally do not involve the payment of a stated commission, but the price usually includes an undisclosed commission or markup. The prices of underwritten offerings, however, generally include a stated underwriter's discount. The Adviser expects to effect the bulk of its transactions in securities of companies based in foreign countries through brokers, dealers or underwriters located in such countries. U.S. Government or other U.S. securities constituting permissible investments will be purchased and sold through U.S. brokers, dealers or underwriters.

Investment decisions for a Portfolio are made independently from those for other investment companies and other advisory accounts managed by the Adviser. It may happen, on occasion, that the same security is held in the portfolio of a Portfolio and one or more of such other companies or accounts. Simultaneous transactions are likely when several funds or accounts are managed by the same Adviser, particularly when a security is suitable for the investment objectives of more than one of such companies or accounts. When two or more companies or accounts managed by the Adviser are simultaneously engaged in the purchase or sale of the same security, the transactions are allocated to the respective companies or accounts both as to amount and price, in accordance with a method deemed equitable to each company or account. In some cases this system may adversely affect the price paid or received by a Portfolio or the size of the position obtainable for the Portfolio.

Allocations are made by the officers of a Portfolio or of the Adviser. Purchases and sales of portfolio securities are determined by the Adviser and are placed with broker-dealers by the order department for the Adviser.

The aggregate brokerage commissions paid by the Portfolios during the three most recent fiscal years or since inception are set forth below:

<u>Portfolio</u>	<u>Fiscal Year Ended December 31</u>	<u>Aggregate Amount of Brokerage Commissions</u>
Growth Portfolio	2011	\$113,496
	2012	79,251
	2013	54,411
Intermediate Bond Portfolio	2011	\$405
	2012	217
		247
Growth and Income Portfolio	2011	\$1,384,525
	2012	1,263,653
	2013	778,196
Large Cap Growth Portfolio	2011	\$512,272
	2012	435,586
	2013(1)	223,215
Small Cap Growth Portfolio	2011	\$119,513
	2012	117,081
	2013	91,885
Real Estate Investment Portfolio	2011	\$74,018
	2012	235,230
	2013	251,843
Global Thematic Growth Portfolio	2011	\$653,101
	2012	457,410
	2013	248,709
International Growth Portfolio	2011	\$311,071
	2012	213,153
	2013	151,936
Small/Mid Cap Value Portfolio	2011	\$1,185,566
	2012	644,721
	2013	935,929
Value Portfolio	2011	\$259,034
	2012	161,524
	2013	160,176
International Value Portfolio	2011	\$1,815,021
	2012	1,451,452
	2013	1,382,847

<u>Portfolio</u>	<u>Fiscal Year Ended December 31</u>	<u>Aggregate Amount of Brokerage Commissions</u>
Balanced Wealth Strategy Portfolio	2011	\$496,625
	2012	516,365
	2013	477,345
Dynamic Asset Allocation Portfolio	2011	\$10,031
	2012	46,640
	2013(2)	144,333

- (1) The aggregate brokerage commissions paid by the Portfolio decreased materially in 2013 due to a decrease in the number of transactions.
- (2) The aggregate brokerage commissions paid by the Portfolio increased materially in 2013 due to an increase in the number and value of transactions.

The Fund may, from time to time, place orders for the purchase or sale of securities (including listed call options) with Sanford C. Bernstein & Co. and Sanford C. Bernstein Limited, affiliates of the Adviser (the “Affiliated Brokers”). In such instances, the placement of orders with such brokers would be consistent with each Portfolio’s objective of obtaining best execution and would not be dependent upon the fact that the Affiliated Brokers are affiliates of the Adviser. With respect to orders placed with the Affiliated Brokers for execution on a securities exchange, commissions received must conform to Section 17(e)(2)(A) of the 1940 Act and Rule 17e-1 thereunder, which permit an affiliated person of a registered investment company (such as the Fund), or any affiliated person of such person, to receive a brokerage commission from such registered investment company provided that such commission is reasonable and fair compared to the commissions received by other brokers in connection with comparable transactions involving similar securities during a comparable period of time.

The aggregate amount of brokerage commissions paid to Affiliated Brokers during each Portfolio’s three most recent fiscal years or since inception, and, during the most recent fiscal year, the Affiliated Brokers’ percentage of the aggregate brokerage commissions and the aggregate dollar amount of brokerage transactions, respectively, are set forth below:

<u>Portfolio</u>	<u>Fiscal Year Ended December 31,</u>	<u>Aggregate Amount Of Brokerage Commissions Paid To Affiliated Brokers</u>	<u>% of Portfolio's Aggregate Brokerage Commissions Paid To Affiliated Brokers</u>	<u>% of Portfolio's Aggregate Dollar Amount of Brokerage Transactions Involving The Payment Of Commissions Through Affiliated Brokers</u>

	2012	824		
	2011	220		

Disclosure of Portfolio Holdings

The Fund believes that the ideas of the Adviser's investment staff should benefit the Portfolios and their shareholders, and does not want to afford speculators an opportunity to profit by anticipating Portfolio trading strategies or using Portfolio information for stock picking. However, the Fund also believes that knowledge of each Portfolio's portfolio holdings can assist shareholders in monitoring their investment, making asset allocation decisions, and evaluating

portfolio management techniques.

The Adviser has adopted, on behalf of the Portfolios, policies and procedures relating to disclosure of the Portfolios' portfolio securities. The policies and procedures relating to disclosure of the Portfolios' portfolio securities are designed to allow disclosure of portfolio holdings information where necessary to the operation of the Portfolios or useful to the Portfolios' shareholders without compromising the integrity or performance of the Portfolios. Except when there are legitimate business purposes for selective disclosure and other conditions (designed to protect the Portfolios and their shareholders) are met, the Portfolios do not provide or permit others to provide information about a Portfolio's portfolio holdings on a selective basis.

The Portfolios include portfolio holdings information as required in regulatory filings and shareholder reports, disclose portfolio holdings information as required by federal or state securities laws and may disclose portfolio holdings information in response to requests by governmental authorities. In addition, the Adviser may post portfolio holdings information on the Adviser's website (www.AllianceBernstein.com). For each portfolio security, the posted information includes its name, the number of shares held by a Portfolio, the market value of the Portfolio's holdings, and the percentage of the Portfolio's assets represented by the Portfolio's holdings. The day after portfolio holdings information is publicly available on the website, it may be mailed, e-mailed or otherwise transmitted to any person.

The Adviser may distribute or authorize the distribution of information about a Portfolio's portfolio holdings that is not publicly available, on the website or otherwise, to the Adviser's employees and affiliates that provide services to the Fund. In addition, the Adviser may distribute or authorize distribution of information about a Portfolio's portfolio holdings that is not publicly available, on the website or otherwise, to the Fund's service providers who require access to the information in order to fulfill their contractual duties relating to the Portfolios, to facilitate the review of the Portfolios by rating agencies, for the purpose of due diligence regarding a merger or acquisition, or for the purpose of effecting in-kind redemption of securities to facilitate orderly redemption of portfolio assets and minimal impact on remaining Portfolio shareholders. The Adviser does not expect to disclose information about a Portfolio's portfolio holdings that is not publicly available to the Portfolio's individual or institutional investors or to intermediaries that distribute the Portfolio's shares. Information may be disclosed with any frequency and any lag, as appropriate.

Before any non-public disclosure of information about a Portfolio's portfolio holdings is permitted, however, the Adviser's Chief Compliance Officer (or his designee) must determine that the Portfolio has a legitimate business purpose for providing the portfolio holdings information, that the disclosure is in the best interests of the Portfolio's shareholders, and that the recipient agrees or has a duty to keep the information confidential and agrees not to trade directly or indirectly based on the information or to use the information to form a specific recommendation about whether to invest in the Portfolio or any other security. Under no circumstances may the Adviser or its affiliates receive any consideration or compensation for disclosing the information.

The Adviser has established procedures to ensure that a Portfolio's portfolio holdings information is only disclosed in accordance with these policies. Only the Adviser's Chief Compliance Officer (or his designee) may approve the disclosure, and then only if he or she and a designated senior officer in the Adviser's product management group determines that the disclosure serves a legitimate business purpose of a Portfolio and is in the best interest of the Portfolio's shareholders. The Adviser's Chief Compliance Officer (or his designee) approves disclosure only after considering the anticipated benefits and costs to the Portfolio and its shareholders, the purpose of the disclosure, any conflicts of interest between the interests of the Portfolio and its shareholders and the interests of the Adviser or any of its affiliates, and whether the disclosure is consistent with the policies and procedures governing disclosure. Only someone approved by the Adviser's Chief Compliance Officer (or his designee) may make approved disclosures of portfolio holdings information to authorized recipients. The Adviser reserves the right to request certifications from senior officers of authorized recipients that the recipient is using the portfolio holdings information only in a manner consistent with the Adviser's policy and any applicable confidentiality agreement. The Adviser's Chief Compliance Officer (or his designee) or another member of the compliance team reports all arrangements to disclose portfolio holdings information to the Fund's Board on a quarterly basis. If the Directors determine that disclosure was inappropriate, the Adviser will promptly terminate the disclosure arrangement.

In accordance with these procedures, each of the following third parties has been approved to receive information concerning the Portfolios' portfolio holdings: (i) the Fund's independent registered public accounting firm, for use in providing audit opinions; (ii) Data Communique International, RR Donnelley Financial and, from time to time, other financial printers, for the purpose of preparing Portfolio regulatory filings; (iii) the Fund's custodian in connection with its custody of the assets of the Portfolios; (iv) Institutional Shareholder Services, Inc. for proxy voting services; and (v) data aggregators, such as Vestek. Information may be provided to these parties at any time with no time lag. Each of these parties is contractually and ethically prohibited from sharing a Portfolio's portfolio holdings information unless specifically authorized.

DIVIDENDS, DISTRIBUTIONS AND TAXES

Each Portfolio of the Fund qualified and intends to continue to qualify to be taxed as a regulated investment company under the Code. If so qualified, each Portfolio will not be subject to federal income and excise taxes on its investment company taxable income and net capital gain to the extent such investment company taxable income and net capital gain are distributed to the separate accounts of insurance companies which hold its shares. Under current tax law, capital gains or dividends from any Portfolio are not currently taxable to the holder of a variable annuity or variable life insurance contract when left to accumulate within such variable annuity or variable life insurance contract. Distributions of net investment income and net short-term capital gains will be treated as ordinary income and distributions of net long-term capital gains will be treated as long-term capital gain in the hands of the insurance companies.

Investment income received by a Portfolio from sources within foreign countries may be subject to foreign income taxes withheld at the source. If more than 50% of the value of a Portfolio's total assets at the close of its taxable year consists of stocks or securities of foreign corporations (which for this purpose should include obligations issued by foreign governments), such Portfolio will be eligible to file an election with the Internal Revenue Service to pass through to its shareholders the amount of foreign taxes paid by the Portfolio. If eligible, each such Portfolio intends to file such an election, although there can be no assurance that such Portfolio will be able to do so.

Section 817(h) of the Code requires that the investments of a segregated asset account of an insurance company be adequately diversified, in accordance with Treasury Regulations promulgated thereunder, in order for the holders of the variable annuity contracts or variable life insurance policies underlying the account to receive the tax-deferred or tax-free treatment generally afforded holders of annuities or life insurance policies under the Code. The Department of the Treasury has issued Regulations under section 817(h) that, among other things, provide the manner in which a segregated asset account will treat investments in a regulated investment company for purposes of the applicable diversification requirements. Under the Regulations, an insurance company segregated account is permitted to look-through a Portfolio to satisfy asset diversification tests and treat its underlying securities, rather than the Portfolio, as investments subject to certain diversification limits. A Portfolio will be considered adequately diversified if no more than 55% of its assets are represented by any one investment, no more than 70% of its assets are represented by any two investments, no more than 80% of its assets are represented by any three investments and no more than 90% of its assets are represented by any four investments. For this purpose, all securities issued by an issuer are treated as a single investment. Each Portfolio plans to satisfy these conditions at all times so that the shares of such Portfolio owned by a segregated asset account of a life insurance company will be subject to this treatment under the Code.

For information concerning the federal income tax consequences for the holders of variable annuity contracts and variable life insurance policies, such holders should consult the prospectus used in connection with the issuance of their particular contracts or policies.

GENERAL INFORMATION

Description of the Portfolios

The Fund was organized as a Maryland corporation in 1987 under the name "Alliance Variable Products Series Fund, Inc." The name of the Fund became "AllianceBernstein Variable Products Series Fund, Inc." on May 1, 2003.

All shares of the Fund when duly issued will be fully paid and nonassessable. The Board is authorized to reclassify any unissued shares into any number of additional series and classes without shareholder approval. Accordingly, the Board in the future, for reasons such as the desire to establish one or more additional Portfolio's with different investment objectives, policies or restrictions or to establish additional channels of distribution, may create additional

series and classes of shares. Any issuance of shares of such additional series and classes would be governed by the 1940 Act and the laws of the State of Maryland.

Generally, shares of each Portfolio would vote as a single series for the election of directors and on any other matter that affected each Portfolio in substantially the same manner. As to matters affecting each Portfolio differently, such as approval of the Advisory Agreement and changes in investment policy, shares of each Portfolio would vote as separate series. Moreover, the Class B shares of each Portfolio will vote separately with respect to matters relating to the 12b-1 Plan(s) adopted in accordance with Rule 12b-1 under the 1940 Act.

It is anticipated that annual meetings of shareholders will not be held; shareholder meetings will only be held when required by federal or state law or in accordance with an undertaking by the Adviser to the SEC. Shareholders have available certain procedures for the election of Directors.

Pursuant to an order received from the SEC, the Fund maintains participation agreements with insurance company separate accounts that obligate the insurance companies to pass any proxy solicitations through to underlying contractholders who in turn are asked to designate voting instructions. In the event that an insurance company does not receive voting instructions from contractholders, it is obligated to vote the shares that correspond to such contractholders in the same proportion as instructions received from all other applicable contractholders.

To the knowledge of the Fund, the following persons owned of record or beneficially, 5% or more of a class of outstanding shares of each Portfolio as of April 4, 2014:

Custodian

State Street Bank and Trust Company (“State Street”), One Lincoln Street, Boston, MA 02111, acts as custodian for the securities and cash of the Fund but plays no part in deciding the purchase or sale of portfolio securities. Subject to the supervision of the Board, State Street may enter into sub-custodial agreements for the holding of the Fund’s securities of foreign issuers.

Principal Underwriter

ABI, an indirect wholly-owned subsidiary of the Adviser, located at 1345 Avenue of the Americas, New York, NY 10105, serves as the Fund’s Principal Underwriter.

Counsel

Legal matters in connection with the issuance of the shares of the Fund offered hereby will be passed upon by Seward & Kissel LLP, New York, NY, 10004.

Independent Registered Public Accounting Firm

Ernst & Young LLP, 5 Times Square, New York, NY, 10036, has been appointed as the independent registered public accounting firm for the Fund.

Code of Ethics And Proxy Voting Policies And Procedures

The Fund, the Adviser and ABI have each adopted codes of ethics pursuant to Rule 17j-1 of the 1940 Act. These codes of ethics permit personnel subject to the codes to invest in securities, including securities that may be purchased or held by the Fund.

The Fund has adopted the Adviser's proxy voting policies and procedures. The Adviser's proxy voting policies and procedures are attached as Appendix A.

Information regarding how the Portfolios voted proxies related to portfolio securities during the most recent 12-month period ended June 30 is available (1) without charge, upon request, by calling (800) 227-4618; or on or through the Fund's website at www.AllianceBernstein.com; or both; and (2) on the SEC's website at www.sec.gov.

FINANCIAL STATEMENTS AND REPORT OF INDEPENDENT REGISTERED PUBLIC
ACCOUNTING FIRM

The financial statements of the Portfolios of the Fund for the fiscal year ended December 31, 2013 and the report of Ernst & Young LLP, the independent registered public accounting firm, are incorporated herein by reference to the Portfolios' annual reports. The annual report was filed on Form N-CSR with the SEC on February 24, 2014. It is available without charge upon request by calling ABIS at (800) 227-4618 or on the Internet at www.AllianceBernstein.com.

APPENDIX A:

STATEMENT OF POLICIES AND PROCEDURES FOR PROXY VOTING

1. Introduction

As a registered investment adviser, AllianceBernstein L.P. (“**AllianceBernstein**”, “**we**” or “**us**”) has a fiduciary duty to act solely in the best interests of our clients. We recognize that this duty requires us to vote client securities in a timely manner and make voting decisions that are intended to maximize long-term shareholder value. Generally, our clients’ objective is to maximize the financial return of their portfolios within appropriate risk parameters. We have long recognized that environmental, social and governance (“**ESG**”) issues can impact the performance of investment portfolios. Accordingly, we have sought to integrate ESG factors into our investment process to the extent that the integration of such factors is consistent with our fiduciary duty to help our clients achieve their investment objectives and protect their economic interests. For additional information regarding our ESG policies and practices, please refer to our firm’s Statement of Policy Regarding Responsible Investment.

We consider ourselves shareholder advocates and take this responsibility very seriously. Consistent with our commitments, we will disclose our clients’ voting records only to them and as required by mutual fund vote disclosure regulations. In addition, our Proxy Committee may, after careful consideration, choose to respond to surveys so long as doing so does not compromise confidential voting.

This statement is intended to comply with Rule 206(4)-6 of the Investment Advisers Act of 1940. It sets forth our policies and procedures for voting proxies for our discretionary investment advisory clients, including investment companies registered under the Investment Company Act of 1940. This statement applies to AllianceBernstein’s investment groups investing on behalf of clients in both U.S. and non-U.S. securities.

2. Proxy Policies

Our proxy voting policies are principle-based rather than rules-based. We adhere to a core set of principles that are described in this Statement and in our Proxy Voting Manual. We assess each proxy proposal in light of those principles. Our proxy voting “litmus test” will always be what we view as most likely to maximize long-term shareholder value. We believe that authority and accountability for setting and executing corporate policies, goals and compensation should generally rest with the board of directors and senior management. In return, we support strong investor rights that allow shareholders to hold directors and management accountable if they fail to act in the best interests of shareholders. In addition, if we determine that ESG issues that arise with respect to an issuer’s past, current or anticipated behaviors are, or are reasonably likely to become, material to its future earnings, we address these concerns in our proxy voting and engagement.

This statement is designed to be responsive to the wide range of proxy voting subjects that can have a significant effect on the investment value of the securities held in our clients’

accounts. These policies are not exhaustive due to the variety of proxy voting issues that we may be required to consider. AllianceBernstein reserves the right to depart from these guidelines in order to make voting decisions that are in our clients' best interests. In reviewing proxy issues, we will apply the following general policies:

2.1. Corporate Governance

We recognize the importance of good corporate governance in our proxy voting policies and engagement practices in ensuring that management and the board of directors fulfill their obligations to shareholders. We favor proposals promoting transparency and accountability within a company. We support the appointment of a majority of independent directors on boards and key committees. Because we believe that good corporate governance requires shareholders to have a meaningful voice in the affairs of the company, we generally will support shareholder proposals which request that companies amend their by-laws to provide that director nominees be elected by an affirmative vote of a majority of the votes cast. Furthermore, we have written to the SEC in support of shareholder access to corporate proxy statements under specified conditions with the goal of serving the best interests of all shareholders.

2.2. Elections of Directors

Unless there is a proxy fight for seats on the Board or we determine that there are other compelling reasons to oppose directors, we will vote in favor of the management proposed slate of directors. That said, we believe that directors have a duty to respond to shareholder actions that have received significant shareholder support. Therefore, we may vote against directors (or withhold votes for directors where plurality voting applies) who fail to act on key issues such as failure to implement proposals to declassify the board, failure to implement a majority vote requirement, failure to submit a rights plan to a shareholder vote or failure to act on tender offers where a majority of shareholders have tendered their shares. In addition, we will vote against directors who fail to attend at least seventy-five percent of board meetings within a given year without a reasonable excuse, and we may abstain or vote against directors of non-U.S. issuers where there is insufficient information about the nominees disclosed in the proxy statement. Also, we will generally not oppose directors who meet the definition of independence promulgated by the primary exchange on which the company's shares are traded or set forth in the code we determine to be best practice in the country where the subject company is domiciled. Finally, because we believe that cumulative voting in single shareholder class structures provides a disproportionately large voice to minority shareholders in the affairs of a company, we will generally vote against such proposals and vote for management proposals seeking to eliminate cumulative voting. However, in dual class structures (such as A&B shares) where the shareholders with a majority economic interest have a minority voting interest, we will generally vote in favor of cumulative voting.

2.3. Appointment of Auditors

AllianceBernstein believes that the company is in the best position to choose its auditors, so we will generally support management's recommendation. However, we recognize that there are inherent conflicts when a company's independent auditor performs substantial non-audit services for the company. The Sarbanes-Oxley Act of 2002 prohibits certain categories of services by auditors to U.S. issuers, making this issue less prevalent in the U.S. Nevertheless, in reviewing a proposed auditor, we will consider the fees paid for non-audit services relative to total fees and whether there are other reasons for us to question the independence or performance of the auditors.

2.4. Changes in Legal and Capital Structure

Changes in a company's charter, articles of incorporation or by-laws are often technical and administrative in nature. Absent a compelling reason to the contrary, AllianceBernstein will cast its votes in accordance with management's recommendations on such proposals. However, we will review and analyze on a case-by-case basis any non-routine proposals that are likely to affect the structure and operation of the company or have a material economic effect on the company. For example, we will generally support proposals to increase authorized common stock when it is necessary to implement a stock split, aid in a restructuring or acquisition, or provide a sufficient number of shares for an employee savings plan, stock option plan or executive compensation plan. However, a satisfactory explanation of a company's intentions must be disclosed in the proxy statement for proposals requesting an increase of greater than 100% of the shares outstanding. We will oppose increases in authorized common stock where there is evidence that the shares will be used to implement a poison pill or another form of anti-takeover device. We will support shareholder proposals that seek to eliminate dual class voting structures.

2.5. Corporate Restructurings, Mergers and Acquisitions

AllianceBernstein believes proxy votes dealing with corporate reorganizations are an extension of the investment decision. Accordingly, we will analyze such proposals on a case-by-case basis, weighing heavily the views of our research analysts that cover the company and our investment professionals managing the portfolios in which the stock is held.

2.6. Proposals Affecting Shareholder Rights

AllianceBernstein believes that certain fundamental rights of shareholders must be protected. We will generally vote in favor of proposals that give shareholders a greater voice in the affairs of the company and oppose any measure that seeks to limit those rights. However, when analyzing such proposals we will weigh the financial impact of the proposal against the impairment of shareholder rights.

2.7. Anti-Takeover Measures

AllianceBernstein believes that measures that impede corporate transactions (such as takeovers) or entrench management not only infringe on the rights of shareholders but

may also have a detrimental effect on the value of the company. Therefore, we will generally oppose proposals, regardless of whether they are advanced by management or shareholders, when their purpose or effect is to entrench management or excessively or inappropriately dilute shareholder ownership. Conversely, we support proposals that would restrict or otherwise eliminate anti-takeover or anti-shareholder measures that have already been adopted by corporate issuers. For example, we will support shareholder proposals that seek to require the company to submit a shareholder rights plan to a shareholder vote. We will evaluate, on a case-by-case basis, proposals to completely redeem or eliminate such plans. Furthermore, we will generally oppose proposals put forward by management (including the authorization of blank check preferred stock, classified boards and supermajority vote requirements) that appear to be anti-shareholder or intended as management entrenchment mechanisms.

2.8. Executive Compensation

AllianceBernstein believes that company management and the compensation committee of the board of directors should, within reason, be given latitude to determine the types and mix of compensation and benefits offered to company employees. Whether proposed by a shareholder or management, we will review proposals relating to executive compensation plans on a case-by-case basis to ensure that the long-term interests of management and shareholders are properly aligned. In general, we will analyze the proposed plan to ensure that shareholder equity will not be excessively diluted taking into account shares available for grant under the proposed plan as well as other existing plans. We generally will oppose plans that allow stock options to be granted with below market value exercise prices on the date of issuance or permit re-pricing of underwater stock options without shareholder approval. Other factors such as the company's performance and industry practice will generally be factored into our analysis. In markets where remuneration reports or advisory votes on executive compensation are not required for all companies, we will generally support shareholder proposals asking the board to adopt a policy (*i.e.*, "say on pay") that the company's shareholders be given the opportunity to vote on an advisory resolution to approve the compensation practices of the company. Although "say on pay" votes are by nature only broad indications of shareholder views, they do lead to more compensation-related dialogue between management and shareholders and help ensure that management and shareholders meet their common objective: maximizing the value of the company. In markets where votes to approve remuneration reports or advisory votes on executive compensation are required, we review the compensation practices on a case-by-case basis. With respect to companies that have received assistance through government programs such as TARP, we will generally oppose shareholder proposals that seek to impose greater executive compensation restrictions on subject companies than are required under the applicable program because such restrictions could create a competitive disadvantage for the subject company. We believe the U.S. Securities and Exchange Commission ("SEC") took appropriate steps to ensure more complete and transparent disclosure of executive compensation when it issued modified executive compensation and corporate governance disclosure rules in 2006 and February 2010. Therefore, while

we will consider them on a case-by-case basis, we generally vote against shareholder proposals seeking additional disclosure of executive and director compensation, including proposals that seek to specify the measurement of performance-based compensation, if the company is subject to SEC rules. We will support requiring a shareholder vote on management proposals to provide severance packages that exceed 2.99 times the sum of an executive officer's base salary plus bonus that are triggered by a change in control. Finally, we will support shareholder proposals requiring a company to expense compensatory employee stock options (to the extent the jurisdiction in which the company operates does not already require it) because we view this form of compensation as a significant corporate expense that should be appropriately accounted for.

2.9. ESG

We are appointed by our clients as an investment manager with a fiduciary responsibility to help them achieve their investment objectives over the long term. Generally, our clients' objective is to maximize the financial return of their portfolios within appropriate risk parameters. We have long recognized that ESG issues can impact the performance of investment portfolios. Accordingly, we have sought to integrate ESG factors into our investment and proxy voting processes to the extent that the integration of such factors is consistent with our fiduciary duty to help our clients achieve their investment objectives and protect their economic interests. For additional information regarding our approach to incorporating ESG issues in our investment and decision-making processes, please refer to our RI Policy, which is attached to this Statement as an Exhibit.

Shareholder proposals relating to environmental, social (including political) and governance issues often raise complex and controversial issues that may have both a financial and non-financial effect on the company. And while we recognize that the effect of certain policies on a company may be difficult to quantify, we believe it is clear that they do affect the company's long-term performance. Our position in evaluating these proposals is founded on the principle that we are a fiduciary. As such, we carefully consider any factors that we believe could affect a company's long-term investment performance (including ESG issues) in the course of our extensive fundamental, company-specific research and engagement, which we rely on in making our investment and proxy voting decisions. Maximizing long-term shareholder value is our overriding concern when evaluating these matters, so we consider the impact of these proposals on the future earnings of the company. In so doing, we will balance the assumed cost to a company of implementing one or more shareholder proposals against the positive effects we believe implementing the proposal may have on long-term shareholder value.

3. Proxy Voting Procedures

3.1. Engagement

In evaluating proxy issues and determining our votes, we welcome and seek out the points of view of various parties. Internally, the Proxy Committee may consult chief

investment officers, directors of research, research analysts across our value and growth equity platforms, portfolio managers in whose managed accounts a stock is held and/or other Investment Policy Group members. Externally, the Proxy Committee may consult company management, company directors, interest groups, shareholder activists and research providers. If we believe an ESG issue is, or is reasonably likely to become, material, we engage a company's management to discuss the relevant issues.

3.2. Conflicts of Interest

AllianceBernstein recognizes that there may be a potential conflict of interest when we vote a proxy solicited by an issuer whose retirement plan we manage or administer, who distributes AllianceBernstein-sponsored mutual funds, or with whom we have, or one of our employees has, a business or personal relationship that may affect (or may be reasonably viewed as affecting) how we vote on the issuer's proxy. Similarly, AllianceBernstein may have a potentially material conflict of interest when deciding how to vote on a proposal sponsored or supported by a shareholder group that is a client. We believe that centralized management of proxy voting, oversight by the Proxy Committee and adherence to these policies ensures that proxies are voted based solely on our clients' best interests. Additionally, we have implemented procedures to ensure that our votes are not the product of a material conflict of interest, including: (i) on an annual basis, the Proxy Committee taking reasonable steps to evaluate (A) the nature of AllianceBernstein's and our employees' material business and personal relationships (and those of our affiliates) with any company whose equity securities are held in client accounts and (B) any client that has sponsored or has a material interest in a proposal upon which we will be eligible to vote; (ii) requiring anyone involved in the decision making process to disclose to the Chair of the Proxy Committee any potential conflict that he or she is aware of (including personal relationships) and any contact that he or she has had with any interested party regarding a proxy vote; (iii) prohibiting employees involved in the decision making process or vote administration from revealing how we intend to vote on a proposal in order to reduce any attempted influence from interested parties; and (iv) where a material conflict of interests exists, reviewing our proposed vote by applying a series of objective tests and, where necessary, considering the views of third party research services to ensure that our voting decision is consistent with our clients' best interests.

Because under certain circumstances AllianceBernstein considers the recommendation of third party research services, the Proxy Committee takes reasonable steps to verify that any third party research service is, in fact, independent taking into account all of the relevant facts and circumstances. This includes reviewing the third party research service's conflict management procedures and ascertaining, among other things, whether the third party research service (i) has the capacity and competency to adequately analyze proxy issues, and (ii) can make recommendations in an impartial manner and in the best interests of our clients.

3.3. Proxies of Certain Non-U.S. Issuers

Proxy voting in certain countries requires “share blocking.” Shareholders wishing to vote their proxies must deposit their shares shortly before the date of the meeting with a designated depository. During this blocking period, shares that will be voted at the meeting cannot be sold until the meeting has taken place and the shares are returned to the clients’ custodian banks. Absent compelling reasons to the contrary, AllianceBernstein believes that the benefit to the client of exercising the vote is outweighed by the cost of voting (*i.e.*, not being able to sell the shares during this period). Accordingly, if share blocking is required we generally choose not to vote those shares.

AllianceBernstein seeks to vote all proxies for securities held in client accounts for which we have proxy voting authority. However, in non-US markets, administrative issues beyond our control may at times prevent AllianceBernstein from voting such proxies. For example, AllianceBernstein may receive meeting notices after the cut-off date for voting or without sufficient time to fully consider the proxy. As another example, certain markets require periodic renewals of powers of attorney that local agents must have from our clients prior to implementing AllianceBernstein’s voting instructions.

3.4. Loaned Securities

Many clients of AllianceBernstein have entered into securities lending arrangements with agent lenders to generate additional revenue. AllianceBernstein will not be able to vote securities that are on loan under these types of arrangements. However, under rare circumstances, for voting issues that may have a significant impact on the investment, we may request that clients recall securities that are on loan if we determine that the benefit of voting outweighs the costs and lost revenue to the client or fund and the administrative burden of retrieving the securities.

3.5. Proxy Committee

We have formed a Proxy Committee, which includes investment professionals from both our growth and value equities teams, which is directly involved in the decision-making process to ensure that our votes are guided by the investment professionals who are most familiar with a given company. The Proxy Committee establishes general proxy policies for AllianceBernstein and considers specific proxy voting matters as necessary. The Proxy Committee periodically reviews these policies and new types of environmental, social and governance issues, and decides how we should vote on proposals not covered by these policies. When a proxy vote cannot be clearly decided by an application of our stated policy, the Proxy Committee will evaluate the proposal. In addition, the Proxy Committee, in conjunction with the analyst that covers the company, may contact corporate management, interested shareholder groups and others as necessary to discuss proxy issues.

Different investment philosophies may occasionally result in different conclusions being drawn regarding certain proposals and, in turn, may result in the Proxy Committee making different voting decisions on the same proposal for value and growth holdings.

Nevertheless, the Proxy Committee always votes proxies with the goal of maximizing the value of the securities in client portfolios.

It is the responsibility of the Proxy Committee to evaluate and maintain proxy voting procedures and guidelines, to evaluate proposals and issues not covered by these guidelines, to evaluate proxies where we face a potential conflict of interest (as discussed in section 3.2), to consider changes in policy and to review the Proxy Voting Statement and the Proxy Voting Manual no less frequently than annually. In addition, the Proxy Committee meets as necessary to address special situations.

Members of the Proxy Committee include senior investment personnel and representatives of the Legal and Compliance Department. The Proxy Committee is chaired by Linda Giuliano, Senior Vice President and Chief Administrative Officer-Equities.

3.6. Proxy Voting Records

You may obtain information regarding how the Portfolios voted proxies relating to portfolio securities during the most recent 12-month period ended June 30, without charge. Simply visit AllianceBernstein's web site at www.alliancebernstein.com, go to the Securities and Exchange Commission's web site at www.sec.gov or call AllianceBernstein at (800) 227-4618.

**Statement of Policy Regarding
Responsible Investment
Principles for Responsible Investment,
ESG, and Socially Responsible Investment**

1. Introduction

AllianceBernstein L.P. (“**AllianceBernstein**” or “**we**”) is appointed by our clients as an investment manager with a fiduciary responsibility to help them achieve their investment objectives over the long term. Generally, our clients’ objective is to maximize the financial return of their portfolios within appropriate risk parameters. AllianceBernstein has long recognized that environmental, social and governance (“**ESG**”) issues can impact the performance of investment portfolios. Accordingly, we have sought to integrate ESG factors into our investment process to the extent that the integration of such factors is consistent with our fiduciary duty to help our clients achieve their investment objectives and protect their economic interests.

Our policy draws a distinction between how the Principles for Responsible Investment (“**PRI**” or “**Principles**”), and Socially Responsible Investing (“**SRI**”) incorporate ESG factors. PRI is based on the premise that, because ESG issues can affect investment performance, appropriate consideration of ESG issues and engagement regarding them is firmly within the bounds of a mainstream investment manager’s fiduciary duties to its clients. Furthermore, PRI is intended to be applied only in ways that are consistent with those mainstream fiduciary duties.

SRI, which refers to a spectrum of investment strategies that seek to integrate ethical, moral, sustainability and other non-financial factors into the investment process, generally involves exclusion and/or divestment, as well as investment guidelines that restrict investments. AllianceBernstein may accept such guideline restrictions upon client request.

2. Approach to ESG

Our long-standing policy has been to include ESG factors in our extensive fundamental research and consider them carefully when we believe they are material to our forecasts and investment decisions. If we determine that these aspects of an issuer’s past, current or anticipated behavior are material to its future expected returns, we address these concerns in our forecasts, research reviews, investment decisions and engagement. In addition, we have well-developed proxy voting policies that incorporate ESG issues and engagement.

3. Commitment to the PRI

In recent years, we have gained greater clarity on how the PRI initiative, based on information from PRI Advisory Council members and from other signatories, provides a framework for incorporating ESG factors into investment research and decision-making. Furthermore, our industry has become, over time, more aware of the importance of ESG factors. We acknowledge these developments and seek to refine what has been our process in this area.

After careful consideration, we determined that becoming a PRI signatory would enhance our current ESG practices and align with our fiduciary duties to our clients as a mainstream investment manager. Accordingly, we became a signatory, effective November 1, 2011.

In signing the PRI, AllianceBernstein as an investment manager publicly commits to adopt and implement all six Principles, where consistent with our fiduciary responsibilities, and to make progress over time on implementation of the Principles.

The six Principles are:

1. We will incorporate ESG issues into investment research and decision-making processes. AllianceBernstein Examples: ESG issues are included in the research analysis process. In some cases, external service providers of ESG-related tools are utilized; we have conducted proxy voting training and will have continued and expanded training for investment professionals to incorporate ESG issues into investment analysis and decision-making processes across our firm.

2. We will be active owners and incorporate ESG issues into our ownership policies and practices.

AllianceBernstein Examples: We are active owners through our proxy voting process (for additional information, please refer to our *Statement of Policies and Procedures for Proxy Voting Manual*); we engage issuers on ESG matters in our investment research process (we define “engagement” as discussions with management about ESG issues when they are, or we believe they are reasonably likely to become, material).

3. We will seek appropriate disclosure on ESG issues by the entities in which we invest.

AllianceBernstein Examples: Generally, we support transparency regarding ESG issues when we conclude the disclosure is reasonable. Similarly, in proxy voting, we will support shareholder initiatives and resolutions promoting ESG disclosure when we conclude the disclosure is reasonable.

4. We will promote acceptance and implementation of the Principles within the investment industry.

AllianceBernstein Examples: By signing the PRI, we have taken an important first step in promoting acceptance and implementation of the six Principles within our industry.

5. We will work together to enhance our effectiveness in implementing the Principles.

AllianceBernstein Examples: We will engage with clients and participate in forums with other PRI signatories to better understand how the PRI are applied in our respective businesses. As a PRI signatory, we have access to information, tools and other signatories to help ensure that we are effective in our endeavors to implement the PRI.

6. We will report on our activities and progress towards implementing the Principles.

AllianceBernstein Examples: We will respond to the 2012 PRI questionnaire and disclose PRI scores from the questionnaire in response to inquiries from clients and in requests for proposals; we will provide examples as requested concerning active ownership activities (voting, engagement or policy dialogue).

4. RI Committee

Our firm's RI Committee provides AllianceBernstein stakeholders, including employees, clients, prospects, consultants and service providers alike, with a resource within our firm on which they can rely for information regarding our approach to ESG issues and how those issues are incorporated in different ways by the PRI and SRI. Additionally, the RI Committee is responsible for assisting AllianceBernstein personnel to further implement our firm's RI policies and practices, and, over time, to make progress on implementing all six Principles.

The RI Committee has a diverse membership, including senior representatives from investments, distribution/sales and legal. The Committee is chaired by Linda Giuliano, Senior Vice President and Chief Administrative Officer-Equities.

If you have questions or desire additional information about this Policy, we encourage you to contact the RI Committee at RIinquiries@alliancebernstein.com or reach out to a Committee member:

Erin Bigley: SVP-Fixed Income, New York
Alex Chaloff: SVP-Private Client, Los Angeles
Nicholas Davidson: SVP-Value, London

SAI PRIMER

The SAI is a part of the Funds' registration statement that is filed with the SEC. The registration statement includes the Funds' prospectuses, the SAI and certain exhibits. The SAI, and any supplements to it, can be found online by accessing the SEC's website at www.sec.gov.

For purposes of any electronic version of this SAI, all references to websites, or universal resource locators (URLs), are intended to be inactive and are not meant to incorporate the contents of any websites into this SAI.

The SAI generally provides additional information about the Funds that is not required to be in the Funds' prospectuses. The SAI expands discussions of certain matters described in the Funds' prospectuses and provides certain additional information about the Funds that may be of interest to some investors. Among other things, the SAI provides information about:

- the organization of the Trust;
- the Funds' investments;
- the Funds' investment adviser, investment subadviser(s) (if any) and other service providers, including roles and relationships of Ameriprise Financial and its affiliates, and conflicts of interest;
- the governance of the Funds;
- the Funds' brokerage practices;
- the share classes offered by the Funds;
- the purchase, redemption and pricing of Fund shares; and
- the application of U.S. federal income tax laws.

Investors may find this information important and helpful. If you have any questions about the Funds, please call Columbia Funds at 800.345.6611 or contact your financial advisor.

Before reading the SAI, you should consult the Glossary below, which defines certain of the terms used in the SAI.

Glossary

1933 Act	Securities Act of 1933, as amended
1934 Act	Securities Exchange Act of 1934, as amended
1940 Act	Investment Company Act of 1940, as amended
Administrative Services Agreement	The administrative services agreement between the Trust, on behalf of the Funds, and the Administrator
Administrator	Columbia Management Investment Advisers, LLC
Ameriprise Financial	Ameriprise Financial, Inc.
AQR	AQR Capital Management, LLC
BANA	Bank of America, National Association
Bank of America	Bank of America Corporation
BFDS/DST	Boston Financial Data Services, Inc./DST Systems, Inc.
Board	The Trust's Board of Trustees
Business Day	Any day on which the New York Stock Exchange (NYSE) is open for business
CEA	Commodity Exchange Act
CFTC	The Commodity Futures Trading Commission, a U.S. Government agency
CMOs	Collateralized mortgage obligations
Code	Internal Revenue Code of 1986, as amended

Codes of Ethics	The codes of ethics adopted by the Board pursuant to Rule 17j-1 under the 1940 Act
Columbia Funds Complex	The complex that is comprised of the registered investment companies advised by the Investment Manager or its affiliates
Columbia Funds or Columbia Fund Family	The open-end investment management companies, including the Funds, advised by the Investment Manager or its affiliates
Columbia Management	Columbia Management Investment Advisers, LLC
Custodian	JPMorgan Chase Bank, N.A.
Distribution Agreement	The distribution agreement between the Trust, on behalf of the Funds, and the Distributor
Distribution Plan(s)	One or more of the plans adopted by the Board pursuant to Rule 12b-1 under the 1940 Act for the distribution of the Funds' shares
Distributor	Columbia Management Investment Distributors, Inc.
FDIC	Federal Deposit Insurance Corporation
FHLMC	Federal Home Loan Mortgage Corporation

FNMA	Federal National Mortgage Association
The Fund(s) or a Fund	One or more of the open-end management investment companies listed on the front cover of this SAI
GNMA	Government National Mortgage Association
GSAM	Goldman Sachs Asset Management, L.P.
Independent Trustee(s)	One or more of the Trustee(s) of the Board who are not "interested persons" (as defined in the 1940 Act) of the Funds
Interested Trustee(s)	A Trustee of the Board who is an "interested person" (as defined in the 1940 Act) of the Funds
Investment Management Services Agreement	The investment management services agreement between the Trust, on behalf of the Funds, and the Investment Manager
Investment Manager	Columbia Management Investment Advisers, LLC
Investment Sub-Advisory Agreement	The investment subadvisory agreement between the Investment Manager and a Fund's subadviser, as the context may require
IRS	United States Internal Revenue Service
JPMorgan	JPMorgan Chase Bank, N.A., the Funds' custodian
LIBOR	London Interbank Offered Rate
Marsico Capital	Marsico Capital Management, LLC
Moody's	Moody's Investors Service, Inc.
NASDAQ	National Association of Securities Dealers Automated Quotations system
NAV	Net Asset Value of a Fund
NRSRO	Nationally recognized statistical ratings organization (such as Moody's, Fitch or S&P)
NSCC	National Securities Clearing Corporation
NYSE	New York Stock Exchange
Participating Insurance Companies	Life insurance companies that issue the variable annuity contracts or variable life insurance policies through separate accounts for which the Funds serve as underlying investment vehicles
The Portfolio(s) or a Portfolio	One or more of the open-end management investment companies listed on the front cover of this SAI that are series of the Trust

Previous Administrator	Columbia Management Advisors, LLC, the administrator of the series of the Trust prior to May 1, 2010 when Ameriprise Financial acquired the long-term asset management business of the Previous Adviser, which is an indirect wholly-owned subsidiary of Bank of America.
Previous Adviser	Columbia Management Advisors, LLC, the investment adviser of the series of the Trust prior to May 1, 2010 when Ameriprise Financial acquired the long-term asset management business of the Previous Adviser, which is an indirect wholly-owned subsidiary of Bank of America.
Previous Distributor	Columbia Management Distributors, Inc., the distributor of the series of the Trust prior to May 1, 2010 when Ameriprise Financial acquired the long-term asset management business of the Previous Adviser, which is an indirect wholly-owned subsidiary of Bank of America.
Previous Transfer Agent	Columbia Management Services, Inc., the transfer agent of the series of the Trust prior to May 1, 2010 when Ameriprise Financial acquired the long-term asset management business of the Previous Adviser, which is an indirect wholly-owned subsidiary of Bank of America.
Pyrford	Pyrford International Ltd.
REIT	Real estate investment trust
REMIC	Real estate mortgage investment conduit
Retirement Plan	A qualified plan or retirement arrangement or account through which shares of a Fund are made available.
RIC	A “regulated investment company,” as such term is used in the Internal Revenue Code of 1986, as amended
S&P	Standard & Poor’s, a division of The McGraw-Hill Companies, Inc. (“Standard & Poor’s” and “S&P” are trademarks of The McGraw-Hill Companies, Inc. and have been licensed for use by the Investment Manager. The Columbia Funds are not sponsored, endorsed, sold or promoted by Standard & Poor’s and Standard & Poor’s makes no representation regarding the advisability of investing in the Columbia Funds).
SAI	This Statement of Additional Information
SEC	United States Securities and Exchange Commission
Selling Agent(s)	Participating Insurance Companies, Retirement Plan sponsors, banks, broker-dealers and financial advisors as well as firms that employ such broker-dealers and financial advisors, including, for example, brokerage firms, banks, investment advisers, third party administrators and other financial intermediaries, including Ameriprise Financial and its affiliates.
Shares	Shares of a Fund
State Street	State Street Bank and Trust Company, the Funds’ former custodian
Subsidiary	A wholly-owned subsidiary of a Fund
Threadneedle	Threadneedle International Limited
Transfer Agency Agreement	The transfer agency and dividend disbursing agent agreement between the Trust, on behalf of the Funds, and Columbia Management Investment Services Corp.
Transfer Agent	Columbia Management Investment Services Corp.
Treasury Regulations	Regulations promulgated under the Code by the United States Treasury Department
The Trust	Columbia Funds Variable Insurance Trust, the registered investment company in the Columbia Funds Family to which this SAI relates
Trustee(s)	One or more of the Board’s Trustees
VP – Managed Volatility Funds	VP – MV Conservative Fund, VP – MV Conservative Growth Fund and VP – MV Growth Fund

Throughout this SAI, the Funds are referred to as follows:

Fund Name:

Columbia Variable Portfolio – Asset Allocation Fund
Columbia Variable Portfolio – Contrarian Core Fund
Columbia Variable Portfolio – Core Bond Fund
Columbia Variable Portfolio – Managed Volatility
Conservative Fund

VP – GS Commodity Strategy Fund
VP – Pyrford International Equity Fund

ABOUT THE TRUST

The Trust is a registered investment company under the 1940 Act located at 225 Franklin Street, Boston, Massachusetts 02110. The Trust was organized as a Massachusetts business trust on June 9, 1987, commenced operations on January 1, 1989, and is registered with the SEC as an open-end management investment company. On May 1, 2006, the Trust changed its name from SteinRoe Variable Investment trust to its current name.

The table below identifies the fiscal year end, the date of the Fund's prospectus(es), the date the Fund (or its predecessor) began operations, whether the Fund is diversified or non-diversified and investment category of the Funds, which are series of the Trust.

Fund	Fiscal Year End	Prospectus Date	Date Began Operations*	Diversified**	Fund Investment Category***
VP – AQR Managed Futures Strategy Fund	December 31	5/1/14	4/30/2012	No	Alternative
VP – Asset Allocation Fund	December 31	5/1/14	1/1/1989	Yes	Fund of Funds – equity
VP – Contrarian Core Fund	December 31	5/1/14	4/30/2012	Yes	Equity
VP – Core Bond Fund	December 31	5/1/14	4/30/2013	Yes	Fixed-income
VP – GS Commodity Strategy Fund	December 31	5/1/14	10/5/2012	No	Alternative
VP – MV Conservative Fund	December 31	5/1/14	4/12/2013	Yes	Fund of Funds – fixed income
VP – MV Conservative Growth Fund	December 31	5/1/14	4/12/2013	Yes	Fund of Funds – equity
VP – MV Growth Fund	December 31	5/1/14	4/12/2013	Yes	Fund of Funds – equity
VP – Multi-Strategy Alternatives Fund	December 31	5/1/14	4/30/2012	Yes	Alternative
VP – Pyrford International Equity Fund	December 31	5/1/14	4/30/2013	Yes	Equity
VP – Select Large Cap Growth Fund	December 31	5/1/14	9/2/2008	Yes	Equity
VP – Small Cap Value Fund	December 31	5/1/14	5/19/1998	Yes	Equity
VP – Small Company Growth Fund	December 31	5/1/14	1/1/1989	Yes	Equity
VP – Strategic Income Fund	December 31	5/1/14	7/5/1994	Yes	Fixed-income

* Certain Funds reorganized into series of the Trust. The date of operations for these Funds represents the date on which the predecessor funds began operation.

** A “diversified” Fund may not, with respect to 75% of its total assets, invest more than 5% of its total assets in securities of any one issuer or purchase more than 10% of the outstanding voting securities of any one issuer, except obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities and except securities of other investment companies. A “non-diversified” Fund may invest a greater percentage of its total assets in the securities of fewer issuers than a “diversified” fund, which increases the risk that a change in the value of any one investment held by the Fund could affect the overall value of the Fund more than it would affect that of a “diversified” fund holding a greater number of investments. Accordingly, a “non-diversified” Fund’s value will likely be more volatile than the value of a more diversified fund. If a “non-diversified” fund is managed as if it were a “diversified” fund for a period of three years, its status under the 1940 Act will convert automatically from “non-diversified” to “diversified”. A “diversified” fund may convert to “non-diversified” status only with shareholder approval.

*** The Fund Investment Category is used as a convenient way to describe Funds in this SAI and should not be deemed a description of the Fund’s principal investment strategies, which are described in the Fund’s prospectus.

Name Changes. The table below identifies any Fund whose name has changed in the past five years, the effective date of the name change and the former name.

Fund	Effective Date of Name Change	Previous Fund Name
VP – Asset Allocation Fund	May 2, 2011	Columbia Asset Allocation Fund, Variable Series
VP – Select Large Cap Growth Fund	May 2, 2011	Columbia Select Large Cap Growth Fund, Variable Series
VP – Small Cap Value Fund	May 2, 2011	Columbia Small Cap Value Fund, Variable Series
VP – Small Company Growth Fund	May 2, 2011	Columbia Small Company Growth Fund, Variable Series
VP – Strategic Income Fund	May 2, 2011	Columbia Strategic Income Fund, Variable Series

Fund	Effective Date of Name Change	Previous Fund Name
VP – Goldman Sachs Commodity Strategy Fund	October 5, 2012	Variable Portfolio – Oppenheimer Commodity Strategy Fund
VP – Multi-Strategy Alternatives Fund	November 18, 2013	Variable Portfolio – Eaton Vance Global Macro Advantage Fund

FUNDAMENTAL AND NON-FUNDAMENTAL INVESTMENT POLICIES

The following discussion of “fundamental” and “non-fundamental” investment policies and limitations for each Fund supplements the discussion of investment policies in the Funds’ prospectuses. A fundamental policy may be changed only with Board and shareholder approval. A non-fundamental policy may be changed by the Board and does not require shareholder approval, but may require notice to shareholders in certain instances.

Unless otherwise noted, whenever an investment policy or limitation states a maximum percentage of a Fund’s assets that may be invested in any security or other asset, or sets forth a policy regarding an investment standard, compliance with such percentage limitation or standard will be determined solely at the time of the Fund’s acquisition of such security or asset.

Notwithstanding any of a Fund’s other investment policies, each Fund, subject to certain limitations, may invest its assets in another investment company. These underlying funds have adopted their own investment policies that may be more or less restrictive than those of the Fund. The policies of the underlying funds may permit a Fund to engage in investment strategies indirectly that would otherwise be prohibited under the Fund’s investment policies.

Fundamental Policies

The 1940 Act provides that a “vote of a majority of the outstanding voting securities” means the affirmative vote of the lesser of (1) more than 50% of the outstanding shares of a Fund, or (2) 67% or more of the shares present at a meeting if more than 50% of the outstanding shares are represented at the meeting in person or by proxy. The following fundamental investment policies cannot be changed without such a vote.

Fund	A Buy or sell real estate	B Buy or sell commodities	C Buy more than 10% of an issuer	D Invest more than 5% in an issuer	E Concentrate in any one industry	F Invest at least 80%	G Act as an underwriter	H Lending	I Borrow money	J Issue senior securities
VP – AQR Managed Futures Strategy Fund	A1	B2	—	—	E1	—	G1	H1	I1	J1

VP – Strategic Income Fund	A1	B1	C1	D1	E1	—	G1	H1	I1	J1

A. Buy or sell real estate

A1 – The Fund may not purchase or sell real estate, except each Fund may: (i) purchase securities of issuers which deal or invest in real estate, (ii) purchase securities which are secured by real estate or interests in real estate and (iii) hold and dispose of real estate or interests in real estate acquired through the exercise of its rights as a holder of securities which are secured by real estate or interests therein.

B. Buy or sell physical commodities

B1 – The Fund may not purchase or sell commodities, except that each Fund may to the extent consistent with its investment objective: (i) invest in securities of companies that purchase or sell commodities or which invest in such programs, (ii) purchase and sell options, forward contracts, futures contracts, and options on futures contracts and (iii) enter into swap contracts and other financial transactions relating to commodities.^(a) This limitation does not apply to foreign currency transactions including without limitation forward currency contracts.

B2 – The Fund may invest up to 25% of its total assets in one or more wholly-owned subsidiaries that may invest in commodities, thereby indirectly gaining exposure to commodities, and may, to the extent consistent with its investment objective, (i) invest in securities of companies that purchase or sell commodities or which invest in such programs, (ii) purchase and sell options, forward contracts, futures contracts, and options on futures contracts and (iii) enter into swap contracts and other financial transactions relating to commodities.^(a) This policy does not limit foreign currency transactions including without limitation forward currency contracts.

C. Buy more than 10% of an issuer

C1 – The Fund may not purchase securities (except securities issued or guaranteed by the U.S. Government, its agencies or instrumentalities) of any one issuer if, as a result, it would own more than 10% of the voting securities of such issuer, except that: (i) up to 25% of its total assets may be invested without regard to these limitations and (ii) a Fund's assets may be invested in the securities of one or more management investment companies to the extent permitted by the 1940 Act, the rules and regulations thereunder, or any applicable exemptive relief.

D. Invest more than 5% in an issuer

D1 – The Fund may not purchase securities (except securities issued or guaranteed by the U.S. Government, its agencies or instrumentalities) of any one issuer if, as a result, more than 5% of its total assets will be invested in the securities of such issuer, except that: (i) up to 25% of its total assets may be invested without regard to these limitations and (ii) a Fund's assets may be invested in the securities of one or more management investment companies to the extent permitted by the 1940 Act, the rules and regulations thereunder, or any applicable exemptive relief.

E. Concentrate^(b)

E1 – The Fund may not purchase any securities which would cause 25% or more of the value of its total assets at the time of purchase to be invested in the securities of one or more issuers conducting their principal business activities in the same industry, provided that: (i) there is no limitation with respect to obligations issued or guaranteed by the U.S. Government, any state or territory of the United States or any of their agencies, instrumentalities or political subdivisions; and (ii) notwithstanding this limitation or any other fundamental investment limitation, assets may be invested in the securities of one or more management investment companies or subsidiaries to the extent permitted by the 1940 Act, the rules and regulations thereunder and any applicable exemptive relief.

G. Act as an underwriter

G1 – The Fund may not underwrite any issue of securities issued by other persons within the meaning of the 1933 Act except when it might be deemed to be an underwriter either: (i) in connection with the disposition of a portfolio security; or (ii) in connection with the purchase of securities directly from the issuer thereof in accordance with the Fund's investment objective. This restriction shall not limit the Fund's ability to invest in securities issued by other registered investment companies.

H. Lending

H1 – The Fund may not make loans, except to the extent permitted by the 1940 Act, the rules and regulations thereunder and any applicable exemptive relief.

I. Borrowing

I1 – The Fund may not borrow money except to the extent permitted by the 1940 Act, the rules and regulations thereunder and any applicable exemptive relief.

J. Issue senior securities

J1 – The Fund may not issue senior securities except to the extent permitted by the 1940 Act, the rules and regulations thereunder and any applicable exemptive relief.

(a) For purposes of fundamental investment policy on buying or selling physical commodities above, at the time of the establishment of the restriction, swap contracts on financial instruments or rates were not within the understanding of the term "commodities," and notwithstanding any federal legislation or regulatory action by the CFTC that subjects such swaps to regulation by the CFTC, the Fund will not consider such instruments to be commodities for purposes of this restriction.

(b) For purposes of applying the limitation set forth in the concentration policies above, the Funds will generally use the industry classifications provided by the Global Industry Classification System (GICS).

Non-fundamental Policies

The following non-fundamental policies may be changed by the Board at any time and are in addition to those described in a prospectus.

Investment in Illiquid Securities

No more than 15% of the net assets of any Fund will be held in securities and other instruments that are illiquid. “Illiquid Securities” are defined in accordance with the SEC staff’s current guidance and interpretations which provide that an illiquid security is a security which may not be sold or disposed of in the ordinary course of business within seven days at approximately the value at which the Fund has valued the security.

Investment in Other Investment Companies

The Funds may not purchase securities of other investment companies except to the extent permitted by the 1940 Act, the rules and regulations thereunder and any applicable exemptive relief. If shares of the Fund are purchased by another Fund in reliance on Section 12(d)(1)(G) of the 1940 Act, for so long as shares of the Fund are held by such other fund, the Fund will not purchase securities of a registered open-end investment company or registered unit investment trust in reliance on Section 12(d)(1)(F) or Section 12(d)(1)(G) of the 1940 Act.

Investment in Foreign Securities

- VP – AQR Managed Futures Strategy Fund may invest without limit in foreign instruments, including emerging market instruments.
- VP – Contrarian Core Fund may invest up to 20% of its net assets in foreign securities, either directly or indirectly through depositary receipts.
- VP – Core Bond Fund may invest up to 25% of its assets in dollar-denominated debt securities issued by foreign governments, companies, or other entities.
- VP – Multi-Strategy Alternatives Fund may invest without limit in foreign investments (including currencies), which may include investments in emerging markets, and in investments that are rated below investment-grade or, if unrated, deemed to be of comparable quality (commonly referred to as “high yield securities” or “junk bonds”).
- VP – Select Large Cap Growth Fund may invest directly in foreign securities or indirectly through depositary receipts.
- VP – Small Cap Value Fund may invest up to 20% of its total assets in foreign securities.
- VP – Small Company Growth Fund will be subject to the following diversification guidelines pertaining to investments in foreign securities:
 1. The Fund will be invested in a minimum of five different foreign countries at all times when it holds investments in foreign securities. However, this minimum is reduced to four when foreign country investments comprise less than 80% of the Fund’s net asset value; to three when less than 60% of such value; to two when less than 40%; and to one when less than 20%.
 2. Except as set forth in item 3 below, the Fund will have no more than 20% of its net asset value invested in securities of issuers located in any one foreign country.
 3. The Fund may have an additional 15% of its value invested in securities of issuers located in any one of the following countries: Australia, Canada, France, Japan, the United Kingdom or Germany.
- VP – Strategic Income Fund may invest in debt securities issued by foreign governments, companies or other entities, including in emerging market countries and non-dollar denominated securities.

Selling Securities Short

- Each Fund (other than those Funds listed below) may not sell securities short, except as permitted by the 1940 Act, the rules and regulations thereunder and any applicable exemptive relief.
- VP – Small Cap Value Fund and VP – Strategic Income Fund may not have a short position, unless the Fund owns, or owns rights (exercisable without payment) to acquire, an equal amount of such securities.

Purchasing on Margin

- VP – Small Cap Value Fund and VP – Strategic Income Fund may not purchase securities on margin, but may receive short-term credit to clear securities transactions and may make initial or maintenance margin deposits in connection with futures transactions.
- VP – Asset Allocation Fund and VP – Small Company Growth Fund may not purchase securities on margin (but may receive short-term credit to clear securities transactions), make short sales of securities, or participate on a joint or a joint and several basis in any trading account in securities (except in connection with transactions in options, futures, and options on futures).

Purchasing and Selling Commodities

- VP – Small Cap Value Fund and VP – Strategic Income Fund may not purchase or sell commodities contracts if the total initial margin and premiums on the contracts would exceed 5% of its total assets.
- VP – AQR Managed Futures Strategy Fund, VP – Multi-Strategy Alternatives Fund, and VP – GS Commodity Strategy Fund may invest more than 25% of its net assets in commodities-related industries. Currently, these Funds consider commodities-related industries to include, among other industries, oil, natural gas, agricultural products and metals industries.

Warrant and Option Transactions

- VP – Asset Allocation Fund and VP – Small Company Growth Fund may not invest more than 5% of its net assets (valued at time of purchase) in warrants, nor more than 2% of its net assets in warrants that are not listed on the New York or American Stock Exchanges;
- VP – Asset Allocation Fund and VP – Small Company Growth Fund may not write an option on a security unless, in compliance with SEC requirements, cash or liquid securities equal in value to the commodity value (less any applicable margin deposits) have been deposited in a segregated account;
- VP – Asset Allocation Fund and VP – Small Company Growth Fund may buy or sell an option on a security, a futures contract or an option on a futures contract so long as the total initial margin and premiums on the contracts do not exceed 5% of its total assets;
- VP – Asset Allocation Fund and VP – Small Company Growth Fund may not purchase a put or call option if the aggregate premiums paid for all put and call options exceed 20% of its net assets (less the amount by which any such positions are in-the-money), excluding put and call options purchased as closing transactions.

Other Non-Fundamental Investment Policies

- VP – Asset Allocation Fund and VP – Small Company Growth Fund may not invest in companies for the purpose of exercising control or management.
- VP – Small Company Growth Fund may not purchase more than 3% of the stock of another investment company; or purchase stock of other investment companies equal to more than 5% of the Fund's total assets (valued at time of purchase) in the case of any one other investment company and 10% of such assets (valued at the time of purchase) in the case of all other investment companies in the aggregate; any purchases of other investment companies by VP – Small Company Growth Fund are to be made in the open market where no profit to a sponsor or dealer results from the purchase, other than the customary broker's commission, except for securities acquired as part of a merger, consolidation or acquisition of assets.
- VP – Asset Allocation Fund and VP – Small Company Growth Fund may not mortgage, pledge, hypothecate or in any manner transfer, as security for indebtedness, any securities owned or held by it, except as may be necessary in connection with (i) permitted borrowings and (ii) options, futures and options on futures.
- VP – Asset Allocation Fund and VP – Small Company Growth Fund may not issue senior securities, except to the extent permitted by the 1940 Act (including permitted borrowings).
- VP – Asset Allocation Fund and VP – Small Company Growth Fund may not purchase portfolio securities for the Fund from, or sell portfolio securities to, any of the officers and directors or Trustees of the Trust or of its investment adviser.
- The borrowing limits for the VP – Small Company Growth Fund are (1) 10% of net asset value when borrowing for any general purpose and (2) 25% of net asset value when borrowing as a temporary measure to facilitate redemptions. For this purpose, net asset value is the market value of all investments or assets owned less outstanding liabilities of the Fund at the time that any new or additional borrowing is undertaken.

State Insurance Regulations

In addition to the restrictions set forth above, each Fund may be subject to investment restrictions imposed under state insurance laws and regulations. These restrictions are non-fundamental and, in the event of amendments to the applicable statutes or regulations, each Fund will comply, without the approval of its shareholders, with the requirements as so modified.

Names Rule Policy

To the extent a Fund is subject to Rule 35d-1 under the 1940 Act (the Names Rule), and does not otherwise have a fundamental policy in place to comply with the Names Rule, such Fund has adopted the following non-fundamental policy: Shareholders will receive at least 60 days' notice of any change to the Fund's investment objective or principal investment strategies made in order to comply with the Names Rule. The notice will be provided in plain English in a separate written document, and will contain the following prominent statement or similar statement in bold-face type: "Important Notice Regarding Change in Investment Policy." This statement will appear on both the notice and the envelope in which it is delivered, unless it is delivered separately from other communications to investors, in which case the statement will appear either on the notice or the envelope in which the notice is delivered.

ABOUT THE FUNDS' INVESTMENTS

Each Fund's investment objectives, principal investment strategies and related principal risks are discussed in each Fund's prospectuses. Each Fund's prospectus identifies the types of securities in which the Fund invests principally and summarizes the principal risks to the Fund's portfolio as a whole associated with such investments. Unless otherwise indicated in the prospectus or this SAI, the investment objective and policies of a Fund may be changed without shareholder approval.

To the extent that a type of security identified in the table below for a Fund is not described in the Fund's prospectus (or as a sub-category of such security type in this SAI), the Fund generally invests in such security type, if at all, as part of its non-principal investment strategies.

Information about individual types of securities (including certain of their associated risks) in which some or all of the Funds may invest is set forth below. Each Fund may invest in these types of securities, subject to its investment objective and fundamental and non-fundamental investment policies. A Fund is not required to invest in any or all of the types of securities listed below.

Funds-of-funds invest in a combination of underlying funds, although they may invest directly in stocks, bonds and other securities. These underlying funds have their own investment strategies and types of investments they are allowed to engage in and purchase. Funds-of-funds may, directly or indirectly, invest through investments in underlying funds, invest in the securities and engage in investment strategies indicated in the table below.

Certain Investment Activity Limits. The overall investment and other activities of the Investment Manager and its affiliates may limit the investment opportunities for each Fund in certain markets, industries or transactions or in individual issuers where limitations are imposed upon the aggregate amount of investment by the Funds and other accounts managed by the Investment Manager and accounts of its affiliates (collectively, affiliated investors). From time to time, each Fund's activities also may be restricted because of regulatory restrictions applicable to the Investment Manager and its affiliates and/or because of their internal policies. See *Investment Management and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest.*

Temporary Defensive Positions. Each Fund may from time to time take temporary defensive investment positions that may be inconsistent with the Fund's principal investment strategies in attempting to respond to adverse market, economic, political, social or other conditions, including, without limitation investing some or all of its assets in money market instruments or shares of affiliated or unaffiliated money market funds or holding some or all of its assets in cash or cash equivalents. The Fund may take such defensive investment positions for as long a period as deemed necessary.

Other Strategic and Investment Measures. Unless prohibited by its investment policies, a Fund may also from time to time take temporary portfolio positions that may or may not be consistent with the Fund's principal investment strategies in attempting to respond to adverse market, economic, political, social or other conditions, including, without limitation, investing in derivatives, such as futures (e.g., index futures) or options on futures, for various purposes, including among others, investing in particular derivatives to achieve indirect investment exposure to a sector, country or region where the Investment Manager (or Fund subadvisor, if applicable) believes such defensive positioning is appropriate. Each Fund may do so without limit and for as long a period as deemed necessary, when the Investment Manager or the Fund's subadvisor, if applicable: (i) believes that market conditions are not favorable for profitable investing or to avoid losses, including under adverse market, economic, political or other conditions; (ii) is unable to locate favorable investment opportunities; or (iii) determines that a temporary defensive position is advisable or necessary in order to meet anticipated redemption requests, or for other reasons. While the Fund is so positioned, derivatives could comprise a substantial portion of the Fund's investments and the Fund may not achieve its investment objective. Investing in this manner may adversely affect Fund performance. During these times, the portfolio managers may make frequent portfolio holding changes, which could result in increased trading expenses and decreased Fund performance.

Types of Investments

A black circle indicates that the investment strategy or type of investment generally is authorized for a category of funds. Exceptions are noted following the table. See *About the Trust* for fund investment categories.

(1) The following fund is not authorized to invest in Warrants and Rights: VP – AQR Managed Futures Strategy Fund.

(2) The following fund is not authorized to invest in Stock Options and Stock Index Options: VP – AQR Managed Futures Strategy Fund.

(3) The following funds are not authorized to invest in Stripped Securities: VP – Asset Allocation Fund, VP – Small Cap Value Fund, VP – Small Company Growth Fund, and VP – Contrarian Core Fund.

(4) The following funds are not authorized to invest in Zero-Coupon, Pay-in-Kind and Step-Coupon Securities: VP – Small Cap Value Fund and VP – Small Company Growth Fund.

A. The following funds are not authorized to invest in High Yield Securities: VP – AQR Managed Futures Strategy Fund, VP – Small Company Growth Fund, and VP – Contrarian Core Fund.

B. The following funds are not authorized to invest in Initial Public Offerings of equity securities: VP – AQR Managed Futures Strategy Fund, VP – Multi-Strategy Alternatives Fund, and VP – Strategic Income Fund.

Asset-Backed Securities

Asset-backed securities represent interests in, or debt instruments that are backed by, pools of various types of assets that generate cash payments generally over fixed periods of time, such as, among others, motor vehicle installment sales, contracts, installment loan contracts, leases of various types of real and personal property, and receivables from revolving (credit card) agreements. Such securities entitle the security holders to receive distributions (i.e., principal and interest) that are tied to the payments made by the borrower on the underlying assets (less fees paid to the originator, servicer, or other

parties, and fees paid for credit enhancement), so that the payments made on the underlying assets effectively pass through to such security holders. Asset-backed securities typically are created by an originator of loans or owner of accounts receivable that sells such underlying assets to a special purpose entity in a process called a securitization. The special purpose entity issues securities that are backed by the payments on the underlying assets, and have a minimum denomination and specific term. Asset-backed securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See *Types of Investments — Variable- and Floating-Rate Obligations, Types of Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities* and *Types of Investments — Private Placement and Other Restricted Securities* for more information.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with asset-backed securities include: Credit Risk, Interest Rate Risk, Liquidity Risk and Prepayment and Extension Risk.

Bank Obligations (Domestic and Foreign)

Bank obligations include certificates of deposit, bankers' acceptances, time deposits and promissory notes that earn a specified rate of return and may be issued by (i) a domestic branch of a domestic bank, (ii) a foreign branch of a domestic bank, (iii) a domestic branch of a foreign bank or (iv) a foreign branch of a foreign bank. Bank obligations may be structured as fixed-, variable- or floating-rate obligations. See *Types of Investments — Variable- and Floating-Rate Obligations* for more information.

Certificates of deposit, or so-called CDs, typically are interest-bearing debt instruments issued by banks and have maturities ranging from a few weeks to several years. Yankee dollar certificates of deposit are negotiable CDs issued in the United States by branches and agencies of foreign banks. Eurodollar certificates of deposit are CDs issued by foreign banks with interest and principal paid in U.S. dollars. Eurodollar and Yankee Dollar CDs typically have maturities of less than two years and have interest rates that typically are pegged to the London Interbank Offered Rate or LIBOR. See *Types of Investments — Eurodollar and Yankee Dollar Instruments*. Bankers' acceptances are time drafts drawn on and accepted by banks, are a customary means of effecting payment for merchandise sold in import-export transactions and are a general source of financing. A time deposit can be either a savings account or CD that is an obligation of a financial institution for a fixed term. Typically, there are penalties for early withdrawals of time deposits. Promissory notes are written commitments of the maker to pay the payee a specified sum of money either on demand or at a fixed or determinable future date, with or without interest.

Bank investment contracts are issued by banks. Pursuant to such contracts, a Fund may make cash contributions to a deposit fund of a bank. The bank then credits to the Fund payments at floating or fixed interest rates. A Fund also may hold funds on deposit with its custodian for temporary purposes.

Certain bank obligations, such as some CDs, are insured by the FDIC up to certain specified limits. Many other bank obligations, however, are neither guaranteed nor insured by the FDIC or the U.S. Government. These bank obligations are "backed" only by the creditworthiness of the issuing bank or parent financial institution. Domestic and foreign banks are subject to different governmental regulation. Accordingly, certain obligations of foreign banks, including Eurodollar and Yankee dollar obligations, involve different and/or heightened investment risks than those affecting obligations of domestic banks, including, among others, the possibilities that: (i) their liquidity could be impaired because of political or economic developments; (ii) the obligations may be less marketable than comparable obligations of domestic banks; (iii) a foreign jurisdiction might impose withholding and other taxes at high levels on interest income; (iv) foreign deposits may be seized or nationalized; (v) foreign governmental restrictions such as exchange controls may be imposed, which could adversely affect the payment of principal and/or interest on those obligations; (vi) there may be less publicly available information concerning foreign banks issuing the obligations; and (vii) the reserve requirements and accounting, auditing and financial reporting standards, practices and requirements applicable to foreign banks may differ (including, less stringent) from those applicable to domestic banks. Foreign banks generally are not subject to examination by any U.S. Government agency or instrumentality. See *Types of Investments — Foreign Securities*.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with bank obligations include: Credit Risk, Interest Rate Risk, Issuer Risk, and Prepayment and Extension Risk.

Collateralized Bond Obligations

Collateralized bond obligations (CBOs) are investment grade bonds backed by a pool of bonds, which may include junk bonds (which are considered speculative investments). CBOs are similar in concept to collateralized mortgage obligations (CMOs), but differ in that CBOs represent different degrees of credit quality rather than different maturities. (See *Types of Investments — Mortgage-Backed Securities* and *— Asset-Backed Securities*.) CBOs are often privately offered and sold, and thus not registered under securities laws.

Underwriters of CBOs package a large and diversified pool of high-risk, high-yield junk bonds, which is then structured into “tranches.” Typically, the first tranche represents a senior claim on collateral and pays the lowest interest rate; the second tranche is junior to the first tranche and therefore subject to greater risk and pays a higher rate; the third tranche is junior to both the first and second tranche, represents the lowest credit quality and instead of receiving a fixed interest rate receives the residual interest payments — money that is left over after the higher tranches have been paid. CBOs, like CMOs, are substantially overcollateralized and this, plus the diversification of the pool backing them, may earn certain of the tranches investment-grade bond ratings. Holders of third-tranche CBOs stand to earn higher or lower yields depending on the rate of defaults in the collateral pool. See *Types of Investments — High Yield Securities*.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with CBOs include: Credit Risk, Illiquid Securities Risk, Interest Rate Risk, Liquidity Risk, High-Yield Securities Risk and Prepayment and Extension Risk.

Commercial Paper

Commercial paper is a short-term debt obligation, usually sold on a discount basis, with a maturity ranging from 2 to 270 days issued by banks, corporations and other borrowers. It is sold to investors with temporary idle cash as a way to increase returns on a short-term basis. These instruments are generally unsecured, which increases the credit risk associated with this type of investment. See *Types of Investments — Debt Obligations* and — *Illiquid Securities*. See Appendix A for a discussion of securities ratings.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with commercial paper include: Credit Risk and Liquidity Risk.

Common Stock

Common stock represents a unit of equity ownership of a corporation. Owners typically are entitled to vote on the selection of directors and other important corporate governance matters, and to receive dividend payments, if any, on their holdings. However, ownership of common stock does not entitle owners to participate in the day-to-day operations of the corporation. Common stocks of domestic and foreign public corporations can be listed, and their shares traded, on domestic stock exchanges, such as the NYSE or the NASDAQ Stock Market. Domestic and foreign corporations also may have their shares traded on foreign exchanges, such as the London Stock Exchange or Tokyo Stock Exchange. See *Types of Investments — Foreign Securities*. Common stock may be privately placed or publicly offered. The price of common stock is generally determined by corporate earnings, type of products or services offered, projected growth rates, experience of management, liquidity, and market conditions generally. In the event that a corporation declares bankruptcy or is liquidated, the claims of secured and unsecured creditors and owners of bonds and preferred stock take precedence over the claims of those who own common stock. See *Types of Investments — Private Placement and Other Restricted Securities — Preferred Stock* and — *Convertible Securities* for more information.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with common stock include: Issuer Risk and Market Risk.

Convertible Securities

Convertible securities include bonds, debentures, notes, preferred stocks or other securities that may be converted or exchanged (by the holder or by the issuer) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio or predetermined price (the conversion price). As such, convertible securities combine the investment characteristics of debt securities and equity securities. A holder of convertible securities is entitled to receive the income of a bond, debenture or note or the dividend of a preferred stock until the conversion privilege is exercised. The market value of convertible securities generally is a function of, among other factors, interest rates, the rates of return of similar nonconvertible securities and the financial strength of the issuer. The market value of convertible securities tends to decline as interest rates rise and, conversely, to rise as interest rates decline. However, a convertible security’s market value tends to reflect the market price of the common stock of the issuing company when that stock price approaches or is greater than its conversion price. As the market price of the underlying common stock declines, the price of the convertible security tends to be influenced more by the rate of return of the convertible security. Because both interest rate and common stock’s market movements can influence their value, convertible securities generally are not as sensitive to changes in interest rates as similar non-convertible debt securities nor generally as sensitive to changes in share price as the underlying common stock. Convertible securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See *Types of Investments — Variable- and Floating-Rate Obligations*, *Types of Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities*, *Types of Investments — Common Stock*, *Types of Investments — Corporate Debt Securities* and *Types of Investments — Private Placement and Other Restricted Securities* for more information.

Certain convertible securities may have a mandatory conversion feature, pursuant to which the securities convert automatically into common stock or other equity securities (of the same or a different issuer) at a specified date and at a specified exchange ratio. Certain convertible securities may be convertible at the option of the issuer, which may require a holder to convert the security into the underlying common stock, even at times when the value of the underlying common stock or other equity security has declined substantially. In addition, some convertible securities may be rated below investment grade or may not be rated and, therefore, may be considered speculative investments. Companies that issue convertible securities frequently are small- and mid-capitalization companies and, accordingly, carry the risks associated with such companies. In addition, the credit rating of a company's convertible securities generally is lower than that of its conventional debt securities. Convertible securities are senior to equity securities and have a claim to the assets of an issuer prior to the holders of the issuer's common stock in the event of liquidation but generally are subordinate to similar non-convertible debt securities of the same issuer. Some convertible securities are particularly sensitive to changes in interest rates when their predetermined conversion price is much higher than the price for the issuing company's common stock.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with convertible securities include: Convertible Securities Risk, Interest Rate Risk, Issuer Risk, Market Risk, Prepayment and Extension Risk, and Reinvestment Risk.

Corporate Debt Securities

Corporate debt securities are long and short term fixed income securities typically issued by businesses to finance their operations. Corporate debt securities are issued by public or private companies, as distinct from debt securities issued by a government or its agencies. The issuer of a corporate debt security often has a contractual obligation to pay interest at a stated rate on specific dates and to repay principal periodically or on a specified maturity date. Corporate debt securities typically have four distinguishing features: (1) they are taxable; (2) they have a par value of \$1,000; (3) they have a term maturity, which means they come due at a specified time period; and (4) many are traded on major securities exchanges. Notes, bonds, debentures and commercial paper are the most common types of corporate debt securities, with the primary difference being their interest rates, maturity dates and secured or unsecured status. Commercial paper has the shortest term and usually is unsecured, as are debentures. The broad category of corporate debt securities includes debt issued by domestic or foreign companies of all kinds, including those with small-, mid- and large-capitalizations. The category also includes bank loans, as well as assignments, participations and other interests in bank loans. Corporate debt securities may be rated investment grade or below investment grade and may be structured as fixed-, variable or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. They may also be senior or subordinated obligations. See Appendix A for a discussion of securities ratings. See *Types of Investments — Variable- and Floating-Rate Obligations*, *Types of Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities*, *Types of Investments — Private Placement and Other Restricted Securities*, *Debt Obligations*, *Types of Investments — Commercial Paper and — High Yield Securities* for more information.

Extendible commercial notes (ECNs) are very similar to commercial paper except that, with ECNs, the issuer has the option to extend the notes' maturity. ECNs are issued at a discount rate, with an initial redemption of not more than 90 days from the date of issue. If ECNs are not redeemed by the issuer on the initial redemption date, the issuer will pay a premium (step-up) rate based on the ECN's credit rating at the time.

Because of the wide range of types and maturities of corporate debt securities, as well as the range of creditworthiness of issuers, corporate debt securities can have widely varying risk/return profiles. For example, commercial paper issued by a large established domestic corporation that is rated by an NRSRO as investment grade may have a relatively modest return on principal but present relatively limited risk. On the other hand, a long-term corporate note issued, for example, by a small foreign corporation from an emerging market country that has not been rated by an NRSRO may have the potential for relatively large returns on principal but carries a relatively high degree of risk.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with corporate debt securities include: Credit Risk, Interest Rate Risk, Issuer Risk, High Yield Securities Risk, Prepayment and Extension Risk and Reinvestment Risk.

Custody Receipts and Trust Certificates

Custody receipts and trust certificates are derivative products that evidence direct ownership in a pool of securities. Typically, a sponsor will deposit a pool of securities with a custodian in exchange for custody receipts evidencing interests in those securities. The sponsor generally then will sell the custody receipts or trust certificates in negotiated transactions at varying prices. Each custody receipt or trust certificate evidences the individual securities in the pool and the holder of a custody receipt or trust certificate generally will have all the rights and privileges of owners of those securities.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with custody receipts and trust certificates include: Liquidity Risk and Counterparty Risk. In addition, custody receipts and trust certificates generally are subject to the same risks as the securities evidenced by the receipts or certificates.

Debt Obligations

Many different types of debt obligations exist (for example, bills, bonds, and notes). Issuers of debt obligations have a contractual obligation to pay interest at a fixed, variable or floating rate on specified dates and to repay principal by a specified maturity date. Certain debt obligations (usually intermediate and long-term bonds) have provisions that allow the issuer to redeem or “call” a bond before its maturity. Issuers are most likely to call these securities during periods of falling interest rates. When this happens, an investor may have to replace these securities with lower yielding securities, which could result in a lower return.

The market value of debt obligations is affected primarily by changes in prevailing interest rates and the issuer’s perceived ability to repay the debt. The market value of a debt obligation generally reacts inversely to interest rate changes. When prevailing interest rates decline, the market value of the bond usually rises, and when prevailing interest rates rise, the market value of the bond usually declines.

In general, the longer the maturity of a debt obligation, the higher its yield and the greater the sensitivity to changes in interest rates. Conversely, the shorter the maturity, the lower the yield and the lower the sensitivity to changes in interest rates.

As noted, the values of debt obligations also may be affected by changes in the credit rating or financial condition of their issuers. Generally, the lower the quality rating of a security, the higher the degree of risk as to the payment of interest and return of principal. To compensate investors for taking on such increased risk, those issuers deemed to be less creditworthy generally must offer their investors higher interest rates than do issuers with better credit ratings. See *Types of Investments — Corporate Debt Securities* and *High Yield Securities*.

See *Types of Investments — Trust-Preferred Securities* for information with respect to the trust-preferred or trust-issued securities.

Determining Investment Grade for Purposes of Investment Policies. When determining whether a security is investment grade or below investment grade for purposes of investment policies of investing in such securities, the Funds use the middle rating of Moody’s, S&P and Fitch after excluding the highest and lowest available ratings. When a rating from only two of these agencies is available, the lower rating is used. When a rating from only one of these agencies is available, that rating is used. When a security is not rated by one of these agencies, the Investment Manager or, as applicable, a subadviser, determines whether it is of investment grade or below investment grade (e.g., junk bond) quality. See Appendix A for a discussion of securities ratings.

All ratings limitations are applied at the time of purchase. Subsequent to purchase, a debt security may cease to be rated or its rating may be reduced below the minimum required for purchase by a Fund. Neither event will require the sale of such a security, but it will be a factor in considering whether to continue to hold the security.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with debt obligations include: Confidential Information Access Risk, Credit Risk, Highly Leveraged Transactions Risk, Impairment of Collateral Risk, Interest Rate Risk, Issuer Risk, Liquidity Risk, Prepayment and Extension Risk and Reinvestment Risk.

Depository Receipts

See *Types of Investments — Foreign Securities* below.

Derivatives

General

Derivatives are financial instruments whose values are based on (or “derived” from) traditional securities (such as a stock or a bond), assets (such as a commodity, like gold), reference rates (such as LIBOR), market indices (such as the S&P 500® Index) or customized baskets of securities or instruments. Some forms of derivatives, such as exchange-traded futures and options on securities, commodities, or indices, are traded on regulated exchanges. These types of derivatives are standardized contracts that can easily be bought and sold, and whose market values are determined and published daily. Non-standardized derivatives, on the other hand, tend to be more specialized or complex, and may be harder to value. Many derivative instruments often require little or no initial payment and therefore often create inherent economic leverage. Derivatives, when used properly, can enhance returns and be useful in hedging portfolios and managing risk. Some common types of derivatives include futures; options; options on futures; forward foreign currency exchange contracts; forward contracts on securities and securities indices; linked securities and structured products; CMOs; stripped securities; warrants; swap agreements and swaptions.

A Fund may use derivatives for a variety of reasons, including, for example: (i) to enhance its return; (ii) to attempt to protect against possible unfavorable changes in the market value of securities held in or to be purchased for its portfolio resulting from securities markets or currency exchange rate fluctuations (i.e., to hedge); (iii) to protect its unrealized gains reflected in the value of its portfolio securities; (iv) to facilitate the sale of such securities for investment purposes; (v) to reduce transaction costs; (vi) to manage the effective maturity or duration of its portfolio; and/or (vii) to maintain cash reserves while remaining fully invested.

A Fund may use any or all of the above investment techniques and may purchase different types of derivative instruments at any time and in any combination. The use of derivatives is a function of numerous variables, including market conditions. See also *Types of Investments — Warrants and Rights* and *When Issued, Delayed Delivery and Forward Commitment Transactions*.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with transactions in derivatives (including the derivatives instruments discussed below) include: Counterparty Risk, Credit Risk, Interest Rate Risk, Leverage Risk, Liquidity Risk, Market Risk, Derivatives Risk, Derivatives Risk/Credit Default Swaps Risk, Derivatives

Risk/Forward Foreign Currency Contracts Risk, Derivatives Risk/Commodity-Linked Futures Contracts Risk, Derivatives Risk/Commodity-Linked Structured Notes Risk, Derivatives Risk/Commodity-Linked Swaps, Derivatives Risk/Forward Interest Rate Agreements Risk, Derivatives Risk/Futures Contracts Risk, Derivatives Risk/Interest Rate Swaps Risk, Derivatives Risk/Inverse Floaters Risk, Derivatives Risk/Options Risk, Derivatives Risk/Portfolio Swaps and Total Return Swaps Risk, Derivatives Risk/Total Return Swaps Risk, and Derivatives Risk/Warrants Risk.

Index or Linked Securities (Structured Products)

General. Indexed or linked securities, also often referred to as “structured products,” are instruments that may have varying combinations of equity and debt characteristics. These instruments are structured to recast the investment characteristics of the underlying security or reference asset. If the issuer is a unit investment trust or other special purpose vehicle, the structuring will typically involve the deposit with or purchase by such issuer of specified instruments (such as commercial bank loans or securities) and/or the execution of various derivative transactions, and the issuance by that entity of one or more classes of securities (structured securities) backed by, or representing interests in, the underlying instruments. The cash flow on the underlying instruments may be apportioned among the newly issued structured securities to create securities with different investment characteristics, such as varying maturities, payment priorities and interest rate provisions, and the extent of such payments made with respect to structured securities is dependent on the extent of the cash flow on the underlying instruments.

Indexed and Inverse Floating Rate Securities. A Fund may invest in securities that provide a potential return based on a particular index or interest rates. For example, a Fund may invest in debt securities that pay interest based on an index of interest rates. The principal amount payable upon maturity of certain securities also may be based on the value of the index. To the extent a Fund invests in these types of securities, a Fund’s return on such securities will rise and fall with the value of the particular index: that is, if the value of the index falls, the value of the indexed securities owned by a Fund will fall. Interest and principal payable on certain securities may also be based on relative changes among particular indices.

A Fund may also invest in so-called “inverse floaters” or “residual interest bonds” on which the interest rates vary inversely with a floating rate (which may be reset periodically by a dutch auction, a remarketing agent, or by reference to a short-term tax-exempt interest rate index). A Fund may purchase synthetically-created inverse floating rate bonds evidenced by custodial or trust receipts. A trust funds the purchase of a bond by issuing two classes of certificates: short-term floating rate notes (typically sold to third parties) and the inverse floaters (also known as residual certificates). No additional income beyond that provided by the trust’s underlying bond is created; rather, that income is merely divided-up between the two classes of certificates. Generally, income on inverse floating rate bonds will decrease when interest rates increase, and will increase when interest rates decrease. Such securities can have the effect of providing a degree of investment leverage, since they may increase or decrease in value in response to changes in market interest rates at a rate that is a multiple of the actual rate at which fixed-rate securities increase or decrease in response to such changes. As a result, the market values of such securities will generally be more volatile than the market values of fixed-rate securities. To seek to limit the volatility of these securities, a Fund may purchase inverse floating obligations that have shorter-term maturities or that contain limitations on the extent to which the interest rate may vary. Certain investments in such obligations may be illiquid. Furthermore, where such a security includes a contingent liability, in the event of an adverse movement in the underlying index or interest rate, a Fund may be required to pay substantial additional margin to maintain the position.

Credit Linked Securities. Among the income-producing securities in which a Fund may invest are credit linked securities. The issuers of these securities frequently are limited purpose trusts or other special purpose vehicles that, in turn, invest in a derivative instrument or basket of derivative instruments, such as credit default swaps, interest rate swaps and other securities, in order to provide exposure to certain fixed income markets. For instance, a Fund may invest in credit linked

securities as a cash management tool in order to gain exposure to a certain market and/or to remain fully invested when more traditional income-producing securities are not available. Like an investment in a bond, investments in these credit linked securities represent the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on or linked to the issuer's receipt of payments from, and the issuer's potential obligations to, the counterparties to the derivative instruments and other securities in which the issuer invests. For instance, the issuer may sell one or more credit default swaps, under which the issuer would receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a default occurs, the stream of payments may stop and the issuer would be obligated to pay the counterparty the par (or other agreed upon value) of the referenced debt obligation. This, in turn, would reduce the amount of income and/or principal that a Fund would receive. A Fund's investments in these securities are indirectly subject to the risks associated with derivative instruments. These securities generally are exempt from registration under the 1933 Act. Accordingly, there may be no established trading market for the securities and they may constitute illiquid investments.

Index-, Commodity- and Currency-Linked Securities. "Index-linked" or "commodity-linked" notes are debt securities of companies that call for interest payments and/or payment at maturity in different terms than the typical note where the borrower agrees to make fixed interest payments and to pay a fixed sum at maturity. Principal and/or interest payments on an index-linked or commodity-linked note depend on the performance of one or more market indices, such as the S&P 500[®] Index, a weighted index of commodity futures such as crude oil, gasoline and natural gas or the market prices of a particular commodity or basket of commodities or securities. Currency-linked debt securities are short-term or intermediate-term instruments having a value at maturity, and/or an interest rate, determined by reference to one or more foreign currencies. Payment of principal or periodic interest may be calculated as a multiple of the movement of one currency against another currency, or against an index.

Index-, commodity- and currency-linked securities may entail substantial risks. Such instruments may be subject to significant price volatility. The company issuing the instrument may fail to pay the amount due on maturity. The underlying investment may not perform as expected by a Fund's portfolio manager. Markets and underlying investments and indexes may move in a direction that was not anticipated by a Fund's portfolio manager. Performance of the derivatives may be influenced by interest rate and other market changes in the United States and abroad, and certain derivative instruments may be illiquid.

Linked securities are often issued by unit investment trusts. Examples of this include such index-linked securities as S&P Depository Receipts (SPDRs), which is an interest in a unit investment trust holding a portfolio of securities linked to the S&P 500[®] Index, and a type of exchange-traded fund (ETF). Because a unit investment trust is an investment company under the 1940 Act, a Fund's investments in SPDRs are subject to the limitations set forth in Section 12(d)(1)(A) of the 1940 Act, although the SEC has issued exemptive relief permitting investment companies such as the Funds to invest beyond the limits of Section 12(d)(1)(A) subject to certain conditions. SPDRs generally closely track the underlying portfolio of securities, trade like a share of common stock and pay periodic dividends proportionate to those paid by the portfolio of stocks that comprise the S&P 500[®] Index. As a holder of interests in a unit investment trust, a Fund would indirectly bear its ratable share of that unit investment trust's expenses. At the same time, a Fund would continue to pay its own management and advisory fees and other expenses, as a result of which a Fund and its shareholders in effect would be absorbing levels of fees with respect to investments in such unit investment trusts.

Because linked securities typically involve no credit enhancement, their credit risk generally will be equivalent to that of the underlying instruments. Investments in structured products may be structured as a class that is either subordinated or unsubordinated to the right of payment of another class. Subordinated linked securities typically have higher rates of return and present greater risks than unsubordinated structured products. Structured products sometimes are sold in private placement transactions and often have a limited trading market.

Investments in linked securities have the potential to lead to significant losses because of unexpected movements in the underlying financial asset, index, currency or other investment. The ability of a Fund to utilize linked securities successfully will depend on its ability correctly to predict pertinent market movements, which cannot be assured. Because currency-linked securities usually relate to foreign currencies, some of which may be currencies from emerging market countries, there are certain additional risks associated with such investments.

Futures Contracts and Options on Futures Contracts

Futures Contracts. A futures contract sale creates an obligation by the seller to deliver the type of security or other asset called for in the contract at a specified delivery time for a stated price. A futures contract purchase creates an obligation by the purchaser to take delivery of the type of security or other asset called for in the contract at a specified delivery time for a stated price. The specific security or other asset delivered or taken at the settlement date is not determined until on or near that date. The determination is made in accordance with the rules of the exchange on which the futures contract was made. A

Fund may enter into futures contracts which are traded on national or foreign futures exchanges and are standardized as to maturity date and underlying security or other asset. Futures exchanges and trading in the United States are regulated under the Commodity Exchange Act (CEA) by the Commodity Futures Trading Commission (CFTC), a U.S. Government agency. See *Types of Investments — Derivatives — CFTC Regulation* below for information on CFTC regulation.

Traders in futures contracts may be broadly classified as either “hedgers” or “speculators.” Hedgers use the futures markets primarily to offset unfavorable changes (anticipated or potential) in the value of securities or other assets currently owned or expected to be acquired by them. Speculators less often own the securities or other assets underlying the futures contracts which they trade, and generally use futures contracts with the expectation of realizing profits from fluctuations in the value of the underlying securities or other assets.

Upon entering into futures contracts, in compliance with regulatory requirements, cash or liquid securities, equal in value to the amount of a Fund’s obligation under the contract (less any applicable margin deposits and any assets that constitute “cover” for such obligation), will be segregated with a Fund’s custodian.

Unlike when a Fund purchases or sells a security, no price is paid or received by a Fund upon the purchase or sale of a futures contract, although a Fund is required to deposit with its custodian in a segregated account in the name of the futures broker an amount of cash and/or U.S. Government securities in order to initiate and maintain open positions in futures contracts. This amount is known as “initial margin.” The nature of initial margin in futures transactions is different from that of margin in security transactions, in that futures contract margin does not involve the borrowing of funds by a Fund to finance the transactions. Rather, initial margin is in the nature of a performance bond or good faith deposit intended to assure completion of the contract (delivery or acceptance of the underlying security or other asset) that is returned to a Fund upon termination of the futures contract, assuming all contractual obligations have been satisfied. Minimum initial margin requirements are established by the relevant futures exchange and may be changed. Brokers may establish deposit requirements which are higher than the exchange minimums. Futures contracts are customarily purchased and sold on margin which may range upward from less than 5% of the value of the contract being traded. Subsequent payments, called “variation margin,” to and from the broker (or the custodian) are made on a daily basis as the price of the underlying security or other asset fluctuates, a process known as “marking to market.” If the futures contract price changes to the extent that the margin on deposit does not satisfy margin requirements, payment of additional variation margin will be required. Conversely, a change in the contract value may reduce the required margin, resulting in a repayment of excess margin to the contract holder. Variation margin payments are made for as long as the contract remains open. A Fund expects to earn interest income on its margin deposits.

Although futures contracts by their terms call for actual delivery or acceptance of securities or other assets (stock index futures contracts or futures contracts that reference other intangible assets do not permit delivery of the referenced assets), the contracts usually are closed out before the settlement date without the making or taking of delivery. A Fund may elect to close some or all of its futures positions at any time prior to their expiration. The purpose of taking such action would be to reduce or eliminate the position then currently held by a Fund. Closing out an open futures position is done by taking an opposite position (“buying” a contract which has previously been “sold,” “selling” a contract previously “purchased”) in an identical contract (i.e., the same aggregate amount of the specific type of security or other asset with the same delivery date) to terminate the position. Final determinations are made as to whether the price of the initial sale of the futures contract exceeds or is below the price of the offsetting purchase, or whether the purchase price exceeds or is below the offsetting sale price. Final determinations of variation margin are then made, additional cash is required to be paid by or released to a Fund, and a Fund realizes a loss or a gain. Brokerage commissions are incurred when a futures contract is bought or sold.

Successful use of futures contracts by a Fund is subject to its portfolio manager’s ability to predict correctly movements in the direction of interest rates and other factors affecting securities and commodities markets. This requires different skills and techniques than those required to predict changes in the prices of individual securities. A Fund, therefore, bears the risk that future market trends will be incorrectly predicted.

The risk of loss in trading futures contracts in some strategies can be substantial, due both to the relatively low margin deposits required and the potential for an extremely high degree of leverage involved in futures contracts. As a result, a relatively small price movement in a futures contract may result in an immediate and substantial loss to the investor. For example, if at the time of purchase, 10% of the value of the futures contract is deposited as margin, a subsequent 10% decrease in the value of the futures contract would result in a total loss of the margin deposit, before any deduction for the transaction costs, if the account were then closed out. A 15% decrease would result in a loss equal to 150% of the original margin deposit if the contract were closed out. Thus, a purchase or sale of a futures contract may result in losses in excess of the amount posted as initial margin for the contract.

In the event of adverse price movements, a Fund would continue to be required to make daily cash payments in order to maintain its required margin. In such a situation, if a Fund has insufficient cash, it may have to sell portfolio securities in order to meet daily margin requirements at a time when it may be disadvantageous to do so. The inability to close the futures position also could have an adverse impact on the ability to hedge effectively.

To reduce or eliminate a hedge position held by a Fund, a Fund may seek to close out a position. The ability to establish and close out positions will be subject to the development and maintenance of a liquid secondary market. It is not certain that this market will develop or continue to exist for a particular futures contract, which may limit a Fund's ability to realize its profits or limit its losses. Reasons for the absence of a liquid secondary market on an exchange include the following: (i) there may be insufficient trading interest in certain contracts; (ii) restrictions may be imposed by an exchange on opening transactions, closing transactions or both; (iii) trading halts, suspensions or other restrictions may be imposed with respect to particular classes or series of contracts, or underlying securities; (iv) unusual or unforeseen circumstances, such as volume in excess of trading or clearing capability, may interrupt normal operations on an exchange; (v) the facilities of an exchange or a clearing corporation may not at all times be adequate to handle current trading volume; or (vi) one or more exchanges could, for economic or other reasons, decide or be compelled at some future date to discontinue the trading of contracts (or a particular class or series of contracts), in which event the secondary market on that exchange (or in the class or series of contracts) would cease to exist, although outstanding contracts on the exchange that had been issued by a clearing corporation as a result of trades on that exchange would continue to be exercisable in accordance with their terms.

Interest Rate Futures Contracts. Bond prices are established in both the cash market and the futures market. In the cash market, bonds are purchased and sold with payment for the full purchase price of the bond being made in cash, generally within five business days after the trade. In the futures market, a contract is made to purchase or sell a bond in the future for a set price on a certain date. Historically, the prices for bonds established in the futures markets have tended to move generally in the aggregate in concert with the cash market prices and have maintained fairly predictable relationships. Accordingly, a Fund may use interest rate futures contracts as a defense, or hedge, against anticipated interest rate changes. A Fund presently could accomplish a similar result to that which it hopes to achieve through the use of interest rate futures contracts by selling bonds with long maturities and investing in bonds with short maturities when interest rates are expected to increase, or conversely, selling bonds with short maturities and investing in bonds with long maturities when interest rates are expected to decline. However, because of the liquidity that is often available in the futures market, the protection is more likely to be achieved, perhaps at a lower cost and without changing the rate of interest being earned by a Fund, through using futures contracts.

Interest rate futures contracts are traded in an auction environment on the floors of several exchanges — principally, the Chicago Board of Trade, the Chicago Mercantile Exchange and the New York Futures Exchange. Each exchange guarantees performance under contract provisions through a clearing corporation, a nonprofit organization managed by the exchange membership. A public market exists in futures contracts covering various financial instruments including long-term U.S. Treasury Bonds and Notes; GNMA modified pass-through mortgage backed securities; three-month U.S. Treasury Bills; and ninety-day commercial paper. A Fund may also invest in exchange-traded Eurodollar contracts, which are interest rate futures on the forward level of LIBOR. These contracts are generally considered liquid securities and trade on the Chicago Mercantile Exchange. Such Eurodollar contracts are generally used to “lock-in” or hedge the future level of short-term rates. A Fund may trade in any interest rate futures contracts for which there exists a public market, including, without limitation, the foregoing instruments.

Index Futures Contracts. An index futures contract is a contract to buy or sell units of an index at a specified future date at a price agreed upon when the contract is made. Entering into a contract to buy units of an index is commonly referred to as buying or purchasing a contract or holding a long position in the index. Entering into a contract to sell units of an index is commonly referred to as selling a contract or holding a short position in the index. A unit is the current value of the index. A Fund may enter into stock index futures contracts, debt index futures contracts, or other index futures contracts appropriate to its objective(s).

Municipal Bond Index Futures Contracts. Municipal bond index futures contracts may act as a hedge against changes in market conditions. A municipal bond index assigns values daily to the municipal bonds included in the index based on the independent assessment of dealer-to-dealer municipal bond brokers. A municipal bond index futures contract represents a firm commitment by which two parties agree to take or make delivery of an amount equal to a specified dollar amount multiplied by the difference between the municipal bond index value on the last trading date of the contract and the price at which the futures contract is originally struck. No physical delivery of the underlying securities in the index is made.

Commodity-Linked Futures Contracts. Commodity-linked futures contracts are traded on futures exchanges. These futures exchanges offer a central marketplace in which to transact in futures contracts, a clearing corporation to process trades, and standardization of expiration dates and contract sizes. Futures markets also specify the terms and conditions of delivery as well as the maximum permissible price movement during a trading session. Additionally, the commodity futures exchanges may have position limit rules that limit the amount of futures contracts that any one party may hold in a particular commodity at any point in time. These position limit rules are designed to prevent any one participant from controlling a significant portion of the market.

Commodity-linked futures contracts are generally based upon commodities within six main commodity groups: (1) energy, which includes, among others, crude oil, Brent crude oil, gas oil, natural gas, gasoline and heating oil; (2) livestock, which

includes, among others, feeder cattle, live cattle and hogs; (3) agriculture, which includes, among others, wheat (Kansas wheat and Chicago wheat), corn and soybeans; (4) industrial metals, which includes, among others, aluminum, copper, lead, nickel and zinc; and (5) precious metals, which includes, among others, gold and silver; and (6) softs, which includes cotton, coffee, sugar and cocoa. A Fund may purchase commodity futures contracts, swaps on commodity futures contracts, options on futures contracts and options and futures on commodity indices with respect to these six main commodity groups and the individual commodities within each group, as well as other types of commodities.

The price of a commodity futures contract will reflect the storage costs of purchasing the physical commodity. These storage costs include the time value of money invested in the physical commodity plus the actual costs of storing the commodity less any benefits from ownership of the physical commodity that are not obtained by the holder of a futures contract (this is sometimes referred to as the “convenience yield”). To the extent that these storage costs change for an underlying commodity while a Fund is long futures contracts on that commodity, the value of the futures contract may change proportionately.

In the commodity futures markets, if producers of the underlying commodity wish to hedge the price risk of selling the commodity, they will sell futures contracts today to lock in the price of the commodity at delivery tomorrow. In order to induce speculators to take the corresponding long side of the same futures contract, the commodity producer must be willing to sell the futures contract at a price that is below the expected future spot price. Conversely, if the predominant hedgers in the futures market are the purchasers of the underlying commodity who purchase futures contracts to hedge against a rise in prices, then speculators will only take the short side of the futures contract if the futures price is greater than the expected future spot price of the commodity.

The changing nature of the hedgers and speculators in the commodity markets will influence whether futures contract prices are above or below the expected future spot price. This can have significant implications for a Fund when it is time to replace an existing contract with a new contract. If the nature of hedgers and speculators in futures markets has shifted such that commodity purchasers are the predominant hedgers in the market, a Fund might open the new futures position at a higher price or choose other related commodity-linked investments.

The values of commodities which underlie commodity futures contracts are subject to additional variables which may be less significant to the values of traditional securities such as stocks and bonds. Variables such as drought, floods, weather, livestock disease, embargoes and tariffs may have a larger impact on commodity prices and commodity-linked investments, including futures contracts, commodity-linked structured notes, commodity-linked options and commodity-linked swaps, than on traditional securities. These additional variables may create additional investment risks which subject a Fund’s commodity-linked investments to greater volatility than investments in traditional securities.

Options on Futures Contracts. A Fund may purchase and write call and put options on those futures contracts that it is permitted to buy or sell. A Fund may use such options on futures contracts in lieu of writing options directly on the underlying securities or other assets or purchasing and selling the underlying futures contracts. Such options generally operate in the same manner as options purchased or written directly on the underlying investments. A futures option gives the holder, in return for the premium paid, the right, but not the obligation, to buy from (call) or sell to (put) the writer of the option a futures contract at a specified price at any time during the period of the option. Upon exercise, the writer of the option is obligated to pay the difference between the cash value of the futures contract and the exercise price. Like the buyer or seller of a futures contract, the holder or writer of an option has the right to terminate its position prior to the scheduled expiration of the option by selling or purchasing an option of the same series, at which time the person entering into the closing purchase transaction will realize a gain or loss. There is no guarantee that such closing purchase transactions can be effected.

A Fund will enter into written options on futures contracts only when, in compliance with regulatory requirements, it has segregated cash or liquid securities equal in value to the underlying security’s or other asset’s value (less any applicable margin deposits). A Fund will be required to deposit initial margin and maintenance margin with respect to put and call options on futures contracts written by it pursuant to brokers’ requirements similar to those described above.

Options on Index Futures Contracts. A Fund may also purchase and sell options on index futures contracts. Options on index futures give the purchaser the right, in return for the premium paid, to assume a position in an index futures contract (a long position if the option is a call and a short position if the option is a put), at a specified exercise price at any time during the period of the option. Upon exercise of the option, the delivery of the futures position by the writer of the option to the holder of the option will be accompanied by delivery of the accumulated balance in the writer’s futures margin account, which represents the amount by which the market price of the index futures contract, at exercise, exceeds (in the case of a call) or is less than (in the case of a put) the exercise price of the option on the index future. If an option is exercised on the last trading day prior to the expiration date of the option, the settlement will be made entirely in cash equal to the difference between the exercise price of the option and the closing level of the index on which the future is based on the expiration date. Purchasers of options who fail to exercise their options prior to the exercise date suffer a loss of the premium paid.

Use by Tax-Exempt Funds of Interest Rate and U.S. Treasury Security Futures Contracts and Options. If a Fund invests in tax-exempt securities, it may purchase and sell futures contracts and related options on interest rate and U.S. Treasury securities when, in the opinion of a Fund's portfolio manager, price movements in these security futures and related options will correlate closely with price movements in the tax-exempt securities which are the subject of the hedge. Interest rate and U.S. Treasury securities futures contracts require the seller to deliver, or the purchaser to take delivery of, the type of security called for in the contract at a specified date and price. Options on interest rate and U.S. Treasury security futures contracts give the purchaser the right in return for the premium paid to assume a position in a futures contract at the specified option exercise price at any time during the period of the option.

Options on Stocks and Stock and Other Indices. A Fund may purchase and write (i.e., sell) put and call options. Such options may relate to particular stocks or stock indices, and may or may not be listed on a domestic or foreign securities exchange and may or may not be issued by the Options Clearing Corporation (OCC). Stock index options are put options and call options on various stock indices. In most respects, they are identical to listed options on common stocks.

There is a key difference between stock options and index options in connection with their exercise. In the case of stock options, the underlying security, common stock, is delivered. However, upon the exercise of an index option, settlement does not occur by delivery of the securities comprising the index. The option holder who exercises the index option receives an amount of cash if the closing level of the stock index upon which the option is based is greater than (in the case of a call) or less than (in the case of a put) the exercise price of the option. This amount of cash is equal to the difference between the closing price of the stock index and the exercise price of the option expressed in dollars times a specified multiple. A stock index fluctuates with changes in the market value of the securities included in the index. For example, some stock index options are based on a broad market index, such as the S&P 500® Index or a narrower market index, such as the S&P 100® Index. Indices may also be based on an industry or market segment.

A Fund may, for the purpose of hedging its portfolio, subject to applicable securities regulations, purchase and write put and call options on foreign stock indices listed on foreign and domestic stock exchanges.

As an alternative to purchasing call and put options on index futures, a Fund may purchase call and put options on the underlying indices themselves. Such options could be used in a manner identical to the use of options on index futures. Options involving securities indices provide the holder with the right to make or receive a cash settlement upon exercise of the option based on movements in the relevant index. Such options must be listed on a national securities exchange and issued by the OCC. Such options may relate to particular securities or to various stock indices, except that a Fund may not write covered options on an index.

Writing Covered Options. A Fund may write covered call options and covered put options on securities held in its portfolio. Call options written by a Fund give the purchaser the right to buy the underlying securities from a Fund at the stated exercise price at any time prior to the expiration date of the option, regardless of the security's market price; put options give the purchaser the right to sell the underlying securities to a Fund at the stated exercise price at any time prior to the expiration date of the option, regardless of the security's market price.

A Fund may write covered options, which means that, so long as a Fund is obligated as the writer of a call option, it will own the underlying securities subject to the option (or comparable securities satisfying the cover requirements of securities exchanges). In the case of put options, a Fund will hold liquid securities equal to the price to be paid if the option is exercised. In addition, a Fund will be considered to have covered a put or call option if and to the extent that it holds an option that offsets some or all of the risk of the option it has written. A Fund may write combinations of covered puts and calls (straddles) on the same underlying security.

A Fund will receive a premium from writing a put or call option, which increases a Fund's return on the underlying security if the option expires unexercised or is closed out at a profit. The amount of the premium reflects, among other things, the relationship between the exercise price and the current market value of the underlying security, the volatility of the underlying security, the amount of time remaining until expiration, current interest rates, and the effect of supply and demand in the options market and in the market for the underlying security. By writing a call option, a Fund limits its opportunity to profit from any increase in the market value of the underlying security above the exercise price of the option but continues to bear the risk of a decline in the value of the underlying security. By writing a put option, a Fund assumes the risk that it may be required to purchase the underlying security for an exercise price higher than the security's then-current market value, resulting in a potential capital loss unless the security subsequently appreciates in value.

A Fund's obligation to sell an instrument subject to a call option written by it, or to purchase an instrument subject to a put option written by it, may be terminated prior to the expiration date of the option by a Fund's execution of a closing purchase transaction, which is effected by purchasing on an exchange an offsetting option of the same series (i.e., same underlying instrument, exercise price and expiration date) as the option previously written. A closing purchase transaction will ordinarily be effected in order to realize a profit on an outstanding option, to prevent an underlying instrument from being called, to

permit the sale of the underlying instrument or to permit the writing of a new option containing different terms on such underlying instrument. A Fund realizes a profit or loss from a closing purchase transaction if the cost of the transaction (option premium plus transaction costs) is less or more than the premium received from writing the option. Because increases in the market price of a call option generally reflect increases in the market price of the security underlying the option, any loss resulting from a closing purchase transaction may be offset in whole or in part by unrealized appreciation of the underlying security.

If a Fund writes a call option but does not own the underlying security, and when it writes a put option, a Fund may be required to deposit cash or securities with its broker as “margin” or collateral for its obligation to buy or sell the underlying security. As the value of the underlying security varies, a Fund may also have to deposit additional margin with the broker. Margin requirements are complex and are fixed by individual brokers, subject to minimum requirements currently imposed by the Federal Reserve Board and by stock exchanges and other self-regulatory organizations.

Purchasing Put Options. A Fund may purchase put options to protect its portfolio holdings in an underlying security against a decline in market value. Such hedge protection is provided during the life of the put option since a Fund, as holder of the put option, is able to sell the underlying security at the put exercise price regardless of any decline in the underlying security’s market price. For a put option to be profitable, the market price of the underlying security must decline sufficiently below the exercise price to cover the premium and transaction costs. By using put options in this manner, a Fund will reduce any profit it might otherwise have realized from appreciation of the underlying security by the premium paid for the put option and by transaction costs.

Purchasing Call Options. A Fund may purchase call options, including call options to hedge against an increase in the price of securities that a Fund wants ultimately to buy. Such hedge protection is provided during the life of the call option since a Fund, as holder of the call option, is able to buy the underlying security at the exercise price regardless of any increase in the underlying security’s market price. In order for a call option to be profitable, the market price of the underlying security must rise sufficiently above the exercise price to cover the premium and transaction costs. These costs will reduce any profit a Fund might have realized had it bought the underlying security at the time it purchased the call option.

Over-the-Counter (OTC) Options. OTC options (options not traded on exchanges) are generally established through negotiation with the other party to the options contract. A Fund will enter into OTC options transactions only with primary dealers in U.S. Government securities and, in the case of OTC options written by a Fund, only pursuant to agreements that will assure that a Fund will at all times have the right to repurchase the option written by it from the dealer at a specified formula price. A Fund will treat the amount by which such formula price exceeds the amount, if any, by which the option may be “in-the-money” as an illiquid investment. It is the present policy of a Fund not to enter into any OTC option transaction if, as a result, more than 15% (10% in some cases, refer to your Fund’s prospectuses) of a Fund’s net assets would be invested in (i) illiquid investments (determined under the foregoing formula) relating to OTC options written by a Fund, (ii) OTC options purchased by a Fund, (iii) securities which are not readily marketable, and (iv) repurchase agreements maturing in more than seven days.

Swap Agreements

Swap agreements are derivative instruments that can be individually negotiated and structured to include exposure to a variety of different types of investments or market factors. Depending on their structure, swap agreements may increase or decrease a Fund’s exposure to long- or short-term interest rates, foreign currency values, mortgage securities, corporate borrowing rates, or other factors such as security prices or inflation rates. A Fund may enter into a variety of swap agreements, including interest rate, index, commodity, commodity futures, equity, equity index, credit default, bond futures, total return, portfolio and currency exchange rate swap agreements, and other types of swap agreements such as caps, collars and floors. A Fund also may enter into swaptions, which are options to enter into a swap agreement.

Swap agreements are usually entered into without an upfront payment because the value of each party’s position is the same. The market values of the underlying commitments will change over time, resulting in one of the commitments being worth more than the other and the net market value creating a risk exposure for one party or the other.

In a typical interest rate swap, one party agrees to make regular payments equal to a floating interest rate times a “notional principal amount,” in return for payments equal to a fixed rate times the same amount, for a specified period of time. If a swap agreement provides for payments in different currencies, the parties might agree to exchange notional principal amounts as well. In a total return swap agreement, the non-floating rate side of the swap is based on the total return of an individual security, a basket of securities, an index or another reference asset. Swaps may also depend on other prices or rates, such as the value of an index or mortgage prepayment rates.

In a typical cap or floor agreement, one party agrees to make payments only under specified circumstances, usually in return for payment of a fee by the other party. For example, the buyer of an interest rate cap obtains the right to receive payments to

the extent that a specified interest rate exceeds an agreed-upon level, while the seller of an interest rate floor is obligated to make payments to the extent that a specified interest rate falls below an agreed-upon level. Caps and floors have an effect similar to buying or writing options. A collar combines elements of buying a cap and selling a floor. In interest rate collar transactions, one party sells a cap and purchases a floor, or vice versa, in an attempt to protect itself against interest rate movements exceeding given minimum or maximum levels or collar amounts.

Swap agreements will tend to shift a Fund's investment exposure from one type of investment to another. For example, if a Fund agreed to pay fixed rates in exchange for floating rates while holding fixed-rate bonds, the swap would tend to decrease a Fund's exposure to long-term interest rates. Another example is if a Fund agreed to exchange payments in dollars for payments in foreign currency. In that case, the swap agreement would tend to decrease a Fund's exposure to U.S. interest rates and increase its exposure to foreign currency and interest rates.

Because swaps are two-party contracts that may be subject to contractual restrictions on transferability and termination and because they may have terms of greater than seven days, swap agreements may be considered to be illiquid. If a swap is not liquid, it may not be possible to initiate a transaction or liquidate a position at an advantageous time or price, which may result in significant losses.

Moreover, a Fund bears the risk of loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty. When a counterparty's obligations are not fully secured by collateral, then the Fund is essentially an unsecured creditor of the counterparty. If the counterparty defaults, the Fund will have contractual remedies, but there is no assurance that a counterparty will be able to meet its obligations pursuant to such contracts or that, in the event of default, the Fund will succeed in enforcing contractual remedies. Counterparty risk still exists even if a counterparty's obligations are secured by collateral because the Fund's interest in collateral may not be perfected or additional collateral may not be promptly posted as required. Counterparty risk also may be more pronounced if a counterparty's obligations exceed the amount of collateral held by the Fund (if any), the Fund is unable to exercise its interest in collateral upon default by the counterparty, or the termination value of the instrument varies significantly from the marked-to-market value of the instrument.

Counterparty risk with respect to derivatives will be affected by new rules and regulations affecting the derivatives market. Some derivatives transactions are required to be centrally cleared, and a party to a cleared derivatives transaction is subject to the credit risk of the clearing house and the clearing member through which it holds its cleared position, rather than the credit risk of its original counterparty to the derivative transaction. Credit risk of market participants with respect to derivatives that are centrally cleared is concentrated in a few clearing houses, and it is not clear how an insolvency proceeding of a clearing house would be conducted and what impact an insolvency of a clearing house would have on the financial system. A clearing member is obligated by contract and by applicable regulation to segregate all funds received from customers with respect to cleared derivatives transactions from the clearing member's proprietary assets. However, all funds and other property received by a clearing broker from its customers are generally held by the clearing broker on a commingled basis in an omnibus account, and the clearing member may invest those funds in certain instruments permitted under the applicable regulations. The assets of a Fund might not be fully protected in the event of the bankruptcy of a Fund's clearing member, because the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing broker's customers for a relevant account class. Also, the clearing member is required to transfer to the clearing organization the amount of margin required by the clearing organization for cleared derivatives, which amounts are generally held in an omnibus account at the clearing organization for all customers of the clearing member. Regulations promulgated by the CFTC require that the clearing member notify the clearing house of the amount of initial margin provided by the clearing member to the clearing organization that is attributable to each customer. However, if the clearing member does not provide accurate reporting, the Funds are subject to the risk that a clearing organization will use a Fund's assets held in an omnibus account at the clearing organization to satisfy payment obligations of a defaulting customer of the clearing member to the clearing organization. In addition, clearing members generally provide to the clearing organization the net amount of variation margin required for cleared swaps for all of its customers in the aggregate, rather than the gross amount of each customer. The Funds are therefore subject to the risk that a clearing organization will not make variation margin payments owed to a Fund if another customer of the clearing member has suffered a loss and is in default, and the risk that a Fund will be required to provide additional variation margin to the clearing house before the clearing house will move the Fund's cleared derivatives transactions to another clearing member. In addition, if a clearing member does not comply with the applicable regulations or its agreement with the Funds, or in the event of fraud or misappropriation of customer assets by a clearing member, a Fund could have only an unsecured creditor claim in an insolvency of the clearing member with respect to the margin held by the clearing member.

Interest Rate Swaps. Interest rate swap agreements are often used to obtain or preserve a desired return or spread at a lower cost than through a direct investment in an instrument that yields the desired return or spread. They are financial instruments that involve the exchange of one type of interest rate cash flow for another type of interest rate cash flow on specified dates in

the future. In a standard interest rate swap transaction, two parties agree to exchange their respective commitments to pay fixed or floating interest rates on a predetermined specified (notional) amount. The swap agreement's notional amount is the predetermined basis for calculating the obligations that the swap counterparties have agreed to exchange. Under most swap agreements, the obligations of the parties are exchanged on a net basis. The two payment streams are netted out, with each party receiving or paying, as the case may be, only the net amount of the two payments. Interest rate swaps can be based on various measures of interest rates, including LIBOR, swap rates, Treasury rates and foreign interest rates.

Credit Default Swap Agreements. A Fund may enter into credit default swap agreements, which may have as reference obligations one or more securities or a basket of securities that are or are not currently held by a Fund. The protection "buyer" in a credit default contract is generally obligated to pay the protection "seller" an upfront or a periodic stream of payments over the term of the contract provided that no credit event, such as a default, on a reference obligation has occurred. If a credit event occurs, the seller generally must pay the buyer the "par value" (full notional value) of the swap in exchange for an equal face amount of deliverable obligations of the reference entity described in the swap, or the seller may be required to deliver the related net cash amount, if the swap is cash settled. A Fund may be either the buyer or seller in a credit default swap. If a Fund is a buyer and no credit event occurs, a Fund may recover nothing if the swap is held through its termination date. However, if a credit event occurs, the buyer generally may elect to receive the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity whose value may have significantly decreased. As a seller, a Fund generally receives an upfront payment or a fixed rate of income throughout the term of the swap provided that there is no credit event. As the seller, a Fund would effectively add leverage to its portfolio because, in addition to its total net assets, a Fund would be subject to investment exposure on the notional amount of the swap.

Credit default swap agreements may involve greater risks than if a Fund had invested in the reference obligation directly since, in addition to risks relating to the reference obligation, credit default swaps are subject to illiquidity risk, counterparty risk and credit risk. A Fund will enter into credit default swap agreements generally with counterparties that meet certain standards of creditworthiness. A buyer generally will lose its investment and recover nothing if no credit event occurs and the swap is held to its termination date. If a credit event were to occur, the value of any deliverable obligation received by the seller, coupled with the upfront or periodic payments previously received, may be less than the full notional value it pays to the buyer, resulting in a loss of value to the seller.

A Fund's obligations under a credit default swap agreement will be accrued daily (offset against any amounts owing to the Fund). In connection with credit default swaps in which a Fund is the buyer, the Fund will segregate or " earmark" cash or other liquid assets, or enter into certain offsetting positions, with a value at least equal to the Fund's exposure (any accrued but unpaid net amounts owed by the Fund to any counterparty), on a mark-to-market basis. In connection with credit default swaps in which a Fund is the seller, the Fund will segregate or " earmark" cash or other liquid assets, or enter into offsetting positions, with a value at least equal to the full notional amount of the swap (minus any amounts owed to the Fund). Such segregation or " earmarking" will ensure that a Fund has assets available to satisfy its obligations with respect to the transaction. Such segregation or " earmarking" will not limit a Fund's exposure to loss.

Equity Swaps. A Fund may engage in equity swaps. Equity swaps allow the parties to the swap agreement to exchange components of return on one equity investment (e.g., a basket of equity securities or an index) for a component of return on another non-equity or equity investment, including an exchange of differential rates of return. Equity swaps may be used to invest in a market without owning or taking physical custody of securities in circumstances where direct investment may be restricted for legal reasons or is otherwise impractical. Equity swaps also may be used for other purposes, such as hedging or seeking to increase total return.

Total Return Swap Agreements. Total return swap agreements are contracts in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to a Fund's portfolio because, in addition to its total net assets, a Fund would be subject to investment exposure on the notional amount of the swap.

Total return swap agreements are subject to the risk that a counterparty will default on its payment obligations to a Fund thereunder, and conversely, that a Fund will not be able to meet its obligation to the counterparty. Generally, a Fund will enter into total return swaps on a net basis (i.e., the two payment streams are netted against one another with a Fund receiving or paying, as the case may be, only the net amount of the two payments). The net amount of the excess, if any, of a Fund's obligations over its entitlements with respect to each total return swap will be accrued on a daily basis, and an amount of liquid assets having an aggregate net asset value at least equal to the accrued excess will be segregated by a Fund. If the total return swap transaction is entered into on other than a net basis, the full amount of a Fund's obligations will be accrued on a

daily basis, and the full amount of a Fund's obligations will be segregated by a Fund in an amount equal to or greater than the market value of the liabilities under the total return swap agreement or the amount it would have cost a Fund initially to make an equivalent direct investment, plus or minus any amount a Fund is obligated to pay or is to receive under the total return swap agreement.

Variance, Volatility and Correlation Swap Agreements. Variance and volatility swaps are contracts that provide exposure to increases or decreases in the volatility of certain referenced assets. Correlation swaps are contracts that provide exposure to increases or decreases in the correlation between the prices of different assets or different market rates.

Commodity-Linked Swaps. Commodity-linked swaps are two-party contracts in which the parties agree to exchange the return or interest rate on one instrument for the return of a particular commodity, commodity index or commodities futures or options contract. The payment streams are calculated by reference to an agreed upon notional amount. A one-period swap contract operates in a manner similar to a forward or futures contract because there is an agreement to swap a commodity for cash at only one forward date. A Fund may engage in swap transactions that have more than one period and therefore more than one exchange of commodities.

A Fund may invest in total return commodity swaps to gain exposure to the overall commodity markets. In a total return commodity swap, a Fund will receive the price appreciation of a commodity index, a portion of the index, or a single commodity in exchange for paying an agreed-upon fee. If the commodity swap is for one period, the Fund will pay a fixed fee, established at the outset of the swap. However, if the term of the commodity swap is more than one period, with interim swap payments, the Fund will pay an adjustable or floating fee. With a "floating" rate, the fee is pegged to a base rate such as LIBOR, and is adjusted each period. Therefore, if interest rates increase over the term of the swap contract, a Fund may be required to pay a higher fee at each swap reset date.

Cross Currency Swaps. Cross currency swaps are similar to interest rate swaps, except that they involve multiple currencies. A Fund may enter into a cross currency swap when it has exposure to one currency and desires exposure to a different currency. Typically, the interest rates that determine the currency swap payments are fixed, although occasionally one or both parties may pay a floating rate of interest. Unlike an interest rate swap, however, the principal amounts are exchanged at the beginning of the contract and returned at the end of the contract. In addition to paying and receiving amounts at the beginning and termination of the agreements, both sides will have to pay in full periodically based upon the currency they have borrowed. Changes in foreign exchange currency rates and changes in interest rates, as described above, may negatively affect currency swaps.

Contracts for Differences. Contracts for differences are swap arrangements in which the parties agree that their return (or loss) will be based on the relative performance of two different groups or baskets of securities. Often, one or both baskets will be an established securities index. A Fund's return will be based on changes in value of theoretical long futures positions in the securities comprising one basket (with an aggregate face value equal to the notional amount of the contract for differences) and theoretical short futures positions in the securities comprising the other basket. A Fund also may use actual long and short futures positions and achieve similar market exposure by netting the payment obligations of the two contracts. A Fund typically enters into contracts for differences (and analogous futures positions) when its portfolio manager believes that the basket of securities constituting the long position will outperform the basket constituting the short position. If the short basket outperforms the long basket, a Fund will realize a loss — even in circumstances when the securities in both the long and short baskets appreciate in value.

Swaptions. A swaption is an options contract on a swap agreement. These transactions that give a counterparty the right (but not the obligation) to enter into new swap agreements or to shorten, extend, cancel or otherwise modify an existing swap agreement (which are described herein) at some designated future time on specified terms, in return for payment of the purchase price (the "premium") of the option. A Fund may write (sell) and purchase put and call swaptions to the same extent it may make use of standard options on securities or other instruments. The writer of the contract receives the premium and bears the risk of unfavorable changes in the market value on the underlying swap agreement. Swaptions can be bundled and sold as a package. These are commonly called interest rate caps, floors and collars (which are described herein).

Many swaps are complex and often valued subjectively. Many over-the-counter derivatives are complex and their valuation often requires modeling and judgment, which increases the risk of mispricing or incorrect valuation. The pricing models used may not produce valuations that are consistent with the values the Fund realizes when it closes or sells an over-the-counter derivative. Valuation risk is more pronounced when the Fund enters into over-the-counter derivatives with specialized terms because the market value of those derivatives in some cases is determined in part by reference to similar derivatives with more standardized terms. Incorrect valuations may result in increased cash payment requirements to counterparties, undercollateralization and/or errors in calculation of the Fund's net asset value.

Title VII of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") established a framework for the regulation of OTC swap markets; the framework outlined the joint responsibility of the CFTC and the SEC

in regulating swaps. The CFTC is responsible for the regulation of swaps, the SEC is responsible for the regulation of security-based swaps and they are both jointly responsible for the regulation of mixed swaps.

Risk of Potential Governmental Regulation of Derivatives

It is possible that government regulation of various types of derivative instruments, including futures and swap agreements, may limit or prevent the Funds from using such instruments as a part of their investment strategy, and could ultimately prevent the Funds from being able to achieve their investment objectives. It is impossible to predict fully the effects of legislation and regulation in this area, but the effects could be substantial and adverse. The futures markets are subject to comprehensive statutes, regulations, and margin requirements. The SEC, the CFTC and the exchanges are authorized to take extraordinary actions in the event of a market emergency, including, for example, the implementation or reduction of speculative position limits, the implementation of higher margin requirements, the establishment of daily price limits and the suspension of trading.

The regulation of swaps and futures transactions in the U.S. is a rapidly changing area of law and is subject to modification by government and judicial action. There is a possibility of future regulatory changes altering, perhaps to a material extent, the nature of an investment in a Fund or the ability of a Fund to continue to implement its investment strategies. In particular, the Dodd-Frank Act, which was signed into law in July 2010, sets forth a new legislative framework for OTC derivatives, such as swaps, in which the Funds may invest. Title VII of the Dodd-Frank Act makes broad changes to the OTC derivatives market, grants significant new authority to the SEC and the CFTC to regulate OTC derivatives and market participants, and will require clearing of many OTC derivatives transactions.

Additional Risk Factors in Cleared Derivatives Transactions

Under recently adopted rules and regulations, transactions in some types of swaps (including interest rate swaps and credit default swaps on North American and European indices) are required to be centrally cleared. In a transaction involving those swaps (“cleared derivatives”), a Fund’s counterparty is a clearing house, rather than a bank or broker. Since the Funds are not members of clearing houses and only members of a clearing house (“clearing members”) can participate directly in the clearing house, the Funds will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Funds will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Clearing members guarantee performance of their clients’ obligations to the clearing house.

In many ways, cleared derivative arrangements are less favorable to mutual funds than bilateral arrangements. For example, the Funds may be required to provide more margin for cleared derivatives positions than for bilateral derivatives positions. Also, in contrast to a bilateral derivatives position, following a period of notice to a Fund, a clearing member generally can require termination of an existing cleared derivatives position at any time or an increase in margin requirements above the margin that the clearing member required at the beginning of a transaction. Clearing houses also have broad rights to increase margin requirements for existing positions or to terminate those positions at any time. Any increase in margin requirements or termination of existing cleared derivatives positions by the clearing member or the clearing house could interfere with the ability of a Fund to pursue its investment strategy. Further, any increase in margin requirements by a clearing member could expose a Fund to greater credit risk to its clearing member because margin for cleared derivatives positions in excess of a clearing house’s margin requirements typically is held by the clearing member. Also, a Fund is subject to risk if it enters into a derivatives transaction that is required to be cleared (or that the Adviser expects to be cleared), and no clearing member is willing or able to clear the transaction on the Fund’s behalf. While the documentation in place between the Funds and their clearing members generally provides that the clearing members will accept for clearing all cleared derivatives transactions that are within credit limits (specified in advance) for each Fund, the Funds are still subject to the risk that no clearing member will be willing or able to clear a transaction. In those cases, the position might have to be terminated, and the Fund could lose some or all of the benefit of the position, including loss of an increase in the value of the position and/or loss of hedging protection. In addition, the documentation governing the relationship between the Funds and clearing members is drafted by the clearing members and generally is less favorable to the Funds than typical bilateral derivatives documentation. For example, documentation relating to cleared derivatives generally includes a one-way indemnity by the Funds in favor of the clearing member for losses the clearing member incurs as the Funds’ clearing member and typically does not provide the Funds any remedies if the clearing member defaults or becomes insolvent. While futures contracts entail similar risks, the risks likely are more pronounced for cleared swaps due to their more limited liquidity and market history.

Some types of cleared derivatives are required to be executed on an exchange or on a swap execution facility. A swap execution facility is a trading platform where multiple market participants can execute derivatives by accepting bids and offers made by multiple other participants in the platform. While this execution requirement is designed to increase transparency and liquidity in the cleared derivatives market, trading on a swap execution facility can create additional costs and risks for the Funds. For example, swap execution facilities typically charge fees, and if a Fund executes derivatives on a

swap execution facility through a broker intermediary, the intermediary may impose fees as well. Also, a Fund may indemnify a swap execution facility, or a broker intermediary who executes cleared derivatives on a swap execution facility on the Fund's behalf, against any losses or costs that may be incurred as a result of the Fund's transactions on the swap execution facility.

These and other new rules and regulations could, among other things, further restrict a Fund's ability to engage in, or increase the cost to the Fund of, derivatives transactions, for example, by making some types of derivatives no longer available to the Fund, increasing margin or capital requirements, or otherwise limiting liquidity or increasing transaction costs. These regulations are new and evolving, so their potential impact on the Funds and the financial system are not yet known. While the new regulations and central clearing of some derivatives transactions are designed to reduce systemic risk (i.e., the risk that the interdependence of large derivatives dealers could cause them to suffer liquidity, solvency or other challenges simultaneously), there is no assurance that the new clearing mechanisms will achieve that result, and in the meantime, as noted above, central clearing and related requirements expose the Funds to new kinds of risks and costs.

CFTC Regulation

Each of VP – AQR Managed Futures Strategy Fund, VP – GS Commodity Strategy Fund, and VP – Multi-Strategy Alternatives Fund no longer qualifies for an exclusion from the definition of a commodity pool pursuant to Rule 4.5 under the Commodity Exchange Act (CEA). Accordingly, the Investment Manager is registered as a “commodity pool operator” under the CEA with respect to these Funds, effective January 1, 2013. The Investment Manager and these Funds are subject to dual regulation by the SEC and the CFTC. Compliance with the CFTC's new regulatory requirements could increase Fund expenses, adversely affecting a Fund's total return. Each Fund and the Investment Manager continue to analyze the effect that these rules, including the CFTC's recent harmonization of overlapping disclosure, reporting and recordkeeping requirements, may have on the Funds.

Each of the other Funds listed on the cover of this SAI qualifies for an exclusion from the definition of a commodity pool under the CEA and has filed a notice of exclusion under CFTC Rule 4.5. Accordingly, the Investment Manager is not subject to registration or regulation as a “commodity pool operator” under the CEA with respect to these Funds. To remain eligible for the exclusion, each of these Funds is limited in its ability to use certain financial instruments regulated under the CEA (“commodity interests”), including futures and options on futures and certain swaps transactions. In the event that a Fund's investments in commodity interests are not within the thresholds set forth in the exclusion, the Investment Manager may be required to register as a “commodity pool operator” with the CFTC with respect to that Fund. The Investment Manager's eligibility to claim the exclusion with respect to a Fund will be based upon, among other things, the level and scope of a Fund's investments in commodity interests, the purposes of such investments and the manner in which the Fund holds out its use of commodity interests. Each such Fund's ability to invest in commodity interests (including, but not limited to, futures and swaps on broad-based securities indexes and interest rates) is limited by the Investment Manager's intention to operate the Fund in a manner that would permit the Investment Manager to continue to claim the exclusion under CFTC Rule 4.5, which may adversely affect the Fund's total return. In the event the Investment Manager becomes unable to rely on the exclusion in Rule 4.5 and is required to register with the CFTC as a commodity pool operator with respect to a Fund, the Fund's expenses may increase, adversely affecting that Fund's total return.

Dollar Rolls

Dollar rolls involve selling securities (e.g., mortgage-backed securities or U.S. Treasury securities) and simultaneously entering into a commitment to purchase those or similar securities on a specified future date and price from the same party. Mortgage dollar rolls and U.S. Treasury rolls are types of dollar rolls. A Fund foregoes principal and interest paid on the securities during the “roll” period. A Fund is compensated by the difference between the current sales price and the lower forward price for the future purchase of the securities, as well as the interest earned on the cash proceeds of the initial sale. The investor also could be compensated through the receipt of fee income equivalent to a lower forward price.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with mortgage dollar rolls include: Counterparty Risk, Credit Risk and Interest Rate Risk.

Equity-Linked Notes

An equity-linked note (ELN) is a debt instrument whose value is based on the value of a single equity security, basket of equity securities or an index of equity securities (each, an Underlying Equity). An ELN typically provides interest income, thereby offering a yield advantage over investing directly in an Underlying Equity. The Fund may purchase ELNs that trade on a securities exchange or those that trade on the over-the-counter markets, including Rule 144A securities. The Fund may also purchase ELNs in a privately negotiated transaction with the issuer of the ELNs (or its broker-dealer affiliate). The Fund may or may not hold an ELN until its maturity.

Equity-linked securities also include issues such as Structured Yield Product Exchangeable for Stock (STRYPES), Trust Automatic Common Exchange Securities (TRACES), Trust Issued Mandatory Exchange Securities (TIMES) and Trust Enhanced Dividend Securities (TRENDS). The issuers of these equity-linked securities generally purchase and hold a portfolio of stripped U.S. Treasury securities maturing on a quarterly basis through the conversion date, and a forward purchase contract with an existing shareholder of the company relating to the common stock. Quarterly distributions on such equity-linked securities generally consist of the cash received from the U.S. Treasury securities and such equity-linked securities generally are not entitled to any dividends that may be declared on the common stock.

Eurodollar and Yankee Dollar and Related Derivatives Instruments

Eurodollar instruments are bonds that pay interest and principal in U.S. dollars held in banks outside the United States, primarily in Europe. Eurodollar instruments are usually issued on behalf of multinational companies and foreign governments by large underwriting groups composed of banks and issuing houses from many countries. Yankee Dollar instruments are U.S. dollar-denominated bonds issued in the United States by foreign banks and corporations. These investments involve risks that are different from investments in securities issued by U.S. issuers.

Eurodollar futures contracts enable purchasers to obtain a fixed rate for the lending of funds and sellers to obtain a fixed rate for borrowings. A Fund may use Eurodollar futures contracts and options thereon to hedge against changes in the LIBOR, to which many interest rate swaps and fixed income instruments are linked.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with Eurodollar and Yankee Dollar instruments include: Credit Risk, Foreign Securities Risk, Interest Rate Risk and Issuer Risk.

Foreign Currency Transactions

Because investments in foreign securities usually involve currencies of foreign countries and because a Fund may hold cash and cash equivalent investments in foreign currencies, the value of a Fund's assets as measured in U.S. dollars may be affected favorably or unfavorably by changes in currency exchange rates and exchange control regulations. Also, a Fund may incur costs in connection with conversions between various currencies. Currency exchange rates may fluctuate significantly over short periods of time, causing a Fund's NAV to fluctuate. Currency exchange rates are generally determined by the forces of supply and demand in the foreign exchange markets, actual or anticipated changes in interest rates, and other complex factors. Currency exchange rates also can be affected by the intervention of U.S. or foreign governments or central banks, or the failure to intervene, or by currency controls or political developments.

Spot Rates and Derivative Instruments. A Fund may conduct its foreign currency exchange transactions either at the spot (cash) rate prevailing in the foreign currency exchange market or by entering into forward foreign currency exchange contracts (forward contracts). (See *Types of Investments — Derivatives.*) These contracts are traded in the interbank market conducted directly between currency traders (usually large commercial banks) and their customers. Because foreign currency transactions occurring in the interbank market might involve substantially larger amounts than those involved in the use of such derivative instruments, a Fund could be disadvantaged by having to deal in the odd lot market for the underlying foreign currencies at prices that are less favorable than for round lots.

A Fund may enter into forward contracts for a variety of reasons, including for risk management (hedging) or for investment purposes.

When a Fund enters into a contract for the purchase or sale of a security denominated in a foreign currency or has been notified of a dividend or interest payment, it may desire to lock in the price of the security or the amount of the payment, usually in U.S. dollars, although it could desire to lock in the price of the security in another currency. By entering into a forward contract, a Fund would be able to protect itself against a possible loss resulting from an adverse change in the relationship between different currencies from the date the security is purchased or sold to the date on which payment is made or received or when the dividend or interest is actually received.

A Fund may enter into forward contracts when management of the Fund believes the currency of a particular foreign country may decline in value relative to another currency. When selling currencies forward in this fashion, a Fund may seek to hedge the value of foreign securities it holds against an adverse move in exchange rates. The precise matching of forward contract amounts and the value of securities involved generally will not be possible since the future value of securities in foreign currencies more than likely will change between the date the forward contract is entered into and the date it matures. The projection of short-term currency market movements is extremely difficult and successful execution of a short-term hedging strategy is highly uncertain.

This method of protecting the value of a Fund's securities against a decline in the value of a currency does not eliminate fluctuations in the underlying prices of the securities. It simply establishes a rate of exchange that can be achieved at some point in time. Although forward contracts can be used to minimize the risk of loss due to a decline in value of hedged currency, they will also limit any potential gain that might result should the value of such currency increase.

A Fund may also enter into forward contracts when the Fund's portfolio manager believes the currency of a particular country will increase in value relative to another currency. A Fund may buy currencies forward to gain exposure to a currency without incurring the additional costs of purchasing securities denominated in that currency.

For example, the combination of U.S. dollar-denominated instruments with long forward currency exchange contracts creates a position economically equivalent to a position in the foreign currency, in anticipation of an increase in the value of the foreign currency against the U.S. dollar. Conversely, the combination of U.S. dollar-denominated instruments with short forward currency exchange contracts is economically equivalent to borrowing the foreign currency for delivery at a specified date in the future, in anticipation of a decrease in the value of the foreign currency against the U.S. dollar.

Unanticipated changes in the currency exchange results could result in poorer performance for Funds that enter into these types of transactions.

A Fund may designate cash or securities in an amount equal to the value of the Fund's total assets committed to consummating forward contracts entered into under the circumstance set forth above. If the value of the securities declines, additional cash or securities will be designated on a daily basis so that the value of the cash or securities will equal the amount of the Fund's commitments on such contracts.

At maturity of a forward contract, a Fund may either deliver (if a contract to sell) or take delivery of (if a contract to buy) the foreign currency or terminate its contractual obligation by entering into an offsetting contract with the same currency trader, having the same maturity date, and covering the same amount of foreign currency.

If a Fund engages in an offsetting transaction, it will incur a gain or loss to the extent there has been movement in forward contract prices. If a Fund engages in an offsetting transaction, it may subsequently enter into a new forward contract to buy or sell the foreign currency.

Although a Fund values its assets each business day in terms of U.S. dollars, it may not intend to convert its foreign currencies into U.S. dollars on a daily basis. However, it will do so from time to time, and such conversions involve certain currency conversion costs. Although foreign exchange dealers do not charge a fee for conversion, they do realize a profit based on the difference (spread) between the prices at which they buy and sell various currencies. Thus, a dealer may offer to sell a foreign currency to a Fund at one rate, while offering a lesser rate of exchange should a Fund desire to resell that currency to the dealer.

It is possible, under certain circumstances, including entering into forward currency contracts for investment purposes, that a Fund will be required to limit or restructure its forward contract currency transactions to qualify as a "regulated investment company" under the Internal Revenue Code.

Options on Foreign Currencies. A Fund may buy put and call options and write covered call and cash-secured put options on foreign currencies for hedging purposes and to gain exposure to foreign currencies. For example, a decline in the dollar value of a foreign currency in which securities are denominated will reduce the dollar value of such securities, even if their value in the foreign currency remains constant. In order to protect against the diminutions in the value of securities, a Fund may buy put options on the foreign currency. If the value of the currency does decline, a Fund would have the right to sell the currency for a fixed amount in dollars and would thereby offset, in whole or in part, the adverse effect on its portfolio that otherwise would have resulted.

Conversely, where a change in the dollar value of a currency would increase the cost of securities a Fund plans to buy, or where a Fund would benefit from increased exposure to the currency, a Fund may buy call options on the foreign currency, giving it the right to purchase the currency for a fixed amount in dollars. The purchase of the options could offset, at least partially, the changes in exchange rates.

As in the case of other types of options, however, the benefit to a Fund derived from purchases of foreign currency options would be reduced by the amount of the premium and related transaction costs. In addition, where currency exchange rates do not move in the direction or to the extent anticipated, a Fund could sustain losses on transactions in foreign currency options that would require it to forego a portion or all of the benefits of advantageous changes in rates.

A Fund may write options on foreign currencies for similar purposes. For example, when a Fund anticipates a decline in the dollar value of foreign-denominated securities due to adverse fluctuations in exchange rates, it could, instead of purchasing a put option, write a call option on the relevant currency, giving the option holder the right to purchase that currency from the Fund for a fixed amount in dollars. If the expected decline occurs, the option would most likely not be exercised and the diminution in value of securities would be offset, at least partially, by the amount of the premium received.

Similarly, instead of purchasing a call option when a foreign currency is expected to appreciate, a Fund could write a put option on the relevant currency, giving the option holder the right to that currency from the Fund for a fixed amount in dollars. If rates move in the manner projected, the put option would expire unexercised and allow the Fund to hedge increased cost up to the amount of the premium.

As in the case of other types of options, however, the writing of a foreign currency option will constitute only a partial hedge up to the amount of the premium, and only if rates move in the expected direction. If this does not occur, the option may be exercised and the Fund would be required to buy or sell the underlying currency at a loss that may not be offset by the amount of the premium. Through the writing of options on foreign currencies, the Fund also may be required to forego all or a portion of the benefits that might otherwise have been obtained from favorable movements on exchange rates.

An option written on foreign currencies is covered if a Fund holds currency sufficient to cover the option or has an absolute and immediate right to acquire that currency without additional cash consideration upon conversion of assets denominated in that currency or exchange of other currency held in its portfolio. An option writer could lose amounts substantially in excess of its initial investments, due to the margin and collateral requirements associated with such positions.

Options on foreign currencies are traded through financial institutions acting as market-makers, although foreign currency options also are traded on certain national securities exchanges, such as the Philadelphia Stock Exchange and the Chicago Board Options Exchange, subject to SEC regulation. In an over-the-counter trading environment, many of the protections afforded to exchange participants will not be available. For example, there are no daily price fluctuation limits, and adverse market movements could therefore continue to an unlimited extent over a period of time. Although the purchaser of an option cannot lose more than the amount of the premium plus related transaction costs, this entire amount could be lost.

Foreign currency option positions entered into on a national securities exchange are cleared and guaranteed by the OCC, thereby reducing the risk of counterparty default. Further, a liquid secondary market in options traded on a national securities exchange may be more readily available than in the over-the-counter market, potentially permitting a Fund to liquidate open positions at a profit prior to exercise or expiration, or to limit losses in the event of adverse market movements.

Foreign Currency Futures and Related Options. A Fund may enter into currency futures contracts to buy or sell currencies. It also may buy put and call options and write covered call and cash-secured put options on currency futures. Currency futures contracts are similar to currency forward contracts, except that they are traded on exchanges (and have margin requirements) and are standardized as to contract size and delivery date. Most currency futures call for payment of delivery in U.S. dollars. A Fund may use currency futures for the same purposes as currency forward contracts, subject to CFTC limitations.

Currency futures and options on futures values can be expected to correlate with exchange rates, but will not reflect other factors that may affect the value of the Fund's investments. A currency hedge, for example, should protect a Yen-denominated bond against a decline in the Yen, but will not protect a Fund against price decline if the issuer's creditworthiness deteriorates. Because the value of a Fund's investments denominated in foreign currency will change in response to many factors other than exchange rates, it may not be possible to match the amount of a forward contract to the value of a Fund's investments denominated in that currency over time.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with foreign currency transactions include: Derivatives Risk, Interest Rate Risk, and Liquidity Risk.

Foreign Securities

Unless otherwise stated in a Fund's prospectus, stocks, bonds and other securities or investments are deemed to be "foreign" based primarily on the issuer's place of organization/incorporation, but the Fund may also consider, under circumstances the Fund's portfolio manager deems relevant, the issuer's domicile, its principal place of business, its primary stock exchange listing, the source of its revenue or other factors. A Fund's investments in foreign markets, may include issuers in emerging markets, as well as frontier markets, each of which carry heightened risks as compared with investments in other typical foreign markets. Frontier market countries generally have smaller economies and even less developed capital markets than typical emerging market countries (which themselves have increased investment risk relative to investing in more developed markets) and, as a result, the risks of investing in emerging market countries are magnified in frontier market countries.

Foreign securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See *Types of Investments — Variable- and Floating-Rate Obligations, Types of Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities* and *Types of Investments — Private Placement and Other Restricted Securities* for more information.

Due to the potential for foreign withholding taxes, MSCI publishes two versions of its indices reflecting the reinvestment of dividends using two different methodologies: gross dividends and net dividends. While both versions reflect reinvested dividends, they differ with respect to the manner in which taxes associated with dividend payments are treated. In calculating the net dividends version, MSCI incorporates reinvested dividends applying the withholding tax rate applicable to foreign non-resident institutional investors that do not benefit from double taxation treaties. The Investment Manager believes that the net dividends version of MSCI indices better reflects the returns U.S. investors might expect were they to invest directly in the component securities of an MSCI index.

There is a practice in certain foreign markets under which an issuer's securities are blocked from trading at the custodian or sub-custodian level for a specified number of days before and, in certain instances, after a shareholder meeting where such shares are voted. This is referred to as "share blocking". The blocking period can last up to several weeks. Share blocking may prevent a Fund from buying or selling securities during this period, because during the time shares are blocked, trades in such securities will not settle. It may be difficult or impossible to lift blocking restrictions, with the particular requirements varying widely by country. As a consequence of these restrictions, the Investment Manager, on behalf of a Fund, may abstain from voting proxies in markets that require share blocking.

Foreign securities may include depositary receipts, such as American Depositary Receipts (ADRs), European Depositary Receipts (EDRs) and Global Depositary Receipts (GDRs). ADRs are U.S. dollar-denominated receipts issued in registered form by a domestic bank or trust company that evidence ownership of underlying securities issued by a foreign issuer. EDRs are foreign currency-denominated receipts issued in Europe, typically by foreign banks or trust companies and foreign branches of domestic banks, that evidence ownership of foreign or domestic securities. GDRs are receipts structured similarly to ADRs and EDRs and are marketed globally. Depositary receipts will not necessarily be denominated in the same currency as their underlying securities. In general, ADRs, in registered form, are designed for use in the U.S. securities markets, and EDRs, in bearer form, are designed for use in European securities markets. GDRs are tradable both in the United States and in Europe and are designed for use throughout the world. A Fund may invest in depositary receipts through "sponsored" or "unsponsored" facilities. A sponsored facility is established jointly by the issuer of the underlying security and a depositary, whereas a depositary may establish an unsponsored facility without participation by the issuer of the deposited security. Holders of unsponsored depositary receipts generally bear all the costs of such facilities and the depositary of an unsponsored facility frequently is under no obligation to distribute interest holder communications received from the issuer of the deposited security or to pass through voting rights to the holders of such receipts in respect of the deposited securities. The issuers of unsponsored depositary receipts are not obligated to disclose material information in the United States, and, therefore, there may be limited information available regarding such issuers and/or limited correlation between available information and the market value of the depositary receipts.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with foreign securities include: Emerging Markets Securities Risk, Foreign Currency Risk, Foreign Securities Risk, Frontier Market Risk, Geographic Concentration Risk, Issuer Risk and Market Risk.

Guaranteed Investment Contracts (Funding Agreements)

Guaranteed investment contracts, or funding agreements, are short-term, privately placed debt instruments issued by insurance companies. Pursuant to such contracts, a Fund may make cash contributions to a deposit fund of the insurance company's general account. The insurance company then credits to a Fund payments at negotiated, floating or fixed interest rates. A Fund will purchase guaranteed investment contracts only from issuers that, at the time of purchase, meet certain credit and quality standards. In general, guaranteed investment contracts are not assignable or transferable without the permission of the issuing insurance companies, and an active secondary market does not exist for these investments. In addition, the issuer may not be able to pay the principal amount to a Fund on seven days' notice or less, at which time the investment may be considered illiquid under applicable SEC regulatory guidance and subject to certain restrictions. See *Types of Investments — Illiquid Securities*.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with guaranteed investment contracts (funding agreements) include: Credit Risk and Liquidity Risk.

High Yield Securities

High Yield, or low and below investment grade securities (below investment grade securities are also known as "junk bonds"), are debt securities with the lowest investment grade rating (e.g., BBB by S&P and Fitch or Baa by Moody's), that are below investment grade (e.g., lower than BBB by S&P and Fitch or Baa by Moody's) or that are unrated but determined by a Fund's portfolio manager to be of comparable quality. These types of securities may be issued to fund corporate transactions or restructurings, such as leveraged buyouts, mergers, acquisitions, debt reclassifications or similar events, are more speculative in nature than securities with higher ratings and tend to be more sensitive to credit risk, particularly during a downturn in the economy. These types of securities generally are issued by unseasoned companies without long track records of sales and earnings, or by companies or municipalities that have questionable credit strength. Low and below investment grade securities and comparable unrated securities: (i) likely will have some quality and protective characteristics that, in the judgment of one or more NRSROs, are outweighed by large uncertainties or major risk exposures to adverse conditions; (ii) are speculative with respect to the issuer's capacity to pay interest and repay principal in accordance with the terms of the obligation; and (iii) may have a less liquid secondary market, potentially making it difficult to value or sell such securities. Credit ratings issued by credit rating agencies are designed to evaluate the safety of principal and interest payments of rated securities. They do not, however, evaluate the market value risk of lower-quality securities and, therefore, may not fully

reflect the true risks of an investment. In addition, credit rating agencies may or may not make timely changes in a rating to reflect changes in the economy or in the condition of the issuer that affect the market value of the securities. Consequently, credit ratings are used only as a preliminary indicator of investment quality. Low and below investment grade securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See *Types of Investments — Variable- and Floating-Rate Obligations, Types of Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities* and *Types of Investments — Private Placement and Other Restricted Securities* for more information.

The rates of return on these types of securities generally are higher than the rates of return available on more highly rated securities, but generally involve greater volatility of price and risk of loss of principal and income, including the possibility of default by or insolvency of the issuers of such securities. Accordingly, a Fund may be more dependent on the Investment Manager's or a subadviser's credit analysis with respect to these types of securities than is the case for more highly rated securities.

The market values of certain low and below investment grade securities and comparable unrated securities tend to be more sensitive to individual corporate developments and changes in economic conditions than are the market values of more highly rated securities. In addition, issuers of low and below investment grade and comparable unrated securities often are highly leveraged and may not have more traditional methods of financing available to them, so that their ability to service their debt obligations during an economic downturn or during sustained periods of rising interest rates may be impaired.

The risk of loss due to default is greater for low and below investment grade and comparable unrated securities than it is for higher rated securities because low and below investment grade securities and comparable unrated securities generally are unsecured and frequently are subordinated to more senior indebtedness. A Fund may incur additional expenses to the extent that it is required to seek recovery upon a default in the payment of principal or interest on its holdings of such securities. The existence of limited markets for lower-rated debt securities may diminish a Fund's ability to: (i) obtain accurate market quotations for purposes of valuing such securities and calculating portfolio net asset value; and (ii) sell the securities at fair market value either to meet redemption requests or to respond to changes in the economy or in financial markets.

Many lower-rated securities are not registered for offer and sale to the public under the 1933 Act. Investments in these restricted securities may be determined to be liquid (able to be sold within seven days at approximately the price at which they are valued by a Fund) pursuant to policies approved by the Fund's Trustees. Investments in illiquid securities, including restricted securities that have not been determined to be liquid, may not exceed 15% of a Fund's net assets. A Fund is not otherwise subject to any limitation on its ability to invest in restricted securities. Restricted securities may be less liquid than other lower-rated securities, potentially making it difficult to value or sell such securities.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with low and below investment grade securities include: Credit Risk, Interest Rate Risk, High Yield Securities Risk and Prepayment and Extension Risk.

Illiquid Securities

Illiquid securities are defined by a Fund consistent with the SEC staff's current guidance and interpretations which provide that an illiquid security is an asset which may not be sold or disposed of in the ordinary course of business within seven days at approximately the value at which a Fund has valued the investment on its books. Some securities, such as those not registered under U.S. securities laws, cannot be sold in public transactions. Some securities are deemed to be illiquid because they are subject to contractual or legal restrictions on resale. Subject to its investment policies, a Fund may invest in illiquid investments and may invest in certain restricted securities that are deemed to be illiquid securities at the time of purchase.

Although one or more of the other risks described in this SAI may also apply, the risk typically associated with illiquid securities include: Liquidity Risk.

Inflation Protected Securities

Inflation is a general rise in prices of goods and services. Inflation erodes the purchasing power of an investor's assets. For example, if an investment provides a total return of 7% in a given year and inflation is 3% during that period, the inflation-adjusted, or real, return is 4%. Inflation-protected securities are debt securities whose principal and/or interest payments are adjusted for inflation, unlike debt securities that make fixed principal and interest payments. One type of inflation-protected debt security is issued by the U.S. Treasury. The principal of these securities is adjusted for inflation as indicated by the Consumer Price Index (CPI) for urban consumers and interest is paid on the adjusted amount. The CPI is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy.

If the CPI falls, the principal value of inflation-protected securities will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Conversely, if the CPI

risks, the principal value of inflation-protected securities will be adjusted upward, and consequently the interest payable on these securities will be increased. Repayment of the original bond principal upon maturity is guaranteed in the case of U.S. Treasury inflation-protected securities, even during a period of deflation. However, the current market value of the inflation-protected securities is not guaranteed and will fluctuate. Other inflation-indexed securities include inflation-related bonds, which may or may not provide a similar guarantee. If a guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal.

Other issuers of inflation-protected debt securities include other U.S. government agencies or instrumentalities, corporations and foreign governments. There can be no assurance that the CPI or any foreign inflation index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the bond's inflation measure.

Any increase in principal for an inflation-protected security resulting from inflation adjustments is considered by IRS regulations to be taxable income in the year it occurs. For direct holders of an inflation-protected security, this means that taxes must be paid on principal adjustments even though these amounts are not received until the bond matures. Similarly, a Fund holding these securities distributes both interest income and the income attributable to principal adjustments in the form of cash or reinvested shares.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with inflation-protected securities include: Inflation Protected Securities Risk, Interest Rate Risk and Market Risk. In addition, inflation protected securities issued by non-U.S. government agencies or instrumentalities are subject to Credit Risk.

Initial Public Offerings

A Fund may invest in initial public offerings (IPOs) of common stock or other primary or secondary syndicated offerings of equity or debt securities issued by a corporate issuer. Fixed income funds frequently invest in these types of offerings of debt securities. A purchase of IPO securities often involves higher transaction costs than those associated with the purchase of securities already traded on exchanges or markets. A Fund may hold IPO securities for a period of time, or may sell them soon after the purchase. Investments in IPOs could have a magnified impact — either positive or negative — on a Fund's performance while the Fund's assets are relatively small. The impact of an IPO on a Fund's performance may tend to diminish as the Fund's assets grow. In circumstances when investments in IPOs make a significant contribution to a Fund's performance, there can be no assurance that similar contributions from IPOs will continue in the future.

Although one or more risks described in this SAI may also apply, the risks typically associated with IPOs include: Initial Public Offering (IPO) Risk, Issuer risk, Liquidity Risk, Market Risk and Small Company Securities Risk.

Inverse Floater

See *Types of Investments — Derivatives — Index or Linked Securities (Structured Products)* above.

Investments in Other Investment Companies (Including ETFs)

Investing in other investment companies may be a means by which a Fund seeks to achieve its investment objective. A Fund may invest in securities issued by other investment companies within the limits prescribed by the 1940 Act, the rules and regulations thereunder and any exemptive orders currently or in the future obtained by a Fund, or the investment company in which a Fund invests, from the SEC. These securities include shares of other open-end investment companies (i.e., mutual funds), closed-end funds, exchange-traded funds (ETFs) and business development companies.

Except with respect to Funds structured as funds-of-funds or so-called master/feeder funds or other Funds whose strategies otherwise allow such investments, the 1940 Act generally requires that a fund limit its investments in another investment company or series thereof so that, as determined at the time a securities purchase is made: (i) no more than 5% of the value of its total assets will be invested in the securities of any one investment company; (ii) no more than 10% of the value of its total assets will be invested in the aggregate in securities of other investment companies; and (iii) no more than 3% of the outstanding voting stock of any one investment company or series thereof will be owned by a Fund or by companies controlled by a Fund. Such other investment companies may include ETFs, which are shares of publicly traded unit investment trusts, open-end funds or depositary receipts that may be passively managed (e.g., they seek to track the performance of specific indexes or companies in related industries) or they may be actively managed. The SEC has granted orders for exemptive relief to certain ETFs that permit investments in those ETFs by other investment companies in excess of these limits.

ETFs are listed on an exchange and trade in the secondary market on a per-share basis, which allows investors to purchase and sell ETF shares at their market price throughout the day. Certain ETFs, such as passively managed ETFs, hold portfolios of securities that are designed to replicate, as closely as possible before expenses, the price and yield of a specified market

index. The performance results of these ETFs will not replicate exactly the performance of the pertinent index due to transaction and other expenses, including fees to service providers borne by ETFs. ETF shares are sold and redeemed at net asset value only in large blocks called creation units and redemption units, respectively. The Funds' ability to redeem redemption units may be limited by the 1940 Act, which provides that ETFs will not be obligated to redeem shares held by the Funds in an amount exceeding one percent of their total outstanding securities during any period of less than 30 days.

Although a Fund may derive certain advantages from being able to invest in shares of other investment companies, such as to be fully invested, there may be potential disadvantages. Investing in other investment companies may result in higher fees and expenses for a Fund and its shareholders. A shareholder may be charged fees not only on Fund shares held directly but also on the investment company shares that a Fund purchases. Because these investment companies may invest in other securities, they are also subject to the risks associated with a variety of investment instruments as described in this SAI.

Under the 1940 Act and rules and regulations thereunder, a Fund may purchase shares of affiliated funds, subject to certain conditions. Investing in affiliated funds may present certain actual or potential conflicts of interest. For more information about such actual and potential conflicts of interest, see *Investment Management and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest*.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with the securities of other investment companies include: Investing in Other Funds Risk, Issuer Risk and Market Risk.

Money Market Instruments

Money market instruments include cash equivalents and short-term debt obligations which include: (i) bank obligations, including certificates of deposit (CDs), time deposits and bankers' acceptances, and letters of credit of banks or savings and loan associations having capital surplus and undivided profits (as of the date of its most recently published annual financial statements) in excess of \$100 million (or the equivalent in the instance of a foreign branch of a U.S. bank) at the date of investment; (ii) funding agreements; (iii) repurchase agreements; (iv) obligations of the United States, foreign countries and supranational entities, and each of their subdivisions, agencies and instrumentalities; (v) certain corporate debt securities, such as commercial paper, short-term corporate obligations and extendible commercial notes; (vi) participation interests; and (vii) municipal securities. Money market instruments may be structured as fixed-, variable- or floating-rate obligations and may be privately placed or publicly offered. A Fund may also invest in affiliated and unaffiliated money market mutual funds, which invest primarily in money market instruments. See *Types of Investments — Variable- and Floating-Rate Obligations* and *Types of Investments — Private Placement and Other Restricted Securities* for more information.

With respect to money market securities, certain U.S. Government obligations are backed or insured by the U.S. Government, its agencies or its instrumentalities. Other money market securities are backed only by the claims paying ability or creditworthiness of the issuer.

Bankers' acceptances are marketable short-term credit instruments used to finance the import, export, transfer or storage of goods. They are termed "accepted" when a bank unconditionally guarantees their payment at maturity.

A Fund may invest its daily cash balance in Columbia Short-Term Cash Fund, a money market fund established for the exclusive use of the funds in the Columbia Fund Family and other institutional clients of the Investment Manager.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with money market instruments include: Credit Risk, Inflation Risk, Interest Rate Risk, Issuer Risk, Money Market Fund Risk and Regulatory Risk.

Mortgage-Backed Securities

Mortgage-backed securities are a type of asset-backed security that represent interests in, or debt instruments backed by, pools of underlying mortgages. In some cases, these underlying mortgages may be insured or guaranteed by the U.S. Government or its agencies. Mortgage-backed securities entitle the security holders to receive distributions that are tied to the payments made on the underlying mortgage collateral (less fees paid to the originator, servicer, or other parties, and fees paid for credit enhancement), so that the payments made on the underlying mortgage collateral effectively pass through to such security holders. Mortgage-backed securities are created when mortgage originators (or mortgage loan sellers who have purchased mortgage loans from mortgage loan originators) sell the underlying mortgages to a special purpose entity in a process called a securitization. The special purpose entity issues securities that are backed by the payments on the underlying mortgage loans, and have a minimum denomination and specific term. Mortgage-backed securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See *Types of Investments — Variable- and Floating-Rate Obligations*, *Types of Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities* and *Types of Investments — Private Placement and Other Restricted Securities* for more information.

Mortgage-backed securities may be issued or guaranteed by GNMA (also known as Ginnie Mae), FNMA (also known as Fannie Mae), or FHLMC (also known as Freddie Mac), but also may be issued or guaranteed by other issuers, including private companies. GNMA is a government-owned corporation that is an agency of the U.S. Department of Housing and Urban Development. It guarantees, with the full faith and credit of the United States, full and timely payment of all monthly principal and interest on its mortgage-backed securities. Until recently, FNMA and FHLMC were government-sponsored corporations owned entirely by private stockholders. Both issue mortgage-related securities that contain guarantees as to timely payment of interest and principal but that are not backed by the full faith and credit of the U.S. Government. The value of the companies' securities fell sharply in 2008 due to concerns that the firms did not have sufficient capital to offset losses. The U.S. Treasury has historically had the authority to purchase obligations of Fannie Mae and Freddie Mac. In addition, in 2008, due to capitalization concerns, Congress provided the U.S. Treasury with additional authority to lend Fannie Mae and Freddie Mac emergency funds and to purchase the companies' stock, as described below. In September 2008, the U.S. Treasury and the Federal Housing Finance Agency (FHFA) announced that Fannie Mae and Freddie Mac had been placed in conservatorship.

In the past Fannie Mae and Freddie Mac have received significant capital support through U.S. Treasury preferred stock purchases and Federal Reserve purchases of their mortgage-backed securities. There can be no assurance that these or other agencies of the government will provide such support in the future. The future status of Fannie Mae or Freddie Mac could be impacted by, among other things, the actions taken and restrictions placed on Fannie Mae or Freddie Mac by the FHFA in its role as conservator, the restrictions placed on Fannie Mae's or Freddie Mac's operations and activities under the senior stock purchase agreements, market responses to developments at Fannie Mae or Freddie Mac, and future legislative and regulatory action that alters the operations, ownership structure and/or mission of Fannie Mae or Freddie Mac, each of which may, in turn, impact the value of, and cash flows on, any securities guaranteed by Fannie Mae and Freddie Mac.

Stripped mortgage-backed securities are a type of mortgage-backed security that receives differing proportions of the interest and principal payments from the underlying assets. Generally, there are two classes of stripped mortgage-backed securities: Interest Only (IO) and Principal Only (PO). IOs entitle the holder to receive distributions consisting of all or a portion of the interest on the underlying pool of mortgage loans or mortgage-backed securities. POs entitle the holder to receive distributions consisting of all or a portion of the principal of the underlying pool of mortgage loans or mortgage-backed securities. See *Types of Investments — Stripped Securities* for more information.

Collateralized Mortgage Obligations (CMOs) are hybrid mortgage-related instruments issued by special purpose entities secured by pools of mortgage loans or other mortgage-related securities, such as mortgage pass-through securities or stripped mortgage-backed securities. CMOs may be structured into multiple classes, often referred to as "tranches," with each class bearing a different stated maturity and entitled to a different schedule for payments of principal and interest, including prepayments. Principal prepayments on collateral underlying a CMO may cause it to be retired substantially earlier than its stated maturity or final distribution dates, resulting in a loss of all or part of the premium if any has been paid. The yield characteristics of mortgage-backed securities differ from those of other debt securities. Among the differences are that interest and principal payments are made more frequently on mortgage-backed securities, usually monthly, and principal may be repaid at any time. These factors may reduce the expected yield. Interest is paid or accrues on all classes of the CMOs on a periodic basis. The principal and interest payments on the underlying mortgage assets may be allocated among the various classes of CMOs in several ways. Typically, payments of principal, including any prepayments, on the underlying mortgage assets are applied to the classes in the order of their respective stated maturities or final distribution dates, so that no payment of principal is made on CMOs of a class until all CMOs of other classes having earlier stated maturities or final distribution dates have been paid in full.

Commercial mortgage-backed securities (CMBS) are a specific type of mortgage-backed security collateralized by a pool of mortgages on commercial real estate.

CMO Residuals are mortgage securities issued by agencies or instrumentalities of the U.S. Government or by private originators of, or investors in, mortgage loans, including savings and loan associations, homebuilders, mortgage banks, commercial banks, investment banks and special purpose entities of the foregoing. The cash flow generated by the mortgage assets underlying a series of CMOs is applied first to make required payments of principal and interest on the CMOs and second to pay the related administrative expenses and any management fee of the issuer. The residual in a CMO structure generally represents the interest in any excess cash flow remaining after making the foregoing payments. Each payment of such excess cash flow to a holder of the related CMO residual represents income and/or a return of capital. The amount of residual cash flow resulting from a CMO will depend on, among other things, the characteristics of the mortgage assets, the coupon rate of each class of CMO, prevailing interest rates, the amount of administrative expenses and the pre-payment experience on the mortgage assets. In particular, the yield to maturity on CMO residuals is extremely sensitive to pre-payments on the related underlying mortgage assets, in the same manner as an interest-only ("IO") class of stripped mortgage-backed securities. In addition, if a series of a CMO includes a class that bears interest at an adjustable rate, the

yield to maturity on the related CMO residual will also be extremely sensitive to changes in the level of the index upon which interest rate adjustments are based. As described below with respect to stripped mortgage-backed securities, in certain circumstances an ETF may fail to recoup fully its initial investment in a CMO residual. CMO residuals are generally purchased and sold by institutional investors through several investment banking firms acting as brokers or dealers. Transactions in CMO residuals are generally completed only after careful review of the characteristics of the securities in question. In addition, CMO residuals may, or pursuant to an exemption therefrom, may not have been registered under the 1933 Act. CMO residuals, whether or not registered under the 1933 Act, may be subject to certain restrictions on transferability, and may be deemed “illiquid” and subject to a Fund’s limitations on investment in illiquid securities.

Mortgage Pass-Through Securities are interests in pools of mortgage-related securities that differ from other forms of debt securities, which normally provide for periodic payment of interest in fixed amounts with principal payments at maturity or specified call dates. Instead, these securities provide a monthly payment which consists of both interest and principal payments. In effect, these payments are a “pass-through” of the monthly payments made by the individual borrowers on their residential or commercial mortgage loans, net of any fees paid to the issuer or guarantor of such securities. Additional payments are caused by repayments of principal resulting from the sale of the underlying property, refinancing or foreclosure, net of fees or costs which may be incurred. Some mortgage-related securities (such as securities issued by the GNMA) are described as “modified pass-through.” These securities entitle the holder to receive all interest and principal payments owed on the mortgage pool, net of certain fees, at the scheduled payment dates regardless of whether or not the mortgagor actually makes the payment.

REMICs are entities that own mortgages and elect REMIC status under the Code and, like CMOs, issue debt obligations collateralized by underlying mortgage assets that have characteristics similar to those issued by CMOs.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with mortgage and asset-backed securities include: Credit Risk, Interest Rate Risk, Issuer Risk, Liquidity Risk, Mortgage-Backed and Other Asset Backed Securities Risk, Prepayment and Extension Risk and Reinvestment Risk.

Municipal Securities

Municipal securities include debt obligations issued by governmental entities to obtain funds for various public purposes, including the construction of a wide range of public facilities, the refunding of outstanding obligations, the payment of general operating expenses, and the extension of loans to public institutions and facilities.

Municipal securities may include municipal bonds, municipal notes and municipal leases, which are described below. Municipal bonds are debt obligations of a governmental entity that obligate the municipality to pay the holder a specified sum of money at specified intervals and to repay the principal amount of the loan at maturity. Municipal securities can be classified into two principal categories, including “general obligation” bonds and other securities and “revenue” bonds and other securities. General obligation bonds are secured by the issuer’s full faith, credit and taxing power for the payment of principal and interest. Revenue securities are payable only from the revenues derived from a particular facility or class of facilities or, in some cases, from the proceeds of a special excise tax or other specific revenue source, such as the user of the facility being financed. Municipal securities also may include “moral obligation” securities, which normally are issued by special purpose public authorities. If the issuer of moral obligation securities is unable to meet its debt service obligations from current revenues, it may draw on a reserve fund, the restoration of which is a moral commitment but not a legal obligation of the governmental entity that created the special purpose public authority. Municipal securities may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See *Types of Investments — Variable- and Floating-Rate Obligations*, *Types of Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities* and *Types of Investments — Private Placement and Other Restricted Securities* for more information.

Municipal notes may be issued by governmental entities and other tax-exempt issuers in order to finance short-term cash needs or, occasionally, to finance construction. Most municipal notes are general obligations of the issuing entity payable from taxes or designated revenues expected to be received within the relevant fiscal period. Municipal notes generally have maturities of one year or less. Municipal notes can be subdivided into two sub-categories: (i) municipal commercial paper and (ii) municipal demand obligations.

Municipal commercial paper typically consists of very short-term unsecured negotiable promissory notes that are sold, for example, to meet seasonal working capital or interim construction financing needs of a governmental entity or agency. While these obligations are intended to be paid from general revenues or refinanced with long-term debt, they frequently are backed by letters of credit, lending agreements, note repurchase agreements or other credit facility agreements offered by banks or institutions. See *Types of Investments — Commercial Paper* for more information.

Municipal demand obligations can be subdivided into two general types: variable rate demand notes and master demand obligations. Variable rate demand notes are tax-exempt municipal obligations or participation interests that provide for a

periodic adjustment in the interest rate paid on the notes. They permit the holder to demand payment of the notes, or to demand purchase of the notes at a purchase price equal to the unpaid principal balance, plus accrued interest either directly by the issuer or by drawing on a bank letter of credit or guaranty issued with respect to such note. The issuer of the municipal obligation may have a corresponding right to prepay at its discretion the outstanding principal of the note plus accrued interest upon notice comparable to that required for the holder to demand payment. The variable rate demand notes in which a Fund may invest are payable, or are subject to purchase, on demand, usually on notice of seven calendar days or less. The terms of the notes generally provide that interest rates are adjustable at intervals ranging from daily to six months.

Master demand obligations are tax-exempt municipal obligations that provide for a periodic adjustment in the interest rate paid and permit daily changes in the amount borrowed. The interest on such obligations is, in the opinion of counsel for the borrower, excluded from gross income for federal income tax purposes (but not necessarily for alternative minimum tax purposes). Although there is no secondary market for master demand obligations, such obligations are considered by a Fund to be liquid because they are payable upon demand.

Municipal lease obligations are participations in privately arranged loans to state or local government borrowers and may take the form of a lease, an installment purchase, or a conditional sales contract. They are issued by state and local governments and authorities to acquire land, equipment, and facilities. An investor may purchase these obligations directly, or it may purchase participation interests in such obligations. In general, municipal lease obligations are unrated, in which case they will be determined by a Fund's portfolio manager to be of comparable quality at the time of purchase to rated instruments that may be acquired by a Fund. Frequently, privately arranged loans have variable interest rates and may be backed by a bank letter of credit. In other cases, they may be unsecured or may be secured by assets not easily liquidated.

Moreover, such loans in most cases are not backed by the taxing authority of the issuers and may have limited marketability or may be marketable only by virtue of a provision requiring repayment following demand by the lender.

Municipal leases may be subject to greater risks than general obligation or revenue bonds. State constitutions and statutes set forth requirements that states or municipalities must meet in order to issue municipal obligations. Municipal leases may contain a covenant by the state or municipality to budget for and make payments due under the obligation. Certain municipal leases may, however, provide that the issuer is not obligated to make payments on the obligation in future years unless funds have been appropriated for this purpose each year.

Although lease obligations do not constitute general obligations of the municipal issuer to which the government's taxing power is pledged, a lease obligation ordinarily is backed by the government's covenant to budget for, appropriate, and make the payments due under the lease obligation. However, certain lease obligations contain "non-appropriation" clauses that provide that the government has no obligation to make lease or installment purchase payments in future years unless money is appropriated for such purpose on a periodic basis. In the case of a "non-appropriation" lease, a Fund's ability to recover under the lease in the event of non-appropriation or default likely will be limited to the repossession of the leased property in the event that foreclosure proves difficult.

Tender option bonds are municipal securities having relatively long maturities and bearing interest at a fixed interest rate substantially higher than prevailing short-term tax-exempt rates that is coupled with the agreement of a third party, such as a bank, broker-dealer or other financial institution, to grant the security holders the option, at periodic intervals, to tender their securities to the institution and receive the face value thereof. The financial institution receives periodic fees equal to the difference between the municipal security's coupon rate and the rate that would cause the security to trade at face value on the date of determination.

There are variations in the quality of municipal securities, both within a particular classification and between classifications, and the rates of return on municipal securities can depend on a variety of factors, including general money market conditions, the financial condition of the issuer, general conditions of the municipal bond market, the size of a particular offering, the maturity of the obligation, and the rating of the issue. The ratings of NRSROs represent their opinions as to the quality of municipal securities. It should be emphasized, however, that these ratings are general and are not absolute standards of quality, and municipal securities with the same maturity, interest rate, and rating may have different rates of return while municipal securities of the same maturity and interest rate with different ratings may have the same rate of return. The municipal bond market is characterized by a large number of different issuers, many having smaller sized bond issues, and a wide choice of different maturities within each issue. For these reasons, most municipal bonds do not trade on a daily basis and many trade only rarely. Because many of these bonds trade infrequently, the spread between the bid and offer may be wider and the time needed to develop a bid or an offer may be longer than for other security markets. See Appendix A for a discussion of securities ratings. (See *Types of Investments — Debt Obligations*.)

Standby Commitments. Standby commitments are securities under which a purchaser, usually a bank or broker-dealer, agrees to purchase, for a fee, an amount of a Fund's municipal obligations. The amount payable by a bank or broker-dealer to

purchase securities subject to a standby commitment typically will be substantially the same as the value of the underlying municipal securities. A Fund may pay for standby commitments either separately in cash or by paying a higher price for portfolio securities that are acquired subject to such a commitment.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with standby commitments include: Counterparty Risk, Market Risk and Municipal Securities Risk.

Taxable Municipal Obligations. Interest or other investment return is subject to federal income tax for certain types of municipal obligations for a variety of reasons. These municipal obligations do not qualify for the federal income tax exemption because (a) they did not receive necessary authorization for tax-exempt treatment from state or local government authorities, (b) they exceed certain regulatory limitations on the cost of issuance for tax-exempt financing or (c) they finance public or private activities that do not qualify for the federal income tax exemption. These non-qualifying activities might include, for example, certain types of multi-family housing, certain professional and local sports facilities, refinancing of certain municipal debt, and borrowing to replenish a municipality's underfunded pension plan.

See Appendix A for a discussion of securities ratings. (See *Types of Investments — Debt Obligations.*)

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with municipal securities include: Credit Risk, Inflation Risk, Interest Rate Risk, Market Risk, Municipal Securities Risk and Municipal Securities Risk/Health Care Sector Risk.

Participation Interests

Participation interests (also called pass-through certificates or securities) represent an interest in a pool of debt obligations, such as municipal bonds or notes that have been “packaged” by an intermediary, such as a bank or broker-dealer. Participation interests typically are issued by partnerships or trusts through which a Fund receives principal and interest payments that are passed through to the holder of the participation interest from the payments made on the underlying debt obligations. The purchaser of a participation interest receives an undivided interest in the underlying debt obligations. The issuers of the underlying debt obligations make interest and principal payments to the intermediary, as an initial purchaser, which are passed through to purchasers in the secondary market, such as a Fund. Mortgage-backed securities are a common type of participation interest. Participation interests may be structured as fixed-, variable- or floating-rate obligations or as zero-coupon, pay-in-kind and step-coupon securities and may be privately placed or publicly offered. See *Types of Investments — Variable- and Floating-Rate Obligations*, *Types of Investments — Zero-Coupon, Pay-in-Kind and Step-Coupon Securities* and *Types of Investments — Private Placement and Other Restricted Securities* for more information.

Loan participations also are a type of participation interest. Loans, loan participations, and interests in securitized loan pools are interests in amounts owed by a corporate, governmental, or other borrower to a lender or consortium of lenders (typically banks, insurance companies, investment banks, government agencies, or international agencies).

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with loan participations include: Confidential Information Access Risk, Credit Risk and Interest Rate Risk.

Partnership Securities

The Fund may invest in securities issued by publicly traded partnerships or master limited partnerships or limited liability companies (together referred to as “PTPs/MLPs”). These entities are limited partnerships or limited liability companies that may be publicly traded on stock exchanges or markets such as the NYSE, the NYSE Alternext US LLC (“NYSE Alternext”) (formerly the American Stock Exchange) and NASDAQ. PTPs/MLPs often own businesses or properties relating to energy, natural resources or real estate, or may be involved in the film industry or research and development activities. Generally PTPs/MLPs are operated under the supervision of one or more managing partners or members. Limited partners, unit holders, or members (such as a Fund that invests in a partnership) are not involved in the day-to-day management of the company. Limited partners, unit holders, or members are allocated income and capital gains associated with the partnership project in accordance with the terms of the partnership or limited liability company agreement.

At times PTPs/MLPs may potentially offer relatively high yields compared to common stocks. Because PTPs/MLPs are generally treated as partnerships or similar limited liability “pass-through” entities for tax purposes, they do not ordinarily pay income taxes, but pass their earnings on to unit holders (except in the case of some publicly traded firms that may be taxed as corporations). For tax purposes, unit holders may initially be deemed to receive only a portion of the distributions attributed to them because certain other portions may be attributed to the repayment of initial investments and may thereby lower the cost basis of the units or shares owned by unit holders. As a result, unit holders may effectively defer taxation on the receipt of some distributions until they sell their units. These tax consequences may differ for different types of entities.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with partnership securities include: Interest Rate Risk, Issuer Risk, Liquidity Risk and Market Risk.

Preferred Stock

Preferred stock represents units of ownership of a corporation that frequently have dividends that are set at a specified rate. Preferred stock has preference over common stock in the payment of dividends and the liquidation of assets. Preferred stock shares some of the characteristics of both debt and equity. Preferred stock ordinarily does not carry voting rights. Most preferred stock is cumulative; if dividends are passed (i.e., not paid for any reason), they accumulate and must be paid before common stock dividends. Participating preferred stock entitles its holders to share in profits above and beyond the declared dividend, along with common shareholders, as distinguished from nonparticipating preferred stock, which is limited to the stipulated dividend. Convertible preferred stock is exchangeable for a given number of shares of common stock and thus tends to be more volatile than nonconvertible preferred stock, which generally behaves more like a fixed income bond. Preferred stock may be privately placed or publicly offered. The price of a preferred stock is generally determined by earnings, type of products or services, projected growth rates, experience of management, liquidity, and general market conditions of the markets on which the stock trades. See *Types of Investments — Private Placement and Other Restricted Securities* for more information.

Auction preferred stock (APS) is a type of adjustable-rate preferred stock with a dividend determined periodically in a Dutch auction process by corporate bidders. An APS is distinguished from standard preferred stock because its dividends change from time to time. Holders of APS may not be able to sell their shares if an auction fails, such as when there are more shares of APS for sale at an auction than there are purchase bids. Shares typically are bought and sold at face values generally ranging from \$100,000 to \$500,000 per share.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with preferred stock include: Convertible Securities Risk, Issuer Risk, Liquidity Risk and Market Risk.

Private Placement and Other Restricted Securities

Private placement securities are securities that have been privately placed and are not registered under the 1933 Act. They are generally eligible for sale only to certain eligible investors. Private placements often may offer attractive opportunities for investment not otherwise available on the open market. Private placement and other “restricted” securities often cannot be sold to the public without registration under the 1933 Act or the availability of an exemption from registration (such as Rules 144 or 144A), or they are “not readily marketable” because they are subject to other legal or contractual delays in or restrictions on resale. Asset-backed securities, common stock, convertible securities, corporate debt securities, foreign securities, low and below investment grade securities, money market instruments, mortgage-backed securities, municipal securities, participation interests, preferred stock and other types of equity and debt instruments may be privately placed or restricted securities.

Private placements typically may be sold only to qualified institutional buyers (or, in the case of the initial sale of certain securities, such as those issued in collateralized debt obligations or collateralized loan obligations, to accredited investors (as defined in Rule 501(a) under the 1933 Act), or in a privately negotiated transaction or to a limited number of purchasers, or in limited quantities after they have been held for a specified period of time and other conditions are met pursuant to an exemption from registration.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with private placement and other restricted securities include: Issuer Risk, Liquidity Risk, Market Risk and Confidential Information Access Risk.

Real Estate Investment Trusts

Real estate investment trusts (REITs) are pooled investment vehicles that manage a portfolio of real estate or real estate related loans to earn profits for their shareholders. REITs are generally classified as equity REITs, mortgage REITs or a combination of equity and mortgage REITs. Equity REITs invest the majority of their assets directly in real property, such as shopping centers, nursing homes, office buildings, apartment complexes, and hotels, and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of interest payments. REITs can be subject to extreme volatility due to fluctuations in the demand for real estate, changes in interest rates, and adverse economic conditions.

Partnership units of real estate and other types of companies sometimes are organized as master limited partnerships in which ownership interests are publicly traded.

Similar to investment companies, REITs are not taxed on income distributed to shareholders provided they comply with certain requirements under the Code. The failure of a REIT to continue to qualify as a REIT for tax purposes can materially affect its value. A Fund will indirectly bear its proportionate share of any expenses paid by a REIT in which it invests. REITs

often do not provide complete tax information until after the calendar year-end. Consequently, because of the delay, it may be necessary for a Fund investing in REITs to request permission to extend the deadline for issuance of Forms 1099-DIV beyond January 31. In the alternative, amended Forms 1099-DIV may be sent.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with REITs include: Interest Rate Risk, Issuer Risk, Market Risk and Real Estate-Related Investment Risk.

Repurchase Agreements

Repurchase agreements are agreements under which a Fund acquires a security for a relatively short period of time (usually within seven days) subject to the obligation of a seller to repurchase and a Fund to resell such security at a fixed time and price (representing the Fund's cost plus interest). The repurchase agreement specifies the yield during the purchaser's holding period. Repurchase agreements also may be viewed as loans made by a Fund that are collateralized by the securities subject to repurchase, which may consist of a variety of security types. A Fund typically will enter into repurchase agreements only with commercial banks, registered broker-dealers and the Fixed Income Clearing Corporation. Such transactions are monitored to ensure that the value of the underlying securities will be at least equal at all times to the total amount of the repurchase obligation, including any accrued interest.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with repurchase agreements include: Counterparty Risk, Credit Risk, Issuer Risk, Market Risk and Repurchase Agreements Risk.

Reverse Repurchase Agreements

Reverse repurchase agreements are agreements under which a Fund temporarily transfers possession of a portfolio instrument to another party, such as a bank or broker-dealer, in return for cash. At the same time, the Fund agrees to repurchase the instrument at an agreed-upon time (normally within 7 days) and price which reflects an interest payment. A Fund generally retains the right to interest and principal payments on the security. Reverse repurchase agreements also may be viewed as borrowings made by a Fund.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with reverse repurchase agreements include: Credit Risk, Interest Rate Risk, Issuer Risk, Market Risk and Reverse Repurchase Agreements Risk.

Short Sales

A Fund may sometimes sell securities short when it owns an equal amount of the securities sold short. This is a technique known as selling short "against the box." If a Fund makes a short sale "against the box," it would not immediately deliver the securities sold and would not receive the proceeds from the sale. The seller is said to have a short position in the securities sold until it delivers the securities sold, at which time it receives the proceeds of the sale. To secure its obligation to deliver securities sold short, a Fund will deposit in escrow in a separate account with the custodian an equal amount of the securities sold short or securities convertible into or exchangeable for such securities. A Fund can close out its short position by purchasing and delivering an equal amount of the securities sold short, rather than by delivering securities already held by a Fund, because a Fund might want to continue to receive interest and dividend payments on securities in its portfolio that are convertible into the securities sold short.

Short sales "against the box" entail many of the same risks and considerations described below regarding short sales not "against the box." However, when a Fund sells short "against the box" it typically limits the amount of its effective leverage. A Fund's decision to make a short sale "against the box" may be a technique to hedge against market risks when a Fund's portfolio manager believes that the price of a security may decline, causing a decline in the value of a security owned by a Fund or a security convertible into or exchangeable for such security. In such case, any future losses in a Fund's long position would be reduced by a gain in the short position. The extent to which such gains or losses in the long position are reduced will depend upon the amount of securities sold short relative to the amount of the securities a Fund owns, either directly or indirectly, and, in the case where a Fund owns convertible securities, changes in the investment values or conversion premiums of such securities.

Subject to its fundamental and non-fundamental investment policies, a Fund may engage in short sales that are not "against the box," which are sales by a Fund of securities, contracts or instruments that it does not own in hopes of purchasing the same security, contract or instrument at a later date at a lower price. The technique is also used to protect a profit in a long-term position in a security, commodity futures contract or other instrument. To make delivery to the buyer, a Fund must borrow or purchase the security. If borrowed, a Fund is then obligated to replace the security borrowed from the third party, so a Fund must purchase the security at the market price at a later time. If the price of the security has increased during this time, then a Fund will incur a loss equal to the increase in price of the security from the time of the short sale plus any premiums and interest paid to the third party. (Until the security is replaced, a Fund is required to pay to the lender amounts

equal to any dividends or interest which accrue during the period of the loan. To borrow the security, a Fund also may be required to pay a premium, which would increase the cost of the security sold. The proceeds of the short sale will be retained by the broker, to the extent necessary to meet the margin requirements, until the short position is closed out.) Short sales of forward commitments and derivatives do not involve borrowing a security. These types of short sales may include futures, options, contracts for differences, forward contracts on financial instruments and options such as contracts, credit-linked instruments, and swap contracts.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with short sales include: Leverage Risk, Market Risk and Short Selling Risk.

Sovereign Debt

Sovereign debt obligations are issued or guaranteed by foreign governments or their agencies. It may be in the form of conventional securities or other types of debt instruments such as loans or loan participations. A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by a variety of factors, including its cash flow situation, the extent of its reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject. (See also *Types of Investments — Foreign Securities*.) In addition, there may be no legal recourse against a sovereign debtor in the event of a default.

Sovereign debt includes Brady Bonds, which are securities issued under the framework of the Brady Plan, an initiative announced by former U.S. Treasury Secretary Nicholas F. Brady in 1989 as a mechanism for debtor nations to restructure their outstanding external commercial bank indebtedness.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with sovereign debt include: Credit Risk, Emerging Markets Securities Risk, Foreign Securities Risk, Issuer Risk and Market Risk.

Standby Commitments

See *Types of Investments — Municipal Securities* above.

Stripped Securities

Stripped securities are the separate income or principal payments of a debt security and evidence ownership in either the future interest or principal payments on an instrument. There are many different types and variations of stripped securities. For example, Separate Trading of Registered Interest and Principal Securities (STRIPS) can be component parts of a U.S. Treasury security where the principal and interest components are traded independently through DTC, a clearing agency registered pursuant to Section 17A of the 1934 Act and created to hold securities for its participants, and to facilitate the clearance and settlement of securities transactions between participants through electronic computerized book-entries, thereby eliminating the need for physical movement of certificates. Treasury Investor Growth Receipts (TIGERs) are U.S. Treasury securities stripped by brokers. Stripped mortgage-backed securities, (SMBS) also can be issued by the U.S. Government or its agencies. Stripped securities may be structured as fixed-, variable- or floating-rate obligations. See *Types of Investments — Variable- and Floating-Rate Obligations* for more information.

SMBS usually are structured with two or more classes that receive different proportions of the interest and principal distributions from a pool of mortgage-backed assets. Common types of SMBS will be structured so that one class receives some of the interest and most of the principal from the mortgage-backed assets, while another class receives most of the interest and the remainder of the principal.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with stripped securities include: Credit Risk, Interest Rate Risk, Liquidity Risk, Prepayment and Extension Risk and Stripped Securities Risk

Trust-Preferred Securities

Trust-preferred securities, also known as trust-issued securities, are securities that have characteristics of both debt and equity instruments and are typically treated by the Funds as debt investments.

Generally, trust-preferred securities are cumulative preferred stocks issued by a trust that is created by a financial institution, such as a bank holding company. The financial institution typically creates the trust with the objective of increasing its capital by issuing subordinated debt to the trust in return for cash proceeds that are reflected on the financial institutions balance sheet.

The primary asset owned by the trust is the subordinated debt issued to the trust by the financial institution. The financial institution makes periodic interest payments on the debt as discussed further below. The financial institution will

subsequently own the trust's common securities, which may typically represent a small percentage of the trust's capital structure. The remainder of the trust's capital structure typically consists of trust-preferred securities which are sold to investors. The trust uses the sales proceeds to purchase the subordinated debt issued by the financial institution. The financial institution uses the proceeds from the subordinated debt sale to increase its capital while the trust receives periodic interest payments from the financial institution for holding the subordinated debt.

The trust uses the interest received to make dividend payments to the holders of the trust-preferred securities. The dividends are generally paid on a quarterly basis and are often higher than other dividends potentially available on the financial institution's common stocks. The interests of the holders of the trust-preferred securities are senior to those of common stockholders in the event that the financial institution is liquidated, although their interests are typically subordinated to those of other holders of other debt issued by the institution.

The primary benefit for the financial institution in using this particular structure is that the trust-preferred securities issued by the trust are treated by the financial institution as debt securities for tax purposes (as a consequence of which the expense of paying interest on the securities is tax deductible), but are treated as more desirable equity securities for purposes of the calculation of capital requirements.

In certain instances, the structure involves more than one financial institution and thus, more than one trust. In such a pooled offering, an additional separate trust may be created. This trust will issue securities to investors and use the proceeds to purchase the trust-preferred securities issued by other trust subsidiaries of the participating financial institutions. In such a structure, the trust-preferred securities held by the investors are backed by other trust-preferred securities issued by the trust subsidiaries.

If a financial institution is financially unsound and defaults on interest payments to the trust, the trust will not be able to make dividend payments to holders of the trust-preferred securities such as the Fund, as the trust typically has no business operations other than holding the subordinated debt issued by the financial institution(s) and issuing the trust-preferred securities and common stock backed by the subordinated debt.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with trust-preferred securities include: Credit Risk, Interest Rate Risk, Liquidity Risk and Prepayment and Extension Risk.

U.S. Government and Related Obligations

U.S. Government obligations include U.S. Treasury obligations and securities issued or guaranteed by various agencies of the U.S. Government or by various agencies or instrumentalities established or sponsored by the U.S. Government. U.S. Treasury obligations and securities issued or guaranteed by various agencies or instrumentalities of the U.S. Government differ in their interest rates, maturities and time of issuance, as well as with respect to whether they are guaranteed by the U.S. Government. U.S. Government and related obligations may be structured as fixed-, variable- or floating-rate obligations. See *Types of Investments — Variable- and Floating-Rate Obligations* for more information.

Investing in U.S. Government and related obligations is subject to certain risks. While U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. Government, such securities are nonetheless subject to credit risk (i.e., the risk that the U.S. Government may be, or be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies and U.S. Government-sponsored instrumentalities may or may not be backed by the full faith and credit of the U.S. Government. These securities may be supported by the ability to borrow from the U.S. Treasury or only by the credit of the issuing agency or instrumentality and, as a result, may be subject to greater credit risk than securities issued or guaranteed by the U.S. Treasury. Obligations of U.S. Government agencies, authorities, instrumentalities and sponsored enterprises historically have involved limited risk of loss of principal if held to maturity. However, no assurance can be given that the U.S. Government would provide financial support to any of these entities if it is not obligated to do so by law.

Government-sponsored entities issuing securities include privately owned, publicly chartered entities created to reduce borrowing costs for certain sectors of the economy, such as farmers, homeowners, and students. They include the Federal Farm Credit Bank System, Farm Credit Financial Assistance Corporation, Fannie Mae, Freddie Mac, Federal National Mortgage Association (FNMA), Student Loan Marketing Association (SLMA), and Resolution Trust Corporation (RTC). Government-sponsored entities may issue discount notes (with maturities ranging from overnight to 360 days) and bonds. On Sept. 7, 2008, the Federal Housing Finance Agency (FHFA), an agency of the U.S. Government, placed the Freddie Mac and Fannie Mae into conservatorship, a statutory process with the objective of returning the entities to normal business operations. FHFA will act as the conservator to operate the enterprises until they are stabilized.

On August 5, 2011, S&P lowered its long-term sovereign credit rating for the United States of America to "AA+" from "AAA". Because a Fund may invest in U.S. Government obligations, the value of a Fund's shares may be adversely affected

by S&P's downgrade or any future downgrades of the U.S. Government's credit rating. While the long-term impact of the downgrade is uncertain. See Appendix A for a description of securities ratings.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with U.S. Government and related obligations include: Credit Risk, Inflation Risk, Interest Rate Risk, Prepayment and Extension Risk, Reinvestment Risk and U.S. Government Obligations Risk.

Variable- and Floating-Rate Obligations

Variable- and floating-rate obligations are debt instruments that provide for periodic adjustments in the interest rate and, under certain circumstances, varying principal amounts. Unlike a fixed interest rate, a variable, or floating, rate is one that rises and declines based on the movement of an underlying index of interest rates and may pay interest at rates that are adjusted periodically according to a specified formula. Variable- or floating-rate securities frequently include a demand feature enabling the holder to sell the securities to the issuer at par. In many cases, the demand feature can be exercised at any time. Some securities that do not have variable or floating interest rates may be accompanied by puts producing similar results and price characteristics. Variable-rate demand notes include master demand notes that are obligations that permit the investor to invest fluctuating amounts, which may change daily without penalty, pursuant to direct arrangements between the investor (as lender), and the borrower. The interest rates on these notes fluctuate. The issuer of such obligations normally has a corresponding right, after a given period, to prepay in its discretion the outstanding principal amount of the obligations plus accrued interest upon a specified number of days' notice to the holders of such obligations. Because these obligations are direct lending arrangements between the lender and borrower, it is not contemplated that such instruments generally will be traded. There generally is not an established secondary market for these obligations. Accordingly, where these obligations are not secured by letters of credit or other credit support arrangements, the lender's right to redeem is dependent on the ability of the borrower to pay principal and interest on demand. Such obligations frequently are not rated by credit rating agencies and may involve heightened risk of default by the issuer. Asset-backed securities, bank obligations, convertible securities, corporate debt securities, foreign securities, low and below investment grade securities, money market instruments, mortgage-backed securities, municipal securities, participation interests, stripped securities, U.S. Government and related obligations and other types of debt instruments may be structured as variable- and floating-rate obligations.

Most floating rate loans are acquired directly from the agent bank or from another holder of the loan by assignment. Most such loans are secured, and most impose restrictive covenants on the borrower. These loans are typically made by a syndicate of banks and institutional investors, represented by an agent bank which has negotiated and structured the loan and which is responsible generally for collecting interest, principal, and other amounts from the borrower on its own behalf and on behalf of the other lending institutions in the syndicate, and for enforcing its rights and the rights of the syndicate against the borrower. Each of the lending institutions, including the agent bank, lends to the borrower a portion of the total amount of the loan, and retains the corresponding interest in the loan. Floating rate loans may include delayed draw term loans and prefunded or synthetic letters of credit.

A Fund's ability to receive payments of principal and interest and other amounts in connection with loans held by it will depend primarily on the financial condition of the borrower. The failure by the Fund to receive scheduled interest or principal payments on a loan would adversely affect the income of the Fund and would likely reduce the value of its assets, which would be reflected in a reduction in the Fund's net asset value. Banks and other lending institutions generally perform a credit analysis of the borrower before originating a loan or purchasing an assignment in a loan. In selecting the loans in which the Fund will invest, however, the Investment Manager will not rely on that credit analysis of the agent bank, but will perform its own investment analysis of the borrowers. The Investment Manager's analysis may include consideration of the borrower's financial strength and managerial experience, debt coverage, additional borrowing requirements or debt maturity schedules, changing financial conditions, and responsiveness to changes in business conditions and interest rates. Investments in loans may be of any quality, including "distressed" loans, and will be subject to the Fund's credit quality policy.

Loans may be structured in different forms, including assignments and participations. In an assignment, a Fund purchases an assignment of a portion of a lender's interest in a loan. In this case, the Fund may be required generally to rely upon the assigning bank to demand payment and enforce its rights against the borrower, but would otherwise be entitled to all of such bank's rights in the loan.

The borrower of a loan may, either at its own election or pursuant to terms of the loan documentation, prepay amounts of the loan from time to time. There is no assurance that a Fund will be able to reinvest the proceeds of any loan prepayment at the same interest rate or on the same terms as those of the original loan.

Corporate loans in which a Fund may purchase a loan assignment are made generally to finance internal growth, mergers, acquisitions, recapitalizations, stock repurchases, leveraged buy-outs, dividend payments to sponsors and other corporate activities. The highly leveraged capital structure of certain borrowers may make such loans especially vulnerable to adverse

changes in economic or market conditions. The Fund may hold investments in loans for a very short period of time when opportunities to resell the investments that a Fund's Portfolio Manager believes are attractive arise.

Certain of the loans acquired by a Fund may involve revolving credit facilities under which a borrower may from time to time borrow and repay amounts up to the maximum amount of the facility. In such cases, the Fund would have an obligation to advance its portion of such additional borrowings upon the terms specified in the loan assignment. To the extent that the Fund is committed to make additional loans under such an assignment, it will at all times designate cash or securities in an amount sufficient to meet such commitments.

Notwithstanding its intention in certain situations to not receive material, non-public information with respect to its management of investments in floating rate loans, the Investment Manager may from time to time come into possession of material, non-public information about the issuers of loans that may be held in a Fund's portfolio. Possession of such information may in some instances occur despite the Investment Manager's efforts to avoid such possession, but in other instances the Investment Manager may choose to receive such information (for example, in connection with participation in a creditors' committee with respect to a financially distressed issuer). As, and to the extent, required by applicable law, the Investment Manager's ability to trade in these loans for the account of the Fund could potentially be limited by its possession of such information. Such limitations on the Investment Manager's ability to trade could have an adverse effect on the Fund by, for example, preventing the Fund from selling a loan that is experiencing a material decline in value. In some instances, these trading restrictions could continue in effect for a substantial period of time.

In some instances, other accounts managed by the Investment Manager may hold other securities issued by borrowers whose floating rate loans may be held in a Fund's portfolio. These other securities may include, for example, debt securities that are subordinate to the floating rate loans held in the Fund's portfolio, convertible debt or common or preferred equity securities.

In certain circumstances, such as if the credit quality of the issuer deteriorates, the interests of holders of these other securities may conflict with the interests of the holders of the issuer's floating rate loans. In such cases, the Investment Manager may owe conflicting fiduciary duties to the Fund and other client accounts. The Investment Manager will endeavor to carry out its obligations to all of its clients to the fullest extent possible, recognizing that in some cases certain clients may achieve a lower economic return, as a result of these conflicting client interests, than if the Investment Manager's client accounts collectively held only a single category of the issuer's securities.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with variable- or floating-rate obligations include: Counterparty Risk, Credit Risk, Interest Rate Risk, Liquidity Risk and Prepayment and Extension Risk.

Warrants and Rights

Warrants and rights are types of securities that give a holder a right to purchase shares of common stock. Warrants usually are issued together with a bond or preferred stock and entitle a holder to purchase a specified amount of common stock at a specified price typically for a period of years. Rights usually have a specified purchase price that is lower than the current market price and entitle a holder to purchase a specified amount of common stock typically for a period of only weeks. Warrants may be used to enhance the marketability of a bond or preferred stock. Warrants do not carry with them the right to dividends or voting rights and they do not represent any rights in the assets of the issuer. Warrants may be considered to have more speculative characteristics than certain other types of investments. In addition, the value of a warrant does not necessarily change with the value of the underlying securities, and a warrant ceases to have value if it is not exercised prior to its expiration date, if any.

The potential exercise price of warrants or rights may exceed their market price, such as when there is no movement in the market price or the market price of the common stock declines.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with warrants and rights include: Convertible Securities Risk, Credit Risk, Issuer Risk and Market Risk.

When-Issued, Delayed Delivery and Forward Commitment Transactions

When-issued, delayed delivery and forward commitment transactions involve the purchase or sale of securities by a Fund, with payment and delivery taking place in the future after the customary settlement period for that type of security. Normally, the settlement date occurs within 45 days of the purchase although in some cases settlement may take longer. The investor does not pay for the securities or receive dividends or interest on them until the contractual settlement date. When engaging in when-issued, delayed delivery and forward commitment transactions, a Fund typically will designate liquid assets in an amount equal to or greater than the purchase price. The payment obligation and, if applicable, the interest rate that will be received on the securities, are fixed at the time that a Fund agrees to purchase the securities. A Fund generally will enter into when-issued, delayed delivery and forward commitment transactions only with the intention of completing such transactions.

However, a Fund's portfolio manager may determine not to complete a transaction if he or she deems it appropriate to close out the transaction prior to its completion. In such cases, a Fund may realize short-term gains or losses.

To Be Announced Securities ("TBAs"). As with other delayed delivery transactions, a seller agrees to issue a TBA security at a future date. However, the seller does not specify the particular securities to be delivered. Instead, the Fund agrees to accept any security that meets specified terms. For example, in a TBA mortgage-backed security transaction, the Fund and the seller would agree upon the issuer, interest rate and terms of the underlying mortgages. The seller would not identify the specific underlying mortgages until it issues the security. TBA mortgage-backed securities increase market risks because the underlying mortgages may be less favorable than anticipated by the Fund. See *Types of Investments — Mortgage-Backed Securities and -Asset-Backed Securities*.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with when-issued, delayed delivery and forward commitment transactions include: Counterparty Risk, Credit Risk and Market Risk.

Zero-Coupon, Pay-in-Kind and Step-Coupon Securities

Zero-coupon, pay-in-kind and step-coupon securities are types of debt instruments that do not necessarily make payments of interest in fixed amounts or at fixed intervals. Asset-backed securities, convertible securities, corporate debt securities, foreign securities, low and below investment grade securities, mortgage-backed securities, municipal securities, participation interests, stripped securities, U.S. Government and related obligations and other types of debt instruments may be structured as zero-coupon, pay-in-kind and step-coupon securities.

Zero-coupon securities do not pay interest on a current basis but instead accrue interest over the life of the security. These securities include, among others, zero-coupon bonds, which either may be issued at a discount by a corporation or government entity or may be created by a brokerage firm when it strips the coupons from a bond or note and then sells the bond or note and the coupon separately. This technique is used frequently with U.S. Treasury bonds, and zero-coupon securities are marketed under such names as CATS (Certificate of Accrual on Treasury Securities), TIGERs or STRIPS. Zero-coupon bonds also are issued by municipalities. Buying a municipal zero-coupon bond frees its purchaser of the obligation to pay regular federal income tax on imputed interest, since the interest is exempt for regular federal income tax purposes. Zero-coupon certificates of deposit and zero-coupon mortgages are generally structured in the same fashion as zero-coupon bonds; the certificate of deposit holder or mortgage holder receives face value at maturity and no payments until then.

Pay-in-kind securities normally give the issuer an option to pay cash at a coupon payment date or to give the holder of the security a similar security with the same coupon rate and a face value equal to the amount of the coupon payment that would have been made.

Step-coupon securities trade at a discount from their face value and pay coupon interest that gradually increases over time. The coupon rate is paid according to a schedule for a series of periods, typically lower for an initial period and then increasing to a higher coupon rate thereafter. The discount from the face amount or par value depends on the time remaining until cash payments begin, prevailing interest rates, liquidity of the security and the perceived credit quality of the issue.

Zero-coupon, step-coupon and pay-in-kind securities holders generally have substantially all the rights and privileges of holders of the underlying coupon obligations or principal obligations. Holders of these securities typically have the right upon default on the underlying coupon obligations or principal obligations to proceed directly and individually against the issuer and are not required to act in concert with other holders of such securities.

See Appendix A for a discussion of securities ratings.

Although one or more of the other risks described in this SAI may also apply, the risks typically associated with zero-coupon, step-coupon, and pay-in-kind securities include: Credit Risk, Interest Rate Risk and Zero-Coupon Bonds Risk.

Information Regarding Risks

The following is a summary of risks of investing in the Funds and the risk characteristics associated with the various investment instruments available to the Funds for investment. A Fund's risk profile is largely defined by the Fund's primary portfolio holdings and principal investment strategies. However, most Funds are allowed to use certain other strategies and investments that may have different risk characteristics. Accordingly, one or more of the following types of risk may be associated with a Fund at any time (for a description of principal risks and investment strategies for an individual Fund, please see that Fund's prospectus):

Active Management Risk. Performance of actively managed Funds will reflect, in part, the ability of the portfolio managers to select investments and to make investment decisions that are suited to achieving the Fund's investment objective. Due to a

Fund's active management, the Fund could underperform its benchmark index and/or other funds with a similar investment objective and/or strategies. A Fund may fail to achieve its investment objective and you may lose money.

Allocation Risk. There is a risk that a Fund's allocation among asset classes, investments, managers, strategies and/or investment styles will cause the Fund's shares to lose value or cause the Fund to underperform other funds with a similar investment objective and/or strategies, or that the investments themselves will not produce the returns expected.

Asset-Backed Securities Risk. The value of the Fund's asset-backed securities may be affected by, among other things, changes in interest rates, factors concerning the interests in and structure of the issuer or the originator of the receivables, the creditworthiness of the entities that provide any supporting letters of credit, surety bonds or other credit enhancements, or the market's assessment of the quality of underlying assets. Asset-backed securities represent interests in, or are backed by, pools of receivables such as credit card, auto, student and home equity loans. They may also be backed by securities backed by these types of loans and others, such as mortgage loans. Asset-backed securities can have a fixed or an adjustable rate. Most asset-backed securities are subject to prepayment risk, which is the possibility that the underlying debt may be refinanced or prepaid prior to maturity during periods of declining or low interest rates, causing the Fund to have to reinvest the money received in securities that have lower yields. In addition, the impact of prepayments on the value of asset-backed securities may be difficult to predict and may result in greater volatility. Rising or high interest rates tend to extend the duration of asset-backed securities, resulting in valuations that are volatile and sensitive to changes in interest rates.

Changing Distribution Level Risk. The amount of the distributions paid by the Fund will vary and generally depends on the amount of interest income and/or dividends received by the Fund on the securities it holds. The Fund may not be able to pay distributions or may have to reduce its distribution level if the interest income and/or dividends the Fund receives from its investments decline.

Commodity-related Investment Risk. The value of commodities investments will generally be affected by overall market movements and factors specific to a particular industry or commodity, which may include demand for the commodity, weather, embargoes, tariffs, and economic health, political, international, regulatory and other developments. Economic and other events (whether real or perceived) can reduce the demand for commodities, which may, in turn, reduce market prices and cause the value of Fund shares to fall. The frequency and magnitude of such changes cannot be predicted. Exposure to commodities and commodities markets may subject the value of the Fund's investments to greater volatility than other types of investments. No, or limited, active trading market may exist for certain commodities investments, which may impair the ability to sell or to realize the full value of such investments in the event of the need to liquidate such investments. In addition, adverse market conditions may impair the liquidity of actively traded commodities investments. Certain types of commodities instruments (such as commodity-linked swaps and commodity-linked structured notes) are subject to the risk that the counterparty to the instrument may not perform or be unable to perform in accordance with the terms of the instrument.

Concentration Risk. To the extent that the Fund concentrates its investment in particular issuers, countries, geographic regions, industries or sectors, the Fund may be subject to greater risks of adverse developments in such areas of focus than a fund that invests in a wider variety of issuers, countries, geographic regions, industries, sectors or investments.

Confidential Information Access Risk. In managing the Fund, the Investment Manager normally will seek to avoid the receipt of material, non-public information (Confidential Information) about the issuers of floating rate loans being considered for acquisition by the Fund, or held in the Fund. In many instances, issuers of floating rate loans offer to furnish Confidential Information to prospective purchasers or holders of the issuer's floating rate loans to help potential investors assess the value of the loan. The Investment Manager's decision not to receive Confidential Information from these issuers may disadvantage the Fund as compared to other floating rate loan investors, and may adversely affect the price the Fund pays for the loans it purchases, or the price at which the Fund sells the loans. Further, in situations when holders of floating rate loans are asked, for example, to grant consents, waivers or amendments, the Investment Manager's ability to assess the desirability of such consents, waivers or amendments may be compromised. For these and other reasons, it is possible that the Investment Manager's decision under normal circumstances not to receive Confidential Information could adversely affect the Fund's performance.

Convertible Securities Risk. Convertible securities are subject to the usual risks associated with debt securities, such as interest rate risk (i.e., the risk of losses attributable to changes in interest rates) and credit risk (i.e., the risk that the issuer of a fixed-income security may or will default or otherwise become unable, or be perceived to be unable or unwilling, to honor a financial obligation, such as making payments to the Fund when due). Convertible securities also react to changes in the value of the common stock into which they convert, and are thus subject to market risk (i.e., the risk that the market values of securities or other investments that the Fund holds will fall, sometimes rapidly or unpredictably, or fail to rise). Because the value of a convertible security can be influenced by both interest rates and the common stock's market movements, a convertible security generally is not as sensitive to interest rates as a similar debt security, and generally will not vary in

value in response to other factors to the same extent as the underlying common stock. In the event of a liquidation of the issuing company, holders of convertible securities would typically be paid before the company's common stockholders but after holders of any senior debt obligations of the company. The Fund may be forced to convert a convertible security before it otherwise would choose to do so, which may decrease the Fund's return.

Counterparty Risk. The risk exists that a counterparty to a financial instrument held by the Fund or by a special purpose or structured vehicle in which the Fund invests may become insolvent or otherwise fail to perform its obligations due to financial difficulties, including making payments to the Fund. The Fund may obtain no or limited recovery in a bankruptcy or other organizational proceedings, and any recovery may be significantly delayed. Transactions that the Fund enters into may involve counterparties in the financial services sector and, as a result, events affecting the financial services sector may cause the Fund's share value to fluctuate.

Credit Risk. Credit risk is the risk that the borrower of a loan or the issuer of another debt security may or will default or otherwise become unable or unwilling, or is perceived to be unable or unwilling, to honor a financial obligation, such as making payments to the Fund. Rating agencies assign credit ratings to certain loans and other fixed-income securities to indicate their credit risk. The price of a loan or other debt security generally will fall if the borrower or the issuer defaults on its obligation to pay principal or interest, the rating agencies downgrade the credit rating of the borrower or the issuer or other news affects the market's perception of the credit risk of the borrower or the issuer. If the issuer of a loan declares bankruptcy or is declared bankrupt, there may be a delay before the Fund can act on the collateral securing the loan, which may adversely affect the Fund. Further, there is a risk that a court could take action with respect to a loan adverse to the holders of the loan, such as invalidating the loan, the lien on the collateral, the priority status of the loan, or ordering the refund of interest previously paid by the borrower. Any such actions by a court could adversely affect the Fund's performance. If the Fund purchases unrated loans or other debt securities, the Fund will depend on analysis of credit risk more heavily than usual.

Non-investment grade loans or securities (commonly called "high-yield" or "junk") have greater price fluctuations and are more likely to experience a default than investment grade loans or securities. A default or expected default of a loan could also make it difficult for the Fund to sell the loan at a price approximating the value previously placed on it. In order to enforce its rights in the event of a default, bankruptcy or similar situation, the Fund may be required to retain legal or similar counsel. This may increase the Fund's operating expenses and adversely affect net asset value. Loans that have a lower priority for repayment in an issuer's capital structure may involve a higher degree of overall risk than more senior loans of the same borrower.

Cyber Security Risk. With the increased use of technologies such as the Internet and the dependence on computer systems to perform necessary business functions, investment companies such as the Funds and their service providers may be prone to operational and information security risks resulting from cyber-attacks. In general, cyber-attacks result from deliberate attacks but unintentional events may have effects similar to those caused by cyber-attacks. Cyber-attacks include, among other behaviors, stealing or corrupting data maintained online or digitally, denial of service attacks on websites, the unauthorized release of confidential information and causing operational disruption. Successful cyber-attacks against, or security breakdowns of, a Fund or its adviser, subadviser(s), custodians, transfer agent, Selling Agents and/or other third party service providers may adversely impact the Fund or its shareholders. For instance, cyber-attacks may interfere with the processing of shareholder transactions, impact a Fund's ability to calculate its NAV, cause the release of private shareholder information or confidential Fund information, impede trading, cause reputational damage, and subject the Fund to regulatory fines, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. The Fund may also incur substantial costs for cyber security risk management in order to prevent any cyber incidents in the future. The Funds and their shareholders could be negatively impacted as a result. While the Funds have established business continuity plans and systems designed to prevent such cyber-attacks, there are inherent limitations in such plans and systems including the possibility that certain risks have not been identified. Similar types of cyber security risks are also present for issuers of securities in which the Funds invest, which could result in material adverse consequences for such issuers, and may cause the Fund's investment in such securities to lose value.

Depository Receipts Risks. Depository receipts are receipts issued by a bank or trust company and evidence of ownership of underlying securities issued by foreign companies. Some foreign securities are traded in the form of American Depositary Receipts (ADRs). Depository receipts involve the risks of other investments in foreign securities, including risks associated with investing in the particular country, including the political, regulatory, economic, social and other conditions or events occurring in the country, as well as fluctuations in its currency. In addition, ADR holders may not have all the legal rights of shareholders and may experience difficulty in receiving shareholder communications.

Derivatives Risk. Losses involving derivative instruments may be substantial, because a relatively small price movement in the underlying security(ies), instrument, commodity, currency or index may result in a substantial loss for the Fund. In addition to the potential for increased losses, the use of derivative instruments may lead to increased volatility within the Fund. Derivatives will typically increase the Fund's exposure to principal risks to which it is otherwise exposed, and may

expose the Fund to additional risks, including correlation risk (related to hedging risk and is the risk that there may be an incomplete correlation between the hedge and the opposite position, which may result in increased or unanticipated losses), counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument), leverage risk (the risk that losses from the derivative instrument may be greater than the amount invested in the derivative instrument), hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), and liquidity risk (it may not be possible for the Fund to liquidate the instrument at an advantageous time or price, each of which may result in significant and unanticipated losses to the Fund. Below is more detailed information on certain derivatives expected to be utilized by the Fund.

Derivatives Risk/Commodity-Linked Futures Contracts. The loss that may be incurred by the Fund in entering into futures contracts is potentially unlimited and may exceed the amount of the premium. Futures markets are highly volatile and the use of futures by the Fund may increase the volatility of the Fund's net asset value. Additionally, as a result of the low collateral deposits normally required in futures trading, a relatively small price movement in a futures contract may result in substantial losses to the Fund. Futures contracts may be illiquid. The liquidity of the futures market depends on participants entering into offsetting transactions rather than making or taking delivery. To the extent participants decide to make or take delivery, liquidity in the futures market could be reduced. Furthermore, exchanges may limit fluctuations in futures contract prices during a trading session by imposing a maximum permissible price movement on each futures contract. The Fund may be disadvantaged if it is prohibited from executing a trade outside the daily permissible price movement. Moreover, to the extent the Fund engages in futures contracts on foreign exchanges, such exchanges may not provide the same protection as U.S. exchanges.

Derivatives Risk/Commodity-Linked Structured Notes Risk. The use of commodity-linked structured notes is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The Fund's investments in commodity-linked structured notes involve substantial risks, including risk of loss of interest and principal, lack of a secondary (i.e. liquid) market, and risk of greater volatility than investments in traditional equity and debt markets.

If payment of interest on a commodity-linked structured note is linked to the value of a particular commodity, commodity index or other economic variable, the Fund might receive lower interest payments (or not receive any of the interest due) on its investments if there is a loss of value of the underlying investment. Further, to the extent that the amount of principal to be repaid upon maturity is linked to the value of a particular commodity, commodity index or other economic variable, the Fund might not receive a portion (or any) of the principal at maturity of the investment or upon earlier exchange. At any time, the risk of loss associated with a particular structured note in the Fund's portfolio may be significantly higher than the value of the note.

A liquid secondary market may not exist for the commodity-linked structured notes held in the Fund's portfolio, which may make it difficult for the notes to be sold at a price acceptable to the portfolio managers or to accurately value them. Investment in commodity-linked structured notes also subjects the Fund to counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument) and hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), each of which may result in significant and unanticipated losses to the Fund.

The value of the commodity-linked structured notes may fluctuate significantly because the values of the underlying investments to which they are linked are themselves volatile. Additionally, the particular terms of a commodity-linked structured note may create economic leverage by requiring payment by the issuer of an amount that is a multiple of the price increase or decrease of the underlying commodity, commodity index, or other economic variable. Economic leverage will increase the volatility of the value of these commodity-linked notes as they may increase or decrease in value more quickly than the underlying commodity, commodity index or other economic variable.

Derivatives Risk/Commodity-Linked Swaps Risk. The use of commodity-linked swaps is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. Commodity-linked swaps could result in losses if the underlying asset or reference does not perform as anticipated. The value of swaps, like many other derivatives, may move in unexpected ways and may result in losses for the Fund. Such transactions can have the potential for unlimited losses. Such risk is heightened in the case of short swap transactions. Swaps can involve greater risks than direct investment in the underlying asset, because swaps may be leveraged (creating leverage risk) and are subject to counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument), hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), pricing risk (the risk that swaps may be difficult to value) and liquidity risk (the risk that it may not be possible to liquidate a swap position at an advantageous time or price), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Credit Default Swap Indexes Risk. A credit default swap (CDS) is an agreement between two parties in which one party agrees to make one or more payments to the second party, while the second party assumes the risk of certain defaults, generally a failure to pay on a referenced debt obligation or the bankruptcy of the obligation's issuer. As such, a CDS generally enables an investor to buy or sell protection against a credit event. A credit default index (CDX) is an index of CDS. Credit default swap indexes (CDSX) are swap agreements that are intended to track the performance of a CDX. CDSX allow an investor, such as the Fund, to manage credit risk or to take a position on a basket of debt obligations more efficiently than transacting in single name CDS. If a credit event occurs in one of the reference issuers, the protection is paid out through the delivery of the defaulted bond by the buyer of protection in return for payment of the notional value of the defaulted bond by the seller of protection or through a cash settlement between the two parties. The reference issuer is then removed from the index. CDSX are subject to the risk that the Fund's counterparty will default on its obligations. If such a default were to occur, any contractual remedies that the Fund may have may be subject to bankruptcy and insolvency laws, which could delay or limit the Fund's recovery. Thus, if the counterparty under a CDSX defaults on its obligation to make payments thereunder, as a result of its bankruptcy or otherwise, the Fund may lose such payments altogether, or collect only a portion thereof, which collection could involve costs or delays. The Fund's return from investment in CDSX may not match the return of the referenced index. Further, investment in CDSX could result in losses if the referenced index does not perform as expected. Unexpected changes in the composition of the index may also affect performance of CDSX. If a referenced index has a dramatic intraday move that causes a material decline in the Fund's net assets, the terms of the Fund's CDSX may permit the counterparty to immediately close out the transaction. In that event, the Fund may be unable to enter into another CDSX or otherwise achieve desired exposure, even if the referenced index reverses all or a portion of its intraday move.

Derivatives Risk/Credit Default Swaps Risk. The use of credit default swaps is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. A credit default swap enables an investor to buy or sell protection against a credit event, such as an issuer's failure to make timely payments of interest or principal, bankruptcy or restructuring. A credit default swap may be embedded within a structured note or other derivative instrument. The value of swaps, like many other derivatives, may move in unexpected ways and may result in losses for the Fund. Swaps can involve greater risks than direct investment in the underlying securities, because swaps, among other factors, may be leveraged (creating leverage risk, the risk that losses from the derivative instrument may be greater than the amount invested in the derivative instrument) and subject the Fund to counterparty risk (the risk that the counterparty to the instrument will not perform or be unable to perform in accordance with the terms of the instrument), hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), pricing risk (the risk that swaps may be difficult to value) and liquidity risk (the risk that it may not be possible for the Fund to liquidate a swap position at an advantageous time or price), each of which may result in significant and unanticipated losses to the Fund. If the Fund is selling credit protection, there is a risk that a credit event will occur and that the Fund will have to pay the counterparty. If the Fund is buying credit protection, there is a risk that no credit event will occur.

Derivatives Risk/Dollar Rolls Risk. Dollar rolls are transactions in which the Fund sells securities to a counterparty and simultaneously agrees to purchase those or similar securities in the future at a predetermined price. Dollar rolls involve the risk that the market value of the securities the Fund is obligated to repurchase may decline below the repurchase price, or that the counterparty may default on its obligations. These transactions may also increase the Fund's portfolio turnover rate. If the Fund reinvests the proceeds of the security sold, the Fund will also be subject to the risk that the investments purchased with such proceeds will decline in value (a form of leverage risk).

Derivatives Risk/Forward Contracts. A forward is a contract between two parties to buy or sell an asset at a specified future time at a price agreed today. Forwards are traded in the over-the-counter markets. The Fund may purchase forward contracts, including those on mortgage-backed securities in the "to be announced" (TBA) market. In the TBA market, the seller agrees to deliver the mortgage backed securities for an agreed upon price on an agreed upon date, but makes no guarantee as to which or how many securities are to be delivered. Investments in forward contracts subject the Fund to counterparty risk.

Derivatives Risk/Forward Foreign Currency Contracts Risk. The use of forward foreign currency contracts is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. These instruments are a type of derivative contract, whereby the Fund may agree to buy or sell a country's or region's currency at a specific price on a specific date in the future. These instruments may fall in value due to foreign market downswings or foreign currency value fluctuations. The effectiveness of any currency hedging strategy by a Fund may be reduced by the Fund's inability to precisely match forward contract amounts and the value of securities involved. Forward foreign currency contracts used for hedging may also limit any potential gain that might result from an increase or decrease in the value of the currency. When entering into forward foreign currency contracts, unanticipated changes in the currency markets could result in reduced performance for the Fund. At or prior to maturity of a forward contract, the Fund may enter into an offsetting contract and may incur a loss to the extent there has been movement in forward contract prices. When the Fund converts its foreign currencies into U.S. dollars, it may incur currency conversion

costs due to the spread between the prices at which it may buy and sell various currencies in the market. Investment in these instruments also subjects the Fund, among other factors, to counterparty risk (the risk that the counterparty to the instrument will not perform or be unable to perform in accordance with the terms of the instrument).

Derivatives Risk/Forward Interest Rate Agreements Risk. Under forward interest rate agreements, the buyer locks in an interest rate at a future settlement date. If the interest rate on the settlement date exceeds the lock rate, the buyer pays the seller the difference between the two rates (based on the notional value of the agreement). If the lock rate exceeds the interest rate on the settlement date, the seller pays the buyer the difference between the two rates (based on the notional value of the agreement). The Fund may act as a buyer or a seller. Investment in these instruments subjects the Fund to risks, including counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument), hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset) and interest rate risk (the risk of losses attributable to changes in interest rates), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Futures Contracts Risk. The use of futures contracts is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. A futures contract is a sales contract between a buyer (holding the “long” position) and a seller (holding the “short” position) for an asset with delivery deferred until a future date. The buyer agrees to pay a fixed price at the agreed future date and the seller agrees to deliver the asset. The seller hopes that the market price on the delivery date is less than the agreed upon price, while the buyer hopes for the contrary. The liquidity of the futures markets depends on participants entering into off-setting transactions rather than making or taking delivery. To the extent participants decide to make or take delivery, liquidity in the futures market could be reduced. In addition, futures exchanges often impose a maximum permissible price movement on each futures contract for each trading session. The Fund may be disadvantaged if it is prohibited from executing a trade outside the daily permissible price movement. Moreover, to the extent the Fund engages in futures contracts on foreign exchanges, such exchanges may not provide the same protection as U.S. exchanges. The loss that may be incurred in entering into futures contracts may exceed the amount of the premium paid and may be potentially unlimited. Futures markets are highly volatile and the use of futures may increase the volatility of the Fund’s net asset value (NAV). Additionally, as a result of the low collateral deposits normally involved in futures trading, a relatively small price movement in a futures contract may result in substantial losses to the Fund. Investment in these instruments involves risks, including counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument), hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset) and pricing risk (the risk that the instrument may be difficult to value), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Inflation Rate Swaps Risk. An inflation rate swap is a derivative instrument used to transfer inflation risk from one party to another through an exchange of cash flows. In an inflation rate swap, one party pays a fixed rate on a notional principal amount, while the other party pays a floating rate linked to an inflation index, such as the Consumer Price Index (CPI). Investments in inflation rate swaps subject the Fund (and, therefore, shareholders) to risks, including hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument), and inflation risk (the risk that inflation rates may change drastically as a result of unexpected shifts in the global economy), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Interest Rate Swaps Risk. Interest rate swaps can be based on various measures of interest rates, including LIBOR, swap rates, treasury rates and other foreign interest rates. A swap agreement can increase or decrease the volatility of the Fund’s investments and its net asset value. The value of swaps, like many other derivatives, may move in unexpected ways and may result in losses for the Fund. Swaps can involve greater risks than direct investment in securities, because swaps may be leveraged, and are, among other factors, subject to counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument), hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), pricing risk (the risk that swaps may be difficult to value), liquidity risk (the risk that it may not be possible to liquidate a swap position at an advantageous time or price) and interest rate risk (the risk of losses attributable to changes in interest rates), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Inverse Floaters Risk. Inverse floaters (or inverse variable or floating rate securities) are a type of derivative, long-term fixed income obligation with a variable or floating interest rate that moves in the opposite direction of short-term interest rates. As short-term interest rates go down, the holders of the inverse floaters receive more income and, as short-term interest rates go up, the holders of the inverse floaters receive less income. Variable rate securities provide for a specified periodic adjustment in the interest rate, while floating rate securities have interest rates that change whenever there is a change in a designated benchmark rate or the issuer’s credit quality. While inverse floaters tend to provide more income

than similar term and credit quality fixed-rate bonds, they also exhibit greater volatility in price movement. There is a risk that the current interest rate on variable and floating rate securities may not accurately reflect current market interest rates or adequately compensate the holder for the current creditworthiness of the issuer. Some variable or floating rate securities are structured with liquidity features and some may include market-dependent liquidity features that may present greater liquidity risk. Other risks associated with transactions in inverse floaters include interest rate risk (the risk of losses attributable to changes in interest rates), counterparty risk (the risk that the issuer of a security may or will default or otherwise become unable, or be perceived to be unable or unwilling, to honor a financial obligation, such as making payments when due) and hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Options Risk. The use of options is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. The Fund may buy and sell call and put options, including options on currencies, interest rates and swap agreements (commonly referred to as swaptions). If the Fund sells a put option, there is a risk that the Fund may be required to buy the underlying asset at a disadvantageous price. If the Fund sells a call option, there is a risk that the Fund may be required to sell the underlying asset at a disadvantageous price, and if the call option sold is not covered (for example, by owning the underlying asset), the Fund's losses are potentially unlimited. Options may be traded on a securities exchange or in the over-the-counter market. These transactions involve other risks, including counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument) and hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Swaps Risk. The use of swaps is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. In a swap transaction, one party agrees to pay the other party an amount equal to the return, based upon an agreed-upon notional value, of a defined underlying asset or a non-asset reference (such as an index) during a specified period of time. In return, the other party would make periodic payments based on a fixed or variable interest rate or on the return from a different underlying asset or non-asset reference based upon an agreed-upon notional value. Swaps could result in losses if the underlying asset or reference does not perform as anticipated. The value of swaps, like many other derivatives, may move in unexpected ways and may result in losses for the Fund. Such transactions can have the potential for unlimited losses. Such risk is heightened in the case of swap transactions involving short exposures. Swaps can involve greater risks than direct investment in the underlying asset, because swaps may be leveraged (creating leverage risk in that the Fund's exposure and potential losses are greater than the amount invested) and are subject to counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument), hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), pricing risk (the risk that swaps may be difficult to value) and liquidity risk (the risk that it may not be possible to liquidate a swap position at an advantageous time or price), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Total Return Swaps Risk. The use of total return swaps is a highly specialized activity which involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. In a total return swap transaction, one party agrees to pay the other party an amount equal to the total return of a defined underlying asset (such as an equity security or basket of such securities) or a non-asset reference (such as an index) during a specified period of time. In return, the other party makes periodic payments based on a fixed or variable interest rate or on the total return from a different underlying asset or non-asset reference. Total return swaps could result in losses if the underlying asset or reference does not perform as anticipated. Such transactions can have the potential for unlimited losses. The value of swaps, like many other derivatives, may move in unexpected ways and may result in losses for the Fund. Swaps can involve greater risks than direct investment in securities, because swaps may be leveraged, are subject to counterparty risk (the risk that the counterparty to the instrument will not perform or be able to perform in accordance with the terms of the instrument), hedging risk (the risk that a hedging strategy may not eliminate the risk that it is intended to offset), pricing risk (the risk that it may be difficult to value) and liquidity risk (the risk that it may not be possible for the Fund to liquidate a swap position at an advantageous time or price), each of which may result in significant and unanticipated losses to the Fund.

Derivatives Risk/Warrants Risk. Warrants are securities giving the holder the right, but not the obligation, to buy the stock of an issuer at a given price (generally higher than the value of the stock at the time of issuance) during a specified period or perpetually. Warrants may be acquired separately or in connection with the acquisition of securities. Warrants do not carry with them the right to dividends or voting rights and they do not represent any rights in the assets of the issuer. In addition, the value of a warrant does not necessarily change with the value of the underlying securities, and a warrant ceases to have value if it is not exercised prior to its expiration date. Warrants may be subject to the risk that the securities could lose value. There also is the risk that the potential exercise price may exceed the market price of the warrants or rights. Investment in these instruments also subject the Fund to liquidity risk (the risk that it may not be possible for the Fund to liquidate the instrument at an advantageous time or price), which may result in significant and unanticipated losses to the Fund).

Emerging Market Securities Risk. Securities issued by foreign governments or companies in emerging market countries are more likely to have greater exposure to the risks of investing in foreign securities that are described in Foreign Securities Risk. In addition, emerging market countries are more likely to experience instability resulting, for example, from rapid changes or developments in social, political, economic or other conditions. Their economies are usually less mature and their securities markets are typically less developed with more limited trading activity (i.e., lower trading volumes and less liquidity) than more developed countries. Emerging market securities tend to be more volatile than securities in more developed markets. Many emerging market countries are heavily dependent on international trade and have fewer trading partners, which makes them more sensitive to world commodity prices and economic downturns in other countries. Some emerging market countries have a higher risk of currency devaluations, and some of these countries may experience periods of high inflation or rapid changes in inflation rates and may have hostile relations with other countries.

Operational and Settlement Risks of Securities in Emerging Markets. In addition to having less developed securities markets, banks in emerging markets that are eligible foreign sub-custodians may be recently organized, lack extensive operating experience or lack effective government oversight or regulation. In addition, there may be legal restrictions or limitations on the ability of the Fund to recover assets held in custody by a foreign sub-custodian in the event of the bankruptcy of the sub-custodian. Because settlement systems may be less organized than in developed markets and because delivery versus payment settlement may not be possible or reliable, there may be a greater risk that settlement may be delayed and that cash or securities of the Fund may be lost because of failures or defects in the system, including fraud or corruption. Settlement systems in emerging markets also have a higher risk of failed trades. Ownership of Russian securities poses particular risks because ownership records are typically maintained in a decentralized fashion by registrars who may not be subject to effective governmental supervision leading to the possibility that the Fund may lose its ownership rights. In such a case, it may be difficult for the Fund to enforce any rights it may have against the registrar or issuer of the securities.

Risks Related to Currencies and Corporate Actions in Emerging Markets. Risks related to currencies and corporate actions are also greater in emerging market countries than in developed countries. For example, some emerging market countries may have fixed or managed currencies that are not free-floating against the U.S. dollar. Further, certain currencies may not be traded internationally, or countries may have varying exchange rates. Some emerging market countries have a higher risk of currency devaluations, and some of these countries may experience sustained periods of high inflation or rapid changes in inflation rates which can have negative effects on a country's economy and securities markets. Corporate action procedures in emerging market countries may be less reliable and have limited or no involvement by the depositories and central banks. Lack of standard practices and payment systems can lead to significant delays in payment.

Risks Related to Corporate and Securities Laws in Emerging Markets. Securities laws in emerging markets may be relatively new and unsettled and, consequently, there is a risk of rapid and unpredictable change in laws regarding foreign investment, securities regulation, title to securities and shareholder rights. Accordingly, foreign investors may be adversely affected by new or amended laws and regulations. In addition, the systems of corporate governance to which issuers in certain emerging markets are subject may be less advanced than the systems to which issuers located in more developed countries are subject, and therefore, shareholders of such issuers may not receive many of the protections available to shareholders of issuers located in more developed countries. These risks may be heightened in Russia.

Equity-Linked Notes Risk. An equity-linked note (ELN) is a debt instrument whose value is based on the value of a single equity security, basket of equity securities or an index of equity securities (each, an Underlying Equity). An ELN typically provides interest income, thereby offering a yield advantage over investing directly in an Underlying Equity. The Fund may purchase ELNs that trade on a securities exchange or those that trade on the over-the-counter markets, including securities offered and sold under Rule 144A of the Securities Act of 1933, as amended. The Fund may also purchase an ELN in a privately negotiated transaction with the issuer of the ELN (or its broker-dealer affiliate). The Fund's investment in ELNs has the potential to lead to significant losses because ELNs are subject to the market and volatility risks associated with their Underlying Equity, and to additional risks not typically associated with investments in listed equity securities, such as liquidity risk, credit risk of the issuer and concentration risk. The liquidity of unlisted ELNs is normally determined by the willingness of the issuer to make a market in the ELN. While the Fund will seek to purchase ELNs only from issuers that it believes to be willing to, and capable of, repurchasing the ELN at a reasonable price, there can be no assurance that the Fund will be able to sell any ELN at such a price or at all. This may impair the Fund's ability to enter into other transactions at a time when doing so might be advantageous. In addition, because ELNs often take the form of unsecured notes of the issuer, the Fund would be subject to the risk that the issuer may default on its obligations under the ELN, thereby subjecting the Fund to the further risk of being too concentrated in the securities (including ELNs) of that issuer. The Fund may or may not hold an ELN until its maturity.

Exchange-Traded Fund (ETF) Risk. An ETF's share price may not track its specified market index (if any) and may trade below its net asset value. Certain ETFs use a "passive" investment strategy and will not attempt to take defensive positions in volatile or declining markets. Other ETFs in which the Fund may invest are actively managed ETFs (i.e., they do not track a

particular benchmark), which subjects the Fund to active management risk. An active secondary market in an ETF's shares may not develop or be maintained and may be halted or interrupted due to actions by its listing exchange, unusual market conditions or other reasons. There can be no assurance an ETF's shares will continue to be listed on an active exchange. In addition, shareholders bear both their proportionate share of the Fund's expenses and similar expenses incurred through ownership of the ETF.

The Funds generally expect to purchase shares of ETFs through broker-dealers in transactions on a securities exchange, and in such cases the Funds will pay customary brokerage commissions for each purchase and sale. Shares of an ETF may also be acquired by depositing a specified portfolio of the ETF's underlying securities, as well as a cash payment generally equal to accumulated dividends of the securities (net of expenses) up to the time of deposit, with the ETF's custodian, in exchange for which the ETF will issue a quantity of new shares sometimes referred to as a "creation unit". Similarly, shares of an ETF purchased on an exchange may be accumulated until they represent a creation unit, and the creation unit may be redeemed in kind for a portfolio of the underlying securities (based on the ETF's net asset value) together with a cash payment generally equal to accumulated dividends as of the date of redemption. The Funds may redeem creation units for the underlying securities (and any applicable cash), and may assemble a portfolio of the underlying securities (and any required cash) to purchase creation units. The Funds' ability to redeem creation units may be limited by the 1940 Act, which provides that ETFs the shares of which are purchased in reliance on Section 12(d)(1)(F) of the 1940 Act will not be obligated to redeem such shares in an amount exceeding one percent of their total outstanding securities during any period of less than 30 days.

Foreign Currency Risk. The performance of the Fund may be materially affected positively or negatively by foreign currency strength or weakness relative to the U.S. dollar, particularly if the Fund invests a significant percentage of its assets in foreign securities or other assets denominated in currencies other than the U.S. dollar. Currency rates in foreign countries may fluctuate significantly over short periods of time for a number of reasons, including changes in interest rates, imposition of currency controls and economic or political developments in the U.S. or abroad. The Fund may also incur currency conversion costs when converting foreign currencies into U.S. dollars and vice versa.

Foreign Currency-Related Tax Risk. As a regulated investment company (RIC), the Fund must derive at least 90% of its gross income for each taxable year from sources treated as "qualifying income" under the Internal Revenue Code of 1986, as amended. The Fund may gain exposure to local currency markets through forward currency contracts. Although foreign currency gains currently constitute "qualifying income," the Treasury Department has the authority to issue regulations excluding from the definition of "qualifying income" a RIC's foreign currency gains not "directly related" to its "principal business" of investing in stock or securities (or options and futures with respect thereto). Such regulations might treat gains from some of the Fund's foreign currency-denominated positions as not qualifying income and there is a remote possibility that such regulations might be applied retroactively, in which case, the Fund might not qualify as a RIC for one or more years. In the event the Treasury Department issues such regulations, the Fund's Board may authorize a significant change in investment strategy or the Fund's liquidation.

Foreign Securities Risk. Investments in foreign securities involve certain risks not associated with investments in securities of U.S. companies. For example, foreign markets can be extremely volatile. Foreign securities are primarily denominated in foreign currencies. Fluctuations in currency exchange rates may impact the value of foreign securities, without a change in the intrinsic value of those securities. Foreign securities may also be less liquid than domestic securities so that the Fund may, at times, be unable to sell foreign securities at desirable times or prices. Brokerage commissions, custodial costs and other fees are also generally higher for foreign securities. The Fund may have limited or no legal recourse in the event of default with respect to certain foreign securities, including those issued by foreign governments. In addition, foreign governments may impose withholding or other taxes on the Fund's income and capital gain on foreign securities, which could reduce the Fund's yield on such securities. Other risks include possible delays in the settlement of transactions or in the payment of income; generally less publicly available information about companies; the impact of economic, political, social, diplomatic or other conditions or events; possible seizure, expropriation or nationalization of a company or its assets; possible imposition of currency exchange controls; accounting, auditing and financial reporting standards that may be less comprehensive and stringent than those applicable to domestic companies; and the relatively less stringent standard of care to which local agents may be held in the local markets. In addition, it may be difficult to obtain reliable information about the securities and business operations of certain foreign issuers. Governments or trade groups may compel local agents to hold securities in designated depositories that are not subject to independent evaluation. The less developed a country's securities market is, the greater the level of risks. The risks posed by sanctions against a particular foreign country, its nationals or industries or businesses within the country may be heightened to the extent the Fund invests significantly in the affected country or region or in issuers from the affected country that depend on global markets.

Operational and Settlement Risks of Foreign Securities. The Fund's foreign securities are generally held outside the United States in the primary market for the securities in the custody of certain eligible foreign banks and trust companies (foreign sub-custodians), as permitted under the Investment Company Act of 1940. Settlement practices for foreign securities may

differ from those in the United States. Some countries have limited governmental oversight and regulation of industry practices, stock exchanges, depositories, registrars, brokers and listed companies, which increases the risk of corruption and fraud and the possibility of losses to the Fund. In particular, under certain circumstances, foreign securities may settle on a delayed delivery basis, meaning that the Fund may be required to make payment for securities before the Fund has actually received delivery of the securities or deliver securities prior to the receipt of payment. Typically, in these cases, the Fund will receive evidence of ownership in accordance with the generally accepted settlement practices in the local market entitling the Fund to delivery or payment at a future date, but there is a risk that the security will not be delivered to the Fund or that payment will not be received, although the Fund and its foreign sub-custodians take reasonable precautions to mitigate this risk. Losses can also result from lost, stolen or counterfeit securities; defaults by brokers and banks; failures or defects of the settlement system; or poor and improper record keeping by registrars and issuers.

Share Blocking. Share blocking refers to a practice in certain foreign markets under which an issuer's securities are blocked from trading at the custodian or sub-custodian level for a specified number of days before and, in certain instances, after a shareholder meeting where a vote of shareholders takes place. The blocking period can last up to several weeks. Share blocking may prevent the Fund from buying or selling securities during this period, because during the time shares are blocked, trades in such securities will not settle. It may be difficult or impossible to lift blocking restrictions, with the particular requirements varying widely by country. As a consequence of these restrictions, the Investment Manager, on behalf of the Fund, may abstain from voting proxies in markets that require share blocking.

Fund-of-Funds Risk. There is risk that the Fund portfolio managers' investment determinations regarding asset classes or underlying funds and the Fund's allocations thereto may not be successful, in whole or in part. There is also a risk that the selected underlying funds' performance may be lower than the performance of the asset class they were selected to represent or may be lower than the performance of alternative underlying funds that could have been selected to represent the asset class. The Fund also is exposed to the same risks as the underlying funds in direct proportion to the allocation of its assets among the underlying funds. The ability of the Fund to realize its investment objective(s) will depend, in large part, on the extent to which the underlying funds realize their investment objective. There is no guarantee that the underlying funds will achieve their respective investment objectives. The performance of underlying funds could be adversely affected if other entities that invest in the same underlying funds make relatively large investments or redemptions in such underlying funds. The Fund, and its shareholders, indirectly bear a portion of the expenses of any funds in which the Fund invests. Because the expenses and costs of a fund are shared by its investors, redemptions by other investors in the fund could result in decreased economies of scale and increased operating expenses for such fund. These transactions might also result in higher brokerage, tax or other costs for a fund. This risk may be particularly important when one investor owns a substantial portion of a fund. The Investment Manager may have potential conflicts of interest in selecting affiliated underlying funds for investment by the Fund because the fees paid to it by some underlying funds are higher than the fees paid by other underlying funds.

Geographic Concentration Risk. The Fund may be particularly susceptible to economic, political, regulatory or other events or conditions affecting issuers and countries within the specific geographic regions in which the Fund invests. Currency devaluations could occur in countries that have not yet experienced currency devaluation to date, or could continue to occur in countries that have already experienced such devaluations. As a result, the Fund's net asset value may be more volatile than a more geographically diversified fund.

Growth Securities Risk. Growth securities typically trade at a higher multiple of earnings than other types of equity securities. Accordingly, the market values of growth securities may be more sensitive to adverse economic or other circumstances or changes in current or expected earnings than the market values of other types of securities. In addition, growth securities, at times, may not perform as well as value securities or the stock market in general, and may be out of favor with investors for varying periods of time.

Health Care Sector Risk. Companies in the health care sector are subject to extensive government regulation. Their profitability can be affected significantly and adversely by restrictions on government reimbursement for medical expenses, government approval of medical products and services, competitive pricing pressures, an increased emphasis on outpatient and other alternative services and other factors. In many cases, patent protection is integral to the success of companies in the health care sector, and profitability can be affected materially by, among other things, the cost of obtaining (or failing to obtain) patent approvals, the cost of litigating patent infringement and the loss of patent protection for medical products (which significantly increases pricing pressures and can materially reduce profitability with respect to such products). Companies in the health care sector also potentially are subject to extensive product liability and other similar litigation. Companies in the health care sector are affected by the rising cost of medical products and services, and the effects of such rising costs can be particularly pronounced for companies that are dependent on a relatively limited number of products or services. Medical products also frequently become obsolete due to industry innovation or other causes. Because the Fund invests a significant portion of its net assets in the equity securities of health care companies, the Fund's price may be more volatile than a fund that is invested in a more diverse range of companies in different market sectors.

High-Yield Securities Risk. Securities with the lowest investment grade rating, securities rated below investment grade (commonly called “high-yield” or “junk” bonds) and unrated securities of comparable quality tend to be more sensitive to credit risk than higher-rated securities and may react more to perceived changes in the ability of the issuing entity or obligor to pay interest and principal when due than to changes in interest rates.

These investments have greater price fluctuations and are more likely to experience a default than higher-rated securities. High-yield securities are considered to be predominantly speculative with respect to the issuer’s capacity to pay interest and repay principal. These securities typically pay a premium — a higher interest rate or yield — because of the increased risk of loss, including default. These securities may require a greater degree of judgment to establish a price, may be difficult to sell at the time and price the Fund desires, may carry high transaction costs, and also are generally less liquid than higher-rated securities. The securities ratings provided by third party rating agencies are based on analyses by these ratings agencies of the credit quality of the securities and may not take into account every risk related to whether interest or principal will be timely repaid. In adverse economic and other circumstances, issuers of lower-rated securities are more likely to have difficulty making principal and interest payments than issuers of higher-rated securities.

Highly Leveraged Transactions Risk. The loans or other securities in which the Fund invests may consist of transactions involving refinancings, recapitalizations, mergers and acquisitions and other financings for general corporate purposes. The Fund’s investments also may include senior obligations of a borrower issued in connection with a restructuring pursuant to Chapter 11 of the U.S. Bankruptcy Code (commonly known as “debtor-in-possession” financings), provided that such senior obligations are determined by the Fund’s portfolio managers to be a suitable investment for the Fund. In such highly leveraged transactions, the borrower assumes large amounts of debt in order to have the financial resources to attempt to achieve its business objectives. Such business objectives may include but are not limited to: management’s taking over control of a company (leveraged buy-out); reorganizing the assets and liabilities of a company (leveraged recapitalization); or acquiring another company. Loans or securities that are part of highly leveraged transactions involve a greater risk (including default and bankruptcy) than other investments.

Impairment of Collateral Risk. The value of collateral, if any, securing a loan can decline, and may be insufficient to meet the borrower’s obligations or difficult or costly to liquidate. In addition, the Fund’s access to collateral may be limited by bankruptcy or other insolvency laws. Further, certain floating rate and other loans may not be fully collateralized and may decline in value.

Inflation Risk. Inflation risk is the uncertainty over the future real value (after inflation) of an investment. Inflation rates may change frequently and drastically as a result of various factors, including unexpected shifts in the domestic or global economy, and the Fund’s investments may not keep pace with inflation, which may result in losses to Fund investors.

Inflation-Protected Securities Risk. Inflation-protected debt securities tend to react to changes in real interest rates. Real interest rates can be described as nominal interest rates minus the expected impact of inflation. In general, the price of an inflation-protected debt security falls when real interest rates rise, and rises when real interest rates fall. Interest payments on inflation-protected debt securities will vary as the principal and/or interest is adjusted for inflation and may be more volatile than interest paid on ordinary bonds. In periods of deflation, the Fund may have no income at all from such investments. Income earned by a shareholder depends on the amount of principal invested, and that principal will not grow with inflation unless the shareholder reinvests the portion of Fund distributions that comes from inflation adjustments.

Initial Public Offering (IPO) Risk. IPOs are subject to many of the same risks as investing in companies with smaller market capitalizations. To the extent the Fund determines to invest in IPOs, it may not be able to invest to the extent desired, because, for example, only a small portion (if any) of the securities being offered in an IPO are available to the Fund. The investment performance of the Fund during periods when it is unable to invest significantly or at all in IPOs may be lower than during periods when the Fund is able to do so. In addition, as the Fund increases in size, the impact of IPOs on the Fund’s performance will generally decrease. IPOs sold within 12 months of purchase may result in increased short-term capital gains.

Interest Rate Risk. Interest rate risk is the risk of losses attributable to changes in interest rates. In general, if prevailing interest rates rise, the values of debt securities will tend to fall, and if interest rates fall, the values of debt securities will tend to rise. Changes in the value of a debt security usually will not affect the amount of income the Fund receives from it but may affect the value of the Fund’s shares. In general, the longer the maturity or duration of a debt security, the greater its sensitivity to changes in interest rates. Interest rate changes also may increase prepayments of debt obligations, which, in turn, would increase prepayment risk. Securities with floating interest rates are typically less sensitive to interest rate changes, but may decline in value if their interest rates do not rise as much as interest rates in general. Because rates on certain floating rate loans and other debt securities reset only periodically, changes in prevailing interest rates (and particularly sudden and significant changes) can be expected to cause fluctuations in the Fund’s net asset value.

Investing in Other Funds Risk. The Fund's investment in other funds (affiliated and/or unaffiliated funds, including exchange-traded funds (ETFs)) subjects the Fund to the investment performance (positive or negative) and risks of these underlying funds in direct proportion to the Fund's investment therein. The performance of underlying funds could be adversely affected if other entities that invest in the same underlying funds make relatively large investments or redemptions in such underlying funds. The Fund, and its shareholders, indirectly bear a portion of the expenses of any funds in which the Fund invests. Because the expenses and costs of a fund are shared by its investors, redemptions by other investors in the fund could result in decreased economies of scale and increased operating expenses for such fund. These transactions might also result in higher brokerage, tax or other costs for the Fund. This risk may be particularly important when one investor owns a substantial portion of another fund. The Investment Manager may have potential conflicts of interest in selecting affiliated underlying funds for investment by the Fund because the fees paid to it by some underlying funds are higher than the fees paid by other underlying funds, as well as a potential conflict in selecting affiliated funds over unaffiliated funds.

Issuer Risk. An issuer in which the Fund invests may perform poorly, and therefore, the value of its securities may decline, which would negatively affect the Fund's performance. Poor performance may be caused by poor management decisions, competitive pressures, breakthroughs in technology, reliance on suppliers, labor problems or shortages, corporate restructurings, fraudulent disclosures, natural disasters or other events, conditions or factors.

Leverage Risk. Leverage occurs when the Fund increases its assets available for investment using borrowings, short sales, derivatives, or similar instruments or techniques. The use of leverage may make any change in the Fund's net asset value (NAV) even greater and thus result in increased volatility of returns. Short sales involve borrowing securities and then selling them, the Fund's short sales effectively leverage the Fund's assets. The Fund's assets that are used as collateral to secure the Fund's obligations to return the securities sold short may decrease in value while the short positions are outstanding, which may force the Fund to use its other assets to increase the collateral. Leverage can create an interest expense that may lower the Fund's overall returns. Leverage presents the opportunity for increased net income and capital gains, but also exaggerates the Fund's risk of loss. There can be no guarantee that a leveraging strategy will be successful.

Liquidity Risk. Liquidity risk is the risk associated with a lack of marketability of investments which may make it difficult to sell the investment at a desirable time or price. The Fund may have to lower the selling price, sell other investments, or forego another, more appealing investment opportunity. Judgment plays a larger role in valuing these investments as compared to valuing more liquid investments.

Market Risk. Market risk refers to the possibility that the market values of securities or other investments that the Fund holds will fall, sometimes rapidly or unpredictably, or fail to rise. Security values may fall or fail to rise because of a variety of factors affecting (or the market's perception of) individual companies (e.g., an unfavorable earnings report), industries or sectors, or the market as a whole, reducing the value of an investment in the Fund. Accordingly, an investment in the Fund could lose money over short or even long periods. The market values of the securities the Fund holds also can be affected by changes or perceived changes in U.S. or foreign economies and financial markets, and the liquidity of these securities, among other factors. In general, equity securities tend to have greater price volatility than debt securities. In addition, common stock prices may be sensitive to rising interest rates, as the cost of capital rises and borrowing costs increase.

Master Limited Partnership Risk. Investments in securities (units) of master limited partnerships involve risks that differ from an investment in common stock. Holders of these units have more limited rights to vote on matters affecting the partnership. These units may be subject to cash flow and dilution risks. There are also certain tax risks associated with such an investment. In particular, the Fund's investment in master limited partnerships can be limited by the Fund's intention to qualify as a regulated investment company for U.S. federal income tax purposes, and can limit the Fund's ability to so qualify. In addition, conflicts of interest may exist between common unit holders, subordinated unit holders and the general partner of a master limited partnership, including a conflict arising as a result of incentive distribution payments. In addition, there are risks related to the general partner's right to require unit holders to sell their common units at an undesirable time or price.

Mid-Cap Company Securities Risk. Securities of mid-capitalization companies (mid-cap companies) can, in certain circumstances, have more risk than securities of larger capitalization companies (larger companies). For example, mid-cap companies may be more vulnerable to market downturns and adverse business or economic events than larger companies because they may have more limited financial resources and business operations. Mid-cap companies are also more likely than larger companies to have more limited product lines and operating histories and to depend on smaller management teams. Securities of mid-cap companies may trade less frequently and in smaller volumes and may be less liquid and fluctuate more sharply in value than securities of larger companies. When the Fund takes significant positions in mid-cap companies with limited trading volumes, the liquidation of those positions, particularly in a distressed market, could be difficult and result in Fund investment losses. In addition, some mid-cap companies may not be widely followed by the investment community, which can lower the demand for their stocks.

Money Market Fund Investment Risk. An investment in a money market fund is not a bank deposit and is not insured or guaranteed by any bank, the FDIC or any other government agency. Although money market funds seek to preserve the value of investments at \$1.00 per share, it is possible for the Fund to lose money by investing in money market funds. In addition to the fees and expenses that the Fund directly bears, the Fund indirectly bears the fees and expenses of any money market funds in which it invests, including affiliated money market funds. To the extent these fees and expenses are expected to equal or exceed 0.01% of the Fund's average daily net assets, they will be reflected in the Annual Fund Operating Expenses set forth in the table under "Fees and Expenses of the Fund." By investing in a money market fund, the Fund will be exposed to the investment risks of the money market fund in direct proportion to such investment. The money market fund may not achieve its investment objective. The Fund, through its investment in the money market fund, may not achieve its investment objective. To the extent the Fund invests in instruments such as derivatives, the Fund may hold investments, which may be significant, in money market fund shares to cover its obligations resulting from the Fund's investments in derivatives.

Mortgage- and Other Asset-Backed Securities Risk. The value of any mortgage-backed and other asset-backed securities held by the Fund may be affected by, among other things, changes or perceived changes in: interest rates, factors concerning the interests in and structure of the issuer or the originator of the mortgages or other assets, the creditworthiness of the entities that provide any supporting letters of credit, surety bonds or other credit enhancements, or the market's assessment of the quality of underlying assets. Mortgage-backed securities represent interests in, or are backed by, pools of mortgages from which payments of interest and principal (net of fees paid to the issuer or guarantor of the securities) are distributed to the holders of the mortgage-backed securities. Mortgage-backed securities can have a fixed or an adjustable rate. Payment of principal and interest on some mortgage-backed securities (but not the market value of the securities themselves) may be guaranteed (i) by the full faith and credit of the U.S. Government (in the case of securities guaranteed by the Government National Mortgage Association) or (ii) by its agencies, authorities, enterprises or instrumentalities (in the case of securities guaranteed by the Federal National Mortgage Association (FNMA) or the Federal Home Loan Mortgage Corporation (FHLMC)), which are not insured or guaranteed by the U.S. Government (although FNMA and FHLMC may be able to access capital from the U.S. Treasury to meet their obligations under such securities). Mortgage-backed securities issued by non-governmental issuers (such as commercial banks, savings and loan institutions, private mortgage insurance companies, mortgage bankers and other secondary market issuers) may be supported by various credit enhancements, such as pool insurance, guarantees issued by governmental entities, letters of credit from a bank or senior/subordinated structures, and may entail greater risk than obligations guaranteed by the U.S. Government, whether or not such obligations are guaranteed by the private issuer. Mortgage-backed securities are subject to prepayment risk, which is the possibility that the underlying mortgage may be refinanced or prepaid prior to maturity during periods of declining or low interest rates, causing the Fund to have to reinvest the money received in securities that have lower yields. In addition, the impact of prepayments on the value of mortgage-backed securities may be difficult to predict and may result in greater volatility. Rising or high interest rates tend to extend the duration of mortgage-backed securities, making them more volatile and more sensitive to changes in interest rates.

Municipal Securities Risk. Municipal securities are debt obligations generally issued to obtain funds for various public purposes, including general financing for state and local governments, or financing for a specific project or public facility. Municipal securities can be significantly affected by political and legislative changes at the state or federal level. Municipal securities may be fully or partially backed by the taxing authority of the local government, by the credit of a private issuer, by the current or anticipated revenues from a specific project or specific assets or by domestic or foreign entities providing credit support, such as letters of credit, guarantees or insurance, and are generally classified into general obligation bonds and special revenue obligations. General obligation bonds are backed by an issuer's taxing authority and may be vulnerable to limits on a government's power or ability to raise revenue or increase taxes. They may also depend for payment on legislative appropriation and/or funding or other support from other governmental bodies. Revenue obligations are payable from revenues generated by a particular project or other revenue source, and are typically subject to greater risk of default than general obligation bonds because investors can look only to the revenue generated by the project or other revenue source backing the project, rather than to the general taxing authority of the state or local government issuer of the obligations. Because many municipal securities are issued to finance projects in sectors such as education, health care, transportation and utilities, conditions in those sectors can affect the overall municipal market. Municipal securities generally pay interest that, in the opinion of bond counsel, is free from U.S. federal income tax (and, in some cases, the federal alternative minimum tax). There is no assurance that the Internal Revenue Service (IRS) will agree with this opinion or that U.S. federal income tax law will not change. In the event the IRS determines that the issuer does not comply with relevant tax requirements or U.S. federal income tax law changes, interest payments from a security could become federally taxable, possibly retroactively to the date the security was issued, and the value of the security would likely fall. The amount of publicly available information for municipal issuers is generally less than for corporate issuers.

Preferred Stock Risk. Preferred stock is a type of stock that generally pays dividends at a specified rate and that has preference over common stock in the payment of dividends and the liquidation of assets. Preferred stock does not ordinarily

carry voting rights. The price of a preferred stock is generally determined by earnings, type of products or services, projected growth rates, experience of management, liquidity, and general market conditions of the markets on which the stock trades. The most significant risks associated with investments in preferred stock include Issuer Risk, Market Risk and Interest Rate Risk.

Prepayment and Extension Risk. Prepayment and extension risk is the risk that a loan, bond or other security or investment might be called or otherwise converted, prepaid or redeemed before maturity. This risk is primarily associated with asset-backed securities, including mortgage-backed securities and floating rate loans. If the investment is converted, prepaid or redeemed before maturity, particularly during a time of declining interest rates or spreads, the portfolio managers may not be able to invest the proceeds in other investments providing as high a level of income, resulting in a reduced yield to the Fund. Conversely, as interest rates rise or spreads widen, the likelihood of prepayment decreases and the maturity of the investment may extend. The portfolio managers may be unable to capitalize on securities with higher interest rates or wider spreads because the Fund's investments are locked in at a lower rate for a longer period of time.

Quantitative Model Risk. The Fund may use quantitative methods to select investments. Securities or other investments selected using quantitative methods may perform differently from the market as a whole or from their expected performance for many reasons, including factors used in building the quantitative analytical framework, the weights placed on each factor, and changing sources of market returns, among others. Any errors or imperfections in the Fund portfolio manager's quantitative analyses or models, or in the data on which they are based, could adversely affect the portfolio manager's effective use of such analyses or models, which in turn could adversely affect the Fund's performance. There can be no assurance that these methodologies will enable the Fund to achieve its objective.

Real Estate-Related Investment Risk. Investment in real estate investment trusts (REITs) and in securities of other companies (wherever organized) principally engaged in the real estate industry subjects the Fund to, among other risks, risks similar to those of direct investments in real estate and the real estate industry in general, including risks related to general and local economic conditions, possible lack of availability of financing and changes in interest rates or property values. REITs are entities that either own properties or make construction or mortgage loans, and also may include operating or finance companies. The value of REIT shares is affected by, among other factors, changes in the value of the underlying properties owned by the REIT, by changes in the prospect for earnings and/or cash flow growth of the REIT itself, defaults by borrowers or tenants, market saturation, decreases in market rates for rents, and other economic, political, or regulatory matters affecting the real estate industry, including REITs. REITs and similar non-U.S. entities depend upon specialized management skills, may have limited financial resources, may have less trading volume in their securities, and may be subject to more abrupt or erratic price movements than the overall securities markets. REITs are also subject to the risk of failing to qualify for tax-free pass-through of income. Some REITs (especially mortgage REITs) are affected by risks similar to those associated with investments in debt securities including changes in interest rates and the quality of credit extended.

Redemption Risk. The Fund may need to sell portfolio securities to meet redemption requests. The Fund could experience a loss when selling portfolio securities to meet redemption requests if there is (i) significant redemption activity by shareholders, including, for example, when a single investor or few large investors make a significant redemption of Fund shares, (ii) a disruption in the normal operation of the markets in which the Fund buys and sells portfolio securities or (iii) the inability of the Fund to sell portfolio securities because such securities are illiquid. In such events, the Fund could be forced to sell portfolio securities at unfavorable prices in an effort to generate sufficient cash to pay redeeming shareholders. The Fund may suspend redemptions or the payment of redemption proceeds when permitted by applicable regulations.

Regulatory Risk. Changes in government regulations may adversely affect the value of a security held by the Fund. In addition, the SEC has proposed amendments to money market regulation. These changes may have a significant impact on the operation of money market funds, which may, among other things, reduce yield.

Reinvestment Risk. Reinvestment risk is the risk that the Fund will not be able to reinvest income or principal at the same return it is currently earning.

Repurchase Agreements Risk. Repurchase agreements are agreements in which the seller of a security to the Fund agrees to repurchase that security from the Fund at a mutually agreed upon price and time. Repurchase agreements carry the risk that the counterparty may not fulfill its obligations under the agreement. This could cause the Fund's income and the value of your investment in the Fund to decline.

Reverse Repurchase Agreements Risk. Reverse repurchase agreements are agreements in which a Fund sells a security to a counterparty, such as a bank or broker-dealer, in return for cash and agrees to repurchase that security at a mutually agreed upon price and time. Reverse repurchase agreements carry the risk that the market value of the security sold by the Fund may decline below the price at which the Fund must repurchase the security. Reverse repurchase agreements also may be viewed as a form of borrowing.

Rule 144A Securities Risk. The Fund may invest significantly in Rule 144A securities that are determined to be liquid in accordance with procedures adopted by the Fund's Board. However, an insufficient number of qualified institutional buyers interested in purchasing Rule 144A securities at a particular time could affect adversely the marketability of such securities and the Fund might be unable to dispose of such securities promptly or at reasonable prices. Accordingly, even if determined to be liquid, the Fund's holdings of Rule 144A securities may increase the level of Fund illiquidity if eligible buyers become uninterested in buying them at a particular time. The Fund may also have to bear the expense of registering the securities for resale and the risk of substantial delays in effecting the registration. Additionally, the purchase price and subsequent valuation of restricted and illiquid securities normally reflect a discount, which may be significant, from the market price of comparable securities for which a more liquid market exists.

Sector Risk. At times, the Fund may have a significant portion of its assets invested in securities of companies conducting business in a related group of industries within an economic sector. Companies in the same economic sector may be similarly affected by economic, regulatory, political or market events or conditions, making the Fund more vulnerable to unfavorable developments in that economic sector than funds that invest more broadly. The more a fund diversifies its investments, the more it spreads risk and potentially reduces the risks of loss and volatility.

Short Positions Risk. The Fund may establish short positions which introduce more risk to the Fund than long positions (where the Fund owns the instrument) because the maximum sustainable loss on an instrument purchased (held long) is limited to the amount paid for the instrument plus the transaction costs, whereas there is no maximum price of the shorted instrument when purchased in the open market. Therefore, in theory, short positions have unlimited risk. The Fund's use of short positions in effect "leverages" the Fund. Leverage potentially exposes the Fund to greater risks of loss due to unanticipated market movements, which may magnify losses and increase the volatility of returns. To the extent the Fund takes a short position in a derivative instrument, this involves the risk of a potentially unlimited increase in the value of the underlying instrument.

Small- and Mid-Cap Company Securities Risk. Securities of small- and mid-capitalization companies (small- and mid-cap companies) can, in certain circumstances, have a higher potential for gains than securities of larger, more established companies (larger companies) but may also have more risk. For example, small- and mid-cap companies may be more vulnerable to market downturns and adverse business or economic events than larger companies because they may have more limited financial resources and business operations. Small- and mid-cap companies are also more likely than larger companies to have more limited product lines and operating histories and to depend on smaller management teams. Securities of small- and mid-cap companies may trade less frequently and in smaller volumes and may be less liquid and fluctuate more sharply in value than securities of larger companies. When the Fund takes significant positions in small- and mid-cap companies with limited trading volumes, the liquidation of those positions, particularly in a distressed market, could be prolonged and result in Fund investment losses. In addition, some small- and mid-cap companies may not be widely followed by the investment community, which can lower the demand for their stocks.

Sovereign Debt Risk. A sovereign debtor's willingness or ability to repay principal and pay interest in a timely manner may be affected by a variety of factors, including its cash flow situation, the extent of its reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the sovereign debtor's policy toward international lenders, and the political constraints to which a sovereign debtor may be subject.

With respect to sovereign debt of emerging market issuers, investors should be aware that certain emerging market countries are among the largest debtors to commercial banks and foreign governments. At times, certain emerging market countries have declared moratoria on the payment of principal and interest on external debt. Certain emerging market countries have experienced difficulty in servicing their sovereign debt on a timely basis and that has led to defaults and the restructuring of certain indebtedness to the detriment of debt-holders. Sovereign debt risk is increased for emerging market issuers.

Special Situations Risk. Securities of companies that are involved in an initial public offering or a major corporate event, such as a business consolidation or restructuring, may present special risk because of the high degree of uncertainty that can be associated with such events. Securities issued in initial public offerings often are issued by companies that are in the early stages of development, have a history of little or no revenues and may operate at a loss following the offering. It is possible that there will be no active trading market for the securities after the offering, and that the market price of the securities may be subject to significant and unpredictable fluctuations. Investing in special situations may have a magnified effect on the performance of funds with small amounts of assets.

Stripped Securities Risk. Stripped securities are the separate income or principal components of debt securities. These securities are particularly sensitive to changes in interest rates, and therefore subject to greater fluctuations in price than typical interest bearing debt securities. For example, stripped mortgage-backed securities have greater interest rate risk than mortgage-backed securities with like maturities, and stripped treasury securities have greater interest rate risk than traditional government securities with identical credit ratings.

Technology and Technology-Related Investment Risk. Companies in the technology sector and technology-related sectors are subject to significant competitive pressures, such as aggressive pricing of their products or services, new market entrants, competition for market share, short product cycles due to an accelerated rate of technological developments and the potential for limited earnings and/or falling profit margins. These companies also face the risks that new services, equipment or technologies will not be accepted by consumers and businesses or will become rapidly obsolete. These factors can affect the profitability of these companies and, as a result, the value of their securities. Also, patent protection is integral to the success of many companies in these sectors, and profitability can be affected materially by, among other things, the cost of obtaining (or failing to obtain) patent approvals, the cost of litigating patent infringement and the loss of patent protection for products (which significantly increases pricing pressures and can materially reduce profitability with respect to such products). In addition, many technology companies have limited operating histories. Prices of these companies' securities historically have been more volatile than other securities, especially over the short term. If a Fund concentrates its investments (or, invests a significant portion of its net assets in securities of technology and technology-related companies), the Fund's price may be more volatile than a fund that is invested in a more diverse range of market sectors.

U.S. Government Obligations Risk. While U.S. Treasury obligations are backed by the "full faith and credit" of the U.S. Government, such securities are nonetheless subject to credit risk (i.e., the risk that the U.S. Government may be, or may be perceived to be, unable or unwilling to honor its financial obligations, such as making payments). Securities issued or guaranteed by federal agencies or authorities and U.S. Government-sponsored instrumentalities or enterprises may or may not be backed by the full faith and credit of the U.S. Government. For example, securities issued by the Federal Home Loan Mortgage Corporation, the Federal National Mortgage Association and the Federal Home Loan Banks are neither insured nor guaranteed by the U.S. Government. These securities may be supported by the ability to borrow from the U.S. Treasury or only by the credit of the issuing agency, authority, instrumentality or enterprise and, as a result, are subject to greater credit risk than securities issued or guaranteed by the U.S. Treasury.

Zero-Coupon Bonds Risk. Zero-coupon bonds are bonds that do not pay interest in cash on a current basis, but instead accrue interest over the life of the bond. As a result, these securities are issued at a discount and their values may fluctuate more than the values of similar securities that pay interest periodically. Although these securities pay no interest to holders prior to maturity, interest accrued on these securities is reported as income to the Fund and affects the amounts distributed to its shareholders, which may cause the Fund to sell investments to obtain cash to make income distributions to shareholders, including at times when it may not be advantageous to do so.

Borrowings

In general, pursuant to the 1940 Act, a Fund may borrow money only from banks in an amount not exceeding 33 1/3% of its total assets (including the amount borrowed) less liabilities (other than borrowings). Any borrowings that come to exceed this amount must be reduced within three days (not including Sundays and holidays) to the extent necessary to comply with the 33 1/3% limitation.

The Funds participate in a committed line of credit (Line of Credit). Any advance under the Line of Credit is contemplated primarily for temporary or emergency purposes.

Lending of Portfolio Securities

To generate additional income, a Fund may lend up to 33%, or such lower percentage specified by the Fund or Adviser of the value of its total assets (including securities out on loan) to broker-dealers, banks or other institutional borrowers of securities. JPMorgan serves as lending agent (the Lending Agent) to the Funds pursuant to a securities lending agreement (the Securities Lending Agreement) approved by the Board. Under the Securities Lending Agreement, the Lending Agent loans securities to approved borrowers pursuant to borrower agreements in exchange for collateral. Collateral may consist of cash, securities issued by the U.S. Government or its agencies or instrumentalities (collectively, "U.S. Government securities") or such other collateral as may be approved by the Board. For loans secured by cash, the Fund retains the interest earned on cash collateral investments, but is required to pay the borrower a rebate for the use of the cash collateral. For loans secured by U.S. Government securities, the borrower pays a borrower fee to the Lending Agent on behalf of the Fund. If the market value of the loaned securities goes up, the Lending Agent will require additional collateral from the borrower.

If the market value of the loaned securities goes down, the borrower may request that some collateral be returned. During the existence of the loan, the lender will receive from the borrower amounts equivalent to any dividends, interest or other distributions on the loaned securities, as well as interest on such amounts.

Loans are subject to termination by a Fund or a borrower at any time. A Fund may choose to terminate a loan in order to vote in a proxy solicitation if the Fund has knowledge of a material event to be voted on that would affect the Fund's investment in the loaned security.

Securities lending involves counterparty risk, including the risk that a borrower may not provide additional collateral when required or return the loaned securities in a timely manner. Counterparty risk also includes a potential loss of rights in the collateral if the borrower or the Lending Agent defaults or fails financially. This risk is increased if a Fund's loans are concentrated with a single borrower or limited number of borrowers. There are no limits on the number of borrowers a Fund may use and a Fund may lend securities to only one or a small group of borrowers. Funds participating in securities lending also bear the risk of loss in connection with investments of cash collateral received from the borrowers. Cash collateral is invested in accordance with investment guidelines contained in the Securities Lending Agreement and approved by the Board. Some or all of the cash collateral received in connection with the securities lending program may be invested in one or more pooled investment vehicles, including, among other vehicles, money market funds managed by the Lending Agent (or its affiliates). The Lending Agent shares in any income resulting from the investment of such cash collateral, and an affiliate of the Lending Agent may receive asset-based fees for the management of such pooled investment vehicles, which may create a conflict of interest between the Lending Agent (or its affiliates) and the Fund with respect to the management of such cash collateral. To the extent that the value or return of a Fund's investments of the cash collateral declines below the amount owed to a borrower, a Fund may incur losses that exceed the amount it earned on lending the security. The Lending Agent will indemnify a Fund from losses resulting from a borrower's failure to return a loaned security when due, but such indemnification does not extend to losses associated with declines in the value of cash collateral investments. The Investment Manager is not responsible for any loss incurred by the Funds in connection with the securities lending program.

The Funds currently do not participate in the securities lending program, but the Board may determine to renew participation in the future.

INVESTMENT MANAGEMENT AND OTHER SERVICES

The Investment Manager and Subadvisers

Columbia Management Investment Advisers, LLC, located at 225 Franklin Street, Boston, MA 02110, is the investment adviser of the Funds and also serves as the investment adviser and administrator of other funds in the Columbia Funds Family. The Investment Manager is a wholly-owned subsidiary of Ameriprise Financial, which is located at 1099 Ameriprise Financial Center, Minneapolis, MN 55474. Ameriprise Financial is a holding company, which primarily conducts business through its subsidiaries to provide financial planning, products and services that are designed to be utilized as solutions for clients' cash and liquidity, asset accumulation, income, protection and estate and wealth transfer needs.

From time to time the Investment Manager may engage its investment advisory affiliates (Participating Affiliates) around the world to provide a variety of services such as, investment research, investment monitoring, trading and discretionary investment management (including portfolio management) to certain accounts managed by the Investment Manager, including the Fund. The Investment Manager expects to engage certain of its Threadneedle Investments affiliates to provide such services. These Participating Affiliates will provide services to the Investment Manager either pursuant to subadvisory agreements, personnel-sharing agreements or similar inter-company arrangements and the Investment Manager will bear any and all costs of such agreements. These Participating Affiliates, like the Investment Manager, are direct or indirect subsidiaries of Ameriprise and are registered with the appropriate respective regulators in their home jurisdictions and, where required, the SEC and the CFTC in the United States.

Pursuant to some of these arrangements, certain employees of these Participating Affiliates may serve as "associated persons" of the Investment Manager and, in this capacity, subject to the oversight and supervision of the Investment Manager and consistent with the investment objectives, policies and limitations set forth in the Fund's prospectus and SAI may provide such services to the Fund on behalf of the Investment Manager.

Services Provided

Under the Investment Management Services Agreement, the Investment Manager has contracted to furnish each Fund with investment research and advice. For these services, unless otherwise noted, each Fund pays a monthly fee to the Investment Manager based on the average of the daily closing value of the total net assets of a Fund for such month. Under the Investment Management Services Agreement, any liability of the Investment Manager to the Trust, a Fund and/or its shareholders is limited to situations involving the Investment Manager's own willful misfeasance, bad faith, negligence in the performance of its duties or reckless disregard of its obligations and duties. Neither the Investment Manager, nor any of its respective directors, officers, partners, principals, employees, or agents shall be liable for any acts or omissions or for any losses suffered by a Fund or its shareholders or creditors.

The Investment Management Services Agreement may be terminated with respect to a Fund at any time on 60 days' written notice by the Investment Manager or by the Board or by a vote of a majority of the outstanding voting securities of a Fund. The Investment Management Services Agreement will automatically terminate upon any assignment thereof, will continue in effect for two years from its initial effective date and thereafter will continue from year to year with respect to a Fund only so long as such continuance is approved at least annually (i) by the Trustees of the Trust or by a vote of a majority of the outstanding voting securities of a Fund and (ii) by vote of a majority of the Trustees who are not interested persons (as such term is defined in the 1940 Act) of the Investment Manager or the Trust, cast in person at a meeting called for the purpose of voting on such approval.

The Investment Manager pays all compensation of the Trustees and officers of the Trust who are employees of the Investment Manager or its affiliates, except for the Chief Compliance Officer, a portion of whose salary is paid by the Columbia Funds Except to the extent expressly assumed by the Investment Manager and except to the extent required by law to be paid or reimbursed by the Investment Manager, the Investment Manager does not have a duty to pay any Fund operating expense incurred in the organization and operation of a Fund, including, but not limited to, auditing, legal, custodial, investor servicing and shareholder reporting expenses. The Trust pays the cost of printing and mailing Fund prospectuses to shareholders.

The Investment Manager, at its own expense, provides office space, facilities and supplies, equipment and personnel for the performance of its functions under each Fund's Investment Management Services Agreement.

Advisory Fee Rates Paid by the Funds

Each Fund, unless otherwise noted, pays the Investment Manager an annual fee for its investment advisory services, as set forth in the Investment Management Services Agreement, and as shown in the section entitled *Fees and Expenses of the Fund — Annual Fund Operating Expenses* in each Fund's prospectuses. The fee is calculated as a percentage of the average

daily net assets of each Fund and is paid monthly. The Investment Manager and/or its affiliates may from time to time waive fees and/or reimburse a Fund's expenses. See the Funds' prospectus for more information.

Investment Management Fee Rates. The Investment Manager receives a monthly investment advisory fee based on each Fund's average daily net assets at the following annual rates:

Investment Management Services Agreement Fee Schedule

Fund	Assets Level (figures in billions)	Annual rate at each asset level	
VP – AQR Managed Futures Strategy Fund	First \$0.5	1.020%	
VP – Multi-Strategy Alternatives Fund	\$0.5 to \$1.0	0.975%	
	\$1.0 to \$3.0	0.950%	
	\$3.0 to \$6.0	0.930%	
	Over \$6.0	0.900%	
	Assets invested in underlying funds that pay an investment advisory fee to the Investment Manager.		0.000%
VP – Asset Allocation Fund	Assets invested in securities (other than third-party advised mutual funds and funds that pay an investment advisory fee to the Investment Manager), including other Columbia Funds that do not pay an investment advisory fee, ETFs, derivatives and individual securities.		0.550%
	Assets invested in non-exchange traded, third party advised mutual funds.		0.100%
	VP – Contrarian Core Fund	First \$0.5	0.710%
VP – Select Large Cap Growth Fund	\$0.5 to \$1.0	0.665%	
	\$1.0 to \$1.5	0.620%

	\$1.0 to \$2.0	0.420%	
	\$2.0 to \$6.0	0.400%	
	\$6.0 to \$7.5	0.380%	
	\$7.5 to \$9.0	0.365%	
	\$9.0 to \$12.0	0.360%	
	\$12.0 to \$20.0	0.350%	
	\$20.0 to \$24.0	0.340%	
	\$24.0 to \$50.0	0.320%	
Over \$50.0	0.300%		
VP – GS Commodity Strategy Fund	First \$0.5	0.550%	
	\$0.5 to \$1.0	0.505%	
	\$1.0 to \$3.0	0.480%	
	\$3.0 to \$6.0	0.460%	
	Over \$6.0	0.440%	
VP – Pyrford International Equity Fund	First \$0.5	0.790%	
	\$0.5 to \$1.0	0.745%	
	\$1.0 to \$1.5	0.700%	
	\$1.5 to \$3.0	0.650%	
	\$3.0 to \$6.0	0.640%	
VP – Small Cap Value Fund	Over \$6.0	0.620%	
	VP – Small Company Growth Fund	First \$0.5	0.790%
	\$0.5 to \$1.0	0.745%	
	Over \$1.0	0.700%	

Fund	Assets Level (figures in billions)	Annual rate at each asset level
VP – Strategic Income Fund	First \$0.5	0.530%
	\$0.5 to \$1.0	0.525%
	\$1.0 to \$2.0	0.515%
	\$2.0 to \$3.0	0.495%
	\$3.0 to \$6.0	0.480%
	\$6.0 to \$7.5	0.455%
	\$7.5 to \$9.0	0.440%
	\$9.0 to \$10.0	0.431%
	\$10.0 to \$15.0	0.419%
	\$15.0 to \$20.0	0.409%
	\$20.0 to \$24.0	0.393%
	\$24.0 to \$50.0	0.374%
	Over \$50.0	0.353%

VP – Managed Volatility Funds. The Investment Manager has implemented a schedule for the investment advisory fees for the VP – Managed Volatility Funds, whereby the Fund pays (i) 0.00% advisory fee on its assets that are invested in affiliated underlying mutual funds, ETFs and closed-end funds that pay an investment management services fee to the Investment Manager; and (ii) an advisory fee rate according to the following schedule on securities, instruments and other assets not described in category (i) above, including without limitation affiliated mutual funds, ETFs and closed-end funds that do not pay an investment management services fee to the Investment Manager, third party funds, derivatives and individual securities:

VP – MV Conservative Fund	First \$0.5	0.660%
VP – MV Conservative Growth Fund	\$0.5 to \$1.0	0.615%
VP – MV Growth Fund	\$1.0 to \$1.5	0.570%
	\$1.5 to \$3.0	0.520%
	\$3.0 to \$6.0	0.510%
	Over \$6.0	0.490%

In no event shall the advisory fee be negative even if the value of one of the categories is a negative amount. Although the fee for each category is calculated separately and there is no negative advisory fee, the Investment Manager currently intends to calculate the advisory fee by reducing (but not below \$0) any advisory fee payable on one category by any negative advisory fee in another category. The Investment Manager may change this calculation methodology at any time.

Management Fees Paid. The table below shows the total management fees paid by each Fund for the last three fiscal periods. For amounts waived or reimbursed by the Investment Manager, see *Expense Limitations*.

Management Fees

(1) For the period from April 30, 2012 (commencement of operations) to December 31, 2012.

(2) For the period from October 5, 2012 (commencement of operations) to December 31, 2012.

(3) For the period from April 30, 2013 (commencement of operations) to December 31, 2013.

(4) For the period from April 12, 2013 (commencement of operations) to December 31, 2013.

Manager of Managers Exemption

The Funds have received an order from the SEC that permits the Investment Manager, subject to the approval of the Board, to appoint a subadviser or change the terms of a subadvisory agreement for a Fund without first obtaining shareholder approval. The order permits the Fund to add or change unaffiliated subadvisers or the fees paid to subadvisers from time to time without the expense and delays associated with obtaining shareholder approval of the change.

Subadvisory Agreements

The assets of certain Funds are managed by subadvisers that have been selected by the Investment Manager, subject to the review and approval of the Board. The Investment Manager has recommended the subadvisers to the Board based upon its assessment of the skills of the subadvisers in managing other assets in accordance with objectives and investment strategies substantially similar to those of the applicable Fund. Short-term investment performance is not the only factor in selecting or terminating a subadviser, and the Investment Manager does not expect to make frequent changes of subadvisers. Subadvisers affiliated with the Investment Manager must be approved by shareholders.

The Investment Manager allocates the assets of a Fund with multiple subadvisers among the subadvisers. Each subadviser has discretion, subject to oversight by the Board and the Investment Manager, to purchase and sell portfolio assets, consistent with the Fund's investment objectives, policies, and restrictions. Generally, the services that a subadviser provides to the Fund are limited to asset management and related recordkeeping services.

The Investment Manager has entered into an advisory agreement with each subadviser under which the subadviser provides investment advisory assistance and day-to-day management of some or all of the Fund's portfolio, as well as investment research and statistical information. A subadviser may also serve as a discretionary or non-discretionary investment adviser to management or advisory accounts that are unrelated in any manner to the Investment Manager or its affiliates.

Subadvisers and Subadvisory Agreement Fee Schedules

Fund	Subadviser(s)	Period of Service	Fee Rate
VP – AQR Managed Futures Strategy Fund	AQR	Since commencement of operations	0.65% on the first \$500 million reducing to 0.50% as assets increase
VP – GS Commodity Strategy Fund	GSAM	Since commencement of operations	0.250% on the first \$200 million, reducing to 0.200% as assets increase
VP – Pyrford International Equity Fund	Pyrford	Since commencement of operations	0.70% on the first \$50 million, reducing to 0.20% as assets increase

The following table shows the subadvisory fees paid by the Investment Manager to subadvisers in the last three fiscal periods or, if shorter, since the Fund's commencement of operations.

Subadvisory Fees

Fund	Subadviser	Subadvisory Fees Paid	
		2013	2012
VP – AQR Managed Futures Strategy Fund	AQR	\$2,571,247	\$1,436,272 ⁽¹⁾
VP – GS Commodity Strategy Fund	GSAM	1,029,315	113,756 ⁽²⁾
VP – Multi-Strategy Alternatives Fund*	Eaton Vance	1,794,900 ⁽³⁾	2,637,034 ⁽¹⁾
VP – Pyrford International Equity Fund	Pyrford	1,426,767 ⁽⁴⁾	—

* Prior to November 18, 2013, the Fund was subadvised by Eaton Vance.

(1) For the period from April 30, 2012 (commencement of operations) to December 31, 2012.

(2) For the period from October 5, 2012 (commencement of operations) to December 31, 2012.

(3) For the period from January 1, 2013 to November 18, 2013.

(4) For the period from April 30, 2013 (commencement of operations) to December 31, 2013.

Additional Information About the Subadvisers.

AQR. AQR is a Delaware limited liability company formed in 1998 and is located at Two Greenwich Plaza, 3rd Floor, Greenwich, Connecticut 06830. AQR is a wholly-owned subsidiary of AQR Capital Management Holdings, LLC (“AQR Holdings”), which has no activities other than holding the interest of AQR. AQR Holdings is a subsidiary of AQR Capital Management Group, L.P. (“AQR LP”) which has no activities other than holding the interests of AQR Holdings. Clifford S. Asness, Ph.D. may be deemed to control AQR indirectly through his significant ownership in AQR LP. Affiliated Managers Group, Inc., a publicly traded holding company, holds a minority interest in AQR Holdings.

GSAM. GSAM, which is located at 200 West Street, New York, New York 10282, is a subsidiary of The Goldman Sachs Group, Inc. and an affiliate of Goldman Sachs & Co. Founded in 1869, The Goldman Sachs Group, Inc. is a financial holding company and a leading global investment banking, securities and investment management firm.

Pyrford. Pyrford, which is located at 95 Wigmore Street, London W1U 1HH England, is a wholly-owned subsidiary of the Bank of Montreal (BMO) Capital Markets Holdings Ltd., a BMO Financial Group company. As part of BMO’s Private Client Group, Pyrford provides wealth management services to clients in North America, Middle East, U.K., Europe and Australia. Pyrford was organized in 1991.

Portfolio Managers. The following table provides information about the portfolio managers of each Fund as of the end of the applicable Fund’s most recent fiscal period, unless otherwise noted. All shares of the Variable Portfolio funds are owned by life insurance companies and Qualified Plans, and are not available for purchase by individuals. Consequently, no portfolio manager owns any shares of Variable Portfolio funds.

* RIC refers to a Registered Investment Company; PIV refers to a Pooled Investment Vehicle.

** Number and type of accounts for which the advisory fee paid is based in part or wholly on performance and the aggregate net assets in those accounts.

(a) Account information provided as of December 31, 2013

(b) The portfolio manager began managing the Fund after its fiscal year end; portfolio manager reporting information is provided as of March 31, 2014.

Potential Conflicts of Interest

- (1) **Columbia Management:** Management of funds-of-funds differs from that of the other Funds. The portfolio management process is set forth generally below and in more detail in the Funds' prospectus.

Portfolio managers of the fund-of-funds may be involved in determining each funds-of-fund's allocation among the three main asset classes (equity, fixed income and cash) and the allocation among investment categories within each asset class, as well as each funds-of-fund's allocation among the underlying funds.

- Because of the structure of the funds-of-funds, the potential conflicts of interest for the portfolio managers may be different than the potential conflicts of interest for portfolio managers who manage other Funds.
- The Investment Manager and its affiliates may receive higher compensation as a result of allocations to underlying funds with higher fees.

In addition to the accounts above, portfolio managers may manage accounts in a personal capacity that may include holdings that are similar to, or the same as, those of the Fund. The Investment Manager has in place a Code of Ethics that is designed to address conflicts and that, among other things, imposes restrictions on the ability of the portfolio managers and other "investment access persons" to invest in securities that may be recommended or traded in the Fund and other client accounts.

To the extent a fund-of-funds invest in securities and instruments other than other Funds, the portfolio manager is subject to the potential conflicts of interest described in (2) below.

A Fund's portfolio manager(s) also may have other potential conflicts of interest in managing the Fund, and the description above is not a complete description of every conflict that could exist in managing the fund and other accounts. Many of the potential conflicts of interest to which the Investment Manager's portfolio managers are subject are essentially the same or similar to the potential conflicts of interest related to the Investment Management activities of the Investment Manager and its affiliates.

- (2) **Columbia Management:** Like other investment professionals with multiple clients, a Fund's portfolio manager(s) may face certain potential conflicts of interest in connection with managing both the Fund and other accounts at the same time. The Investment Manager and the Funds have adopted compliance policies and procedures that attempt to address certain of the potential conflicts that portfolio managers face in this regard. Certain of these conflicts of interest are summarized below.

The management of accounts with different advisory fee rates and/or fee structures, including accounts that pay advisory fees based on account performance (performance fee accounts), may raise potential conflicts of interest for a portfolio manager by creating an incentive to favor higher fee accounts.

Potential conflicts of interest also may arise when a portfolio manager has personal investments in other accounts that may create an incentive to favor those accounts. As a general matter and subject to the Investment Manager's Code of Ethics and certain limited exceptions, the Investment Manager's investment professionals do not have the opportunity to invest in client accounts, other than the Funds.

A portfolio manager who is responsible for managing multiple funds and/or accounts may devote unequal time and attention to the management of those Funds and/or accounts. The effects of this potential conflict may be more pronounced where Funds and/or accounts managed by a particular portfolio manager have different investment strategies.

A portfolio manager may be able to select or influence the selection of the broker/dealers that are used to execute securities transactions for the Funds. A portfolio manager's decision as to the selection of broker/dealers could produce disproportionate costs and benefits among the Funds and the other accounts the portfolio manager manages.

A potential conflict of interest may arise when a portfolio manager buys or sells the same securities for a Fund and other accounts. On occasions when a portfolio manager considers the purchase or sale of a security to be in the best interests of a Fund as well as other accounts, the Investment Manager's trading desk may, to the extent consistent with applicable laws and regulations, aggregate the securities to be sold or bought in order to obtain the best execution and lower brokerage commissions, if any. Aggregation of trades may create the potential for unfairness to a Fund or another account if a portfolio manager favors one account over another in allocating the securities bought or sold.

"Cross trades," in which a portfolio manager sells a particular security held by a Fund to another account (potentially saving transaction costs for both accounts), could involve a potential conflict of interest if, for example, a portfolio manager is permitted to sell a security from one account to another account at a higher price than an independent third party would pay. The Investment Manager and the Funds have adopted compliance procedures that provide that any transactions between a Fund and another account managed by the Investment Manager are to be made at a current market price, consistent with applicable laws and regulations.

Another potential conflict of interest may arise based on the different investment objectives and strategies of a Fund and other accounts managed by its portfolio manager(s). Depending on another account's objectives and other factors, a portfolio manager may give advice to and make decisions for a Fund that may differ from advice given, or the timing or nature of decisions made, with respect to another account. A portfolio manager's investment decisions are the product of many factors in addition to basic suitability for the particular account involved. Thus, a portfolio manager may buy or sell a particular security for certain accounts, and not for a Fund, even though it could have been bought or sold for the Fund at the same time. A portfolio manager also may buy a particular security for one or more accounts when one or more other accounts are selling the security (including short sales). There may be circumstances when a portfolio manager's purchases or sales of portfolio securities for one or more accounts may have an adverse effect on other accounts, including the Funds.

To the extent a Fund invests in underlying Funds, a portfolio manager will be subject to the potential conflicts of interest described in (1) above.

A Fund's portfolio manager(s) also may have other potential conflicts of interest in managing the Fund, and the description above is not a complete description of every conflict that could exist in managing the Fund and other accounts. Many of the potential conflicts of interest to which the Investment Manager's portfolio managers are subject are essentially the same or similar to the potential conflicts of interest related to the Investment Management activities of the Investment Manager and its affiliates.

- (3) ***AQR Portfolio Manager Conflicts of Interest.*** Each of the portfolio managers is also responsible for managing other accounts in addition to the Fund, including other accounts of AQR, or its affiliates. Other accounts may include, without limitation, separately managed accounts for foundations, endowments, pension plans, and high net-worth families; registered investment companies; unregistered investment companies relying on either Section 3(c)(1) or Section 3(c)(7) of the 1940 Act (such companies are commonly referred to as "hedge funds"); foreign investment companies; and may also include accounts or investments managed or made by the portfolio managers in a personal or other capacity ("Proprietary Accounts"). Management of other accounts in addition to the Fund can present certain conflicts of interest, as described below.

From time to time, potential conflicts of interest may arise between a portfolio manager's management of the investments of the Fund, on the one hand, and the management of other accounts, on the other. The other accounts might have similar investment objectives or strategies as the Fund, or otherwise hold, purchase, or sell securities that are eligible to be held, purchased or sold by the Fund. Because of their positions with the Fund, the portfolio managers know the size, timing and possible market impact of the Fund's trades. It is theoretically possible that the portfolio managers could use this information to the advantage of other accounts they manage and to the possible detriment of the Fund.

A potential conflict of interest may arise as a result of a portfolio manager's management of a number of accounts (including Proprietary Accounts) with similar investment strategies. Often, an investment opportunity may be suitable for both the Fund and other accounts, but may not be available in sufficient quantities for both the Fund and the other accounts to participate fully. Similarly, there may be limited opportunity to sell an investment held by the Fund and another account. In addition, different account guidelines and/or differences within particular investment strategies may lead to the use of different investment practices for portfolios with a similar investment strategy. AQR will not necessarily purchase or sell the same securities at the same time, same direction, or in the same proportionate amounts for all eligible accounts, particularly if different accounts have materially different amounts of capital under management by AQR, different amounts of investable cash available, different strategies, or different risk tolerances. As a result, although AQR manages numerous accounts and/or portfolios with similar or identical investment objectives, or may manage accounts with different objectives that trade in the same securities, the portfolio decisions relating to these accounts, and the performance resulting from such decisions, may differ from account to account.

Whenever decisions are made to buy or sell securities by the Fund and one or more of the other accounts (including Proprietary Accounts) simultaneously, AQR or the portfolio manager may aggregate the purchases and sales of the securities and will allocate the securities transactions in a manner that it believes to be equitable under the circumstances. To this end, AQR has adopted policies and procedures that are intended to ensure that investment opportunities are allocated equitably among accounts over time. As a result of the allocations, there may be instances where the Fund will not participate in a transaction that is allocated among other accounts or the Fund may not be allocated the full amount of the securities sought to be traded. While these aggregation and allocation policies could have a detrimental effect on the price or amount of the securities available to the Fund from time to time, it is the opinion of AQR that the overall benefits outweigh any disadvantages that may arise from this practice. Subject to applicable laws and/or account restrictions, AQR may buy, sell or hold securities for other accounts while entering into a different or opposite investment decision for the Fund.

AQR and the Fund's portfolio managers may also face a conflict of interest where some accounts pay higher fees to AQR than others, such as by means of performance fees. Specifically, the entitlement to a performance fee in managing one or more accounts may create an incentive for AQR to take risks in managing assets that it would not otherwise take in the absence of such arrangements. Additionally, since performance fees reward AQR for performance in accounts which are subject to such fees, AQR may have an incentive to favor these accounts over those that have only fixed asset-based fees with respect to areas such as trading opportunities, trade allocation, and allocation of new investment opportunities.

AQR has implemented specific policies and procedures (e.g., a code of ethics and trade allocation policies) that seek to address potential conflicts of interest that may arise in connection with the management of the Fund and other accounts and that are designed to ensure that all client accounts are treated fairly and equitably over time.

- (4) ***GSAM Portfolio Manager Conflicts of Interest.*** The involvement of the GSAM, Goldman Sachs and their affiliates in the management of, or their interest in, other accounts and other activities of Goldman Sachs may present conflicts of interest with respect to one or more funds for which GSAM is a sub-adviser or adviser or limit such funds' investment activities. Goldman Sachs is a worldwide, full service investment banking, broker dealer, asset management and financial services organization and a major participant in global financial markets that provides a wide range of financial services to a substantial and diversified client base that includes corporations, financial institutions, governments and high-net-worth individuals. As such, it acts as an investor, investment banker, research provider, investment manager, financier, advisor, market maker, trader, prime broker, lender, agent and principal. In those and other capacities, Goldman Sachs advises clients in all markets and transactions and purchases, sells, holds and recommends a broad array of investments, including securities, derivatives, loans, commodities, currencies, credit default swaps, indices, baskets and other financial instruments and products for its own account or for the accounts of its customers and has other direct and indirect interests in the global fixed income, currency, commodity, equity and other markets and the securities and issuers in which the certain funds directly and indirectly invest. Thus, it is likely that such funds may have multiple business relationships with and will invest in, engage in transactions with, make voting decisions with respect to, or obtain services from entities for which Goldman Sachs performs or seeks to perform investment banking or other services. GSAM acts as sub-adviser to certain of the funds. The fees earned by GSAM in this capacity are generally based on asset levels, the fees are not directly contingent on the Portfolio performance, and GSAM would still receive significant compensation from the Portfolio even if shareholders lose money. Goldman Sachs and its affiliates engage in proprietary trading and advise accounts and funds which have investment objectives similar to those of the funds and/or which engage in and compete for transactions in the same types of securities, currencies and instruments as the funds. Goldman Sachs and its affiliates will not have any obligation to make available any information regarding their proprietary activities or strategies, or the activities or strategies used for other accounts managed by them, for the benefit of the management of the Funds. The results of the Portfolio's a Fund's investment activities, therefore, may differ from those of Goldman Sachs, its affiliates, and other accounts managed by Goldman Sachs and it is possible that a Fund could sustain losses during periods in which Goldman Sachs and its affiliates and other accounts achieve significant profits on their trading for proprietary or other accounts. In addition, the Funds may enter into transactions in which Goldman Sachs or its other clients have an adverse interest. For example, a Fund may take a long position in a security at the same time that Goldman Sachs or other accounts managed by the GSAM take a short position in the same security (or vice versa). These and other transactions undertaken by Goldman Sachs, its affiliates or Goldman Sachs advised clients may, individually or in the aggregate, adversely impact the Funds. Transactions by one or more Goldman Sachs advised clients or the GSAM may have the effect of diluting or otherwise disadvantaging the values, prices or investment strategies of the Funds. A Fund's activities may be limited because of regulatory restrictions applicable to Goldman Sachs and its affiliates, and/or their internal policies designed to comply with such restrictions. As a global financial services firm, Goldman Sachs also provides a wide range of investment banking and financial services to issuers of securities and investors in securities. Goldman Sachs, its affiliates and others associated with it may create markets or specialize in, have positions in and effect transactions in, securities of issuers held by the Funds, and may also perform or seek to perform investment banking and financial services for those issuers. Goldman Sachs and its affiliates may have business relationships with and purchase or distribute or sell services or products from or to, distributors, consultants and others who recommend the Fund or who engage in transactions with or for the Funds.

The funds may make brokerage and other payments to Goldman Sachs and its affiliates in connection with the Portfolio's portfolio investment transactions, in accordance with applicable law.

- (5) ***Pyrford Portfolio Manager Conflicts of Interest.*** A conflict of interest may arise as a result of a portfolio manager being responsible for multiple accounts, including the Fund, which may have different investment guidelines and objectives. In addition to the Fund, these accounts may include other mutual funds managed on an advisory or subadvisory basis, separate accounts, and collective trust accounts. An investment opportunity may be suitable for the Fund as well as for any of the other managed accounts. However, the investment may not be available in sufficient quantity for all of the

accounts to participate fully. In addition, there may be limited opportunity to sell an investment held by the Fund and the other accounts. The other accounts may have similar investment objectives or strategies as the Fund, they may track the same benchmarks or indexes as the Fund tracks, and they may sell securities that are eligible to be held, sold or purchased by the Fund. A portfolio manager may be responsible for accounts that have different advisory fee schedules, which may create the incentive for the portfolio manager to favor one account over another in terms of access to investment opportunities. A portfolio manager also may manage accounts whose investment objectives and policies differ from those of the Fund, which may cause the portfolio manager to effect trading in one account that may have an adverse effect on the value of the holdings within another account, including the Fund.

To address and manage any potential conflicts of interest, Pyrford has adopted compliance policies and procedures to allocate investment opportunities and to attempt to ensure that each of their clients is treated on a fair and equitable basis. Such policies and procedures include, but are not limited to, trade allocation and trade aggregation policies, cross trading policies, portfolio manager assignment practices, and oversight by investment management, and/or compliance departments. For example, a potential conflict of interest, such as where a portfolio manager could take undue risks to boost lagging performance, would be mitigated through the oversight of the Fund's investment portfolio by the Investment Chairman and Chief Investment Officer of Pyrford. This oversight also attempts to prevent "style drift" and to maintain consistency between the Fund's investment portfolio and the prevailing Pyrford investment philosophy.

Structure of Compensation

(6) **Columbia Management:** Direct compensation is typically comprised of a base salary, and an annual incentive award that is paid either in the form of a cash bonus if the size of the award is under a specified threshold, or, if the size of the award is over a specified threshold, the award is paid in a combination of a cash bonus, an equity incentive award, and deferred compensation. Equity incentive awards are made in the form of Ameriprise Financial restricted stock, or for more senior employees both Ameriprise Financial restricted stock and stock options. The investment return credited on deferred compensation is based on the performance of specified Columbia Mutual funds, in most cases including the mutual funds the portfolio manager manages.

Base salary is typically determined based on market data relevant to the employee's position, as well as other factors including internal equity. Base salaries are reviewed annually, and increases are typically given as promotional increases, internal equity adjustments, or market adjustments.

Annual incentive awards are variable and are based on (1) an evaluation of the employee's investment performance and (2) the results of a peer and/or management review of the employee, which takes into account skills and attributes such as team participation, investment process, communication, and professionalism. Scorecards are used to measure performance of Mutual Funds and other accounts managed by the employee versus benchmarks and peer groups. Performance versus benchmark and peer group is generally weighted for the rolling one, three, and five year periods. One year performance is weighted 10%, three year performance is weighted 60%, and five year performance is weighted 30%. Relative asset size is a key determinant for fund weighting on a scorecard. Typically, weighting would be proportional to actual assets. Consideration may also be given to performance in managing client assets in sectors and industries assigned to the employee as part of his/her investment team responsibilities, where applicable. For leaders who also have group management responsibilities, another factor in their evaluation is an assessment of the group's overall investment performance.

Equity incentive awards are designed to align participants' interests with those of the shareholders of Ameriprise Financial. Equity incentive awards vest over multiple years, so they help retain employees.

Deferred compensation awards are designed to align participants' interests with the investors in the mutual funds and other accounts they manage. The value of the deferral account is based on the performance of Columbia mutual funds. Employees have the option of selecting from various Columbia mutual funds for their mutual fund deferral account, however portfolio managers must allocate a minimum of 25% of their incentive awarded through the deferral program to the Columbia mutual fund(s) they manage. Mutual fund deferrals vest over multiple years, so they help retain employees.

Exceptions to this general approach to bonuses exist for certain teams and individuals.

Funding for the bonus pool is determined by management and depends on, among other factors, the levels of compensation generally in the investment management industry taking into account investment performance (based on market compensation data) and both Ameriprise Financial and Columbia Management profitability for the year, which is largely determined by assets under management.

For all employees the benefit programs generally are the same, and are competitive within the Financial Services Industry. Employees participate in a wide variety of plans, including options in Medical, Dental, Vision, Health Care and Dependent Spending Accounts, Life Insurance, Long Term Disability Insurance, 401(k), and a cash balance pension plan.

- (7) **Columbia Management:** The compensation of specified portfolio managers consists of (i) a base salary, (ii) an annual cash bonus, and (iii) long-term incentive awards in the form of Ameriprise Financial stock options and restricted stock. The annual cash bonus is based on management's assessment of the employee's performance relative to individual and business unit goals and objectives which, for portfolio manager Moore, may be based, in part, on achieving certain investment performance goals and retaining and attracting assets under management, and for portfolio manager Bergene, on developing competitive products, managing existing products, and selecting and monitoring subadvisers for Columbia funds. In addition, subject to certain vesting requirements, the compensation of portfolio manager Moore includes a long-term incentive awards paid in cash that are based on the performance of Ameriprise Financial over rolling three-year periods.

For all employees the benefit programs generally are the same, and are competitive within the Financial Services Industry. Employees participate in a wide variety of plans, including options in Medical, Dental, Vision, Health Care and Dependent Spending Accounts, Life Insurance, Long Term Disability Insurance, 401(k), and a cash balance pension plan.

- (8) **Columbia Management:** Portfolio manager compensation is typically comprised of (i) a base salary, and (ii) an annual cash bonus. The annual cash bonus is paid from team bonus pools. Funding for two of the bonus pools is based upon a percentage of profits or revenue generated by the institutional portfolios they manage. The portfolio managers may also be paid from a separate bonus pool based upon the performance of the mutual fund(s) they manage. Funding for this bonus pool is determined by a percentage of the aggregate assets under management in the mutual fund(s) they manage, and by the one, three and five year performance of the mutual fund(s) in relation to the relevant peer group universe.

Senior management of Columbia Management has the discretion to increase or decrease the size of the bonus pool related to mutual funds and to determine the exact amount of each portfolio manager's bonus paid from this portion of the bonus pool based on his/her performance as an employee. Senior management of Columbia Management does not have discretion over the size of the bonus pool related to institutional portfolios.

For all employees the benefit programs generally are the same, and are competitive within the Financial Services Industry. Employees participate in a wide variety of plans, including options in Medical, Dental, Vision, Health Care and Dependent Spending Accounts, Life Insurance, Long Term Disability Insurance, 401(k), and a cash balance pension plan.

- (9) **Columbia Management:** Portfolio manager compensation is typically comprised of (i) a base salary and (ii) an annual cash bonus. The annual cash bonus, and in some instances the base salary, are paid from a team bonus pool that is based on fees and performance of the accounts managed by the portfolio management team, which might include mutual funds, wrap accounts, institutional portfolios and hedge funds.

The percentage of management fees on mutual funds and long-only institutional portfolios that fund the bonus pool is based on the short term (typically one-year) and long-term (typically three-year and five-year) performance of those accounts in relation to the relevant peer group universe.

A fixed percentage of management fees on hedge funds and separately managed accounts that follow a hedge fund mandate fund the bonus pool.

The percentage of performance fees on hedge funds and separately managed accounts that follow a hedge fund mandate that fund the bonus pool is based on the absolute level of each hedge fund's current year investment return,

For all employees the benefit programs generally are the same, and are competitive within the Financial Services Industry. Employees participate in a wide variety of plans, including options in Medical, Dental, Vision, Health Care and Dependent Spending Accounts, Life Insurance, Long Term Disability Insurance, 401(k), and a cash balance pension plan.

- (10) **AQR Portfolio Manager Compensation.** The compensation for each of the portfolio managers who is a principal of AQR is in the form of distributions based on the revenues generated by AQR. Distributions to each portfolio manager are based on cumulative research, leadership and other contributions to AQR. Revenue distributions are also a function of assets under management and performance of accounts managed by AQR. There is no direct linkage between performance and compensation. However, there is an indirect linkage in that superior performance tends to attract assets and thus increase revenues.

The compensation for the portfolio managers that are not principals of AQR primarily consists of a fixed base salary and a discretionary bonus. Under AQR's salary administration system, salary increases are granted on a merit basis, and in this regard, salaries are reviewed at least annually under a formal review program. Job performance contributes significantly to the determination of any salary increase; other factors, such as seniority and contributions to AQR are also considered. Discretionary bonuses are determined by the portfolio manager's individual performance, including efficiency, contributions to AQR and quality of work performed. A portfolio manager's performance is not based on any specific fund's or strategy's performance, but is affected by the overall performance of the firm.

- (11) **GSAM Portfolio Manager Compensation.** Compensation for GSAM portfolio managers is comprised of a base salary and discretionary variable compensation. The base salary is fixed from year to year. Year-end discretionary variable compensation is primarily a function of each portfolio manager's individual performance and his contribution to overall team performance; the performance of the GSAM and its affiliates; the team's net revenues for the past year which in part is derived from advisory fees, and for certain accounts, performance-based fees; and anticipated compensation levels among competitor firms. Portfolio managers are rewarded, in part, for their delivery of investment performance, measured on a pre-tax basis, which is reasonably expected to meet or exceed the expectations of clients and fund shareholders in terms of: excess return over an applicable benchmark, peer group ranking, risk management and factors specific to certain funds such as yield or regional focus. Performance is judged over 1-, 3- and 5-year time horizons. The benchmark for VP – GS Commodity Strategy is the Dow Jones-UBS Commodity Index Total ReturnSM.

The discretionary variable compensation for portfolio managers is also significantly influenced by: (1) effective participation in team research discussions and process; and (2) management of risk in alignment with the targeted risk parameter and investment objective of the fund. Other factors may also be considered including: (1) general client/ shareholder orientation and (2) teamwork and leadership. Portfolio managers may receive equity-based awards as part of their discretionary variable compensation.

Other Compensation — In addition to base salary and discretionary variable compensation, GSAM has a number of additional benefits in place including (1) a 401k program that enables employees to direct a percentage of their pretax salary and bonus income into a tax-qualified retirement plan; and (2) investment opportunity programs in which certain professionals may participate subject to certain eligibility requirements.

- (12) **Pyrford Portfolio Manager Compensation.** Compensation for investment professionals consists of basic remuneration, which is benchmarked to the external marketplace to ensure it remains competitive. In addition, a portion of the remuneration paid to investment personnel over and above base salary, is tied to the investment performance of client accounts. The formula for each professional varies according to their level of portfolio responsibility and seniority. Investment professionals may also receive bonuses of restricted share units or other units linked to the performance of BMO or Pyrford.

Bonuses paid to investment professionals include the following additional elements:

- Restricted Share Units (RSU). These units are linked to the value of the share price of the parent group, BMO Financial Group, and mature three years after they are granted. The units accrue dividends announced by the company and distribution is made in cash based on the final share price.
- Sustained Growth Award (SGA). These units are linked specifically to the performance of Pyrford, including the profitability and investment performance of the firm as a whole. The units mature three years after they are granted and the final value is determined by the business' previous three year performance.

The Administrator

Columbia Management Investment Advisers, LLC (which is also the Investment Manager) serves as Administrator of the Funds.

Services Provided

Pursuant to the terms of the Administrative Services Agreement, the Administrator has agreed to provide all of the services necessary for, or appropriate to, the business and effective operation of each Fund that are not (a) provided by employees or other agents engaged by the Fund or (b) required to be provided by any person pursuant to any other agreement or arrangement with the Fund.

Administration Fee Paid by the Funds

The Administrator receives fees as compensation for its services, which are computed daily and paid monthly, as set forth in the Administrative Services Agreement, and as shown in the table below.

Administrative Services Agreement Fee Schedule

Fund	Assets Level (figures in billions)	Annual rate at each asset level
VP – AQR Managed Futures Strategy Fund; VP – GS Commodity Strategy Fund; VP – Multi-Strategy Alternatives Fund; VP – Pyrford International Equity Fund; VP – Small Cap Value Fund; VP – Small Company Growth Fund	First \$0.5	0.080%
	\$0.5 to \$1.0	0.075%
	\$1.0 to \$3.0	0.070%
	\$3.0 to \$12.0	0.060%
	Over \$12.0	0.050%
VP – Asset Allocation Fund	All assets	0.020%
VP – Contrarian Core Fund; VP – Select Large Cap Growth Fund	First \$0.5	0.060%
	\$0.5 to \$1.0	0.055%
	\$1.0 to \$3.0	0.050%
	\$3.0 to \$12.0	0.040%
	Over \$12.0	0.030%
VP – Core Bond Fund; VP – Strategic Income Fund	First \$0.5	0.070%
	\$0.5 to \$1.0	0.065%
	\$1.0 to \$3.0	0.060%
	\$3.0 to \$12.0	0.050%
	Over \$12.0	0.040%

VP – Managed Volatility Funds. The Investment Manager has implemented a schedule for the administrative services fees for the VP – Managed Volatility Funds, whereby the Fund pays (i) 0.020% administrative services fee on its assets that are invested in affiliated underlying mutual funds, ETFs and closed-end funds that pay an investment management fee to the Administrator or its affiliate; and (ii) an administrative services fee rate according to the following schedule on securities, instruments and other assets not described in category (i) above, including without limitation affiliated mutual funds, ETFs and closed-end funds that do not pay an investment management fee to the Administrator or its affiliates, third party funds, derivatives and individual securities:

VP – MV Conservative Fund	First \$0.5	0.060%
VP – MV Conservative Growth Fund	\$0.5 to \$1.0	0.055%
VP – MV Growth Fund	\$1.0 to \$3.0	0.050%
	\$3.0 to \$12.0	0.040%
	Over \$12.0	0.030%

The fee is calculated for each calendar day on the basis of net assets as of the close of the preceding day. Fees paid in each of the last three fiscal periods are shown in the table below.

Administration Fees

Fund	Administration Fees		
	2013	2012	2011
VP – AQR Managed Futures Strategy Fund	\$322,536	\$175,957 ⁽¹⁾	—
VP – Asset Allocation Fund	19,172	20,153	\$22,376
VP – Contrarian Core Fund	601,339	184,791 ⁽¹⁾	—

VP – Strategic Income Fund	\$744,832	\$721,091	\$479,022

- (1) For the period from April 30, 2012 (commencement of operations) to December 31, 2012.
(2) For the period from October 5, 2012 (commencement of operations) to December 31, 2012.
(3) For the period from April 30, 2013 (commencement of operations) to December 31, 2013.
(4) For the period from April 12, 2013 (commencement of operations) to December 31, 2013.

The Distributor

Columbia Management Investment Distributors, Inc. (the Distributor), a subsidiary of Ameriprise Financial and an affiliate of the Investment Manager, serves as the principal underwriter and distributor for the continuous offering of shares of the Funds pursuant to a Distribution Agreement. The Distribution Agreement obligates the Distributor to use appropriate efforts to find purchasers for the shares of the Funds. The Distributor's address is: 225 Franklin Street, Boston, MA 02110.

Distribution Obligations

The Trustees have approved a Distribution Plan and Agreement (the Plan) pursuant to Rule 12b-1 under the 1940 Act for the Class 2 shares of the Funds. Under the Plan, the Funds pay the Distributor a monthly distribution fee at the aggregate annual rate of up to 0.25% of each Fund's Class 2 share average daily net assets. Pursuant to the Distribution Agreement, the Distributor, as agent, sells shares of the Funds on a continuous basis and transmits purchase and redemption orders that it receives to the Trust or the Transfer Agent, or their designated agents.

Additionally, the Distributor has agreed to use appropriate efforts to solicit orders for the sale of shares and to undertake advertising and promotion as it believes appropriate in connection with such solicitation. Pursuant to the Distribution Agreement, the Distributor, at its own expense, finances those activities which are primarily intended to result in the sale of shares of the Funds, including, but not limited to, advertising, compensation of underwriters, dealers and sales personnel, the printing and mailing of prospectuses to other than existing shareholders, and the printing and mailing of sales literature. The Distributor, however, may be compensated or reimbursed for all or a portion of such expenses to the extent permitted by a Distribution Plan adopted by the Trust pursuant to Rule 12b-1 under the 1940 Act. See *Investment Management and Other Services — Distribution and Servicing Plans* for more information about the share classes for which the Trust has adopted a Distribution Plan.

See *Investment Management and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest* for more information about conflicts of interest, including those that relate to the Investment Manager and its affiliates.

The Distribution Agreement became effective with respect to each Fund after approval by its Board, and, after an initial two-year period, continues from year to year, provided that such continuation of the Distribution Agreement is specifically approved at least annually by the Board, including its Independent Trustees. The Distribution Agreement terminates automatically in the event of its assignment, and is terminable with respect to each Fund at any time without penalty by the Trust (by vote of the Board or by vote of a majority of the outstanding voting securities of the Fund) or by the Distributor on 60 days' written notice.

Distribution and Servicing Plans

The Trust has adopted distribution and/or shareholder servicing plans for certain share classes. See the cover of this SAI for the share classes offered by the Funds.

The table below shows the annual distribution and/or services fees (payable monthly and calculated based on an annual percentage of average daily net assets) and the combined amount of such fees applicable to each share class. The Trust is not aware as to what amount, if any, of the distribution and service fees paid to the Distributor and Previous Distributor were, on a Fund-by-Fund basis, used for advertising, printing and mailing of prospectuses to other than current shareholders, compensation to broker-dealers, compensation to sales personnel, or interest, carrying or other financing charges.

	Distribution Fee	Service Fee	Combined Total
Class 1	None	None	None
Class 2	Up to 0.25%	0.00%	Up to 0.25%

Fees Paid.

For its most recent fiscal period, each Fund paid distribution fees as shown in the following table.

Distribution Fees

Fund	Class 2
Fiscal Year Ended December 31, 2013	
VP – AQR Managed Futures Strategy Fund	\$ 4,641
VP – Asset Allocation Fund	44,721
VP – Contrarian Core Fund	6,317
VP – Core Bond Fund	1,316 ⁽¹⁾
VP – GS Commodity Strategy Fund	1,250
VP – MV Conservative Fund	61,767 ⁽²⁾

(2) For the period from April 12, 2013 (commencement of operations) to December 31, 2013.

Other Services Provided

The Transfer Agent

Columbia Management Investment Services Corp. (formerly, RiverSource Service Corporation) is the transfer agent for the Funds. The Transfer Agent is located at 225 Franklin Street, Boston, MA 02110. Under the Transfer Agency Agreement, the Transfer Agent provides transfer agency, dividend disbursing agency and shareholder servicing agency services to the Funds. Effective September 7, 2010, the Funds pay the Transfer Agent a transfer agency fee at an annual rate of 0.06% of average net assets, payable monthly and, prior to September 7, 2010, paid the Transfer Agent an annual transfer agency fee of \$22.36 per account, payable monthly. The VP – Managed Volatility Funds do not pay a direct fee for transfer agency services on the portion of assets invested in underlying funds that pay a fee for transfer agency services, however the transfer agent will earn a fee equal to 0.06% of the average daily net assets of the VP – Managed Volatility Funds invested in securities (other than underlying mutual funds that pay a transfer agency fee), including other funds that don't pay a fee for transfer agency services, ETFs, derivatives and individual securities. In addition, prior to September 7, 2010, the Funds reimbursed the Transfer Agent for the fees and expenses the Transfer Agent paid to financial intermediaries that maintained omnibus accounts with the Funds, subject to a cap of up to \$22.36 per account for financial intermediaries that sought payment by the Transfer Agent on a per account basis and a cap equal to 0.15% of a Fund's net assets represented by such an account for financial intermediaries that sought payment by the Transfer Agent based on a percentage of net assets. The Transfer Agent also may retain as additional compensation for its services revenues for fees for wire, telephone and redemption orders, account transcripts due the Transfer Agent from Fund shareholders and interest (net of bank charges) earned with respect to balances in accounts the Transfer Agent maintains in connection with its services to the Funds. The fees paid to the Transfer Agent may be changed by the Board without shareholder approval.

The Transfer Agent retains BFDS/DST, 2 Heritage Drive, North Quincy, MA 02171 as the Funds' sub-transfer agent. BFDS/DST assists the Transfer Agent in carrying out its duties.

The Custodian

The Funds' securities and cash are held pursuant to a custodian agreement with JPMorgan, 1 Chase Manhattan Plaza, 19th Floor, New York, NY 10005. JPMorgan is responsible for safeguarding the Funds' cash and securities, receiving and delivering securities and collecting the Funds' interest and dividends. The custodian is permitted to deposit some or all of its securities in central depository systems as allowed by federal law. For its services, each Fund pays its custodian a maintenance charge and a charge per transaction in addition to reimbursing the custodian's out-of-pocket expenses.

As part of this arrangement, securities purchased outside the United States are maintained in the custody of various foreign branches of JPMorgan or in other financial institutions as permitted by law and by the Fund's custodian agreement.

Pricing and Bookkeeping Services

Prior to July 11, 2011, State Street provided certain pricing and bookkeeping services to the Funds. The Administrator was responsible for overseeing the performance of these services and for certain other services.

Services Provided

Effective December 15, 2006, the Trust entered into a Financial Reporting Services Agreement with State Street and the Previous Adviser (the Financial Reporting Services Agreement) pursuant to which State Street provided financial reporting services to the Funds. Also effective December 15, 2006, the Trust entered into an Accounting Services Agreement with State Street and the Previous Adviser (collectively with the Financial Reporting Services Agreement, the State Street Agreements) pursuant to which State Street provided accounting services to the Funds. Effective May 1, 2010, the State Street Agreements were amended to, among other things, assign and delegate the Previous Adviser's rights and obligations under the State Street Agreements to the Administrator. Under the State Street Agreements, each Fund paid State Street an annual fee of \$38,000 paid monthly plus an additional monthly fee based on an annualized percentage rate of average daily net assets of the Fund for the month. The aggregate fee for a Fund during any year did not exceed \$140,000 annually (exclusive of out-of-pocket expenses and charges). Each Fund also reimbursed State Street for certain out-of-pocket expenses and charges. The State Street Agreements were terminated, with respect to the Funds, by July 11, 2011.

From December 15, 2006 through May 1, 2010, the Trust was party to a Pricing and Bookkeeping Oversight and Services Agreement (the Services Agreement) with the Previous Adviser. Under the Services Agreement, the Previous Adviser provided services related to Fund expenses and the requirements of the Sarbanes-Oxley Act of 2002, and provided oversight of the accounting and financial reporting services provided by State Street. Under the Services Agreement, each Fund reimbursed the Previous Adviser for out-of-pocket expenses and charges, including fees payable to third parties, such as for pricing the Funds' portfolio securities, incurred by the Previous Adviser in the performance of services under the Services Agreement. Prior to January 1, 2008, the Funds also reimbursed the Previous Adviser for accounting oversight services and services related to Fund expenses and the requirements of the Sarbanes-Oxley Act of 2002. Effective May 1, 2010, the services previously provided by the Previous Adviser under the Services Agreement began to be provided by the Administrator under the Administrative Services Agreement, and the Services Agreement was terminated.

Pricing and Bookkeeping Fees Paid by the Funds

The Investment Manager, the Previous Adviser and State Street received fees from the Funds for their services as reflected in the following charts, which show the net pricing and bookkeeping fees paid to State Street, the Investment Manager and the Previous Adviser for the three most recently completed fiscal years, except as otherwise indicated.

Pricing and Bookkeeping Fees

Fund*	Pricing and Bookkeeping Fees		
	2013	2012	2011
VP – Asset Allocation Fund	—	—	\$11,862
VP – Select Large Cap Growth Fund	—	—	20,454
VP – Small Cap Value Fund	—	—	51,588
VP – Small Company Growth Fund	—	—	24,425
VP – Strategic Income Fund	—	—	20,873

* VP – AQR Managed Futures Strategy Fund, VP – Contrarian Core Fund, VP – Core Bond Fund, VP – GS Commodity Strategy Fund, VP – MV Conservative Fund, VP – MV Conservative Growth Fund, VP – MV Growth Fund, VP – Multi-Strategy Fund, and VP – Pyrford International Equity Fund commenced operations subsequent to 2011, and as a result, did not incur Pricing and Bookkeeping Fees.

Independent Registered Public Accounting Firm

PricewaterhouseCoopers LLP, which is located at 225 South Sixth Street, Minneapolis, MN 55402, is the Funds' independent registered public accounting firm. The financial statements contained in each Fund's annual report were audited by PricewaterhouseCoopers LLP. The Board has selected PricewaterhouseCoopers LLP as the independent registered public accounting firm to audit the Funds' books and review their tax returns for their respective fiscal year ends.

The Reports of Independent Registered Public Accounting Firm and the audited financial statements are included in the annual reports to shareholders of the Funds, and are incorporated herein by reference. No other parts of the annual reports or

semiannual reports to shareholders are incorporated by reference herein. The audited financial statements incorporated by reference into the Funds' prospectuses and this SAI have been so incorporated in reliance upon the report of the independent registered public accounting firm, given on its authority as an expert in auditing and accounting.

Counsel

Ropes & Gray LLP serves as legal counsel to the Trust. Its address is Prudential Tower, 800 Boylston St., Boston, Massachusetts 02199. Vedder Price P.C. serves as co-counsel. Its address is 1401 I Street N.W., Suite 1100, Washington, DC 20005.

Expense Limitations

The Investment Manager and certain of its affiliates have agreed to waive fees and/or reimburse certain expenses (excluding certain fees and expenses, such as transaction costs and certain other investment related expenses, interest, taxes, acquired fund fees and expenses (for Funds other than the VP – Managed Volatility Funds), and extraordinary expenses) so that certain Funds' net operating expenses, after giving effect to fees waived/expenses reimbursed and any balance credits and/or overdraft charges from the Fund's custodian, do not exceed specified rates for specified time periods, as described in a Fund's prospectus.

The tables below show the expenses reimbursed and fees waived by Investment Manager and its affiliates for the last three fiscal periods. The table is organized by fiscal year end.

Expenses Reimbursed

Fund	Amounts Reimbursed		
	2013	2012	2011
VP – AQR Managed Futures Strategy Fund	\$660,639	\$249,316 ⁽¹⁾	—
VP – Asset Allocation Fund	43,155	84,550	\$136,223

(4) For the period from April 12, 2013 (commencement of operations) to December 31, 2013.

Fees Waived

If a Fund is not shown, there were no fees waived for the relevant fiscal periods.

Fund	Amounts Waived		
	2013	2012	2011
VP – Asset Allocation Fund	—	—	\$175,679
VP – Small Cap Value Fund	\$337,500	\$282,925	278,271

Other Roles and Relationships of Ameriprise Financial and its Affiliates – Certain Conflicts of Interest

As described above in the *Investment Management and Other Services* section of this SAI, and in the *More Information About the Fund — Primary Service Providers* section of each Fund's prospectus, the Investment Manager, Administrator, Distributor and Transfer Agent, all affiliates of Ameriprise Financial, receive compensation from the Funds for the various services they provide to the Funds. Additional information as to the specific terms regarding such compensation is set forth in these affiliated service providers' contracts with the Funds, each of which typically is included as an exhibit to Part C of each Fund's registration statement.

In many instances, the compensation paid to the Investment Manager and other Ameriprise Financial affiliates for the services they provide to the Funds is based, in some manner, on the size of the Funds' assets under management. As the size of the Funds' assets under management grows, so does the amount of compensation paid to the Investment Manager and other Ameriprise Financial affiliates for providing services to the Funds. This relationship between Fund assets and affiliated service provider compensation may create economic and other conflicts of interests of which Fund investors should be aware.

These potential conflicts of interest, as well as additional ones, are discussed in detail below and also are addressed in other disclosure materials, including the Funds' prospectuses. These conflicts of interest also are highlighted in account documentation and other disclosure materials of Ameriprise Financial affiliates that make available or offer the Columbia Funds as investments in connection with their respective products and services. In addition, Part 1A of the Investment Manager's Form ADV, which it must file with the SEC as an investment adviser registered under the Investment Advisers Act of 1940, provides information about the Investment Manager's business, assets under management, affiliates and potential conflicts of interest. Part 1A of the Investment Manager's Form ADV is available online through the SEC's website at www.adviserinfo.sec.gov.

The Board monitors events to identify any material conflicts that may arise between the interests of the Participating Insurance Companies or between the interests of owners of variable annuity contracts or variable life insurance policies, or participants in Qualified Plans. The Trust currently does not foresee any disadvantages to the owners of variable annuity contracts or variable life insurance policies or participants in Qualified Plans arising from the fact that certain interests of owners may differ.

Additional actual or potential conflicts of interest and certain investment activity limitations that could affect the Funds may arise from the financial services activities of Ameriprise Financial and its affiliates, including, for example, the investment advisory/management services provided for clients and customers other than the Funds. In this regard, Ameriprise Financial is a major financial services company. Ameriprise Financial and its affiliates are engaged in a wide range of financial activities beyond the mutual fund-related activities of the Investment Manager, including, among others, broker-dealer (sales and trading), asset management, insurance and other financial activities. The broad range of financial services activities of Ameriprise Financial and its affiliates may involve multiple advisory, transactional, lending, financial and other interests in securities and other instruments, and in companies, that may be bought, sold or held by the Funds. The following describes certain actual and potential conflicts of interest that may be presented.

Actual and Potential Conflicts of Interest Related to the Investment Advisory/Management Activities of Ameriprise Financial and its Affiliates in Connection With Other Advised/Managed Funds and Accounts

The Investment Manager and other affiliates of Ameriprise Financial may advise or manage funds and accounts other than the Funds. In this regard, Ameriprise Financial and its affiliates may provide investment advisory/management and other services to other advised/managed funds and accounts that are similar to those provided to the Funds. The Investment Manager and Ameriprise Financial's other investment adviser affiliates (including, for example, Columbia Wanger Asset Management, LLC) will give advice to and make decisions for all advised/managed funds and accounts, including the Funds, as they believe to be in that fund's and/or account's best interests, consistent with their fiduciary duties. The Funds and the other advised/managed funds and accounts of Ameriprise Financial and its affiliates are separately and potentially divergently managed, and there is no assurance that any investment advice Ameriprise Financial and its affiliates give to other advised/managed funds and accounts will also be given simultaneously or otherwise to the Funds.

A variety of other actual and potential conflicts of interest may arise from the advisory relationships of the Investment Manager and other Ameriprise Financial affiliates with other clients and customers. Advice given to the Funds and/or investment decisions made for the Funds by the Investment Manager or other Ameriprise Financial affiliates may differ from, or may conflict with, advice given to and/or investment decisions made for other advised/managed funds and accounts. As a result, the performance of the Funds may differ from the performance of other funds or accounts advised/managed by the Investment Manager or other Ameriprise Financial affiliates. Similarly, a position taken by Ameriprise Financial and its affiliates, including the Investment Manager, on behalf of other funds or accounts may be contrary to a position taken on

behalf of the Funds. Moreover, Ameriprise Financial and its affiliates, including the Investment Manager, may take a position on behalf of other advised/managed funds and accounts, or for their own proprietary accounts, that is adverse to companies or other issuers in which the Funds are invested. For example, the Funds may hold equity securities of a company while another advised/managed fund or account may hold debt securities of the same company. If the portfolio company were to experience financial difficulties, it might be in the best interest of the Funds for the company to reorganize while the interests of the other advised/managed fund or account might be better served by the liquidation of the company. This type of conflict of interest could arise as the result of circumstances that cannot be generally foreseen within the broad range of investment advisory/management activities in which Ameriprise Financial and its affiliates engage.

Investment transactions made on behalf of other funds or accounts advised/managed by the Investment Manager or other Ameriprise Financial affiliates also may have a negative effect on the value, price or investment strategies of the Funds. For example, this could occur if another advised/managed fund or account implements an investment decision ahead of, or at the same time as, the Funds and causes the Funds to experience less favorable trading results than they otherwise would have experienced based on market liquidity factors. In addition, the other funds and accounts advised/managed by the Investment Manager and other Ameriprise Financial affiliates, including the other Columbia Funds, may have the same or very similar investment objective and strategies as the Funds. In this situation, the allocation of, and competition for, investment opportunities among the Funds and other funds and/or accounts advised/managed by the Investment Manager or other Ameriprise Financial affiliates may create conflicts of interest especially where, for example, limited investment availability is involved. The Investment Manager has adopted policies and procedures addressing the allocation of investment opportunities among the Funds and other funds and accounts advised by the Investment Manager and other affiliates of Ameriprise Financial. For more information, see *Investment Management and Other Services — The Investment Manager and Subadvisers — Portfolio Managers — Potential Conflicts of Interests*.

Sharing of Information among Advised/Managed Accounts

Ameriprise Financial and its affiliates also may possess information that could be material to the management of a Fund and may not be able to, or may determine not to, share that information with the Fund, even though the information might be beneficial to the Fund. This information may include actual knowledge regarding the particular investments and transactions of other advised/managed funds and accounts, as well as proprietary investment, trading and other market research, analytical and technical models, and new investment techniques, strategies and opportunities. Depending on the context, Ameriprise Financial and its affiliates generally will have no obligation to share any such information with the Funds. In general, employees of Ameriprise Financial and its affiliates, including the portfolio managers of the Investment Manager, will make investment decisions without regard to information otherwise known by other employees of Ameriprise Financial and its affiliates, and generally will have no obligation to access any such information and may, in some instances, not be able to access such information because of legal and regulatory constraints or the internal policies and procedures of Ameriprise Financial and its affiliates. For example, if the Investment Manager or another Ameriprise Financial affiliate, or their respective employees, come into possession of non-public information regarding another advised/managed fund or account, they may be prohibited by legal and regulatory constraints, or internal policies and procedures, from using that information in connection with transactions made on behalf of the Funds. For more information, see *Investment Management and Other Services — The Investment Manager and Subadvisers — Portfolio Managers — Potential Conflicts of Interests*.

Soft Dollar Benefits

Certain products and services, commonly referred to as “soft dollar services” (including, to the extent permitted by law, research reports, economic and financial data, financial publications, proxy analysis, computer databases and other research-oriented materials), that the Investment Manager may receive in connection with brokerage services provided to a Fund may have the inadvertent effect of disproportionately benefiting other advised/managed funds or accounts. This could happen because of the relative amount of brokerage services provided to a Fund as compared to other advised/managed funds or accounts, as well as the relative compensation paid by a Fund.

Services Provided to Other Advised/Managed Accounts

Ameriprise Financial and its affiliates also may act as an investment adviser, investment manager, administrator, transfer agent, custodian, trustee, broker-dealer, agent, or in another capacity, for advised/managed funds and accounts other than the Funds, and may receive compensation for acting in such capacity. This compensation that the Investment Manager, Distributor and Transfer Agent and other Ameriprise Financial affiliates receive could be greater than the compensation Ameriprise Financial and its affiliates receive for acting in the same or similar capacity for the Funds. In addition, the Investment Manager, Distributor and Transfer Agent and other Ameriprise Financial affiliates may receive other benefits, including enhancement of new or existing business relationships. This compensation and/or the benefits that Ameriprise Financial and its affiliates may receive from other advised/managed funds and accounts and other relationships could potentially create incentives to favor other advised/managed funds and accounts over the Funds. Trades made by Ameriprise

Financial and its affiliates for the Funds may be, but are not required to be, aggregated with trades made for other funds and accounts advised/managed by the Investment Manager and other Ameriprise Financial affiliates. If trades are aggregated among the Funds and those other funds and accounts, the various prices of the securities being traded may be averaged, which could have the potential effect of disadvantaging the Funds as compared to the other funds and accounts with which trades were aggregated.

Proxy Voting

Although the Investment Manager endeavors to make all proxy voting decisions with respect to the interests of the Funds for which it is responsible in accordance with its proxy voting policies and procedures, the Investment Manager's proxy voting decisions with respect to a Fund's portfolio securities may or may not benefit other advised/managed funds and accounts, and/or clients, of Ameriprise Financial and its affiliates. The Investment Manager has adopted proxy voting policies and procedures that are designed to provide that all proxy voting is done in the best interests of its clients, including the Funds, without any resulting benefit or detriment to the Investment and/or its affiliates, including Ameriprise Financial and its affiliates. For more information about the Funds' proxy voting policies and procedures, see *Investment Management and Other Services — Proxy Voting Policies and Procedures*.

Certain Trading Activities

The directors/trustees, officers and employees of Ameriprise Financial and its affiliates may buy and sell securities or other investments for their own accounts, and in doing so may take a position that is adverse to the Funds. In order to reduce the possibility that such personal investment activities of the directors/trustees, officers and employees of Ameriprise Financial and its affiliates will materially adversely affect the Funds, Ameriprise Financial and its affiliates have adopted policies and procedures, and the Funds, the Board, the Investment Manager and the Distributor have each adopted a Code of Ethics that addresses such personal investment activities. For more information, see *Investment Management and Other Services — Codes of Ethics*.

Affiliate Transactions

Subject to applicable legal and regulatory requirements, a Fund may enter into transactions in which Ameriprise Financial and/or its affiliates, or companies that are deemed to be affiliates of a Fund because of, among other factors, their or their affiliates' ownership or control of shares of the Fund, may have an interest that potentially conflicts with the interests of the Fund. For example, an affiliate of Ameriprise Financial may sell securities to a Fund from an offering in which it is an underwriter or that it owns as a dealer, subject to applicable legal and regulatory requirements. Applicable legal and regulatory requirements also may prevent a Fund from engaging in transactions with an affiliate of the Fund, which may include Ameriprise Financial and its affiliates, or from participating in an investment opportunity in which an affiliate of a Fund participates.

Certain Investment Limitations

Regulatory and other restrictions may limit a Fund's investment activities in various ways. For example, certain securities may be subject to ownership limitations due to regulatory limits on investments in certain industries (such as, for example, banking and insurance) and markets (such as emerging or international markets), or certain transactions (such as those involving certain derivatives or other instruments) or mechanisms imposed by certain issuers (such as, among others, poison pills). Certain of these restrictions may impose limits on the aggregate amount of investments that may be made by affiliated investors in the aggregate or in individual issuers. In these circumstances, the Investment Manager may be prevented from acquiring securities for a Fund that it might otherwise prefer to acquire if the acquisition would cause the Fund and its affiliated investors to exceed an applicable limit. These types of regulatory and other applicable limits are complex and vary significantly in different contexts including, among others, from country to country, industry to industry and issuer to issuer. The Investment Manager has policies and procedures in place designed to monitor and interpret these limits. Nonetheless, given the complexity of these limits, the Investment Manager and/or its affiliates may inadvertently breach these limits, and a Fund may therefore be required to sell securities that it might otherwise prefer to hold in order to comply with such limits. In addition, aggregate ownership limitations could cause performance dispersion among funds and accounts managed by the Investment Manager with similar investment objectives and strategies and portfolio management teams. For example, if further purchases in an issuer are restricted due to regulatory or other reasons, a portfolio manager would not be able to acquire securities or other assets of an issuer for a new Fund that may already be held by other funds and accounts with the same/similar investment objectives and strategies that are managed by the same portfolio management team. The Investment Manager may also choose to limit purchases in an issuer to a certain threshold for risk management purposes. If the holdings of the Investment Manager's affiliates are included in that limitation, a Fund may be more limited in its ability to purchase a particular security or other asset than if the holdings of the Investment Manager's affiliates had been excluded from the calculation. At certain times, a Fund may be restricted in its investment activities because of relationships that an affiliate of the Fund, which may include Ameriprise Financial and its affiliates, may have with the issuers of securities. This could

happen, for example, if a Fund desired to buy a security issued by a company for which Ameriprise Financial or an affiliate serves as underwriter. In any of these scenarios, a Fund's inability to participate (or participate further) in a particular investment, despite a portfolio manager's desire to so participate, may negatively impact Fund performance. The internal policies and procedures of Ameriprise Financial and its affiliates covering these types of restrictions and addressing similar issues also may at times restrict a Fund's investment activities. See also *About the Funds' Investments — Certain Investment Activity Limits*.

Actual and Potential Conflicts of Interest Related to Ameriprise Financial and its Affiliates' Non-Advisory Relationships with Clients and Customers other than the Funds

The financial relationships that Ameriprise Financial and its affiliates may have with companies and other entities in which a Fund may invest can give rise to actual and potential conflicts of interest. Subject to applicable legal and regulatory requirements, a Fund may invest (a) in the securities of Ameriprise Financial and/or its affiliates and/or in companies in which Ameriprise Financial and its affiliates have an equity, debt or other interest, and/or (b) in the securities of companies held by other Columbia Funds. The purchase, holding and sale of such securities by a Fund may enhance the profitability and the business interests of Ameriprise Financial and/or its affiliates and/or other Columbia Funds. There also may be limitations as to the sharing with the Investment Manager of information derived from the non-investment advisory/management activities of Ameriprise Financial and its affiliates because of legal and regulatory constraints and internal policies and procedures (such as information barriers and ethical walls). Because of these limitations, Ameriprise Financial and its affiliates generally will not share information derived from its non-investment advisory/management activities with the Investment Manager.

Actual and Potential Conflicts of Interest Related to Ameriprise Financial Affiliates' Marketing and Use of the Columbia Funds as Investment Options

Ameriprise Financial and its affiliates also provide a variety of products and services that, in some manner, may utilize the Columbia Funds as investment options. For example, the Columbia Funds may be offered as investments in connection with brokerage and other securities products offered by Ameriprise Financial and its affiliates, and may be utilized as investments in connection with fiduciary, investment management and other accounts offered by affiliates of Ameriprise Financial, as well as for other Columbia Funds structured as "funds of funds." The use of the Columbia Funds in connection with other products and services offered by Ameriprise Financial and its affiliates may introduce economic and other conflicts of interest. These conflicts of interest are highlighted in account documentation and other disclosure materials for the other products and services offered by Ameriprise Financial and its affiliates.

Ameriprise Financial and its affiliates, including the Investment Manager, may make payments to their affiliates in connection with the promotion and sale of the Funds' shares, in addition to the sales-related and other compensation that these parties may receive from the Funds. As a general matter, personnel of Ameriprise Financial and its affiliates do not receive compensation in connection with their sales or use of the Funds that is greater than that paid in connection with their sales of other comparable products and services. Nonetheless, because the compensation that the Investment Manager and other affiliates of Ameriprise Financial may receive for providing services to the Funds is generally based on the Funds' assets under management and those assets will grow as shares of the Funds are sold, potential conflicts of interest may exist. See *Brokerage Allocation and Other Practices — Additional Selling and/or Servicing Agent Payments* for more information.

Codes of Ethics

The Funds, the Investment Manager, the subadvisers and the Distributor have adopted Codes of Ethics pursuant to the requirements of the 1940 Act, including Rule 17j-1 under the 1940 Act. These Codes of Ethics permit personnel subject to the Codes of Ethics to invest in securities, including securities that may be bought or held by the Funds. These Codes of Ethics are included as exhibits to Part C of the Funds' registration statement. These Codes of Ethics can be reviewed and copied at the SEC's Public Reference Room and may be obtained by calling the SEC at 202.551.8090; they also are available on the SEC's website at www.sec.gov, and may be obtained, after paying a duplicating fee, by electronic request to publicinfo@sec.gov or by writing to the SEC's Public Reference Section, Washington, D.C. 20549-1520.

Proxy Voting Policies and Procedures

General. The Funds have delegated to the Investment Manager the responsibility to vote proxies relating to portfolio securities held by the Funds, including Funds managed by subadvisers. In deciding to delegate this responsibility to the Investment Manager, the Board reviewed the policies adopted by the Investment Manager or summaries of such policies. These included the procedures that the Investment Manager follows when a vote presents a conflict between the interests of the Funds and their shareholders and the Investment Manager and its affiliates.

The Investment Manager's policy is to vote all proxies for Fund securities in a manner considered by the Investment Manager to be in the best economic interests of its clients, including the Funds, without regard to any benefit or detriment to the Investment Manager, its employees or its affiliates. The best economic interests of clients is defined for this purpose as the interest of enhancing or protecting the value of client accounts, considered as a group rather than individually, as the Investment Manager determines in its discretion. The Investment Manager endeavors to vote all proxies of which it becomes aware prior to the vote deadline; provided, however, that in certain circumstances the Investment Manager may refrain from voting securities. For instance, the Investment Manager may refrain from voting foreign securities if it determines that the costs of voting outweigh the expected benefits of voting and typically will not vote securities if voting would impose trading restrictions. In addition, the Funds will generally refrain from recalling portfolio securities on loan to vote proxies based upon a determination that the costs and lost revenue to the Funds, combined with the administrative effects of recalling the securities, generally outweigh the benefit of voting the proxy. While in general, neither the Funds nor the Investment Manager assesses the economic impact and benefits of voting loaned securities on a case-by-case basis, situations may arise in which the Funds or the Investment Manager requests that loaned securities be recalled in order to vote a proxy. However, the Board has established a guideline to direct the Investment Manager to endeavor to recall loaned securities if (i) a proposal relating to a merger or acquisition, a material restructuring, a proxy contest or a shareholder rights plan is expected to be on the ballot or (ii) the prior year's evaluation of the issuer's pay-for-performance practices has raised concerns, based on the determination that, in these situations, the benefits of voting such proxies generally outweigh the costs or lost revenue to the Funds or any potential adverse administrative effects to the Funds of not recalling such securities.

Oversight. The operation of the Investment Manager's proxy voting policy and procedures is overseen by a committee (the "Proxy Voting Committee") composed of representatives of the Investment Manager's equity investments, equity research, compliance, legal and operations functions. The Proxy Voting Committee has the responsibility to review, at least annually, the Investment Manager's proxy voting policies to ensure consistency with internal policies, regulatory requirements, conflicts of interest and client disclosures.

The Proxy Voting Committee also develops predetermined voting guidelines used to vote securities. The voting guidelines indicate whether to vote for, against or abstain from particular proposals, or whether the matter should be considered on a case-by-case basis. The Proxy Voting Committee may determine to vote differently from the guidelines on particular proposals in the event it determines that doing so is in the clients' best economic interests. The Investment Manager may also consider the voting recommendations of analysts, portfolio managers and information obtained from outside resources, including one or more third-party research providers. When proposals are not covered by the voting guidelines or a voting determination must be made on a case-by-case basis, a portfolio manager or analyst will make the voting determination based on his or her determination of the clients' best economic interests. In addition, the Proxy Voting Committee may determine proxy votes when proposals require special consideration.

Addressing Conflicts of Interest. The Investment Manager seeks to address potential material conflicts of interest by having predetermined voting guidelines. In addition, if the Investment Manager determines that a material conflict of interest exists, the Investment Manager will invoke one or more of the following conflict management practices: (i) causing the proxies to be voted in accordance with the recommendations of an independent third party (which may be the Investment Manager's proxy voting administrator or research provider); (ii) causing the proxies to be delegated to an independent third party (which may be the Investment Manager's proxy voting administrator or research provider); and (iii) in unusual cases, with the client's consent and upon ample notice, forwarding the proxies to the Investment Manager's clients so that they may vote the proxies directly. A member of the Proxy Voting Committee is prohibited from voting on any proposal for which he or she has a conflict of interest by reason of a direct relationship with the issuer or other party affected by a given proposal. Persons making recommendations to the Proxy Voting Committee or its members are required to disclose to the committee any relationship with a party making a proposal or other matter known to the person that would create a potential conflict of interest.

Voting Proxies of Affiliated Underlying Funds. Certain Funds may invest in shares of other Columbia Funds (referred to in this context as "underlying funds") and may own substantial portions of these underlying funds. If such Funds are in a master-feeder structure, the feeder Fund will either seek instructions from its shareholders with regard to the voting of proxies with respect to the master fund's shares and vote such proxies in accordance with such instructions or vote the shares held by it in the same proportion as the vote of all other master fund shareholders. With respect to Funds that hold shares of underlying funds other than in a master-feeder structure, the holding Funds will vote proxies of underlying funds in the same proportion as the vote of all other holders of the underlying fund's shares, unless the Board otherwise instructs.

Proxy Voting Agents. The Investment Manager has retained Institutional Shareholder Services Inc., a third-party vendor, as its proxy voting administrator to implement its proxy voting process and to provide recordkeeping and vote disclosure services. The Investment Manager has retained both Institutional Shareholder Services Inc. and Glass-Lewis & Co. to provide proxy research services.

Additional Information. Information regarding how the Columbia Funds (except certain Columbia Funds that do not invest in voting securities) voted proxies relating to portfolio securities during the most recent twelve month period ended June 30 will be available by August 31 of this year free of charge: (i) through the Columbia Funds' website at www.columbiamanagement.com and (ii) on the SEC's website at www.sec.gov. For a copy of the Investment Manager's voting guidelines in effect on the date of this SAI, see Appendix C to this SAI.

Organization and Management of Wholly-Owned Subsidiaries

Each of VP – AQR Managed Futures Strategy Fund, VP – GS Commodity Strategy Fund, and VP – Multi-Strategy Alternatives Fund (for purposes of this section, referred to collectively as the “Fund”) may invest up to 25% of its total assets in one or more wholly-owned subsidiaries (referred to herein collectively as the “Subsidiary”) organized under the laws of the Cayman Islands, which will gain exposure to the commodities markets. The Subsidiary's commodity-linked investments (including commodity-linked futures contracts, structured notes, swaps and options), swaps and other investments are expected to produce leveraged exposure to the performance of the commodities markets. The Subsidiary also invests in investment-grade fixed income and other securities that may serve as collateral for its commodity-linked positions and may hold cash or cash equivalents, and may invest directly in commodities.

The Subsidiary is overseen by its own board of directors and is not registered under the 1940 Act. The Fund, as the sole shareholder of the Subsidiary, does not have all of the protections offered by the 1940 Act to shareholders of investment companies registered under the 1940 Act. However, the Subsidiary is wholly-owned and controlled by the Fund and the Fund's Board of Trustees oversees the investment activities of the Fund, including its investment in the Subsidiary, and the Fund's role as sole shareholder of the Subsidiary. The Investment Manager and the Fund's subadvisers are responsible for the Subsidiary's day-to-day business pursuant to their separate agreements with, or in respect of, the Subsidiary. The following individuals serve as Directors of the Subsidiary:

Name, address, year of birth	Position held with Subsidiary and length of service	Principal occupation during past five years
Anthony P. Haugen 807 Ameriprise Financial Center Minneapolis, MN 55474-2405 1964	Director since 2013	Vice President Finance, Ameriprise Financial, Inc. since June 2004
Amy K. Johnson 5228 Ameriprise Financial Center Minneapolis, MN 55474-2405 1965	Director since 2013	See <i>Fund Governance — The Officers</i>
Paul D. Pearson 5228 Ameriprise Financial Center Minneapolis, MN 55474-2405 1956	Director since 2013	See <i>Fund Governance — The Officers</i>

The Subsidiary has entered into separate contracts for the provision of advisory, administrative and custody services with the same service providers who provide those services to the Fund. Each Subsidiary will bear the fees and expenses incurred in connection with the services it receives pursuant to those agreements.

The financial information of the Subsidiary will be consolidated into the Fund's financial statements, as contained within the Fund's annual and semiannual reports provided to shareholders.

As described below under *TAXATION — Qualification as a Regulated Investment Company*, in order to qualify for the special tax treatment accorded to RICs under the Code, the Fund must satisfy a 90% gross income requirement and an asset diversification requirement. These requirements are not applicable to the Subsidiary. The Subsidiary will take steps to ensure that income recognized by the Fund in respect of the Subsidiary will be qualifying income for purposes of the 90% gross income requirement. For purposes of the asset diversification requirement, the Fund will limit its investment in the Subsidiary in the aggregate to 25% or less of the Fund's total assets as of the end of every quarter of its taxable year; the asset diversification requirement applies to the Fund's interest in the Subsidiary but not to the Subsidiary's investments.

Changes in U.S. laws and/or the laws of the Cayman Islands could prevent the Fund and/or the Subsidiary from operating as described in the Fund's prospectus and this SAI, and could negatively affect the Fund and its shareholders. For example, the Cayman Islands currently does not impose certain taxes on the Subsidiary, including any income, corporate or capital gains tax, estate duty, inheritance tax, gift tax or withholding tax. If Cayman Islands laws were changed to require the Subsidiary to pay Cayman Islands taxes, the investment returns of the Fund would likely decrease.

By investing in one or more wholly owned subsidiaries organized under the laws of the Cayman Islands (Subsidiary), the Fund is indirectly exposed to the risks associated with the Subsidiary's investments. The derivatives and other investments held by the Subsidiary are subject to the same risks that would apply to similar investments if held directly by the Fund. The Subsidiary is subject to the same principal risk that the Fund is subject to (which are described in the applicable Fund's prospectus). There can be no assurance that the investment objective of the Subsidiary will be achieved. The Subsidiary is not registered under the 1940 Act and, except as otherwise noted, is not subject to the investor protections of the 1940 Act. However, the Fund wholly owns and controls the Subsidiary, and the Fund and the Subsidiary are both managed by the Investment Manager, making it unlikely that the Subsidiary will take action contrary to the interests of the Fund and its shareholders. The Fund's Board has oversight responsibility for the investment activities of the Fund, including its investment in the Subsidiary, and the Fund's role as sole shareholder of the Subsidiary. In managing the Subsidiary's investment portfolio, the Investment Manager will manage the Subsidiary's portfolio in accordance with the Fund's investment policies and restrictions. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary, respectively, are organized, could result in the inability of the Fund and/or the Subsidiary to operate as described in the applicable prospectus and this SAI and could adversely affect the Fund and its shareholders. For example, the Cayman Islands currently does not impose any income, corporate or capital gains tax, estate duty, inheritance tax, gift tax or withholding tax on the Subsidiary. If Cayman Islands law were changed and the Subsidiary was required to pay Cayman Island taxes, the investment returns of the Fund would likely decrease.

FUND GOVERNANCE

The Board of Trustees

Leadership Structure and Risk Oversight

The Board oversees the Trust and the Funds. The Trustees are responsible for overseeing the management and operations of the Trust. The Board consists of eleven Trustees who have varied experience and skills. Ten of the Trustees, including the Chairman of the Board, are Independent Trustees. The remaining Trustee, Mr. William F. Truscott, is an “interested person” (as defined in the 1940 Act) of the Columbia Funds by reason of his service as chairman of the board and president of the Investment Manager and director and chief executive officer of the Distributor. With respect to Mr. Truscott, the Trustees have concluded that having a senior officer of the Investment Manager serve as a Trustee benefits Fund shareholders by facilitating communication between the Independent Trustees and the senior management of the Investment Manager, and by assisting efforts to align the interests of the Investment Manager more closely with those of Fund shareholders. Further information about the backgrounds and qualifications of the Trustees can be found in the section *Trustee Biographical Information and Qualifications*. The Board has several standing committees, which are an integral part of each Fund’s overall governance and risk oversight structure. The committees include the Audit Committee, the Governance Committee, the Advisory Fees & Expenses Committee, the Compliance Committee, the Investment Oversight Committees and the Product and Distribution Committee. All of the members of each of the committees are Independent Trustees. The roles of each committee are more fully described in the section *Standing Committees* below.

The Funds have retained the Investment Manager as the Funds’ investment adviser and administrator. The Investment Manager provides the Funds with investment advisory services, and is responsible for day-to-day administration of the Funds and management of the risks that arise from the Funds’ investments and operations. The Board provides oversight of the services provided by the Investment Manager, including risk management services. In addition, each committee of the Board provides oversight of the Investment Manager’s risk management services with respect to the particular activities within the committee’s purview. In the course of providing oversight, the Board and the committees receive a wide range of reports with respect to the Funds’ activities, including reports regarding each Fund’s investment portfolio, the compliance of the Funds with applicable laws, and the Funds’ financial accounting and reporting. The Board and the relevant committees meet periodically with officers of the Funds and the Investment Manager and with representatives of various of the Funds’ service providers. The Board and certain committees also meet periodically with the Funds’ Chief Compliance Officer to receive reports regarding the compliance of the Funds and the Investment Manager with the federal securities laws and their internal compliance policies and procedures. In addition, the Board meets periodically with the portfolio managers of the Funds to receive reports regarding the management of the Funds, including their investment risks.

The Board reviews its leadership structure periodically and believes that its structure is appropriate, in light of the size of the Trust and the nature of its business, to enable the Board to exercise its oversight of the Funds and the other investment companies overseen by the Trustees. In particular, the Board believes that having an Independent Trustee serve as the chair of the Board and having other Independent Trustees serve as chairs of each committee promotes independence from the Investment Manager in setting agendas and conducting meetings. The Board believes that its committee structure makes the oversight process more efficient and more effective by allowing, among other things, smaller groups of Trustees to bring increased focus to matters within the purview of each committee.

Standing Committees

Ms. Lukitsh and Messrs. Hacker, Nelson and Neuhauser are members of the Advisory Fees & Expenses Committee. The Advisory Fees & Expenses Committee’s functions include reviewing and making recommendations to the Board as to contracts requiring approval of a majority of the Independent Trustees and as to any other contracts that may be referred to the Advisory Fees & Expenses Committee by the Board.

Ms. Verville and Messrs. Hacker, Moffett and Simpson are members of the Audit Committee. The Audit Committee’s functions include making recommendations to the Board regarding the selection and performance of the independent registered public accounting firm, and reviewing matters relating to accounting and auditing practices and procedures, accounting records and the internal accounting controls of the Funds and certain service providers.

Mses. Kelly and Verville and Messrs. Moffett and Nelson are members of the Compliance Committee. The Compliance Committee’s functions include, among other things, monitoring, supervising and assessing the performance of the Funds’ Chief Compliance Officer and reviewing his compensation, reviewing periodically and recommending changes to the codes of ethics and compliance policies of the Funds and its service providers, and reviewing each Fund’s portfolio execution.

Mses. Kelly and Lukitsh and Messrs. Mayer and Neuhauser are members of the Product and Distribution Committee. The Product and Distribution Committee’s functions include, among other things, reviewing such matters relating to the

marketing of the Funds and the distribution of the Fund’s shares, including matters relating to the design and positioning of funds, marketing and distribution strategies for the Funds and the effectiveness and competitiveness of such strategies, as the Committee may deem appropriate.

Messrs. Drake, Hacker, Mayer and Simpson are members of the Governance Committee. The Governance Committee’s functions include recommending to the Board nominees for Independent Trustee positions and for appointments to various committees, overseeing the Board’s periodic evaluations of the effectiveness of the Board, reviewing and recommending to the Board governance and other policies and practices to be followed in carrying out the Trustees’ duties and responsibilities and reviewing and making recommendations to the Board regarding the compensation of the Independent Trustees.

The Governance Committee will consider nominees for Trustee recommended by shareholders provided that such recommendations are submitted by the date disclosed in a Fund’s proxy statement and otherwise comply with applicable securities laws, including Rule 14a-8 under the 1934 Act. Such shareholder recommendations must be in writing and should be sent to the attention of the Governance Committee in care of the Fund at 225 Franklin Street, Boston, MA 02110. Shareholder recommendations should include the proposed nominee’s biographical information (including business experience for the past ten years) and a description of the qualifications of the proposed nominee, along with a statement from the proposed nominee that he or she is willing to serve and meets the requirements to serve as an Independent Trustee, if applicable.

Each Independent Trustee also serves on an Investment Oversight Committee (IOC). Each IOC is responsible for monitoring, on an ongoing basis, a select group of Columbia Funds overseen by the Board and gives particular consideration to such matters as each Fund’s adherence to its investment mandates, historical performance, changes in investment processes and personnel, and proposed changes to investment objectives. Investment personnel who manage the Funds attend IOC meetings from time to time to assist each IOC in its review of the Funds. Each IOC meets four times a year, as the applicable IOC did for each Fund’s most recently completed fiscal year. The members of the respective IOCs are as follows:

IOC #1: Ms. Verville and Messrs. Drake and Neuhauser are responsible for reviewing funds in the following asset categories: Global Stock, International Stock, Large Growth, Income and Specialty, Fixed Income — High Yield, Core and Municipal.

IOC #2: Messrs. Mayer and Nelson and Meses. Kelly and Lukitsh are responsible for reviewing funds in the following asset categories: Asset Allocation, Large Blend Value, Small Value and Specialty; Fixed Income — International Bond, Multi-Sector and Municipal.

IOC #3: Messrs. Hacker, Moffett and Simpson are responsible for reviewing funds in the following asset categories: Asset Allocation, Mid Growth, Money Market, Small Blend, Small Growth, Specialty; Fixed Income — Core, Municipal and Short Duration.

The table below shows the number of times each committee met during the most recent fiscal year.

Fiscal Period	Audit	Governance	Advisory Fees &	Compliance	Investment	Product &
	Committee	Committee	Expenses Committee	Committee	Oversight Committee	Distribution Committee
Fiscal year ending December 31 (All funds)	5	5	5	4	4	5

Trustee Biographical Information and Qualifications

The following provides an overview of the considerations that led the Board to conclude that each individual serving as a Trustee should so serve. Generally, no one factor was decisive in the selection of an individual to join the Board. Among the factors the Board considered when concluding that an individual should serve on the Board were the following: (i) the individual’s business and professional experience and accomplishments; (ii) the individual’s ability to work effectively with the other Trustees; (iii) the individual’s prior experience, if any, serving on the boards of public companies (including, where relevant, other investment companies) and other complex enterprises and organizations; and (iv) how the individual’s skills, experience and attributes would contribute to an appropriate mix of relevant skills and experience on the Board.

In respect of each current Trustee, the individual’s substantial professional accomplishments and experience, including in fields related to the operations of the Fund, were a significant factor in the determination that, in light of the business and structure of the Trust, the individual should serve as a Trustee. Following is a summary of each Trustee’s particular professional experience and additional considerations that contributed to the Board’s conclusion that an individual should serve as a Trustee:

Rodman L. Drake — Mr. Drake has significant experience serving as a CEO and on boards of directors for public companies, including investment companies. This experience includes holding such positions with the various boards as chairman, lead

independent director, and chairman of the nominating, compensation and audit committees. Mr. Drake is Co-Founder of Baringo Capital LLC, and was previously the CEO of a hybrid REIT, president of a private equity firm and the CEO of a leading management consulting firm.

Douglas A. Hacker — Mr. Hacker has extensive executive experience, having served in various executive roles with United Airlines and more recently as an independent business executive. Mr. Hacker also has experience on other boards of directors. As former chief financial officer of United Airlines, Mr. Hacker has significant experience in accounting and financial management, including in a public company setting.

Janet Langford Kelly — Ms. Kelly is Senior Vice President, General Counsel and Corporate Secretary for ConocoPhillips. Prior to joining ConocoPhillips Ms. Kelly held senior legal and leadership roles in other large corporations and law firms, including as a partner at the law firms Sidley & Austin and at Zelle, Hoffman, Voelbel, Mason and Gette. Ms. Kelly has previously served on the board of directors for a public company and various industry groups and non-profit organizations.

Nancy T. Lukitsh — Ms. Lukitsh has extensive executive experience in the financial services industries, particularly with respect to the marketing of investment products, having served as Senior Vice President, Partner and Director of Marketing for Wellington Management Company, LLP. Ms. Lukitsh has previously served as Chair of Wellington Management Portfolios (commingled investment pools designed for non-U.S. institutional investors) and as a director of other Wellington affiliates. In addition, she has previously served on the boards of directors of various non-profit organizations. She is also a Chartered Financial Analyst.

William E. Mayer — Mr. Mayer has significant executive and board experience with financial services and investment companies. Mr. Mayer, currently a partner at a private equity firm, also has significant executive experience and experience working in finance. Previously, Mr. Mayer was a professor and Dean of the College of Business and Management at the University of Maryland and was President and CEO of The First Boston Corporation.

David M. Moffett — Mr. Moffett has extensive executive and board of director experience, including serving on audit committees for public companies. Mr. Moffett was selected as CEO when the Federal Home Loan Mortgage Corporation was placed under conservatorship in 2008, and served as a consultant to its interim chief executive officer and the board of directors until 2009. Formerly, Mr. Moffett was the CFO of a large U.S. bank holding company where his responsibilities included trust and wealth management.

Charles R. Nelson — Dr. Nelson is an experienced investment company trustee, having served on the Board, and the boards of predecessor funds, since 1981. He served as Professor of Economics at the University of Washington from 1976 to 2011, he has written several books, authored numerous articles in economics and finance, and served on editorial boards of professional journals. He is a Fellow of the Econometric Society and his contributions were the subject of a conference at the Federal Reserve Bank of Atlanta in 2006. Additionally, he is an experienced consultant on economic and statistical matters.

John J. Neuhauser — Dr. Neuhauser is an experienced investment company trustee, having served on the Board since 1985 and on the boards of other investment companies. In addition to his board experience, Dr. Neuhauser has extensive executive experience. He is currently the President of Saint Michael's College and has served in a variety of other leadership roles in higher education.

Patrick J. Simpson — Mr. Simpson is a partner in the Portland, Oregon office of Perkins Coie LLP, an international law firm. Mr. Simpson's practice includes such relevant areas as corporate governance, corporate finance and securities law compliance.

Anne-Lee Verville — Ms. Verville has significant executive experience. Prior to her retirement in 1997, she held various leadership and executive roles with IBM Corporation. Ms. Verville has previously served on the board of directors for a public company and non-profit organizations.

William F. Truscott — Mr. Truscott has significant executive and board experience with financial services and investment companies. Mr. Truscott has served on the Board of Trustees of certain Columbia funds since 2001. He has served as chairman of the board of the Investment Manager since May 2010 and since February 2012 has served as its president. From 2001 to April 2010, Mr. Truscott served as the president, chairman of the board and chief investment officer of the Investment Manager. He has served as director of the Distributor since May 2010 and since February 2012 has served as its chief executive officer. From 2008 to April 2010, Mr. Truscott served as chairman of the board and chief executive officer of the Distributor.

The following table provides additional biographical information about the Trustees as of the date of this SAI, including their principal occupations during the past five years, although their specific titles may have varied over the period. The mailing address of each Trustee is: c/o Columbia Management Investment Advisers, LLC, 225 Franklin Street, Mail Drop BX32 05228, Boston, MA 02110.

Independent Trustee Biographical Information

Name, Year of Birth and Position Held with the Trust	Year First Appointed or Elected as Trustee to any Fund Currently in the Columbia Funds Complex or a Predecessor Thereof	Principal Occupation(s) during the Past Five Years	Number of Funds in the Columbia Funds Complex Overseen	Other Directorships Held by Trustee During the Past Five Years

* Mr. Truscott receives reimbursements for reasonable expenses related to his attendance at meetings of the Board or standing committees, which are not included in the amounts shown. Mr. Truscott became a Trustee in March 2012.

Columbia Funds Deferred Compensation Plan

Under the terms of the Deferred Fee Agreement (the Deferred Compensation Plan), each eligible Trustee may elect, on an annual basis, to defer receipt of all or a portion of compensation payable to him or her for service as Trustee for that calendar year (expressly, a Trustee may elect to defer his/her annual retainer, his/her attendance fees, or both components, which together comprise total compensation for service). Fees deferred by a Trustee are credited to a book reserve account (the Deferral Account) established by the Columbia Funds, the value of which is derived from the rate of return of one or more Columbia Funds selected by the Trustee (with accruals to the Deferral Account beginning at such time as a Trustee's fund elections having been established, and proceeds for service having been paid into such account, and terminating at such time as when proceeds become payable to such Trustee under the Deferred Compensation Plan). Trustees may change their fund elections only in accordance with the provisions of the Deferred Compensation Plan.

Distributions from a Trustee's Deferral Account will be paid by check, either in a lump sum or in annual installments. Payments made in annual installments are disbursed over a period of up to ten years, following such time as a Trustee may qualify to receive such payments. If a deferring Trustee dies prior to or after the commencement of the disbursement of

amounts accrued in his/her Deferral Account, the balance of the account will be distributed to his/her designated beneficiary either in lump sum or in annual payments as established by such Trustee himself/herself, his/her beneficiary or his/her estate. Amounts payable under the Deferred Compensation Plan are not funded or secured in any way, and each deferring Trustee has the status of an unsecured creditor of the Columbia Fund(s) from which compensation has been deferred.

Beneficial Equity Ownership

The table below shows, for each Trustee, the aggregate value of all investments in equity securities of the Columbia Funds Family overseen by the Trustee, including notional amounts through the Deferred Compensation Plan, as noted. The table does not include ownership of Columbia Funds overseen by other boards of trustees/directors; the Trustees may own shares of other Columbia Funds they do not oversee. All shares of the Variable Portfolio funds are owned by life insurance companies and Qualified Plans, and are not available for purchase by individuals. Consequently, no Trustee owns any shares of Variable Portfolio funds.

Trustee Ownership for the Calendar Year Ended December 31, 2013

Fund	Aggregate Dollar Range of Equity Securities in all Funds in the Columbia Funds Family Overseen by the Trustee
<i>Independent Trustees</i>	
Rodman L. Drake	Over \$100,000 ¹
Douglas A. Hacker	Over \$100,000
Janet Langford Kelly	Over \$100,000 ¹
Nancy T. Lukitsh	\$0
William E. Mayer	\$0
David Moffett	\$0
Charles R. Nelson	Over \$100,000
John J. Neuhauser	Over \$100,000
Patrick J. Simpson	Over \$100,000 ¹
Anne-Lee Verville	Over \$100,000 ¹
<i>Interested Trustee</i>	
William F. Truscott	Over \$100,000

¹ Includes the value of compensation payable under the Deferred Compensation Plan that is determined as if the amounts deferred had been invested, as of the date of deferral, in shares of one or more funds in the Columbia Funds Family overseen by the Trustee as specified by each Trustee.

The Officers

The following table provides basic information about the Officers of the Trust as of the date of this SAI, including their principal occupations during the past five years, although their specific titles may have varied over the period. The mailing address of each Officer is: c/o Columbia Management Investment Advisers, LLC, 225 Franklin Street, Mail Drop BX32 05228, Boston, MA 02110. In addition to Mr. Truscott, who is a Senior Vice President, the other officers are:

BROKERAGE ALLOCATION AND OTHER PRACTICES

General Brokerage Policy, Brokerage Transactions and Broker Selection

The Investment Manager (or the investment subadviser(s) who make the day-to-day investment decisions for a Fund, as applicable) is responsible for decisions to buy and sell securities for each Fund, for the selection of broker-dealers, for the execution of a Fund's securities transactions and for the allocation of brokerage commissions in connection with such transactions, subject to policies established by the Board. The Investment Manager's primary consideration in effecting a security transaction is to obtain the best net price and the most favorable execution of the order. Purchases and sales of securities on a securities exchange are effected through brokers who charge negotiated commissions for their services. Orders may be directed to any broker to the extent and in the manner permitted by applicable law.

In the over-the-counter market, securities generally are traded on a "net" basis with dealers acting as principals for their own accounts without stated commissions, although the price of a security usually includes a profit to the dealer. In underwritten offerings, securities are bought at a fixed price that includes an amount of compensation to the underwriter, generally referred to as the underwriter's "concession" or "discount." On occasion, certain money market instruments may be bought directly from an issuer, in which case no commissions or discounts are paid.

In placing orders for portfolio securities of the Funds, the Investment Manager gives primary consideration to obtaining the best net prices and most favorable execution. This means that the Investment Manager will seek to execute each transaction at a price and commission, if any, which provides the most favorable total cost or proceeds reasonably attainable in the circumstances. In seeking such execution, the Investment Manager will use its best judgment in evaluating the terms of a transaction, and will give consideration to various relevant factors, including, without limitation, the size and type of the transaction, the nature and character of the market for the security, the confidentiality, speed and certainty of effective execution required for the transaction, the general execution and operational capabilities of the broker-dealer, the reputation, reliability, experience and financial condition of the broker-dealer, the value and quality of the services rendered by the broker-dealer in this instance and other transactions and the reasonableness of the spread or commission, if any. Research services received from broker-dealers supplement the Investment Manager's own research and may include the following types of information: statistical and background information on industry groups and individual companies; forecasts and interpretations with respect to U.S. and foreign economies, securities, markets, specific industry groups and individual companies; information on political developments; Fund management strategies; performance information on securities and information concerning prices of securities; and information supplied by specialized services to the Investment Manager and to the Board with respect to the performance, investment activities and fees and expenses of other mutual funds. Such information may be communicated electronically, orally or in written form. Research services also may include the arranging of meetings with management of companies and the provision of access to consultants who supply research information.

The outside research is useful to the Investment Manager since, in certain instances, the broker-dealers utilized by the Investment Manager may follow a different universe of securities issuers and other matters than those that the Investment Manager's staff can follow. In addition, this research provides the Investment Manager with a different perspective on financial markets, even if the securities research obtained relates to issuers followed by the Investment Manager. Research services that are provided to the Investment Manager by broker-dealers are available for the benefit of all accounts managed or advised by the Investment Manager. In some cases, the research services are available only from the broker-dealer providing such services. In other cases, the research services may be obtainable from alternative sources. The Investment Manager is of the opinion that because the broker-dealer research supplements rather than replaces the Investment Manager's own research, the receipt of such research does not tend to decrease the Investment Manager's expenses, but tends to improve the quality of its investment advice. However, to the extent that the Investment Manager would have bought any such research services had such services not been provided by broker-dealers, the expenses of such services to the Investment Manager could be considered to have been reduced accordingly. Certain research services furnished by broker-dealers may be useful to the clients of the Investment Manager other than the Funds. Conversely, any research services received by the Investment Manager through the placement of transactions of other clients may be of value to the Investment Manager in fulfilling its obligations to the Funds. The Investment Manager is of the opinion that this material is beneficial in supplementing its research and analysis; and, therefore, it may benefit the Trust by improving the quality of the Investment Manager's investment advice. The advisory fees paid by the Trust are not reduced because the Investment Manager receives such services.

Under Section 28(e) of the 1934 Act, the Investment Manager shall not be "deemed to have acted unlawfully or to have breached its fiduciary duty" solely because under certain circumstances it has caused the account to pay a higher commission than the lowest available. To obtain the benefit of Section 28(e), the Investment Manager must make a good faith determination that the commissions paid are "reasonable in relation to the value of the brokerage and research services

provided by such member, broker, or dealer, viewed in terms of either that particular transaction or his overall responsibilities with respect to the accounts as to which he exercises investment discretion.” Accordingly, the price to a Fund in any transaction may be less favorable than that available from another broker-dealer if the difference is reasonably justified by other aspects of the portfolio execution services offered. Some broker-dealers may indicate that the provision of research services is dependent upon the generation of certain specified levels of commissions and underwriting concessions by the Investment Manager’s clients, including the Funds.

Commission rates are established pursuant to negotiations with broker-dealers based on the quality and quantity of execution services provided by broker-dealers in light of generally prevailing rates. On exchanges on which commissions are negotiated, the cost of transactions may vary among different broker-dealers. Transactions on foreign stock exchanges involve payment of brokerage commissions that generally are fixed. Transactions in both foreign and domestic over-the-counter markets generally are principal transactions with dealers, and the costs of such transactions involve dealer spreads rather than brokerage commissions. With respect to over-the-counter transactions, the Investment Manager, where possible, will deal directly with dealers who make a market in the securities involved, except in those circumstances in which better prices and execution are available elsewhere.

In certain instances there may be securities that are suitable for a Fund as well as for one or more of the other clients of the Investment Manager. Investment decisions for the Funds and for the Investment Manager’s other clients are made with the goal of achieving their respective investment objectives. A particular security may be bought or sold for only one client even though it may be held by, or bought or sold for, other clients. Likewise, a particular security may be bought for one or more clients when one or more other clients are selling that same security. Some simultaneous transactions are inevitable when a number of accounts receive investment advice from the same investment adviser, particularly when the same security is suitable for the investment objectives of more than one client. When two or more clients are engaged simultaneously in the purchase or sale of the same security, the securities are allocated among clients in a manner believed to be equitable to each. In some cases, this policy could have a detrimental effect on the price or volume of the security in a particular transaction that may affect the Funds.

The Funds may participate, if and when practicable, in bidding for the purchase of portfolio securities directly from an issuer in order to take advantage of the lower purchase price available to members of a bidding group. A Fund will engage in this practice, however, only when the Investment Manager, in its sole discretion, believes such practice to be otherwise in such Fund’s interests.

The Trust will not execute portfolio transactions through, or buy or sell portfolio securities from or to, the Distributor, the Investment Manager, the Administrator or their affiliates acting as principal (including repurchase and reverse repurchase agreements), except to the extent permitted by applicable law, regulation or order. However, the Investment Manager is authorized to allocate buy and sell orders for portfolio securities to certain broker-dealers and financial institutions, including, in the case of agency transactions, broker-dealers and financial institutions that are affiliated with Ameriprise Financial. To the extent that a Fund executes any securities trades with an affiliate of Ameriprise Financial, such Fund does so in conformity with Rule 17e-1 under the 1940 Act and the procedures that such Fund has adopted pursuant to the rule. In this regard, for each transaction, the Board will determine that the transaction is effected in accordance with the Funds’ Rule 17e-1 procedures, which require: (i) the transaction resulted in prices for and execution of securities transactions at least as favorable to the particular Fund as those likely to be derived from a non-affiliated qualified broker-dealer; (ii) the affiliated broker-dealer charged the Fund commission rates consistent with those charged by the affiliated broker-dealer in similar transactions to clients comparable to the Fund and that are not affiliated with the broker-dealer in question; and (iii) the fees, commissions or other remuneration paid by the Fund did not exceed 2% of the sales price of the securities if the sale was effected in connection with a secondary distribution, or 1% of the purchase or sale price of such securities if effected in other than a secondary distribution.

Certain affiliates of Ameriprise Financial may have deposit, loan or commercial banking relationships with the corporate users of facilities financed by industrial development revenue bonds or private activity bonds bought by certain of the Columbia Funds. Ameriprise Financial or certain of its affiliates may serve as trustee, custodian, tender agent, guarantor, placement agent, underwriter, or in some other capacity, with respect to certain issues of securities. Under certain circumstances, a Fund may buy securities from a member of an underwriting syndicate in which an affiliate of Ameriprise Financial is a member. The Trust has adopted procedures pursuant to Rule 10f-3 under the 1940 Act, and intends to comply with the requirements of Rule 10f-3, in connection with any purchases of securities that may be subject to Rule 10f-3.

Given the breadth of the Investment Manager’s investment management activities, investment decisions for the Funds are not always made independently from those for other funds, or other investment companies and accounts advised or managed by the Investment Manager. When a purchase or sale of the same security is made at substantially the same time on behalf of one or more of the Columbia Funds and another investment portfolio, investment company or account, the transaction will be averaged as to price and available investments allocated as to amount in a manner which the Investment Manager believes to

be equitable to the Funds and such other funds, investment portfolio, investment company or account. In some instances, this investment procedure may adversely affect the price paid or received by a Fund or the size of the position obtained or sold by the Fund. To the extent permitted by law, the Investment Manager may aggregate the securities to be sold or bought for the Funds with those to be sold or bought for other funds, investment portfolios, investment companies, or accounts in executing transactions.

See *Investment Management and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest* for more information about these and other conflicts of interest.

Brokerage Commissions

The following charts reflect the amounts of brokerage commissions paid by the Funds for the three most recently completed fiscal years. In certain instances, the Funds may pay brokerage commissions to broker-dealers that are affiliates of Ameriprise Financial. As indicated above, all such transactions involving the payment of brokerage commissions to affiliates are done in compliance with Rule 17e-1 under the 1940 Act.

Aggregate Brokerage Commissions Paid by the Funds

The following charts reflect the aggregate amount of brokerage commissions paid by the Funds for the three most recently completed fiscal years. Differences, year to year, in the amount of brokerage commissions paid by a Fund were primarily the result of increased market volatility as well as shareholder purchase and redemption activity in the Fund.

Total Brokerage Commissions

Fund	2013	2012	2011
VP – AQR Managed Futures Strategy Fund	\$234,066	\$129,000 ⁽¹⁾	—

VP – Strategic Income Fund	59,717	34,290	12,206

(1) For the period from April 30, 2012 (commencement of operations) to December 31, 2012.

(2) For the period from October 5, 2012 (commencement of operations) to December 31, 2012.

(3) For the period from April 30, 2013 (commencement of operations) to December 31, 2013.

(4) For the period from April 12, 2013 (commencement of operations) to December 31, 2013.

Brokerage Commissions Paid by the Funds to Certain Broker-Dealers

No Funds paid brokerage commissions to affiliated broker-dealers for the fiscal years ended December 31, 2011, 2012, and 2013.

Directed Brokerage

The Funds or the Investment Manager, through an agreement or understanding with a broker-dealer, or otherwise through an internal allocation procedure, may direct, subject to applicable legal requirements, the Funds' brokerage transactions to a broker-dealer because of the research services it provides the Funds or the Investment Manager.

During each Fund's most recent applicable fiscal year (or period), the Funds directed certain brokerage transactions and paid related commissions in the amounts as follows:

Brokerage Directed for Research

Fund	Amount of transactions	Amount of commissions imputed or paid
	For fiscal period ended in 2013	
VP – AQR Managed Futures Strategy Fund	—	—
VP – Asset Allocation Fund	—	—
VP – Contrarian Core Fund	\$1,199,919,430	\$564,537
VP – Core Bond Fund	— ⁽¹⁾	— ⁽¹⁾
VP – GS Commodity Strategy Fund	—	—
VP – MV Conservative Fund	2,761,564 ⁽²⁾	699 ⁽²⁾

VP – Pyrford International Equity Fund	— ⁽¹⁾	— ⁽¹⁾
VP – Select Large Cap Growth Fund	78,944,298	26,116
VP – Small Cap Value Fund	134,399,751	208,550
VP – Small Company Growth Fund	8,337,948	9,323
VP – Strategic Income Fund	—	—

(1) For the period from April 30, 2013 (commencement of operations) to December 31, 2013.

(2) For the period from April 12, 2013 (commencement of operations) to December 31, 2013.

Securities of Regular Broker-Dealers

In certain cases, the Funds, as part of their principal investment strategies, or otherwise as a permissible investment, will invest in the common stock or debt obligations of the regular broker-dealers that the Investment Manager uses to transact brokerage for the Funds.

As of each Fund's most recent applicable fiscal year (or period) end, the Funds owned securities of their "regular brokers or dealers" or their parents, as defined in Rule 10b-1 under the 1940 Act, as shown in the table below:

Investments in Securities of Regular Brokers or Dealers

Fund	Issuer	Value of securities owned at end of fiscal period
VP – AQR Managed Futures Strategy Fund	None	N/A
VP – Asset Allocation Fund	None	N/A
VP – Contrarian Core Fund	Citigroup, Inc.	\$54,801,846

OTHER PRACTICES

Performance Disclosure

For certain Funds, performance shown includes the returns of a predecessor to the Fund. The table below identifies the predecessor fund for certain of these Funds and shows the periods when performance shown is that of the predecessor fund or a predecessor to that fund.

Fund	Predecessor Fund	For periods prior to:
VP – Small Cap Value Fund	Colonial Small Cap Value Fund, Variable Series, a series of Liberty Variable Investment Trust	May 1, 2006
VP – Strategic Income Fund	Colonial Strategic Income Fund, Variable Series, a series of Liberty Variable Investment Trust	May 1, 2006

Portfolio Turnover

A change in the securities held by a Fund is known as “portfolio turnover.” High portfolio turnover involves correspondingly greater expenses to the Fund, including brokerage commissions or dealer mark-ups and other transaction costs on the sale of securities and reinvestments in other securities. The trading costs associated with portfolio turnover may adversely affect a Fund’s performance. For each Fund’s portfolio turnover rate, see the *Fees and Expenses of the Fund — Portfolio Turnover* section in the prospectuses for that Fund.

In any particular year, market conditions may result in greater rates than are presently anticipated. The rate of a Fund’s turnover may vary significantly from time to time depending on the volatility of economic and market conditions.

See below for an explanation for any significant variation in a Fund’s portfolio turnover rates over the two most recently completed fiscal years, if applicable:

The increase in turnover rate for VP – Multi-Strategy Alternatives Fund is due to the fact that effective on November 18, 2013 the Fund became managed directly by the Investment Manager, without a subadviser, and the resultant principal investment strategy changes. Additionally, the fiscal year ended December 31, 2013, was the fund’s first full fiscal year end.

Disclosure of Portfolio Holdings Information

The Board and the Investment Manager believe that the investment ideas of the Investment Manager and any subadviser with respect to portfolio management of a Fund should benefit the Fund and its shareholders, and do not want to afford speculators an opportunity to profit by anticipating Fund trading strategies or by using Fund portfolio holdings information for stock picking. However, the Board also believes that knowledge of a Fund’s portfolio holdings can assist shareholders in monitoring their investments, making asset allocation decisions, and evaluating portfolio management techniques.

The Board has therefore adopted policies and procedures relating to disclosure of the Funds’ portfolio securities. These policies and procedures are intended to protect the confidentiality of Fund portfolio holdings information and generally prohibit the release of such information until such information is made available to the general public, unless such persons have been authorized to receive such information on a selective basis, as described below. It is the policy of the Fund not to provide or permit others to provide portfolio holdings on a selective basis, and the Investment Manager does not intend to selectively disclose portfolio holdings or expect that such holdings information will be selectively disclosed, except where necessary for the Fund’s operation or where there are other legitimate business purposes for doing so and, in any case, where conditions are met that are designed to protect the interests of the Funds and their shareholders.

Although the Investment Manager seeks to limit the selective disclosure of portfolio holdings information and such selective disclosure is monitored under the Fund’s compliance program for conformity with the policies and procedures, there can be no assurance that these policies will protect the Fund from the potential misuse of holdings information by individuals or firms in possession of that information. Under no circumstances may the Investment Manager, its affiliates or any employee thereof receive any consideration or compensation for disclosing such holdings information.

Public Disclosures

The Funds’ portfolio holdings are currently disclosed to the public through filings with the SEC and postings on the Funds’ website. The information is available on the Funds’ website as described below.

- For equity, convertible, alternative and flexible Funds (other than the equity Funds identified below), a complete list of Fund portfolio holdings as of month-end is posted approximately, but no earlier than, 15 calendar days after such month-end.

- For Funds that are subadvised by Marsico Capital, Columbia Small Cap Growth Fund I and VP – Small Company Growth Fund, a complete list of Fund portfolio holdings as of month-end is posted approximately, but no earlier than, 30 calendar days after such month-end.
- For fixed-income Funds, a complete list of Fund portfolio holdings as of calendar quarter-end is posted approximately, but no earlier than, 30 calendar days after such quarter-end.
- For money market Funds, a complete list of Fund portfolio holdings as of month-end is posted no later than five business days after such month-end. Such month-end holdings are continuously available on the website for at least six months, together with a link to an SEC webpage where a user of the website may obtain access to the Fund's most recent 12 months of publicly available filings on Form N-MFP. Money market Fund portfolio holdings information posted on the website, at minimum, includes with respect to each holding, the name of the issuer, the category of investment (e.g., Treasury debt, government agency debt, asset backed commercial paper, structured investment vehicle note), the CUSIP number (if any), the principal amount, the maturity date (as determined under Rule 2a-7 for purposes of calculating weighted average maturity), the final maturity date (if different from the maturity date previously described), coupon or yield and the amortized cost value. The money market Funds will also disclose on the website the overall weighted average maturity and weighted average life maturity of a holding.

Portfolio holdings of Funds owned solely by affiliates of the Investment Manager are not disclosed on the website. A complete schedule of each Fund's portfolio holdings is available semiannually and annually in shareholder reports filed on Form N-CSR and, after the first and third fiscal quarters, in regulatory filings on Form N-Q. These shareholder reports and regulatory filings are filed with the SEC in accordance with federal securities laws. Shareholders may obtain each Columbia Fund's Form N-CSR and N-Q filings on the SEC's website at www.sec.gov. In addition, each Columbia Fund's Form N-CSR and N-Q filings may be reviewed and copied at the SEC's public reference room in Washington, D.C. You may call the SEC at 202.551.8090 for information about the SEC's website or the operation of the public reference room.

In addition, the Investment Manager makes publicly available information regarding certain Fund's largest five to fifteen holdings, as a percentage of the market value of the Funds' portfolios as of a month-end. This holdings information is made publicly available approximately 15 calendar days following the month-end. The scope of the information that is made available on the Funds' websites pursuant to the Funds' policies may change from time to time without prior notice. This information may not be available on the website for all Funds included in this SAI.

The Investment Manager may also disclose more current portfolio holdings information as of specified dates on the Columbia Funds' website.

The Columbia Funds, the Investment Manager and their affiliates may include portfolio holdings information that already has been made public through a website posting or SEC filing in marketing literature and other communications to shareholders, advisors or other parties, provided that the information is disclosed no earlier than when the information is disclosed publicly on the funds' website or no earlier than the time a fund files such information in a publicly available SEC filing required to include such information.

Other Disclosures

The Funds' policies and procedures provide that no disclosures of the Funds' portfolio holdings may be made prior to the portfolio holdings information being made available to the general public unless (i) the Funds have a legitimate business purpose for making such disclosure, (ii) the Funds or their authorized agents authorize such non-public disclosure of information, and (iii) the party receiving the non-public information enters into an appropriate confidentiality agreement or is otherwise subject to a confidentiality obligation.

In determining the existence of a legitimate business purpose for making portfolio disclosures, the following factors, among others, are considered: (i) any prior disclosure must be consistent with the anti-fraud provisions of the federal securities laws and the fiduciary duties of the Investment Manager; (ii) any conflicts of interest between the interests of Fund shareholders, on the one hand, and those of the Investment Manager, the Funds' Distributor or any affiliated person of a Fund, the Investment Manager or Distributor on the other; and (iii) any prior disclosure to a third party, although subject to a confidentiality agreement, would not make conduct lawful that is otherwise unlawful.

In addition, the Funds periodically disclose their portfolio information on a confidential basis to various service providers that require such information to assist the Funds with their day-to-day business affairs. These service providers include each Fund's sub-adviser(s) (if any) and vendors or other entities each subadviser may also hire to perform services for the funds, affiliates of the Investment Manager, the Funds' custodian, subcustodians, the Funds' independent registered public accounting firm, legal counsel, operational system vendors, financial printers, proxy solicitor and proxy voting service provider, as well as ratings agencies that maintain ratings on certain Funds. These service providers are required to keep such information confidential, and are prohibited from trading based on the information or otherwise using the information except

as necessary in providing services to the Funds. The Funds also may disclose portfolio holdings information to broker/dealers and certain other entities in connection with potential transactions and management of the Funds, provided that reasonable precautions, including limitations on the scope of the portfolio holdings information disclosed, are taken to avoid any potential misuse of the disclosed information. Certain Columbia Funds (Investing Funds) managed by the Investment Manager invest in other Columbia Funds (Underlying Funds). The portfolio managers of these Investing Funds may have access to non-public portfolio holdings information of the Underlying Funds.

The Funds also disclose portfolio holdings information as required by federal, state or international securities laws, and may disclose portfolio holdings information in response to requests by governmental authorities, or in connection with litigation or potential litigation, a restructuring of a holding, where such disclosure is necessary to participate or explore participation in a restructuring of the holding (e.g., as part of a bondholder group), or to the issuer of a holding, pursuant to a request of the issuer or any other party who is duly authorized by the issuer.

The Board has adopted policies to ensure that the Fund’s portfolio holdings information is only disclosed in accordance with these policies. Before any selective disclosure of portfolio holdings information is permitted, the person seeking to disclose such holdings information must submit a written request to the Portfolio Holdings Committee (“PHC”). The PHC is comprised of members from the Investment Manager’s legal department, compliance department, the Funds’ President, and the Funds’ Chief Compliance Officer. The PHC is authorized by the Board to perform an initial review of requests for disclosure of holdings information to evaluate whether there is a legitimate business purpose for selective disclosure, whether selective disclosure is in the best interests of a Fund and its shareholders, to consider any potential conflicts of interest between the Fund, the Investment Manager, and its affiliates, and to safeguard against improper use of holdings information. Factors considered in this analysis are whether the recipient has agreed to or has a duty to keep the holdings information confidential and whether risks have been mitigated such that the recipient has agreed or has a duty to use the holdings information only as necessary to effectuate the purpose for which selective disclosure may be authorized, including a duty not to trade on such information. Before portfolio holdings may be selectively disclosed, requests approved by the PHC must also be authorized by the Funds’ President, Chief Compliance Officer or General Counsel/Chief Legal Officer or their respective designees. On at least an annual basis, the PHC reviews the approved recipients of selective disclosure and may require a resubmission of the request, in order to re-authorize certain ongoing arrangements. These procedures are intended to be reasonably designed to protect the confidentiality of Fund holdings information and to prohibit their release to individual investors, institutional investors, intermediaries that distribute the Fund’s shares, and other parties, until such holdings information is made public or unless such persons have been authorized to receive such holdings information on a selective basis, as set forth above.

Ongoing Portfolio Holdings Disclosure Arrangements:

The Funds currently have ongoing arrangements with certain approved recipients with respect to the disclosure of portfolio holdings information prior to such information being made public. Portfolio holdings information disclosed to such recipients is current as of the time of its disclosure, is disclosed to each recipient solely for purposes consistent with the services described below and has been authorized in accordance with the policy. No compensation or consideration is received in exchange for this information. In addition to the daily information provided to a Fund’s custodians, subcustodians, Administrator, Investment Manager and subadvisers, the following disclosure arrangements are in place:

Identity of Recipient	Conditions/restrictions on use of information	Frequency of Disclosure
Recipients under arrangements with the Funds or Investment Manager:		
BarraOne / MSCI Barra	Used for risk analysis and reporting.	Daily
Barclays Capital	Used for analytics including risk and attribution assessment.	Daily
BlackRock Aladdin	Used for fixed income trading and decision support.	Daily
Bloomberg	Used for portfolio analytics and independent research.	Daily or Monthly
Capital Markets Services (“CMS”)	Used for intraday post-trade information when equity exposures (either via futures or options trades) are modified beyond certain limits for Columbia Variable Portfolio – Managed Volatility Funds.	As Needed
Catapult (formerly Reflections)	Used to provide Edgar filing and typesetting services, as well as printing of prospectuses, factsheets, annual and semi-annual reports.	As Needed
Cenveo, Inc.	Used for printing of prospectuses, factsheets, annual and semi-annual reports.	As Needed
Citigroup	Used in resolving technical difficulties with an analytic software program.	Daily
Cogent Consulting LLC	Used to facilitate the evaluation of commission rates and to provide flexible commission reporting.	Daily
FactSet Research Systems, Inc.	Used for provision of quantitative analytics, charting and fundamental data.	Daily
Harte-Hanks	Used for printing of prospectuses, factsheets, and annual and semi-annual reports	As Needed
Index Universe	Used to cover product and market developments related to index funds, ETFs, index derivatives, and other sophisticated investment strategies.	Monthly
Institutional Shareholder Services Inc. (“ISS”)	Used for proxy voting administration and research on proxy matters.	Daily
Investment Technology Group	Used to evaluate and assess trading activity, execution and practices.	Quarterly
Intex	Used to provide mortgage analytics.	Periodic
Investor Tool’s Perform	Used for municipal securities decision support.	Daily

Identity of Recipient	Conditions/restrictions on use of information	Frequency of Disclosure

Markit/Wall Street Office	Used for bank loan asset servicing.	Daily
Merrill Corporation	Used to provide Edgar filing and typesetting services, as well as printing of prospectuses, factsheets, annual and semi-annual reports.	As Needed
MoneyMate	Used to report returns and analytics to client facing materials.	Monthly
Morningstar	Used for independent research and ranking of funds, and to fulfill role as investment consultant for fund of funds product.	Monthly or As Needed
Print Craft	Used to assemble kits and mailing that include the fact sheets.	As Needed
R.R. Donnelley & Sons Company	Used to provide Edgar filing and typesetting services, and printing of prospectuses, factsheets, annual and semi-annual reports.	As Needed
Sungard Invest One	Used as portfolio accounting system.	Daily
Threadneedle Investments	Used by portfolio managers and research analysts in supporting certain management strategies, and by shared support partners (legal, operations, compliance, risk, etc.) to provide Fund maintenance and development.	As Needed
Universal Wilde	Used to provide printing and mailing services for prospectuses, annual and semi-annual reports, and supplements.	As Needed
Wilshire Associates, Inc.	An equity analytics tool used to provide daily performance attribution reporting based on daily holdings to the investment and investment analytics teams.	Daily
Recipients under arrangements with subadvisers:		
Infinitt-O	Used by certain subadvisers for reconciling cash and positions.	Daily

In addition, portfolio holdings information may be provided from time to time to the Funds' counsel, counsel to the independent trustees and the Funds' independent auditors in connection with the services they provide to the Fund or the trustees. Portfolio holdings information may also be provided to affiliates of the Investment Manager to monitor risks and various holdings limitations that must be aggregated with affiliated funds and accounts, among other purposes. The Investment Manager and the subadvisers use a variety of broker-dealers and other agents to effect securities transactions on behalf of the Funds. These broker-dealers may become aware of the Funds' intentions, transactions and positions in performing their functions.

Additional Selling Agent Payments

Selling Agents may receive different commissions, sales charge reallowances and other payments with respect to sales of different classes of shares of the Funds.

The Distributor and other Ameriprise Financial affiliates may pay additional compensation to selected Selling Agents, including other Ameriprise Financial affiliates, under the categories described below. These categories are not mutually exclusive, and a single Selling Agent may receive payments under all categories. These payments may create an incentive for a Selling Agent or its representatives to recommend or offer shares of a Fund to its customers. The amount of payments made to Selling Agents may vary. In determining the amount of payments to be made, the Distributor and other Ameriprise Financial affiliates may consider a number of factors, including, without limitation, asset mix and length of relationship with the Selling Agent, the size of the customer/shareholder base of the Selling Agent, the manner in which customers of the Selling Agent make investments in the Funds, the nature and scope of marketing support or services provided by the Selling Agent (as described more fully below) and the costs incurred by the Selling Agent in connection with maintaining the infrastructure necessary or desirable to support investments in the Funds.

These additional payments by the Distributor and other Ameriprise Financial affiliates are made pursuant to agreements between the Distributor and other Ameriprise Financial affiliates and Selling Agents, and do not change the price paid by investors for the purchase of a share, the amount a Fund will receive as proceeds from such sales or the distribution fees and expenses paid by the Fund as shown under the heading *Fees and Expenses of the Fund* in the Fund's prospectus.

Marketing Support Payments

The Distributor, the Investment Manager and their affiliates may make payments, from their own resources, to certain Selling Agents, including other Ameriprise Financial affiliates, for marketing/sales support services relating to the Columbia Funds, including, but not limited to, business planning assistance, educating Selling Agent personnel about the Funds and shareholder financial planning needs, placement on the Selling Agent's preferred or recommended fund list or otherwise identifying the Funds as being part of a complex to be accorded a higher degree of marketing support than complexes not making such payments, access to sales meetings, sales representatives and management representatives of the Selling Agent, client servicing

and systems infrastructure support. These payments are generally based upon one or more of the following factors: average net assets of the Columbia Funds distributed by the Distributor attributable to that Selling Agent, gross sales of the Columbia Funds distributed by the Distributor attributable to that Selling Agent, reimbursement of ticket charges (fees that a Selling Agent firm charges its representatives for effecting transactions in fund shares) or a negotiated lump sum payment.

While the financial arrangements may vary for each Selling Agent, the marketing support payments to each Selling Agent generally are expected to be between 0.05% and 0.50% on an annual basis for payments based on average net assets of the Columbia Funds attributable to the Selling Agent, and between 0.05% and 0.25% on an annual basis for firms receiving a payment based on gross sales of the Columbia Funds attributable to the Selling Agent. The Distributor, the Investment Manager and other Ameriprise affiliates may make payments in materially larger amounts or on a basis materially different from those described above when dealing with certain Selling Agents. Such increased payments may enable the Selling Agents to offset credits that they may provide to their customers.

As of April 2014, the Distributor and/or the Investment Manager had agreed to make marketing support payments with respect to the Columbia Funds to the Selling Agents or their affiliates shown below.

Recipients of Marketing Support Payments with Respect to the Funds from the Distributor and/or other Ameriprise Financial Affiliates

- Allianz Life Insurance Company of North America
- Allianz Life Insurance Company of New York
- American United Life Insurance Company
- Equitrust Life Insurance Company
- First Great West Life & Annuity Company
- Genworth Life & Annuity Insurance
- Genworth Life Insurance Company of New York
- Great West Life & Annuity Company
- Guardian Insurance & Annuity Company
- ING USA & Life Insurance Company
- Jefferson National Life Insurance Company
- Liberty Life Assurance Company of Boston
- Midland National Life Insurance Company
- Monumental Life Insurance Company
- National Integrity Life Insurance Company
- New York Life Insurance & Annuity Corporation
- Prudential Annuities Life Assurance Corporation
- RiverSource Life Insurance Company
- RiverSource Life Insurance Company of New York
- Security Benefit Life Insurance
- SunAmerica Annuity & Life Assurance Company
- Sun Life Assurance Co of Canada
- Sun Life Insurance & Annuity Co of NY
- Symetra Life Insurance Company
- Independence Life & Annuity Co
- Transamerica Financial
- Transamerica Advisors Life
- Transamerica Advisors Life of NY
- Union Central Life Insurance Co

The Distributor, the Investment Manager and their affiliates may enter into similar arrangements with other Selling Agents from time to time. Therefore, the preceding list is subject to change at any time without notice.

Other Payments

From time to time, the Distributor, from its own resources, may provide additional compensation to certain Selling Agents that sell or arrange for the sale of shares of the Funds to the extent not prohibited by laws or the rules of any self-regulatory agency, such as the Financial Industry Regulatory Authority (FINRA). Such compensation provided by the Distributor may include financial assistance to Selling Agents that enable the Distributor to participate in and/or present at Selling Agent-sponsored conferences or seminars, sales or training programs for invited registered representatives and other Selling Agent employees, Selling Agent entertainment and other Selling Agent-sponsored events, and travel expenses, including lodging incurred by registered representatives and other employees in connection with prospecting, retention and due diligence trips. The Distributor makes payments for entertainment events it deems appropriate, subject to the Distributor's internal guidelines and applicable law. These payments may vary depending upon the nature of the event.

Your Selling Agent may charge you fees or commissions in addition to those disclosed in this SAI. You should consult with your Selling Agent and review carefully any disclosure your Selling Agent provides regarding its services and compensation. Depending on the financial arrangement in place at any particular time, a Selling Agent and its financial consultants may have a financial incentive for recommending a particular fund or a particular share class over other funds or share classes. See *Investment Management and Other Services — Other Roles and Relationships of Ameriprise Financial and its Affiliates — Certain Conflicts of Interest* for more information.

CAPITAL STOCK AND OTHER SECURITIES

Description of the Trust's Shares

The Trust may issue an unlimited number of full and fractional shares of beneficial interest of each Fund, without par value, and to divide or combine the shares of any series into a greater or lesser number of shares of that Fund without thereby changing the proportionate beneficial interests in that Fund and to divide such shares into classes. Most of the Funds are authorized to issue multiple classes of shares. Such classes are designated as Class 1 and Class 2. Each share of a class of a Fund represents an equal proportional interest in that Fund with each other share in the same class and is entitled to such distributions out of the income earned on the assets belonging to that Fund as are declared in the discretion of the Board. However, different share classes of a Fund pay different distribution amounts because each share class has different expenses. Each time a distribution is made, the net asset value per share of the share class is reduced by the amount of the distribution.

Subject to certain limited exceptions discussed in each Fund's prospectuses and in this SAI, a Fund may no longer be accepting new investments from current shareholders or prospective investors in general or with respect to one or more classes of shares. The Funds, however, may at any time and without notice, accept new investments in general or with respect to one or more previously closed classes of shares. If investors other than Participating Insurance Companies, Separate Accounts, Qualified Plans or certain other eligible investors were to purchase shares in a Fund, VA contracts or VLI policies funded by that Fund could lose their favorable tax status. See "*Taxation*" below.

Restrictions on Holding or Disposing of Shares

There are no restrictions on the right of shareholders to retain or dispose of the Funds' shares, other than the possible future termination of the Funds or the relevant class, except that the Funds may redeem Fund shares of shareholders holding less than any minimum or more than any maximum investment from time to time established by the Board. The Funds may be terminated by reorganization into another mutual fund or by liquidation and distribution of their assets. Unless terminated by reorganization or liquidation, the Funds and classes will continue indefinitely.

Liability

The Trust is organized as a business trust under Massachusetts law. Under Massachusetts law, shareholders of a Massachusetts business trust may, under certain circumstances, be held personally liable as partners for its obligation. However, the Declaration of Trust that establishes a trust, a copy of which, together with all amendments thereto (the "Declaration of Trust"), is on file with the office of the Secretary of the Commonwealth of Massachusetts, contains an express disclaimer of shareholder liability for acts or obligations of the Trust, or of any series in the Trust. The Declaration of Trust provides that, if any shareholder (or former shareholder) of a series of the Trust is held to be personally liable solely by reason of being or having been a shareholder and not because of such shareholder's acts or omissions or for some other reason, the shareholder or former shareholder (or the heirs, executors, administrators or other legal representatives thereof, or in the case of a corporation or other entity, its corporate or other general successor) shall be entitled out of the assets of the Fund (or attributable to the class) of which such shareholder or former shareholder is or was the holder of shares to be held harmless from and indemnified against all loss and expense arising from such liability.

The Declaration of Trust also provides that the Trust may maintain appropriate insurance (for example, fidelity bond and errors and omissions insurance) for the protection of the Trust, its shareholders, Trustees, officers, employees, agents or service providers covering claims and liabilities. Thus, the risk of a shareholder incurring financial loss on account of shareholder liability is limited to circumstances in which both inadequate insurance existed and the Trust itself was unable to meet its obligations.

The Declaration of Trust further provides that obligations of the Trust are not binding upon the Trustees individually, but only upon the assets and property of the Trust, and that Trustees are not liable for their own willful misfeasance, bad faith, gross negligence or reckless disregard of the duties involved in the conduct of the office of Trustee, and for nothing else, and are not be liable for errors of judgment or mistakes of fact or law.

The Trustees may fill any vacancies on the Board except that the Trustees may not fill a vacancy if, immediately after filling such vacancy, less than two-thirds of the Trustees then in office would have been elected to such office by the shareholders. In addition, at such times as less than a majority of the Trustees then in office have been elected to such office by the shareholders, the Trustees must call a meeting of shareholders. Trustees may be removed from office by a written consent signed by holders of a majority of the outstanding shares of the Trust or by a vote of the holders of a majority of the outstanding shares at a meeting duly called for the purpose. Except as otherwise disclosed in a Fund's prospectuses and this SAI, the Trustees shall continue to hold office and may appoint their successors.

By becoming a shareholder of the Fund, each shareholder shall be expressly held to have assented to and agreed to be bound by the provisions of the Declaration of Trust.

Dividend Rights

The shareholders of a Fund are entitled to receive any dividends or other distributions declared for the Fund. No shares have priority or preference over any other shares of the Funds with respect to distributions. Distributions will be made from the assets of the Funds, and will be paid pro rata to all shareholders of each Fund (or class) according to the number of shares of each Fund (or class) held by shareholders on the record date. The amount of income dividends per share may vary between separate share classes of the Funds based upon differences in the way that expenses are allocated between share classes pursuant to a multiple class plan.

Voting Rights and Shareholder Meetings

Shareholders have the power to vote only as expressly granted under the 1940 Act or under Massachusetts business trust law. Each whole share (or fractional share) outstanding on the applicable record date shall be entitled to a number of votes on any matter on which it is entitled to vote equal to the net asset value of the share (or fractional share) in U.S. dollars determined at the close of business on the record date (for example, a share having a net asset value of \$10.50 would be entitled to 10.5 votes).

Shareholders have no independent right to vote on any matter, including the creation, operation, dissolution or termination of the Trust. Shareholders have the right to vote on other matters only as the Board authorizes. Currently, the 1940 Act requires that shareholders have the right to vote, under certain circumstances, to: (i) elect Trustees; (ii) approve investment advisory agreements; (iii) approve a change in subclassification of a Fund; (iv) approve any change in fundamental investment policies; (v) approve a distribution plan under Rule 12b-1 under the 1940 Act; and (vi) to terminate the independent accountant. At any shareholders' meetings that may be held, shareholders of all series would vote together, irrespective of series, on the election of Trustees, but with respect to matters that affect one class but not another, shareholders vote as a class; for example, the approval of a distribution plan applicable to that class is voted on by holders of that class of shares. Subject to the foregoing, all shares of the Trust have equal voting rights and will be voted in the aggregate, and not by Fund, except where voting by Fund is required by law or where the matter involved only affects one Fund. For example, a change in a Fund's fundamental investment policy affects only one Fund and would be voted upon only by shareholders of the Fund involved. Additionally, approval of an investment advisory agreement (if shareholder approval is required under exemptive relief) or investment subadvisory agreement, since it only affects one Fund, is a matter to be determined separately by each Fund. Approval by the shareholders of one Fund is effective as to that Fund whether or not sufficient votes are received from the shareholders of the other series to approve the proposal as to those Funds. Shareholders are entitled to one vote for each whole share held and a proportional fractional vote for each fractional vote held, on matters on which they are entitled to vote. Fund shareholders do not have cumulative voting rights. The Trust is not required to hold, and have no present intention of holding, annual meetings of shareholders.

Previously, the Trust had voluntarily undertaken to adhere to certain governance measures contemplated by an SEC settlement order with respect to the Trust's prior investment adviser in 2005. Over the past several years, the SEC has adopted many rules under the 1940 Act and the Investment Advisers Act of 1940 to strengthen fund governance and compliance oversight of funds and their investment advisers. Accordingly, although the Trust may continue to follow certain governance practices noted in the 2005 settlement order, it will do so as the Board deems appropriate and not pursuant to any voluntary undertakings. In this regard, the Board has determined that it is unnecessary to commit to holding a meeting of shareholders to elect trustees at least every five years. Instead, the Board will convene meetings of shareholders to elect trustees as required by the 1940 Act or as deemed appropriate by the Board.

The Trustees may fill any vacancies on the Board except that the Trustees may not fill a vacancy if, immediately after filling such vacancy, less than two-thirds of the Trustees then in office would have been elected to such office by the shareholders. In addition, at such times as less than a majority of the Trustees then in office have been elected to such office by the shareholders, the Trustees must call a meeting of shareholders. Trustees may be removed from office by a vote of two-thirds of the outstanding shares at a meeting called at the request of shareholders whose interests represent 10% or more of the outstanding shares. Except as otherwise disclosed in a Fund's prospectus and this SAI, the Trustees shall continue to hold office and may appoint their successors.

Certain Participating Insurance Companies have voting rights with respect to all Fund shares held in the separate accounts where the Participating Insurance Companies set aside and invest the assets of certain of their VA contracts or VLI policies. To the extent a matter is to be voted upon by Fund shareholders and to the extent required by federal securities laws or regulations, it is expected that the Participating Insurance Companies will: (i) notify each VA contract owner and VLI policy holder (each an "Owner" and collectively, the "Owners") of the shareholder meeting if shares held for that Owner's contract

or policy may be voted; (ii) send proxy materials and a form of instructions that each Owner can use to tell its Participating Insurance Company how to vote the Fund shares held for such contract or policy; (iii) arrange for the handling and tallying of proxies received from the Owners; (iv) vote all Fund shares attributable to each Owner's contract or policy according to instructions received from such Owner; and (v) vote all Fund shares for which no voting instructions are received in the same proportion as shares for which instructions have been received.

For further discussion of the rights of Owners and Qualified Plan participants concerning the voting of shares, please see your annuity or life insurance contract prospectus or Qualified Plan disclosure documents, as applicable.

Liquidation Rights

In the event of the liquidation or dissolution of the Trust or the Funds, shareholders of the Funds are entitled to receive the assets attributable to the relevant class of shares of the Funds that are available for distribution and to a distribution of any general assets not attributable to a particular investment portfolio that are available for distribution in such manner and on such basis as the Board may determine.

Preemptive Rights

There are no preemptive rights associated with Fund shares.

Conversion Rights

Conversion features and exchange privileges are described in the Funds' prospectuses.

Redemptions

Each Fund's dividend, distribution and redemption policies can be found in its prospectuses. However, the Board may suspend the right of shareholders to sell shares when permitted or required to do so by law or compel sales of shares in certain cases.

Sinking Fund Provisions

The Trust has no sinking fund provisions.

Calls or Assessment

All Fund shares are issued in uncertificated form only and when issued will be fully paid and non-assessable by the Trust.

PURCHASE, REDEMPTION AND PRICING OF SHARES

Purchase and Redemption

An investor may buy, sell and transfer shares in the Funds utilizing the methods, and subject to the restrictions, described in the Funds' prospectuses. The following information supplements information in the Funds' prospectuses.

Fund shares are made available to serve as the underlying investment vehicles for VA contract and VLI policy separate accounts issued by Participating Insurance Companies, for Qualified Plans and for certain other eligible investors. Shares of the Funds are sold at net asset value without the imposition of a sales charge. The separate accounts of the Participating Insurance Companies or Qualified Plan sponsor place orders to purchase and redeem shares of the Funds based on, among other things, the amount of premium payments to be invested and the amount of surrender and transfer requests to be effected on that day pursuant to the contracts.

In addition, in no instance will the Funds be made available to life insurance separate accounts without the Trust having received any necessary SEC consents or approvals. It is conceivable that in the future it may be disadvantageous for VA contract separate accounts and VLI policy separate accounts to invest in the Funds simultaneously. Although the Trust and the Funds do not currently foresee any such disadvantages either to VA contract owners or VLI policy owners, the Trust's Board intends to monitor events in order to identify any material conflicts between such VA contract owners and VLI policy owners and to determine what action, if any, should be taken in response thereto. If the Board were to conclude that separate funds should be established for VLI policy and VA contract separate accounts, the VLI policy and VA contract owners would not bear any expenses attendant to the establishment of such separate funds.

Purchases of shares of the Funds may be effected on days on which the NYSE is open for business (a "Business Day"). The Trust and the Distributor reserve the right to reject any purchase order. The issuance of Shares is recorded on the books of the Trust, and share certificates are not issued. Purchase orders for shares in the Funds that are received by the Distributor or by the Transfer Agent before the close of regular trading hours on the Exchange (currently 4:00 p.m., Eastern time) on any Business Day are priced according to the net asset value determined on that day but are not executed until 4:00 p.m., Eastern time, on the Business Day on which immediately available funds in payment of the purchase price are received by the Fund's Custodian.

Redemption proceeds are normally remitted in Federal funds wired to the redeeming Participating Insurance Company or Qualified Plan sponsor within three Business Days following receipt of the order. It is the responsibility of the Distributor to transmit orders it receives to the Trust. No charge for wiring redemption payments is imposed by the Trust. Redemption orders are effected at the net asset value per share next determined after acceptance of the order by the Transfer Agent.

Should a Fund stop selling shares, the Board may make a deduction from the value of the assets held by the Fund to cover the cost of future liquidations of the assets so as to distribute these costs fairly among all shareholders.

The Trust also may make payment for sales in readily marketable securities or other property if it is appropriate to do so in light of the Trust's responsibilities under the 1940 Act.

Under the 1940 Act, the Funds may suspend the right of redemption or postpone the date of payment for shares during any period when (i) trading on the NYSE is restricted by applicable rules and regulations of the SEC; (ii) the NYSE is closed for other than customary weekend and holiday closings; (iii) the SEC has by order permitted such suspension; (iv) an emergency exists as determined by the SEC. (The Funds may also suspend or postpone the recordation of the transfer of their shares upon the occurrence of any of the foregoing conditions).

The Trust has elected to be governed by Rule 18f-1 under the 1940 Act, as a result of which each Fund is obligated to redeem shares, subject to the exceptions listed above, with respect to any one shareholder during any 90-day period, solely in cash up to the lesser of \$250,000 or 1% of the net asset value of each Fund at the beginning of the period. Although redemptions in excess of this limitation would normally be paid in cash, the Fund reserves the right to make these payments in whole or in part in securities or other assets in case of an emergency, or if the payment of a redemption in cash would be detrimental to the existing shareholders of the Fund as determined by the Board. In these circumstances, the securities distributed would be valued as set forth in this SAI. Should a Fund distribute securities, a shareholder may incur brokerage fees or other transaction costs in converting the securities to cash.

The timing and magnitude of cash inflows from investors buying Fund shares could prevent a Fund from always being fully invested. Conversely, the timing and magnitude of cash outflows to investors redeeming Fund shares could require large ready reserves of uninvested cash to meet shareholder redemptions. Either situation could adversely impact a Fund's performance.

Potential Adverse Effects of Large Investors

Each Fund may from time to time sell to one or more investors, including other funds advised by the Investment Manager or third parties, a substantial amount of its shares, and may thereafter be required to satisfy redemption requests by such investors. Such sales and redemptions may be very substantial relative to the size of the Fund. While it is not possible to predict the overall effect of such sales and redemptions over time, such transactions may adversely affect the Fund's performance to the extent that the Fund is required to invest cash received in connection with a sale or to sell portfolio securities to facilitate a redemption at, in either case, a time when the Fund otherwise would not invest or sell. Such transactions also may increase a Fund's transaction costs, which would detract from Fund performance.

Anti-Money Laundering Compliance

The Funds are required to comply with various anti-money laundering laws and regulations. Consequently, the Funds may request additional required information from you to verify your identity. Your application will be rejected if it does not contain your name, social security number, date of birth and permanent street address. If at any time the Funds believe a shareholder may be involved in suspicious activity or if certain account information matches information on government lists of suspicious persons, the Funds may choose not to establish a new account or may be required to "freeze" a shareholder's account. The Funds also may be required to provide a governmental agency with information about transactions that have occurred in a shareholder's account or to transfer monies received to establish a new account, transfer an existing account or transfer the proceeds of an existing account to a governmental agency. In some circumstances, the law may not permit the Funds to inform the shareholder that it has taken the actions described above.

Offering Price

The share price of each Fund is based on each Fund's net asset value per share, which is calculated separately for each class of shares as of the close of regular trading on the NYSE (which is usually 4:00 p.m. Eastern Time unless the NYSE closes earlier) on each day the Fund is open for business, unless the Board determines otherwise. The Funds do not value their shares on days that the NYSE is closed.

For Funds Other than Money Market Funds. The value of each Fund's portfolio securities is determined in accordance with the Trust's valuation procedures, which are approved by the Board. Except as described below under "Fair Valuation of Portfolio Securities," the Fund's portfolio securities are typically valued using the following methodologies:

Equity Securities. Equity securities (including common stocks, preferred stocks, convertible securities, warrants and ETFs) listed on an exchange are valued at the closing price on their primary exchange (which, in the case of foreign securities, may be a foreign exchange) or, if a closing price is not readily available, at the mean of the closing bid and asked prices. Over-the-counter equity securities not listed on any national exchange but included in the NASDAQ National Market System are valued at the NASDAQ Official Closing Price or, if the official closing price is not readily available, at the mean between the closing bid and asked prices. Equity securities and ETFs that are not listed on any national exchange and are not included in the NASDAQ National Market System are valued at the primary exchange last sale price, or if the last sale price is not readily available, at the mean between the closing bid and asked prices. Shares of other open-end investment companies (other than ETFs) are valued at the latest net asset value reported by those companies.

Fixed Income Securities. Short-term debt securities purchased with remaining maturities of 60 days or less and long-term debt securities with remaining maturities of 60 days or less are valued at their amortized cost value. Amortized cost is an approximation of market value determined by systematically increasing the carrying value of a security if acquired at a discount, or reducing the carrying value if acquired at a premium, so that the carrying value is equal to maturity value on the maturity date. The value of short-term debt securities with remaining maturities in excess of 60 days is the market price, which may be obtained from a pricing service or, if a market price is not available from a pricing service, a bid quote from a broker or dealer. Short-term variable rate demand notes are typically valued at their par value. Other debt securities typically are valued using an evaluated bid provided by a pricing service. If pricing information is unavailable from a pricing service or the Investment Manager's valuation committee believes such information is not reflective of market value, then a quote from a broker or dealer may be used. Newly issued debt securities may be valued at purchase price for up to two days following purchase.

Futures, Options and Other Derivatives. Futures and options on futures are valued based on the settle price at the close of regular trading on their principal exchange or, in the absence of transactions, they are valued at the mean of the closing bid and asked prices closest to the last reported sale price. Listed options are valued at the mean of the closing bid and asked prices. If market quotations are not readily available, futures and options are valued using quotations from brokers. Customized derivative products are valued at a price provided by a pricing service or, if such a price is unavailable, a broker quote or at a price derived from an internal valuation model.

Repurchase Agreements. Repurchase agreements are generally valued at a price equal to the amount of the cash invested in a repurchase agreement

Foreign Currencies. Foreign currencies and securities denominated in foreign currencies are valued in U.S. dollars utilizing spot exchange rates at the close of regular trading on the NYSE. Forward foreign currency contracts are valued in U.S. dollars utilizing the applicable forward currency exchange rate as of the close of regular trading on the NYSE.

For Money Market Funds. In accordance with Rule 2a-7 under the 1940 Act, all of the securities in the portfolio of a money market fund are valued at amortized cost. The amortized cost method of valuation is an approximation of market value determined by systematically increasing the carrying value of a security if acquired at a discount, or reducing the carrying value if acquired at a premium, so that the carrying value is equal to maturity value on the maturity date. Amortized cost does not take into consideration unrealized capital gains or losses.

The Board has established procedures designed to stabilize the Fund's price per share for purposes of sales and redemptions at \$1.00, to the extent that it is reasonably possible to do so. These procedures include review of the Fund's securities by the Board, at intervals deemed appropriate by it, to determine whether the Fund's net asset value per share computed by using available market quotations deviates from a share value of \$1.00 as computed using the amortized cost method. Deviations are reported to the Board periodically and, if any such deviation exceeds 0.5%, the Board must determine what action, if any, needs to be taken. If the Board determines that a deviation exists that may result in a material dilution or other unfair results for shareholders or investors, the Board must cause the Fund to undertake such remedial action as the Board deems appropriate to eliminate or reduce to the extent reasonably practicable such dilution or unfair results.

Such action may include withholding dividends, calculating net asset value per share for purposes of sales and redemptions using available market quotations, making redemptions in kind, and/or selling securities before maturity in order to realize capital gains or losses or to shorten average portfolio maturity.

While the amortized cost method provides certainty and consistency in portfolio valuation, it may result in valuations of securities that are either somewhat higher or lower than the prices at which the securities could be sold. This means that during times of declining interest rates the yield on the Fund's shares may be higher than if valuations of securities were made based on actual market prices and estimates of market prices. Accordingly, if using the amortized cost method were to result in a lower portfolio value, a prospective investor in the Fund would be able to obtain a somewhat higher yield than the investor would receive if portfolio valuations were based on actual market values. Existing shareholders, on the other hand, would receive a somewhat lower yield than they would otherwise receive. The opposite would happen during a period of rising interest rates.

Fair Valuation of Portfolio Securities. Rather than using the methods described above, the Investment Manager's valuation committee will, in accordance with valuation procedures, which are approved by the Board, determine in good faith a security's fair value in the event that (i) quotations are not readily available, such as when trading is halted or securities are not actively traded; (ii) valuations obtained for a security are deemed, in the judgment of the valuation committee, not to be reflective of market value (prices deemed unreliable); or (iii) a significant event has been recognized in relation to a security or class of securities that is not reflected in quotations from other sources, such as when an event impacting a foreign security occurs after the closing of the security's foreign exchange but before the closing of the NYSE. The fair value of a security is likely to be different from the quoted or published price and fair value determinations often require significant judgment.

In general, any relevant factors may be taken into account in determining fair value, including the following, among others: the fundamental analytical data relating to the security; the value of other financial instruments, including derivative securities traded on other markets or among dealers; trading volumes on markets, exchanges, or among dealers; values of baskets of securities on markets, exchanges, or among dealers; changes in interest rates; observations from financial institutions; government actions or pronouncements; other news events; information as to any transactions or offers with respect to the security; price and extent of public trading in similar securities of the issuer or comparable companies; nature and expected duration of the event, if any, giving rise to the valuation issue; pricing history; the relative size of the position in the portfolio; internal models; and other relevant information.

With respect to securities traded on foreign markets, relevant factors may include, but not be limited to, the following: the value of foreign securities traded on other foreign markets; ADR and/or GDR trading; closed-end fund trading; foreign currency exchange activity and prices; and the trading of financial products that are tied to baskets of foreign securities, such as certain exchange-traded index funds. A systematic independent fair value pricing service assists in the fair valuation process for foreign securities in order to adjust for possible changes in value that may occur between the close of the foreign exchange and the time at which a Fund's NAV is determined. Although the use of this service is intended to decrease opportunities for time zone arbitrage transactions, there can be no assurance that it will successfully decrease arbitrage opportunities.

TAXATION

The following information supplements and should be read in conjunction with the section in the Funds' prospectuses entitled *Distributions and Taxes*. The prospectuses generally describe the U.S. federal income tax treatment of the Funds and their shareholders. This section of the SAI provides additional information concerning U.S. federal income taxes. It is based on the Code, applicable Treasury Regulations, judicial authority, and administrative rulings and practice, all as in effect as of the date of this SAI and all of which are subject to change, including changes with retroactive effect. The following discussion does not address any state, local or foreign tax matters.

The following discussion is generally based on the assumption that the shares of each Fund will be respected as owned by Participating Insurance Companies through their separate accounts, Qualified Plans, and other eligible persons or plans permitted to hold shares of a Fund pursuant to the applicable Treasury Regulations without impairing the ability of the Participating Insurance Company separate accounts to satisfy the diversification requirements of Section 817(h) of the Code ("Other Eligible Investors"). If this is not the case and shares of a Fund held by separate accounts of Participating Insurance Companies are not respected as owned for U.S. federal income tax purposes by those separate accounts, the person(s) determined to own the Fund shares will not be eligible for tax deferral and, instead, will be taxed currently on Fund distributions and on the proceeds of any sale, transfer or redemption of Fund shares under applicable U.S. federal income tax rules that may not be discussed herein.

The Trust has not requested and will not request an advance ruling from the IRS as to the U.S. federal income tax matters described below. The IRS could adopt positions contrary to those discussed below and such positions could be sustained. In addition, the following discussion and the discussions in the Funds' prospectuses address only some of the U.S. federal income tax considerations generally affecting investments in the Funds. In particular, because Participating Insurance Company separate accounts, Qualified Plans and Other Eligible Investors will be the only shareholders of a Fund, only certain U.S. federal tax aspects of an investment in a Fund are described herein. Holders of VA contracts and VLI policies (together, "Contracts"), Qualified Plan participants, or persons investing through an Other Eligible Investor are urged to consult the Participating Insurance Company, Qualified Plan, or Other Eligible Investor through which their investment is made, as well as to consult their own tax advisors and financial planners, regarding the U.S. federal tax consequences to them of an investment in a Fund, the application of state, local, or foreign laws, and the effect of any possible changes in applicable tax laws on an investment in a Fund.

Taxation — Funds Intending to Qualify as Regulated Investment Companies

The following sections apply only to the following Funds and their shareholders: VP – AQR Managed Futures Strategy Fund, VP – Asset Allocation Fund, VP – Core Bond Fund, VP – GS Commodity Strategy Fund, VP – Pyrford International Equity Fund, VP – Select Large Cap Growth Fund, VP – Small Cap Value Fund, VP – Small Company Growth Fund and VP – Strategic Income Fund:

Qualification as a Regulated Investment Company

It is intended that each Fund qualify as a "regulated investment company" under Subchapter M of Subtitle A, Chapter 1 of the Code. Each Fund will be treated as a separate entity for U.S. federal income tax purposes. Thus, the provisions of the Code applicable to regulated investment companies generally will apply separately to each Fund, even though each Fund is a series of the Trust. Furthermore, each Fund will separately determine its income, gains, losses, and expenses for U.S. federal income tax purposes.

In order to qualify for the special tax treatment accorded regulated investment companies and their shareholders, each Fund must, among other things, derive at least 90% of its gross income each taxable year generally from (i) dividends, interest, certain payments with respect to securities loans, gains from the sale or other disposition of stock, securities or foreign currencies, or other income attributable to its business of investing in such stock, securities or foreign currencies (including, but not limited to, gains from options, futures or forward contracts) and (ii) net income derived from an interest in a qualified publicly traded partnership, as defined below. In general, for purposes of this 90% gross income requirement, income derived from a partnership (other than a qualified publicly traded partnership) will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership which would be qualifying income if realized directly by the regulated investment company. However, 100% of the net income derived from an interest in a qualified publicly traded partnership (very generally, defined as a partnership (x) the interests in which are traded on an established securities market or readily tradable on a secondary market or the substantial equivalent thereof, (y) that derives at least 90% of its income from the passive income sources defined in Code Section 7704(d), and (z) that derives less than 90% of its income from the qualifying income described in clause (i) above) will be treated as qualifying income. Certain of a Fund's investments in master limited partnerships (MLPs) and ETFs, if any, may qualify as interests in qualified publicly traded partnerships, as

described further below. In addition, although in general the passive loss rules do not apply to a regulated investment company, such rules do apply to a regulated investment company with respect to items attributable to an interest in a qualified publicly traded partnership.

Each Fund must also diversify its holdings so that, at the end of each quarter of the Fund's taxable year: (i) at least 50% of the fair market value of its total assets consists of (A) cash and cash items (including receivables), U.S. Government securities and securities of other regulated investment companies, and (B) securities of any one issuer (other than those described in clause (A)) to the extent such securities do not exceed 5% of the value of the Fund's total assets and are not more than 10% of the outstanding voting securities of such issuer, and (ii) not more than 25% of the value of the Fund's total assets consists of the securities of any one issuer (other than those described in clause (i)(A)), the securities of two or more issuers the Fund controls and which are engaged in the same, similar, or related trades or businesses, or the securities of one or more qualified publicly traded partnerships. In addition, for purposes of meeting this diversification requirement, the term "outstanding voting securities of such issuer" includes the equity securities of a qualified publicly traded partnership and in the case of a Fund's investments in loan participations, the Fund shall treat both the financial intermediary and the issuer of the underlying loan as an issuer. The qualifying income and diversification requirements described above may limit the extent to which a Fund can engage in certain derivative transactions, including, but not limited to, options, futures contracts, forward contracts, swap agreements and commodity-linked instruments, as well as the extent to which it can invest in MLPs and certain commodity-linked ETFs.

In addition, each Fund generally must distribute to its shareholders at least 90% of its investment company taxable income for the taxable year, which generally includes its ordinary income and the excess of any net short-term capital gain over net long-term capital loss, and at least 90% of its net tax-exempt interest income (if any) for the taxable year.

If a Fund qualifies as a regulated investment company that is accorded special tax treatment, it generally will not be subject to U.S. federal income tax on any of the investment company taxable income and net capital gain (i.e., the excess of net long-term capital gain over net short-term capital loss) it distributes to its shareholders. Each Fund generally intends to distribute at least annually substantially all of its investment company taxable income (computed without regard to the dividends-paid deduction) and its net capital gain. However, no assurance can be given that a Fund will not be subject to U.S. federal income taxation. Any investment company taxable income or net capital gain retained by the Fund will be subject to tax at regular corporate rates.

In determining its net capital gain, including in connection with determining the amount available to support a Capital Gain Dividend (as defined below), its taxable income, and its earnings and profits, a regulated investment company generally may elect to treat part or all of any post-October capital loss (defined as the greatest of net capital loss, net long-term capital loss, or net short-term capital loss, in each case attributable to the portion of the taxable year after October 31) or late-year ordinary loss (generally, (i) net ordinary loss from the sale, exchange or other taxable disposition of property, attributable to the portion of the taxable year after October 31, plus (ii) other net ordinary loss attributable to the portion of the taxable year after December 31) as if incurred in the succeeding taxable year.

In order to comply with the distribution requirements described above applicable to regulated investment companies, a Fund generally must make the distributions in the same taxable year that it realizes the income and gain, although in certain circumstances, a Fund may make the distributions in the following taxable year in respect of income and gains from the prior taxable year. If a Fund declares a distribution to shareholders of record in October, November or December of one calendar year and pays the distribution by January 31 of the following calendar year the Fund and its shareholders will be treated as if the Fund paid the distribution on December 31 of the earlier year.

If a Fund were to fail to meet the income, diversification or distribution test described above, the Fund could in some cases cure such failure including by paying a fund-level tax or interest, making additional distributions, or disposing of certain assets. If the Fund were ineligible to or otherwise did not cure such failure for any year, or otherwise were to fail to qualify as a regulated investment company accorded special tax treatment under the Code for such year, (i) it would be taxed in the same manner as an ordinary corporation without any deduction for its distributions to shareholders, and (ii) each Participating Insurance Company separate account invested in the Fund would fail to satisfy the separate diversification requirements described below (See *Taxation — Special Tax Considerations for Separate Accounts of Participating Insurance Companies*), with the result that the Contracts supported by that account would no longer be eligible for tax deferral. In addition, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest and make substantial distributions before requalifying as a regulated investment company.

Excise Tax

Amounts not distributed on a timely basis by regulated investment companies in accordance with a calendar year distribution requirement are subject to a nondeductible 4% excise tax at the Fund level. This excise tax, however, is generally inapplicable to any regulated investment company whose sole shareholders are separate accounts of insurance companies

funding Contracts, Qualified Plans, Other Eligible Investors, or other regulated investment companies that are also exempt from the excise tax. If a Fund is subject to the excise tax requirements and the Fund fails to distribute by December 31 of each calendar year at least the sum of 98% of its ordinary income for that year (excluding capital gains and losses) and 98.2% of its capital gain net income (adjusted for net ordinary losses) for the one-year period ending on October 31 of that year (or the last day of the Fund's taxable year ending in December of that year if the Fund so elects), and any of its ordinary income and capital gain net income from previous years that were not distributed during such years, the Fund will be subject to the excise tax. For these purposes, ordinary gains and losses from the sale, exchange, or other taxable disposition of property that would be taken properly into account after October 31 of a calendar year are generally treated as arising on January 1 of the following calendar year. For purposes of the excise tax, a Fund will be treated as having distributed any amount on which it has been subject to corporate income tax in the taxable year ending within the calendar year. Each Fund generally intends, if it is subject to the excise tax, to actually distribute or be deemed to have distributed substantially all of its ordinary income and capital gain net income, if any, by the end of each calendar year in order to avoid having any liability for payment of excise tax. However, no assurance can be given that a Fund will not have any excise tax liability.

Capital Loss Carryforwards

Capital losses in excess of capital gains ("net capital losses") are not permitted to be deducted against a Fund's net investment income. Instead, potentially subject to certain limitations, a Fund is permitted to carry forward a net capital loss from any taxable year to offset its capital gains, if any, realized during a subsequent taxable year. If a Fund has incurred net capital losses in a taxable year beginning on or before December 22, 2010 ("pre-2011 losses"), the Fund is permitted to carry such losses forward for eight taxable years; in the year to which they are carried forward, such losses are treated as short-term capital losses that first offset short-term capital gains, and then offset long-term capital gains. If a Fund incurs or has incurred net capital losses in a taxable year beginning after December 22, 2010 ("post-2010 losses"), those losses will be carried forward to one or more subsequent taxable years without expiration. Any such post-2010 carryforward losses will retain their character as short-term or long-term. The Fund must use any post-2010 carryforwards, which will not expire, applying them first against gains of the same character, before it uses any pre-2011 losses. This increases the likelihood that pre-2011 losses will expire unused. Capital gains that are offset by carried forward capital losses are not subject to fund-level U.S. federal income taxation, regardless of whether they are distributed to shareholders. Accordingly, the Funds do not expect to distribute any such offsetting capital gains. The Funds cannot carry back or carry forward any net operating losses (deductions and ordinary losses in excess of ordinary income).

Fund	Total Capital Loss Carryforwards as of December 31, 2013	Amount Expiring In						Amount Not Expiring

(1) For the period from April 30, 2013 (commencement of operations) to December 31, 2013.

Taxation of Fund Investments

If a Fund purchases a debt obligation with original issue discount (OID) (generally a debt obligation with an issue price less than its stated principal amount, such as a zero-coupon bond), the Fund may be required to annually include in its income a portion of the OID as ordinary income, even though the Fund will not receive cash payments for such discount until maturity or disposition of the obligation, and depending on market conditions and the credit quality of the bond, might never receive cash for such discount. Inflation-protected bonds generally can be expected to produce OID income as their principal amounts are adjusted upward for inflation. A Fund generally will be required to make distributions to shareholders representing the OID or market discount (if an election is made by the Fund to include market discount over the holding period of the applicable debt obligation) on debt securities that is currently includible in income, even though the cash representing such income may not have been received by the Fund, and depending on market conditions and the credit quality of the bond, might never be received. Cash to pay such distributions may be obtained from borrowing or from sales proceeds of securities held by a Fund which the Fund otherwise might have continued to hold; obtaining such cash might be

disadvantageous for the Fund. Payment-in-kind securities similarly will give rise to income which is required to be distributed and is taxable even though a Fund receives no cash interest payment on the security during the year.

If a Fund invests in debt obligations that are in the lowest rating categories or are unrated, including debt obligations of issuers not currently paying interest or who are in default, special tax issues may exist for the Fund. Tax rules are not entirely clear about issues such as: (1) whether a Fund should recognize market discount on a debt obligation and, (2) if so, the amount of market discount the Fund should recognize, (3) when a Fund may cease to accrue interest, OID or market discount, (4) when and to what extent deductions may be taken for bad debts or worthless securities and (5) how payments received on obligations in default should be allocated between principal and income. These and other related issues will be addressed by a Fund when, as and if it invests in such securities, in order to seek to ensure that it distributes sufficient income to preserve its status as a regulated investment company and does not become subject to U.S. federal income or excise tax.

Foreign exchange gains and losses realized by a Fund in connection with certain transactions involving foreign currency-denominated debt securities, certain options, futures contracts, forward contracts and similar instruments relating to foreign currencies, or payables or receivables denominated in a foreign currency are subject to Section 988 of the Code, which generally causes such gains and losses to be treated as ordinary income or loss and may affect the amount and timing of recognition of the Fund's income. Under future Treasury Regulations, any such transactions that are not directly related to a Fund's investments in stock or securities (or its options contracts or futures contracts with respect to stock or securities) may have to be limited in order to enable the Fund to satisfy the 90% qualifying income test described above. If the net foreign exchange loss exceeds a Fund's net investment company taxable income (computed without regard to such loss) for a taxable year, the resulting ordinary loss for such year will not be available as a carryforward and thus cannot be deducted by the Fund in future years.

A Fund's transactions in securities and certain types of derivatives (e.g., options, futures contracts, forward contracts and swap agreements), as well as any of its hedging, short sale, securities loan or similar transactions may be subject to special tax rules, such as the notional principal contract, straddle, constructive sale, wash-sale, mark-to-market ("Section 1256"), or short-sale rules, the effect of which may be to accelerate income to the Fund, defer losses to the Fund, or change the character of the Fund's income. Rules governing the U.S. federal income tax aspects of certain of these transactions, including certain commodity-linked investments, are in a developing stage and are not entirely clear in certain respects. Accordingly, while each Fund intends to account for such transactions in a manner it deems to be appropriate, an adverse determination or future guidance by the IRS with respect to these rules (which determination or guidance could be retroactive) may affect whether a Fund has made sufficient distributions, and otherwise satisfied the relevant requirements to maintain its qualification as a regulated investment company and avoid fund-level tax. Certain requirements that must be met under the Code in order for a Fund to qualify as a regulated investment company may limit the extent to which a Fund will be able to engage in certain derivatives or commodity-linked transactions.

If a Fund receives a payment in lieu of dividends (a "substitute payment") with respect to securities on loan pursuant to a securities lending transaction, such income will not be eligible for the dividends received deduction for corporate shareholders. A dividends-received deduction is a deduction that may be available to corporate shareholders, subject to limitations and other rules, on Fund distributions attributable to dividends received by the Fund from domestic corporations, which, if received directly by the corporate shareholder, would qualify for such a deduction. For eligible corporate shareholders, the dividends-received deduction may be subject to certain reductions, and a distribution by a Fund attributable to dividends of a domestic corporation will be eligible for the deduction only if certain holding period and other requirements are met. These requirements are complex; therefore, corporate shareholders of the Funds are urged to consult their own tax advisors and financial planners. Similar consequences may apply to repurchase and other derivative transactions.

Certain of a Fund's investments in derivative instruments and foreign currency-denominated instruments, as well as any of its foreign currency transactions and hedging activities, are likely to produce a difference between its book income and its taxable income. If a Fund's book income is less than the sum of its taxable income and net tax-exempt income (if any), the Fund could be required to make distributions exceeding book income to qualify as a regulated investment company that is accorded special tax treatment.

Any investment by a Fund in REIT equity securities may result in the Fund's receipt of cash in excess of the REIT's earnings. Investments in REIT equity securities also may require a Fund to accrue and distribute income not yet received. To generate sufficient cash to make the requisite distributions, the Fund may be required to sell securities in its portfolio (including when it is not advantageous to do so) that it otherwise would have continued to hold.

Amounts realized by a Fund from sources within foreign countries (e.g., dividends or interest paid on foreign securities) may be subject to withholding and other taxes imposed by such countries; such taxes would reduce the Fund's return on those investments. Tax conventions between certain countries and the United States may reduce or eliminate such taxes.

A Fund may invest directly or indirectly in residual interests in REMICs or equity interests in taxable mortgage pools (TMPs). Under an IRS notice, and Treasury Regulations that have yet to be issued but may apply retroactively, a portion of a Fund's income (including income allocated to the Fund from a pass-through entity) that is attributable to a residual interest in a REMIC or an equity interest in a TMP (referred to in the Code as an "excess inclusion") will be subject to U.S. federal income tax in all events. This notice also provides, and the regulations are expected to provide, that excess inclusion income of a regulated investment company, such as a Fund, will be allocated to shareholders of the regulated investment company in proportion to the dividends received by such shareholders, with the same consequences as if the shareholders held the related interest directly.

In general, excess inclusion income allocated to shareholders (i) cannot be offset by net operating losses (subject to a limited exception for certain thrift institutions), (ii) will constitute unrelated business taxable income (UBTI) to entities (including a Qualified Plan, an individual retirement account, a 401(k) plan, a Keogh plan or certain other tax-exempt entities) subject to tax on UBTI, thereby potentially requiring such an entity that is allocated excess inclusion income, and otherwise might not be required to file a tax return, to file a tax return and pay tax on such income, (iii) in the case of a foreign shareholder, will not qualify for any reduction in U.S. federal withholding tax, and (iv) in the case of a Participating Insurance Company separate account supporting a Contract, cannot be offset by an adjustment to the reserves and thus is currently taxed notwithstanding the more general tax deferral available to Participating Insurance Company separate accounts funding Contracts.

Income of a Fund that would be UBTI if earned directly by a tax-exempt entity will not generally be attributed as UBTI to a tax-exempt shareholder of the Fund. Notwithstanding this "blocking" effect, a tax-exempt shareholder could realize UBTI by virtue of its investment in the Fund if shares in the Fund constitute debt-financed property in the hands of the tax-exempt shareholder within the meaning of Code Section 514(b).

Some amounts received by a Fund from its investments in MLPs will likely be treated as returns of capital because of accelerated deductions available with respect to the activities of MLPs. On the disposition of an investment in such an MLP, the Fund will likely realize taxable income in excess of economic gain from that asset (or if, in later periods, a Fund does not dispose of the MLP, the Fund will likely realize taxable income in excess of cash flow received by the Fund from the MLP), and the Fund must take such income into account in determining whether the Fund has satisfied its regulated investment company distribution requirements. The Fund may have to borrow or liquidate securities to satisfy its distribution requirements and meet its redemption requests, even though investment considerations might otherwise make it undesirable for the Fund to borrow money or sell securities at the time.

As noted above, certain of the ETFs and MLPs in which a Fund may invest qualify as qualified publicly traded partnerships. In such cases, the net income derived from such investments will constitute qualifying income for purposes of the 90% gross income requirement described earlier for qualification as a regulated investment company. If, however, such a vehicle were to fail to qualify as a qualified publicly traded partnership in a particular year, a portion of the gross income derived from it in such year could constitute nonqualifying income to a Fund for purposes of the 90% gross income requirement and thus could adversely affect the Fund's ability to qualify as a regulated investment company for a particular year. In addition, as described above, the diversification requirement for regulated investment company qualification will limit a Fund's investments in one or more vehicles that are qualified publicly traded partnerships to 25% of the Fund's total assets as of the end of each quarter of the Fund's taxable year.

"Passive foreign investment companies" (PFICs) are generally defined as foreign corporations where at least 75% of their gross income for their taxable year is income from passive sources (such as certain interest, dividends, rents and royalties, or capital gains) or at least 50% of their assets on average produce such passive income. If a Fund acquires any equity interest in a PFIC, the Fund could be subject to U.S. federal income tax and interest charges on "excess distributions" received from the PFIC or on gain from the sale of such equity interest in the PFIC, even if all income or gain actually received by the Fund is timely distributed to its shareholders.

Elections may be available that would ameliorate these adverse tax consequences, but such elections would require a Fund to include its share of the PFIC's income and net capital gains annually, regardless of whether it receives any distribution from the PFIC (in the case of a "QEF election"), or to mark the gains (and to a limited extent losses) in its interests in the PFIC "to the market" as though the Fund had sold and repurchased such interests on the last day of the Fund's taxable year, treating such gains and losses as ordinary income and loss (in the case of a "mark-to-market election"). The QEF and mark-to-market elections may require a Fund to recognize taxable income or gain without the concurrent receipt of cash and increase the amount required to be distributed by the Fund to avoid taxation. Making either of these elections therefore may require a Fund to liquidate other investments prematurely to meet the minimum distribution requirements described above, which also may adversely affect the Fund's total return. Each Fund may attempt to limit and/or manage its holdings in PFICs to minimize tax liability and/or maximize returns from these investments but there can be no assurance that it will be able to do so. Moreover, because it is not always possible to identify a foreign corporation as a PFIC, a Fund may incur the tax and interest charges described above in some instances.

A U.S. person, including a Fund, who owns (directly or indirectly) 10% or more of the total combined voting power of all classes of stock of a foreign corporation is a “U.S. Shareholder” for purposes of the controlled foreign corporation (“CFC”) provisions of the Code. A CFC is a foreign corporation that, on any day of its taxable year, is owned (directly, indirectly, or constructively) more than 50% (measured by voting power or value) by U.S. Shareholders. The wholly-owned subsidiaries of VP – AQR Managed Futures Strategy Fund and VP – GS Commodity Strategy Fund (for purposes of this paragraph, each a Fund) are expected to be CFCs in which the respective Fund will be a U.S. Shareholder. As a U.S. Shareholder, each Fund is required to include in gross income for U.S. federal income tax purposes all of the “subpart F income” of a CFC in which the Fund invests, whether or not such income is actually distributed by the CFC, provided that the foreign corporation has been a CFC for at least 30 uninterrupted days in its taxable year. Subpart F income generally includes interest, OID, dividends, net gains from the disposition of stocks or securities, receipts with respect to securities loans, net gains from transactions (including futures, forward, and similar transactions) in commodities, and net payments received with respect to equity swaps and similar derivatives. Net losses incurred by a CFC during a tax year do not flow through to the Fund and thus will not be available to offset income or capital gain generated from the Fund’s other investments. In addition, net losses incurred by a CFC during a tax year generally cannot be carried forward by the CFC to offset gains realized by it in subsequent taxable years. To the extent a Fund invests in a CFC and recognizes subpart F income in excess of actual cash distributions from the CFC, the Fund may be required to sell assets (including when it is not advantageous to do so) to generate the cash necessary to distribute as dividends to its shareholders all of its income and gains and therefore to eliminate any tax liability at the Fund level.

In addition, the Foreign Account Tax Compliance Act (FATCA) generally imposes a reporting and 30% withholding tax regime with respect to so called “withholdable payments” when certain reporting requirements are not met. Very generally, withholdable payments are payments of certain U.S.-source income (such as interest and dividends) and gross proceeds from the sale or other disposition of property that can produce U.S.-source interest or dividends. The 30% withholding tax on withholdable payments is scheduled to be phased in beginning with payments made on July 1, 2014. Pursuant to these requirements, to the extent a Subsidiary receives withholdable payments on an investment, it will be subject to the 30% withholding tax unless the Subsidiary satisfies the reporting or certain other requirements, as may be applicable to the Subsidiary. Each Subsidiary expects to satisfy such of these requirements as may be applicable to it, so as to avoid this 30% withholding tax. See “Certain Shareholder Reporting and Withholding Requirements” below for more discussion of these rules.

In addition to the investments described above, prospective shareholders should be aware that other investments made by a Fund may involve complex tax rules that may result in income or gain recognition by the Fund without corresponding current cash receipts. Although each Fund seeks to avoid significant noncash income, such noncash income could be recognized by a Fund, in which case the Fund may distribute cash derived from other sources in order to meet the minimum distribution requirements described above. In this regard, a Fund could be required at times to liquidate investments prematurely in order to satisfy its minimum distribution requirements, which may accelerate the recognition of gain and adversely affect the Fund’s total return. Furthermore, amounts realized by a Fund from sources within foreign countries may be subject to withholding and other taxes imposed by such countries, thereby reducing the amount available for distribution to shareholders.

Tax Shelter Reporting Regulations

Under Treasury Regulations, if a shareholder recognizes a loss of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder, including a Participating Insurance Company holding separate accounts, the shareholder must file with the IRS a disclosure statement on IRS Form 8886. Direct shareholders of portfolio securities are in many cases excepted from this reporting requirement, but under current guidance, shareholders of a regulated investment company, such as Participating Insurance Companies that own shares in a Fund through their separate accounts, are not excepted. Future guidance may extend the current exception from this reporting requirement to shareholders of most or all regulated investment companies. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer’s treatment of the loss is proper. Shareholders should consult with their tax advisors to determine the applicability of these regulations in light of their individual circumstances.

Taxation — Funds Expecting to Be Treated as Partnerships

The following sections apply only to the following Funds and their shareholders: VP – Contrarian Core Fund, VP – Multi-Strategy Alternatives Fund and the VP – Managed Volatility Funds:

Fund Status

For U.S. federal income tax purposes, each Fund expects to be treated as a partnership and not as an association taxable as a corporation, and does not expect to be a “publicly traded partnership” as defined in Section 7704 of the Code. Each Fund considers itself to be a separate entity for U.S. federal income tax purposes. Thus, each Fund and its shareholders should not

be required to take into account the assets, operations, or shareholders of other series of the Trust for U.S. federal income tax purposes (e.g., for purposes of determining possible characterization as a publicly traded partnership). If a Fund were determined to be a publicly traded partnership taxable as a corporation, (i) it generally would be subject to tax at the Fund level on its earnings and profits at regular corporate income tax rates, and (ii) each Participating Insurance Company separate account invested in the Fund would fail to satisfy the separate diversification requirements described below (See **Taxation — Special Tax Considerations for Separate Accounts of Participating Insurance Companies**), with the result that the Contracts supported by that account would no longer be eligible for tax deferral.

As a partnership, a Fund is not itself subject to U.S. federal income tax. Instead, each shareholder will be required to take into account for U.S. federal income tax purposes its allocable share of a Fund's income, gains, losses, deductions, credits, and other tax items, without regard to whether such shareholder has received or will receive corresponding distributions from the Fund. Allocations of these tax items, for U.S. federal income tax purposes, generally will be made in accordance with the economics of the Funds. Such items when allocated to a shareholder will generally retain their character as qualifying for particular tax treatment (e.g., eligibility for dividends-received deduction) when received by a taxable shareholder such as a Participating Insurance Company; this "pass-through" of tax characteristics will generally not affect holders of Contracts funded by a Fund or participants in Qualified Plans investing in a Fund.

Taxation of Fund Investments

Any investment by a Fund in foreign securities may subject the Fund and/or its shareholders (whether or not shareholders receive any distributions with respect to such investments), directly or indirectly, to taxation, including withholding or other taxes on dividends, interest, or capital gains, and/or tax filing obligations in foreign jurisdictions. A Fund and/or its shareholders may otherwise be subject to foreign taxation on repatriation proceeds generated from those securities or to other transaction-based foreign taxes on those securities.

A U.S. person, including a Fund, who owns, directly or indirectly, 10% or more of the total combined voting power of all classes of stock of a foreign corporation is a "U.S. Shareholder" for purposes of the controlled foreign corporation ("CFC") provisions of the Code. A CFC is a foreign corporation that, on any day of its taxable year, is owned (directly, indirectly, or constructively) more than 50% (measured by voting power or value) by U.S. Shareholders. The wholly-owned subsidiary of VP – Multi-Strategy Alternatives Fund (for purposes of this paragraph, a Fund) is expected to be a CFC in which the Fund will be a U.S. Shareholder. As a U.S. Shareholder, the Fund is required to include in gross income for U.S. federal income tax purposes all of a CFC's "subpart F income," whether or not such income is actually distributed by the CFC, provided that the foreign corporation has been a CFC for at least 30 uninterrupted days in its taxable year. Subpart F income generally includes interest, OID, dividends, net gains from the disposition of stocks or securities, receipts with respect to securities loans, net gains from transactions (including futures, forward, and similar transactions) in commodities, and net payments received with respect to equity swaps and similar derivatives. Subpart F income is treated as ordinary income, regardless of the character of the CFC's underlying income. Net losses incurred by a CFC during a tax year do not flow through to a Fund and thus will not be available to offset income or capital gain generated from a Fund's other investments. In addition, net losses incurred by a CFC during a tax year generally cannot be carried forward by the CFC to offset gains realized by it in subsequent taxable years.

A Fund may invest in PFICs, which also are subject to special tax rules. Shareholders of a Fund that invests in a CFC, including a Subsidiary, or a PFIC may be subject to special reporting and filing requirements in respect of their indirect investment in such instruments. Shareholders should consult their tax advisors in this regard.

Under a notice issued by the IRS in October 2006 and Treasury regulations that have not yet been issued, but may apply retroactively, a portion of a Fund's income (including income allocated to a Fund from a pass-through entity) that is attributable to a residual interest in a REMIC or an equity interest in a TMP (referred to in the Code as an "excess inclusion") will be subject to U.S. federal income tax in all events. This notice also provides, and the regulations are expected to provide, that excess inclusion income of a partnership, such as the Funds, will be allocated to shareholders of the partnership consistent with their allocation of other items of income, with the same consequences as if the shareholders held the related interest directly.

In general, excess inclusion income allocated to shareholders (i) cannot be offset by net operating losses (subject to a limited exception for certain thrift institutions), (ii) will constitute UBTI to entities (including a Qualified Plan, an individual retirement account, a 401(k) plan, a Keogh plan, or certain other tax-exempt entities) subject to tax on UBTI, thereby potentially requiring such an entity that is allocated excess inclusion income to file a tax return and pay tax on such income, (iii) in the case of a foreign shareholder, will not qualify for any reduction in U.S. federal withholding tax, and (iv) in the case of a Participating Insurance Company separate account supporting a Contract, cannot be offset by an adjustment to the reserves and thus is currently taxed notwithstanding the more general tax deferral available to Participating Insurance Company separate accounts funding Contracts.

In addition, to the extent that a shareholder has borrowed to finance shares of a Fund or a Fund holds property that constitutes debt-financed property (e.g., securities purchased on margin), income attributable to such property allocated to a shareholder that is an exempt organization may constitute UBTI. Certain of a Fund's other investments or activities may also generate UBTI. Furthermore, the IRS may take the position that certain of a Fund's investments in derivative instruments should be reclassified in a manner that gives rise to UBTI. In addition, reverse repurchase agreements may, under certain conditions, be characterized as secured loans, the proceeds of which could be used to acquire assets that would, therefore, give rise to debt-financed income. If a Fund generates UBTI, a tax-exempt shareholder in the Fund generally would be required to file a tax return and could incur tax liability on such shareholder's allocable share of that UBTI. Each Fund currently does not expect to leverage its investments.

Qualified Plans and other tax-exempt shareholders should consult their own tax advisors concerning the possible effects of UBTI on their own tax situation as well as the general tax implications of an investment in a Fund.

U.S. Tax Shelter Rules

A Fund may engage in transactions or make investments that would subject the Fund, its shareholders, and/or its "material advisors," as defined in Treas. Reg. Sec. 301.6112-1(c)(1), to special rules requiring such transactions or investments by the Fund or investments in the Fund to be reported and/or otherwise disclosed to the IRS, including to the IRS's Office of Tax Shelter Analysis (the "Tax Shelter Rules"). A transaction may be subject to reporting or disclosure if it is described in any of several categories of "reportable transactions", which include, among others, transactions that result in the incurrence of a loss or losses exceeding certain thresholds or that are offered under conditions of confidentiality. Although each Fund does not expect to engage in transactions solely or principally for the purpose of achieving a particular tax consequence, there can be no assurance that a Fund will not engage in transactions that trigger the Tax Shelter Rules. In addition, a shareholder may have disclosure obligations with respect to its shares in a Fund if the shareholder (or the Fund in certain cases) participates in a reportable transaction.

Shareholders should consult their own tax advisors about their obligation to report or disclose to the IRS information about their investment in a Fund and participation in a Fund's income, gain, loss, deduction, or credit with respect to transactions or investments subject to these rules. In addition, pursuant to these rules, a Fund may provide to its material advisors identifying information about the Fund's shareholders and their participation in the Fund and the Fund's income, gain, loss, deduction, or credit from those transactions or investments, and the Fund or its material advisors may disclose this information to the IRS upon its request. Significant penalties may apply for failure to comply with these rules.

In addition, an excise tax and additional disclosure requirements may apply to certain tax-exempt entities that are "parties" to certain types of prohibited tax shelter transactions. Qualified Plans and other tax-exempt shareholders should consult with their tax advisors in this regard.

In certain circumstances, a Fund and/or a Fund's tax advisor may make special disclosures to the IRS of certain positions taken by the Fund.

Special Tax Considerations for Separate Accounts of Participating Insurance Companies (All Funds)

Under the Code, if the investments of a segregated asset account, such as the separate accounts of Participating Insurance Companies, are "adequately diversified," and certain other requirements are met, a holder of a Contract supported by the account will receive favorable tax treatment in the form of deferral of tax until a distribution is made under the Contract.

In general, the investments of a segregated asset account are considered to be "adequately diversified" only if: (i) no more than 55% of the value of the total assets of the account is represented by any one investment; (ii) no more than 70% of the value of the total assets of the account is represented by any two investments; (iii) no more than 80% of the value of the total assets of the account is represented by any three investments; and (iv) no more than 90% of the value of the total assets of the account is represented by any four investments. Section 817(h) provides as a safe harbor that a segregated asset account is also considered to be "adequately diversified" if it meets the regulated investment company diversification tests described earlier and no more than 55% of the value of the total assets of the account is attributable to cash, cash items (including receivables), U.S. Government securities, and securities of other regulated investment companies.

In general, all securities of the same issuer are treated as a single investment for such purposes, and each U.S. Government agency and instrumentality is considered a separate issuer. However, Treasury Regulations provide a "look-through rule" with respect to a segregated asset account's investments in a regulated investment company or partnership for purposes of the applicable diversification requirements, provided certain conditions are satisfied by the regulated investment company or partnership. In particular, (i) if the beneficial interests in the regulated investment company or partnership are held by one or more segregated asset accounts of one or more insurance companies, and (ii) if public access to such regulated investment company or partnership is available exclusively through the purchase of a Contract, then a segregated asset account's beneficial interest in the regulated investment company or partnership is not treated as a single investment. Instead, a pro rata

portion of each asset of the regulated investment company or partnership is treated as an asset of the segregated asset account. Look-through treatment is also available if the two requirements above are met and notwithstanding the fact that beneficial interests in the regulated investment company or partnership are also held by Qualified Plans and Other Eligible Investors. Additionally, to the extent a Fund meeting the above conditions invests in underlying regulated investment companies or partnerships that themselves are owned exclusively by insurance company separate accounts, Qualified Plans, or Other Eligible Investors, the assets of those underlying regulated investment companies or partnerships generally should be treated as assets of the separate accounts investing in the Fund.

As indicated above, the Trust intends that each of the VP – Asset Allocation Fund, VP – Core Bond Fund, VP – GS Commodity Strategy Fund, VP – Pyrford International Equity Fund, VP – Select Large Cap Growth Fund, VP – Small Cap Value Fund, VP – Small Company Growth Fund, VP – Strategic Income Fund and VP – AQR Managed Futures Strategy Fund will qualify as a regulated investment company or, in the case of VP – Contrarian Core Fund, VP – Multi-Strategy Alternatives Fund and each VP – Managed Volatility Fund, as a partnership that is not a “publicly traded partnership,” under the Code. The Trust also intends to cause each Fund to satisfy the separate diversification requirements imposed by Section 817(h) of the Code and applicable Treasury Regulations at all times to enable the corresponding separate accounts to be “adequately diversified.” In addition, the Trust intends that each Fund will qualify for the “look-through rule” described above by limiting the investment in each Fund’s shares to Participating Insurance Company separate accounts, Qualified Plans and Other Eligible Investors. Accordingly, the Trust intends that each Participating Insurance Company, through its separate accounts, will be able to treat its interests in a Fund as ownership of a pro rata portion of each asset of the Fund, so that individual holders of the Contracts underlying the separate account will qualify for favorable U.S. federal income tax treatment under the Code. However, no assurance can be made in that regard.

Failure by a Fund to satisfy the Section 817(h) requirements by failing to comply with the “55%-70%-80%-90%” diversification test or the safe harbor described above, or by failing to comply with the “look-through rule,” could cause the Contracts to lose their favorable tax status and require a Contract holder to include currently in ordinary income any income accrued under the Contracts for the current and all prior taxable years. Under certain circumstances described in the applicable Treasury Regulations, inadvertent failure to satisfy the Section 817(h) diversification requirements may be corrected; such a correction would require a payment to the IRS. Any such failure could also result in adverse tax consequences for the Participating Insurance Company issuing the Contracts.

The IRS has indicated that a degree of investor control over the investment options underlying a Contract may interfere with the tax-deferred treatment of such Contracts. The IRS has issued rulings addressing the circumstances in which a Contract holder’s control of the investments of the separate account may cause the holder, rather than the insurance company, to be treated as the owner of the assets held by the separate account. If the holder is considered the owner of the securities underlying the separate account, income and gains produced by those securities would be included currently in the holder’s gross income.

In determining whether an impermissible level of investor control is present, one factor the IRS considers is whether a Fund’s investment strategies are sufficiently broad to prevent a Contract holder from being deemed to be making particular investment decisions through its investment in the separate account. For this purpose, current IRS guidance indicates that typical fund investment strategies, even those with a specific sector or geographical focus, are generally considered sufficiently broad. Most, although not necessarily all, of the Funds have objectives and strategies that are not materially narrower than the investment strategies held not to constitute an impermissible level of investor control in recent IRS rulings (such as large company stocks, international stocks, small company stocks, mortgage-backed securities, money market securities, telecommunications stocks and financial services stocks).

The above discussion addresses only one of several factors that the IRS considers in determining whether a Contract holder has an impermissible level of investor control over a separate account. Contract holders should consult with their Participating Insurance Companies and their own tax advisors, as well as the prospectus relating to their particular Contract, for more information concerning this investor control issue.

In the event that additional rules, regulations or other guidance is issued by the IRS or the Treasury Department concerning this issue, such guidance could affect the treatment of a Fund as described above, including retroactively. In addition, there can be no assurance that a Fund will be able to continue to operate as currently described, or that the Fund will not have to change its investment objective or investment policies in order to prevent, on a prospective basis, any such rules and regulations from causing Contract owners to be considered the owners of the shares of the Fund.

Certain Shareholder Reporting and Withholding Requirements (All Funds)

Shareholders that are U.S. persons and own, directly or indirectly, more than 50% of a Fund could be required to report annually their “financial interest” in the Fund’s “foreign financial accounts,” (if any), on FinCEN Form 114, Report of

Foreign Bank and Financial Accounts (FBAR). Shareholders should consult their intermediaries through which a Fund investment is made (if applicable), as well as their tax advisors to determine the applicability to them of this reporting requirement.

FATCA generally requires a Fund to obtain information sufficient to identify the status of each of its shareholders under FATCA. If a shareholder fails to provide this information or otherwise fails to comply with FATCA, a Fund may be required to withhold under FATCA at a rate of 30% with respect to that shareholder on dividends, including Capital Gain Dividends, and the proceeds of the sale, redemption or exchange of Fund shares; depending on the nature of the distribution, such withholding would begin as early as July 1, 2014. Each prospective investor is urged to consult its tax advisor regarding the applicability of FATCA and any other withholding or reporting requirements with respect to the prospective investor's own situation, including investments through an intermediary.

Special Considerations for Contract Holders and Plan Participants

The foregoing discussion does not address the tax consequences to Contract holders or Qualified Plan participants of an investment in a Contract or participation in a Qualified Plan. Contract holders investing in a Fund through a Participating Insurance Company separate account, Qualified Plan participants, or persons investing in a Fund through Other Eligible Investors are urged to consult with their Participating Insurance Company, Qualified Plan sponsor, or Other Eligible Investor, as applicable, and their own tax advisors, for more information regarding the U.S. federal income tax consequences to them of an investment in a Fund.

CONTROL PERSONS AND PRINCIPAL HOLDERS OF SECURITIES

Management Ownership

All shares of the Variable Portfolio funds are owned by life insurance companies and Qualified Plans, and are not available for purchase by individuals. Consequently, as of March 31, 2014, the Trustees and Officers of the Trust, as a group, beneficially owned less than 1% of each class of shares of each Fund.

Principal Shareholders and Control Persons

The tables below identify the names, address and ownership percentage of each person who owns of record or is known by the Trust to own beneficially 5% or more of any class of a Fund's outstanding shares (Principal Holders) or 25% or more of a Fund's outstanding shares (Control Persons). A shareholder who beneficially owns more than 25% of a Fund's shares is presumed to "control" the Fund, as that term is defined in the 1940 Act, and may have a significant impact on matters submitted to a shareholder vote. A shareholder who beneficially owns more than 50% of a Fund's outstanding shares may be able to approve proposals, or prevent approval of proposals, without regard to votes by other Fund shareholders. Additional information about Control Persons is provided following the tables. The information, for a Fund provided is as of a date no more than 30 days prior to the date on which a post-effective amendment to the applicable Trust's registration statement with respect to such Fund.

All the shares of the Funds are held of record by sub-accounts of separate accounts of Participating Insurance Companies on behalf of the owners of VLI policies or VA contracts, by Qualified Plans, by the Investment Manager, by the general account of SunLife Insurance Company (SunLife) or by certain other eligible investors. At all meetings of shareholders of the Funds each Participating Insurance Company or Qualified Plan sponsor will vote the shares held of record by sub-accounts of its separate accounts only in accordance with the instructions received from the VLI policy, VA contract owners or Qualified Plan participant on behalf of whom such shares are held. All such shares as to which no instructions are received (as well as, in the case of SunLife, all shares held by its general account) will be voted in the same proportion as shares as to which instructions are received (with SunLife's general account shares being voted in the proportions determined by instructing owners of SunLife VLI policies or VA contracts). Accordingly, each Participating Insurance Company or Qualified Plan sponsor disclaims beneficial ownership of the shares of the Funds held of record by the sub-accounts of its separate accounts (or, in the case of SunLife, its general account).

Except as otherwise indicated, the information below is as of March 31, 2014.

(a) A combination of investments made by the Investment Manager and/or by other Funds managed by the Investment Manager.

The Investment Manager, a Minnesota limited liability company, is a wholly-owned subsidiary of Ameriprise Financial, Inc. Other Columbia Funds managed by the Investment Manager may hold more than 25% of a Fund.

RiverSource Life Account for Inside Distribution (RiverSource Life Insurance Company) is a Minnesota corporation. RiverSource Life Insurance Company is a wholly-owned subsidiary of Ameriprise Financial, Inc.

Sun Life Assurance Company of Canada (U.S.) is a Delaware corporation. Sun Life Assurance Company of Canada (U.S.) is a wholly-owned subsidiary of Sun Life Financial.

ING USA Annuity and Life Insurance Company is an Iowa Corporation. ING USA Annuity and Life Insurance Company is a wholly-owned subsidiary of ING U.S., Inc.

New York Life Insurance & Annuity Corporation is a Delaware Corporation. New York Life Insurance & Annuity Corporation is a wholly-owned subsidiary of New York Life Insurance Company.

Hartford Life Insurance Company is a Connecticut Corporation. Hartford Life Insurance Company is a wholly-owned subsidiary of The Hartford Financial Services Group, Inc.

INFORMATION REGARDING PENDING AND SETTLED LEGAL PROCEEDINGS

In December 2005, without admitting or denying the allegations, American Express Financial Corporation (AEFC, which is now known as Ameriprise Financial, Inc. (Ameriprise Financial)) entered into settlement agreements with the SEC and Minnesota Department of Commerce (MDOC) related to market timing activities. As a result, AEFC was censured and ordered to cease and desist from committing or causing any violations of certain provisions of the Investment Advisers Act of 1940, the Investment Company Act of 1940, and various Minnesota laws. AEFC agreed to pay disgorgement of \$10 million and civil money penalties of \$7 million. AEFC also agreed to retain an independent distribution consultant to assist in developing a plan for distribution of all disgorgement and civil penalties ordered by the SEC in accordance with various undertakings detailed at <http://www.sec.gov/litigation/admin/ia-2451.pdf>. Ameriprise Financial and its affiliates have cooperated with the SEC and the MDOC in these legal proceedings, and have made regular reports to the Funds' Board of Trustees.

Ameriprise Financial and certain of its affiliates have historically been involved in a number of legal, arbitration and regulatory proceedings, including routine litigation, class actions, and governmental actions, concerning matters arising in connection with the conduct of their business activities. Ameriprise Financial believes that the Funds are not currently the subject of, and that neither Ameriprise Financial nor any of its affiliates are the subject of, any pending legal, arbitration or regulatory proceedings that are likely to have a material adverse effect on the Funds or the ability of Ameriprise Financial or its affiliates to perform under their contracts with the Funds. Ameriprise Financial is required to make 10-Q, 10-K and, as necessary, 8-K filings with the Securities and Exchange Commission on legal and regulatory matters that relate to Ameriprise Financial and its affiliates. Copies of these filings may be obtained by accessing the SEC website at www.sec.gov.

There can be no assurance that these matters, or the adverse publicity associated with them, will not result in increased fund redemptions, reduced sale of fund shares or other adverse consequences to the Funds. Further, although we believe proceedings are not likely to have a material adverse effect on the Funds or the ability of Ameriprise Financial or its affiliates to perform under their contracts with the Funds, these proceedings are subject to uncertainties and, as such, we are unable to estimate the possible loss or range of loss that may result. An adverse outcome in one or more of these proceedings could result in adverse judgments, settlements, fines, penalties or other relief that could have a material adverse effect on the consolidated financial condition or results of operations of Ameriprise Financial.

DESCRIPTION OF RATINGS

The ratings of S&P, Moody's and Fitch represent their opinions as to quality. These ratings are not absolute standards of quality and are not recommendations to purchase, sell or hold a security. Issuers and issues are subject to risks that are not evaluated by the rating agencies.

S&P's Debt Ratings

Long-Term Issue Credit Ratings

An obligation rated 'AAA' has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

An obligation rated 'AA' differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

An obligation rated 'A' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong. An obligation rated 'BBB' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated 'BB', 'B', 'CCC', 'CC', and 'C' are regarded as having significant speculative characteristics. 'BB' indicates the least degree of speculation and 'C' the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

An obligation rated 'BB' is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

An obligation rated 'B' is more vulnerable to nonpayment than obligations rated 'BB', but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

An obligation rated 'CCC' is currently vulnerable to nonpayment, and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

An obligation rated 'CC' is currently highly vulnerable to nonpayment.

A 'C' rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents, or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the 'C' rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have been suspended in accordance with the instrument's terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

An obligation rated 'D' is in payment default. The 'D' rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within five business days, irrespective of any grace period. The 'D' rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation's rating is lowered to 'D' upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

Short-Term Issue Credit Ratings

Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the U.S., for example, that means obligations with an original maturity of no more than 365 days – including commercial paper.

A short-term obligation rated 'A-1' is rated in the highest category by S&P. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

A short-term obligation rated 'A-2' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

A short-term obligation rated 'A-3' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

A short-term obligation rated 'B' is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor's inadequate capacity to meet its financial commitments.

A short-term obligation rated 'C' is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

A short-term obligation rated 'D' is in payment default. The 'D' rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The 'D' rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

Municipal Short-Term Note Ratings

SP-1 Strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

SP-2 Satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

SP-3 Speculative capacity to pay principal and interest.

Moody's Long-Term Debt Ratings

Global Long-Term Rating Scale

Aaa – Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa – Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A – Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa – Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba – Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B – Obligations rated B are considered speculative and are subject to high credit risk.

Caa – Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca – Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C – Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Global Short-Term Rating Scale

Issuers (or supporting institutions) rated Prime-1 (P-1) have a superior ability to repay short-term debt obligations.

Issuers (or supporting institutions) rated Prime-2 (P-2) have a strong ability to repay short-term debt obligations.

Issuers (or supporting institutions) rated Prime-3 (P-3) have an acceptable ability to repay short-term obligations.

Issuers (or supporting institutions) rated Not Prime (NP) do not fall within any of the Prime rating categories.

US Municipal Short-Term Debt and Demand Obligation Ratings

While the global short-term 'prime' rating scale is applied to U.S. municipal tax-exempt commercial paper, these programs are typically backed by external letters of credit or liquidity facilities and their short-term prime ratings usually map to the long-term rating of the enhancing bank or financial institution and not to the municipality's rating. Other short-term

municipal obligations, which generally have different funding sources for repayment, are rated using two additional short-term rating scales (i.e., the MIG and VMIG scales discussed below).

The Municipal Investment Grade (MIG) scale is used to rate US municipal bond anticipation notes of up to three years maturity. Municipal notes rated on the MIG scale may be secured by either pledged revenues or proceeds of a take-out financing received prior to note maturity. MIG ratings expire at the maturity of the obligation, and the issuer's long-term rating is only one consideration in assigning the MIG rating. MIG ratings are divided into three levels—MIG 1 through MIG 3—while speculative grade short-term obligations are designated SG.

The MIG 1 designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

The MIG 2 designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

The MIG 3 designation denotes acceptable credit quality. Liquidity and cash-flow protection may be narrow, and market access for refinancing is likely to be less well-established.

The SG designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

In the case of variable rate demand obligations (VRDOs), a two-component rating is assigned: a long or short-term debt rating and a demand obligation rating. The first element represents Moody's evaluation of risk associated with scheduled principal and interest payments. The second element represents Moody's evaluation of risk associated with the ability to receive purchase price upon demand ("demand feature"). The second element uses a rating from a variation of the MIG scale called the Variable Municipal Investment Grade (VMIG) scale. The rating transitions on the VMIG scale, as shown in the diagram below, differ from those on the Prime scale to reflect the risk that external liquidity support generally will terminate if the issuer's long-term rating drops below investment grade.

The VMIG 1 designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

The VMIG 2 designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

The VMIG 3 designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

The SG designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.

Fitch's Ratings

Corporate Finance Obligations – Long-Term Rating Scales

AAA: Highest credit quality.

'AAA' ratings denote the lowest expectation of credit risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA: Very high credit quality.

'AA' ratings denote expectations of very low credit risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A: High credit quality.

'A' ratings denote expectations of low credit risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB: Good credit quality.

'BBB' ratings indicate that expectations of credit risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

BB: Speculative.

'BB' ratings indicate an elevated vulnerability to credit risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial alternatives may be available to allow financial commitments to be met.

B: Highly speculative.

'B' ratings indicate that material credit risk is present.

CCC: Substantial credit risk.

'CCC' ratings indicate that substantial credit risk is present.

CC: Very high levels of credit risk.

'CC' ratings indicate very high levels of credit risk.

C: Exceptionally high levels of credit risk.

'C' indicates exceptionally high levels of credit risk.

Defaulted obligations typically are not assigned 'RD' or 'D' ratings, but are instead rated in the 'B' to 'C' rating categories, depending upon their recovery prospects and other relevant characteristics.

Short-Term Ratings Assigned to Issuers or Obligations in Corporate, Public and Structured Finance

F1: Highest short-term credit quality.

Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added "+" to denote any exceptionally strong credit feature.

F2: Good short-term credit quality.

Good intrinsic capacity for timely payment of financial commitments.

F3: Fair short-term credit quality.

The intrinsic capacity for timely payment of financial commitments is adequate.

B: Speculative short-term credit quality.

Minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

C: High short-term default risk.

Default is a real possibility.

RD: Restricted default.

Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Typically applicable to entity ratings only.

D: Default.

Indicates a broad-based default event for an entity, or the default of a short-term obligation.

Proxy Voting Guidelines

Columbia Management Investment Advisers, LLC

**Proxy Voting Guidelines
Effective January 1, 2012**

ColumbiaManagementSM

Set forth on the following pages are guidelines adopted and used by Columbia Management Investment Advisers, LLC (the “Adviser”, “We”, “Us” or “Our”) in voting proxies (the “Guidelines”). The Guidelines are organized by issue and present certain factors that may be considered in making proxy voting determinations. The Adviser may, in exercising its fiduciary discretion, determine to vote any proxy in a manner contrary to these Guidelines.

Directors, Boards, Committees

Elect Directors

In a routine election of directors, the Adviser generally votes FOR the slate nominated by the nominating committee of independent directors, who are in the best position to know what qualifications are needed for each director to contribute to an effective board. The Adviser generally will WITHHOLD support from a nominee who fails to meet one or more of the following criteria:

Independence — A nominee who is deemed an affiliate of the company by virtue of a material business, familial or other relationship with the company but is otherwise not an employee.

Attendance — A nominee who failed to attend at least 75% of the board's meetings.

Over Boarding — A nominee who serves on more than four other public company boards or an employee director nominee who serves on more than two other public company boards.

Committee Membership — A nominee who has been assigned to the audit, compensation, nominating, or governance committee if that nominee is not independent of management, or if the nominee does not meet the specific independence and experience requirements for audit committees or the independence requirements for compensation committees.

Audit Committee Chair — A nominee who serves as audit committee chair where the committee failed to put forth shareholder proposals for ratification of auditors.

Board Independence — A nominee of a company whose board as proposed to be constituted would have more than one-third of its members from management.

Interlocking Directorship — A nominee who is an executive officer of another company on whose board one of the company's executive officers sits.

Poor Governance — A nominee involved with options backdating, financial restatements or material weakness in controls, approving egregious compensation, or who has consistently disregarded the interests of shareholders.

The Adviser will vote on a CASE-BY-CASE basis on any director nominee who meets the aforementioned criteria but whose candidacy has otherwise been identified by the third party research provider as needing further consideration for any reason not identified above.

In the case of contested elections, the Adviser will vote on a CASE-BY-CASE basis, taking into consideration the above criteria and other factors such as the background of the proxy contest, the performance of the company, current board and management, and qualifications of nominees on both slates.

Shareholder Nominations for Director

The Adviser will vote on a CASE-BY-CASE basis for shareholder-nominated candidates for director, taking into account various factors including, but not limited to: company performance, the circumstances compelling the nomination by the shareholder, composition of the incumbent board, and the criteria listed above the Adviser uses to evaluate nominees.

Shareholder Nominations for Director – Special Criteria

The Adviser generally votes in accordance with recommendations made by its third party research provider, which are typically based on the view that board nominating committees are responsible for establishing and implementing policies regarding the composition of the board and are therefore in the best position to make determinations with respect to special nominating criteria.

Director Independence and Committees

The Adviser generally will vote FOR proposals that require all members of a board's key committees (audit, compensation, nominating or governance) be independent from management.

Independent Board Chair / Lead Director

The Adviser generally will vote FOR proposals supporting an independent board chair or lead director and FOR the separation of the board chair and CEO roles, as independent board leaders foster the effectiveness of the independent directors and ensure appropriate oversight of management.

Removal of Directors

The Adviser generally will vote FOR proposals that amend governing documents to grant or restore shareholder ability to remove directors with cause, and AGAINST proposals that provide directors may be removed only by supermajority vote. The Adviser will vote on a CASE-BY-CASE basis on proposals calling for removal of specific directors.

Board Vacancies

The Adviser generally votes in accordance with recommendations made by its third party research provider in the case of vacancies filled by continuing directors, taking into account factors including whether the proposal is in connection with a proxy contest or takeover situation.

Cumulative Voting

In the absence of proxy access rights or majority voting, the Adviser generally will vote FOR the restoration or provision for cumulative voting and AGAINST its elimination.

Majority Voting

The Adviser generally will vote FOR amendments to governing documents that provide that nominees standing for election to the board must receive a majority of votes cast in order to be elected to the board.

Number of Directors

The Adviser generally will vote FOR amendments to governing documents that provide directors the authority to adjust the size of the board to adapt to needs that may arise.

Term Limits

The Adviser generally will vote AGAINST proposals seeking to establish a limit on director terms or mandatory retirement.

General Corporate Governance

Right to Call a Special Meeting

The Adviser generally votes in accordance with recommendations made by its third party research provider, which typically recommends votes FOR adoption, considering factors such as proposed ownership threshold, company size, and shareholder ownership, but will not support proposals allowing for investors with less than 10% ownership to call a special meeting.

Eliminate or Restrict Right to Call Special Meeting

The Adviser will generally vote AGAINST proposals to eliminate the right of shareholders to call special meetings.

Lead Independent Director Right to Call Special Meeting

The Adviser will generally vote FOR governance document amendments or other proposals which give the lead independent director the authority to call special meetings of the independent directors at any time.

Adjourn Meeting

The Adviser will vote on a CASE-BY-CASE basis on adjournment proposals and generally in the same direction as the primary proposal (i.e., if supporting the primary proposal, favor adjournment; if not supporting the primary proposal, oppose adjournment).

Other Business

The Adviser generally will vote AGAINST proposals seeking to give management the authority to conduct or vote on other business at shareholder meetings on the grounds that shareholders not present at the meeting would be unfairly excluded from such deliberations.

Eliminate or Restrict Action by Written Consent

The Adviser will generally vote AGAINST proposals to eliminate the right of shareholders to act by written consent since it may be appropriate to take such action in some instances.

Vote Unmarked Proxies

The Adviser generally will vote FOR proposals prohibiting voting of unmarked proxies in favor of management.

Proxy Contest Advance Notice

The Adviser generally will vote AGAINST proposals to amend governing documents that require advance notice for shareholder proposals or director nominees beyond notice that allows for sufficient time for company response, SEC review, and analysis by other shareholders.

Minimum Stock Ownership

The Adviser will vote on a CASE-BY-CASE basis on proposals regarding minimum stock ownership levels.

Director and Officer Indemnification

The Adviser will generally vote FOR the provision of a maximum dollar amount that can be obtained through the course of legal action from a director or officer who acts in good faith and does not benefit from a transaction.

Confidential Voting

The Adviser generally will vote FOR actions that ensure all proxies, ballots, and voting tabulations which identify shareholders be kept confidential, except where disclosure is mandated by law. The Adviser supports the proposal to minimize pressure on shareholders, particularly employee shareholders.

Miscellaneous Governing Document Amendments

The Adviser generally will vote FOR bylaw or charter changes that are of a housekeeping nature (e.g., updates or corrections).

Change Company Name

The Adviser will generally vote FOR routine business matters such as changing the company's name.

Approve Minutes

The Adviser will generally vote FOR routine procedural matters such as approving the minutes of a prior meeting.

Change Date/Time/Location of Annual Meeting

The Adviser will vote in accordance with the recommendation of the third-party research provider on proposals to change the date, time or location of the company's annual meeting of shareholders.

Approve Annual, Financial and Statutory Reports

The Adviser generally will vote FOR proposals to approve the annual reports and accounts, financial and statutory reports, provided companies required to comply with U.S. securities laws have included the certifications required by the Sarbanes Oxley Act of 2002.

Compensation

Approve or Amend Omnibus Equity Compensation Plan

The Adviser generally votes in accordance with recommendations made by its third party research provider, which typically recommends votes FOR adoption or amendments to omnibus (general) equity compensation plans for employees or non-employee directors if they are reasonable and consistent with industry and country standards, and AGAINST compensation plans that substantially dilute ownership interest in a company, provide participants with excessive awards, or have objectionable structural features.

Approve or Amend Stock Option Plan

The Adviser generally votes in accordance with recommendations made by its third party research provider, which are typically based on factors including cost, size, and pattern of grants in comparison to peer groups, history of repricing, and grants to senior executives and non-employee directors.

Approve or Amend Employee Stock Purchase Plan

The Adviser generally votes in accordance with recommendations made by its third party research provider, which are typically based on factors including the plan's cost to shareholders, whether those costs are in line with the company's peer's plans, and whether the plan requires shareholder approval within five years.

Approve or Amend Performance-Based 162(m) Compensation Plan

The Adviser generally votes in accordance with recommendations made by its third party research provider, which are typically based on factors that consider the goal of the plan and in particular the linkage between potential payments to senior executives and the attainment of preset performance-based metrics.

Approve or Amend Restricted Stock Plan

The Adviser generally votes in accordance with recommendations made by its third party research provider, which considers such factors as the balance of all equity grants and awards, the term and other restrictions in place for restricted stock.

Stock Option Repricing or Exchanges

The Adviser generally votes in accordance with recommendations made by its third party research provider on matters relating to the repricing of stock options, which are typically based on factors such as whether the amending terms lead to a reduction in shareholder rights, allow the plan to be amended without shareholder approval, or change the terms to the detriment of employee incentives such as excluding a certain class or group of employees. The Adviser generally will vote FOR proposals to put stock option repricings to a shareholder vote.

Performance-Based Stock Options

The Adviser will vote on a CASE-BY-CASE basis regarding proposals urging that stock options be performance-based rather than tied to the vagaries of the stock market.

Ban Future Stock Option Grants

The Adviser generally will vote AGAINST proposals seeking to ban or eliminate stock options in equity compensation plans as such an action would preclude the company from offering a balanced compensation program.

Require Stock Retention Period

The Adviser generally will vote FOR proposals requiring senior executives to hold stock obtained by way of a stock option plan for a minimum of three years.

Require Approval of Extraordinary Benefits

The Adviser generally will vote FOR proposals specifying that companies disclose any extraordinary benefits paid or payable to current or retired senior executives and generally will vote AGAINST proposals requiring shareholder approval of any such extraordinary benefits.

Pay for Performance

The Adviser will vote on a CASE-BY-CASE basis regarding proposals seeking to align executive compensation with shareholders' interests.

Say on Pay

The Adviser generally votes in accordance with recommendations made by its third party research provider, taking into consideration the company's pay for performance results and certain elements of the Compensation Discussion and Analysis disclosure.

Executive Severance Agreements

The Adviser generally votes in accordance with recommendations made by its third party research provider on these proposals regarding approval of specific executive severance arrangements in the event of change in control of a company or due to other circumstances.

Approve or Amend Deferred Compensation Plans for Directors

The Adviser generally will vote FOR approval or amendments to deferred compensation plans for non-employee directors, so that they may defer compensation earned until retirement.

Set Director Compensation

The Adviser generally will vote AGAINST proposals that seek to limit director compensation or mandate that compensation be paid solely in shares of stock.

Director Retirement Plans

The Adviser will generally vote AGAINST the adoption or amendment of director retirement plans on the basis that directors should be appropriately compensated while serving and should not view service on a board as a long-term continuing relationship with a company.

Business Entity and Capitalization

Common or Preferred Stock – Increase in Authorized Shares or Classes

The Adviser will vote on a CASE-BY-CASE basis regarding proposals to increase authorized shares of common stock or to add a class of common stock, taking into consideration the company's capital goals that may include stock splits, stock dividends, or financing for acquisitions or general operations. With respect to proposals seeking to increase authorized shares of preferred

stock, to add a class of preferred stock, to authorize the directors to set the terms of the preferred stock or to amend the number of votes per share of preferred stock, the Adviser will vote on a CASE-BY-CASE basis on the grounds that such actions may be connected to a shareholder rights' plan that the Adviser also will consider on a CASE-BY-CASE basis.

Common or Preferred Stock – Decrease in Authorized Shares or Classes

The Adviser generally will vote FOR proposals seeking to decrease authorized shares of common or preferred stock or the elimination of a class of common or preferred stock.

Common Stock – Change in Par Value

The Adviser generally will vote FOR proposals to change the par value of the common stock, provided that the changes do not cause a diminution in shareholder rights.

Authorize Share Repurchase Program

The Adviser generally will vote FOR proposals to institute or renew open market share repurchase plans in which all shareholders may participate on equal terms.

Stock Splits

The Adviser generally will vote FOR stock split proposals on the grounds that they intended to encourage stock ownership of a company.

Private Placements, Conversion of Securities, Issuance of Warrants or Convertible Debentures

The Adviser will generally vote FOR the issuance of shares for private placements, the conversion of securities from one class to another, and the issuance of warrants or convertible debentures on the grounds that such issuances may be necessary and beneficial for the financial health of the company and may be a low cost source of equity capital. The Adviser will generally vote AGAINST any such issuance or related action if the proposal would in any way result in new equity holders having superior voting rights, would result in warrants or debentures, when exercised, holding in excess of 20 percent of the currently outstanding voting rights, or if the proposal would in any way diminish the rights of existing shareholders.

Issuance of Equity or Equity-Linked Securities without Subscription Rights (Preemptive Rights)

The Adviser generally will vote FOR proposals that seek shareholder approval of the issuance of equity, convertible bonds or other equity-linked debt instruments, or to issue shares to satisfy the exercise of such securities that are free of subscription (preemptive) rights on the grounds that companies must retain the ability to issue such securities for purposes of raising capital. The Adviser generally will vote AGAINST any proposal where dilution exceeds 20 percent of the company's outstanding capital.

Recapitalization

The Adviser generally will vote FOR recapitalization plans that combine two or more classes of stock into one class, or that authorize the company to issue new common or preferred stock for such plans. The Adviser generally will vote AGAINST recapitalization plans that would result in the diminution of rights for existing shareholders.

Merger Agreement

The Adviser will vote on a CASE-BY-CASE basis on proposals seeking approval of a merger or merger agreement and all proposals related to such primary proposals, taking into consideration the particular facts and circumstances of the proposed merger and its potential benefits to existing shareholders.

Going Private

The Adviser will vote on a CASE-BY-CASE basis on proposals that allow listed companies to de-list and terminate registration of their common stock, taking into consideration the cash-out value to shareholders, and weighing the value in continuing as a publicly traded entity.

Reincorporation

The Adviser will vote on a CASE-BY-CASE basis on reincorporation proposals, taking into consideration whether financial benefits (e.g., reduced fees or taxes) likely to accrue to the company as a result of a reincorporation or other change of domicile outweigh any accompanying material diminution of shareholder rights. The Adviser will generally vote AGAINST the proposal unless the long-term business reasons for doing so are valid. The Adviser will generally vote FOR proposals to consider reincorporating in the United States if a company left the country for the purpose of avoiding taxes.

Bundled Proposals

The Adviser generally votes in accordance with recommendations made by its third party research provider on “bundled” or otherwise conditioned proposals, which are determined depending on the overall economic effects to shareholders.

Defense Mechanisms

Shareholder Rights’ Plan (Poison Pill)

The Adviser will vote on a CASE-BY-CASE basis regarding management proposals seeking ratification of a shareholder rights’ plan, including a net operating loss (NOL) shareholder rights’ plan, or stockholder proposals seeking modification or elimination of any existing shareholder rights’ plan.

Supermajority Voting

The Adviser generally will vote FOR the elimination or material diminution of provisions in company governing documents that require the affirmative vote of a supermajority of shareholders for approval of certain actions, and generally will vote AGAINST the adoption of any supermajority voting clause.

Control Share Acquisition Provisions

The Adviser generally will vote FOR proposals to opt out of control share acquisition statutes and will generally vote AGAINST proposals seeking approval of control share acquisition provisions in company governing documents on the grounds that such provisions may harm long-term share value by effectively entrenching management. The ability to buy shares should not be constrained by requirements to secure approval of the purchase from other shareholders.

Anti-Greenmail

The Adviser generally will vote FOR proposals to adopt anti-greenmail governing document amendments or to otherwise restrict a company’s ability to make greenmail payments.

Classification of Board of Directors

The Adviser generally will vote FOR proposals to declassify a board and AGAINST proposals to classify a board, absent special circumstances that would indicate that shareholder interests are better served by voting to the contrary.

Auditors

Ratify or Appoint Auditors

The Adviser generally votes in accordance with recommendations made by its third party research provider, which typically recommends votes FOR ratification or appointment except in situations where there are questions about the relative qualification of the auditors, conflicts of interest, auditor involvement in significant financial restatements, option backdating, material weaknesses in controls or situations where independence has been compromised.

Prohibit or Limit Auditor’s Non-Audit Services

The Adviser generally votes in accordance with recommendations made by its third party research provider, which typically recommends votes AGAINST these proposals since it may be necessary or appropriate for auditors to provide a service related to the business of a company and that service will not compromise the auditors’ independence. In addition, Sarbanes-Oxley legislation spells out the types of services that need pre-approval or would compromise independence.

Indemnification of External Auditor

The Adviser will generally vote AGAINST proposals to indemnify external auditors on the grounds that indemnification agreements may limit pursuit of legitimate recourse against the audit firm.

Indemnification of Internal Auditor

The Adviser will generally vote FOR the indemnification of internal auditors, unless the costs associated with the approval are not disclosed.

Social and Environmental

Disclose Social Agenda

The Adviser generally will ABSTAIN from voting on proposals that seek disclosure, often in the form of a report, on items such as military contracts or sales, environmental or conservation initiatives, business relationships with foreign countries, or

animal welfare for the following reasons: a) our clients are likely to have different views of what is a socially responsible policy, b) whether social responsibility issues other than those mandated by law should be the subject of corporate policy, or c) because the impact of such disclosure on share value can rarely be anticipated with any degree of confidence.

Socially Responsible Investing

The Adviser generally will ABSTAIN from voting on proposals that seek to have a company take a position on social or environmental issues, for the reasons cited under 'Disclose Social Agenda' above.

Prohibit or Disclose Contributions and Lobbying Expenses

The Adviser generally votes in accordance with recommendations made by its third party research provider, which typically considers the proposal in the context of the company's current disclosures, Federal and state laws, and whether the proposal is in shareholders' best interests.

Disclose Prior Government Service

The Adviser generally will ABSTAIN from voting on proposals seeking the company to furnish a list of high-ranking employees who served in any governmental capacity over the last five years.

Change in Operations or Products Manufactured or Sold

The Adviser generally will ABSTAIN from voting on proposals seeking to change the way a company operates (e.g., protect human rights, sexual orientation, stop selling tobacco products, move manufacturing operations to another country, etc.).

Executive Compensation Report

The Adviser generally will vote AGAINST proposals seeking companies to issue a report on linkages between executive compensation and financial, environmental and social performance on the grounds that executive compensation is a business matter for the company's board to consider.

Pay Equity

The Adviser will generally vote AGAINST proposals seeking a cap on the total pay and other compensation of its executive officers to no more than a specified multiple of the pay of the average employee of the company.

Foreign Issues

Foreign Issues- Directors, Boards, Committees

Approve Discharge of Management (Supervisory) Board

The Adviser generally votes in accordance with recommendations made by its third party research provider, which typically recommends votes FOR approval of the board, based on factors including whether there is an unresolved investigation or whether the board has participated in wrongdoing. This is a standard request in Germany and discharge is generally granted unless a shareholder states a specific reason for withholding discharge and intends to take legal action.

Announce Vacancies on Management (Supervisory) Board

The Adviser generally will vote FOR proposals requesting shareholder approval to announce vacancies on the board, as is required under Dutch law.

Approve Director Fees

The Adviser generally votes in accordance with recommendations made by its third party research provider on proposals seeking approval of director fees.

Foreign Issues- General Corporate Governance

Digitalization of Certificates

The Adviser generally will vote FOR proposals seeking shareholder approval to amend a company's articles of incorporation to eliminate references to share certificates and beneficial owners, and to make other related changes to bring the articles in line with recent regulatory changes for Japanese companies.

Authorize Filing of Required Documents and Other Formalities

The Adviser generally will vote FOR proposals requesting shareholders authorize the holder of a copy of the minutes of the general assembly to accomplish any formalities required by law, as is required in France.

Propose Publications Media

The Adviser generally will vote FOR proposals requesting shareholders approve the designation of a newspaper as the medium to publish the company's meeting notice, as is common in Chile and other countries.

Clarify Articles of Association or Incorporation

The Adviser generally will vote FOR proposals seeking shareholder approval of routine housekeeping of the company's articles, including clarifying items and deleting obsolete items.

Update Articles of Association or Incorporation with Proxy Results

The Adviser generally will vote FOR proposals requesting shareholders approve changes to the company's articles of association or incorporation to reflect the results of a proxy vote by shareholders, which is a routine proposal in certain country's proxies.

Conform Articles of Association or Incorporation to Law or Stock Exchange

The Adviser generally will vote FOR proposals requesting shareholder approval to amend the articles of association or incorporation to conform to new requirements in local or national law or rules established by a stock exchange on which its stock is listed.

Authorize Board to Ratify and Execute Approved Resolutions

The Adviser generally will vote FOR proposals requesting shareholder approval to authorize the board to ratify and execute any resolutions approved at the meeting.

Prepare and Approve List of Shareholders

The Adviser generally votes FOR proposals requesting shareholder approval for the preparation and approval of the list of shareholders entitled to vote at the meeting, which is a routine formality in European countries.

Authorize Company to Engage in Transactions with Related Parties

The Adviser generally will vote FOR proposals requesting shareholder approval for the company, its subsidiaries, and target associated companies to enter into certain transactions with persons who are considered "interested parties" as defined in Chapter 9A of the Listing Manual of the Stock Exchange of Singapore (SES), as the SES related-party transaction rules are fairly comprehensive and provide shareholders with substantial protection against insider trading abuses.

Amend Articles to Lower Quorum Requirement for Special Business

The Adviser generally will vote on a CASE-BY-CASE basis on proposals seeking to amend the articles to lower the quorum requirement to one-third for special business resolutions at a shareholder meeting, which is common when certain material transactions such as mergers or acquisitions are to be considered by shareholders.

Change Date/Location of Annual Meeting

The Adviser will vote in accordance with the recommendation of the third-party research provider on proposals to change the date, time or location of the company's annual meeting of shareholders.

Elect Chairman of the Meeting

The Adviser generally will vote FOR proposals requesting shareholder approval to elect the chairman of the meeting, which is a routine meeting formality in certain European countries.

Authorize New Product Lines

The Adviser generally will vote FOR proposals requesting shareholder approval to amend the company's articles to allow the company to expand into new lines of business.

Approve Financial Statements, Directors' Reports and Auditors' Reports

The Adviser generally will vote FOR proposals that request shareholder approval of the financial statements, directors' reports, and auditors' reports.

Foreign Issues- Compensation

Approve Retirement Bonuses for Directors/Statutory Auditors

The Adviser generally will ABSTAIN from voting on proposals requesting shareholder approval for the payment of retirement bonuses to retiring directors and/or statutory auditors, which is a standard request in Japan, because information to justify the proposal is typically insufficient.

Approve Payment to Deceased Director's/Statutory Auditor's Family

The Adviser generally will ABSTAIN from voting on proposals requesting shareholder approval for the payment of a retirement bonus to the family of a deceased director or statutory auditor, which is a standard request in Japan, because information to justify the proposal is typically insufficient.

Foreign Issues- Business Entity, Capitalization

Set or Approve the Dividend

The Adviser generally will vote FOR proposals requesting shareholders approve the dividend rate set by management.

Approve Allocation of Income and Dividends

The Adviser generally will vote FOR proposals requesting shareholders approve a board's allocation of income for the current fiscal year, as well as the dividend rate.

Approve Scrip (Stock) Dividend Alternative

The Adviser generally will vote FOR proposals requesting shareholders authorize dividend payments in the form of either cash or shares at the discretion of each shareholder, provided the options are financially equal. The Adviser generally will vote AGAINST proposals that do not allow for a cash option unless management demonstrates that the cash option is harmful to shareholder value.

Authorize Issuance of Equity or Equity-Linked Securities

The Adviser generally will vote FOR proposals requesting shareholder approval to permit the board to authorize the company to issue convertible bonds or other equity-linked debt instruments or to issue shares to satisfy the exercise of such securities.

Authorize Issuance of Bonds

The Adviser generally will vote FOR proposals requesting shareholder approval granting the authority to the board to issue bonds or subordinated bonds.

Authorize Capitalization of Reserves for Bonus Issue or Increase in Par Value

The Adviser generally will vote FOR proposals requesting shareholder approval to increase authorized stock by capitalizing various reserves or retained earnings, which allows shareholders to receive either new shares or a boost in the par value of their shares at no cost.

Increase Issued Capital for Rights Issue

The Adviser generally will vote FOR proposals requesting shareholder approval to increase to issued capital in order to offer a rights issue to current registered shareholders, which provides shareholders the option of purchasing additional shares of the company's stock, often at a discount to market value, and the company will use the proceeds from the issue to provide additional financing.

Board Authority to Repurchase Shares

The Adviser generally will vote FOR proposals requesting that a board be given the authority to repurchase shares of the company on the open market, with such authority continuing until the next annual meeting.

Authorize Reissuance of Repurchased Shares

The Adviser generally will vote FOR proposals requesting shareholder approval to reissue shares of the company's stock that had been repurchased by the company at an earlier date.

Approve Payment of Corporate Income Tax

The Adviser generally will vote FOR proposals seeking approval for the use by a company of its reserves in order to pay corporate taxes, which is common practice in Europe.

Cancel Pre-Approved Capital Issuance Authority

The Adviser generally will vote FOR proposals requesting shareholders cancel a previously approved authority to issue capital, which may be necessary in Denmark as companies there do not have authorized but unissued capital that they may issue as needed like their counterparts in other countries.

Allotment of Unissued Shares

The Adviser generally will vote FOR proposals requesting that shareholders give the board the authority to allot or issue unissued shares.

Authority to Allot Shares for Cash

The Adviser generally will vote FOR proposals requesting that shareholders give the board the ability to allot a set number of authorized but unissued shares for the purpose of employee share schemes and to allot equity securities for cash to persons other than existing shareholders up to a limited aggregate nominal amount (a percentage of the issued share capital of the company).

Foreign Issues- Defense Mechanisms

Authorize Board to Use All Outstanding Capital

The Adviser will vote on a CASE-BY-CASE basis on proposals requesting shareholders authorize the board, for one year, to use all outstanding capital authorizations in the event that a hostile public tender or exchange offer is made for the company, which is a common anti-takeover measure in France similar to the way U.S. companies use preferred stock.

Foreign Issues- Auditors

Approve Special Auditors' Report

The Adviser generally will vote FOR proposals that present shareholders of French companies, as required by French law, with a special auditor's report that confirms the presence or absence of any outstanding related party transactions. At a minimum, such transactions (with directors or similar parties) must be previously authorized by the board. This part of the French commercial code provides shareholders with a mechanism to ensure an annual review of any outstanding related party transactions.

Appoint Statutory Auditor

The Adviser generally will vote FOR proposals requesting shareholder approval to appoint the internal statutory auditor, designated as independent internal auditor as required by the revised Japanese Commercial Code.

Foreign Issues- Social and Environmental

Authorize Company to Make EU Political Organization Donations

The Adviser generally will ABSTAIN from voting on proposals that seek authorization for the company to make EU political organization donations and to incur EU political expenditures.

STATEMENT OF ADDITIONAL INFORMATION

February 28, 2014

DFA Investment Dimensions Group Inc. (the “Fund”) is an open-end management investment company that offers eighty series of shares. This statement of additional information (“SAI”) relates to seven of those series:

Domestic Equity Portfolios

VA U.S. Large Value Portfolio

VA U.S. Targeted Value Portfolio

International Equity Portfolios

VA International Value Portfolio

VA International Small Portfolio

Fixed Income Portfolios

VA Short-Term Fixed Portfolio

VA Global Bond Portfolio

Global Portfolio

DFA VA Global Moderate Allocation Portfolio

(individually, a “Portfolio” and collectively, the “Portfolios”). The shares of the Portfolios are sold only to separate accounts of insurance companies in conjunction with variable life and variable annuity contracts. This SAI is not a prospectus but should be read in conjunction with the Portfolios’ prospectus dated February 28, 2014, as amended from time to time. The audited financial statements and financial highlights of the Portfolios are incorporated by reference from the Fund’s annual report to shareholders. The prospectus and annual report can be obtained free of charge by writing to the above address or by calling the above telephone number.

PORTFOLIO CHARACTERISTICS AND POLICIES

Dimensional Fund Advisors LP (the “Advisor”) serves as investment advisor to each of the Portfolios. The Advisor is organized as a Delaware limited partnership and is controlled and operated by its general partner, Dimensional Holdings Inc., a Delaware corporation.

The DFA VA Global Moderate Allocation Portfolio described in this SAI is a “fund of funds” that seeks to achieve its investment objective by investing its assets in funds managed by the Advisor (the “Underlying Funds”). The Underlying Funds in which the DFA VA Global Moderate Allocation Portfolio may invest include: U.S. Core Equity 1 Portfolio, U.S. Core Equity 2 Portfolio, VA U.S. Large Value Portfolio, DFA Real Estate Securities Portfolio, International Core Equity Portfolio, VA International Value Portfolio, Emerging Markets Core Equity Portfolio, DFA Selectively Hedged Global Fixed Income Portfolio, VA Short-Term Fixed Portfolio, VA Global Bond Portfolio and DFA Two-Year Global Fixed Income Portfolio, each a series of the Fund. The DFA VA Global Moderate Allocation Portfolio offers two classes of shares: Class L10 shares and Institutional Class shares. The Class L10 shares are offered to qualified investors in a separate prospectus. This SAI describes the Institutional Class shares of the Portfolio.

The following information supplements the information set forth in the prospectus. Unless otherwise indicated, it applies to all of the Portfolios. Capitalized terms not otherwise defined in this SAI have the meaning assigned to them in the prospectus.

Each of the Portfolios and Underlying Fund is diversified under the federal securities laws and regulations.

Because the structure of the Domestic Equity and International Equity Portfolios are based on the relative market capitalizations of eligible holdings, it is possible that the Portfolios might include at least 5% of the outstanding voting securities of one or more issuers. In such circumstances, a Portfolio and the issuer would be deemed “affiliated persons” and certain requirements under the federal securities laws and regulations regulating dealings between mutual funds and their affiliates might become applicable.

Each of the Portfolios (except the VA International Value Portfolio and DFA VA Global Moderate Allocation Portfolio) has adopted a non-fundamental policy as required by Rule 35d-1 under the Investment Company Act of 1940 (the “1940 Act”) that, under normal circumstances, at least 80% of the value of each Portfolio’s net assets, plus the amount of any borrowings for investment purposes, will be invested in a specific type of investment. Additionally, if a Portfolio changes its 80% investment policy, the Portfolio will notify shareholders at least 60 days before the change, and will change the name of the Portfolio. For more information on each Portfolio’s specific 80% policy, see each Portfolio’s “**PRINCIPAL INVESTMENT STRATEGIES**” section in the Prospectus.

BROKERAGE TRANSACTIONS

The following table reports brokerage commissions paid by the Portfolios during the fiscal years ended October 31, 2013, October 31, 2012, and October 31, 2011.

	Fiscal Year Ended <u>2013</u>	Fiscal Year Ended <u>2012</u>	Fiscal Year Ended <u>2011</u>
VA U.S. Large Value Portfolio	\$43,925	\$ 17,725	\$ 21,313
VA U.S. Targeted Value Portfolio	\$38,528	\$ 30,939	\$ 29,816
VA International Value Portfolio	\$24,436	\$ 19,592	\$ 22,921
VA International Small Portfolio	\$20,571	\$ 14,929	\$ 11,070

The following discussions relate to the policies of the Portfolios and in the case of the DFA VA Global Moderate Allocation Portfolio, the Underlying Funds. The DFA VA Global Moderate Allocation Portfolio will not incur any brokerage costs in connection with its purchase or redemption of shares of the Underlying Funds.

The substantial increases or decreases in the amount of brokerage commissions paid by certain Portfolios from year to year indicated in the foregoing table resulted primarily from asset changes that required increases or decreases in the amount of securities that were bought and sold by those Portfolios.

The Fixed Income Portfolios and Fixed Income Underlying Funds acquire and sell securities on a net basis with dealers which are major market makers in such securities. The Investment Committee of the Advisor selects dealers on the basis of their size and market making ability. When executing portfolio transactions, the Advisor seeks to obtain the most favorable price for the securities being traded among the dealers with whom the Fixed Income Portfolios effect transactions.

Portfolio transactions will be placed with a view to receiving the best price and execution. The Advisor will seek to acquire and dispose of securities in a manner which would cause as little fluctuation in the market prices of securities being purchased or sold as possible in light of the size of the transactions being effected. Brokers will be selected with this goal in view. The Advisor monitors the performance of brokers which effect transactions for the Portfolios to determine the effect that the brokers' trading has on the market prices of the securities in which the Portfolios invest. The Advisor also checks the rate of commission, if any, being paid by the Portfolios to their brokers to ascertain that the rates are competitive with those charged by other brokers for similar services. Dimensional Fund Advisors Ltd. also performs these services for the United Kingdom and Continental Small Company segments of VA International Small Portfolio and DFA Australia Limited also performs these services for the Japanese and Asia Pacific Small Company segments of VA International Small Portfolio.

Subject to the duty to seek to obtain best price and execution, transactions may be placed with brokers that have assisted in the sale of Portfolio shares. The Advisor, however, pursuant to policies and procedures approved by the Board of Directors of the Fund, is prohibited from selecting brokers and dealers to effect a Portfolio's portfolio securities transactions based (in whole or in part) on a broker's or dealer's promotion or sale of shares issued by a Portfolio or any other registered investment companies.

Companies eligible for purchase by the Portfolios (except the VA Short-Term Fixed Portfolio, VA Global Bond Portfolio and DFA VA Global Moderate Allocation Portfolio) and U.S. Core Equity 1 Portfolio, the U.S. Core Equity 2 Portfolio, DFA Real Estate Securities Portfolio, VA U.S. Large Value Portfolio, International Core Equity Portfolio, Emerging Markets Core Equity Portfolio, VA International Value Portfolio of the Underlying Funds may be thinly traded securities. The Advisor believes that it needs maximum flexibility to effect trades on a best execution basis. As deemed appropriate, the Advisor places buy and sell orders for the Portfolio with various brokerage firms that may act as principal or agent. The Advisor may also make use of direct market access and algorithmic, program or electronic trading methods. The Advisor may extensively use electronic trading systems as such systems can provide the ability to customize the orders placed and can assist in the Advisor's execution strategies.

Transactions also may be placed with brokers who provide the Advisor with investment research, such as: reports concerning individual issuers; general economic or industry reports or research data compilations; compilations of securities prices, earnings, dividends, and similar data; computerized databases; quotation services; trade analytics; ancillary brokerage services; and services of economic or other consultants. The investment advisory agreements permit the Advisor knowingly to pay commissions on these transactions that are greater than another broker, dealer or exchange member might charge if the Advisor, in good faith, determines that the commissions paid are reasonable in relation to the research or brokerage services provided by the broker or dealer when viewed in terms of either a particular transaction or the Advisor's overall responsibilities to the accounts under its management. Research services furnished by brokers through whom securities transactions are effected may be used by the Advisor in servicing all of its accounts and not all such services may be used by the Advisor with respect to the Portfolios.

During the fiscal year ended October 31, 2013, the Portfolios paid commissions for securities transactions to brokers which provided market price monitoring services, market studies, brokerage services and research services to the Portfolios as set forth in the following table:

	Value of Securities Transactions	Brokerage Commissions
VA U.S. Large Value Portfolio	\$87,604,983	\$38,098
VA U.S. Targeted Value Portfolio	\$50,590,578	\$35,591
VA International Value Portfolio	\$43,560,111	\$23,897
VA International Small Portfolio	\$34,453,152	\$20,007

Certain Portfolios may purchase securities of their regular brokers or dealers (as defined in Rule 10b-1 of the 1940 Act). The table below lists the regular brokers or dealers of each Portfolio whose securities (or securities of the broker's or dealer's parent company) were acquired by the Portfolio during the fiscal year ended October 31, 2013, as well as the value of such securities held by the Portfolio as of October 31, 2013.

<u>Portfolio</u>	<u>Broker or Dealer</u>	<u>Value of Securities</u>
VA International Value Portfolio	Credit Suisse Group	\$1,582,371
VA International Value Portfolio	Societe Generale	\$1,231,778
VA U.S. Large Value Portfolio	Jefferies	\$ 52,287

INVESTMENT LIMITATIONS

Each of the Portfolios has adopted certain limitations which may not be changed with respect to any Portfolio without the approval of a majority of the outstanding voting securities of the Portfolio. A "majority" is defined as the lesser of: (1) at least 67% of the voting securities of the Portfolio (to be affected by the proposed change) present at a meeting, if the holders of more than 50% of the outstanding voting securities of the Portfolio are present or represented by proxy, or (2) more than 50% of the outstanding voting securities of such Portfolio.

The Portfolios will not:

- (1) borrow money, except to the extent permitted by the 1940 Act, or any rules, exemptions or interpretations thereunder that may be adopted, granted or issued by the Securities and Exchange Commission (the "SEC");
- (2) make loans, except to the extent permitted by the 1940 Act, or any rules, exemptions or interpretations thereunder that may be adopted, granted or issued by the SEC; provided that in no event shall a Portfolio be permitted to make a loan to a natural person;
- (3) purchase or sell real estate, unless acquired as a result of ownership of securities or other instruments, and provided that this restriction does not prevent a Portfolio from: (i) purchasing or selling securities or instruments secured by real estate or interests therein, securities or instruments representing interests in real estate or securities or instruments of issuers that invest, deal or otherwise engage in transactions in real estate or interests therein; and (ii) purchasing or selling real estate mortgage loans;
- (4) purchase or sell physical commodities, unless acquired as a result of ownership of securities or other instruments, and provided that this restriction does not prevent a Portfolio from: (i) engaging in transactions involving currencies and futures contracts and options thereon; or (ii) investing in securities or other instruments that are secured by physical commodities;
- (5) purchase the securities of any one issuer, if immediately after such investment, a Portfolio would not qualify as a "diversified company" as that term is defined by the 1940 Act, as amended, and as modified or interpreted by regulatory authority having jurisdiction, from time to time;

- (6) engage in the business of underwriting securities issued by others;
- (7) acquire any securities of companies within one industry if, as a result of such acquisition, more than 25% of the value of the Portfolio's total assets would be invested in securities of companies within such industry; except DFA VA Global Moderate Allocation Portfolio may invest 25% of its total assets in securities issued or guaranteed by the U.S. Government or any of its agencies or securities of other investment companies and VA Short-Term Fixed Portfolio shall invest more than 25% of its total assets in obligations of banks and bank holding companies in the circumstances described in the prospectus under "**Investments in the Banking Industry**" and as otherwise described under "**PRINCIPAL INVESTMENT STRATEGIES**";
- (8) sell securities short; or
- (9) issue senior securities (as such term is defined in Section 18(f) of the 1940 Act), except to the extent permitted by the 1940 Act.

The investment limitations set forth above only relate to the Portfolios. The Underlying Funds may have investment limitations that are more or less restrictive than those of the DFA VA Global Moderate Allocation Portfolio. The investment limitations of the Underlying Funds are set forth in their respective statements of additional information.

With respect to the investment limitation described in (1) above, each Portfolio will maintain asset coverage of at least 300% (as described in the 1940 Act), inclusive of any amounts borrowed, with respect to any borrowings made by such Portfolio. The DFA VA Global Moderate Allocation Portfolio does not currently intend to borrow money for investment purposes.

Although the investment limitation described in (2) above prohibits loans, each Portfolio except for the DFA VA Global Moderate Allocation Portfolio is authorized to lend portfolio securities.

The investment limitations described in (5) and (7) above do not prohibit the DFA VA Global Moderate Allocation Portfolio from investing all or substantially all of its assets in the shares of other registered, open-end investment companies, such as the Underlying Funds. In applying the investment limitations described in (5) and (7) above, the DFA VA Global Moderate Allocation Portfolio will look through to the security holdings of the Underlying Funds in which it invests.

For purposes of the investment limitation described in (7) above, the VA Short-Term Fixed Portfolio, as disclosed in the prospectus under "**Investments in the Banking Industry—VA Short-Term Fixed Portfolio and certain Fixed Income Underlying Funds**" will invest more than 25% of its total assets in obligations of U.S. and foreign banks and bank holding companies ("banking industry securities") when the yield to maturity on eligible portfolio investments in banking industry securities as a group generally exceeds the yield to maturity on all other eligible portfolio investments as a group generally for a period of five consecutive days when the NYSE is open for trading.

For purposes of the investment limitation described in (7) above, management does not consider securities that are issued by the U.S. government or its agencies or instrumentalities to be investments in an "industry." However, management currently considers securities issued by a foreign government (but not the U.S. government or its agencies or instrumentalities) or a supranational organization to be subject to the 25% limitation. Thus, not more than 25% of a Portfolio's total assets will be invested in securities issued by any one foreign government or supranational organization. The Portfolio will consider each foreign government to be conducting its business activities in a separate industry, and will consider a security to have been issued by a foreign government if (i) the security is issued directly by such government or (ii) the security is issued by an agency, instrumentality or authority that is backed by the full faith and credit of such foreign government. Currency positions are not considered investments in a foreign government for purposes of this investment limitation. A Portfolio also might invest in certain securities issued by companies in a particular industry whose obligations are guaranteed by a foreign government. Management could consider such a company to be within the particular industry in which the company operates, rather than the industry of the foreign government, and, based on the foregoing, the Portfolio will invest in

the securities of such a company only if the Portfolio can do so under the Portfolio's policy of not being concentrated in any single industry.

Each Portfolio is required to operate in accordance with the SEC staff's current position on illiquid assets, which limits investments in illiquid assets to 15% of a Portfolio's net assets. For these purposes, each of the VA Short-Term Fixed Portfolio and VA Global Bond Portfolio may invest in commercial paper that is exempt from the registration requirements of the Securities Act of 1933 (the "1933 Act"), subject to the requirements regarding credit ratings stated in the prospectus under "**Description of Investments—Fixed Income Portfolios and Fixed Income Underlying Funds.**" Further, pursuant to Rule 144A under the 1933 Act, the Portfolios may purchase certain unregistered (i.e. restricted) securities upon a determination that a liquid institutional market exists for the securities. If it is determined that a liquid market does exist, the securities will not be subject to the 15% limitation on holdings of illiquid securities. While maintaining oversight, the Board of Directors has delegated the day-to-day function of making liquidity determinations to the Advisor. For Rule 144A securities to be considered liquid, there must be at least two dealers making a market in such securities. After purchase, the Board of Directors and the Advisor will continue to monitor the liquidity of Rule 144A securities.

Unless otherwise indicated, all limitations applicable to the Portfolios' investments apply only at the time that a transaction is undertaken.

ADDITIONAL POLICIES OF THE UNDERLYING FUNDS

Domestic Equity Underlying Funds

DFA Real Estate Securities Portfolio – The DFA Real Estate Securities Portfolio, using a free float adjusted market capitalization weighted approach, purchases readily marketable equity securities of companies whose principal activities include ownership, management, development, construction, or sale of residential, commercial or industrial real estate. The Portfolio will principally invest in equity securities of companies in certain real estate investment trusts and companies engaged in residential construction and firms, except partnerships, whose principal business is to develop commercial property. A company's market capitalization is the number of its shares outstanding times its price per share. In general, the higher the relative market capitalization of the U.S. real estate company, the greater its representation in the Portfolio. The Advisor may modify market capitalization weights and even exclude companies after considering such factors as free float, momentum, trading strategies, liquidity management, and expected profitability, as well as other factors that the Advisor determines to be appropriate, given market conditions. In assessing expected profitability, the Advisor may consider different ratios, such as that of earnings or profits from operations relative to book value or assets. The DFA Real Estate Securities Portfolio will purchase shares of real estate investment trusts ("REITs").

U.S. Core Equity 1 Portfolio – The U.S. Core Equity 1 Portfolio purchases a broad and diverse group of securities of U.S. companies with a greater emphasis on small capitalization and value companies as compared to their representation in the U.S. Universe. The Advisor generally defines the U.S. Universe as a free float adjusted market capitalization weighted portfolio of U.S. operating companies listed on the New York Stock Exchange ("NYSE"), NYSE Alternext US LLC or Nasdaq Global Market® or such other securities exchanges deemed appropriate by the Advisor. The Portfolio's increased exposure to small and value companies may be achieved by decreasing the allocation of the Portfolio's assets to the largest U.S. growth companies relative to their weight in the U.S. Universe, which would result in a greater weight allocation to small capitalization and value companies. An equity issuer is considered a growth company primarily because it has a low, non-negative book value in relation to its market capitalization. An equity issuer is considered a value company primarily because it has a high book value in relation to its market capitalization. Additionally, the U.S. Core Equity 1 Portfolio's percentage allocation to all securities as compared to their representation in the U.S. Universe may be modified after considering other factors the Advisor determines to be appropriate, such as free float, momentum, trading strategies, liquidity management, and expected profitability. In assessing expected profitability, the Advisor may consider different ratios, such as that of earnings or profits from operations relative to book value or assets.

U.S. Core Equity 2 Portfolio – The U.S. Core Equity 2 Portfolio purchases a broad and diverse group of securities of U.S. companies with a greater emphasis on small capitalization and value companies as compared to

their representation in the U.S. Universe. The Advisor generally defines the U.S. Universe as a free float adjusted market capitalization weighted portfolio of U.S. operating companies listed on the NYSE, NYSE Alternext US LLC or Nasdaq Global Market® or such other securities exchanges deemed appropriate by the Advisor. The Portfolio's increased exposure to small and value companies may be achieved by decreasing the allocation of the Portfolio's assets to the largest U.S. growth companies relative to their weight in the U.S. Universe, which would result in a greater weight allocation to small capitalization and value companies. An equity issuer is considered a growth company primarily because it has a low, non-negative book value in relation to its market capitalization. An equity issuer is considered a value company primarily because it has a high book value in relation to its market capitalization. Additionally, the U.S. Core Equity 2 Portfolio's percentage allocation to all securities as compared to their representation in the U.S. Universe may be modified after considering other factors the Advisor determines to be appropriate, such as free float, momentum, trading strategies, liquidity management, and expected profitability. In assessing expected profitability, the Advisor may consider different ratios, such as that of earnings or profits from operations relative to book value or assets.

VA U.S. Large Value Portfolio – The VA U.S. Large Value Portfolio, using a market capitalization weighted approach, purchases a broad and diverse group of readily marketable securities of large U.S. companies that the Advisor determines to be value stocks. A company's market capitalization is the number of its shares outstanding times its price per share. In general, the higher the relative market capitalization of the U.S. large cap company, the greater its representation in the Portfolio. The Advisor may modify market capitalization weights and even exclude companies after considering such factors as free float, momentum, trading strategies, liquidity management and expected profitability, as well as other factors that the Advisor determines to be appropriate, given market conditions. Securities are considered value stocks primarily because a company's shares have a high book value in relation to their market value (a "book to market ratio"). In assessing expected profitability, the Advisor may consider different ratios, such as that of earnings or profits from operations relative to book value or assets.

As a non-fundamental policy, under normal circumstances, VA U.S. Large Value Portfolio will invest at least 80% of its net assets in securities of large cap U.S. companies. As of the date of this SAI, for purposes of the Portfolio, the Advisor considers large cap companies to be companies whose market capitalizations are generally in the highest 90% of total market capitalization or companies whose market capitalizations are larger than the 1,000th largest U.S. company, whichever results in the higher market capitalization break. Total market capitalization is based on the market capitalization of U.S. operating companies listed on the New York Stock Exchange ("NYSE"), NYSE Alternext US LLC, Nasdaq Global Market® or such other securities exchanges deemed appropriate by the Advisor. Under the Advisor's market capitalization guidelines described above, as of December 31, 2013, the market capitalization of a large cap company was \$3,522 million or above. This dollar amount will change due to market conditions.

International Equity Underlying Funds

International Core Equity Portfolio – The International Core Equity Portfolio purchases a broad and diverse group of securities of non-U.S. companies in developed markets with a greater emphasis on small capitalization and value companies as compared to their representation in the International Universe. For purposes of this Portfolio, the Advisor defines the International Universe as a market capitalization weighted portfolio of non-U.S. companies in developed markets that have been authorized as approved markets for investment by the Advisor's Investment Committee. The Portfolio's increased exposure to small capitalization and value companies may be achieved by decreasing the allocation of the International Core Equity Portfolio's assets to the largest growth companies relative to their weight in the International Universe, which would result in a greater weight allocation to small capitalization and value companies. An equity issuer is considered a growth company primarily because it has a low, non-negative book value in relation to its market capitalization. An equity issuer is considered a value company primarily because it has a high book value in relation to its market capitalization. Additionally, the International Core Equity Portfolio's percentage allocation to all securities as compared to their representation in the International Universe may be modified after considering other factors the Advisor determines to be appropriate, such as free float, momentum, trading strategies, liquidity management, and expected profitability. In assessing expected profitability, the Advisor may consider different ratios, such as that of earnings or profits from operations relative to book value or assets.

Emerging Markets Core Equity Portfolio – The Emerging Markets Core Equity Portfolio purchases a broad and diverse group of securities associated with emerging markets, which may include frontier markets (emerging market countries in an earlier stage of development), authorized for investment by the Advisor’s Investment Committee (“Approved Markets”), with an increased exposure to securities of small cap issuers and securities that it considers to be value securities. In assessing value, the Advisor may consider factors such as the issuer’s securities having a high book value in relation to their market value, as well as price to cash flow or price to earnings ratios. The criteria the Advisor uses for assessing value are subject to change from time to time. In addition, the Advisor may adjust the representation in the Portfolio of an eligible company, or exclude a company, after considering expected profitability relative to other eligible companies. In assessing expected profitability, the Advisor may consider different ratios, such as that of earnings or profits from operations relative to book value or assets.

VA International Value Portfolio – The VA International Value Portfolio, using a market capitalization weighted approach, purchases securities of large non-U.S. companies in countries with developed markets that the Advisor determines to be value stocks. A company’s market capitalization is the number of its shares outstanding times its price per share. In general, the higher the relative market capitalization of a large company within an eligible country, the greater its representation in the Portfolio. The Advisor may modify market capitalization weights and even exclude companies after considering such factors as free float, momentum, trading strategies, liquidity management, and expected profitability, as well as other factors that the Advisor determines to be appropriate, given market conditions. Securities are considered value stocks primarily because a company’s shares have a high book value in relation to their market value (a “book to market ratio”). In assessing expected profitability, the Advisor may consider different ratios, such as that of earnings or profits from operations relative to book value or assets.

The VA International Value Portfolio intends to purchase securities of large companies associated with developed market countries that the Advisor has designated as approved markets. The Advisor determines the minimum market capitalization of a large company with respect to each country or region in which the Portfolio invests. As of December 31, 2013, for the Portfolio, the lowest minimum market capitalization of a large company in any country or region in which the Portfolio invests was \$1,628 million. This threshold will change due to market conditions.

Fixed Income Underlying Funds

DFA Two-Year Global Fixed Income Portfolio – The DFA Two-Year Global Fixed Income Portfolio (the “Two-Year Global Portfolio”) seeks to maximize risk-adjusted total returns from a universe of U.S. and foreign debt securities maturing in two years or less. The Two-Year Global Portfolio invests in obligations issued or guaranteed by the U.S. and foreign governments, their agencies and instrumentalities, corporate debt obligations, bank obligations, commercial paper, repurchase agreements, obligations of other domestic and foreign issuers, securities of domestic or foreign issuers denominated in U.S. dollars but not trading in the United States, and obligations of supranational organizations. At the present time, the Advisor expects that most investments will be made in the obligations of issuers which are in developed countries. However, in the future, the Advisor anticipates investing in issuers located in other countries as well. The fixed income securities in which the Two-Year Global Portfolio invests are considered investment grade at the time of purchase. Under normal market conditions, the Portfolio intends to invest its assets in issuers organized or having a majority of their assets in, or deriving a majority of their operating income in, at least three different countries, one of which may be the United States. As a non-fundamental policy, under normal circumstances, the Portfolio will invest at least 80% of its net assets in fixed income securities that mature within two years from the date of settlement.

It is the policy of the Two-Year Global Portfolio that the weighted average length of maturity of investments will not exceed two years. However, investments may be made in obligations maturing in a shorter time period (from overnight, to up to two years from the date of settlement). Because many of the Portfolio’s investments will be denominated in foreign currencies, the Portfolio will also enter into forward foreign currency contracts to attempt to protect against uncertainty in the level of future foreign currency rates, to hedge against fluctuations in currency exchange rates or to transfer balances from one currency to another. The Portfolio may use derivatives, such as futures contracts and options on futures contracts, to gain market exposure on its uninvested cash pending investment in securities or to maintain liquidity to pay redemptions.

The Two-Year Global Portfolio may concentrate its investments in obligations of U.S. and foreign banks and bank holding companies. The Portfolio will concentrate its assets (invest more than 25% of its total assets) in obligations of U.S. and/or foreign banks and bank holding companies (“banking industry securities”) when the yield to maturity on eligible portfolio investments in banking industry securities as a group generally exceeds the yield to maturity on all other eligible portfolio investments as a group generally for a period of five consecutive days when the New York Stock Exchange is open for trading. See the section entitled “**Investments in the Banking Industry-VA Short-Term Fixed Portfolio and certain Fixed Income Underlying Funds**” below for additional information.

DFA Selectively Hedged Global Fixed Income Portfolio – The DFA Selectively Hedged Global Fixed Income Portfolio (the “Selectively Hedged Global Portfolio”) seeks to maximize total returns from a universe of U.S. and foreign debt securities maturing in five years or less from the date of settlement. The Portfolio may selectively hedge its currency exposures depending on market conditions. The debt securities in which the Portfolio may invest include obligations issued or guaranteed by the U.S. and foreign governments, their agencies and instrumentalities, corporate debt obligations, bank obligations, commercial paper, repurchase agreements, obligations of other domestic and foreign issuers, securities of domestic or foreign issuers denominated in U.S. dollars but not trading in the United States, and obligations of supranational organizations. At the present time, the Advisor expects that most investments will be made in the obligations of issuers that are located in developed countries. However, in the future, the Advisor anticipates investing in issuers located in other countries as well. The fixed income securities in which the Selectively Hedged Global Portfolio invests are considered investment grade at the time of purchase. Under normal market conditions, the Portfolio intends to invest its assets in issuers organized or having a majority of their assets in, or deriving a majority of their operating income in, at least three different countries, one of which may be the United States.

As a non-fundamental policy, under normal circumstances, the Portfolio will invest at least 80% of its net assets in fixed income securities. The Selectively Hedged Global Portfolio primarily invests in securities that mature within five years from the date of settlement and maintains an average portfolio maturity and an average portfolio duration of three years or less. Duration is a measure of the expected life of a fixed income security that is used to determine the sensitivity of a security’s price to changes in interest rates. The longer a security’s duration, the more sensitive it will be to changes in interest rates.

Because many of the Selectively Hedged Global Portfolio’s investments may be denominated in foreign currencies, the Portfolio may hedge the currency exposure of the foreign securities by entering into foreign forward currency contracts, or leave some or all of the currency exposure unhedged, to attempt to protect against uncertainty in the level of future foreign currency rates, to hedge against fluctuations in currency exchange rates or to transfer balances from one currency to another. The decision to hedge the Portfolio’s currency exposure with respect to a foreign market will be based on, among other things, a comparison of the respective foreign and U.S. short-term interest rates and the Portfolio’s existing exposure to a given foreign currency. The Portfolio may also enter into foreign forward currency contracts in order to gain exposure to foreign currencies in a more efficient manner. In addition, the Portfolio may use derivatives, such as futures contracts and options on futures contracts, to gain market exposure on its uninvested cash pending investment in securities or to maintain liquidity to pay redemptions.

The Selectively Hedged Global Portfolio may concentrate its investments in obligations of U.S. and foreign banks and bank holding companies. The Portfolio will concentrate its assets (invest more than 25% of its total assets) in obligations of U.S. and/or foreign banks and bank holding companies (“banking industry securities”) when the yield to maturity on eligible portfolio investments in banking industry securities as a group generally exceeds the yield to maturity on all other eligible portfolio investments as a group generally for a period of five consecutive days when the New York Stock Exchange is open for trading. See the section entitled “**Investments in the Banking Industry-VA Short-Term Fixed Portfolio and certain Fixed Income Underlying Funds**” below for additional information.

VA Global Bond Portfolio – The VA Global Bond Portfolio seeks to achieve its investment objective by generally investing in a universe of U.S. and foreign debt securities maturing in five years or less. The Portfolio primarily purchases obligations issued or guaranteed by the U.S. and foreign governments, their agencies and instrumentalities, corporate debt obligations, bank obligations, commercial paper, repurchase agreements, obligations of other domestic and foreign issuers, securities of domestic and foreign issuers denominated in U.S.

dollars but not trading in the United States, and obligations of supranational organizations. At the present time, the Advisor expects that most investments will be made in the obligations of issuers which are developed countries. However, in the future, the Advisor anticipates investing in issuers located in other countries as well. The fixed income securities in which the VA Global Bond Portfolio invests are considered investment grade at the time of purchase. Under normal market conditions, the Portfolio intends to invest its assets in issuers organized or having a majority of their assets in, or deriving a majority of their operating income in, at least three different countries, one of which may be the United States. As a non-fundamental policy, under normal circumstances, the Portfolio will invest at least 80% of its net assets in fixed income securities. The Portfolio will generally invest its assets in obligations which mature within five years from the date of settlement. Because many of the Portfolio's investments will be denominated in foreign currencies, the Portfolio will also enter into forward foreign currency contracts to attempt to protect against uncertainty in the level of future foreign currency rates, to hedge against fluctuations in currency exchange rates, or to transfer balances from one currency to another.

VA Short-Term Fixed Portfolio – The VA Short-Term Fixed Portfolio seeks to achieve its investment objective by generally investing in a universe of high quality fixed income securities that typically mature in one year or less. The Portfolio may, however, take a large position in securities maturing within two years from the date of settlement when higher yields are available. The Portfolio purchases U.S. government obligations, U.S. government agency obligations, dollar-denominated obligations of foreign issuers issued in the U.S., foreign government and agency obligations, bank obligations, including U.S. subsidiaries and branches of foreign banks, corporate obligations, commercial paper, repurchase agreements, obligations of supranational organizations and affiliated and unaffiliated unregistered money market funds. As a non-fundamental policy, under normal circumstances, the Portfolio will invest at least 80% of its net assets in fixed income securities and maintain a dollar-weighted average portfolio maturity that will not exceed one year. The Portfolio principally invests in certificates of deposit, commercial paper, bankers' acceptances, notes and bonds.

The VA Short-Term Fixed Portfolio may concentrate its investments in obligations of U.S. and foreign banks and bank holding companies. The Portfolio will invest more than 25% of its total assets in obligations of U.S. and/or foreign banks and bank holding companies (“banking industry securities”) when the yield to maturity on eligible portfolio investments in banking industry securities as a group generally exceeds the yield to maturity on all other eligible portfolio investments as a group for a period of five consecutive days when the New York Stock Exchange is open for trading. See the section entitled “**Investments in the Banking Industry-VA Short-Term Fixed Portfolio and certain Fixed Income Underlying Funds**” below for additional information.

Description of Investments of the Fixed Income Portfolios and Fixed Income Underlying Funds

The following is a description of the categories of investments, which may be acquired by the Fixed Income Underlying Funds.

	<u>Permissible Categories:</u>
Two-Year Global Portfolio.....	1-11
Selectively Hedged Global Portfolio.....	1, 2, 4, 6-8, 10-14
VA Global Bond Portfolio.....	1-11
VA Short-Term Fixed Portfolio	1-8, 10-11

1. *U.S. Government Obligations*—Debt securities issued by the U.S. Treasury which are direct obligations of the U.S. Government, including bills, notes and bonds.

2. *U.S. Government Agency Obligations*—Issued or guaranteed by U.S. government-sponsored instrumentalities and federal agencies, which have different levels of credit support. The U.S. government agency obligations include, but are not limited to, securities issued by agencies and instrumentalities of the U.S. Government that are supported by the full faith and credit of the United States, such as the Federal Housing

Administration and Ginnie Mae, including Ginnie Mae pass-through certificates. Other securities issued by agencies and instrumentalities sponsored by the U.S. Government may be supported only by the issuer's right to borrow from the U.S. Treasury, subject to certain limits, such as securities issued by Federal Home Loan Banks, or are supported only by the credit of such agencies, such as Freddie Mac and Fannie Mae.

3. *Corporate Debt Obligations*—*Non-convertible corporate debt securities (e.g., bonds and debentures), which are rated Aa3 or better by Moody's, or AA- or better by S&P, or AA- or better by Fitch, or if there is no rating for the debt security, they are determined by the Advisor to be of comparable quality to equivalent issues of the same issuer rated or lease AA- or Aa3.*

4. *Bank Obligations*—Obligations of U.S. banks and savings and loan associations and dollar-denominated obligations of U.S. subsidiaries and branches of foreign banks, such as certificates of deposit (including marketable variable rate certificates of deposit), time deposits and bankers' acceptances. Bank certificates of deposit will only be acquired from banks having assets in excess of \$1,000,000,000.

5. *Commercial Paper*—Rated, at the time of purchase, A1 or better by S&P or Prime1 by Moody's, or F1 or better by Fitch or, if unrated, issued by a corporation having an outstanding unsecured debt issue rated Aaa by Moody's or AAA by S&P or AAA by Fitch.

6. *Repurchase Agreements*—Instruments through which the Fixed Income Underlying Funds purchase securities ("underlying securities") from a bank or a registered U.S. government securities dealer, with an agreement by the seller to repurchase the securities at an agreed price, plus interest at a specified rate. The underlying securities will be limited to U.S. government and agency obligations described in (1) and (2) above. The Fixed Income Underlying Funds will not enter into a repurchase agreement with a duration of more than seven days if, as a result, more than 10% of the value of the Fixed Income Underlying Fund's total assets would be so invested. In addition, a repurchase agreement with a duration of more than seven days will be subject to a Fixed Income Underlying Fund's illiquid assets policy. The Fixed Income Underlying Funds also will only invest in repurchase agreements with a bank if the bank has at least \$1,000,000,000 in assets and is approved by the Investment Committee of the Advisor. The Advisor will monitor the market value of the securities plus any accrued interest thereon so that they will at least equal the repurchase price.

7. *Foreign Government and Agency Obligations*—Bills, notes, bonds and other debt securities issued or guaranteed by foreign governments, or their agencies and instrumentalities.

8. *Supranational Organization Obligations*—Debt securities of supranational organizations such as the European Investment Bank, the Inter-American Development Bank, or the World Bank, which are chartered to promote economic development.

9. *Foreign Issuer Obligations*—*Debt securities of non-U.S. issuers rated AA- or better by S&P or Aa3 or better by Moody's or AA or , if unrated, securities that have been determined to be of comparable quality.*

10. *Eurodollar Obligations*—Debt securities of domestic or foreign issuers denominated in U.S. dollars but not trading in the United States.

11. *Money Market Funds*—The Fixed Income Underlying Funds may invest in affiliated and unaffiliated registered and unregistered money market funds. Investments in money market funds may involve a duplication of certain fees and expenses.

12. *Corporate Debt Obligations*—Nonconvertible corporate debt securities (e.g., bonds and debentures), which have received an investment grade rating by Moody's, Fitch or S&P or, if unrated, have been determined by the Advisor to be of comparable quality.

13. *Commercial Paper*—Rated, at the time of purchase, A3 or better by S&P or Prime3 or better by Moody's, or F3 or better by Fitch or, if unrated, issued by a corporation having an outstanding unsecured debt issue rated at least Baa3 by Moody's or BBB- by S&P or Fitch.

14. *Foreign Issuer Obligations*—Debt securities of non-U.S. issuers that have received a rating of BBB- or better by S&P or Fitch or Baa3 or better by Moody's, or, if unrated, have been determined by the Advisor to be of comparable quality.

The categories of investments that may be acquired by each of the Fixed Income Underlying Funds may include both fixed and floating rate securities. Floating rate securities bear interest at rates that vary with prevailing market rates. Interest rate adjustments are made periodically (e.g., every six months), usually based on a money market index such as the London Interbank Offered Rate (LIBOR) or the Treasury bill rate.

Investments in the Banking Industry-VA Short-Term Fixed Portfolio and certain Fixed Income Underlying Funds

The Two-Year Global Portfolio, Selectively Hedged Global Portfolio and VA Short-Term Fixed Portfolio will invest more than 25% of their total respective assets in obligations of U.S. and/or foreign banks and bank holding companies ("banking industry securities") when the yield to maturity on eligible portfolio investments in banking industry securities as a group generally exceeds the yield to maturity on all other eligible portfolio investments as a group generally for a period of five consecutive days when the NYSE is open for trading. For purposes of this policy, the Advisor considers eligible portfolio investments to be those securities that are on the Advisor's then current buy list that are available for purchase. This policy can only be changed by a vote of shareholders. When investment in such obligations exceeds 25% of the total net assets of any of these Portfolios, such Portfolio will be considered to be concentrating its investments in the banking industry. Once a Portfolio concentrates its investments in the banking industry, the Portfolio may remain concentrated in the banking industry until the purchase of new investments in the normal course of executing the Portfolio's investment strategy result in less than 25% of the Portfolio's total assets consisting of banking industry securities. Similarly, in applying a Portfolio's banking industry policy, the Advisor will track the yield to maturity on eligible portfolio investments in the banking industry when the purchase of new investments in the normal course of executing the Portfolio's investment strategy could result in the Portfolio becoming concentrated and then will purchase such amount of eligible investments in the banking industry as would be consistent with the normal course of executing the Portfolio's investment strategy.

As the date of this SAI, the VA Short-Term Fixed Portfolio is concentrating its investments in the banking industry.

The types of bank and bank holding company obligations in which the Two-Year Global Portfolio, Selectively Hedged Global Portfolio and VA Short-Term Fixed Portfolio may invest include: certificates of deposit, bankers' acceptances, commercial paper and other debt obligations issued in the United States provided such obligations meet the Portfolio's established credit rating criteria as stated under "**Description of Investments of the Fixed Income Portfolios and Fixed Income Underlying Funds**" and otherwise meet the maturity guidelines for the Portfolio.

FUTURES CONTRACTS

All Portfolios (except the VA Short-Term Fixed Portfolio) and in the case of the DFA VA Global Moderate Allocation Portfolio, the Underlying Funds, may enter into futures contracts and options on futures contracts to gain market exposure on the Portfolio's uninvested cash pending investments in securities and to maintain liquidity to pay redemptions. Futures contracts provide for the future sale by one party and purchase by another party of a specified amount of defined securities at a specified future time and at a specified price. Futures contracts that are standardized as to maturity date and underlying financial instrument are traded on national futures exchanges. Each Portfolio will be required to make a margin deposit in cash or government securities with a futures commission merchant ("FCM") to initiate and maintain positions in futures contracts. Minimal initial margin requirements are established by the futures exchanges, and FCMs may establish margin requirements which are higher than the exchange requirements. After a futures contract position is opened, the value of the contract is marked to market daily. If the futures contract price changes, to the extent that the margin on deposit does not satisfy margin requirements, payment of additional "variation" margin to be held by the FCM will be required. Conversely, a reduction in the required margin would result in excess margin that can be refunded to the custodial accounts of the

Portfolio. Variation margin payments may be made to and from the futures broker for as long as the contract remains open. Each Portfolio expects to earn income on its margin deposits. Each Portfolio intends to limit its futures-related investment activity so that other than with respect to bona fide hedging activity (as defined in Commodity Futures Trading Commission ("CFTC") General Regulations Section 1.3 (z)): (i) the aggregate initial margin and premiums paid to establish commodity futures and commodity option contract positions (determined at the time the most recent position was established) do not exceed 5% of the liquidation value of a Portfolio's portfolio, after taking into account unrealized profits and unrealized losses on any such contracts it has entered into (provided that, in the case of an option that is in-the-money at the time of purchase, the in-the-money amount may be excluded in calculating such 5% limitation) or (ii) the aggregate net "notional value" (i.e., the size of a commodity futures or commodity option contract in contract units (taking into account any multiplier specified in the contract), multiplied by the current market price (for a futures contract) or strike price (for an option contract) of each such unit) of all non-hedge commodity futures and commodity option contracts that a Portfolio has entered into (determined at the time the most recent position was established) does not exceed the liquidation value of a Portfolio's portfolio, after taking into account unrealized profits and unrealized losses on any such contracts that a Portfolio has entered into.

Positions in futures contracts may be closed out only on an exchange that provides a secondary market. However, there can be no assurance that a liquid secondary market will exist for any particular futures contract at any specific time. Therefore, it might not be possible to close a futures position and, in the event of adverse price movements, the Portfolio would continue to be required to make variation margin deposits. In such circumstances, if the Portfolio has insufficient cash, it might have to sell portfolio securities to meet daily margin requirements at a time when it might be disadvantageous to do so. Management intends to minimize the possibility that it will be unable to close out a futures contract by only entering into futures which are traded on national futures exchanges and for which there appears to be a liquid secondary market. Pursuant to published positions of the SEC and interpretations of the staff of the SEC, a Portfolio (or its custodian) is required to maintain segregated accounts or to segregate assets through notations on the books of the custodians, consisting of liquid assets (or, as permitted under applicable interpretations, enter into offsetting positions) in connection with its futures contract transactions in order to cover its obligations with respect to such contracts. These requirements are designed to limit the amount of leverage that a Portfolio may use by entering into futures transactions.

FOREIGN CURRENCY TRANSACTIONS

The International Equity Portfolios, VA Global Bond Portfolio and each Fixed Income Underlying Fund (except the VA Short-Term Fixed Portfolio) may acquire and sell forward foreign currency exchange contracts in order to protect against uncertainty in the level of future foreign currency exchange rates. The Portfolios will conduct their foreign currency exchange transactions either on a spot (i.e., cash) basis at the spot rate prevailing in the foreign currency exchange market, or through entering into forward contracts to purchase or sell foreign currencies. A forward foreign currency exchange contract involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days (usually less than one year) from the date of the contract agreed upon by the parties, at a price set at the time of the contract. These contracts are traded in the interbank market conducted directly between traders (usually large commercial banks) and their customers. A forward contract generally has no deposit requirement, and no commissions are charged at any stage for trades. Although foreign exchange dealers do not charge a fee for conversion, they do realize a profit based on the difference (the spread) between the price at which they are buying and selling various currencies.

With respect to an International Equity Portfolio or an International Equity Underlying Fund, the Portfolio or the Underlying Fund may enter into a forward contract in connection with the purchase or sale of foreign equity securities, typically to "lock in" the value of the transaction with respect to a different currency. In addition, a Portfolio or an International Equity Underlying Fund may, from time to time, enter into a forward contract to transfer balances from one currency to another currency.

The VA Global Bond Portfolio and the Fixed Income Underlying Funds (except the VA Short-Term Fixed Portfolio), may enter into forward foreign currency contracts to hedge against fluctuations in currency exchange rates or to transfer balances from one currency to another currency. The VA Global Bond Portfolio and a Fixed Income Underlying Fund (except the VA Short-Term Fixed Portfolio) may enter into a forward contract to buy or

sell the amount of foreign currency approximating the value of some or all of the portfolio securities quoted or denominated in such foreign currency. The precise matching of the forward contract amounts and the value of the securities involved will not generally be possible since the future value of such securities in foreign currencies will change as a consequence of market movements in the value of those securities between the date the forward contract is entered into and the date it expires.

The Two-Year Global Portfolio typically hedges its foreign currency exposure. The Selectively Hedged Global Portfolio may hedge the currency exposure of its foreign securities or leave some or all of the currency exposure unhedged.

CASH MANAGEMENT PRACTICES

All Portfolios and Underlying Funds engage in cash management practices in order to earn income on uncommitted cash balances. Generally, cash is uncommitted pending investment in other securities, payment of redemptions or in other circumstances where the Advisor believes liquidity is necessary or desirable. For example, in the case of the Portfolios, cash investments may be made for temporary defensive purposes during periods in which market, economic or political conditions warrant. In addition, each of Portfolios may enter into arrangements with its custodian whereby it may earn a credit on its cash balances maintained in its non-interest bearing U.S. Dollar custody cash account to be applied against fund service fees payable to the custodian or the custodian's subsidiaries for fund services provided.

All the Portfolios and Underlying Funds may invest cash in short-term repurchase agreements. In addition, the following cash investments are permissible:

<u>Portfolios</u>	<u>Permissible Cash Investment</u>	<u>Percentage Guidelines**</u>
The Domestic Equity Portfolios	High quality, highly liquid fixed income securities,* such as money market instruments; affiliated and unaffiliated registered and unregistered money market funds***	20%
VA International Value Portfolio	Fixed income obligations* as may be acquired by the Fixed Income Portfolios; affiliated and unaffiliated registered and unregistered money market funds***	20%
VA International Small Portfolio	Fixed income obligations,* such as money market instruments; affiliated and unaffiliated registered and unregistered money market funds***	20%
The Fixed Income Portfolios	Affiliated and unaffiliated registered and unregistered money market funds***	20%

<u>Portfolio</u>	<u>Permissible Cash Investments*</u>	<u>Percentage Guidelines**</u>
DFA VA Global Moderate Allocation Portfolio	U.S. government securities, repurchase agreements and short-term paper; affiliated and unaffiliated registered and unregistered money market funds***	20%

<u>Non-VA Underlying Funds</u>	<u>Permissible Cash Investments*</u>	<u>Percentage Guidelines**</u>
U.S. Core Equity 1 Portfolio U.S. Core Equity 2 Portfolio International Core Equity Portfolio	High quality, highly liquid fixed income securities, such as money market instruments; index futures contracts and options thereon; affiliated and unaffiliated registered and unregistered money market funds***	20%
DFA Real Estate Securities Portfolio	Fixed income obligations such as money market instruments; index futures contracts and options thereon; affiliated and unaffiliated registered and unregistered money market funds***	20%
Emerging Markets Core Equity Portfolio	Money market instruments; highly liquid debt securities; freely convertible currencies; index futures contracts and options thereon; affiliated and unaffiliated registered and unregistered money market funds***	20%
DFA Two-Year Global Fixed Income Portfolio	Short-term repurchase agreements; affiliated and unaffiliated registered and unregistered money market funds***	N.A.
DFA Selectively Hedged Global Fixed Income Portfolio	Short-term repurchase agreements; affiliated and unaffiliated registered and unregistered money market funds***	N.A.

* With respect to fixed income instruments, except in connection with corporate actions, the Portfolios and Underlying Funds will invest in fixed income instruments that at the time of purchase have an investment grade rating by a rating agency or are deemed to be investment grade by the Advisor.

** The percentage guidelines set forth above are not absolute limitations, but the Portfolios and Underlying Funds do not expect to exceed these guidelines under normal circumstances.

*** Investments in money market mutual funds may involve duplication of certain fees and expenses.

CONVERTIBLE DEBENTURES

VA International Small Portfolio may invest up to 5% of its assets in convertible debentures issued by non-U.S. companies. Convertible debentures include corporate bonds and notes that may be converted into or exchanged for common stock. These securities are generally convertible either at a stated price or a stated rate (that is, for a specific number of shares of common stock or other security). As with other fixed income securities, the price of a convertible debenture to some extent varies inversely with interest rates. While providing a fixed-income stream (generally higher in yield than the income derived from a common stock but lower than that afforded by a non-convertible debenture), a convertible debenture also affords the investor an opportunity, through its conversion feature, to participate in the capital appreciation of the common stock into which it is convertible. As the market price of the underlying common stock declines, convertible debentures tend to trade increasingly on a yield basis and so may not experience market value declines to the same extent as the underlying common stock. When the market price of the underlying common stock increases, the price of a convertible debenture tends to rise as a reflection of the value of the underlying common stock. To obtain such a higher yield, the Portfolio may be required to pay for a convertible debenture an amount in excess of the value of the underlying common stock. Common stock acquired by the Portfolio upon conversion of a convertible debenture will generally be held for as long as the Advisor anticipates such stock will provide the Portfolio with opportunities which are consistent with the Portfolio's investment objective and policies.

EXCHANGE TRADED FUNDS

The Portfolios (except the VA Short-Term Fixed Portfolio and VA Global Bond Portfolio) and the U.S. Core Equity 1 Portfolio, U.S. Core Equity 2 Portfolio, International Core Equity Portfolio and Emerging Markets Core Equity Portfolio of the Underlying Funds, may invest in Exchange Traded Funds (“ETFs”) and similarly structured pooled investments for the purpose of gaining exposure to the equity markets while maintaining liquidity. An ETF is an investment company classified as an open-end investment company or unit investment trust that is traded similar to a publicly traded company. ETFs in which the Portfolios invest are passively managed and attempt to track or replicate a desired index, such as a sector, market or global segment. The risks and costs of investing in ETFs are comparable to investing in a publicly traded company. The goal of an ETF is to correspond generally to the price and yield performance, before fees and expenses, of its underlying index. The risk of not correlating to the index is an additional risk to the investors of ETFs. When a Portfolio or an Underlying Fund invests in an ETF, shareholders of the Portfolio or an Underlying Fund bear their proportionate share of the underlying ETF’s fees and expenses.

DIRECTORS AND OFFICERS

Directors

Organization of the Board

The Board of Directors of the Fund (the “Board”) is responsible for establishing the Fund’s policies and for overseeing the management of the Fund. The Board of Directors elects the officers of the Fund, who, along with third party service providers, are responsible for administering the day-to-day operations of the Fund. The Board of Directors of the Fund is comprised of two interested Directors and six disinterested Directors. David G. Booth, an interested Director, is Chairman of the Board. The Board has not found it necessary to appoint a lead disinterested Director because it believes that the existing structure of the Board allows for effective communication among the disinterested Directors, between the disinterested Directors and interested Directors, as well as between the disinterested Directors and management. The existing Board structure for the Fund also provides the disinterested Directors with adequate influence over the governance of the Board and the Fund, while also providing the Board with the invaluable insight of the two interested Directors, who, as both officers of the Fund and the Advisor, participate in the day-to-day management of the Fund’s affairs, including risk management.

The agenda for each quarterly meeting of the Board is provided at least two weeks prior to the meeting to the disinterested Directors in order to provide the Directors with the opportunity to contact Fund management and/or the disinterested Directors’ independent counsel regarding agenda items. In addition, the disinterested Directors regularly communicate with Mr. Booth regarding items of interest to them in between regularly scheduled meetings of the Board. The Board of the Fund meets in person at least four times each year and by telephone at other times. At each in-person meeting, the disinterested Directors meet in executive session with their independent counsel to discuss matters outside the presence of management.

The Board has three standing committees. The Audit Committee and Nominating Committee are composed entirely of disinterested Directors. As described below, through these Committees, the disinterested Directors have direct oversight of the Fund’s accounting and financial reporting policies, the selection and nomination of candidates to the Fund’s Board. The Investment Review Committee (the “Review Committee”) consists of both interested and disinterested directors. The Review Committee assists the Board in carrying out its fiduciary duties with respect to the oversight of the Fund and its performance.

The Board’s Audit Committee is comprised of George M. Constantinides, Roger G. Ibbotson and Abbie J. Smith. The Audit Committee for the Board oversees the Fund’s accounting and financial reporting policies and practices, the Fund’s internal controls, the Fund’s financial statements and the independent audits thereof and performs other oversight functions as requested by the Board. The Audit Committee for the Board recommends the appointment of the Fund’s independent registered public accounting firm and also acts as a liaison between the Fund’s independent registered public accounting firm and the full Board. There were two Audit Committee meetings held for the Fund during the fiscal year ended October 31, 2013.

The Board's Nominating Committee is comprised of George M. Constantinides, John P. Gould, Roger G. Ibbotson, Edward P. Lazear, Myron S. Scholes and Abbie J. Smith. The Nominating Committee for the Board makes recommendations for nominations of disinterested and interested members on the Board to the disinterested Board members and to the full board. The Nominating Committee evaluates a candidate's qualification for Board membership and the independence of such candidate from the Advisor and other principal service providers. There was one Nominating Committee meeting held for the Fund during the fiscal year ended October 31, 2013.

The Review Committee is comprised of John P. Gould, Edward P. Lazear, Myron S. Scholes and Eduardo A. Repetto. At the request of the Board or the Advisor, the Review Committee (i) reviews the design of possible new series of the Fund, (ii) reviews performance of existing Portfolios of the Fund, and discusses and recommends possible enhancements to the Portfolios' investment strategies, (iii) reviews proposals by the Advisor to modify or enhance the investment strategies or policies of each Portfolio, and (iv) considers issues relating to investment services for each Portfolio of the Fund. There were two Review Committee meetings held for the Fund during the fiscal year ended October 31, 2013.

The Board of the Fund, including all of the disinterested Directors, oversees and approves the contracts of the third party service providers that provide advisory, administrative, custodial and other services to the Fund.

Board Oversight of Risk Management

The Board, as a whole, considers risk management issues as part of its general oversight responsibilities throughout the year at regular board meetings, through regular reports that have been developed by Fund management and the Advisor. These reports address certain investment, valuation and compliance matters. The Board also may receive special written reports or presentations on a variety of risk issues, either upon the Board's request or upon the initiative of the Advisor. In addition, the Audit Committee of the Board meets regularly with management of the Advisor to review reports on the Advisor's examinations of functions and processes that affect the Fund.

With respect to investment risk, the Board receives regular written reports describing and analyzing the investment performance of the Fund's portfolios. The Board discusses these reports and the portfolios' performance and investment risks with management of the Advisor at the Board's regular meetings. The Investment Committee of the Advisor meets regularly to discuss a variety of issues, including the impact that the investment in particular securities or instruments, such as derivatives, may have on the portfolios. To the extent that the Investment Committee of the Advisor decides to materially change an investment strategy or policy of a portfolio and such change could have a significant impact on the portfolio's risk profile, the Advisor will present such change to the Board for their approval.

With respect to valuation, the Advisor and the Fund's Administrative and Accounting Agent provide regular written reports to the Board that enables the Board to review fair valued securities in a particular portfolio. Such reports also include information concerning illiquid and any worthless securities held by each portfolio. In addition, the Fund's Audit Committee reviews valuation procedures and pricing results with the Fund's independent registered public accounting firm in connection with such Committee's review of the results of the audit of each portfolio's year-end financial statements.

With respect to compliance risks, the Board receives regular compliance reports prepared by the Advisor's compliance group and meets regularly with the Fund's Chief Compliance Officer (CCO) to discuss compliance issues, including compliance risks. As required under SEC rules, the disinterested Directors meet at least quarterly in executive session with the CCO, and the Fund's CCO prepares and presents an annual written compliance report to the Board. The Fund's Board adopts compliance policies and procedures for the Fund and receives information about the compliance procedures in place for the Fund's service providers. The compliance policies and procedures are specifically designed to detect and prevent violations of the federal securities laws.

The Advisor periodically provides information to the Board relevant to enterprise risk management describing the way in which certain risks are managed at the complex-wide level by the Advisor. Such presentations

include areas such as counter-party risk, material fund vendor or service provider risk, investment risk, reputational risk, personnel risk and business continuity risk.

Director Qualifications

When a vacancy occurs on the Board, the Nominating Committee of the Board evaluates a candidate's qualification for Board membership and the independence of such candidate from the Advisor and other principal service providers. The Nominating Committee will consider nominees recommended by Qualifying Fund Shareholders if a vacancy occurs among Board members. A Qualifying Fund Shareholder is a shareholder, or group of shareholders, that: (i) owns of record, or beneficially through a financial intermediary, 5% or more of the Fund's outstanding shares, and (ii) has owned such shares for 12 months or more prior to submitting the recommendation to the Committee. Such recommendations shall be directed to the Secretary of the Fund at 6300 Bee Cave Road, Building One, Austin, TX 78746. The Qualifying Fund Shareholder's letter should include: (i) the name and address of the Qualifying Fund Shareholder making the recommendation; (ii) the number of shares of each Portfolio of the Fund that are owned of record and beneficially by such Qualifying Fund Shareholder, and the length of time that such shares have been so owned by the Qualifying Fund Shareholder; (iii) a description of all arrangements and understandings between such Qualifying Fund Shareholder and any other person or persons (naming such person or persons) pursuant to which the recommendation is being made; (iv) the name and address of the nominee; and (v) the nominee's resume or curriculum vitae. The Qualifying Fund Shareholder's letter must be accompanied by a written consent of the individual to stand for election if nominated for the Board and to serve if elected by shareholders. The Committee also may seek such additional information about the nominee as the Committee considers appropriate, including information relating to such nominee that is required to be disclosed in solicitations or proxies for the election of Board members.

The Nominating Committee of the Board believes that it is in the best interests of the Fund and its shareholders to obtain highly-qualified individuals to serve as members of the Board. The Fund's Board believes that each Director currently serving on the Board has the experience, qualifications, attributes and skills to allow the Board to effectively oversee the management of the Fund and protect the interests of shareholders. The Board noted that each Director had professional experience in areas of importance for investment companies. The Board considered that each disinterested Director held an academic position in the areas of finance, economics or accounting. The Board also noted that John P. Gould, Myron S. Scholes and Abbie J. Smith each had experience serving as a director on the boards of operating companies and/or other investment companies. In addition, the Board considered that David G. Booth and Eduardo A. Repetto contributed valuable experience due to their positions with the Advisor. Certain biographical information for each disinterested Director and each interested Director of the Fund is set forth in the tables below, including a description of each Director's experience as a Director of the Fund and as a director or trustee of other funds, as well as other recent professional experience.

Disinterested Directors

Name, Address and Year of Birth	Position	Term of Office¹ and Length of Service	Principal Occupation During Past 5 Years	Portfolios within the DFA Fund Complex² Overseen	Other Directorships of Public Companies Held During Past 5 Years

Director of Dimensional Fund Advisors Ltd., Dimensional Funds PLC, Dimensional Funds II PLC, Dimensional Japan Ltd. and Dimensional Advisors Ltd. Formerly, Vice President of the DFA Entities and Dimensional Fund Advisors Canada ULC.	107 portfolios in 4 investment companies	None

¹ Each Director holds office for an indefinite term until his or her successor is elected and qualified.

² Each Director is a director or trustee of each of the four registered investment companies within the DFA Fund Complex, which include: the Fund; DIG; the Trust; and DEM. Each disinterested Director also serves on the Independent Review Committee of the Dimensional Funds, mutual funds registered in the provinces of Canada and managed by the Advisor’s affiliate, Dimensional Fund Advisors Canada ULC.

Information relating to each Director’s ownership (including the ownership of his or her immediate family) in each Portfolio of the Fund in this SAI and in all registered investment companies in the DFA Fund Complex as of December 31, 2013 is set forth in the chart below.

Name	Dollar Range of Fund Shares Owned	Aggregate Dollar Range of Shares Owned in All Funds Overseen by Director in Family of Investment Companies
Disinterested Directors:		
George M. Constantinides	None	None Directly; Over \$100,000 in Simulated Funds**
John P. Gould	None	None Directly; Over \$100,000 in Simulated Funds **
Roger G. Ibbotson	None	Over \$100,000; Over \$100,000 in Simulated Funds**
Edward P. Lazear	None	None Directly; Over \$100,000 in Simulated Funds**
Myron S. Scholes	None	Over \$100,000; Over \$100,000 in Simulated Funds**
Abbie J. Smith	None	None Directly; Over \$100,000 in Simulated Funds **
Interested Directors:		
David G. Booth	None	Over \$100,000
Eduardo A. Repetto	None	Over \$100,000

** As discussed below, the compensation to certain of the disinterested Directors may be in amounts that correspond to a hypothetical investment in a cross-section of the DFA Funds. Thus, the disinterested Directors who are so compensated experience the same investment returns that are experienced by shareholders of the DFA Funds although the disinterested Directors do not directly own shares of the DFA Funds.

Set forth below is a table listing, for each Director entitled to receive compensation, the compensation received from the Fund during the fiscal year ended October 31, 2013 and the total compensation received from all four registered investment companies for which the Advisor served as investment advisor during that same fiscal year. The table also provides the compensation paid by the Fund to the Fund's Chief Compliance Officer for the fiscal year ended October 31, 2013.

<u>Name and Position</u>	<u>Aggregate Compensation from the Fund*</u>	<u>Pension or Retirement Benefits as Part of Fund Expenses</u>	<u>Estimated Annual Benefits upon Retirement</u>	<u>Total Compensation from the Fund and DFA Fund Complex Paid to Directors†</u>
George M. Constantinides Director	\$157,303	N/A	N/A	\$244,000
John P. Gould Director	\$157,303	N/A	N/A	\$244,000
Roger G. Ibbotson Director	\$163,723	N/A	N/A	\$254,000
Edward P. Lazear Director	\$157,303	N/A	N/A	\$244,000
Myron S. Scholes Director	\$176,800	N/A	N/A	\$274,000
Abbie J. Smith Director	\$157,303	N/A	N/A	\$244,000
Christopher S. Crossan Chief Compliance Officer	\$250,411	N/A	N/A	N/A

† The term DFA Fund Complex refers to the four registered investment companies for which the Advisor performs advisory or administrative services and for which the individuals listed above serve as directors/trustees on the Boards of Directors/Trustees of such companies.

* Under a deferred compensation plan (the “Plan”) adopted effective January 1, 2002, the disinterested Directors of the Fund may defer receipt of all or a portion of the compensation for serving as members of the four Boards of Directors/Trustees of the investment companies in the DFA Fund Complex (the “DFA Funds”). Amounts deferred under the Plan are treated as though equivalent dollar amounts had been invested in shares of a cross-section of the DFA Funds (the “Reference Funds” or “Simulated Funds”). The amounts ultimately received by the disinterested Directors under the Plan will be directly linked to the investment performance of the Reference Funds. Deferral of fees in accordance with the Plan will have a negligible effect on a fund’s assets, liabilities, and net income per share, and will not obligate a fund to retain the services of any disinterested Director or to pay any particular level of compensation to the disinterested Director. The total amount of deferred compensation accrued by the disinterested Directors from the DFA Fund Complex who participated in the Plan during the fiscal year ended October 31, 2013 is as follows: \$254,000 (Mr. Ibbotson) and \$244,000 (Mr. Lazear). A disinterested Director’s deferred compensation will be distributed at the earlier of: (a) January in the year after the disinterested Director’s resignation from the Boards of Directors/Trustees of the DFA Funds, or death or disability; or (b) five years following the first deferral, in such amounts as the disinterested Director has specified. The obligations of the DFA Funds to make payments under the Plan will be unsecured general obligations of the DFA Funds, payable out of the general assets and property of the DFA Funds.

Officers

Below is the name, year of birth, information regarding positions with the Funds and the principal occupation for each officer of the Funds. The address of each officer is 6300 Bee Cave Road, Building One, Austin, TX 78746. Each of the officers listed below holds the same office (except as otherwise noted) in the following entities: Dimensional Fund Advisors LP, Dimensional Holdings Inc., DFA Securities LLC, the Funds, the Trust, and DEM (collectively, the “DFA Entities”).

¹ Each officer holds office for an indefinite term at the pleasure of the Board of Directors and until his or her successor is elected and qualified.

As of January 31, 2013, Directors and officers as a group owned less than 1% of the outstanding stock of each Portfolio described in this SAI.

SERVICES TO THE FUND

Administrative Services

State Street Bank and Trust Company (“State Street”), 1 Lincoln Street, Boston, MA 02111, serves as the accounting and administration services, dividend disbursing and transfer agent for the Portfolios and the Underlying Funds. The services provided by State Street are subject to supervision by the executive officers and the Board of Directors of the Fund, and include day-to-day keeping and maintenance of certain records, calculation of the offering price of the shares, preparation of reports, liaison with its custodians, and transfer and dividend disbursing agency services. For the administrative and accounting services provided by State Street, the Portfolios (except the DFA VA Global Moderate Allocation Portfolio) and the Underlying Funds pay State Street an annual fee that is calculated daily and paid monthly according to a fee schedule based on the aggregate average net assets of the Fund Complex, which includes four registered investment companies. The fee schedule is set forth in the table below:

- .0058% of the Fund Complex’s first \$150 billion of average net assets;
- .0050% of the Fund Complex’s next \$50 billion of average net assets; and
- .0025% of the Fund Complex’s average net assets in excess of \$200 billion.

The fees charged to a Portfolio or an Underlying Fund under the fee schedule are allocated to each such Portfolio or Underlying Fund based on the Portfolio’s or Underlying Fund’s pro-rata portion of the applicable aggregate average net assets of the Fund Complex. The DFA VA Global Moderate Allocation Portfolio is also subject to an annual fee of \$36,000.

The Portfolios also pay separate fees to State Street with respect to the services State Street provides as transfer agent and dividend disbursing agent.

Custodians

Citibank, N.A., 111 Wall Street, New York, NY, 10005, is the custodian for the International Equity Portfolios and VA Global Bond Portfolio.

State Street Bank and Trust Company, 1 Lincoln Street, Boston, MA 02111, serves as the custodian for the Domestic Equity Portfolios, VA Short-Term Fixed Portfolio and DFA VA Global Moderate Allocation Portfolio.

Each custodian maintains a separate account or accounts for a Portfolio; receives, holds, and releases portfolio securities on account of the Portfolio; makes receipts and disbursements of money on behalf of the Portfolio; and collects and receives income and other payments and distributions on account of the Portfolio’s portfolio securities.

Distributor

The Fund's shares are distributed by DFA Securities LLC (formerly, DFA Securities Inc.) ("DFAS"), a wholly-owned subsidiary of the Advisor. DFAS is registered as a limited purpose broker-dealer under the Securities Exchange Act of 1934 and is a member of the Financial Industry Regulatory Authority. The principal business address of DFAS is 6300 Bee Cave Road, Austin, TX 78746.

DFAS acts as an agent of the Fund by serving as the principal underwriter of the Fund's shares. Pursuant to the Distribution Agreement with the Fund, DFAS uses its best efforts to seek or arrange for the sale of shares of the Fund, which are continuously offered. No sales charges are paid by investors or the Fund. No compensation is paid by the Fund to DFAS under the Distribution Agreement.

Legal Counsel

Stradley Ronon Stevens & Young, LLP serves as legal counsel to the Fund. Its address is 2600 One Commerce Square, Philadelphia, PA 19103-7098.

Independent Registered Public Accounting Firm

PricewaterhouseCoopers LLP ("PwC") is the independent registered public accounting firm for the Fund and audits the annual financial statements of the Fund. PwC's address is Two Commerce Square, Suite 1700, 2001 Market Street, Philadelphia, PA 19103-7042.

Investment Management

Dimensional Fund Advisors LP, located at 6300 Bee Cave Road, Building One, Austin, TX 78746, serves as investment advisor to the Portfolios and Underlying Funds. Pursuant to an Investment Advisory Agreement with each Portfolio and each Underlying Fund, the Advisor is responsible for the management of their respective assets.

Pursuant to Sub-Advisory Agreements with the Advisor, DFA Australia Limited ("DFA Australia"), Level 43 Gateway, 1 Macquarie Place, Sydney, New South Wales 2000, Australia, has the authority and responsibility to select brokers and dealers to execute securities transactions for the VA International Value Portfolio and VA International Small Portfolio (each a "DFA Australia Sub-Advised Fund"). DFA Australia's duties include the maintenance of a trading desk for each DFA Australia Sub-Advised Fund and the determination of the best and most efficient means of executing securities transactions. On at least a semi-annual basis, the Advisor reviews the holdings of each DFA Australia Sub-Advised Fund, and reviews the trading process and the execution of securities transactions. The Advisor is responsible for determining those securities which are eligible for purchase and sale by a DFA Australia Sub-Advised Fund and may delegate this task, subject to its own review, to DFA Australia. DFA Australia maintains and furnishes to the Advisor information and reports on Japanese and Asia Pacific Rim small companies, including its recommendations of securities to be added to the securities that are eligible for purchase by a DFA Australia Sub-Advised Fund as well as making recommendations and elections on corporate actions. In rendering investment management services to the Advisor with respect to each DFA Australia Sub-Advised Fund, DFA Australia expects to use the resources of certain participating affiliates of DFA Australia. Such participating affiliates are providing such services to DFA Australia pursuant to conditions provided in no-action relief granted by the staff of the SEC allowing registered investment advisers to use portfolio management, research and trading resources of advisory affiliates subject to the supervision of a registered adviser.

Pursuant to Sub-Advisory Agreements with the Advisor, Dimensional Fund Advisors Ltd. ("DFAL"), 20 Triton Street, Regent's Place, London, NW13BF, United Kingdom, a company that is organized under the laws of England, has the authority and responsibility to select brokers or dealers to execute securities transactions for the VA International Value Portfolio and VA International Small Portfolio (each a "DFAL Sub-Advised Fund"). DFAL's duties include the maintenance of a trading desk for each DFAL Sub-Advised Fund and the determination of the best and most efficient means of executing securities transactions. On at least a semi-annual basis, the Advisor reviews the holdings of each DFAL Sub-Advised Fund and reviews the trading process and the execution of securities transactions. The Advisor is responsible for determining those securities which are eligible for purchase

and sale by each DFAL Sub-Advised Fund and may delegate this task, subject to its own review, to DFAL. DFAL maintains and furnishes to the Advisor information and reports on United Kingdom and European small companies, including its recommendations of securities to be added to the securities that are eligible for purchase by each DFAL Sub-Advised Fund as well as making recommendations and elections on corporate actions. DFAL is a member of the Financial Conduct Authority, a self-regulatory organization for investment managers operating under the laws of England.

The Advisor or its affiliates may provide certain non-advisory services (such as data collection or other consulting services) to broker-dealers or investment advisers that may be involved in the distribution of the Portfolios and Underlying Funds or other mutual funds advised by the Advisor (“DFA Advised Funds”) or who may recommend the purchase of such DFA Advised Funds for their clients. The Advisor or its affiliates also may provide historical market analysis, risk/return analysis, and continuing education to investment advisers (some of whom may be dual registered investment advisers/broker-dealers) as well as educational speakers and facilities for investment adviser conferences. The Advisor or its affiliates may pay a fee to attend, speak at or assist in sponsoring such conferences or pay travel accommodations of certain participants attending an investment adviser sponsored conference. Sponsorship of investment adviser and/or broker-dealer events by the Advisor may include direct payments to vendors or reimbursement of expenses incurred by investment advisers and/or broker-dealers in connection with hosting educational, training or other events for their customers. At the request of a client or potential client, the Advisor or its affiliates may also refer such client to one or more such investment advisers. Any such services or arrangements may give such broker-dealers and investment advisers an incentive to recommend DFA Advised Funds to their clients in order to receive such non-advisory services from the Advisor or its affiliates. However, the provision of these services by the Advisor or its affiliates is not dependent, directly or indirectly, on the amount of DFA Advised Funds sold or recommended by such broker-dealers or investment advisers.

ADVISORY FEES

David G. Booth and Rex A. Siquefield, as directors and/or officers of the Advisor and shareholders of the outstanding stock of the Advisor’s general partner, may be deemed controlling persons of the Advisor. Mr. Booth also serves as Director and officer of the Fund. For the services it provides as investment advisor to each Portfolio, the Advisor is paid a monthly fee calculated as a percentage of average net assets of the Portfolio. For the fiscal years ended October 31, 2013, October 31, 2012 and October 2011, the Portfolios paid advisory fees to the Advisor (and any sub-advisor) as set forth in the following table:

<u>Portfolio</u>	<u>Fiscal Year Ended 2013 (000)</u>	<u>Fiscal Year Ended 2012 (000)</u>	<u>Fiscal Year Ended 2011 (000)</u>
VA U.S. Targeted Value Portfolio	\$442	\$ 342	\$ 344
VA U.S. Large Value Portfolio	\$431	\$ 341	\$ 325
VA International Value Portfolio	\$459	\$ 380	\$ 421
VA International Small Portfolio	\$496	\$ 401	\$ 411
VA Short-Term Fixed Portfolio	\$305	\$ 284	\$ 254
VA Global Bond Portfolio	\$354	\$ 320	\$ 290
DFA VA Global Moderate Allocation Portfolio (a)	\$54	N/A	N/A

(a) Pursuant to a Fee Waiver and Expense Assumption Agreement for the DFA VA Global Moderate Allocation Portfolio, the Advisor has agreed to waive all or a portion of its management fee and to assume the expenses of the Institutional Class shares of the Portfolio (including the expenses that the Portfolio bears as a shareholder of other funds managed by the Advisor but excluding the expenses that the Portfolio incurs indirectly through its investment in unaffiliated investment companies and excluding any applicable 12b-1 fees) (“Portfolio Expenses”) to the extent necessary to limit the Portfolio Expenses of the Institutional Class shares of the Portfolio, on an annualized basis, to 0.40% of such class of the Portfolio’s average daily net assets (the “Expense Limitation

Amount”). At any time that the Portfolio Expenses of the Institutional Class shares of the Portfolio are less than the Expense Limitation Amount for the Institutional Class shares of the Portfolio, the Advisor retains the right to recover any fees previously waived and/or expenses previously assumed to the extent that such recovery will not cause the annualized Portfolio Expenses for such class of shares of the Portfolio to exceed the Expense Limitation Amount. The Portfolio is not obligated to reimburse the Advisor for fees previously waived or expenses previously assumed by the Advisor more than thirty-six months before the date of such reimbursement. The Fee Waiver and/or Expense Assumption Agreement will remain in effect through February 28, 2015, and may only be terminated by the Funds Board of Directors prior to that date. The Fee Waiver Agreement shall continue in effect from year to year thereafter unless terminated by the Fund or the Advisor.

The Advisor pays DFAL a fee equal to 50,000 pounds sterling total per year, payable on a quarterly basis, for services to the VA International Small Portfolio. The Advisor pays DFA Australia a fee equal to \$13,000 per year, payable on a quarterly basis, for services to VA International Small Portfolio.

PORTFOLIO MANAGERS

In accordance with the team approach used to manage the Portfolios, the portfolio managers and portfolio traders implement the policies and procedures established by the Investment Committee. The portfolio managers and portfolio traders also make daily investment decisions regarding the Portfolios based on the parameters established by the Investment Committee. The individuals named below coordinate the efforts of all other portfolio managers or trading personnel with respect to the day-to-day management of the category of portfolios indicated.

Domestic Equity Portfolios	Bhanu P. Singh, Stephen A. Clark, Joseph H. Chi, Jed S. Fogdall and Henry F. Gray
International Equity Portfolios	Karen E. Umland, Joseph H. Chi, Jed S. Fogdall and Henry F. Gray
Fixed Income Portfolios	David A. Plecha and Joseph F. Kolerich

Other Managed Accounts

In addition to the Portfolios, each portfolio manager manages (i) other U.S. registered investment companies advised or sub-advised by the Advisor, (ii) other pooled investment vehicles that are not U.S. registered mutual funds and (iii) other accounts managed for organizations and individuals. The following table sets forth information regarding the total accounts for which each portfolio manager has the primary responsibility for coordinating the day-to-day management responsibilities.

Name of Portfolio Manager	Number of Accounts Managed and Total Assets by Category As of October 31, 2013*
Stephen A. Clark	<ul style="list-style-type: none"> • 28 U.S. registered mutual funds with \$83,330 million in total assets under management. • 0 unregistered pooled investment vehicles. • 0 other accounts.
Karen E. Umland	<ul style="list-style-type: none"> • 59 U.S. registered mutual funds with \$101,234 million in total assets under management. • 9 unregistered pooled investment vehicles with \$2,640 million in total assets under management. • 31 other accounts with \$13,729 million in total assets under management, of which one account with \$370 million in assets may be subject to a performance fee.
Joseph H. Chi	<ul style="list-style-type: none"> • 107 U.S. registered mutual funds with \$192,368 million in total assets under management.

Name of Portfolio Manager Number of Accounts Managed and Total Assets by Category As of October 31, 2013*

	<ul style="list-style-type: none"> • 19 unregistered pooled investment vehicles with \$10,147 million in total assets under management, of which one account with \$226 million in assets may be subject to a performance fee. • 73 other accounts with \$18,978 million in total assets under management, of which one account with \$370 million in assets may be subject to a performance fee.
Jed S. Fogdall	<ul style="list-style-type: none"> • 107 U.S. registered mutual funds with \$192,368 million in total assets under management. • 19 unregistered pooled investment vehicles with \$10,147 million in total assets under management, of which one account with \$226 million in assets may be subject to a performance fee. • 73 other accounts with \$18,978 million in total assets under management, of which one account with \$370 million in assets may be subject to a performance fee.
David A. Plecha	<ul style="list-style-type: none"> • 33 U.S. registered mutual funds with \$59,592 million in total assets under management. • 4 unregistered pooled investment vehicles with \$5,532 million in total assets under management. • 9 other accounts with \$1,447 million in total assets under management.
Henry F. Gray	<ul style="list-style-type: none"> • 95 U.S. registered mutual funds with \$192,368 million in total assets under management. • 15 unregistered pooled investment vehicles with \$10,147 million in total assets under management, of which one account with \$226 million in assets may be subject to a performance fee. • 73 other accounts with \$18,978 million in total assets under management, of which one account with \$370 million in assets may be subject to a performance fee.
Joseph F. Kolerich	<ul style="list-style-type: none"> • 32 U.S. registered mutual funds with \$59,339 million in total assets under management. • 4 unregistered pooled investment vehicles with \$5,532 million in total assets under management. • 9 other accounts with \$1,447 million in total assets under management.

* Bhanu P. Singh did not share primary responsibility in the oversight of day-to-day management of responsibilities for accounts as of October 31, 2013; as such, information regarding such accounts is not presented.

Description of Compensation Structure

Portfolio managers receive a base salary and bonus. Compensation of a portfolio manager is determined at the discretion of the Advisor and is based on a portfolio manager's experience, responsibilities, the perception of the quality of his or her work efforts and other subjective factors. The compensation of portfolio managers is not directly based upon the performance of the Portfolios or other accounts that the portfolio managers manage. The Advisor reviews the compensation of each portfolio manager annually and may make modifications in compensation as it deems necessary to reflect changes in the market. Each portfolio manager's compensation consists of the following:

- **Base salary.** Each portfolio manager is paid a base salary. The Advisor considers the factors described above to determine each portfolio manager's base salary.

- **Semi-Annual Bonus.** Each portfolio manager may receive a semi-annual bonus. The amount of the bonus paid to each portfolio manager is based upon the factors described above.

Portfolio managers may be awarded the right to purchase restricted shares of the stock of the Advisor, as determined from time to time by the Board of Directors of the Advisor or its delegates. Portfolio managers also participate in benefit and retirement plans and other programs available generally to all employees.

In addition, portfolio managers may be given the option of participating in the Advisor's Long Term Incentive Plan. The level of participation for eligible employees may be dependent on overall level of compensation, among other considerations. Participation in this program is not based on or related to the performance of any individual strategies or any particular client accounts.

Potential Conflicts of Interest

Actual or apparent conflicts of interest may arise when a portfolio manager has the primary day-to-day responsibilities with respect to more than one Portfolio and other accounts. Other accounts include registered mutual funds (other than the Portfolios in this SAI), other unregistered pooled investment vehicles, and other accounts managed for organizations and individuals ("Accounts"). An Account may have similar investment objectives to a Portfolio, or may purchase, sell or hold securities that are eligible to be purchased, sold or held by a Portfolio. Actual or apparent conflicts of interest include:

- **Time Management.** The management of multiple Portfolios and/or Accounts may result in a portfolio manager devoting unequal time and attention to the management of each Portfolio and/or Accounts. The Advisor seeks to manage such competing interests for the time and attention of portfolio managers by having portfolio managers focus on a particular investment discipline. Most Accounts managed by a portfolio manager are managed using the same investment models that are used in connection with the management of the Portfolios.
- **Investment Opportunities.** It is possible that at times identical securities will be held by more than one Portfolio and/or Account. However, positions in the same security may vary and the length of time that any Portfolio or Account may choose to hold its investment in the same security may likewise vary. If a portfolio manager identifies a limited investment opportunity that may be suitable for more than one Portfolio or Account, a Portfolio may not be able to take full advantage of that opportunity due to an allocation of filled purchase or sale orders across all eligible Portfolios and Accounts. To deal with these situations, the Advisor has adopted procedures for allocating portfolio transactions across multiple Portfolios and Accounts.
- **Broker Selection.** With respect to securities transactions for the Portfolios, the Advisor determines which broker to use to execute each order, consistent with its duty to seek best execution of the transaction. However, with respect to certain Accounts (such as separate accounts), the Advisor may be limited by the client with respect to the selection of brokers or may be instructed to direct trades through a particular broker. In these cases, the Advisor or its affiliates may place separate, non-simultaneous, transactions for a Portfolio and another Account that may temporarily affect the market price of the security or the execution of the transaction, or both, to the detriment of the Portfolio or the Account.
- **Performance-Based Fees.** For some Accounts, the Advisor may be compensated based on the profitability of the Account, such as by a performance-based management fee. These incentive compensation structures may create a conflict of interest for the Advisor with regard to Accounts where the Advisor is paid based on a percentage of assets because the portfolio manager may have an incentive to allocate securities preferentially to the Accounts where the Advisor might share in investment gains.
- **Investment in an Account.** A portfolio manager or his/her relatives may invest in an Account that he or she manages and a conflict may arise where he or she may therefore have an incentive to treat the Account in which the portfolio manager or his/her relatives invest preferentially as compared to other Accounts for which he or she has portfolio management responsibilities.

The Advisor and the Fund have adopted certain compliance procedures that are reasonably designed to address these types of conflicts. However, there is no guarantee that such procedures will detect each and every situation in which a conflict arises.

Investments in Each Portfolio

The portfolio managers and their immediate families did not own any shares of the Portfolios contained in this SAI that they manage as of October 31, 2013.

GENERAL INFORMATION

The Fund was incorporated under Maryland law on June 15, 1981. Until June 1983, the Fund was named DFA Small Company Fund Inc. From September 18, 1995 until May 1, 2008, VA U.S. Large Value Portfolio was named the VA Large Value Portfolio. From inception until September 18, 1995, VA U.S. Large Value Portfolio was named DFA Global Value Portfolio and VA Global Bond Portfolio was named DFA Global Bond Portfolio. Prior to May 1, 2008, the VA U.S. Targeted Value Portfolio was named the VA Small Value Portfolio. The shares of each Portfolio, when issued and paid for in accordance with the Fund's prospectus, will be fully paid and non-assessable shares, with equal, non-cumulative voting rights and no preferences as to conversion, exchange, dividends, redemption or any other feature.

Pursuant to an exemptive order from the SEC, shares of the Portfolios may be sold to registered separate accounts of various insurance companies offering variable annuity and variable life products. At present, the Board of Directors of the Fund does not foresee any disadvantage arising from the fact that each Portfolio may offer its shares to separate accounts of various insurance companies to serve as an investment vehicle for their variable separate accounts. However, a material conflict could arise between the interest of the different participating separate accounts. The Fund's Board of Directors would monitor events in order to identify any material irreconcilable conflicts that may possibly arise and to determine what action, if any, should be taken in response to such conflicts of interest. If such conflicts were to occur, one or more insurance companies' separate accounts might be required to withdraw its investments in one or more Portfolios, or shares of another Portfolio may be substituted by the Fund. As a result, a Portfolio might be forced to sell a portion of its securities at a disadvantageous price. In the event of such a material conflict, the affected insurance companies agree to take any necessary steps, including removing its separate account from the Portfolio if required by law, to resolve the matter.

CODE OF ETHICS

The Fund, the Advisor and DFAS have adopted a Code of Ethics, under Rule 17j-1 of the 1940 Act, for certain access persons of the Portfolios. The Code is designed to ensure that access persons act in the interest of the Portfolios, and their shareholders, with respect to any personal trading of securities. Under the Code, access persons are generally prohibited from knowingly buying or selling securities (except for mutual funds, U.S. government securities and money market instruments) which are being purchased, sold or considered for purchase or sale by a Portfolio unless their proposed purchases are approved in advance. The Code also contains certain reporting requirements and securities trading clearance procedures.

SHAREHOLDER RIGHTS

Because of current federal securities law requirements, the Fund expects that its life insurance company shareholders will offer their contract owners the opportunity to instruct them as to how Portfolio shares allocable to their variable contracts will be voted with respect to certain matters, such as approval of investment advisory agreements. Generally, an insurance company will vote all Portfolio shares held in a separate account in the same proportion as it receives instructions from contract owners in that separate account. Under certain circumstances described in the insurance company separate account prospectus, the insurance company may not vote in accordance with the contract owner's instructions.

With respect to matters which require shareholder approval, shareholders are entitled to vote only with respect to matters which affect the interest of the class of shares (Portfolio) which they hold, except as otherwise required by applicable law. If liquidation of the Fund should occur, shareholders would be entitled to receive on a per class basis the assets of the particular Portfolio whose shares they own, as well as a proportionate share of Fund assets not attributable to any particular class. Ordinarily, the Fund does not intend to hold annual meetings of shareholders, except as required by the 1940 Act or other applicable law. The Fund's by-laws provide that special meetings of shareholders shall be called at the written request of shareholders entitled to cast not less than a majority of the votes entitled to be cast at such meeting. Such meeting may be called to consider any matter, including the removal of one or more directors. Shareholders will receive shareholder communications with respect to such matters as required by the 1940 Act, including semi-annual and annual financial statements of the Fund, the latter being audited.

Shareholder inquiries may be made by writing or calling the Fund at the address or telephone number appearing on the cover. Only those individuals whose signatures are on file for the account in question may receive specific account information or make changes in the account registration.

PRINCIPAL HOLDERS OF SECURITIES

PURCHASE AND REDEMPTION OF SHARES

The following information supplements the information set forth in the prospectus under the caption “**PURCHASE AND REDEMPTION OF SHARES.**”

The Fund will accept purchase and redemption orders on each day that the New York Stock Exchange (“NYSE”) is open for business, regardless of whether the Federal Reserve System is closed. However, no purchases by wire may be made on any day that the Federal Reserve System is closed. The Fund will generally be closed on days that the NYSE is closed. The NYSE is scheduled to be open Monday through Friday throughout the year except for days closed to recognize New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The Federal Reserve System is closed on the same days as the NYSE, except that it is open on Good Friday and closed on Columbus Day and Veterans’ Day. Orders for redemptions and purchases will not be processed if the Fund is closed.

The Fund reserves the right, in its sole discretion, to suspend the offering of shares of any or all Portfolios or reject purchase orders when, in the judgment of management, such suspension or rejection is in the best interest of the Fund or a Portfolio.

The Fund may suspend redemption privileges or postpone the date of payment: (1) during any period when the NYSE is closed, or trading on the NYSE is restricted as determined by the SEC, (2) during any period when an emergency exists as defined by the rules of the SEC as a result of which it is not reasonably practicable for the Fund to dispose of securities owned by it, or fairly to determine the value of its assets and (3) for such other periods as the SEC may permit.

The Fund or its transfer agent may from time to time appoint a sub-transfer agent, such as a broker, for the receipt of purchase and redemption orders and funds from certain investors. With respect to purchases and redemptions through a sub-transfer agent, the Fund will be deemed to have received a purchase or redemption order when the sub-transfer agent receives the order. Shares of a Portfolio will be priced at the public offering price next calculated after receipt of the purchase or redemption order by the sub-transfer agent.

TAXATION OF THE PORTFOLIOS AND THEIR SHAREHOLDERS

The following is a summary of some of the federal income tax consequences of investing in a Portfolio (sometimes referred to as “the Portfolio”). Because shares of the Portfolio are sold only to separate accounts of insurance companies, the tax consequences described below generally are not applicable to an owner of a variable life or variable annuity contract.

This “**TAXATION OF THE PORTFOLIOS AND THEIR SHAREHOLDERS**” section is based on the Internal Revenue Code of 1986, as amended (the “Code”) and applicable regulations in effect on the date of this SAI. Future legislative, regulatory or administrative changes, including provisions of current law that sunset and thereafter no longer apply, or court decisions may significantly change the tax rules applicable to the Portfolio and its shareholders. Any of these changes or court decisions may have a retroactive effect.

Different tax rules may apply depending on how an Underlying Fund in which a Portfolio invests is organized for federal income tax purposes. The VA Global Moderate Allocation Portfolio invests in Underlying Funds organized as corporations for federal income tax purposes. These rules could affect the amount, timing or character of the income distributed to shareholders of the Portfolio.

Unless otherwise indicated, the discussion below with respect to a Portfolio includes in the case of a Portfolio invested in an Underlying Fund, its pro rata share of the dividends and distributions of the Underlying Funds.

This discussion of “TAXATION OF THE PORTFOLIOS AND THEIR SHAREHOLDERS” is not intended or written to be used as tax advice. The tax status of your investment in the Portfolio depends upon the features of your variable life or variable annuity contract. For further information, please refer to the prospectus of the insurance company separate account that offers your contract.

Taxation of the Portfolio

The Portfolio has elected and intends to qualify (or, if newly organized, intends to elect and qualify) each year as a regulated investment company (sometimes referred to as a “regulated investment company,” “RIC” or “portfolio”) under Subchapter M of the Code. If the Portfolio qualifies, the Portfolio will not be subject to federal income tax on the portion of its investment company taxable income (that is, generally, taxable interest, dividends, net short-term capital gains, and other taxable ordinary income, net of expenses, without regard to the deduction for dividends paid) and net capital gain (that is, the excess of net long-term capital gains over net short-term capital losses) that it distributes to shareholders.

Qualification as a regulated investment company. In order to qualify for treatment as a regulated investment company, the Portfolio must satisfy the following requirements:

- **Distribution Requirement** — the Portfolio must distribute an amount equal to the sum of at least 90% of its investment company taxable income and 90% of its net tax-exempt income, if any, for the tax year (including, for purposes of satisfying this distribution requirement, certain distributions made by the Portfolio after the close of its taxable year that are treated as made during such taxable year).
- **Income Requirement** —the Portfolio must derive at least 90% of its gross income from dividends, interest, certain payments with respect to securities loans, and gains from the sale or other disposition of stock, securities or foreign currencies, or other income (including, but not limited to, gains from options, futures or forward contracts) derived from its business of investing in such stock, securities or currencies and net income derived from qualified publicly traded partnerships (“QPTPs”).
- **Asset Diversification Test** —the Portfolio must satisfy the following asset diversification test at the close of each quarter of the Portfolio’s tax year: (1) at least 50% of the value of the Portfolio’s assets must consist of cash and cash items, U.S. government securities, securities of other regulated investment companies, and securities of other issuers (as to which the Portfolio has not invested more than 5% of the value of the Portfolio’s total assets in securities of an issuer and as to which the Portfolio does not hold more than 10% of the outstanding voting securities of the issuer); and (2) no more than 25% of the value of the Portfolio’s total assets may be invested in the securities of any one issuer (other than U.S. government securities or securities of other regulated investment companies) or of two or more issuers which the Portfolio controls and which are engaged in the same or similar trades or businesses, or, collectively, in the securities of one or more QPTPs.

In some circumstances, the character and timing of income realized by the Portfolio for purposes of the Income Requirement or the identification of the issuer for purposes of the Asset Diversification Test is uncertain under current law with respect to a particular investment, and an adverse determination or future guidance by the Internal Revenue Service (“IRS”) with respect to such type of investment may adversely affect the Portfolio’s ability to satisfy these requirements. In other circumstances, the Portfolio may be required to sell portfolio holdings in order to meet the Income Requirement, Distribution Requirement, or Asset Diversification Test which may have a negative impact on the Portfolio’s income and performance. In lieu of potential disqualification, the Portfolio is permitted to pay a tax for certain failures to satisfy the Asset Diversification Test or Income Requirement, which, in general, are limited to those due to reasonable cause and not willful neglect.

The Portfolio may use "equalization accounting" (in lieu of making some cash distributions) in determining the portion of its income and gains that has been distributed. If the Portfolio uses equalization accounting, it will allocate a portion of its undistributed investment company taxable income and net capital gain to redemptions of Portfolio shares and will correspondingly reduce the amount of such income and gains that it distributes in cash. If the IRS determines that the Portfolio's allocation is improper and that the Portfolio has under-distributed its income and gain for any taxable year, the Portfolio may be liable for federal income and/or excise tax. If, as a result of such adjustment, the Portfolio fails to satisfy the Distribution Requirement, the Portfolio will not qualify that year as a regulated investment company the effect of which is described in the following paragraph.

If for any taxable year the Portfolio does not qualify as a regulated investment company, all of its taxable income (including its net capital gain) would be subject to tax at regular corporate rates without any deduction for dividends paid to shareholders, and the dividends would be taxable to the shareholders as ordinary income (or possibly as qualified dividend income) to the extent of the Portfolio's current and accumulated earnings and profits. Failure to qualify as a regulated investment company would thus have a negative impact on the Portfolio's income and performance. Subject to savings provisions for certain inadvertent failures to satisfy the Income Requirement or Asset Diversification Test which, in general, are limited to those due to reasonable cause and not willful neglect, it is possible that the Portfolio will not qualify as a regulated investment company in any given tax year. Even if such savings provisions apply, the Portfolio may be subject to a monetary sanction of \$50,000 or more. Moreover, the Board reserves the right not to maintain the qualification of the Portfolio as a regulated investment company if it determines such a course of action to be beneficial to shareholders.

Capital loss carryovers. The capital losses of the Portfolio, if any, do not flow through to shareholders. Rather, the Portfolio may use its capital losses, subject to applicable limitations, to offset its capital gains without being required to pay taxes on or distribute to shareholders such gains that are offset by the losses. Under the Regulated Investment Company Modernization Act of 2010 ("RIC Mod Act"), if the Portfolio has a "net capital loss" (that is, capital losses in excess of capital gains) for a taxable year beginning after December 22, 2010, the excess (if any) of the Portfolio's net short-term capital losses over its net long-term capital gains is treated as a short-term capital loss arising on the first day of the Portfolio's next taxable year, and the excess (if any) of the Portfolio's net long-term capital losses over its net short-term capital gains is treated as a long-term capital loss arising on the first day of the Portfolio's next taxable year. Any such net capital losses of the Portfolio that are not used to offset capital gains may be carried forward indefinitely to reduce any future capital gains realized by the Portfolio in succeeding taxable years. However, for any net capital losses realized in taxable years of the Portfolio beginning on or before December 22, 2010, the Portfolio is only permitted to carry forward such capital losses for eight years as a short-term capital loss. Under a transition rule, capital losses arising in a taxable year beginning after December 22, 2010 must be used before capital losses realized in a taxable year beginning on or before December 22, 2010. The amount of capital losses that can be carried forward and used in any single year is subject to an annual limitation if there is a more than 50% "change in ownership" of the Portfolio. An ownership change generally results when shareholders owning 5% or more of the Portfolio increase their aggregate holdings by more than 50% over a three-year look-back period. An ownership change could result in capital loss carryovers being used at a slower rate (or, in the case of those realized in taxable years of the Portfolio beginning on or before December 22, 2010, to expire unutilized), thereby reducing the Portfolio's ability to offset capital gains with those losses. An increase in the amount of taxable gains distributed to the Portfolio's shareholders could result from an ownership change. The Portfolio undertakes no obligation to avoid or prevent an ownership change, which can occur in the normal course of shareholder purchases and redemptions or as a result of engaging in a tax-free reorganization with another portfolio. Moreover, because of circumstances beyond the Portfolio's control, there can be no assurance that the Portfolio will not experience, or has not already experienced, an ownership change.

Deferral of late year losses. The Portfolio may elect to treat part or all of any "qualified late year loss" as if it had been incurred in the succeeding taxable year in determining the Portfolio's taxable income, net capital gain, net short-term capital gain, and earnings and profits. The effect of this election is to treat any such "qualified late year loss" as if it had been incurred in the succeeding taxable year in characterizing Portfolio distributions for any calendar year (see "**Taxation of Portfolio Distributions** — *Distributions of capital gains*" below). A "qualified late year loss" includes:

- any net capital loss, net long-term capital loss, or net short-term capital loss incurred after October 31 of the current taxable year (“post-October losses”), and
- the excess, if any, of (1) the sum of (a) specified losses incurred after October 31 of the current taxable year, and (b) other ordinary losses incurred after December 31 of the current taxable year, over (2) the sum of (a) specified gains incurred after October 31 of the current taxable year, and (b) other ordinary gains incurred after December 31 of the current taxable year.

The terms “specified losses” and “specified gains” mean ordinary losses and gains from the sale, exchange, or other disposition of property (including the termination of a position with respect to such property), foreign currency losses and gains, and losses and gains resulting from holding stock in a passive foreign investment company (“PFIC”) for which a mark-to-market election is in effect. The terms “ordinary losses” and “ordinary gains” mean other ordinary losses and gains that are not described in the preceding sentence. Since the Portfolio has a fiscal year ending in October, the amount of qualified late-year losses (if any) is computed without regard to any items of income, gain, or loss that are (a) post-October losses, (b) specified losses, and (c) specified gains.

Undistributed capital gains. The Portfolio may retain or distribute to shareholders its net capital gain for each taxable year. The Portfolio currently intends to distribute net capital gains. If the Portfolio elects to retain its net capital gain, the Portfolio will be taxed thereon (except to the extent of any available capital loss carryovers) at the highest corporate tax rate (currently 35%). If the Portfolio elects to retain its net capital gain, it is expected that the Portfolio also will elect to have shareholders treated as if each received a distribution of its pro rata share of such gain, with the result that each shareholder will be required to report its pro rata share of such gain on its tax return as long-term capital gain, will receive a refundable tax credit for its pro rata share of tax paid by the Portfolio on the gain, and will increase the tax basis for its shares by an amount equal to the deemed distribution less the tax credit.

Fund of funds corporate structures. In the case of a Portfolio that invests in Underlying Funds, distributions by the Underlying Funds, redemptions of shares in the Underlying Funds, and changes in asset allocations by the Portfolio may result in taxable distributions to Portfolio shareholders of ordinary income or capital gains. A fund of funds generally will not be able to currently offset gains realized by one Underlying Fund in which the fund of funds invests against losses realized by another Underlying Fund. If shares of an Underlying Fund are purchased within 30 days before or after redeeming at a loss other shares of that Underlying Fund (whether pursuant to a rebalancing by the Portfolio or otherwise), all or a part of the loss will not be deductible by the Portfolio and instead will increase its basis for the newly purchased shares. Also, except with respect to qualified fund of funds discussed below, a fund of funds (a) is not eligible to pass-through to shareholders foreign tax credits from an Underlying Fund that pays foreign income taxes (see, “**Investment in Foreign Securities — Pass-through of foreign tax credits**” below), (b) is not eligible to pass-through to shareholders exempt-interest dividends from an Underlying Fund, and (c) dividends paid by a fund of funds from interest earned by an Underlying Fund on U.S. government obligations is unlikely to be exempt from state and local income tax. However, a fund of funds is eligible to pass-through to shareholders qualified dividends earned by an Underlying Fund (see “**Dividends Received Deduction for Corporations**” below). A qualified fund of funds, i.e. a Portfolio at least 50 percent of the value of the total assets of which (at the close of each quarter of the taxable year) is represented by interests in other RICs, is eligible to pass-through to shareholders (a) foreign tax credits and (b) exempt-interest dividends.

Excise tax distribution requirements. To avoid a 4% nondeductible federal excise tax, the Portfolio must distribute by December 31 of each year an amount equal to at least: (1) 98% of its ordinary income for the calendar year, (2) 98.2% of capital gain net income (that is, the excess of the gains from sales or exchanges of capital assets over the losses from such sales or exchanges) for the one-year period ended on October 31 of such calendar year, and (3) any prior year undistributed ordinary income and capital gain net income. Federal excise taxes will not apply to the Portfolio in a given calendar year, however, if all of its shareholders (other than certain “permitted shareholders”) at all times during the calendar year are segregated asset accounts of life insurance companies where the shares are held in connection with variable products. For purposes of determining whether the Portfolio qualifies for this exemption, any shares attributable to an investment in the Portfolio made in connection with organization of the Portfolio is disregarded as long as the investment doesn't exceed \$250,000. Permitted shareholders include other RICs eligible for the exemption (e.g. insurance dedicated funds-of-funds). If the Portfolio fails to qualify for the exemption, the Portfolio intends to make sufficient distributions prior to the end of

each calendar year to avoid any material liability for federal income and excise tax, but can give no assurances that all or a portion of such liability will be avoided.

Foreign income tax. Investment income received by the Portfolio from sources within foreign countries may be subject to foreign income tax withheld at the source and the amount of tax withheld generally will be treated as an expense of the Portfolio. The United States has entered into tax treaties with many foreign countries which entitle the Portfolio to a reduced rate of, or exemption from, tax on such income. It is impossible to determine the effective rate of foreign tax in advance since the amount of the Portfolio's assets to be invested in various countries is not known. Under certain circumstances, the Portfolio may elect to pass-through foreign tax credits to shareholders, although it reserves the right not to do so. In some instances it may be more costly to pursue tax reclaims than the value of the benefits received by the Portfolio. See “**Investment in Foreign Securities – Pass-through of foreign tax credits**” below.

Special Rules Applicable to Variable Contracts

The Portfolio intends to comply with the diversification requirements imposed by Section 817(h) of the Code and the regulations thereunder. These requirements, which are in addition to the diversification requirements imposed on the Portfolio by the 1940 Act and Subchapter M of the Code, place certain limitations on (i) the assets of the insurance company separate accounts that may be invested in securities of a single issuer and (ii) eligible investors. Because Section 817(h) and those regulations treat the assets of the Portfolio as assets of the corresponding division of the insurance company separate accounts, (referred to as “segregated asset accounts” for federal income tax purposes), the Portfolio intends to comply with these diversification requirements. Specifically, the regulations provide that, except as permitted by the “safe harbor” described below, as of the end of each calendar quarter or within 30 days thereafter no more than 55% of the Portfolio's total assets may be represented by any one investment, no more than 70% by any two investments, no more than 80% by any three investments and no more than 90% by any four investments. For this purpose, all securities of the same issuer are considered a single investment, and while each U.S. government agency and instrumentality is considered a separate issuer, a particular foreign government and its agencies, instrumentalities and political subdivisions all will be considered the same issuer. Section 817(h) provides, as a safe harbor, that a segregated asset account will be treated as being adequately diversified if the Asset Diversification is satisfied and no more than 55% of the value of the account's total assets are cash and cash items (including receivables), government securities and securities of other RICs. The regulations also provide that the Portfolio's shareholders are limited, generally, to life insurance company segregated asset accounts, general accounts of the same life insurance company, an investment advisor or affiliate in connection with the creation or management of the Portfolio or the trustee of a qualified pension plan. Failure of the Portfolio to satisfy the Section 817(h) requirements would result in taxation of and treatment of the contract holders investing in a corresponding insurance company division other than as described in the applicable prospectuses of the various insurance company segregated asset accounts.

Also, for a variable life or a variable annuity insurance contract to qualify for tax deferral, assets in the segregated asset accounts supporting the contract must be considered to be owned by the insurance company and not by the contract owner. Accordingly, a contract holder should not have an impermissible level of control over the Fund's investment in any particular asset so as to avoid the prohibition on investor control. If the contract holder is considered the owner of the segregated asset account, income and gains produced by the underlying assets would be included currently in the contract holder's gross income with the variable contract being characterized as a mere “wrapper.” In light of the unique structure of the VA Global Moderate Allocation Portfolio, the Portfolio sought and received a private letter ruling from the IRS holding that the owner of the variable life or variable annuity contract will not be treated as the owner of the Portfolio's shares based on the structure and intended operation of the Portfolio. However, it is possible that the Treasury Department may issue future pronouncements addressing the circumstances in which a variable contract owner's control of the investments of a segregated asset account may cause the contract owner, rather than the insurance company, to be treated as the owner of the assets held by the segregated asset account. If the contract owner is considered the owner of the segregated asset account, income and gains produced by those securities would be included currently in the contract owner's gross income. It is not known what standards will be set forth in any such pronouncements or when, if at all, these pronouncements may be issued. If such pronouncements are issued, the Portfolio would seek to modify the structure of the Portfolio.

Reference should be made to the prospectus for the applicable contract for more information regarding the federal income tax consequences to an owner of a contract.

Taxation of Portfolio Distributions

The Portfolio anticipates distributing substantially all of its investment company taxable income and net capital gain for each taxable year.

Distributions of net investment income. The Portfolio receives ordinary income generally in the form of dividends and/or interest on its investments. A Portfolio investing in an Underlying Fund receives income generally in the form of dividends. The Portfolio may also recognize ordinary income from other sources, including, but not limited to, certain gains on foreign currency-related transactions. This income, less expenses incurred in the operation of the Portfolio, constitutes its net investment income from which dividends may be paid to shareholders.

Distributions of capital gains. The Portfolio may realize a capital gain or loss in connection with sales or other dispositions of its portfolio securities. A Portfolio investing in an Underlying Fund may also derive capital gains through its redemption of shares of an Underlying Fund (see “**Taxation of the Portfolio —Fund of funds corporate structures**” above). Distributions derived from the excess of net short-term capital gain over net long-term capital loss will be taxable to shareholders as ordinary income. Distributions from the excess of net long-term capital gain over net short-term capital loss will be taxable to shareholders as long-term capital gain, regardless of how long the shareholder has held their shares in the Portfolio.

Returns of capital. Distributions by the Portfolio that are not paid from earnings and profits will be treated as a return of capital to the extent of (and in reduction of) the shareholder's tax basis in his shares; any excess will be treated as gain from the sale of his shares. Thus, the portion of a distribution that constitutes a return of capital will decrease the shareholder's tax basis in his Portfolio shares (but not below zero), and will result in an increase in the amount of gain (or decrease in the amount of loss) that will be recognized by the shareholder for tax purposes on the later sale of such Portfolio shares. Return of capital distributions can occur for a number of reasons including, among others, the Portfolio over-estimates the income to be received from certain investments such as those classified as partnerships or equity real estate investment trusts.

Dividends-received deduction for corporations. Ordinary income dividends designated by the Portfolio as derived from qualified dividends from domestic corporations will qualify for the 70% dividends received deduction generally available to corporations. The availability of the dividends-received deduction is subject to certain holding period and debt financing restrictions imposed under the Code on the corporation claiming the deduction. Income derived by the Portfolio from investments in derivatives, fixed-income and foreign securities generally is not eligible for this treatment.

Tax shelter reporting. Under Treasury regulations, if a shareholder recognizes a loss with respect to the Portfolio's shares of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder (or certain greater amounts over a combination of years), the shareholder must file with the IRS a disclosure statement on Form 8886. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their tax advisors to determine the applicability of these regulations in light of their individual circumstances.

Consent dividends. The Portfolio may utilize consent dividend provisions of Section 565 of the Code to make distributions. Provided that all shareholders agree in a consent filed with the income tax return of the Portfolio to treat as a dividend the amount specified in the consent, the amount will be considered a distribution just as any other distribution paid in money and reinvested back into the Portfolio.

Investment in Foreign Securities

The Portfolio may be subject to foreign withholding taxes on income from certain foreign securities. Tax conventions between certain countries and the United States may reduce or eliminate such taxes on the Portfolio

and/or its shareholders. Any foreign withholding taxes could reduce the Portfolio's distributions paid to its shareholders.

Pass-through of foreign tax credits. If at the end of the fiscal year more than 50% in value of the total assets of the Portfolio (or if the Portfolio is a qualified fund of funds as described above under the heading "**Taxation of the Portfolio**—*Fund of funds corporate structures*", an Underlying Fund) are invested in securities of foreign corporations, the Portfolio may elect to pass through to its shareholders their pro rata share of foreign income taxes paid by the Portfolio (or Underlying Fund). If this election is made, the Portfolio may report more taxable income to a shareholder than it actually distributes. The shareholder will then be entitled either to deduct their share of these taxes in computing their taxable income or to claim a foreign tax credit for these taxes against their U.S. federal income tax (subject to limitations for certain shareholders). The Portfolio will provide shareholders with the information necessary to claim this deduction or credit on their personal income tax return if it makes this election. The Portfolio (or Underlying Fund) reserves the right not to pass through to its shareholders the amount of foreign income taxes paid by the Portfolio (or Underlying Fund). Additionally, any foreign tax withheld on payments made "in lieu of" dividends or interest will not qualify for the pass-through of foreign tax credits to shareholders.

Effect of foreign debt investments on distributions. Most foreign exchange gains realized on the sale of debt securities are treated by the Portfolio as ordinary income for federal income tax purposes. Similarly, foreign exchange losses realized on the sale of debt securities generally are treated as ordinary losses. These gains when distributed are taxable to shareholders as ordinary income, and any losses reduce the Portfolio's ordinary income otherwise available for distribution. This treatment could increase or decrease the Portfolio's ordinary income distributions, and may cause some or all of the Portfolio's previously distributed income to be classified as a return of capital.

PFIC securities. The Portfolio may invest in securities of foreign entities that could be deemed for tax purposes to be PFICs. In general, a PFIC is any foreign corporation if 75% or more of its gross income for its taxable year is passive income, or 50% or more of its average assets (by value) are held for the production of passive income. When investing in PFIC securities, the Portfolio intends to mark-to-market these securities and recognize any unrealized gains as ordinary income at the end of its fiscal year. Deductions for losses are allowable only to the extent of any current or previously recognized gains. These gains (reduced by allowable losses) are treated as ordinary income that the Portfolio is required to distribute, even though it has not sold or received dividends from these securities. Shareholders should also be aware that the designation of a foreign security as a PFIC security will cause its income dividends to fall outside of the definition of qualified foreign corporation dividends. These dividends generally will not qualify for the reduced rate of taxation on qualified dividends when distributed to shareholders by the Portfolio. Due to various complexities in identifying PFICs, the Portfolio can give no assurances that it will be able to identify portfolio securities in foreign corporations that are PFICs in time for the Portfolio to make a mark-to-market election. If the Portfolio (or an Underlying Fund) is unable to identify an investment as a PFIC and thus does not make a mark-to-market election, the Portfolio (or Underlying Fund) may be subject to U.S. federal income tax on a portion of any "excess distribution" or gain from the disposition of such shares even if such income is distributed as a taxable dividend by the Portfolio to its shareholders. Additional charges in the nature of interest may be imposed on the Portfolio (or Underlying Fund) in respect of deferred taxes arising from such distributions or gains. Any such taxes or interest charges could in turn reduce the Portfolio's distributions paid to shareholders.

Investment in Complex Securities

The Portfolio may invest in complex securities and such investments may be subject to numerous special and complicated tax rules. These rules could affect whether gains or losses recognized by the Portfolio are treated as ordinary income or capital gain, accelerate the recognition of income to the Portfolio, defer the Portfolio's ability to recognize losses, and subject the Portfolio to U.S. federal income tax on income from certain of the Portfolio's foreign investments. In turn, these rules may affect the amount, timing and/or tax character of the Portfolio's income and, in turn, of the income distributed to its shareholders.

Effect of Future Legislation; Local Tax Considerations

The foregoing general discussion of U.S. federal income tax consequences is based on the Code and the regulations issued thereunder as in effect on the date of this SAI. Future legislative or administrative changes, including provisions of current law that sunset and thereafter no longer apply, or court decisions may significantly change the conclusions expressed herein, and any such changes or decisions may have a retroactive effect with respect to the transactions contemplated herein. Rules of state and local taxation of ordinary income, qualified dividend income and capital gain dividends may differ from the rules for U.S. federal income taxation described above. Distributions may also be subject to additional state, local and foreign taxes depending on each shareholder's particular situation. Non-U.S. shareholders may be subject to U.S. tax rules that differ significantly from those summarized above. Shareholders are urged to consult their tax advisors as to the consequences of these and other state and local tax rules affecting investment in the Portfolio.

PROXY VOTING POLICIES

The Board of Directors of the Fund has delegated the authority to vote proxies for the portfolio securities held by the Portfolios and Underlying Funds to the Advisor in accordance with the Proxy Voting Policies and Procedures (the "Voting Policies") and Proxy Voting Guidelines ("Voting Guidelines") adopted by the Advisor. The Voting Guidelines are largely based on those developed by Institutional Shareholder Services, Inc. ("ISS"), an independent third party service provider, except with respect to certain matters for which the Advisor has modified the standard voting guidelines. A concise summary of the Voting Guidelines is provided in an Appendix to this SAI.

The Investment Committee at the Advisor is generally responsible for overseeing the Advisor's proxy voting process. The Investment Committee has formed a Corporate Governance Committee composed of certain officers, directors and other personnel of the Advisor and has delegated to its members authority to (i) oversee the voting of proxies, (ii) make determinations as to how to vote certain specific proxies, (iii) verify the on-going compliance with the Voting Policies, and (iv) review the Voting Policies from time to time and recommend changes to the Investment Committee. The Corporate Governance Committee may designate one or more of its members to oversee specific, ongoing compliance with respect to the Voting Policies and may designate other personnel of the Advisor to vote proxies on behalf of the Portfolios and Underlying Funds, including all authorized traders of the Advisor.

The Advisor seeks to vote (or refrains from voting) proxies in a manner that the Advisor determines is in the best interests of the Portfolios and Underlying Funds and which seeks to maximize the value of the Portfolios' and Underlying Funds' investments. Generally, the Advisor analyzes proxy statements on behalf of the Portfolios and instructs the vote (or refrains from voting) in accordance with the Voting Policies and the Voting Guidelines. Since most proxies the Advisor receives are instructed to be voted in accordance with the Voting Guidelines, proxies voted should not result from conflicts of interest. However, the Voting Policies do address the procedures to be followed if a conflict of interest arises between the interests of the Portfolios, and the interests of the Advisor or its affiliates. If a Corporate Governance Committee ("Committee") member has actual knowledge of a conflict of interest and recommends a vote contrary to the Voting Guidelines (or in the case where the Voting Guidelines do not prescribe a particular vote and the proposed vote is contrary to the recommendation of ISS), the Committee member will bring the vote to the Committee which will (a) determine how the vote should be cast keeping in mind the principle of preserving shareholder value, or (b) determine to abstain from voting, unless abstaining would be materially adverse to the interest of the Portfolios or Underlying Funds. To the extent the Committee makes a determination regarding how to vote or to abstain for a proxy on behalf of a Portfolio or Underlying Fund in the circumstances described in this paragraph, the Advisor will report annually on such determinations to the Board of Directors of the Fund.

The Advisor will usually instruct voting of proxies in accordance with the Voting Guidelines. The Voting Guidelines provide a framework for analysis and decision making, however, the Voting Guidelines do not address all potential issues. In order to be able to address all the relevant facts and circumstances related to a proxy vote, the Advisor reserves the right to instruct votes counter to the Voting Guidelines if, after a review of the matter, the Advisor believes that the best interests of the Portfolio or Underlying Fund would be served by such a vote. In such

a circumstance, the analysis will be documented in writing and periodically presented to the Corporate Governance Committee. To the extent that the Voting Guidelines do not cover potential voting issues, the Advisor will instruct the vote on such issues in a manner that is consistent with the spirit of the Voting Guidelines and that the Advisor believes would be in the best interests of the Portfolio or Underlying Fund.

The Advisor seeks to vote (or refrain from voting) proxies in a manner that the Advisor determines is in the best interests of a Portfolio or Underlying Fund and which seeks to maximize the value of that Portfolio's or Underlying Funds' investments. In some cases, the Advisor may determine that it is in the best interests of a Portfolio or Underlying Fund to refrain from exercising proxy voting rights. The Advisor may determine that voting is not in the best interest of a Portfolio or Underlying Fund and refrain from voting if the costs, including the opportunity costs, of voting would, in the view of the Advisor, exceed the expected benefits of voting. For securities on loan, the Advisor will balance the revenue-producing value of loans against the difficult-to-assess value of casting votes. It is the Advisor's belief that the expected value of casting a vote generally will be less than the securities lending income, either because the votes will not have significant economic consequences or because the outcome of the vote would not be affected by the Advisor recalling loaned securities in order to ensure they are voted. The Advisor does not intend to recall securities on loan if based upon information in the Advisor's possession, it determines that voting the securities is likely to materially affect the value of the Portfolio's or Underlying Funds' investment and that it is in the Portfolio's or Underlying Funds' best interests to do so. In cases where the Advisor does not receive a solicitation or enough information within a sufficient time (as reasonably determined by the Advisor) prior to the proxy-voting deadline, the Advisor or its service provider may be unable to vote.

With respect to non-U.S. securities, it is typically both difficult and costly to vote proxies due to local regulations, customs, and other requirements or restrictions. The Advisor does not intend to vote proxies of non-U.S. companies if the Advisor determines that the expected economic costs from voting outweigh the anticipated economic benefit to a Portfolio or Underlying Fund associated with voting. The Advisor intends to make its determination on whether to vote proxies of non-U.S. companies on a portfolio-by-portfolio basis, and generally seeks to implement uniform voting procedures for all proxies of companies in a country. The Advisor periodically reviews voting logistics, including costs and other voting difficulties, on a portfolio by portfolio and country by country basis, in order to determine if there have been any material changes that would affect the Advisor's decision of whether or not to vote. In the event the Advisor is made aware of an believes an issue to be voted is likely to materially affect the economic value of a Portfolio or Underlying Fund, that its vote is reasonably likely to influence the ultimate outcome of the contest, and the expected benefits of voting the proxies exceed the costs, the Advisor seeks to will make every reasonable effort to vote such proxies.

The Advisor and the Fund have retained ISS to provide certain services with respect to proxy voting. ISS will provide information on shareholder meeting dates and proxy materials; translate proxy materials printed in a foreign language; provide research on proxy proposals and voting recommendations in accordance with the Voting Guidelines; effect votes on behalf of the Portfolios and Underlying Funds; and provide reports concerning the proxies voted ("Proxy Voting Services"). In addition, the Advisor may retain the services of supplemental third-party proxy service providers to provide, among other things, research on proxy proposals and voting recommendations for certain shareholder meetings, as identified in the Voting Guidelines. Although the Advisor retains third-party service providers for proxy issues, the Advisor remains responsible for proxy voting decisions. In this regard, the Advisor uses commercially reasonable efforts to oversee the directed delegation to third-party proxy voting service providers, upon which the Advisor relies to carry out the Proxy Voting Services. In the event that the Voting Guidelines are not implemented precisely as the Advisor intends because of the actions or omissions of any third party service providers, custodians or sub-custodians or other agents or any such persons experience any irregularities (e.g. misvotes or missed votes), then such instances will not necessarily be deemed by the Advisor as a breach of the Voting Policies.

Information regarding how each of the Portfolios and Underlying Funds voted proxies related to its portfolio securities during the 12 month period ended June 30 of each year is available, no later than August 31 of each year, without charge, (i) on the Advisor's website at <http://www.dimensional.com> and (ii) on the SEC's website at <http://www.sec.gov>.

DISCLOSURE OF PORTFOLIO HOLDINGS

The Advisor and the Board of Directors of the Fund (the “Board”) have adopted a policy (the “Policy”) to govern disclosure of the portfolio holdings of the Portfolios (“Holdings Information”), and to prevent the misuse of material non-public Holdings Information. The Advisor has determined that the Policy and its procedures (1) are reasonably designed to ensure that disclosure of Holdings Information is in the best interests of the shareholders of the Portfolios, and (2) appropriately address the potential for material conflicts of interest.

Disclosure of Holdings Information as Required by Applicable Law. Holdings Information (whether a partial listing of portfolio holdings or a complete listing of portfolio holdings) shall be disclosed to any person as required by applicable law, rules and regulations.

Online Disclosure of Portfolio Holdings Information. Each Portfolio generally discloses up to its twenty-five largest portfolio holdings and the percentages that each of these largest portfolio holdings represent of the Portfolio’s total assets (“largest holdings”), as of the most recent month-end, online at the Advisor’s public website, <http://www.dimensional.com>, within twenty days after the end of each month. This online disclosure may also include information regarding the Portfolio’s industry allocations. Each Portfolio generally discloses its complete Holdings Information (other than cash and cash equivalents), as of month-end, online at the Advisor’s public website, <http://www.dimensional.com>, two months following the month-end, or more frequently and at different periods when authorized by a Designated Person (as defined below).

Disclosure of Holdings Information to Recipients. Each of the Advisor’s Chairmen, Director of Institutional Services, Head of Portfolio Management and Trading and General Counsel (together, the “Designated Persons”) may authorize disclosing non-public Holdings Information more frequently or at different periods than as described above solely to those financial advisors, registered accountholders, authorized consultants, authorized custodians, or third-party data service providers (each a “Recipient”) who: (i) specifically request the more current non-public Holdings Information and (ii) execute a Use and Nondisclosure Agreement (each a “Nondisclosure Agreement”). Each Nondisclosure Agreement subjects the Recipient to a duty of confidentiality with respect to the non-public Holdings Information, and prohibits the Recipient from trading based on the non-public Holdings Information. Any non-public Holdings Information that is disclosed shall not include any material information about a Portfolio’s trading strategies or pending portfolio transactions. The non-public Holdings Information provided to a Recipient under a Nondisclosure Agreement is not subject to a time delay before dissemination. Designated Persons may also approve the distribution of Holdings Information for a Portfolio more frequently or at a period other than as described above.

As of the date of this SAI, the Advisor and the Portfolios had ongoing arrangements with the following Recipients to make available non-public Holdings Information:

Recipient	Business Purpose	Frequency
Citibank, N.A.	Fund Custodian	Daily
Citibank, N.A.	Middle office operational support service provider to the Advisor	Daily
Fund Evaluation Group LLC	Monitoring investor exposure and investment strategy	Upon Request
PricewaterhouseCoopers LLP	Independent registered public accounting firm	Upon Request
Pricing Service Vendor	Fair value information services	Daily
State Street Bank and Trust Company	Fund Administrator, Accounting Agent, Transfer Agent, and Custodian	Daily
Wescott Financial Advisory Group	Monitoring investor exposure and investment strategy	Monthly

In addition, certain employees of the Advisor and its subsidiaries receive Holdings Information on a quarterly, monthly or daily basis, or upon request, in order to perform their business functions. The Portfolios, the Advisor, or other parties do not receive any compensation in connection with these arrangements.]

The Policy includes the following procedures to ensure that disclosure of Holdings Information is in the best interests of shareholders, and to address any conflicts between the interests of shareholders, on the one hand, and the interests of the Advisor, DFAS or any affiliated person of the Funds, The DFA Investment Trust Company, the Advisor or DFAS, on the other. In order to protect the interests of shareholders, the Portfolios, and to ensure no adverse effect on shareholders, in the limited circumstances where a Designated Person is considering making non-public Holdings Information available to a Recipient, the Advisor's Director of Institutional Services and the Chief Compliance Officer will consider any conflicts of interest. If the Chief Compliance Officer, following appropriate due diligence, determines in his or her reasonable business judgment that (1) the Portfolio has a legitimate business purpose for providing the non-public Holdings Information to a Recipient, and (2) disclosure of non-public Holdings Information to the Recipient would be in the interests of the shareholders and outweighs possible reasonably anticipated adverse effects, then the Chief Compliance Officer may approve the proposed disclosure.

The Chief Compliance Officer documents all disclosures of non-public Holdings Information (including the legitimate business purpose for the disclosure), and periodically reports to the Board on such arrangements. The Chief Compliance Officer is also responsible for ongoing monitoring of the distribution and use of non-public Holdings Information. Such arrangements are reviewed by the Chief Compliance Officer on an annual basis. Specifically, the Chief Compliance Officer requests an annual certification from each Recipient that the Recipient has complied with all terms contained in the Nondisclosure Agreement. Recipients who fail to provide the requested certifications are prohibited from receiving non-public Holdings Information.

The Board exercises continuing oversight of the disclosure of Holdings Information by: (1) overseeing the implementation and enforcement of the Policy by the Chief Compliance Officer of the Advisor and of the Fund; (2) considering reports and recommendations by the Chief Compliance Officer concerning the implementation of the Policy and any material compliance matters that may arise in connection with the Policy; and (3) considering whether to approve or ratify any amendments to the Policy. The Advisor and the Board reserve the right to amend the Policy at any time, and from time to time without prior notice, in their sole discretion.

Prohibitions on Disclosure of Portfolio Holdings and Receipt of Compensation. No person is authorized to disclose Holdings Information or other investment positions (whether online at <http://www.dimensional.com>, in writing, by fax, by e-mail, orally or by other means) except in accordance with the Policy. In addition, no person is authorized to make disclosure pursuant to the Policy if such disclosure is otherwise in violation of the antifraud provisions of the federal securities laws.

The Policy prohibits a Portfolio, the Advisor or an affiliate thereof from receiving any compensation or other consideration of any type for the purpose of obtaining disclosure of non-public Holdings Information or other investment positions. "Consideration" includes any agreement to maintain assets in the Portfolio or in other investment companies or accounts managed by the Advisor or by any affiliated person of the Advisor.

The Policy and its procedures are intended to provide useful information concerning the Portfolios to existing and prospective shareholders, while at the same time preventing the improper use of Holdings Information. However, there can be no assurance that the furnishing of any Holdings Information is not susceptible to inappropriate uses, particularly in the hands of sophisticated investors, or that the Holdings Information will not in fact be misused in other ways, beyond the control of the Advisor.

FINANCIAL STATEMENTS

PricewaterhouseCoopers LLP, Two Commerce Square, Suite 1700, 2001 Market Street, Philadelphia, PA 19103-7042, is the Fund's independent registered public accounting firm and audits the Fund's annual financial statements. The audited financial statements and financial highlights of the Portfolios for the fiscal period ended October 31, 2013, as set forth in the Fund's annual report to shareholders relating to the Portfolios, including the report of PricewaterhouseCoopers LLP, are incorporated by reference into this SAI.

An investor may obtain a copy of the annual reports, upon request and without charge, by contacting the Fund at the address or telephone number appearing on the cover of this SAI.

PERFORMANCE DATA

The Portfolios may compare their investment performance to appropriate market and mutual fund indices and investments for which reliable performance data is available. Such indices are generally unmanaged and are prepared by entities and organizations which track the performance of investment companies or investment advisors. Unmanaged indices often do not reflect deductions for administrative and management costs and expenses. The performance of the Portfolios may also be compared in publications to averages, performance rankings, or other information prepared by recognized mutual fund statistical services. Any performance information, whether related to the Portfolios or to the Advisor, should be considered in light of a Portfolio's investment objectives and policies, characteristics and the quality of the portfolio and market conditions during the time period indicated and should not be considered to be representative of what may be achieved in the future.

APPENDIX

U.S. PROXY VOTING CONCISE GUIDELINES

Effective for Meetings on or after February 1, 2014

In order to provide greater analysis on certain shareholder meetings, the Advisor has elected to receive research reports for certain meetings, as indicated below, from Glass Lewis in addition to Institutional Shareholder Services, Inc. ("ISS"), and may in certain circumstances purchase research from other third parties as well.

Specifically, if available, the Advisor may obtain research from Glass Lewis or other third parties in addition to ISS for shareholder meetings in the following circumstances: (1) where the Advisor's clients have a significant aggregate holding in the issuer and the meeting agenda contains proxies concerning: Anti-takeover Defenses or Voting Related Issues, Mergers and Acquisitions or Reorganizations or Restructurings, Capital Structure Issues, Compensation Issues or a proxy contest; or (2) where the Advisor in its discretion, has deemed that additional research is warranted.

Where research is obtained from Glass Lewis in accordance with these Guidelines, the Advisor will first review the research reports obtained from ISS and Glass Lewis. If the recommendations contained in the research reports from ISS and Glass Lewis are the same, the Advisor will vote accordingly. If the recommendations contained in the research reports from ISS and Glass Lewis are inconsistent, the Advisor will vote in accordance with the Corporate Governance Committee's (or its designee's) determination considering the principle of preserving shareholder value.

Routine/Miscellaneous

Auditor Ratification

Vote FOR proposals to ratify auditors unless any of the following apply:

- An auditor has a financial interest in or association with the company, and is therefore not independent;
- There is reason to believe that the independent auditor has rendered an opinion that is neither accurate nor indicative of the company's financial position;
- Poor accounting practices are identified that rise to a serious level of concern, such as: fraud; misapplication of GAAP, or material weaknesses identified in Section 404 disclosures; or
- Fees for non-audit services ("other" fees) are excessive.

Non-audit fees are excessive if:

- Non-audit ("other") fees > audit fees + audit-related fees + tax compliance/preparation fees.

Board of Directors:

Voting on Director Nominees in Uncontested Elections

Four fundamental principles apply when determining votes on director nominees:

1. Accountability
2. Responsiveness
3. Composition
4. Independence

Generally vote for director nominees, except under the following circumstances:

1. Accountability

Vote AGAINST or WITHHOLD from the entire board of directors (except new nominees, who should be considered CASE-BY-CASE) for the following:

Problematic Takeover Defenses

Classified Board Structure:

- 1.1. The board is classified, and a continuing director responsible for a problematic governance issue at the board/committee level that would warrant a withhold/against vote recommendation is not up for election. All appropriate nominees (except new) may be held accountable.

Director Performance Evaluation:

- 1.2. The board lacks accountability and oversight, coupled with sustained poor performance relative to peers. Sustained poor performance is measured by one- and three-year total shareholder returns in the bottom half of a company's four-digit GICS industry group (Russell 3000 companies only). Take into consideration the company's five-year total shareholder return and operational metrics. Problematic provisions include but are not limited to:
 - A classified board structure;
 - A supermajority vote requirement;
 - Either a plurality vote standard in uncontested director elections or a majority vote standard with no plurality carve-out for contested elections;
 - The inability of shareholders to call special meetings;
 - The inability of shareholders to act by written consent;
 - A dual-class capital structure; and/or
 - A non-shareholder-approved poison pill.

Poison Pills:

- 1.3. The company's poison pill has a "dead-hand" or "modified dead-hand" feature. Vote AGAINST or WITHHOLD from nominees every year until this feature is removed;

- 1.4. The board adopts a poison pill with a term of more than 12 months (“long-term pill”), or renews any existing pill, including any “short-term” pill (12 months or less), without shareholder approval. A commitment or policy that puts a newly adopted pill to a binding shareholder vote may potentially offset an adverse vote recommendation. Review such companies with classified boards every year, and such companies with annually elected boards at least once every three years, and vote AGAINST or WITHHOLD votes from all nominees if the company still maintains a non-shareholder-approved poison pill; or
- 1.5. The board makes a material adverse change to an existing poison pill without shareholder approval.

Vote CASE-BY-CASE on all nominees if:

- 1.6. The board adopts a poison pill with a term of 12 months or less (“short-term pill”) without shareholder approval, taking into account the following factors:
 - The date of the pill’s adoption relative to the date of the next meeting of shareholders—*i.e.* whether the company had time to put the pill on ballot for shareholder ratification given the circumstances;
 - The issuer’s rationale;
 - The issuer’s governance structure and practices; and
 - The issuer’s track record of accountability to shareholders.

Problematic Audit-Related Practices

Generally vote AGAINST or WITHHOLD from the members of the Audit Committee if:

- 1.7. The non-audit fees paid to the auditor are excessive (see discussion under “[Auditor Ratification](#)”);
- 1.8. The company receives an adverse opinion on the company’s financial statements from its auditor; or
- 1.9. There is persuasive evidence that the Audit Committee entered into an inappropriate indemnification agreement with its auditor that limits the ability of the company, or its shareholders, to pursue legitimate legal recourse against the audit firm.

Vote CASE-BY-CASE on members of the Audit Committee and potentially the full board if:

- 1.10. Poor accounting practices are identified that rise to a level of serious concern, such as: fraud; misapplication of GAAP; and material weaknesses identified in Section 404 disclosures. Examine the severity, breadth, chronological sequence and duration, as well as the company’s efforts at remediation or corrective actions, in determining whether WITHHOLD/AGAINST votes are warranted.

Problematic Compensation Practices/Pay for Performance Misalignment

In the absence of an Advisory Vote on Executive Compensation ballot item or in egregious situations, vote AGAINST or WITHHOLD from the members of the Compensation Committee and (potentially the full board) if:

- 1.11. There is a significant misalignment between CEO pay and company performance ([pay for performance](#));
- 1.12. The company maintains significant [problematic pay practices](#);
- 1.13. The board exhibits a significant level of [poor communication and responsiveness](#) to shareholders;
- 1.14. The company fails to submit one-time [transfers of stock options](#) to a shareholder vote; or
- 1.15. The company fails to fulfill the terms of a [burn rate commitment](#) made to shareholders.

Vote CASE-BY-CASE on Compensation Committee members (or, in exceptional cases, the full board) and the Management Say-on-Pay proposal if:

- 1.16. The company's previous say-on-pay proposal received the support of less than 70 percent of votes cast, taking into account:
- The company's response, including:
 - Disclosure of engagement efforts with major institutional investors regarding the issues that contributed to the low level of support;
 - Specific actions taken to address the issues that contributed to the low level of support;
 - Other recent compensation actions taken by the company;
 - Whether the issues raised are recurring or isolated;
 - The company's ownership structure; and
 - Whether the support level was less than 50 percent, which would warrant the highest degree of responsiveness.

Governance Failures

Under extraordinary circumstances, vote AGAINST or WITHHOLD from directors individually, committee members, or the entire board, due to:

- 1.17. Material failures of governance, stewardship, risk oversight, or fiduciary responsibilities at the company;
- 1.18. Failure to replace management as appropriate; or
- 1.19. Egregious actions related to a director's service on other boards that raise substantial doubt about his or her ability to effectively oversee management and serve the best interests of shareholders at any company.

2. Responsiveness

Vote CASE-BY-CASE on individual directors, committee members, or the entire board of directors (as appropriate) if:

- 2.1. The board failed to act on a shareholder proposal that received the support of a majority of the shares cast in the previous year. Factors that will be considered are:
- Disclosed outreach efforts by the board to shareholders in the wake of the vote;
 - Rationale provided in the proxy statement for the level of implementation;
 - The subject matter of the proposal;
 - The level of support for and opposition to the resolution in past meetings;
 - Actions taken by the board in response to the majority vote and its engagement with shareholders;
 - The continuation of the underlying issue as a voting item on the ballot (as either shareholder or management proposals); and
 - Other factors as appropriate.
- 2.2. The board failed to act on takeover offers where the majority of shares are tendered;
- 2.3. At the previous board election, any director received more than 50 percent withhold/against votes of the shares cast and the company has failed to address the issue(s) that caused the high withhold/against vote;

- 2.4. The board implements an advisory vote on executive compensation on a less frequent basis than the frequency that received the majority of votes cast at the most recent shareholder meeting at which shareholders voted on the say-on-pay frequency; or
- 2.5. The board implements an advisory vote on executive compensation on a less frequent basis than the frequency that received a plurality, but not a majority, of the votes cast at the most recent shareholder meeting at which shareholders voted on the say-on-pay frequency, taking into account:
 - The board's rationale for selecting a frequency that is different from the frequency that received a plurality;
 - The company's ownership structure and vote results;
 - ISS' analysis of whether there are compensation concerns or a history of problematic compensation practices; and
 - The previous year's support level on the company's say-on-pay proposal.

3. Composition

Attendance at Board and Committee Meetings:

- 3.1. Generally vote AGAINST or WITHHOLD from directors (except new nominees, who should be considered CASE-BY-CASE) who attend less than 75 percent of the aggregate of their board and committee meetings for the period for which they served, unless an acceptable reason for absences is disclosed in the proxy or another SEC filing. Acceptable reasons for director absences are generally limited to the following:
 - Medical issues/illness;
 - Family emergencies; and
 - Missing only one meeting (when the total of all meetings is three or fewer).
- 3.2. If the proxy disclosure is unclear and insufficient to determine whether a director attended at least 75 percent of the aggregate of his/her board and committee meetings during his/her period of service, vote AGAINST or WITHHOLD from the director(s) in question.

Overboarded Directors:

Vote AGAINST or WITHHOLD from individual directors who:

- 3.3. Sit on more than six public company boards; or
- 3.4. Are CEOs of public companies who sit on the boards of more than two public companies besides their own—withhold only at their outside boards.

4. Independence

Vote AGAINST or WITHHOLD from Inside Directors and Affiliated Outside Directors when:

- 4.1. The inside or affiliated outside director serves on any of the three key committees: audit, compensation, or nominating;
- 4.2. The company lacks an audit, compensation, or nominating committee so that the full board functions as that committee;
- 4.3. The company lacks a formal nominating committee, even if the board attests that the independent directors fulfill the functions of such a committee; or

4.4. Independent directors make up less than a majority of the directors.

Proxy Access

ISS supports proxy access as an important shareholder right, one that is complementary to other best-practice corporate governance features. However, in the absence of a uniform standard, proposals to enact proxy access may vary widely; as such, ISS is not setting forth specific parameters at this time and will take a case-by-case approach in evaluating these proposals.

Vote CASE-BY-CASE on proposals to enact proxy access, taking into account, among other factors:

- Company-specific factors; and
- Proposal-specific factors, including:
 - The ownership thresholds proposed in the resolution (i.e., percentage and duration);
 - The maximum proportion of directors that shareholders may nominate each year; and
 - The method of determining which nominations should appear on the ballot if multiple shareholders submit nominations.

Proxy Contests—Voting for Director Nominees in Contested Elections

Vote CASE-BY-CASE on the election of directors in contested elections, considering the following factors:

- Long-term financial performance of the target company relative to its industry;
- Management’s track record;
- Background to the proxy contest;
- Nominee qualifications and any compensatory arrangements;
- Strategic plan of dissident slate and quality of critique against management;
- Likelihood that the proposed goals and objectives can be achieved (both slates); and
- Stock ownership positions.

When the addition of shareholder nominees to the management card (“proxy access nominees”) results in a number of nominees on the management card which exceeds the number of seats available for election, vote CASE-BY-CASE considering the same factors listed above.

Shareholder Rights & Defenses

Poison Pills- Management Proposals to Ratify Poison Pill

Vote CASE-BY-CASE on management proposals on poison pill ratification, focusing on the features of the shareholder rights plan. Rights plans should contain the following attributes:

- No lower than a 20% trigger, flip-in or flip-over;
- A term of no more than three years;
- No dead-hand, slow-hand, no-hand or similar feature that limits the ability of a future board to redeem the pill;

- Shareholder redemption feature (qualifying offer clause); if the board refuses to redeem the pill 90 days after a qualifying offer is announced, 10 percent of the shares may call a special meeting or seek a written consent to vote on rescinding the pill.

In addition, the rationale for adopting the pill should be thoroughly explained by the company. In examining the request for the pill, take into consideration the company's existing governance structure, including: board independence, existing takeover defenses, and any problematic governance concerns.

Poison Pills- Management Proposals to Ratify a Pill to Preserve Net Operating Losses (NOLs)

Vote AGAINST proposals to adopt a poison pill for the stated purpose of protecting a company's net operating losses (NOL) if the term of the pill would exceed the shorter of three years and the exhaustion of the NOL.

Vote CASE-BY-CASE on management proposals for poison pill ratification, considering the following factors, if the term of the pill would be the shorter of three years (or less) and the exhaustion of the NOL:

- The ownership threshold to transfer (NOL pills generally have a trigger slightly below 5 percent);
- The value of the NOLs;
- Shareholder protection mechanisms (sunset provision, or commitment to cause expiration of the pill upon exhaustion or expiration of NOLs);
- The company's existing governance structure including: board independence, existing takeover defenses, track record of responsiveness to shareholders, and any other problematic governance concerns; and
- Any other factors that may be applicable.

Shareholder Ability to Act by Written Consent

Generally vote AGAINST management and shareholder proposals to restrict or prohibit shareholders' ability to act by written consent.

Generally vote FOR management and shareholder proposals that provide shareholders with the ability to act by written consent, taking into account the following factors:

- Shareholders' current right to act by written consent;
- The consent threshold;
- The inclusion of exclusionary or prohibitive language;
- Investor ownership structure; and
- Shareholder support of, and management's response to, previous shareholder proposals.

Vote CASE-BY-CASE on shareholder proposals if, in addition to the considerations above, the company has the following governance and antitakeover provisions:

- An unfettered right for shareholders to call special meetings at a 10 percent threshold;
- A majority vote standard in uncontested director elections;
- No non-shareholder-approved pill; and
- An annually elected board.

CAPITAL/RESTRUCTURING

Common Stock Authorization

Vote FOR proposals to increase the number of authorized common shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.

Vote AGAINST proposals at companies with more than one class of common stock to increase the number of authorized shares of the class of common stock that has superior voting rights.

Vote AGAINST proposals to increase the number of authorized common shares if a vote for a reverse stock split on the same ballot is warranted despite the fact that the authorized shares would not be reduced proportionally.

Vote CASE-BY-CASE on all other proposals to increase the number of shares of common stock authorized for issuance. Take into account company-specific factors that include, at a minimum, the following:

- Past Board Performance:
 - The company's use of authorized shares during the last three years
- The Current Request:
 - Disclosure in the proxy statement of the specific purposes of the proposed increase;
 - Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request; and
 - The dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns.

Dual Class Structure

Generally vote AGAINST proposals to create a new class of common stock unless:

- The company discloses a compelling rationale for the dual-class capital structure, such as:
 - The company's auditor has concluded that there is substantial doubt about the company's ability to continue as a going concern; or
 - The new class of shares will be transitory;
- The new class is intended for financing purposes with minimal or no dilution to current shareholders in both the short term and long term; and
- The new class is not designed to preserve or increase the voting power of an insider or significant shareholder.

Preferred Stock Authorization

Vote FOR proposals to increase the number of authorized preferred shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.

Vote AGAINST proposals at companies with more than one class or series of preferred stock to increase the number of authorized shares of the class or series of preferred stock that has superior voting rights.

Vote CASE-BY-CASE on all other proposals to increase the number of shares of preferred stock authorized for issuance. Take into account company-specific factors that include, at a minimum, the following:

- Past Board Performance:
 - The company's use of authorized preferred shares during the last three years;
- The Current Request:
 - Disclosure in the proxy statement of the specific purposes for the proposed increase;
 - Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request;
 - In cases where the company has existing authorized preferred stock, the dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns; and
 - Whether the shares requested are blank check preferred shares that can be used for antitakeover purposes.

Mergers and Acquisitions

Vote CASE-BY-CASE on mergers and acquisitions. Review and evaluate the merits and drawbacks of the proposed transaction, balancing various and sometimes countervailing factors including:

- *Valuation* - Is the value to be received by the target shareholders (or paid by the acquirer) reasonable? While the fairness opinion may provide an initial starting point for assessing valuation reasonableness, emphasis is placed on the offer premium, market reaction and strategic rationale.
- *Market reaction* - How has the market responded to the proposed deal? A negative market reaction should cause closer scrutiny of a deal.
- *Strategic rationale* - Does the deal make sense strategically? From where is the value derived? Cost and revenue synergies should not be overly aggressive or optimistic, but reasonably achievable. Management should also have a favorable track record of successful integration of historical acquisitions.
- *Negotiations and process* - Were the terms of the transaction negotiated at arm's-length? Was the process fair and equitable? A fair process helps to ensure the best price for shareholders. Significant negotiation "wins" can also signify the deal makers' competency. The comprehensiveness of the sales process (*e.g.*, full auction, partial auction, no auction) can also affect shareholder value.
- *Conflicts of interest* - Are insiders benefiting from the transaction disproportionately and inappropriately as compared to non-insider shareholders? As the result of potential conflicts, the directors and officers of the company may be more likely to vote to approve a merger than if they did not hold these interests. Consider whether these interests may have influenced these directors and officers to support or recommend the merger. The CIC figure presented in the "ISS Transaction Summary" section of this report is an aggregate figure that can in certain cases be a misleading indicator of the true value transfer from shareholders to insiders. Where such figure appears to be excessive, analyze the underlying assumptions to determine whether a potential conflict exists.

- *Governance* - Will the combined company have a better or worse governance profile than the current governance profiles of the respective parties to the transaction? If the governance profile is to change for the worse, the burden is on the company to prove that other issues (such as valuation) outweigh any deterioration in governance.

COMPENSATION

Executive Pay Evaluation

Underlying all evaluations are five global principles that most investors expect corporations to adhere to in designing and administering executive and director compensation programs:

1. Maintain appropriate pay-for-performance alignment, with emphasis on long-term shareholder value: This principle encompasses overall executive pay practices, which must be designed to attract, retain, and appropriately motivate the key employees who drive shareholder value creation over the long term. It will take into consideration, among other factors, the link between pay and performance; the mix between fixed and variable pay; performance goals; and equity-based plan costs;
2. Avoid arrangements that risk “pay for failure”: This principle addresses the appropriateness of long or indefinite contracts, excessive severance packages, and guaranteed compensation;
3. Maintain an independent and effective compensation committee: This principle promotes oversight of executive pay programs by directors with appropriate skills, knowledge, experience, and a sound process for compensation decision-making (*e.g.*, including access to independent expertise and advice when needed);
4. Provide shareholders with clear, comprehensive compensation disclosures: This principle underscores the importance of informative and timely disclosures that enable shareholders to evaluate executive pay practices fully and fairly;
5. Avoid inappropriate pay to non-executive directors: This principle recognizes the interests of shareholders in ensuring that compensation to outside directors does not compromise their independence and ability to make appropriate judgments in overseeing managers’ pay and performance. At the market level, it may incorporate a variety of generally accepted best practices.

Advisory Votes on Executive Compensation—Management Proposals (Management Say-on-Pay)

Vote CASE-BY-CASE on ballot items related to executive pay and practices, as well as certain aspects of outside director compensation.

Vote AGAINST Advisory Votes on Executive Compensation (Management Say-on-Pay—MSOP) if:

- There is a significant misalignment between CEO pay and company performance ([pay for performance](#));
- The company maintains significant problematic pay practices;
- The board exhibits a significant level of poor communication and responsiveness to shareholders.

Vote AGAINST or WITHHOLD from the members of the Compensation Committee and potentially the full board if:

- There is no MSOP on the ballot, and an AGAINST vote on an MSOP is warranted due to a pay for performance misalignment, problematic pay practices, or the lack of adequate responsiveness on compensation issues raised previously, or a combination thereof;
- The board fails to respond adequately to a previous MSOP proposal that received less than 70 percent support of votes cast;
- The company has recently practiced or approved problematic pay practices, including option repricing or option backdating; or
- The situation is egregious.

Vote AGAINST an equity plan on the ballot if:

- A pay for performance misalignment is found, and a significant portion of the CEO's misaligned pay is attributed to non-performance-based equity awards, taking into consideration:
 - Magnitude of pay misalignment;
 - Contribution of non-performance-based equity grants to overall pay; and
 - The proportion of equity awards granted in the last three fiscal years concentrated at the named executive officer (NEO) level.

Primary Evaluation Factors for Executive Pay

Pay-for-Performance Evaluation

ISS annually conducts a pay-for-performance analysis to identify strong or satisfactory alignment between pay and performance over a sustained period. With respect to companies in the Russell 3000 index, this analysis considers the following:

1. Peer Group Alignment:

- The degree of alignment between the company's annualized TSR rank and the CEO's annualized total pay rank within a peer group, each measured over a three-year period.
- The multiple of the CEO's total pay relative to the peer group median.

2. Absolute Alignment – the absolute alignment between the trend in CEO pay and company TSR over the prior five fiscal years – i.e., the difference between the trend in annual pay changes and the trend in annualized TSR during the period.

If the above analysis demonstrates significant unsatisfactory long-term pay-for-performance alignment or, in the case of non-Russell 3000 index companies, misaligned pay and performance are otherwise suggested, our analysis may include any of the following qualitative factors, if they are relevant to the analysis to determine how various pay elements may work to encourage or to undermine long-term value creation and alignment with shareholder interests:

- The ratio of performance- to time-based equity awards;
- The overall ratio of performance-based compensation;
- The completeness of disclosure and rigor of performance goals;
- The company's peer group benchmarking practices;

- Actual results of financial/operational metrics, such as growth in revenue, profit, cash flow, etc., both absolute and relative to peers;
- Special circumstances related to, for example, a new CEO in the prior FY or anomalous equity grant practices (e.g., bi-annual awards);
- Realizable pay compared to grant pay; and
- Any other factors deemed relevant.

Problematic Pay Practices

The focus is on executive compensation practices that contravene the global pay principles, including:

- Problematic practices related to non-performance-based compensation elements;
- Incentives that may motivate excessive risk-taking; and
- Options Backdating.

Problematic Pay Practices related to Non-Performance-Based Compensation Elements

Pay elements that are not directly based on performance are generally evaluated CASE-BY-CASE considering the context of a company's overall pay program and demonstrated pay-for-performance philosophy. Please refer to ISS' Compensation FAQ document for detail on specific pay practices that have been identified as potentially problematic and may lead to negative recommendations if they are deemed to be inappropriate or unjustified relative to executive pay best practices. The list below highlights the problematic practices that carry significant weight in this overall consideration and may result in adverse vote recommendations:

- Repricing or replacing of underwater stock options/SARS without prior shareholder approval (including cash buyouts and voluntary surrender of underwater options);
- Excessive perquisites or tax gross-ups, including any gross-up related to a secular trust or restricted stock vesting;
- New or extended agreements that provide for:
 - CIC payments exceeding 3 times base salary and average/target/most recent bonus;
 - CIC severance payments without involuntary job loss or substantial diminution of duties ("single" or "modified single" triggers);
 - CIC payments with excise tax gross-ups (including "modified" gross-ups).

Incentives that may Motivate Excessive Risk-Taking

- Multi-year guaranteed bonuses;
- A single or common performance metric used for short- and long-term plans;
- Lucrative severance packages;
- High pay opportunities relative to industry peers;
- Disproportionate supplemental pensions; or
- Mega annual equity grants that provide unlimited upside with no downside risk.

Factors that potentially mitigate the impact of risky incentives include rigorous claw-back provisions and robust stock ownership/holding guidelines.

Options Backdating

The following factors should be examined CASE-BY-CASE to allow for distinctions to be made between “sloppy” plan administration versus deliberate action or fraud:

- Reason and motive for the options backdating issue, such as inadvertent vs. deliberate grant date changes;
- Duration of options backdating;
- Size of restatement due to options backdating;
- Corrective actions taken by the board or compensation committee, such as canceling or re-pricing backdated options, the recouping of option gains on backdated grants; and
- Adoption of a grant policy that prohibits backdating, and creates a fixed grant schedule or window period for equity grants in the future.

Board Communications and Responsiveness

Consider the following factors CASE-BY-CASE when evaluating ballot items related to executive pay on the board’s responsiveness to investor input and engagement on compensation issues:

- Failure to respond to majority-supported shareholder proposals on executive pay topics; or
- Failure to adequately respond to the company's previous say-on-pay proposal that received the support of less than 70 percent of votes cast, taking into account:
 - The company's response, including:
 - Disclosure of engagement efforts with major institutional investors regarding the issues that contributed to the low level of support;
 - Specific actions taken to address the issues that contributed to the low level of support;
 - Other recent compensation actions taken by the company;
 - Whether the issues raised are recurring or isolated;
 - The company's ownership structure; and
 - Whether the support level was less than 50 percent, which would warrant the highest degree of responsiveness.

Frequency of Advisory Vote on Executive Compensation ("Say When on Pay")

Vote FOR annual advisory votes on compensation, which provide the most consistent and clear communication channel for shareholder concerns about companies' executive pay programs.

Voting on Golden Parachutes in an Acquisition, Merger, Consolidation, or Proposed Sale

Vote CASE-BY-CASE on say on Golden Parachute proposals, including consideration of existing change-in-control arrangements maintained with named executive officers rather than focusing primarily on new or extended arrangements.

Features that may result in an AGAINST recommendation include one or more of the following, depending on the number, magnitude, and/or timing of issue(s):

- Single- or modified-single-trigger cash severance;
- Single-trigger acceleration of unvested equity awards;

- Excessive cash severance (>3x base salary and bonus);
- Excise tax gross-ups triggered and payable (as opposed to a provision to provide excise tax gross-ups);
- Excessive golden parachute payments (on an absolute basis or as a percentage of transaction equity value); or
- Recent amendments that incorporate any problematic features (such as those above) or recent actions (such as extraordinary equity grants) that may make packages so attractive as to influence merger agreements that may not be in the best interests of shareholders; or
- The company's assertion that a proposed transaction is conditioned on shareholder approval of the golden parachute advisory vote.

Recent amendment(s) that incorporate problematic features will tend to carry more weight on the overall analysis. However, the presence of multiple legacy problematic features will also be closely scrutinized.

In cases where the golden parachute vote is incorporated into a company's advisory vote on compensation (management say-on-pay), ISS will evaluate the say-on-pay proposal in accordance with these guidelines, which may give higher weight to that component of the overall evaluation.

Equity-Based and Other Incentive Plans

Vote CASE-BY-CASE on equity-based compensation plans. Vote AGAINST the equity plan if any of the following factors apply:

- The total cost of the company's equity plans is unreasonable;
- The plan expressly permits repricing;
- A pay-for-performance misalignment is found;
- The company's three year burn rate exceeds the burn rate cap of its industry group;
- The plan has a liberal change-of-control definition; or
- The plan is a vehicle for problematic pay practices.

Social/Environmental Issues

Overall Approach

Generally vote FOR the management's recommendation on shareholder proposals involving social/environmental issues. When evaluating social and environmental shareholder proposals, Dimensional considers the most important factor to be whether adoption of the proposal is likely to enhance or protect shareholder value.

With respect to environmentally screened portfolios, the Advisor will generally vote on shareholder proposals involving environmental issues in accordance with the following ISS U.S. Proxy Voting Guidelines:

Generally vote CASE-BY-CASE, taking into consideration whether implementation of the proposal is likely to enhance or protect shareholder value, and in addition the following will also be considered:

- If the issues presented in the proposal are more appropriately or effectively dealt with through legislation or government regulation;
- If the company has already responded in an appropriate and sufficient manner to the issue(s) raised in the proposal;

- Whether the proposal's request is unduly burdensome (scope, or timeframe) or overly prescriptive;
- The company's approach compared with any industry standard practices for addressing the issue(s) raised by the proposal;
- If the proposal requests increased disclosure or greater transparency, whether or not reasonable and sufficient information is currently available to shareholders from the company or from other publicly available sources; and
- If the proposal requests increased disclosure or greater transparency, whether or not implementation would reveal proprietary or confidential information that could place the company at a competitive disadvantage.

Political Issues

Overall Approach

Generally vote FOR the management's recommendation on shareholder proposals involving political issues. When evaluating political shareholder proposals, Dimensional considers the most important factor to be whether adoption of the proposal is likely to enhance or protect shareholder value.

Foreign Private Issuers Listed on U.S. Exchanges

Vote AGAINST (or WITHHOLD from) non-independent director nominees at companies which fail to meet the following criteria: a majority-independent board, and the presence of an audit, a compensation, and a nomination committee, each of which is entirely composed of independent directors.

Where the design and disclosure levels of equity compensation plans are comparable to those seen at U.S. companies, U.S. compensation policy will be used to evaluate the compensation plan proposals. Otherwise, they, and all other voting items, will be evaluated using the relevant ISS regional or market proxy voting guidelines.

APPENDIX

INTERNATIONAL PROXY VOTING SUMMARY GUIDELINES

Effective for Meetings on or after February 1, 2014

In order to provide greater analysis on certain shareholder meetings, the Advisor has elected to receive research reports for certain meetings, as indicated below, from Glass Lewis and Ownership Matters in addition to Institutional Shareholder Services, Inc. (“ISS”) and may in certain circumstances purchase research from other third parties as well.

Specifically, if available, the Advisor may obtain research from Glass Lewis or other third parties in addition to ISS for shareholder meetings in the following circumstances: (1) where the Advisor’s clients have a significant aggregate holding in the issuer and the meeting agenda contains proxies concerning: Anti-takeover Defenses or Voting Related Issues, Mergers and Acquisitions or Reorganizations or Restructurings, Capital Structure Issues, Compensation Issues or a proxy contest; or (2) where the Advisor in its discretion, has deemed that additional research is warranted. The Advisor may purchase research from Ownership Matters with respect to the proxies of certain large Australian Companies.

Where research is obtained from Glass Lewis in accordance with these Guidelines, the Advisor will first review the research reports obtained from ISS and Glass Lewis. If the recommendations contained in the research reports from ISS and Glass Lewis are the same, the Advisor will vote accordingly. If the recommendations contained in the research reports from ISS and Glass Lewis are inconsistent, the Advisor will vote in accordance with the Corporate Governance Committee’s (or its designee’s) determination considering the principle of preserving shareholder value.

1. General Policies

Financial Results/Director and Auditor Reports

Vote FOR approval of financial statements and director and auditor reports, unless:

- There are concerns about the accounts presented or audit procedures used; or
- The company is not responsive to shareholder questions about specific items that should be publicly disclosed.

Appointment of Auditors and Auditor Compensation

Vote FOR proposals to ratify auditors and proposals authorizing the board to fix auditor fees, unless:

- There are serious concerns about the accounts presented or the audit procedures used;
- The auditors are being changed without explanation; or
- non-audit-related fees are substantial or are routinely in excess of standard annual audit-related fees.

Vote AGAINST the appointment of external auditors if they have previously served the company in an executive capacity or can otherwise be considered affiliated with the company.

Appointment of Internal Statutory Auditors

Vote FOR the appointment or (re)election of statutory auditors, unless:

- There are serious concerns about the statutory reports presented or the audit procedures used;
- Questions exist concerning any of the statutory auditors being appointed; or
- The auditors have previously served the company in an executive capacity or can otherwise be considered affiliated with the company.

Allocation of Income

Vote FOR approval of the allocation of income, unless:

- The dividend payout ratio has been consistently below 30 percent without adequate explanation; or
- The payout is excessive given the company's financial position.

Stock (Scrip) Dividend Alternative

Vote FOR most stock (scrip) dividend proposals.

Vote AGAINST proposals that do not allow for a cash option unless management demonstrates that the cash option is harmful to shareholder value.

Amendments to Articles of Association

Vote amendments to the articles of association on a CASE-BY-CASE basis.

Change in Company Fiscal Term

Vote FOR resolutions to change a company's fiscal term unless a company's motivation for the change is to postpone its AGM.

Lower Disclosure Threshold for Stock Ownership

Vote AGAINST resolutions to lower the stock ownership disclosure threshold below 5 percent unless specific reasons exist to implement a lower threshold.

Amend Quorum Requirements

Vote proposals to amend quorum requirements for shareholder meetings on a CASE-BY-CASE basis.

Transact Other Business

Vote AGAINST other business when it appears as a voting item.

2. BOARD OF DIRECTORS

Non-Contested Director Elections

Vote FOR management nominees in the election of directors, unless:

- Adequate disclosure has not been provided in a timely manner;
- There are clear concerns over questionable finances or restatements;
- There have been questionable transactions with conflicts of interest;
- There are any records of abuses against minority shareholder interests; or
- The board fails to meet minimum corporate governance standards.

Vote AGAINST the election or reelection of any and all director nominees when the names of the nominees are not available at the time the ISS analysis is written and therefore no research is provided on the nominee.

Vote FOR individual nominees unless there are specific concerns about the individual, such as criminal wrongdoing or breach of fiduciary responsibilities.

Vote AGAINST individual directors if repeated absences at board meetings have not been explained (in countries where this information is disclosed).

Vote FOR employee and/or labor representatives if they sit on either the audit or compensation committee and are required by law to be on those committees. Vote AGAINST employee and/or labor representatives if they sit on either the audit or compensation committee, if they are not required to be on those committees.

Vote on a CASE-BY-CASE basis for contested elections of directors, e.g. the election of shareholder nominees or the dismissal of incumbent directors, determining which directors are best suited to add value for shareholders.

ISS Classification of Directors - International Policy

Executive Director

- Employee or executive of the company;
- Any director who is classified as a non-executive, but receives salary, fees, bonus, and/or other benefits that are in line with the highest-paid executives of the company.

Non-Independent Non-Executive Director (NED)

- Any director who is attested by the board to be a non-independent NED;
- Any director specifically designated as a representative of a significant shareholder of the company;
- Any director who is also an employee or executive of a significant shareholder of the company;
- Beneficial owner (direct or indirect) of at least 10% of the company's stock, either in economic terms or in voting rights (this may be aggregated if voting power is distributed among more than one member of a defined group, e.g., members of a family that beneficially own less than 10% individually, but collectively own more than 10%), unless market best practice dictates a lower ownership and/or disclosure threshold (and in other special market-specific circumstances);
- Government representative;
- Currently provides (or a relative^[1] provides) professional services^[2] to the company, to an affiliate of the company, or to an individual officer of the company or of one of its affiliates in excess of \$10,000 per year;
- Represents customer, supplier, creditor, banker, or other entity with which the company maintains a transactional/commercial relationship (unless the company discloses information to apply a materiality test^[3]);
- Any director who has conflicting or cross-directorships with executive directors or the chairman of the company;

- Relative^[1] of a current or former executive of the company or its affiliates;
- A new appointee elected other than by a formal process through the General Meeting (such as a contractual appointment by a substantial shareholder);
- Founder/co-founder/member of founding family but not currently an employee;
- Former executive (5 year cooling off period);
- Years of service will NOT be a determining factor unless it is recommended best practice in a market:
 - o 9 years (from the date of election) in the United Kingdom and Ireland;
 - o 12 years in European markets;
 - o 7 years in Russia.

Independent NED

- Not classified as non-independent by ISS (see above);
- No material^[4] connection, either directly or indirectly, to the company other than a board seat.

Employee Representative

- Represents employees or employee shareholders of the company (classified as “employee representative” but considered a non-independent NED).

Footnotes:

[1] “Relative” follows the SEV’s proposed definition of “immediate family members” which covers spouses, parents, children, step-parents, step-children, siblings, in-laws, and any person (other than a tenant or employee) sharing the household of any director, nominee for director, executive officer, or significant shareholder of the company.

[2] Professional services can be characterized as advisory in nature and generally include the following: investment banking/financial advisory services; commercial banking (beyond deposit services); investment services; insurance services; accounting/audit services; consulting services; marketing services; and legal services. The case of participation in a banking syndicate by a non-lead bank should be considered a transaction (and hence subject to the associated materiality test) rather than a professional relationship.

[3] If the company makes or receives annual payments exceeding the greater of \$200,000 or 5 percent of the recipient's gross revenues. (The recipient is the party receiving the financial proceeds from the transaction.)

[4] For purposes of ISS' director independence classification, “material” will be defined as a standard of relationship (financial, personal or otherwise) that a reasonable person might conclude could potentially influence one's objectivity in the boardroom in a manner that would have a meaningful impact on an individual's ability to satisfy requisite fiduciary standards on behalf of shareholders.

Contested Director Elections

For shareholder nominees, ISS places the persuasive burden on the nominee or the proposing shareholder to prove that they are better suited to serve on the board than management's nominees. Serious consideration of shareholder nominees will be given only if there are clear and compelling reasons for the nominee to join the board. These nominees must also demonstrate a clear ability to contribute positively to board deliberations; some nominees may have hidden or narrow agendas and may unnecessarily contribute to divisiveness among directors.

The major decision factors are:

- Company performance relative to its peers;
- Strategy of the incumbents versus the dissidents;
- Independence of directors/nominees;
- Experience and skills of board candidates;
- Governance profile of the company;
- Evidence of management entrenchment;
- Responsiveness to shareholders;
- Whether a takeover offer has been rebuffed.

When analyzing a contested election of directors, ISS will generally focus on two central questions: (1) Have the proponents proved that board change is warranted? And if so, (2) Are the proponent board nominees likely to effect positive change (i.e., maximize long-term shareholder value)?

Voting on Directors for Egregious Actions

Under extraordinary circumstances, vote AGAINST or WITHHOLD from directors individually, on a committee, or the entire board, due to:

- Material failures of governance, stewardship, risk oversight, or fiduciary responsibilities at the company;
- Failure to replace management as appropriate; or
- Egregious actions related to the director(s)' service on other boards that raise substantial doubt about his or her ability to effectively oversee management and serve the best interests of shareholders at any company.

Discharge of Board and Management

Vote for the discharge of directors, including members of the management board and/or supervisory board, *unless* there is reliable information about significant and compelling concerns that the board is not fulfilling its fiduciary duties warranted on a CASE-BY-CASE basis by:

- A lack of oversight or actions by board members which invoke shareholder distrust related to malfeasance or poor supervision, such as operating in private or company interest rather than in shareholder interest
- Any legal issues (e.g. civil/criminal) aiming to hold the board responsible for breach of trust in the past or related to currently alleged action yet to be confirmed (and not only in the fiscal year in question) such as price fixing, insider trading, bribery, fraud, and other illegal actions
- Other egregious governance issues where shareholders will bring legal action against the company or its directors

For markets which do not routinely request discharge resolutions (e.g. common law countries or markets where discharge is not mandatory), analysts may voice concern in other appropriate agenda items, such as approval of the annual accounts or other relevant resolutions, to enable shareholders to express discontent with the board.

Director, Officer, and Auditor Indemnification and Liability Provisions

Vote proposals seeking indemnification and liability protection for directors and officers on a CASE-BY-CASE basis.

Vote AGAINST proposals to indemnify external auditors.

Board Structure

Vote FOR routine proposals to fix board size.

Vote AGAINST the introduction of classified boards and mandatory retirement ages for directors.

Vote AGAINST proposals to alter board structure or size in the context of a fight for control of the company or the board.

3. CAPITAL STRUCTURE

Share Issuance Requests

General Issuances

Vote FOR issuance authorities with pre-emptive rights to a maximum of 100 percent over currently issued capital and as long as the share issuance authorities' periods are clearly disclosed (or implied by the application of a legal maximum duration) and in line with market-specific practices and/or recommended guidelines.

Vote FOR issuance authorities without pre-emptive rights to a maximum of 20 percent (or a lower limit if local market best practice recommendations provide) of currently issued capital as long as the share issuance authorities' periods are clearly disclosed (or implied by the application of a legal maximum duration) and in line with market-specific practices and/or recommended guidelines

Specific Issuances

Vote on a CASE-BY-CASE basis on all requests, with or without preemptive rights.

Increases in Authorized Capital

Vote FOR non-specific proposals to increase authorized capital up to 100 percent over the current authorization unless the increase would leave the company with less than 30 percent of its new authorization outstanding.

Vote FOR specific proposals to increase authorized capital to any amount, unless:

- The specific purpose of the increase (such as a share-based acquisition or merger) does not meet ISS guidelines for the purpose being proposed; or
- The increase would leave the company with less than 30 percent of its new authorization outstanding after adjusting for all proposed issuances.

Vote AGAINST proposals to adopt unlimited capital authorizations.

Reduction of Capital

Vote FOR proposals to reduce capital for routine accounting purposes unless the terms are unfavorable to shareholders.

Vote proposals to reduce capital in connection with corporate restructuring on a CASE-BY-CASE basis.

Capital Structures

Vote FOR resolutions that seek to maintain or convert to a one-share, one-vote capital structure.

Vote AGAINST requests for the creation or continuation of dual-class capital structures or the creation of new or additional super voting shares.

Preferred Stock

Vote FOR the creation of a new class of preferred stock or for issuances of preferred stock up to 50 percent of issued capital unless the terms of the preferred stock would adversely affect the rights of existing shareholders.

Vote FOR the creation/issuance of convertible preferred stock as long as the maximum number of common shares that could be issued upon conversion meets ISS guidelines on equity issuance requests.

Vote AGAINST the creation of a new class of preference shares that would carry superior voting rights to the common shares.

Vote AGAINST the creation of blank check preferred stock unless the board clearly states that the authorization will not be used to thwart a takeover bid.

Vote proposals to increase blank check preferred authorizations on a CASE-BY-CASE basis.

Debt Issuance Requests

Vote non-convertible debt issuance requests on a CASE-BY-CASE basis, with or without preemptive rights.

Vote FOR the creation/issuance of convertible debt instruments as long as the maximum number of common shares that could be issued upon conversion meets ISS guidelines on equity issuance requests.

Vote FOR proposals to restructure existing debt arrangements unless the terms of the restructuring would adversely affect the rights of shareholders.

Pledging of Assets for Debt

Vote proposals to approve the pledging of assets for debt on a CASE-BY-CASE basis.

Increase in Borrowing Powers

Vote proposals to approve increases in a company's borrowing powers on a CASE-BY-CASE basis.

Share Repurchase Plans

Generally vote FOR share repurchase programs/market authorities, *provided that* the proposal meets the following parameters:

- Maximum Volume: 10 percent for market repurchase within any single authority and 10 percent of outstanding shares to be kept in treasury (“on the shelf”); and
- Duration does not exceed 18 months.

ISS will recommend AGAINST any proposal where:

- The repurchase can be used for takeover defenses;
- There is clear evidence of abuse;
- There is no safeguard against selective buybacks; and/or

- Pricing provisions and safeguards are deemed to be unreasonable in light of market practice.

ISS may support share repurchase plans in excess of 10 percent volume under exceptional circumstances, such as one-off company specific events (e.g. capital re-structuring). Such proposals will be assessed CASE-BY-CASE based on merits, which should be clearly disclosed in the annual report, provided that following conditions are met:

- The overall balance of the proposed plan seems to be clearly in shareholders' interests;
- The plan still respects the 10 percent maximum of shares to be kept in treasury.

Reissuance of Repurchased Shares

Vote FOR requests to reissue any repurchased shares unless there is clear evidence of abuse of this authority in the past.

Capitalization of Reserves for Bonus Issues/Increase in Par Value

Vote FOR requests to capitalize reserves for bonus issues of shares or to increase par value.

4. COMPENSATION

Compensation Plans

Vote compensation plans on a CASE-BY-CASE basis.

Director Compensation

Vote FOR proposals to award cash fees to non-executive directors unless the amounts are excessive relative to other companies in the country or industry.

Vote non-executive director compensation proposals that include both cash and share-based components on a CASE-BY-CASE basis.

Vote proposals that bundle compensation for both non-executive and executive directors into a single resolution on a CASE-BY-CASE basis.

Vote AGAINST proposals to introduce retirement benefits for non-executive directors.

5. OTHER ITEMS

Reorganizations/Restructurings

Vote reorganizations and restructurings on a CASE-BY-CASE basis.

Mergers and Acquisitions

Vote CASE-BY-CASE on mergers and acquisitions taking into account the following:

For every M&A analysis, ISS reviews publicly available information as of the date of the report and evaluates the merits and drawbacks of the proposed transaction, balancing various and sometimes countervailing factors including:

- Valuation - Is the value to be received by the target shareholders (or paid by the acquirer) reasonable? While the fairness opinion may provide an initial starting point for assessing valuation reasonableness, ISS places emphasis on the offer premium, market reaction, and strategic rationale.
- Market reaction - How has the market responded to the proposed deal? A negative market reaction will cause ISS to scrutinize a deal more closely.
- Strategic rationale - Does the deal make sense strategically? From where is the value derived? Cost and revenue synergies should not be overly aggressive or optimistic, but reasonably achievable. Management should also have a favorable track record of successful integration of historical acquisitions.
- Conflicts of interest - Are insiders benefiting from the transaction disproportionately and inappropriately as compared to non-insider shareholders? ISS will consider whether any special interests may have influenced these directors and officers to support or recommend the merger.
- Governance - Will the combined company have a better or worse governance profile than the current governance profiles of the respective parties to the transaction? If the governance profile is to change for the worse, the burden is on the company to prove that other issues (such as valuation) outweigh any deterioration in governance.

Vote AGAINST if the companies do not provide sufficient information upon request to allow shareholders to make an informed voting decision.

Mandatory Takeover Bid Waivers

Vote proposals to waive mandatory takeover bid requirements on a CASE-BY-CASE basis.

Reincorporation Proposals

Vote reincorporation proposals on a CASE-BY-CASE basis.

Expansion of Business Activities

Vote FOR resolutions to expand business activities unless the new business takes the company into risky areas.

Related-Party Transactions

Vote related-party transactions on a CASE-BY-CASE basis..

Antitakeover Mechanisms

Vote AGAINST all antitakeover proposals unless they are structured in such a way that they give shareholders the ultimate decision on any proposal or offer.

Shareholder Proposals

Vote all shareholder proposals on a CASE-BY-CASE basis.

Vote FOR proposals that would improve the company's corporate governance or business profile at a reasonable cost.

Vote AGAINST proposals that limit the company's business activities or capabilities or result in significant costs being incurred with little or no benefit.

Corporate Social Responsibility (CSR) Issues

Generally vote FOR the management's recommendation on shareholder proposals involving CSR Issues. When evaluating social and environmental shareholder proposals, Dimensional considers the most important factor to be whether adoption of the proposal is likely to enhance or protect shareholder value.

With respect to environmentally screened portfolios, the Advisor will generally vote on shareholder proposals involving environmental issues in accordance with the following ISS International Proxy Voting Guidelines:

Generally vote CASE-BY-CASE, taking into consideration whether implementation of the proposal is likely to enhance or protect shareholder value, and in addition the following will be considered:

- If the issues presented in the proposal are more appropriately or effectively dealt with through legislation or government regulation;
- If the company has already responded in an appropriate and sufficient manner to the issue(s) raised in the proposal;
- Whether the proposal's request is unduly burdensome (scope, timeframe, or cost) or overly prescriptive;
- The company's approach compared with any industry standard practices for addressing the issue(s) raised by the proposal;
- If the proposal requests increased disclosure or greater transparency, whether or not reasonable and sufficient information is currently available to shareholders from the company or from other publicly available sources; and
- If the proposal requests increased disclosure or greater transparency, whether or not implementation would reveal proprietary or confidential information that could place the company at a competitive disadvantage.

Country of Incorporation vs. Country of Listing-Application of Policy

In general, country of incorporation will be the basis for policy application. However, ISS will generally apply its US policies to the extent possible at issuers that file DEF 14As, 10-K annual and 10-Q quarterly reports and are thus considered domestic issuers by the U.S. Securities and Exchange Commission (SEC).

Foreign Private Issuers Listed on U.S. Exchanges

Companies that are incorporated outside of the U.S. and listed solely on U.S. exchanges, where they qualify as Foreign Private Issuers, will be subject to the following policy:

Vote AGAINST (or WITHHOLD from) non-independent director nominees at companies which fail to meet the following criteria: a majority-independent board, and the presence of an audit, a compensation, and a nomination committee, each of which is entirely composed of independent directors.

Where the design and disclosure levels of equity compensation plans are comparable to those seen at U.S. companies, U.S. compensation policy will be used to evaluate the compensation plan proposals. In all other cases, equity compensation plans will be evaluated according to ISS' International Proxy Voting Guidelines.

All other voting items will be evaluated using ISS' International Proxy Voting Guidelines.

Foreign private issuers ("FPIs") are defined as companies whose business is administered principally outside the U.S., with more than 50 percent of assets located outside the U.S.; a majority of whose directors/officers are not U.S. citizens or residents; and a majority of whose outstanding voting shares are held by non-residents of the U.S.

STATEMENT OF ADDITIONAL INFORMATION

May 1, 2014

This Statement of Additional Information (SAI), which is not a prospectus, supplements and should be read in conjunction with the current prospectus of each fund listed below, as such prospectuses may be revised from time to time. To obtain a copy of a fund's prospectus, please call your financial adviser, or write to the fund at 144 Glenn Curtiss Boulevard, Uniondale, New York 11556-0144, visit www.dreyfus.com, or call 1-800-DREYFUS (inside the U.S. only).

Fund shares are offered only to variable annuity and variable life insurance separate accounts established by Participating Insurance Companies to fund the Policies. Individuals may not purchase shares of any fund directly from the fund. The Policies are described in the separate prospectuses issued by the Participating Insurance Companies.

The most recent annual report and semi-annual report to shareholders for each fund are separate documents supplied with this SAI, and the financial statements, accompanying notes and report of the independent registered public accounting firm appearing in the annual report are incorporated by reference into this SAI. All classes of a fund have the same fiscal year end and prospectus date. Capitalized but undefined terms used in this SAI are defined in the Glossary at the end of this SAI.

¹ Each of the board members serves on the board's audit, nominating, litigation and, with the exception of Mr. DiMartino, compensation committees.

The following table shows the year each board member joined each fund's board.

Fund	Joseph S. DiMartino	Peggy C. Davis	David P. Feldman	Ehud Houminer	Lynn Martin	Robin A. Melvin	Martin Peretz
DSIF	1996	2006	1996	1996	2012	2012	2006
DVIF	2006	2006	2006	2006	2012	2012	1991

Each board member has been a Dreyfus Family of Funds board member for over fifteen years. Additional information about each board member follows (supplementing the information provided in the table above) that

describes some of the specific experiences, qualifications, attributes or skills that each board member possesses which the board believes has prepared them to be effective board members. The board believes that the significance of each board member's experience, qualifications, attributes or skills is an individual matter (meaning that experience that is important for one board member may not have the same value for another) and that these factors are best evaluated at the board level, with no single board member, or particular factor, being indicative of board effectiveness. However, the board believes that board members need to have the ability to critically review, evaluate, question and discuss information provided to them, and to interact effectively with fund management, service providers and counsel, in order to exercise effective business judgment in the performance of their duties; the board believes that its members satisfy this standard. Experience relevant to having this ability may be achieved through a board member's educational background; business, professional training or practice (e.g., medicine, accounting or law), public service or academic positions; experience from service as a board member (including the board for the funds) or as an executive of investment funds, public companies or significant private or not-for-profit entities or other organizations; and/or other life experiences. The charter for the board's nominating committee contains certain other factors considered by the committee in identifying and evaluating potential board member nominees. To assist them in evaluating matters under federal and state law, the board members are counseled by their independent legal counsel, who participates in board meetings and interacts with the Manager, and also may benefit from information provided by the Manager's counsel; counsel to the funds and to the board have significant experience advising funds and fund board members. The board and its committees have the ability to engage other experts as appropriate. The board evaluates its performance on an annual basis.

- Joseph S. DiMartino – Mr. DiMartino has been the Chairman of the Board of the funds in the Dreyfus Family of Funds for over 15 years. From 1971 through 1994, Mr. DiMartino served in various roles as an employee of Dreyfus (prior to its acquisition by a predecessor of BNY Mellon in August 1994 and related management changes), including portfolio manager, President, Chief Operating Officer and a director. He ceased being an employee or director of Dreyfus by the end of 1994. From July 1995 to November 1997, Mr. DiMartino served as Chairman of the Board of The Noel Group, a public buyout firm; in that capacity, he helped manage, acquire, take public and liquidate a number of operating companies. From 1986 to 2010, Mr. DiMartino served as a Director of the Muscular Dystrophy Association.
- Peggy C. Davis – Ms. Davis currently serves as the John S. R. Shad Professor of Lawyering and Ethics at New York University School of Law as a writer and teacher in the fields of evidence, constitutional theory, family law, social sciences and the law, legal process and professional methodology and training. Prior to joining the university's faculty in 1983, Ms. Davis served as a Judge of the Family Court of the State of New York. Before her appointment to the bench, she practiced law for ten years in both the commercial and public interest sectors. Ms. Davis also has served as Chair of the Board of the Russell Sage Foundation.
- David P. Feldman – Mr. Feldman is the former Chairman and Chief Executive Officer of AT&T Investment Management Corp., from which he retired in 1997, where he was responsible for \$70 billion in pension assets. Mr. Feldman has served as Chairman of the Financial Executives Institute's Committee on Investment of Employee Benefits Assets. Mr. Feldman currently serves as a member of the Pension Managers Advisory Committee of the NYSE.
- Ehud Houminer – Mr. Houminer currently serves on Columbia Business School's Board of Overseers. Prior to his association with Columbia Business School beginning in 1991, Mr. Houminer held various senior financial, strategic and management positions at Philip Morris Companies Inc., including serving as Senior Corporate Vice President for Corporate Planning, and as President and Chief Executive Officer of Philip Morris USA, Inc. (now part of Altria Group, Inc.). Mr. Houminer is Chairman of the Columbia Business School Board and a Trustee of Ben Gurion University.
- Lynn Martin – Ms. Martin served in the U.S. House of Representatives from 1981 to 1991, the Illinois Senate from 1979 to 1980, and the Illinois House of Representatives from 1977 to 1979. Ms. Martin also served as Co-Chairperson of then-Vice President George H.W. Bush's 1988 presidential campaign, and from 1991 to 1993 served as U.S. Secretary of Labor under President Bush. After her tenure in politics, Ms. Martin was a professor at the Kellogg School of Management, Northwestern University, and also a fellow at Harvard University's Kennedy School of Government. She also has served as an Advisor of Deloitte & Touche LLP and

as Chair of its Council for the Advancement of Women. Ms. Martin serves on the Chicago Council on Global Affairs, Coca-Cola International Advisory Council and Deutsche Bank Advisory Council.

- **Robin A. Melvin** – Ms. Melvin currently serves as a Board member of Illinois Mentoring Partnership, a non-profit organization dedicated to increasing the quantity and quality of mentoring services in Illinois. Ms. Melvin served as a Director of the Boisi Family Foundation, a private family foundation that supports organizations serving the needs of youth from disadvantaged circumstances, from 1995 to 2012. In that role she also managed the Boisi Family Office, providing the primary interface with all investment managers, legal advisors and other service providers to the family. She has also served in various roles with MENTOR, a national non-profit youth mentoring advocacy organization, including Executive Director of the New York City affiliate, Vice President of the national affiliate network, Vice President of Development, and, immediately prior to her departure, Senior Vice President in charge of strategy. Prior to that, Ms. Melvin served as an investment banker with Goldman Sachs Group, Inc.
- **Dr. Martin Peretz** – Dr. Peretz is the Editor-in-Chief Emeritus of The New Republic and was Editor-in-Chief from 1974 until 2010. Dr. Peretz is also the co-founder and a director of TheStreet.com. Previously, Dr. Peretz was a member of the faculty of Harvard University from 1966 through 2002. He currently serves on the boards of a number of significant non-profit organizations.

Committee Meetings

The boards' audit, nominating, compensation, litigation and pricing committees met during the funds' last fiscal years as indicated below:

Fund	Audit	Nominating	Compensation	Litigation	Pricing
DSIF	5	0	0	0	0
DVIF	5	0	0	0	0

Board Members' and Officers' Fund Share Ownership

The table below indicates the dollar range of each board member's ownership of fund shares and shares of other funds in the Dreyfus Family of Funds for which he or she is a board member, in each case as of December 31, 2013.

Fund	Joseph S. DiMartino	Peggy C. Davis	David P. Feldman	Ehud Houminer	Lynn Martin	Robin A. Melvin	Martin Peretz
DSIF	None	None	None	None	None	None	None
AP	None	None	None	None	None	None	None
GIP	None	None	None	None	None	None	None
IEP	None	None	None	None	None	None	None
IVP	None	None	None	None	None	None	None
MMP	None	None	None	None	None	None	None
OSCP	None	None	None	None	None	None	None
QBP	None	None	None	None	None	None	None
Aggregate holdings of funds in the Dreyfus Family of Funds for which responsible as a board member	Over \$100,000	\$50,001 - \$100,000	Over \$100,000	Over \$100,000	\$50,001- \$100,000	Over \$100,000	\$50,001 - \$100,000

Board members and officers, as a group, owned less than 1% of each class of each fund's voting securities outstanding on April 2, 2014.

As of December 31, 2013, none of the board members or their immediate family members owned securities of the Manager, any Sub-Advisers, the Distributor or any person (other than a registered investment company) directly or indirectly controlling, controlled by or under common control with the Manager, any Sub-Advisers or the Distributor.

Board Members' Compensation

Annual retainer fees and meeting attendance fees are allocated among the funds on the basis of net assets, with the Chairman of the Boards, Joseph S. DiMartino, receiving an additional 25% of such compensation. The funds reimburse board members for their expenses. The funds do not have a bonus, pension, profit-sharing or retirement plan. Each emeritus board member is entitled to receive an annual retainer of one-half the amount paid as a retainer at the time the board member became emeritus and a per meeting attended fee of one-half the amount paid to board members.

The aggregate amount of fees and expenses* received from the funds by each current board member for the funds' last fiscal years, and by all funds in the Dreyfus Family of Funds for which such person was a board member during 2013, were as follows:

Fund	Joseph S. DiMartino	Peggy C. Davis	David P. Feldman	Ehud Houminer	Lynn Martin	Robin A. Melvin	Martin Peretz
DSIF	\$21,405	\$17,124	\$19,011	\$14,932	\$17,124	\$17,124	\$15,981
DVIF	\$14,040	\$11,232	\$12,469	\$6,787	\$11,232	\$11,232	\$10,480
Total compensation from the funds and fund complex (***)	\$1,084,688 (154)	\$352,000 (64)	\$222,000 (47)	\$270,500 (71)	\$200,000 (47)	\$511,000 (98)	\$187,000 (47)

Fund	Emeritus Board Members					
	James F. Henry	Rosalind G. Jacobs	Paul A. Marks	Daniel Rose	Philip L. Toia**	Sander Vanocur
DSIF	\$6,483	\$572	\$4,820	\$2,222	\$11,752	\$2,211
DVIF	\$4,248	\$9,758	\$3,166	\$1,464	\$7,771	\$1,451
Total compensation from the funds and fund complex (***)	\$68,500 (47)	\$67,000 (64)	\$49,000 (47)	\$96,250 (64)	\$174,390 (57)	\$90,250 (64)

* Amounts shown do not include the cost of office space, secretarial services and health benefits for the Chairman of the Boards and expenses reimbursed to board members for attending board meetings.

** Emeritus board member since May 8, 2013.

*** Represents the number of separate portfolios comprising the investment companies in the fund complex, including the funds, for which the board member served in 2013.

RATINGS OF CORPORATE DEBT SECURITIES

The average distribution of investments (at value) in corporate debt securities (excluding any preferred stock, convertible preferred stock or convertible bonds) by ratings for the last fiscal year, computed on a monthly basis, for each fund that focuses its investments in corporate debt securities was as follows:

Fitch	Moody's	S&P	QBP
AAA	Aaa	AAA	82.1%
AA	Aa	AA	5.3%
A	A	A	12.7%
BBB	Baa	BBB	27.3%
BB	Ba	BB	4.4%
B	B	B	0.9%
CCC	Caa	CCC	-
Not Rated	Not Rated	Not Rated	.2%*
Total			132.9%**

*Those securities which are not rated have been determined by the Manager to be of comparable quality to securities in the following rating categories: BBB/Baa (.2%).

**The fund also held non-convertible preferred stocks rated AA/Aa (0.3%).

SECURITIES OF REGULAR BROKERS OR DEALERS

A fund may acquire securities issued by one or more of its "regular brokers or dealers," as defined in Rule 10b-1 under the 1940 Act. Rule 10b-1 provides that a "regular broker or dealer" is one of the ten brokers or dealers that, during the fund's last fiscal year: (1) received the greatest dollar amount of brokerage commissions from participating, either directly or indirectly, in the fund's portfolio transactions, (2) engaged as principal in the largest dollar amount of the fund's portfolio transactions or (3) sold the largest dollar amount of the fund's securities. The following is a list of the issuers of the securities, and the aggregate value per issuer, of a fund's regular brokers or dealers held by such fund as of the end of its last fiscal year:

Fund	Regular Broker or Dealer	Aggregate Value Per Issuer
DSIF	J.P. Morgan Securities LLC	\$26,880,000
	Bank of America NA	\$20,299,000
	Citigroup Inc.	\$19,318,000
	Goldman, Sachs & Co.	\$9,117,000
	Morgan Stanley	\$5,290,000
AP	J.P. Morgan Securities LLC	\$15,632,000
GIP	J.P. Morgan Securities LLC	\$2,176,000
	Goldman, Sachs & Co.	\$768,000
	Citigroup Inc.	\$1,013,000
	Bank of America NA	\$673,000
	Morgan Stanley	\$493,000
IEP	Barclays Capital Inc.	\$771,000
	Deutsche Bank Securities Inc.	\$562,000
IVP	HSBC Securities (USA) Inc.	\$1,855,000
	UBS Securities LLC	\$744,000
	Deutsche Bank Securities Inc.	\$1,132,000
	Barclays Capital Inc.	\$766,000
	Credit Suisse (USA) Inc.	\$805,000

	Barclays Capital Inc.	\$2,000,000
	Credit Agricole Cheuvreux North American Inc.	\$4,000,000
	Citigroup Inc.	\$5,000,000
OSCP	N/A	
QBP	Citigroup Inc.	\$969,000
	J.P. Morgan Securities LLC	\$946,000
	RBS Securities Inc.	\$1,149,000
	Morgan Stanley	\$876,000
	Goldman, Sachs & Co.	\$759,000
	Bank of America NA	\$538,000
	HSBC Securities (USA) Inc.	\$345,000
	Credit Suisse (USA) Inc.	\$139,000

COMMISSIONS

The aggregate amounts of commissions paid by each fund for brokerage commissions and spreads or concessions on principal transactions (none of which were paid to affiliates) for its last three fiscal years were as follows:

Fund	2013 Fiscal Year		2012 Fiscal Year		2011 Fiscal Year	
	Commissions	Spreads/ Concessions	Commissions	Spreads/ Concessions	Commissions	Spreads/ Concessions
DSIF	\$34,779	\$718	\$30,845	\$0	\$30,532	\$0
AP	\$71,061	\$0	\$33,262	\$0	\$37,771	\$0
GIP	\$43,237	\$2,751	\$52,582	\$1,227	\$108,690	\$13,185

Fund	2013 Fiscal Year		2012 Fiscal Year		2011 Fiscal Year	
	Commissions	Spreads/ Concessions	Commissions	Spreads/ Concessions	Commissions	Spreads/ Concessions
IEP	\$41,865	\$0	\$50,211	\$0	\$80,286	\$0
IVP	\$100,944	\$0	\$86,147	\$0	\$125,412	\$0
MMP	--	--	--	--	--	--
OSCP	\$493,126	\$175,196	\$420,890	\$141,730	\$683,239	\$417,877
QBP	\$1,586	\$0	\$785	\$0	\$3,859	\$0

The following table provides an explanation of any material difference in the commissions or spreads/concessions paid by a fund in either of the two fiscal years preceding the last fiscal year.

Fund	Reason for Any Material Difference in Commissions or Spreads/Concessions
DSIF	N/A
AP	The fund's assets and portfolio turnover increased in 2013.
GIP	The fund's portfolio turnover was higher in 2011 than in 2012 and 2013.
IEP	The fund experienced a significant decline in assets during 2011.
IVP	N/A
MMP	N/A
OSCP	The fund's portfolio turnover was higher in 2011 than in 2012 and 2013. In addition, the fund experienced a significant decline in assets during 2011.
QBP	N/A

The aggregate amount of transactions during each fund's last fiscal year in securities effected on an agency basis through a broker-dealer for, among other things, research services and the commissions and concessions related to such transactions were as follows:

Fund	Transactions	Related Commissions/Concessions
DSIF	N/A	N/A
AP	\$139,638,658	\$70,147
GIP	\$65,583,571	\$36,372
IEP	\$23,430,728	\$33,986
IVP	\$52,825,881	\$80,854
MMP	N/A	N/A
OSCP	\$170,497,863	\$318,689
QBP	N/A	N/A

PORTFOLIO TURNOVER VARIATION (not applicable to money market funds)

Each fund's portfolio turnover rate for up to five fiscal years is shown in the prospectus. The following table provides an explanation of any significant variation in a fund's portfolio turnover rates over the last two fiscal years (or any anticipated variation in the portfolio turnover rate from that reported for the last fiscal year).

Fund	Reason for Any Significant Portfolio Turnover Rate Variation, or Anticipated Variation
DSIF	N/A
AP	N/A
GIP	N/A
IEP	N/A
IVP	N/A

Fund	Reason for Any Significant Portfolio Turnover Rate Variation, or Anticipated Variation
OSCP	N/A
QBP	N/A

SHARE OWNERSHIP

The following persons are known by each fund to own of record 5% or more of the indicated class of the fund's outstanding voting securities. A shareholder who beneficially owns, directly or indirectly, more than 25% of a fund's voting securities may be deemed to "control" (as defined in the 1940 Act) the fund. All information for a fund is as of the date indicated for the first listed class.

INVESTMENTS, INVESTMENT TECHNIQUES AND RISKS

The following charts, which supplement and should be read together with the information in the prospectus, indicate some of the specific investments and investment techniques applicable to your fund. Additional policies and restrictions are described in the prospectus and below in the next section (see "Investment Restrictions"). *See "Additional Information About Investments, Investment Techniques and Risks" in Part III of this SAI for more information, including important risk disclosure, about the investments and investment techniques applicable to your fund.*

Funds other than the Money Market Portfolio

Fund	Equity Securities¹	IPOs	U.S. Government Securities²	Corporate Debt Securities	High Yield and Lower-Rated Securities³	Zero Coupon, Pay-in-Kind and Step-Up Securities	Inflation-Indexed Securities (other than TIPS)
Appreciation Portfolio	✓	✓	✓	✓		✓	
Dreyfus Stock Index Fund	✓		✓				
Growth and Income Portfolio	✓	✓		✓	✓	✓	
International Equity Portfolio	✓	✓		✓		✓	
International Value Portfolio	✓	✓		✓		✓	
Opportunistic Small Cap Portfolio	✓	✓		✓	✓	✓	
Quality Bond Portfolio	✓		✓	✓	✓	✓	✓

¹ For each of Appreciation Portfolio, Growth and Income Portfolio, International Equity Portfolio, International Value Portfolio and Opportunistic Small Cap Portfolio, (1) includes common and preferred stock, convertible securities and warrants and (2) each fund is limited to investing 5% of its net assets in warrants (2% of net assets in the case of Appreciation Portfolio and Opportunistic Small Cap Portfolio), except that this limitation does not apply to warrants purchased by a fund that are sold in units with, or attached to, other securities. Included in the limitations on warrants, but not to exceed 2% of the value of a fund's net assets, may be warrants which are not listed on the NYSE or the NYSE Amex.

For Quality Bond Portfolio, includes common and preferred stock and convertible securities. Quality Bond Portfolio may only invest in common stock to a limited extent. From time to time, the fund may hold common stock sold in units with, or attached to, debt securities purchased by the fund. In connection with its investments in corporate debt securities, or restructuring of investments owned by the fund, the fund may receive warrants or other non-income producing equity securities. The fund may retain such securities,

including equity securities received upon conversion of convertible securities, until the Adviser determines it is appropriate in light of current market conditions for the fund to dispose of such securities.

- ² For Appreciation Portfolio, Growth and Income Portfolio, International Equity Portfolio, International Value Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio, see "Money Market Instruments" below.
- ³ Quality Bond Portfolio may invest in high yield, lower-rated debt securities rated as low as B by a Rating Agency and Growth and Income Portfolio may invest up to 35% of the value of its net assets in high yield, lower-rated convertible debt securities rated as low as Caa by Moody's or CCC by S&P or Fitch.

Fund	Variable and Floating Rate Securities⁴	Loans⁵	Mortgage-Related Securities	Asset-Backed Securities
Appreciation Portfolio	✓	✓		
Dreyfus Stock Index Fund				
Growth and Income Portfolio	✓	✓	✓	
International Equity Portfolio	✓	✓		
International Value Portfolio	✓	✓		
Opportunistic Small Cap Portfolio	✓	✓		
Quality Bond Portfolio	✓	✓	✓	✓

⁴ Each fund except Dreyfus Stock Index Fund may invest in variable amount master demand notes as part of its investment in money market instruments.

⁵ Each fund except Dreyfus Stock Index Fund may purchase from financial institutions participation interests in securities in which the fund may invest.

Fund	Municipal Securities	REITs	Money Market Instruments⁶	Foreign Securities⁷	Emerging Markets	Depository Receipts
Appreciation Portfolio			✓	✓	✓	✓
Dreyfus Stock Index Fund		✓	✓	✓		✓
Growth and Income Portfolio	✓ (up to 25% of assets)	✓	✓	✓	✓	✓
International Equity Portfolio		✓	✓	✓	✓ (up to 20% of assets)	✓
International Value Portfolio			✓	✓	✓	✓
Opportunistic Small Cap Portfolio			✓	✓	✓	✓
Quality Bond Portfolio	✓ (up to 25% of assets)		✓	✓	✓	✓

⁶ Includes short-term U.S. Government securities, bank obligations, repurchase agreements and commercial paper. Generally, (1) except for Dreyfus Stock Index Fund, when the Adviser determines that adverse market conditions exist, a fund may adopt a temporary defensive position and invest up to 100% of its assets in money market instruments, and (2) a fund also may purchase money market instruments when it has cash reserves or in anticipation of taking a market position. For Dreyfus Stock Index Fund, the commercial paper purchased by the fund will consist only of direct obligations which, at the time of their purchase, are (a) rated at least P-1 by Moody's or A-1 by S&P, (b) issued by companies having an outstanding unsecured debt issue currently rated at least Aa by Moody's or at least AA- by S&P, or (c) if unrated, determined by the Adviser to be of comparable quality to those rated obligations which may be purchased by the fund.

⁷ Appreciation Portfolio may invest up to 10% of the value of its assets in securities of foreign governments and foreign companies that are not publicly traded in the U.S.

International Value Portfolio ordinarily invests in at least ten foreign countries, and limits its investments in any single company to no more than 5% of its assets at the time of purchase. The fund's sector exposure generally will not exceed 10 percentage points above the sector's weighting in the Morgan Stanley Capital International Europe, Australasia, Far East Index.

Opportunistic Small Cap Portfolio may invest up to 25% of its assets in common stock of foreign companies, but currently intends to invest no more than 20% of its assets in foreign securities.

Quality Bond Portfolio may invest up to 10% of its net assets in bonds issued by foreign issuers that are denominated in foreign currencies, and up to 20% of its net assets in bonds issued by foreign issuers whether denominated in U.S. dollars or in foreign currency. Issuers organized in the U.S. will always be treated as domestic issuers.

⁹ For Growth and Income Portfolio and Opportunistic Small Cap Portfolio, (1) the fund will not sell securities short if, after effect is given to any such short sale, the total market value of all securities sold short would exceed 25% of the value of the fund's net assets and (2) at no time will more than 15% of the value of the fund's net assets be in deposits on short sales against the box. Opportunistic Small Cap Portfolio may only make short sales against the box.

¹⁰ Appreciation Portfolio, International Equity Portfolio, International Value Portfolio and Opportunistic Small Cap Portfolio each currently intends to borrow money only for temporary or emergency (not leveraging) purposes, in an amount up to 15% of the value of its total assets (including the amount borrowed) valued at the lesser of cost or market, less liabilities (not including the amount borrowed) at the time the borrowing is made. In addition, Growth and Income Portfolio and Quality Bond Portfolio each may borrow for investment purposes on a secured basis through entering into reverse repurchase agreements.

Dreyfus Stock Index Fund may borrow money only for temporary or emergency (not leveraging) purposes, in an amount up to 5% of the value of its total assets (including the amount borrowed) valued at the lesser of cost or market, less liabilities (not including the amount borrowed) at the time the borrowing is made.

¹¹ Growth and Income Portfolio and Quality Bond Portfolio each intends to engage in forward commitments to increase its financial exposure to the types of securities in which it invests.

Dreyfus Stock Index Fund. The fund is managed by determining which stocks are to be purchased or sold to match, to the extent feasible, the investment characteristics of its Index. The fund will attempt to achieve a correlation between its performance and that of the fund's Index, in both rising and falling markets, of at least 0.95, without taking into account expenses. A correlation of 1.00 would indicate perfect correlation, which would be achieved when the fund's net asset value, including the value of its dividends and capital gain distributions, increases or decreases in exact proportion to changes in the Index. The fund's ability to correlate its performance with that of its Index, however, may be affected by, among other things, changes in securities markets, the manner in which the total return of the fund's Index is calculated, the size of the fund's portfolio, the amount of cash or cash equivalents held in the fund's portfolio, and the timing, frequency and size of shareholder purchases and redemptions. The fund will use cash flows from shareholder purchase and redemption activity to maintain, to the extent feasible, the similarity of its portfolio to the securities comprising the fund's Index. Inclusion of a security in an Index in no way implies an opinion by the sponsor of the Index as to its attractiveness as an investment. In the future, subject to the approval of the fund's shareholders, the fund may select a different index if such a standard of comparison is deemed to be more representative of the performance of the securities the fund seeks to match. The fund is not sponsored, endorsed, sold or promoted by the sponsor of its Index.

INVESTMENT RESTRICTIONS

"Fundamental Policies" may not be changed without approval of the holders of a majority of the fund's outstanding voting securities (as defined in the 1940 Act). "Nonfundamental Policies" may be changed at any time, without shareholder approval, by a vote of a majority of the board members and in compliance with applicable law and regulatory policy.

Fundamental Policies

Except as may be otherwise disclosed in the prospectus, each fund's investment objective is a Fundamental Policy. Additionally, as a matter of Fundamental Policy, each fund, as indicated, may not:

1. Borrowing

Appreciation Portfolio, Growth and Income Portfolio, International Equity Portfolio, International Value Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio.

Borrow money, except to the extent permitted under the 1940 Act (which currently limits borrowing to no more than 33-1/3% of the value of the fund's total assets). For purposes of this Fundamental Policy, with respect to the Appreciation, Growth and Income, International Equity, International Value and Quality

Bond Portfolios, the entry into options, forward contracts, futures contracts, including those relating to indices, and options on futures contracts or indices shall not constitute borrowing.

Dreyfus Stock Index Fund. Borrow money or pledge, mortgage or hypothecate its assets, except as described in the prospectus and this SAI and in connection with entering into futures contracts. Collateral arrangements with respect to initial or variation margin for future contracts will not be deemed to be pledges of the fund's assets.

2. **Commodities**

Appreciation Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Invest in commodities, except that the Appreciation and Quality Bond Portfolios may invest in futures contracts, including those related to indices, and options on futures contracts or indices, and commodities underlying or related to any such futures contracts as well as invest in forward contracts and currency options.

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Invest in commodities, except that the fund may purchase and sell options, forward contracts, futures contracts, including those related to indices, and options on futures contracts or indices.

Dreyfus Stock Index Fund. Invest in commodities, except that the fund may invest in futures contracts as described in the prospectus and SAI.

3. **Issuer Diversification**

Appreciation Portfolio, International Value Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Invest more than 5% of its assets in the obligations of any one issuer, except that up to 25% of the value of the fund's total assets may be invested, and securities issued or guaranteed by the U.S. Government or its agencies or instrumentalities may be purchased, without regard to any such limitation. Notwithstanding the foregoing, to the extent required by the rules of the SEC, the Money Market Portfolio will not invest more than 5% of its assets in the obligations of any one bank.

Appreciation Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Purchase the securities of any issuer if such purchase would cause the fund to hold more than 10% of the voting securities of such issuer. This Fundamental Policy applies only with respect to 75% of such fund's total assets.

International Value Portfolio. Hold more than 10% of the outstanding voting securities of any single issuer. This Fundamental Policy applies only with respect to 75% of the fund's total assets.

4. **Industry Concentration**

Appreciation Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Invest, except in the case of the Money Market Portfolio, more than 25% of its total assets in the securities of issuers in any single industry; provided that for temporary defensive purposes, there shall be no limitation on the purchase of obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities. The Money Market Portfolio may not invest less than 25% of its assets in obligations issued by banks under normal market conditions.

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Invest more than 25% of the value of its total assets in the securities of issuers in any single industry, provided that there shall be no limitation on the purchase of obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities.

Dreyfus Stock Index Fund. Invest more than 25% of its assets in investments in any particular industry or industries (including banking), except to the extent the Index also is so concentrated, provided that, when the fund has adopted a temporary defensive posture, there shall be no limitation on the purchase of obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities.

5. **Investing for Control**

Money Market Portfolio, Opportunistic Small Cap Portfolio, Dreyfus Stock Index Fund and Quality Bond Portfolio. Invest in the securities of a company for the purpose of exercising management or control, but the fund will vote the securities it owns in its portfolio as a shareholder in accordance with its views.

6. **Loans**

Appreciation Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio, Dreyfus Stock Index Fund and Quality Bond Portfolio. Lend any securities or make loans to others, except to the extent permitted under the 1940 Act (which currently limits such loans to no more than 33-1/3% of the value of the fund's total assets) or as otherwise permitted by the SEC. For purposes of this Fundamental Policy, the purchase of debt obligations (including acquisitions of loans, loan participations or other forms of debt instruments) and the entry into repurchase agreements shall not constitute loans by the fund. Any loans of portfolio securities will be made according to guidelines established by the SEC and the board.

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Make loans to others, except through the purchase of debt obligations and the entry into repurchase agreements. However, the fund may lend its portfolio securities in an amount not to exceed 33-1/3% of the value of its total assets. Any loans of portfolio securities will be made according to guidelines established by the SEC and the board.

7. **Margin and Short Sales**

Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Sell securities short or purchase securities on margin, except that the Opportunistic Small Cap Portfolio may engage in short sales and each fund may obtain such short-term credit as may be necessary for the clearance of purchases and sales of securities, and the Quality Bond Portfolio may make margin deposits in connection with transactions in options, forward contracts, futures contracts, and options on futures contracts.

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Purchase securities on margin, but the fund may make margin deposits in connection with transactions in options, forward contracts, futures contracts, including those related to indices, and options on futures contracts or indices.

8. **Puts/Calls**

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolios. Purchase, sell or write puts, calls or combinations thereof, except as described in the prospectus and this SAI.

Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Purchase or write puts and calls or combinations thereof, except as described in the prospectus and this SAI.

Dreyfus Stock Index Fund. Purchase, sell or write puts, calls or combinations thereof.

9. **Companies with Limited Operations**

Dreyfus Stock Index Fund, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Purchase securities of any company having less than three years' continuous operations (including operations of any predecessors) if such purchase would cause the value of the fund's investments in all such companies to exceed 5% of the value of its total assets.

10. **Limit Where Affiliated Persons Involved**

Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Purchase or retain the securities of any issuer if the officers or board members of the fund or of the Manager individually own beneficially more than 0.5% of the securities of such issuer or together own beneficially more than 5% of the securities of such issuer.

11. **Real Estate**

Appreciation Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Purchase or sell real estate or REIT securities, but the fund may purchase and sell securities that are secured by real estate and may purchase and sell securities issued by companies that invest or deal in real estate.

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Purchase, hold or deal in real estate, or oil, gas or other mineral leases or exploration or development programs, but the fund may purchase and sell securities that are secured by real estate or issued by companies that invest or deal in real estate.

Dreyfus Stock Index Fund. Purchase, hold or deal in real estate, or oil and gas interests, but the fund may purchase and sell securities that are secured by real estate or issued by companies that invest or deal in real estate.

12. **Senior Securities**

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Issue any senior security (as such term is defined in Section 18(f) of the 1940 Act), except to the extent the activities permitted in Fundamental Policy Nos. 1 and 2 and the fund's Nonfundamental Policy Nos. 3 and 6 may be deemed to give rise to a senior security.

13. **Underwriting**

Appreciation Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Act as an underwriter of securities of other issuers.

Growth and Income, International Equity and International Value Portfolios. Act as an underwriter of securities of other issuers, except to the extent the fund may be deemed an underwriter under the Securities Act by virtue of disposing of portfolio securities.

Dreyfus Stock Index Fund. Act as an underwriter of securities of other issuers or purchase securities subject to restrictions on disposition under the Securities Act (so-called "restricted securities"). The fund may not enter into repurchase agreements providing for settlement in more than seven days after notice or purchase securities which are not readily marketable if, in the aggregate, more than 10% of the value of the fund's net assets would be so invested.

14. **Warrants**

Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Purchase warrants, except that the Opportunistic Small Cap Portfolio may purchase warrants not to exceed 2% of its net assets. For purposes of this Fundamental Policy, such warrants shall be valued at the lower of cost or market, except that warrants acquired by the fund in units or attached to securities shall not be included within this 2% restriction.

15. **Time Deposits**

Dreyfus Stock Index Fund. Enter into time deposits maturing in more than seven days or invest in time deposits maturing from two business days through seven calendar days in excess of 10% of the fund's total assets.

Nonfundamental Policies

As a Nonfundamental Policy, which may be changed at any time, without shareholder approval, by a vote of a majority of the board members and in compliance with applicable law and regulatory policy, each fund, as indicated, may not:

1. **Arbitrage**

Dreyfus Stock Index Fund. Engage in arbitrage transactions.

2. **Investing for Control**

Appreciation Portfolio, Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Invest in the securities of a company for the purpose of exercising management or control, but the fund will vote the securities it owns as a shareholder in accordance with its views.

3. **Pledging Assets**

Appreciation Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Pledge, hypothecate, mortgage or otherwise encumber its assets, except to the extent necessary to secure permitted borrowings. The entry into collateral arrangements with respect to options, currency options, futures contracts, including those related to indices, and options on futures contracts or indices and arrangements with respect to initial or variation margin for futures contracts or options will not be deemed to be pledges of assets.

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Pledge, mortgage or hypothecate its assets, except to the extent necessary to secure permitted borrowings and to the extent related to the purchase of securities on a when-issued or forward commitment basis and the deposit of assets in escrow in connection with writing covered put and call options and collateral and initial or variation margin arrangements with respect to options, forward contracts, futures contracts, including those relating to indices, and options on futures contracts or indices.

Money Market Portfolio. Pledge, hypothecate, mortgage or otherwise encumber its assets, except to the extent necessary to secure permitted borrowings and to facilitate engaging in repurchase agreement transactions. The entry into collateral arrangements with respect to options, currency options, futures contracts, including those related to indices, and options on futures contracts or indices and arrangements with respect to initial or variation margin for futures contracts or options will not be deemed to be pledges of assets

4. **Companies with Limited Operations**

Appreciation Portfolio, Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Purchase securities of any company having less than three years' continuous operations (including operations of any predecessors) if such purchase would cause the value of the fund's investments in all such companies to exceed 5% of the value of its total assets.

5. **Securities of Other Investment Companies**

Dreyfus Stock Index Fund, Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Purchase securities of other investment companies, except to the extent permitted under the 1940 Act.

6. **Puts/Calls**

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Purchase, sell or write puts, calls or combinations thereof, except as described in the prospectus and this SAI.

Appreciation Portfolio. Purchase or write puts and calls or combinations thereof, except as described in the prospectus and this SAI.

7. **Illiquid Investments**

All funds except Dreyfus Stock Index Fund. Enter into repurchase agreements providing for settlement in more than seven days after notice or purchase securities that are illiquid if, in the aggregate, more than 15%

(10% with respect to the Money Market Portfolio) of the value of the fund's net assets would be so invested.

8. Margin and Short Sales

Appreciation Portfolio. Sell securities short or purchase securities on margin, except that the fund may obtain such short-term credit as may be necessary for the clearance of purchases and sales of securities.

Dreyfus Stock Index Fund. Sell securities short, but the fund reserves the right to sell securities short against the box.

9. Warrants

Growth and Income Portfolio, International Equity Portfolio and International Value Portfolio. Purchase warrants in excess of 5% of its net assets. For purposes of this Nonfundamental Policy, such warrants shall be valued at the lower of cost or market, except that warrants acquired by the fund in units or attached to securities shall not be included within this restriction.

Appreciation Portfolio. Purchase warrants, except that the fund may purchase warrants not to exceed 2% of its net assets. For purposes of this Nonfundamental Policy, such warrants shall be valued at the lower of cost or market, except that warrants acquired by the fund in units or attached to securities shall not be included within this 2% restriction.

Dreyfus Stock Index Fund. Purchase warrants (other than those acquired by the fund in units or attached to securities).

10. Issuer Diversification

Appreciation Portfolio, International Value Portfolio, Money Market Portfolio, Opportunistic Small Cap Portfolio and Quality Bond Portfolio. Invest more than 10% of its total assets in the obligations of any one issuer (excluding U.S. Government securities) and to purchase no more than 10% of an issuer's outstanding securities.

Dreyfus Stock Index Fund. Invest more than 10% of its total assets in the securities of any single issuer or hold more than 10% of the voting securities of any single issuer.

11. Limit Where Affiliated Persons Involved

Appreciation Portfolio. Purchase or retain the securities of any issuer if the officers or board members of the fund, the Manager or Sarofim & Co. individually own beneficially more than 0.5% of the securities of such issuer or together own beneficially more than 5% of the securities of such issuer.

In addition, each fund has adopted the following policies as Nonfundamental Policies: each fund intends (i) to comply with the diversification requirements prescribed in regulations under Section 817(h) of the Code, and (ii) to comply in all material respects with insurance laws and regulations that the fund has been advised are applicable to investments of separate accounts of Participating Insurance Companies.

With respect to each fund, if a percentage restriction is adhered to at the time of investment, a later change in percentage resulting from a change in values or assets will not constitute a violation of such restriction, except as otherwise required by the 1940 Act. With respect to the funds' policies pertaining to borrowing, however, if borrowings exceed 33-1/3% of the value of a fund's total assets as a result of a change in values or assets, the fund must take steps to reduce such borrowings within three days (not including Sundays and holidays) thereafter at least to the extent of such excess.

References to "commodities" in the Fundamental Policies described above are to physical commodities, typically natural resources or agricultural products, and are not intended to refer to instruments that are strictly financial in nature and are not related to the purchase or delivery of physical commodities.

Policies Related to Fund Names

Each of the following funds invests, under normal circumstances, at least 80% of its net assets, plus any borrowings for investment purposes (for funds that may borrow for investment purposes) in the instruments (or other instruments with similar economic characteristics) described below. Each fund has adopted a policy to provide its shareholders with at least 60 days' prior notice of any change in its policy to so invest its assets.

Fund	Investment
Dreyfus Stock Index Fund	Stocks included in the S&P 500 Index and in futures whose performance is tied to the index*
International Equity Portfolio International Value Portfolio	Stocks
Opportunistic Small Cap Portfolio	Stocks of small-cap companies
Quality Bond Portfolio	Bonds

* The fund generally is fully invested in such investments.

SHAREHOLDER SERVICES PLAN(Dreyfus Stock Index Fund—Initial shares only)

The fund has adopted a Shareholder Services Plan for its Initial shares pursuant to which the fund reimburses the Distributor an amount not to exceed an annual rate of 0.25% of the value of the fund's average daily net assets for certain allocated expenses with respect to servicing and/or maintaining shareholder accounts.

A quarterly report of the amounts expended under the fund's Shareholder Services Plan, and the purposes for which such expenditures were incurred, must be made to the board for its review. In addition, the Shareholder Services Plan provides that material amendments of the Shareholder Services Plan must be approved by the board and by the board members who are not "interested persons" (as defined in the 1940 Act) of the fund and have no direct or indirect financial interest in the operation of the Shareholder Services Plan, by vote cast in person at a meeting called for the purpose of considering such amendments. The Shareholder Services Plan is subject to annual approval by such vote of the board members cast in person at a meeting called for the purpose of voting on the Shareholder Services Plan. The Shareholder Services Plan is terminable at any time by vote of a majority of the board members who are not "interested persons" of the fund and have no direct or indirect financial interest in the operation of the Shareholder Services Plan.

INFORMATION ABOUT THE FUNDS' ORGANIZATION AND STRUCTURE

Each fund is an open-end management investment company. Listed below are the forms of organization of each fund company, its corresponding fund series (if any), the dates of organization and each fund's subclassification as "diversified" or "non-diversified" under the 1940 Act. The fund companies (in bold) listed below are either Maryland corporations or Massachusetts business trusts. If one or more funds are listed in italics thereunder, then such fund company is a "series" company, and investments are made through, and shareholders invest in, the fund series shown. References in this SAI to a "fund" generally refer to the series of a series company; if no such funds are listed under a bold fund company name, then it is not organized as a series company and the term "fund" refers to such fund company.

Name	State of Organization	Date of Organization¹	Diversification Classification
Dreyfus Stock Index Fund, Inc.	Maryland	January 24, 1989	Non-diversified
Dreyfus Variable Investment Fund	Massachusetts	October 29, 1986	
<i>Appreciation Portfolio</i>			Diversified
<i>Growth and Income Portfolio</i>			Non-diversified
<i>International Equity Portfolio</i>			Non-diversified
<i>International Value Portfolio</i>			Diversified
<i>Money Market Portfolio</i>			Diversified

Name	State of Organization	Date of Organization ¹	Diversification Classification
<i>Opportunistic Small Cap Portfolio</i>			Diversified
<i>Quality Bond Portfolio</i>			Diversified

¹ As a result of legal requirements relating to the formation of Massachusetts business trusts, there may have been a significant period of time between the dates of organization and commencement of operations for funds organized in this structure, during which time no business or other activities were conducted.

CERTAIN EXPENSE ARRANGEMENTS AND OTHER DISCLOSURES

Expense Limitations and Arrangements

All funds except Dreyfus Stock Index Fund. The Manager (and, with respect to the Appreciation Portfolio, Sarofim & Co.) has agreed that if, in any fiscal year, the aggregate expenses of a fund, exclusive of taxes, brokerage, interest on borrowings and (with the prior written consent of the necessary state securities commissions) extraordinary expenses, but including the advisory fees, exceed the expense limitation of any state having jurisdiction over the fund, the fund may deduct from the payment to be made to the Manager (and, with respect to the Appreciation Portfolio, Sarofim & Co.) or the Manager (and, with respect to the Appreciation Portfolio, Sarofim & Co.) will bear, such excess expense to the extent required by state law. Such deduction or payment, if any, will be estimated daily, and reconciled and effected or paid, as the case may be, on a monthly basis.

Dreyfus Stock Index Fund. The Index Manager pays the Custodian for its services to the fund.

Index Licensing Disclosures (Dreyfus Stock Index Fund only)

The fund is not sponsored, endorsed, sold or promoted by S&P. S&P makes no representation or warranty, express or implied, to the owners of the funds or any member of the public regarding the advisability of investing in securities generally or in the fund particularly or the ability of the S&P 500 Index to track general stock market performance. S&P's only relationship to the fund is the licensing of certain trademarks and trade names of S&P and of the S&P 500 Index which is determined, composed and calculated by S&P without regard to the fund. S&P has no obligation to take the needs of the fund or the owners of the fund into consideration in determining, composing or calculating the S&P 500 Index. S&P is not responsible for and has not participated in the calculation of the fund's net asset value, nor is S&P a distributor of the fund. S&P has no obligation or liability in connection with the administration, marketing or trading of the fund.

S&P DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE S&P 500 INDEX OR ANY DATA INCLUDED THEREIN. S&P MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY DREYFUS STOCK INDEX FUND, OWNERS OF THE FUND, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE S&P 500 INDEX OR ANY DATA INCLUDED THEREIN. S&P MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE S&P 500 INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL S&P HAVE ANY LIABILITY FOR ANY SPECIAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS), EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

COUNSEL AND INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Stroock & Stroock & Lavan LLP, 180 Maiden Lane, New York, New York 10038-4982, as counsel for the funds, has rendered its opinion as to certain legal matters regarding the due authorization and valid issuance of the shares being sold pursuant to the funds' prospectuses.

Ernst & Young LLP, 5 Times Square, New York, New York 10036-6530, an independent registered public accounting firm, has been selected to serve as the independent registered public accounting firm for the funds.

HOW TO BUY SHARES

Initial shares and Service shares are identical, except as to the expenses borne by each class, which may affect performance. See "Distribution Plans (Service Shares Only)." Shares currently are offered only to separate accounts of Participating Insurance Companies. **Individuals may not place purchase orders directly with a fund.** See the prospectus of the separate account of the Participating Insurance Company for more information on the purchase of fund shares and with respect to the availability for investment in specific funds and specific classes of the funds. The funds do not issue share certificates.

Each fund reserves the right to reject any purchase order. No fund will establish an account for a "foreign financial institution," as that term is defined in Treasury rules implementing Section 312 of the USA PATRIOT Act. Foreign financial institutions include: foreign banks (including foreign branches of U.S. depository institutions); foreign offices of U.S. securities broker-dealers, futures commission merchants and mutual funds; non-U.S. entities that, if they were located in the United States, would be securities broker-dealers, futures commission merchants or mutual funds; and non-U.S. entities engaged in the business of currency dealer or exchanger or money transmitter.

As discussed under "Management Arrangements – Distributor," Participating Insurance Companies and other financial intermediaries may receive revenue sharing payments from the Manager or the Distributor. The receipt of such payments could create an incentive for a Participating Insurance Company to recommend or sell fund shares instead of other mutual funds where such payments are not received. Please contact your Participating Insurance Company for details about any payments it may receive in connection with the sale of fund shares or the provision of services to a fund.

Purchase orders from separate accounts based on the amount of premium payments to be invested pursuant to the Policies and transaction requests received by the Participating Insurance Company on a given business day in accordance with procedures established by the Participating Insurance Company will be effected at the net asset value of the applicable fund determined on such business day if the orders are received by the Transfer Agent or other authorized entity in proper form and in accordance with applicable requirements on the next business day and Federal Funds in the net amount of such orders are received by the fund on the next business day in accordance with applicable requirements. It is each Participating Insurance Company's responsibility to properly transmit purchase orders and Federal Funds in accordance with applicable requirements. Policy owners should refer to the prospectus for their contracts or Policies in this regard.

Converting Shares

Under certain circumstances, shares of a fund with more than one class may be converted from one class of shares to another class of shares of the same fund. The aggregate dollar value of the shares of the class received upon any such conversion will equal the aggregate dollar value of the converted shares on the date of the conversion.

Information Pertaining to Purchase Orders

Dreyfus Stock Index Fund and Small Cap Stock Index Portfolio. To permit these funds to invest your money as promptly as possible after receipt, thereby maximizing each fund's ability to track its Index, you are urged to transmit your purchase order in proper form so that it may be received by the Transfer Agent prior to 12:00 noon, Eastern time, on the day you want your purchase order to be effective.

HOW TO REDEEM SHARES

Fund shares may be redeemed at any time by the separate accounts of the Participating Insurance Companies. **Individuals may not place redemption orders directly with a fund.** Redemption requests from separate accounts based on premiums and transaction requests received by the Participating Insurance Company on a given business day in accordance with procedures established by the Participating Insurance Company will be effected at the net

asset value of the applicable fund determined on such business day if the requests are received by the Transfer Agent or another authorized entity in proper form and in accordance with applicable requirements on the next business day. It is each Participating Insurance Company's responsibility to properly transmit redemption requests in accordance with applicable requirements. Policy owners should consult their Participating Insurance Company prospectus in this regard. No charges are imposed by the funds when shares are redeemed.

The funds ordinarily will make payment for all shares redeemed within seven days after receipt by the Transfer Agent of a redemption request in proper form, except as provided by the rules of the SEC.

Should any conflict between Policy owners arise which would require that a substantial amount of net assets be withdrawn, orderly portfolio management could be disrupted to the potential detriment of such Policy owners.

Redemption Commitment

Each fund has committed itself to pay in cash all redemption requests by any fund shareholder of record, limited in amount during any 90-day period to the lesser of \$250,000 or 1% of the value of the fund's net assets at the beginning of such period. Such commitment is irrevocable without the prior approval of the SEC. In the case of requests for redemption from the fund in excess of such amount, the fund's board reserves the right to make payments in whole or in part in securities or other assets of the fund in case of an emergency or any time a cash distribution would impair the liquidity of the fund to the detriment of the existing shareholders. In such event, the securities would be valued in the same manner as the fund's portfolio is valued. If the recipient sells such securities, brokerage charges would be incurred.

Suspension of Redemptions

The right of redemption may be suspended or the date of payment postponed (a) during any period when the NYSE is closed (other than customary weekend and holiday closings), (b) when the SEC determines that trading in the markets a fund ordinarily utilizes is restricted, or when an emergency exists as determined by the SEC so that disposal of the fund's investments or determination of its NAV is not reasonably practicable, or (c) for such other periods as the SEC by order may permit to protect fund shareholders.

Information Pertaining to Redemptions

Dreyfus Stock Index Fund and Small Cap Stock Index Portfolio. To maximize each fund's ability to track the Index, you are urged to transmit redemption requests so that they may be received by the fund or its Transfer Agent prior to 12:00 noon, Eastern time, on the day upon which separate accounts of Participating Insurance Companies want the redemption requests to be effective.

EXCHANGE PRIVILEGE

Investors can exchange shares of a class for shares of the same class of any other fund managed by the Manager that is offered only to separate accounts established by Participating Insurance Companies to fund Policies, subject to the terms and conditions set forth in the applicable Participating Insurance Company's prospectus. Policy holders should refer to the applicable Participating Insurance Company's prospectus for more information on exchanging fund shares. The funds reserve the right to modify or discontinue the exchange privilege at any time upon 60 days' notice to the Participating Insurance Companies.

DISTRIBUTION PLANS

(Service shares only)

Rule 12b-1 under the 1940 Act provides, among other things, that an investment company may bear expenses of distributing its shares only pursuant to a plan adopted in accordance with the Rule. Pursuant to a Distribution Plan adopted with respect to Service shares, each fund pays the Distributor at an annual rate of 0.25% of the value of the average daily net assets of the fund's Service shares for distributing Service shares, for advertising and marketing related to Service shares and for servicing and/or maintaining accounts of Service class shareholders. Under the Distribution Plan, the Distributor may make payments to Participating Insurance Companies and the principal underwriters for their variable insurance products. The fees payable under the Distribution Plan are payable without

regard to actual expenses incurred. The board believes that there is a reasonable likelihood that each Distribution Plan will benefit the relevant fund and the holders of the fund's Service shares.

A quarterly report of the amounts expended under a fund's Distribution Plan, and the purposes for which such expenditures were incurred, must be made to the board for its review. Each Distribution Plan provides that it may not be amended to increase materially the costs that holders of Service shares may bear pursuant to the Distribution Plan without the approval of the holders of Service shares; other material amendments of the Distribution Plan must be approved by the board and by the board members who are not "interested persons" (as defined in the 1940 Act) of the fund and have no direct or indirect financial interest in the operation of the Distribution Plan or in any agreements entered into in connection with the Distribution Plan, by vote cast in person at a meeting called for the purpose of considering such amendments. Each Distribution Plan is subject to annual approval by such vote of the board members cast in person at a meeting called for the purpose of voting on the Distribution Plan. As to each fund, the Distribution Plan is terminable at any time by vote of a majority of the board members who are not "interested persons" with respect to the fund and have no direct or indirect financial interest in the operation of the Distribution Plan or any agreements related to the Distribution Plan or by vote of a majority of the outstanding voting securities of such class.

ADDITIONAL INFORMATION ABOUT INVESTMENTS, INVESTMENT TECHNIQUES AND RISKS

See the prospectus and "Investments, Investment Techniques and Risks" and "Investment Restrictions" in Part II of this SAI to determine which policies and risks apply to your fund.

The funds are intended to be funding vehicles for VA contracts and VLI policies to be offered by Participating Insurance Companies and will seek to be offered in as many jurisdictions as possible. Certain states have regulations concerning concentration of investments and certain investment techniques. If applied to a fund, the fund may be limited in its ability to engage in such techniques and to manage its portfolio with the flexibility provided herein. It is each fund's intention to operate in material compliance with current insurance laws and regulations, as applied, in each jurisdiction in which the fund is offered.

All Funds other than the Money Market Portfolio

Equity Securities

Equity securities include common stocks and certain preferred stocks, convertible securities and warrants. Equity securities fluctuate in value, often based on factors unrelated to the value of the issuer of the securities, and such fluctuations can be pronounced. Changes in the value of a fund's investments will result in changes in the value of its shares and thus the fund's total return to investors.

Investing in equity securities poses risks specific to an issuer as well as to the particular type of company issuing the equity securities. For example, equity securities of small- or mid-capitalization companies tend to have more abrupt or erratic price swings than equity securities of larger, more established companies because, among other reasons, they trade less frequently and in lower volumes and their issuers typically are more subject to changes in earnings and prospects in that they are more susceptible to changes in economic conditions, may be more reliant on singular products or services and are more vulnerable to larger competitors. Equity securities of these types of companies may have a higher potential for gains, but also may be subject to greater risk of loss. If a fund, together with other investment companies and other clients advised by the Adviser and its affiliates, owns significant positions in portfolio companies, depending on market conditions, the fund's ability to dispose of some or all positions at a desirable time may be adversely affected. While common stockholders usually have voting rights on a number of significant matters, other types of equity securities, such as preferred stock, common limited partnership units and limited liability company interests, may not ordinarily have voting rights.

An investment in securities of companies that have no earnings or have experienced losses is generally based on a belief that actual or anticipated products or services will produce future earnings. If the anticipated event is delayed or does not occur, or if investor perception about the company changes, the company's stock price may decline sharply and its securities may become less liquid.

Investing in equity securities also poses risks specific to a particular industry, market or sector, such as technology, financial services, consumer goods or natural resources (*e.g.*, oil and gas). To some extent, the prices of equity securities tend to move by industry, market or sector. When market conditions favorably affect, or are expected to favorably affect, an industry, the share prices of the equity securities of companies in that industry tend to rise. Conversely, negative news or a poor outlook for a particular industry can cause the share prices of such securities of companies in that industry to decline quickly.

Common Stock. Stocks and similar securities, such as common limited partnership units and limited liability company interests, represent shares of ownership in a company. After other claims are satisfied, common stockholders and other common equity owners participate in company profits on a pro-rata basis; profits may be paid out in dividends or reinvested in the company to help it grow. Increases and decreases in earnings are usually reflected in a company's common equity securities, so common equity securities generally have the greatest appreciation and depreciation potential of all corporate securities. Common stock may be received upon the conversion of convertible securities.

Preferred Stock. Preferred stock is a form of equity ownership in a corporation. Generally, preferred stock has a specified dividend and ranks after bonds and before common stocks in its claim on income for dividend payments and on assets should the company be liquidated. The market value of preferred stock generally increases when interest rates decline and decreases when interest rates rise, but, as with debt securities, also is affected by the issuer's ability or perceived ability to make payments on the preferred stock. While most preferred stocks pay a dividend, a fund may purchase preferred stock where the issuer has omitted, or is in danger of omitting, payment of its dividend. Such investments would be made primarily for their capital appreciation potential. Certain classes of preferred stock are convertible, meaning the preferred stock is convertible into shares of common stock of the issuer. Holding convertible preferred stock can provide a steady stream of dividends and the option to convert the preferred stock to common stock.

Certain convertible preferred stocks may offer enhanced yield features. These preferred stocks may feature a mandatory conversion date and may have a capital appreciation limit expressed in terms of a stated price. Other types of convertible securities may be designed to provide the investor with high current income with some prospect of future capital appreciation and may have some built-in call protection. Investors may have the right to convert such securities into shares of common stock at a preset conversion ratio or hold them until maturity. Upon maturity they may convert into either cash or a specified number of shares of common stock.

Trust preferred securities are preferred stocks issued by a special purpose trust subsidiary backed by subordinated debt of the corporate parent. These securities typically bear a market rate coupon comparable to interest rates available on debt of a similarly rated company. Holders of trust preferred securities have limited voting rights to control the activities of the trust and no voting rights with respect to the parent company.

Convertible Securities. Convertible securities include bonds, debentures, notes, preferred stocks or other securities that may be converted or exchanged (by the holder or by the issuer) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio or predetermined price (the conversion price). Convertible securities have characteristics similar to both equity and fixed-income securities. Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer, although convertible bonds, as corporate debt obligations, enjoy seniority in right of payment to all equity securities, and convertible preferred stock is senior to common stock of the same issuer. Because of the subordination feature, however, convertible securities typically have lower ratings than similar non-convertible securities.

Although to a lesser extent than with fixed-income securities, the market value of convertible securities tends to decline as interest rates increase and, conversely, tends to increase as interest rates decline. In addition, because of the conversion feature, the market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stock. A unique feature of convertible securities is that as the market price of the underlying common stock declines, convertible securities tend to trade increasingly on a yield basis, and so may not experience market value declines to the same extent as the underlying common stock. When the market price of the underlying common stock increases, the prices of the convertible securities tend to rise as a reflection of the value of the underlying common stock. While no securities investments are without risk, investments in convertible securities generally entail less risk than investments in common stock of the same issuer.

Convertible securities provide for a stable stream of income with generally higher yields than common stocks, but there can be no assurance of current income because the issuers of the convertible securities may default on their obligations. A convertible security, in addition to providing fixed-income, offers the potential for capital appreciation through the conversion feature, which enables the holder to benefit from increases in the market price of the underlying common stock. There can be no assurance of capital appreciation, however, because securities prices fluctuate. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality because of the potential for capital appreciation.

So-called "synthetic convertible securities" are comprised of two or more different securities, each with its own market value, whose investment characteristics, taken together, resemble those of convertible securities. An example is a non-convertible debt security and a warrant or option. The "market value" of a synthetic convertible is the combined value of its fixed-income component and its convertible component. For this reason, the values of a synthetic convertible and a true convertible security may respond differently to market fluctuations.

Warrants and Stock Purchase Rights. Warrants or stock purchase rights ("rights") give the holder the right to subscribe to equity securities at a specific price for a specified period of time. Warrants and rights are subject to the same market risk as stocks, but may be more volatile in price. A fund's investment in warrants and rights will not entitle it to receive dividends or exercise voting rights, provide no rights with respect to the assets of the issuer and will become worthless if not profitably exercised before the expiration date. Warrants, rights or other non-income producing equity securities may be received in connection with a fund's investments in corporate debt securities (further described below), or restructuring of investments. Bonds with warrants attached to purchase equity securities have many characteristics of convertible bonds and their prices may, to some degree, reflect the performance of the underlying stock.

IPOs. An IPO is a corporation's first offering of stock to the public. Shares are given a market value reflecting expectations for the corporation's future growth. Special rules of FINRA apply to the distribution of IPOs. Corporations offering IPOs generally have limited operating histories and may involve greater investment risk. Special risks associated with IPOs may include a limited number of shares available for trading, unseasoned trading, lack of investor knowledge of the company, and limited operating history, all of which may contribute to price volatility. The limited number of shares available for trading in some IPOs may make it more difficult for a fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. In addition, some IPOs are involved in relatively new industries or lines of business, which may not be widely understood by investors. Some of the companies involved in new industries may be regarded as developmental stage companies, without revenues or operating income, or the near-term prospects of such. Foreign IPOs are subject to foreign political and currency risks. Many IPOs are issued by undercapitalized companies of small or microcap size. The prices of these companies' securities can be very volatile, rising and falling rapidly, sometimes based solely on investor perceptions rather than economic reasons.

Fixed-Income Securities

Fixed-income securities include interest-bearing securities, such as corporate debt securities. Interest-bearing securities are investments which promise a stable stream of income, although the prices of fixed rate fixed-income securities are inversely affected by changes in interest rates and, therefore, are subject to interest rate risk, as well as the risk of unrelated market price fluctuations. Fixed-income securities may have various interest rate payment and reset terms, including fixed rate, floating or adjustable rate, zero coupon, contingent, deferred, payment in kind and auction rate features. Floating rate instruments, the rates of which adjust periodically by reference to another measure, such as the market interest rate, are generally less sensitive to interest rate changes than fixed rate instruments, although the value of floating rate loans and other floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates or as expected. Certain securities, such as those with interest rates that fluctuate directly or indirectly based on multiples of a stated index, are designed to be highly sensitive to changes in interest rates and can subject the holders thereof to extreme reductions of yield and possibly loss of principal. Certain fixed-income securities may be issued at a discount from their face value or purchased at a price less than their stated face amount or at a price less than their issue price plus the portion of "original issue discount" previously accrued thereon, *i.e.*, purchased at a "market discount." The amount of original issue discount and/or market discount on certain obligations may be significant, and accretion of market discount together with original issue discount, will cause a fund to realize income prior to the receipt of cash payments with respect to these securities. To maintain its qualification as a regulated investment company and avoid liability for federal income

taxes, a fund may be required to distribute such income accrued with respect to these securities and may have to dispose of portfolio securities under disadvantageous circumstances in order to generate cash to satisfy these distribution requirements.

Failure of an issuer to make timely interest or principal payments, or a decline or perception of a decline in the credit quality of a fixed-income security (known as credit risk), can cause the security's price to fall, potentially lowering a fund's share price. The values of fixed-income securities also may be affected by changes in the credit rating of the issuer. Once the rating of a portfolio security has been changed, a fund will consider all circumstances deemed relevant in determining whether to continue to hold the security. Fixed-income securities rated below investment grade by the Rating Agencies may be subject to greater risks with respect to the issuing entity and to greater market fluctuations (and not necessarily inversely with changes in interest rates) than certain lower yielding, higher-rated fixed-income securities. See "High Yield and Lower-Rated Securities" below for a discussion of those securities and see "Rating Categories" below for a general description of the Rating Agencies' ratings.

As a measure of a fixed-income security's cash flow, duration is an alternative to the concept of "term to maturity" in assessing the price volatility associated with changes in interest rates (known as interest rate risk). Generally, the longer the duration, the more volatility an investor should expect. For example, the market price of a bond with a duration of three years would be expected to decline 3% if interest rates rose 1%. Conversely, the market price of the same bond would be expected to increase 3% if interest rates fell 1%. The market price of a bond with a duration of six years would be expected to increase or decline twice as much as the market price of a bond with a three-year duration. Duration is a way of measuring a security's maturity in terms of the average time required to receive the present value of all interest and principal payments as opposed to its term to maturity. The maturity of a security measures only the time until final payment is due; it does not take account of the pattern of a security's cash flows over time, which would include how cash flow is affected by prepayments and by changes in interest rates. Incorporating a security's yield, coupon interest payments, final maturity and option features into one measure, duration is computed by determining the weighted average maturity of a bond's cash flows, where the present values of the cash flows serve as weights. In computing the duration of a fund, the Adviser will estimate the duration of obligations that are subject to features such as prepayment or redemption by the issuer, put options retained by the investor or other imbedded options, taking into account the influence of interest rates on prepayments and coupon flows.

Average weighted maturity is the length of time, in days or years, until the securities held by a fund, on average, will mature or be redeemed by their issuers. The average maturity is weighted according to the dollar amounts invested in the various securities by the fund. In general, the longer a fund's average weighted maturity, the more its share price will fluctuate in response to changing interest rates. For purposes of calculating average effective portfolio maturity, a security that is subject to redemption at the option of the issuer on a particular date (the "call date") which is prior to the security's stated maturity may be deemed to mature on the call date rather than on its stated maturity date. The call date of a security will be used to calculate average effective portfolio maturity when the Adviser reasonably anticipates, based upon information available to it, that the issuer will exercise its right to redeem the security. The Adviser may base its conclusion on such factors as the interest rate paid on the security compared to prevailing market rates, the amount of cash available to the issuer of the security, events affecting the issuer of the security, and other factors that may compel or make it advantageous for the issuer to redeem a security prior to its stated maturity.

When interest rates fall, the principal on certain fixed-income securities, including mortgage-backed and certain asset-backed securities (discussed below), may be prepaid. The loss of higher yielding underlying mortgages and the reinvestment of proceeds at lower interest rates can reduce a fund's potential price gain in response to falling interest rates, reduce the fund's yield, or cause the fund's share price to fall. This is known as prepayment risk. Conversely, when interest rates rise, the effective duration of a fund's fixed-rate mortgage-related and other asset-backed securities may lengthen due to a drop in prepayments of the underlying mortgages or other assets. This is known as extension risk and would increase the fund's sensitivity to rising interest rates and its potential for price declines.

U.S. Government Securities. U.S. Government securities are issued or guaranteed by the U.S. Government or its agencies or instrumentalities. U.S. Government securities include Treasury bills, Treasury notes and Treasury bonds, which differ in their interest rates, maturities and times of issuance. Treasury bills have initial maturities of one year or less; Treasury notes have initial maturities of one to ten years; and Treasury bonds generally have initial

maturities of greater than ten years. Some obligations issued or guaranteed by U.S. Government agencies and instrumentalities are supported by the full faith and credit of the Treasury; others by the right of the issuer to borrow from the Treasury; others by discretionary authority of the U.S. Government to purchase certain obligations of the agency or instrumentality; and others only by the credit of the agency or instrumentality. These securities bear fixed, floating or variable rates of interest. While the U.S. Government currently provides financial support to such U.S. Government-sponsored agencies or instrumentalities, no assurance can be given that it will always do so, since it is not so obligated by law. A security backed by the Treasury or the full faith and credit of the United States is guaranteed only as to timely payment of interest and principal when held to maturity. Neither the market value nor a fund's share price is guaranteed.

TIPS are issued by the Treasury and are designed to provide investors a long-term investment vehicle that is not vulnerable to inflation. The interest rate paid by TIPS is fixed, while the principal value rises or falls semi-annually based on changes in a published Consumer Price Index. Thus, if inflation occurs, the principal and interest payments on the TIPS are adjusted accordingly to protect investors from inflationary loss. During a deflationary period, the principal and interest payments decrease, although the TIPS' principal will not drop below its face value at maturity. In exchange for the inflation protection, TIPS generally pay lower interest rates than typical Treasury securities. Only if inflation occurs will TIPS offer a higher real yield than a conventional Treasury bond of the same maturity. The secondary market for TIPS may not be as active or liquid as the secondary market for conventional Treasury securities. See also "Inflation-Indexed Securities" below.

On August 5, 2011, S&P lowered its long-term sovereign credit rating for the United States of America to "AA+" from "AAA." The value of shares of a fund that may invest in U.S. Government obligations may be adversely affected by S&P's downgrade or any future downgrades of the U.S. Government's credit rating. While the long-term impact of the downgrade is uncertain, it could, for example, lead to increased volatility in the short-term.

Corporate Debt Securities. Corporate debt securities include corporate bonds, debentures, notes and other similar instruments, including certain convertible securities. Debt securities may be acquired with warrants attached to purchase additional fixed-income securities at the same coupon rate. A decline in interest rates would permit a fund to buy additional bonds at the favorable rate or to sell the warrants at a profit. If interest rates rise, the warrants would generally expire with no value. Corporate income-producing securities also may include forms of preferred or preference stock, which may be considered equity securities. The rate of interest on a corporate debt security may be fixed, floating or variable, and may vary inversely with respect to a reference rate such as interest rates or other financial indicators. The rate of return or return of principal on some debt obligations may be linked or indexed to the level of exchange rates between the U.S. dollar and a foreign currency or currencies. Such securities may include those whose principal amount or redemption price is indexed to, and thus varies directly with, changes in the market price of certain commodities, including gold bullion or other precious metals.

Ratings of Securities; Unrated Securities. Subsequent to its purchase by a fund, an issue of rated securities may cease to be rated or its rating may be reduced below any minimum that may be required for purchase by a fund. Neither event will require the sale of such securities by the fund, but the Adviser will consider such event in determining whether the fund should continue to hold the securities. In addition, it is possible that a Rating Agency might not timely change its ratings of a particular issue to reflect subsequent events. To the extent the ratings given by a Rating Agency for any securities change as a result of changes in such organizations or their rating systems, a fund will attempt to use comparable ratings as standards for its investments in accordance with its investment policies.

A fund may purchase unrated securities, which are not rated by a Rating Agency but that the Adviser determines are of comparable quality to the rated securities in which the fund may invest. Unrated securities may be less liquid than comparable rated securities, because dealers may not maintain daily markets in such securities and retail markets for many of these securities may not exist. As a result, a fund's ability to sell these securities when, and at a price, the Adviser deems appropriate may be diminished. Investing in unrated securities involves the risk that the Adviser may not accurately evaluate the security's comparative credit rating. To the extent that a fund invests in unrated securities, the fund's success in achieving its investment objective(s) may depend more heavily on the Adviser's credit analysis than if the fund invested exclusively in rated securities.

High Yield and Lower-Rated Securities. Fixed-income securities rated below investment grade, such as those rated Ba by Moody's or BB by S&P and Fitch, and as low as those rated Caa/CCC by Rating Agencies at the time of purchase (commonly known as "high yield" or "junk" bonds), or, if unrated, deemed to be of comparable quality by the Adviser, though higher yielding, are characterized by higher risk. See "Rating Categories" below for a general description of securities ratings. These securities may be subject to certain risks with respect to the issuing entity and to greater market fluctuations than certain lower yielding, higher-rated securities. These securities generally are considered by the Rating Agencies to be, on balance, predominantly speculative with respect to the issuer's ability to make principal and interest payments in accordance with the terms of the obligation and generally will involve more credit risk than securities in the higher rating categories. The ratings of Rating Agencies represent their opinions as to the quality of the obligations which they undertake to rate. It should be emphasized, however, that ratings are relative and subjective and are not absolute standards of quality and, although ratings may be useful in evaluating the safety or interest and principal payments, they do not evaluate the market value risk of such obligations. Although these ratings may be an initial criterion for selection of portfolio investments, the Adviser also will evaluate these securities and the ability of the issuers of such securities to pay interest and principal based upon financial and other available information. The success of a fund's investments in lower-rated securities may be more dependent on the Adviser's credit analysis than might be the case for investments in higher-rated securities.

Bond prices generally are inversely related to interest rate changes; however, bond price volatility also may be inversely related to coupon. Accordingly, below investment grade securities may be relatively less sensitive to interest rate changes than higher quality securities of comparable maturity, because of their higher coupon. This higher coupon is what the investor receives in return for bearing greater credit risk. The higher credit risk associated with below investment grade securities potentially can have a greater effect on the value of such securities than may be the case with higher quality issues of comparable maturity, and will be a substantial factor in a fund's relative share price volatility.

The prices of these securities can fall dramatically in response to negative news about the issuer or its industry. The market values of many of these securities also tend to be more sensitive to general economic conditions than are higher-rated securities and will fluctuate over time. Companies that issue certain of these securities often are highly leveraged and may not have available to them more traditional methods of financing. Therefore, the risk associated with acquiring the securities of such issuers generally is greater than is the case with the higher-rated securities. These securities may be particularly susceptible to economic downturns. For example, during an economic downturn or a sustained period of rising interest rates, highly leveraged issuers of these securities may not have sufficient revenues to meet their interest payment obligations. The issuer's ability to service its debt obligations also may be affected adversely by specific corporate developments, forecasts, or the unavailability of additional financing. The risk of loss because of default by the issuer is significantly greater for the holders of these securities because such securities generally are unsecured and often are subordinated to other creditors of the issuer. It is likely that an economic recession also would disrupt severely the market for such securities and have an adverse impact on their value.

Because there is no established retail secondary market for many of these securities, it may be anticipated that such securities could be sold only to a limited number of dealers or institutional investors. To the extent a secondary trading market for these securities does exist, it generally is not as liquid as the secondary market for higher-rated securities. The lack of a liquid secondary market may have an adverse impact on market price and yield and a fund's ability to dispose of particular issues when necessary to meet the fund's liquidity needs or in response to a specific economic event such as a deterioration in the creditworthiness of the issuer. The lack of a liquid secondary market for certain securities also may make it more difficult for a fund to obtain accurate market quotations for purposes of valuing the fund's portfolio and calculating its NAV. Adverse conditions could make it difficult at times for a fund to sell certain securities or could result in lower prices than those used in calculating the fund's NAV. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the values and liquidity of these securities. In such cases, the Adviser's judgment may play a greater role in valuation because less reliable, objective data may be available.

Certain funds may invest in these securities when their issuers will be close to, or already have entered, reorganization proceedings. As a result, it is expected that these securities will cease or will have ceased to meet their interest payment obligations, and accordingly would trade in much the same manner as an equity security. Consequently, a fund would intend to make such investments on the basis of potential appreciation in the price of

these securities, rather than any expectation of realizing income. Reorganization entails a complete change in the structure of a business entity. An attempted reorganization may be unsuccessful, resulting in substantial or total loss of amounts invested. If reorganization is successful, the value of securities of the restructured entity may depend on numerous factors, including the structure of the reorganization, the market success of the entity's products or services, the entity's management, and the overall strength of the marketplace.

High yield, lower-rated securities acquired during an initial offering may involve special risks because they are new issues. A fund will not have any arrangement with any person concerning the acquisition of such securities.

Zero Coupon, Pay-In-Kind and Step-Up Securities. Zero coupon securities are issued or sold at a discount from their face value and do not entitle the holder to any periodic payment of interest prior to maturity or a specified redemption date or cash payment date. Zero coupon securities also may take the form of notes and bonds that have been stripped of their unmatured interest coupons, the coupons themselves and receipts or certificates representing interests in such stripped debt obligations and coupons. Zero coupon securities issued by corporations and financial institutions typically constitute a proportionate ownership of the issuer's pool of underlying Treasury securities. A zero coupon security pays no interest to its holders during its life and is sold at a discount to its face value at maturity. The amount of any discount varies depending on the time remaining until maturity or cash payment date, prevailing interest rates, liquidity of the security and perceived credit quality of the issuer. Pay-in-kind securities generally pay interest through the issuance of additional securities. Step-up coupon bonds are debt securities that typically do not pay interest for a specified period of time and then pay interest at a series of different rates. The amount of any discount on these securities varies depending on the time remaining until maturity or cash payment date, prevailing interest rates, liquidity of the security and perceived credit quality of the issuer. The market prices of these securities generally are more volatile and are likely to respond to a greater degree to changes in interest rates than the market prices of securities that pay cash interest periodically having similar maturities and credit qualities. In addition, unlike bonds that pay cash interest throughout the period to maturity, a fund will realize no cash until the cash payment date unless a portion of such securities are sold and, if the issuer defaults, the fund may obtain no return at all on its investment. Federal income tax law requires the holder of a zero coupon security or of certain pay-in-kind or step-up bonds to accrue income with respect to these securities prior to the receipt of cash payments. To maintain its qualification as a regulated investment company and avoid liability for federal income taxes, a fund may be required to distribute such income accrued with respect to these securities and may have to dispose of portfolio securities under disadvantageous circumstances in order to generate cash to satisfy these distribution requirements.

The credit risk factors pertaining to high-yield, lower-rated securities (discussed above) also apply to lower-rated zero coupon, pay-in-kind and step-up securities. In addition to the risks associated with the credit rating of the issuers, the market prices of these securities may be very volatile during the period no interest is paid.

Inflation-Indexed Securities. Inflation-indexed securities, such as TIPS, are fixed-income securities whose value is periodically adjusted according to the rate of inflation. Two structures are common. The Treasury and some other issuers utilize a structure that accrues inflation into the principal value of the bond. Most other issuers pay out the Consumer Price Index accruals as part of a semi-annual coupon.

Inflation-indexed securities issued by the Treasury have varying maturities and pay interest on a semi-annual basis equal to a fixed percentage of the inflation-adjusted principal amount. If the periodic adjustment rate measuring inflation falls, the principal value of inflation-index bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of Treasury inflation-indexed bonds, even during a period of deflation. However, the current market value of the bonds is not guaranteed and will fluctuate. Other inflation-related bonds may or may not provide a similar guarantee. If a guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal amount.

The periodic adjustment of U.S. inflation-indexed securities is tied to the Consumer Price Index for Urban Consumers ("CPI-U"), which is calculated monthly by the U.S. Bureau of Labor Statistics. The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation-indexed securities issued by a foreign government are generally adjusted to reflect a comparable inflation index calculated by that government. There can be no assurance that the CPI-U or any foreign inflation

index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States.

The value of inflation-indexed securities is expected to change in response to changes in real interest rates. Real interest rates in turn are tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if the rate of inflation rises at a faster rate than nominal interest rates, real interest rates might decline, leading to an increase in value of inflation-indexed securities. In contrast, if nominal interest rates increase at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation-index securities. While these securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in value. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the security's inflation measure.

Variable and Floating Rate Securities. Variable and floating rate securities provide for adjustment in the interest rate paid on the obligations. The terms of such obligations typically provide that interest rates are adjusted based upon an interest or market rate adjustment as provided in the respective obligations. The adjustment intervals may be regular, and range from daily up to annually, or may be event-based, such as based on a change in the prime rate. Variable rate obligations typically provide for a specified periodic adjustment in the interest rate, while floating rate obligations typically have an interest rate which changes whenever there is a change in the external interest or market rate. Because of the interest rate adjustment feature, variable and floating rate securities provide a fund with a certain degree of protection against rises in interest rates, although the fund will participate in any declines in interest rates as well. Generally, changes in interest rates will have a smaller effect on the market value of variable and floating rate securities than on the market value of comparable fixed-income obligations. Thus, investing in variable and floating rate securities generally allows less opportunity for capital appreciation and depreciation than investing in comparable fixed-income securities.

Variable Rate Demand Notes. Variable rate demand notes include master demand notes, which are obligations that permit a fund to invest fluctuating amounts, at varying rates of interest, pursuant to direct arrangements between the fund, as lender, and the borrower. These obligations permit daily changes in the amounts borrowed. Because these obligations are direct lending arrangements between the lender and borrower, it is not contemplated that such instruments generally will be traded, and there generally is no established secondary market for these obligations, although they are redeemable on demand at face value, plus accrued interest. Accordingly, where these obligations are not secured by letters of credit or other credit support arrangements, the fund's right to redeem is dependent on the ability of the borrower to pay principal and interest on demand. Such obligations frequently are not rated by credit rating agencies. Changes in the credit quality of banks or other financial institutions providing any credit support or liquidity enhancements could cause losses to the fund.

Floating and Inverse Floating Rate Debt Instruments. The interest rate on a floating rate debt instrument ("floater") is a variable rate which is tied to another interest rate, such as a prime rate or Treasury bill rate. The interest rate on an inverse floating rate debt instrument moves or resets in the opposite direction from the market rate of interest to which the inverse floater is indexed or inversely to a multiple of the applicable index. An inverse floating rate debt instrument may exhibit greater price volatility than a fixed rate obligation of similar credit quality, and investing in these instruments involves leveraging which may magnify gains or losses.

Loans. Senior secured loans ("Senior Loans") typically hold a first lien priority and, like other types of loans, pay interest at rates that are determined daily, monthly, quarterly or semi-annually on the basis of a floating base lending rate plus a premium or credit spread. These base lending rates are primarily LIBOR and secondarily the prime rate offered by one or more major U.S. banks and the certificate of deposit rate or other base lending rates used by commercial lenders. As short-term interest rates increase, interest payable to a fund from its investments in loans is likely to increase, and as short-term interest rates decrease, interest payable to the fund from its investments in loans is likely to decrease. To the extent a fund invests in loans with a base lending rate floor, the fund's potential for decreased income in a flat or falling rate environment may be mitigated, but the fund may not receive the benefit of increased coupon payments if the relevant interest rate increases but remains below the base lending rate floor.

Loans in which a fund may invest are typically made to U.S. and, to a limited extent, non-U.S. corporations, partnerships and other business entities that operate in various industries and geographical regions (a "Borrower"). Borrowers may obtain loans to, among other reasons, refinance existing debt and for acquisitions, dividends, leveraged buyouts and general corporate purposes. Subordinated loans generally have the same characteristics as Senior Loans except that such loans are subordinated in payment and/or lower in lien priority to first lien holders or may be unsecured.

Senior Loans hold the most senior position in the capital structure of a Borrower, are secured with specific collateral and have a claim on the assets and/or stock of the Borrower that is senior to that held by unsecured creditors, subordinated debt holders and stockholders of the Borrower. Typically, in order to borrow money pursuant to a Senior Loan, a Borrower will, for the term of the Senior Loan, pledge collateral, including, but not limited to: (i) working capital assets, such as accounts receivable and inventory, (ii) tangible fixed assets, such as real property, buildings and equipment, (iii) intangible assets, such as trademarks and patent rights (but excluding goodwill) and (iv) security interests in shares of stock of subsidiaries or affiliates. In the case of Senior Loans made to non-public companies, the company's shareholders or owners may provide collateral in the form of secured guarantees and/or security interests in assets that they own. In many instances, a Senior Loan may be secured only by stock in the Borrower or its subsidiaries. Collateral may consist of assets that may not be readily liquidated, and there is no assurance that the liquidation of such assets would satisfy fully a Borrower's obligations under a Senior Loan.

A Borrower must comply with various restrictive covenants contained in a loan agreement or note purchase agreement between the Borrower and the holders of a loan (the "Loan Agreement"). In a typical loan, an agent (the "Agent Bank") administers the terms of the Loan Agreement. In such cases, the Agent Bank is normally responsible for the collection of principal and interest payments from the Borrower and the apportionment of these payments to the credit of all institutions that are parties to the Loan Agreement. A fund will generally rely upon the Agent Bank or an intermediate participant to receive and forward to the fund its portion of the principal and interest payments on the loan. Additionally, a fund normally will rely on the Agent Bank and the other loan investors to use appropriate credit remedies against the Borrower. The Agent Bank is typically responsible for monitoring compliance with covenants contained in the Loan Agreement based upon reports prepared by the Borrower. The Agent Bank may monitor the value of any collateral and, if the value of the collateral declines, may accelerate the loan, may give the Borrower an opportunity to provide additional collateral or may seek other protection for the benefit of the participants in the loan. The Agent Bank is compensated by the Borrower for providing these services under a Loan Agreement, and such compensation may include special fees paid upon structuring and funding the Senior Loan and other fees paid on a continuing basis. With respect to loans for which the Agent Bank does not perform such administrative and enforcement functions, the Adviser may perform such tasks on a fund's behalf, although a collateral bank will typically hold any collateral on behalf of the fund and the other loan investors pursuant to the applicable Loan Agreement.

In the process of buying, selling and holding loans, a fund may receive and/or pay certain fees. These fees are in addition to interest payments received and may include facility fees, commitment fees, amendment fees, commissions and prepayment penalty fees. When a fund buys a loan it may receive a facility fee and when it sells a loan it may pay a facility fee. On an ongoing basis, a fund may receive a commitment fee based on the undrawn portion of the underlying line of credit portion of a loan. In certain circumstances, a fund may receive a prepayment penalty fee upon the prepayment of a loan by a Borrower. Other fees received by a fund may include covenant waiver fees, covenant modification fees or other amendment fees.

Offerings of Senior Loans and other loans in which a fund may invest generally are not registered with the SEC, or any state securities commission, and are not listed on any national securities exchange. Because there is less readily available or reliable information about most loans than is the case for many other types of securities, the Adviser will rely primarily on its own evaluation of a Borrower's credit quality rather than on any available independent sources. Therefore, a fund investing in loans will be particularly dependent on the analytical abilities of the Adviser. No active trading market may exist for some loans, which may make it difficult to value them. Some loans may be subject to restrictions on resale. In some cases, negotiations involved in disposing of indebtedness may require weeks to complete. Any secondary market for loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which may impair the ability of a seller to realize full value and thus cause a material decline in a fund's net asset value. In addition, a fund may not be able to readily dispose of its loans at prices that approximate those at which the fund could sell such loans if they were more widely-traded and, as a

result of such illiquidity, the fund may have to sell other investments or engage in borrowing transactions if necessary to raise cash to meet its obligations. If a fund's investments are focused on loans, a limited supply or relative illiquidity of loans may adversely affect a fund's yield.

The settlements of secondary market purchases of Senior Loans in the ordinary course, on a settlement date beyond the period expected by loan market participants (*i.e.*, T+7 for par loans and T+20 for distressed loans, in other words more than seven or twenty business days beyond the trade date, respectively), are subject to the delayed compensation mechanics prescribed by the Loan Syndications and Trading Association ("LSTA"). For par loans, for example, income accrues to the buyer of the loan (the "Buyer") during the period beginning on the last date by which the loan purchase should have settled (T+7) to and including the actual settlement date. Should settlement of a par loan purchased in the secondary market be delayed beyond the T+7 period prescribed by the LSTA, the Buyer is typically compensated for such delay through a payment from the seller of the loan (this payment may be netted from the wire released on settlement date for the purchase price of the loan paid by the Buyer). In brief, the adjustment is typically calculated by multiplying the notional amount of the trade by the applicable margin in the Loan Agreement pro rated for the number of business days (calculated using a year of 360 days) beyond the settlement period prescribed by the LSTA, plus any amendment or consent fees that the Buyer should have received. Furthermore, the purchase of a Senior Loan in the secondary market is typically negotiated and finalized pursuant to a binding trade confirmation, and, therefore, the risk of non-delivery of the security to the fund is reduced or eliminated.

A fund may purchase and retain in its portfolio loans where the Borrower has experienced, or may be perceived to be likely to experience, credit problems, including involvement in or recent emergence from bankruptcy court proceedings or other forms of debt restructuring. Such investments may provide opportunities for enhanced income, although they also will be subject to greater risk of loss. At times, in connection with the restructuring of a loan either outside of bankruptcy court or in the context of bankruptcy court proceedings, a fund may determine or be required to accept equity securities or junior credit securities in exchange for all or a portion of a loan. A fund may from time to time participate on ad-hoc committees formed by creditors to negotiate with the management of financially troubled Borrowers and may incur legal fees as a result of such participation. In addition, such participation may restrict the fund's ability to trade in or acquire additional positions in a particular security when it might otherwise desire to do so. Participation by a fund also may expose the fund to potential liabilities under bankruptcy or other laws governing the rights of creditors and debtors.

Loans are usually rated below investment grade and may also be unrated. As a result, the risks associated with investing in loans are similar to the risks of fixed-income securities rated below investment grade, although Senior Loans are senior and secured, in contrast to other fixed-income securities rated below investment grade, which are often subordinated and/or unsecured. Any specific collateral used to secure a loan, however, may decline in value or become illiquid, which would adversely affect the loan's value. Loans are subject to a number of risks described elsewhere in this SAI section titled "Fixed-Income Securities," including non-payment of principal and interest, liquidity risk and the risk of investing in fixed-income securities rated below investment grade.

Investing in loans is subject to legislative risk. If legislation or state or federal regulations impose additional requirements or restrictions on the ability of financial institutions to make loans, the availability of Senior Loans and other types of loans for investment by a fund may be adversely affected. In addition, such requirements or restrictions could reduce or eliminate sources of financing for certain issuers. This would increase the risk of default. If legislation or federal or state regulations require financial institutions to increase their capital requirements, this may cause financial institutions to dispose of loans that are considered highly levered transactions. If a fund attempts to sell a loan at a time when a financial institution is engaging in such a sale, the price the fund could receive for the loan may be adversely affected.

Subordinated loans generally are subject to similar risks as those associated with investments in Senior Loans, except that such loans are subordinated in payment and/or lower in lien priority to first lien holders or may be unsecured. In the event of default on a subordinated loan, the first priority lien holder has first claim to the underlying collateral of the loan. These loans are subject to the additional risk that the cash flow of the Borrower and property securing the loan or debt, if any, may be insufficient to meet scheduled payments after giving effect to the senior unsecured or senior secured obligations of the Borrower. This risk is generally higher for subordinated

unsecured loans or debt that is not backed by a security interest in any specific collateral. Subordinated loans generally have greater price volatility than Senior Loans and may be less liquid.

The Adviser and/or its affiliates may participate in the primary and secondary market for loans. Because of limitations imposed by applicable law, the presence of the Adviser and/or the Adviser's affiliates in the loan market may restrict a fund's ability to acquire certain loans, or affect the timing or price of such acquisitions. Also, because the Adviser, in the course of investing fund assets in loans, may have access to material non-public information regarding a Borrower, the ability of a fund or funds advised by such Adviser to purchase or sell publicly-traded securities of such Borrowers may be restricted. Conversely, because of the financial services and asset management activities of the Adviser and/or its affiliates, the Adviser may not have access to material non-public information regarding the Borrower to which other lenders have access.

Participation Interests and Assignments. Loans may be originated, negotiated and structured by a syndicate of lenders ("Co-Lenders"), consisting of commercial banks, thrift institutions, insurance companies, financial companies or other financial institutions one or more of which acts as Agent Bank. Co-Lenders may sell such securities to third parties called "Participants." A fund investing in such securities may participate as a Co-Lender at origination or acquire an interest in the security (a "participation interest") from a Co-Lender or a Participant. Co-Lenders and Participants interposed between a fund and the Borrower, together with the Agent Bank(s), are referred herein as "Intermediate Participants." A participation interest gives a fund an undivided interest in the security in the proportion that the fund's participation interest bears to the total principal amount of the security. These instruments may have fixed, floating or variable rates of interest.

A fund may purchase a participation interest in a portion of the rights of an Intermediate Participant, which would not establish any direct relationship between the fund and the Borrower. The fund would be required to rely on the Intermediate Participant that sold the participation interest not only for the enforcement of the fund's rights against the Borrower but also for the receipt and processing of payments due to the fund under the security. The fund would have the right to receive payments of principal, interest and any fees to which it is entitled only from the Intermediate Participant and only upon receipt of the payments from the Borrower. The fund generally will have no right to enforce compliance by the Borrower with the terms of the Loan Agreement nor any rights of set-off against the Borrower, and the fund may not directly benefit from any collateral supporting the obligation in which it has purchased the participation interest. Because it may be necessary to assert through an Intermediate Participant such rights as may exist against the Borrower, in the event the Borrower fails to pay principal and interest when due, the fund may be subject to delays, expenses and risks that are greater than those that would be involved if the fund would enforce its rights directly against the Borrower. Moreover, under the terms of a participation interest, a fund may be regarded as a creditor of the Intermediate Participant (rather than of the Borrower), so that the fund may also be subject to the risk that the Intermediate Participant may become insolvent. In the event of the insolvency of the Intermediate Participant, the fund may be treated as a general creditor of the Intermediate Participant and may not benefit from any set-off between the Intermediate Participant and the Borrower. Certain participation interests may be structured in a manner designed to avoid purchasers being subject to the credit risk of the Intermediate Participant, but even under such a structure, in the event of the Intermediate Participant's insolvency, the Intermediate Participant's servicing of the participation interests may be delayed and the assignability of the participation interest impaired. Similar risks may arise with respect to the Agent Bank if, for example, assets held by the Agent Bank for the benefit of a fund were determined by the appropriate regulatory authority or court to be subject to the claims of the Agent Bank's creditors. In such case, the fund might incur certain costs and delays in realizing payment in connection with the participation interest or suffer a loss of principal and/or interest. Further, in the event of the bankruptcy or insolvency of the Borrower, the obligation of the Borrower to repay the loan may be subject to certain defenses that can be asserted by such Borrower as a result of improper conduct by the Agent Bank or Intermediate Participant.

A fund may invest in the underlying loan to the Borrower through an assignment of all or a portion of such loan ("Assignments") from a third party. When the fund purchases Assignments from Co-Lenders it will acquire direct rights against the Borrower on the loan. Because Assignments are arranged through private negotiations between potential assignees and potential assignors, however, the rights and obligations acquired by the fund as the purchaser of an Assignment may differ from, and be more limited than, those held by the assigning Co-Lender.

A fund may have difficulty disposing of participation interests and Assignments because to do so it will have to sell such securities to a third party. Because there is no established secondary market for such securities, it is anticipated that such securities could be sold only to a limited number of institutional investors. The lack of an established secondary market may have an adverse impact on the value of such securities and the fund's ability to dispose of particular participation interests or Assignments when necessary to meet the fund's liquidity needs or in response to a specific economic event such as a deterioration in the creditworthiness of the Borrower. The lack of an established secondary market for participation interests and Assignments also may make it more difficult for the fund to assign a value to these securities for purposes of valuing the fund's portfolio and calculating its NAV.

Mortgage-Related Securities. Mortgage-related securities are a form of derivative collateralized by pools of residential or commercial mortgages. Pools of mortgage loans are assembled as securities for sale to investors by various governmental, government-related and private organizations. These securities may include complex instruments such as collateralized mortgage obligations ("CMOs") and stripped mortgage-backed securities, mortgage pass-through securities, interests in REMICs, adjustable rate mortgage loans, or other kinds of mortgage-backed securities, including those with fixed, floating and variable interest rates; interest rates based on multiples of changes in a specified index of interest rates; interest rates that change inversely to changes in interest rates; and those that do not bear interest.

Mortgage-related securities are subject to credit, prepayment and interest rate risk, and may be more volatile and less liquid, and more difficult to price accurately, than more traditional debt securities. Although certain mortgage-related securities are guaranteed by a third party (such as a U.S. Government agency or instrumentality with respect to government-related mortgage-backed securities) or otherwise similarly secured, the market value of the security, which may fluctuate, is not secured. Mortgage-backed securities issued by private issuers, whether or not such securities are subject to guarantees or another form of credit enhancement, may entail greater risk than securities directly or indirectly guaranteed by the U.S. Government. The market value of mortgage-related securities depends on, among other things, the level of interest rates, the securities' coupon rates and the payment history of the mortgagors of the underlying mortgages.

Mortgage-related securities generally are subject to credit risks associated with the performance of the underlying mortgage properties and to prepayment risk. In certain instances, the credit risk associated with mortgage-related securities can be reduced by third party guarantees or other forms of credit support. Improved credit risk does not reduce prepayment risk, which is unrelated to the rating assigned to the mortgage-related security. Prepayment risk may lead to pronounced fluctuations in value of the mortgage-related security. If a mortgage-related security is purchased at a premium, all or part of the premium may be lost if there is a decline in the market value of the security, whether resulting solely from changes in interest rates or from prepayments on the underlying mortgage collateral (the rates of which are highly dependent upon changes in interest rates, as discussed below). Mortgage loans are generally partially or completely prepaid prior to their final maturities as a result of events such as sale of the mortgaged premises, default, condemnation or casualty loss. Because these securities may be subject to extraordinary mandatory redemption in whole or in part from such prepayments of mortgage loans, a substantial portion of such securities may be redeemed prior to their scheduled maturities or even prior to ordinary call dates. Extraordinary mandatory redemption without premium could also result from the failure of the originating financial institutions to make mortgage loans in sufficient amounts within a specified time period. The ability of issuers of mortgage-backed securities to make payments depends on such factors as rental income, occupancy levels, operating expenses, mortgage default rates, taxes, government regulations and appropriation of subsidies.

Certain mortgage-related securities, such as inverse floating rate CMOs, have coupons that move inversely to a multiple of a specific index, which may result in a form of leverage. As with other interest-bearing securities, the prices of certain mortgage-related securities are inversely affected by changes in interest rates. However, although the value of a mortgage-related security may decline when interest rates rise, the converse is not necessarily true, since in periods of declining interest rates the mortgages underlying the security are more likely to be prepaid. For this and other reasons, a mortgage-related security's stated maturity may be shortened by unscheduled prepayments on the underlying mortgages, and, therefore, it is not possible to predict accurately the security's return to a fund. Moreover, with respect to certain stripped mortgage-backed securities, if the underlying mortgage securities experience greater than anticipated prepayments of principal, a fund may fail to fully recoup its initial investment even if the securities are rated in the highest rating category by a nationally recognized statistical rating organization. During periods of rapidly rising interest rates, prepayments of mortgage-related securities may occur

at slower than expected rates. Slower prepayments effectively may lengthen a mortgage-related security's expected maturity, which generally would cause the value of such security to fluctuate more widely in response to changes in interest rates. Were the prepayments on a fund's mortgage-related securities to decrease broadly, the fund's effective duration, and thus sensitivity to interest rate fluctuations, would increase. Commercial real property loans, however, often contain provisions that reduce the likelihood that such securities will be prepaid. The provisions generally impose significant prepayment penalties on loans and in some cases there may be prohibitions on principal prepayments for several years following origination.

Residential Mortgage-Related Securities. Residential mortgage-related securities representing participation interests in pools of one- to four-family residential mortgage loans issued or guaranteed by governmental agencies or instrumentalities, such as the GNMA, the FNMA and the Federal Home Loan Mortgage Corporation ("FHLMC"), or issued by private entities, have been issued using a variety of structures, including multi-class structures featuring senior and subordinated classes. Some mortgage-related securities have structures that make their reactions to interest rate changes and other factors difficult to predict, making their value highly volatile.

Mortgage-related securities issued by GNMA include Ginnie Maes which are guaranteed as to the timely payment of principal and interest by GNMA and such guarantee is backed by the full faith and credit of the U.S. Government. Ginnie Maes are created by an "issuer," which is a Federal Housing Administration ("FHA") approved mortgagee that also meets criteria imposed by GNMA. The issuer assembles a pool of FHA, Farmers' Home Administration or Veterans' Administration ("VA") insured or guaranteed mortgages which are homogeneous as to interest rate, maturity and type of dwelling. Upon application by the issuer, and after approval by GNMA of the pool, GNMA provides its commitment to guarantee timely payment of principal and interest on the Ginnie Maes backed by the mortgages included in the pool. The Ginnie Maes, endorsed by GNMA, then are sold by the issuer through securities dealers. Ginnie Maes bear a stated "coupon rate" which represents the effective FHA-VA mortgage rate at the time of issuance, less GNMA's and the issuer's fees. GNMA is authorized under the National Housing Act to guarantee timely payment of principal and interest on Ginnie Maes. This guarantee is backed by the full faith and credit of the U.S. Government. GNMA may borrow Treasury funds to the extent needed to make payments under its guarantee. When mortgages in the pool underlying a Ginnie Mae are prepaid by mortgagors or by result of foreclosure, such principal payments are passed through to the certificate holders. Accordingly, the life of the Ginnie Mae is likely to be substantially shorter than the stated maturity of the mortgages in the underlying pool. Because of such variation in prepayment rates, it is not possible to predict the life of a particular Ginnie Mae. Payments to holders of Ginnie Maes consist of the monthly distributions of interest and principal less GNMA's and the issuer's fees. The actual yield to be earned by a holder of a Ginnie Mae is calculated by dividing interest payments by the purchase price paid for the Ginnie Mae (which may be at a premium or a discount from the face value of the certificate). Monthly distributions of interest, as contrasted to semi-annual distributions which are common for other fixed interest investments, have the effect of compounding and thereby raising the effective annual yield earned on Ginnie Maes.

Mortgage-related securities issued by FNMA, including FNMA Guaranteed Mortgage Pass-Through Certificates (also known as "Fannie Maes"), are solely the obligations of FNMA and are not backed by or entitled to the full faith and credit of the U.S. Government. Fannie Maes are guaranteed as to timely payment of principal and interest by FNMA. Mortgage-related securities issued by FHLMC include FHLMC Mortgage Participation Certificates (also known as "Freddie Macs" or "PCs"). Freddie Macs are not guaranteed by the U.S. Government or by any Federal Home Loan Bank and do not constitute a debt or obligation of the U.S. Government or of any Federal Home Loan Bank. Freddie Macs entitle the holder to timely payment of interest, which is guaranteed by FHLMC. FHLMC guarantees either ultimate collection or timely payment of all principal payments on the underlying mortgage loans. When FHLMC does not guarantee timely payment of principal, FHLMC may remit the amount due on account of its guarantee of ultimate payment of principal at any time after default on an underlying mortgage, but in no event later than one year after it becomes payable.

In September 2008, the Treasury and the Federal Housing Finance Agency ("FHFA") announced that FNMA and FHLMC had been placed in conservatorship. Since that time, FNMA and FHLMC have received significant capital support through Treasury preferred stock purchases, as well as Treasury and Federal Reserve purchases of their mortgage backed securities. The FHFA and the U.S. Treasury (through its agreement to purchase FNMA and FHLMC preferred stock) have imposed strict limits on the size of their mortgage portfolios. While the mortgage-backed securities purchase programs ended in 2010, the Treasury continued its support for the entities' capital as

necessary to prevent a negative net worth through at least 2012. When a credit rating agency downgraded long-term U.S. Government debt in August 2011, the agency also downgraded FNMA and FHLMC's bond ratings, from AAA to AA+, based on their direct reliance on the U.S. Government (although that rating did not directly relate to their mortgage-backed securities). From the end of 2007 through the third quarter of 2012, FNMA and FHLMC required Treasury support of approximately \$187.5 billion through draws under the preferred stock purchase agreements. However, they have repaid approximately \$131.5 billion in dividends. FNMA and FHLMC ended the second quarter of 2013 with positive net worth and, as a result, neither required a draw from the Treasury. While the Treasury committed to offset negative equity at FNMA and FHLMC through its preferred stock purchases through 2012, FHFA has made projections for those purchases through 2015, predicting that cumulative Treasury draws (including dividends) at the end of 2015 could range from \$191 billion to \$209 billion. Nonetheless, no assurance can be given that the Federal Reserve or the Treasury will ensure that FNMA and FHLMC remain successful in meeting their obligations with respect to the debt and mortgage-backed securities that they issue.

In addition, the problems faced by FNMA and FHLMC, resulting in their being placed into federal conservatorship and receiving significant U.S. Government support, have sparked serious debate among federal policymakers regarding the continued role of the U.S. Government in providing liquidity for mortgage loans. The Obama Administration produced a report to Congress on February 11, 2011, outlining a proposal to wind down FNMA and FHLMC by increasing their guaranty fees, reducing their conforming loan limits (the maximum amount of each loan they are authorized to purchase), and continuing progressive limits on the size of their investment portfolio. In December 2011, Congress enacted the Temporary Payroll Tax Cut Continuation Act of 2011 which, among other provisions, requires that FNMA and FHLMC increase their single-family guaranty fees by at least 10 basis points and remit this increase to the Treasury with respect to all loans acquired by FNMA or FHLMC on or after April 1, 2012 and before January 1, 2022. Serious discussions among policymakers continue, however, as to whether FNMA and FHLMC should be nationalized, privatized, restructured or eliminated altogether. In July 2013, the House Financial Services Committee approved the Protect American Taxpayers and Homeowners Act of 2013. The bill, if enacted, would require FHFA to place FNMA and FHLMC into receivership within five years and repeal their corporate charters at that time, which would effectively strip them of the authority to conduct any new business. The bill would also place restrictions on FNMA's and FHLMC's activities prior to being placed into receivership and may result in FNMA and FHLMC further increasing their guaranty fees. FNMA and FHLMC also are the subject of several continuing legal actions and investigations over certain accounting, disclosure or corporate governance matters, which (along with any resulting financial restatements) may continue to have an adverse effect on the guaranteeing entities. Importantly, the future of FNMA and FHLMC is in serious question as the U.S. Government considers multiple options.

Commercial Mortgage-Related Securities. Commercial mortgage-related securities generally are multi-class debt or pass-through certificates secured by mortgage loans on commercial properties. These mortgage-related securities generally are constructed to provide protection to holders of the senior classes against potential losses on the underlying mortgage loans. This protection generally is provided by having the holders of subordinated classes of securities ("Subordinated Securities") take the first loss if there are defaults on the underlying commercial mortgage loans. Other protection, which may benefit all of the classes or particular classes, may include issuer guarantees, reserve funds, additional Subordinated Securities, cross-collateralization and over-collateralization. Commercial lending, however, generally is viewed as exposing the lender to a greater risk of loss than one- to four-family residential lending. Commercial lending, for example, typically involves larger loans to single borrowers or groups of related borrowers than residential one- to four-family mortgage loans. In addition, the repayment of loans secured by income-producing properties typically is dependent upon the successful operation of the related real estate project and the cash flow generated therefrom. Consequently, adverse changes in economic conditions and circumstances are more likely to have an adverse impact on mortgage-related securities secured by loans on certain types of commercial properties than those secured by loans on residential properties. The risks that recovery or repossessed collateral might be unavailable or inadequate to support payments on commercial mortgage-related securities may be greater than is the case for non-multifamily residential mortgage-related securities.

Subordinated Securities. Subordinated Securities, including those issued or sponsored by commercial banks, savings and loan institutions, mortgage bankers, private mortgage insurance companies and other non-governmental issuers, have no governmental guarantee, and are subordinated in some manner as to the payment of principal and/or interest to the holders of more senior mortgage-related securities arising out of the same pool of mortgages. The holders of Subordinated Securities typically are compensated with a higher stated yield than are the holders of more

senior mortgage-related securities. On the other hand, Subordinated Securities typically subject the holder to greater risk than senior mortgage-related securities and tend to be rated in a lower rating category, and frequently a substantially lower rating category, than the senior mortgage-related securities issued in respect of the same pool of mortgages. Subordinated Securities generally are likely to be more sensitive to changes in prepayment and interest rates and the market for such securities may be less liquid than is the case for traditional fixed-income securities and senior mortgage-related securities.

Collateralized Mortgage Obligations (CMOs) and Multi-Class Pass-Through-Securities. CMOs are multiclass bonds backed by pools of mortgage pass-through certificates or mortgage loans. CMOs may be collateralized by: (1) Ginnie Mae, Fannie Mae, or Freddie Mac pass-through certificates; (2) unsecuritized mortgage loans insured by the FHA or guaranteed by the Department of Veterans' Affairs; (3) unsecuritized conventional mortgages; (4) other mortgage-related securities; or (5) any combination thereof.

Each class of CMOs, often referred to as a "tranche," is issued at a specific coupon rate and has a stated maturity or final distribution date. Principal prepayments on collateral underlying a CMO may cause it to be retired substantially earlier than the stated maturities or final distribution dates. The principal and interest on the underlying mortgages may be allocated among the several classes of a series of a CMO in many ways. One or more tranches of a CMO may have coupon rates which reset periodically at a specified increment over an index or market rate, such as LIBOR (or sometimes more than one index). These floating rate CMOs typically are issued with lifetime caps on the coupon rate thereon. Inverse floating rate CMOs constitute a tranche of a CMO with a coupon rate that moves in the reverse direction to an applicable index or market rate such as LIBOR. Accordingly, the coupon rate thereon will increase as interest rates decrease. Inverse floating rate CMOs are typically more volatile than fixed or floating rate tranches of CMOs.

Many inverse floating rate CMOs have coupons that move inversely to a multiple of the applicable indexes. The effect of the coupon varying inversely to a multiple of an applicable index creates a leverage factor. Inverse floating rate CMOs based on multiples of a stated index are designed to be highly sensitive to changes in interest rates and can subject the holders thereof to extreme reductions of yield and loss of principal. The markets for inverse floating rate CMOs with highly leveraged characteristics at times may be very thin. The ability of a fund to dispose of positions in such securities will depend on the degree of liquidity in the markets for such securities. It is impossible to predict the amount of trading interest that may exist in such securities, and therefore the future degree of liquidity. It should be noted that inverse floaters based on multiples of a stated index are designed to be highly sensitive to changes in interest rates and can subject the holders thereof to extreme reductions of yield and loss of principal.

As CMOs have evolved, some classes of CMO bonds have become more prevalent. The planned amortization class ("PAC") and targeted amortization class ("TAC"), for example, were designed to reduce prepayment risk by establishing a sinking-fund structure. PAC and TAC bonds assure to varying degrees that investors will receive payments over a predetermined period under varying prepayment scenarios. Although PAC and TAC bonds are similar, PAC bonds are better able to provide stable cash flows under various prepayment scenarios than TAC bonds because of the order in which these tranches are paid.

Stripped Mortgage-Backed Securities. Stripped mortgage-backed securities are created by segregating the cash flows from underlying mortgage loans or mortgage securities to create two or more new securities, each with a specified percentage of the underlying security's principal or interest payments. Mortgage securities may be partially stripped so that each investor class receives some interest and some principal. When securities are completely stripped, however, all of the interest is distributed to holders of one type of security, known as an interest-only security ("IO") and all of the principal is distributed to holders of another type of security known as a principal-only security ("PO"). IOs and POs can be created in a pass-through structure or as tranches of a CMO. The yields to maturity on IOs and POs are very sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets. If the underlying mortgage assets experience greater than anticipated prepayments of principal, a fund may not fully recoup its initial investment in IOs. Conversely, if the underlying mortgage assets experience less than anticipated prepayments of principal, the yield on POs could be materially and adversely affected.

Adjustable-Rate Mortgage Loans ("ARMs"). ARMs eligible for inclusion in a mortgage pool will generally provide for a fixed initial mortgage interest rate for a specified period of time, generally for either the first three, six, twelve,

thirteen, thirty-six, or sixty scheduled monthly payments. Thereafter, the interest rates are subject to periodic adjustment based on changes in an index. ARMs typically have minimum and maximum rates beyond which the mortgage interest rate may not vary over the lifetime of the loans. Certain ARMs provide for additional limitations on the maximum amount by which the mortgage interest rate may adjust for any single adjustment period. Negatively amortizing ARMs may provide limitations on changes in the required monthly payment. Limitations on monthly payments can result in monthly payments that are greater or less than the amount necessary to amortize a negatively amortizing ARM by its maturity at the interest rate in effect during any particular month.

Private Entity Securities. Mortgage-related securities may be issued by commercial banks, savings and loan institutions, mortgage bankers, private mortgage insurance companies and other non-governmental issuers. Timely payment of principal and interest on mortgage-related securities backed by pools created by non-governmental issuers often is supported partially by various forms of insurance or guarantees, including individual loan, title, pool and hazard insurance. The insurance and guarantees are issued by government entities, private insurers and the mortgage poolers. There can be no assurance that the private insurers or mortgage poolers can meet their obligations under the policies, so that if the issuers default on their obligations the holders of the security could sustain a loss. No insurance or guarantee covers a fund or the price of a fund's shares. Mortgage-related securities issued by non-governmental issuers generally offer a higher rate of interest than government-agency and government-related securities because there are no direct or indirect government guarantees of payment.

Other Mortgage-Related Securities. Other mortgage-related securities include securities other than those described above that directly or indirectly represent a participation in, or are secured by and payable from, mortgage loans on real property, including a CMO tranche which collects any cash flow from collateral remaining after obligations to the other tranches have been met. Other mortgage-related securities may be equity or debt securities issued by agencies or instrumentalities of the U.S. Government or by private originators of, or investors in, mortgage loans, including savings and loan associations, homebuilders, mortgage banks, commercial banks, investment banks, partnerships, trusts and special purpose entities of the foregoing.

Asset-Backed Securities. Asset-backed securities are a form of derivative instrument. Non-mortgage asset-backed securities are securities issued by special purpose entities whose primary assets consist of a pool of loans, receivables or other assets. Payment of principal and interest may depend largely on the cash flows generated by the assets backing the securities and, in certain cases, supported by letters of credit, surety bonds or other forms of credit or liquidity enhancements. The value of these asset-backed securities also may be affected by the creditworthiness of the servicing agent for the pool of assets, the originator of the loans or receivables or the financial institution providing the credit support.

The securitization techniques used for asset-backed securities are similar to those used for mortgage-related securities, including the issuance of securities in senior and subordinated classes (see "Mortgage-Related Securities—Commercial Mortgage-Related Securities" and "—Subordinated Securities" above). These securities include debt securities and securities with debt-like characteristics. The collateral for these securities has included home equity loans, automobile and credit card receivables, boat loans, computer leases, airplane leases, mobile home loans, recreational vehicle loans and hospital account receivables. Other types of asset-backed securities may be developed in the future. The purchase of non-mortgage asset-backed securities raises considerations peculiar to the financing of the instruments underlying such securities.

Asset-backed securities present certain risks of mortgage-backed securities, such as prepayment risk, as well as risks that are not presented by mortgage-backed securities. Primarily, these securities may provide a less effective security interest in the related collateral than do mortgage-backed securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities.

Municipal Securities.

Municipal Securities Generally. "Municipal securities" are debt securities or other obligations issued by states, territories and possessions of the United States and the District of Columbia and their political subdivisions, agencies and instrumentalities, or multistate agencies and authorities, and certain other specified securities, the interest from which is, in the opinion of bond counsel to the issuer, exempt from federal and, with respect to municipal securities in which certain funds invest, the personal income taxes of a specified state (referred to in this SAI as Municipal Bonds or Municipal Obligations, as applicable—see "Glossary" below). Municipal securities

generally include debt obligations issued to obtain funds for various public purposes and include certain industrial development bonds issued by or on behalf of public authorities. Municipal securities are classified as general obligation bonds, revenue bonds and notes. General obligation bonds are secured by the issuer's pledge of its full faith, credit and taxing power for the payment of principal and interest. Revenue bonds are payable from the revenue derived from a particular facility or class of facilities or, in some cases, from the proceeds of a special excise or other specific revenue source, but not from the general taxing power. Tax-exempt industrial development bonds, in most cases, are revenue bonds that do not carry the pledge of the credit of the issuing municipality, but generally are guaranteed by the corporate entity on whose behalf they are issued. Notes are short-term instruments which are obligations of the issuing municipalities or agencies and are sold in anticipation of a bond issuance, collection of taxes or receipt of other revenues. Issues of municipal commercial paper typically represent short-term, unsecured, negotiable promissory notes. These obligations are issued by agencies of state and local governments to finance seasonal working capital needs of municipalities or to provide interim construction financing and are paid from general revenues of municipalities or are refinanced with long-term debt. In most cases, municipal commercial paper is backed by letters of credit, lending agreements, note repurchase agreements or other credit facility agreements offered by banks or other institutions. Municipal securities include municipal lease/purchase agreements which are similar to installment purchase contracts for property or equipment issued by municipalities.

A fund's investments in municipal securities may include investments in U.S. territories or possessions such as Puerto Rico, the U.S. Virgin Islands, Guam and the Northern Mariana Islands. A fund's investments in a territory or possession could be affected by economic, legislative, regulatory or political developments affecting issuers in the territory or possession. For example, Puerto Rico, like many other states and U.S. municipalities, experienced a significant downturn during the recent recession and continues to face significant fiscal challenges, including persistent government deficits, underfunded public pensions, sizable debt service obligations and a high unemployment rate. As a result, many rating agencies have downgraded Puerto Rico's various municipal issuers, including the Commonwealth itself and its general obligation debt, or placed them on "negative watch." If the economic situation in Puerto Rico persists or worsens, the volatility, credit quality and performance of a fund holding securities of issuers in Puerto Rico could be adversely affected.

Municipal securities bear fixed, floating or variable rates of interest, which are determined in some instances by formulas under which the municipal security's interest rate will change directly or inversely to changes in interest rates or an index, or multiples thereof, in many cases subject to a maximum and minimum. Certain municipal securities are subject to redemption at a date earlier than their stated maturity pursuant to call options, which may be separated from the related municipal security and purchased and sold separately. The purchase of call options on specific municipal securities may protect a fund from the issuer of the related municipal security redeeming, or other holder of the call option from calling away, the municipal security before maturity. The sale by a fund of a call option that it owns on a specific municipal security could result in the receipt of taxable income by the fund.

The municipal securities market is not subject to the same level of regulation as other sectors of the U.S. capital markets due to broad exemptions under the federal securities laws for municipal securities. As a result, there may be less disclosure, including current audited financial information, available about municipal issuers than is available for issuers of securities registered under the Securities Act.

While, in general, municipal securities are tax exempt securities having relatively low yields as compared to taxable, non-municipal securities of similar quality, certain municipal securities are taxable obligations, offering yields comparable to, and in some cases greater than, the yields available on other permissible investments.

For the purpose of diversification under the 1940 Act, the identification of the issuer of municipal securities depends on the terms and conditions of the security. When the assets and revenues of an agency, authority, instrumentality or other political subdivision are separate from those of the government creating the subdivision and the security is backed only by the assets and revenues of the subdivision, such subdivision would be deemed to be the sole issuer. Similarly, in the case of an industrial development bond, if the bond is backed only by the assets and revenues of the non-governmental user, then such non-governmental user would be deemed to be the sole issuer. If, however, in either case, the creating government or some other entity guarantees a security, such a guaranty would be considered a separate security and would be treated as an issue of such government or other entity.

Municipal securities include certain private activity bonds (a type of revenue bond issued by or on behalf of public authorities to raise money to finance various privately operated or public facilities and for which the payment of principal and interest is dependent solely on the ability of the facility's user to meet its financial obligations and the pledge, if any, of real and personal property so financed as security for such payment), the income from which is subject to the alternative minimum tax. Taxable municipal securities also may include remarketed certificates of participation. Certain funds may invest in these municipal securities if the Adviser determines that their purchase is consistent with a fund's investment objective.

The yields on municipal securities are dependent on a variety of factors, including general economic and monetary conditions, money market factors, conditions in the municipal securities market, size of a particular offering, maturity of the obligation and rating of the issue. The achievement of the investment objective of a municipal or other tax-exempt fund is dependent in part on the continuing ability of the issuers of municipal securities in which the fund invests to meet their obligations for the payment of principal and interest when due. Municipal securities historically have not been subject to registration with the SEC, although there have been proposals which would require registration in the future. Issuers of municipal securities, like issuers of corporate securities, may declare bankruptcy, and obligations of issuers of municipal securities are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors. Many such bankruptcies historically have been of smaller villages, towns, cities and counties, but in November 2011 Jefferson County, Alabama (the state's most populous county) became the subject of the largest municipal bankruptcy ever in the U.S., at over \$4 billion in total indebtedness, surpassing in size the 1994 bankruptcy of Orange County, California. In addition, Harrisburg, Pennsylvania (the state's capital) filed for bankruptcy in October 2011. Stockton, California also filed for bankruptcy in July 2012, making it the largest U.S. city in history to file for bankruptcy. The obligations of municipal issuers may become subject to laws enacted in the future by Congress or state legislatures, or referenda extending the time for payment of principal and/or interest, or imposing other constraints upon enforcement of such obligations or upon the ability of municipalities to levy taxes. There is also the possibility that, as a result of litigation or other conditions, the ability of any municipal issuer to pay, when due, the principal of and interest on its municipal securities may be materially affected.

Certain provisions in the Code relating to the issuance of municipal securities may reduce the volume of municipal securities qualifying for federal tax exemption. One effect of these provisions could be to increase the cost of the municipal securities available for purchase by a fund and thus reduce available yield. Shareholders should consult their tax advisors concerning the effect of these provisions on an investment in such a fund. Proposals that may restrict or eliminate the income tax exemption for interest on municipal securities may be introduced in the future. If any such proposal were enacted that would reduce the availability of municipal securities for investment by a fund so as to adversely affect fund shareholders, the fund would reevaluate its investment objective and policies and submit possible changes in the fund's structure to shareholders for their consideration.

Instruments Related to Municipal Securities. The following is a description of certain types of investments related to municipal securities.

- *Floating and Variable Rate Demand Notes and Bonds.* Floating and variable rate demand notes and bonds are tax exempt obligations ordinarily having stated maturities in excess of one year, but which permit the holder to demand payment of principal at any time, or at specified intervals. Variable rate demand notes include master demand notes. See "Fixed-Income Securities—Variable and Floating Rate Securities" above.
- *Municipal Lease Obligations.* Municipal lease obligations or installment purchase contract obligations (collectively, "lease obligations") have special risks not ordinarily associated with general obligation or revenue bonds. Leases and installment purchase or conditional sale contracts (which normally provide for title to the leased asset to pass eventually to the government issuer) have evolved as a means for governmental issuers to acquire property and equipment without meeting the constitutional and statutory requirements for the issuance of debt. Although lease obligations do not constitute general obligations of the municipality for which the municipality's taxing power is pledged, a lease obligation ordinarily is backed by the municipality's covenant to budget for, appropriate and make the payments due under the lease obligation. However, lease obligations in which a fund may invest may contain "non-appropriation" clauses which provide that the municipality has no obligation to make lease or installment purchase payments in future years unless money is appropriated for such purpose on a yearly basis. Although "non-appropriation" lease obligations are secured by the leased property,

disposition of the property in the event of foreclosure might prove difficult. Certain lease obligations may be considered illiquid. Determination as to the liquidity of such securities is made in accordance with guidelines established by the board. Pursuant to such guidelines, the board has directed the Adviser to monitor carefully a fund's investment in such securities with particular regard to: (1) the frequency of trades and quotes for the lease obligation; (2) the number of dealers willing to purchase or sell the lease obligation and the number of other potential buyers; (3) the willingness of dealers to undertake to make a market in the lease obligation; (4) the nature of the marketplace trades, including the time needed to dispose of the lease obligation, the method of soliciting offers and the mechanics of transfer; and (5) such other factors concerning the trading market for the lease obligation as the Adviser may deem relevant. In addition, in evaluating the liquidity and credit quality of a lease obligation that is unrated, the board has directed the Adviser to consider: (1) whether the lease can be canceled; (2) what assurance there is that the assets represented by the lease can be sold; (3) the strength of the lessee's general credit (e.g., its debt, administrative, economic and financial characteristics); (4) the likelihood that the municipality will discontinue appropriating funding for the leased property because the property is no longer deemed essential to the operations of the municipality (e.g., the potential for an "event of non-appropriation"); (5) the legal recourse in the event of failure to appropriate; and (6) such other factors concerning credit quality as the Adviser may deem relevant.

- *Indexed and Inverse Floating Rate Municipal Securities.* Indexed rate municipal securities are securities that pay interest or whose principal amount payable upon maturity is based on the value of an index of interest rates. Interest and principal payable on certain securities also may be based on relative changes among particular indexes. So-called "inverse floating obligations" or "residual interest bonds" ("inverse floaters") are derivative instruments created by depositing municipal securities in a trust which divides the bond's income stream into two parts: (1) a short-term variable rate demand note; and (2) a residual interest bond (the inverse floater) which receives interest based on the remaining cash flow of the trust after payment of interest on the note and various trust expenses. The interest rate on the inverse floater varies inversely with a floating rate (which may be reset periodically by a "Dutch" auction, a remarketing agent or by reference a short-term tax-exempt interest rate index), usually moving in the opposite direction as the interest on the variable rate demand note.

A fund may either participate in structuring an inverse floater or purchase an inverse floater in the secondary market. When structuring an inverse floater, a fund will transfer to a trust fixed rate municipal securities held in the fund's portfolio. The trust then typically issues the inverse floaters and the variable rate demand notes that are collateralized by the cash flows of the fixed rate municipal securities. In return for the transfer of the municipal securities to the trust, the fund receives the inverse floaters and cash associated with the sale of the notes from the trust. For accounting purposes, a fund treats these transfers as part of a secured borrowing or financing transaction (not a sale), and the interest payments and related expenses due on the notes issued by the trusts and sold to third parties as expenses and liabilities of the fund. Inverse floaters purchased in the secondary market are treated as the purchase of a security and not as a secured borrowing or financing transaction. Synthetically created inverse floating rate bonds evidenced by custodial or trust receipts are securities that have the effect of providing a degree of investment leverage, since they may increase or decrease in value in response to changes in market interest rates at a rate that is a multiple of the rate at which fixed rate securities increase or decrease in response to such changes.

An investment in inverse floaters may involve greater risk than an investment in a fixed rate municipal security. Because changes in the interest rate on the other security or index inversely affect the residual interest paid on the inverse floater, the value of an inverse floater is generally more volatile than that of a fixed rate municipal security. Inverse floaters have interest rate adjustment formulas which generally reduce or, in the extreme, eliminate the interest paid to a fund when short-term interest rates rise, and increase the interest paid to the fund when short-term interest rates fall. Investing in inverse floaters involves leveraging which may magnify the fund's gains or losses. Although volatile, inverse floaters typically offer the potential for yields exceeding the yields available on fixed rate municipal securities with comparable credit quality, coupon, call provisions and maturity. These securities usually permit the investor to convert the floating rate to a fixed rate (normally adjusted downward), and this optional conversion feature may provide a partial hedge against rising rates if exercised at an opportune time. Investments in inverse floaters may be illiquid.

Real Estate Investment Trusts (REITs)

A REIT is a corporation, or a business trust that would otherwise be taxed as a corporation, which meets the definitional requirements of the Code. The Code permits a qualifying REIT to deduct dividends paid, thereby effectively eliminating corporate level federal income tax and making the REIT a pass-through vehicle for federal income tax purposes. To meet the definitional requirements of the Code, a REIT must, among other things, invest substantially all of its assets in interests in real estate (including mortgages and other REITs) or cash and government securities, derive most of its income from rents from real property or interest on loans secured by mortgages on real property, and distribute to shareholders annually a substantial portion of its otherwise taxable income.

REITs are characterized as equity REITs, mortgage REITs and hybrid REITs. Equity REITs invest primarily in the fee ownership or leasehold ownership of land and buildings and derive their income primarily from rental income. Equity REITs also can realize capital gains (or losses) by selling properties that have appreciated (or depreciated) in value. Mortgage REITs can make construction, development or long-term mortgage loans and are sensitive to the credit quality of the borrower. Mortgage REITs derive their income from interest payments on such loans. Hybrid REITs combine the characteristics of both equity and mortgage REITs, generally by holding both ownership interests and mortgage interests in real estate. The value of securities issued by REITs is affected by tax and regulatory requirements and by perceptions of management skill. They also are subject to heavy cash flow dependency, defaults by borrowers or tenants, self-liquidation and the possibility of failing to qualify for tax-free status under the Code or to maintain exemption from the 1940 Act.

Money Market Instruments

When the Adviser determines that adverse market conditions exist, a fund may adopt a temporary defensive position and invest up to 100% of its assets in money market instruments, including U.S. Government securities, bank obligations, repurchase agreements and commercial paper. During such periods, the fund may not achieve its investment objective(s). A fund also may purchase money market instruments when it has cash reserves or in anticipation of taking a market position.

Investing in money market instruments is subject to certain risks. Money market instruments (other than certain U.S. Government securities) are not backed or insured by the U.S. Government, its agencies or its instrumentalities. Accordingly, only the creditworthiness of an issuer, or guarantees of that issuer, support such instruments.

Bank Obligations. See "Bank Obligations" below under "Money Market Portfolio."

Repurchase Agreements. See "Repurchase Agreements" below under "Money Market Portfolio."

Commercial Paper. Commercial paper represents short-term, unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations and finance companies used to finance short-term credit needs and may consist of U.S. dollar-denominated obligations of domestic issuers and foreign currency-denominated obligations of domestic or foreign issuers. Commercial paper may be backed only by the credit of the issuer or may be backed by some form of credit enhancement, typically in the form of a guarantee by a commercial bank. Commercial paper backed by guarantees of foreign banks may involve additional risk due to the difficulty of obtaining and enforcing judgments against such banks and the generally less restrictive regulations to which such banks are subject.

Foreign Securities

Foreign securities include the securities of companies organized under the laws of countries other than the United States and those issued or guaranteed by governments other than the U.S. Government or by foreign supranational entities. They also include securities of companies whose principal trading market is in a country other than the United States or of companies (including those that are located in the United States or organized under U.S. law) that derive a significant portion of their revenue or profits from foreign businesses, investments or sales, or that have a majority of their assets outside the United States. They may be traded on foreign securities exchanges or in the foreign over-the-counter markets. Supranational entities include international organizations designated or supported by governmental entities to promote economic reconstruction or development and international banking institutions

and related government agencies. Examples include the International Bank for Reconstruction and Development (the World Bank), the European Coal and Steel Community, the Asian Development Bank and the InterAmerican Development Bank. Obligations of the World Bank and certain other supranational organizations are supported by subscribed but unpaid commitments of member countries. There is no assurance that these commitments will be undertaken or complied with in the future.

Investing in the securities of foreign issuers, as well as instruments that provide investment exposure to foreign securities and markets, involves risks that are not typically associated with investing in U.S. dollar-denominated securities of domestic issuers. Investments in foreign issuers may be affected by changes in currency rates (*i.e.*, affecting the value of assets as measured in U.S. dollars), changes in foreign or U.S. laws or restrictions applicable to such investments and in exchange control regulations (*e.g.*, currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. A change in the value of such foreign currency against the U.S. dollar also will result in a change in the amount of income available for distribution. If a portion of a fund's investment income may be received in foreign currencies, such fund will be required to compute its income in U.S. dollars for distribution to shareholders, and therefore the fund will absorb the cost of currency fluctuations. After the fund has distributed income, subsequent foreign currency losses may result in the fund having distributed more income in a particular fiscal period than was available from investment income, which could result in a return of capital to shareholders. In addition, if the exchange rate for the currency in which a fund receives interest payments declines against the U.S. dollar before such income is distributed as dividends to shareholders, the fund may have to sell portfolio securities to obtain sufficient cash to enable the fund to pay such dividends. Commissions on transactions in foreign securities may be higher than those for similar transactions on domestic stock markets, and foreign custodial costs are higher than domestic custodial costs. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have on occasion been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign securities markets generally are not as developed or efficient as those in the United States. Securities of some foreign issuers are less liquid and more volatile than securities of comparable U.S. issuers. Similarly, volume and liquidity in most foreign securities markets are less than in the United States and, at times, volatility of price can be greater than in the United States.

Because evidences of ownership of foreign securities usually are held outside the United States, additional risks of investing in foreign securities include possible adverse political and economic developments, seizure or nationalization of foreign deposits and adoption of governmental restrictions that might adversely affect or restrict the payment of principal and interest on the foreign securities to investors located outside the country of the issuer, whether from currency blockage, exchange control regulations or otherwise. Foreign securities held by a fund may trade on days when the fund does not calculate its NAV and thus may affect the fund's NAV on days when shareholders have no access to the fund.

Emerging Markets. The risks associated with investing in foreign securities are often heightened for investments in emerging market countries. These heightened risks include: (1) greater risks of expropriation, confiscatory taxation and nationalization, and less social, political and economic stability; (2) the small size of the markets for securities of emerging market issuers and a low or nonexistent volume of trading, resulting in lack of liquidity and in price volatility; (3) certain national policies which may restrict the investment opportunities including restrictions on investing in issuers or industries deemed sensitive to relevant national interests; and (4) the absence of developed legal structures governing private or foreign investment and private property. The purchase and sale of portfolio securities in certain emerging market countries may be constrained by limitations as to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. In certain cases, such limitations may be computed based upon the aggregate trading by or holdings of a fund, its Adviser and its affiliates and their respective clients and other service providers. A fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to government intervention and the imposition of "capital controls." Countries use these controls to restrict volatile movements of capital entering (inflows) and exiting (outflows) their country to respond to certain economic conditions. Such controls are mainly applied to short-term capital

transactions to counter speculative flows that threaten to undermine the stability of the exchange rate and deplete foreign exchange reserves. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets in such a way that may adversely affect the ability of a fund to repatriate its income and capital. These limitations may have a negative impact on the fund's performance and may adversely affect the liquidity of the fund's investment to the extent that it invests in certain emerging market countries. Some emerging market countries may have fixed or managed currencies which are not free-floating against the U.S. dollar. Further, certain emerging market countries' currencies may not be internationally traded. Certain of these currencies have experienced a steady devaluation relative to the U.S. dollar. If a fund does not hedge the U.S. dollar value of securities it owns denominated in currencies that are devalued, the fund's NAV will be adversely affected. Many emerging market countries have experienced substantial, and in some periods extremely high, rates of inflation for many years. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, adverse effects on the economies and securities markets of certain of these countries.

Certain funds may invest in companies organized or with their principal place of business, or majority of assets or business, in pre-emerging markets, also known as frontier markets. The risks associated with investments in frontier market countries include all the risks described above for investments in foreign securities and emerging markets, although the risks are magnified for frontier market countries. Because frontier markets are among the smallest, least mature and least liquid of the emerging markets, investments in frontier markets generally are subject to a greater risk of loss than investments in developed markets or traditional emerging markets. Frontier market countries have smaller economies, less developed capital markets, more political and economic instability, and more governmental limitations on foreign investments than typically found in more developed countries, and frontier markets typically have greater market volatility, lower trading volume and greater risk of a market shutdown than more developed markets. Frontier markets are more prone to economic shocks associated with political and economic risks than are emerging markets generally. Many frontier market countries may be dependent on commodities, foreign trade or foreign aid.

Certain Asian Emerging Market Countries. The performance of a fund that concentrates its investments in Asian emerging market countries is expected to be closely tied to social, political and economic conditions within Asia and to be more volatile than the performance of more geographically diversified funds. Many Asian economies are characterized by over-extension of credit, frequent currency fluctuation, devaluations and restrictions, rising unemployment, rapid fluctuations in inflation, reliance on exports and less efficient markets. Currency devaluation in one Asian country can have a significant effect on the entire region. The legal systems in many Asian countries are still developing, making it more difficult to obtain and/or enforce judgments.

Furthermore, increased political and social unrest in some Asian countries could cause economic and market uncertainty throughout the region. The auditing and reporting standards in some Asian emerging market countries may not provide the same degree of shareholder protection or information to investors as those in developed countries. In particular, valuation of assets, depreciation, exchange differences, deferred taxation, contingent liability and consolidation may be treated differently than under the auditing and reporting standards of developed countries.

Certain Asian emerging market countries are undergoing a period of growth and change which may result in trading volatility and difficulties in the settlement and recording of securities transactions, and in interpreting and applying the relevant law and regulations. The securities industries in these countries are comparatively underdeveloped. Stockbrokers and other intermediaries in Asian emerging market countries may not perform as well as their counterparts in the United States and other more developed securities markets. Certain Asian emerging market countries may require substantial withholding on dividends paid on portfolio securities and on realized capital gains. There can be no assurance that repatriation of the fund's income, gains or initial capital from these countries can occur.

Depository Receipts and New York Shares. Securities of foreign issuers in the form of ADRs, EDRs and GDRs and other forms of depository receipts may not necessarily be denominated in the same currency as the securities into which they may be converted. ADRs are receipts typically issued by a U.S. bank or trust company which evidence ownership of underlying securities issued by a foreign corporation. EDRs are receipts issued in Europe, and GDRs are receipts issued outside the United States typically by non-U.S. banks and trust companies that evidence ownership of either foreign or domestic securities. Generally, ADRs in registered form are designed for use in the U.S. securities markets, EDRs in bearer form are designed for use in Europe, and GDRs in bearer form are designed

for use outside the United States. New York Shares are securities of foreign companies that are issued for trading in the United States. New York Shares are traded in the United States on national securities exchanges or in the over-the-counter market.

Depository receipts may be purchased through "sponsored" or "unsponsored" facilities. A sponsored facility is established jointly by the issuer of the underlying security and a depository. A depository may establish an unsponsored facility without participation by the issuer of the deposited security. Holders of unsponsored depository receipts generally bear all the costs of such facilities, and the depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the issuer of the deposited security or to pass through voting rights to the holders of such receipts in respect of the deposited securities. Purchases or sales of certain ADRs may result, indirectly, in fees being paid to the Depository Receipts Division of The Bank of New York Mellon, an affiliate of the Manager, by brokers executing the purchases or sales.

Securities of foreign issuers that are represented by ADRs or that are listed on a U.S. securities exchange or traded in the U.S. over-the-counter markets are not subject to many of the special considerations and risks discussed in the prospectus and this SAI that apply to foreign securities traded and held abroad. A U.S. dollar investment in ADRs or shares of foreign issuers traded on U.S. exchanges may be impacted differently by currency fluctuations than would an investment made in a foreign currency on a foreign exchange in shares of the same issuer.

Investment Companies

The 1940 Act, subject to a fund's own more restrictive limitations, if applicable, limits a fund's investment in securities issued by registered and unregistered investment companies, including exchange-traded funds (discussed below), subject to certain exceptions, currently is limited to: (1) 3% of the total voting stock of any one investment company; (2) 5% of the fund's total assets with respect to any one investment company; and (3) 10% of the fund's total assets in the aggregate. As a shareholder of another investment company, a fund would bear, along with other shareholders, its pro rata portion of the other investment company's expenses, including advisory fees. These expenses would be in addition to the advisory fees and other expenses that the fund bears directly in connection with its own operations. A fund also may invest its uninvested cash reserves or cash it receives as collateral from borrowers of its portfolio securities in connection with the fund's securities lending program, in shares of one or more money market funds advised by the Manager. Such investments will not be subject to the limitations described above.

Private Investment Funds. As with investments in registered investment companies, if a fund invests in a private investment fund, such as a "hedge fund" or private equity fund, the fund will be charged its proportionate share of the advisory fees, including any incentive compensation and other operating expenses, of the private investment fund. These fees, which can be substantial, would be in addition to the advisory fees and other operating expenses incurred by the fund. In addition, private investment funds are not registered with the SEC and may not be registered with any other regulatory authority. Accordingly, they are not subject to certain regulatory requirements and oversight to which registered issuers are subject. There may be very little public information available about their investments and performance. Moreover, because sales of shares of private investment funds are generally restricted to certain qualified purchasers, such shares may be illiquid and it could be difficult for the fund to sell its shares at an advantageous price and time. Finally, because shares of private investment funds are not publicly traded, a fair value for the fund's investment in these companies typically will have to be determined under policies approved by the board.

Exchange-Traded Funds (ETFs)

Although certain ETFs are actively managed, most ETFs are designed to provide investment results that generally correspond to the price and yield performance of the component securities or commodities of a benchmark index. These ETFs may include S&P Depository Receipts ("SPDRs"), DIAMONDS, Nasdaq-100 Index Tracking Stock (also referred to as "Nasdaq-100 Shares") and iShares exchange-traded funds ("iShares"), such as iShares Russell 2000 Growth Index Fund. ETFs usually are units of beneficial interest in an investment trust or represent undivided ownership interests in a portfolio of securities or commodities. For an ETF designed to correspond to a securities index benchmark, the ETF's portfolio typically consists of all or substantially all of the component securities of, and in substantially the same weighting as, the relevant benchmark index. The benchmark indexes of SPDRs, DIAMONDS and Nasdaq-100 Shares are the S&P 500 Stock Index, the Dow Jones Industrial Average and the

Nasdaq-100 Index, respectively. The benchmark index for iShares varies, generally corresponding to the name of the particular iShares fund. ETFs are listed on an exchange, and shares are generally purchased and sold in the secondary market at market price. At times, the market price may be at a premium or discount to the ETF's NAV. Because shares of ETFs trade on an exchange, they may be subject to trading halts on the exchange.

The values of ETFs are subject to change as the values of their respective component securities or commodities fluctuate according to market volatility. Investments in ETFs that are designed to correspond to an index of securities involve certain inherent risks generally associated with investments in a portfolio of such securities, including the risk that the general level of securities prices may decline, thereby adversely affecting the value of ETFs invested in by a fund. Similarly, investments in ETFs that are designed to correspond to commodity returns involve certain inherent risks generally associated with investment in commodities. Moreover, investments in ETFs designed to correspond to indexes of securities may not exactly match the performance of a direct investment in the respective indexes to which they are intended to correspond due to the temporary unavailability of certain index securities in the secondary market or other extraordinary circumstances, such as discrepancies with respect to the weighting of securities.

Derivatives

Depending on the fund, derivatives may be used for a variety of reasons, including to (1) hedge to seek to mitigate certain market, interest rate or currency risks; (2) to manage the maturity or the interest rate sensitivity (sometimes called duration) of fixed-income securities; (3) to provide a substitute for purchasing or selling particular securities to reduce portfolio turnover, to seek to obtain a particular desired return at a lower cost to a fund than if the fund had invested directly in an instrument yielding the desired return, such as when a fund "equitizes" available cash balances by using a derivative instrument to gain exposure to relevant equity investments or markets consistent with its investment objective and policies, or for other reasons; or (4) to seek to increase potential returns. Generally, a derivative is a financial contract whose value depends upon, or is derived from, the value of an underlying asset, reference rate or index, and may relate to stocks, bonds, interest rates, currencies or currency exchange rates and related indexes. Derivatives may provide a cheaper, quicker or more specifically focused way to invest than "traditional" securities would. Examples of derivative instruments include options contracts, futures contracts, options on futures contracts, forward contracts, swap agreements, credit derivatives, structured securities and participatory notes. Whether or not a fund may use some or all of these derivatives varies by fund. In addition, a fund's portfolio managers may decide not to employ some or all of these strategies, and there is no assurance that any derivatives strategy used by the fund will succeed.

Derivatives can be volatile and involve various types and degrees of risk, depending upon the characteristics of the particular derivative and the portfolio as a whole. Derivatives permit a fund to increase or decrease the level of risk, or change the character of the risk, to which its portfolio is exposed in much the same way as the fund can increase or decrease the level of risk, or change the character of the risk, of its portfolio by making investments in specific securities. However, derivatives may entail investment exposures that are greater than their cost would suggest, meaning that a small investment in derivatives could have a large potential impact on the fund's performance. Derivatives involve greater risks than if a fund had invested in the reference obligation directly.

An investment in derivatives at inopportune times or when market conditions are judged incorrectly may lower return or result in a loss. A fund could experience losses if its derivatives were poorly correlated with underlying instruments or the fund's other investments or if the fund were unable to liquidate its position because of an illiquid secondary market. The market for many derivatives is, or suddenly can become, illiquid. Changes in liquidity may result in significant, rapid and unpredictable changes in the prices for derivatives.

Derivatives may be purchased on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. Exchange-traded derivatives, primarily futures contracts and options, generally are guaranteed by the clearing agency that is the issuer or counterparty to such derivatives. This guarantee usually is supported by a variation margin payment system operated by the clearing agency in order to reduce overall credit risk. As a result, unless the clearing agency defaults, there is relatively little counterparty credit risk associated with derivatives purchased on an exchange. In contrast, no clearing agency guarantees over-the-counter derivatives. Therefore, each party to an over-the-counter derivative bears the risk that the counterparty will default. Accordingly, the Adviser will consider the creditworthiness of counterparties to over-the-counter derivatives in the same manner as it would review the credit quality of a security to be purchased by a fund. Over-the-counter

derivatives are less liquid than exchange-traded derivatives since the other party to the transaction may be the only investor with sufficient understanding of the derivative to be interested in bidding for it. Derivatives that are considered illiquid will be subject to a fund's limit on illiquid investments.

Some derivatives may involve leverage (*e.g.*, an instrument linked to the value of a securities index may return income calculated as a multiple of the price movement of the underlying index). This economic leverage will increase the volatility of these instruments as they may increase or decrease in value more quickly than the underlying security, index, futures contract, currency or other economic variable. Pursuant to regulations and/or published positions of the SEC, a fund may be required to segregate permissible liquid assets, or engage in other measures approved by the SEC or its staff, to "cover" the fund's obligations relating to its transactions in derivatives. For example, in the case of futures contracts or forward contracts that are not contractually required to cash settle, a fund must set aside liquid assets equal to such contracts' full notional value (generally, the total numerical value of the asset underlying a future or forward contract at the time of valuation) while the positions are open. With respect to futures contracts or forward contracts that are contractually required to cash settle, however, a fund is permitted to set aside liquid assets in an amount equal to the fund's daily marked-to-market net obligation (*i.e.*, the fund's daily net liability) under the contracts, if any, rather than such contracts' full notional value. By setting aside assets equal to only its net obligations under cash-settled derivatives, a fund may employ leverage to a greater extent than if the fund were required to segregate assets equal to the full notional value of such contracts. Requirements to maintain cover might impair a fund's ability to sell a portfolio security, meet redemption requests or other current obligations, or make an investment at a time when it would otherwise be favorable to do so, or require that the fund sell a portfolio security at a disadvantageous time.

Successful use of certain derivatives may be a highly specialized activity that requires skills that may be different than the skills associated with ordinary portfolio securities transactions. If the Adviser is incorrect in its forecasts of market factors, or a counterparty defaults, investment performance would diminish compared with what it would have been if derivatives were not used. Successful use of derivatives by a fund also is subject to the Adviser's ability to predict correctly movements in the direction of the relevant market and, to the extent the transaction is entered into for hedging purposes, to ascertain the appropriate correlation between the securities or position being hedged and the price movements of the corresponding derivative position. For example, if a fund enters into a derivative position to hedge against the possibility of a decline in the market value of securities held in its portfolio and the prices of such securities instead increase, the fund will lose part or all of the benefit of the increased value of securities which it has hedged because it will have offsetting losses in the derivative position.

Options and futures contracts prices can diverge from the prices of their underlying instruments. Options and futures contracts prices are affected by such factors as current and anticipated short-term interest rates, changes in volatility of the underlying instrument, and the time remaining until expiration of the contract, which may not affect the prices of the underlying instruments in the same way. Imperfect correlation may also result from differing levels of demand in the options and futures markets and the securities markets, from structural differences in how options and futures and securities are traded, or from imposition of daily price fluctuation limits or trading halts. A fund may purchase or sell options and futures contracts with a greater or lesser value than any securities it wishes to hedge or intends to purchase in order to attempt to compensate for differences in volatility between the contract and the securities, although this may not be successful in all cases. If price changes in a fund's options or futures positions used for hedging purposes are poorly correlated with the investments the fund is attempting to hedge, the options or futures positions may fail to produce anticipated gains or result in losses that are not offset by gains in other investments.

The funds have claimed exclusions from the definition of the term "commodity pool operator" pursuant to Regulation 4.5 under the CEA and, therefore, are not subject to registration or regulation as a CPO under the CEA. The funds may be limited in their ability to use commodity futures or options thereon, engage in certain swap transactions or make certain other investments (collectively, "commodity interests") if they continue to claim the exclusion from the definition of CPO.

In order to be eligible to continue to claim this exclusion, if a fund uses commodity interests other than for bona fide hedging purposes (as defined by the CFTC), the aggregate initial margin and premiums required to establish those positions (after taking into account unrealized profits and unrealized losses on any such positions and excluding the amount by which options are "in-the-money" at the time of purchase) may not exceed 5% of the fund's NAV, or,

alternatively, the aggregate net notional value of those positions, as determined at the time the most recent position was established, may not exceed 100% of the fund's NAV (after taking into account unrealized profits and unrealized losses on any such positions). In addition to meeting one of the foregoing trading limitations, a fund may not market itself as a commodity pool or otherwise as a vehicle for trading in the commodity futures, commodity options or swaps markets. Even if a fund's direct use of commodity interests complies with the trading limitations described above, the fund may have indirect exposure to commodity interests in excess of such limitations. Such exposure may result from the fund's investment in other investment vehicles, including investment companies that are not managed by the Manager or one of its affiliates, certain securitized vehicles that may invest in commodity interests and/or non-equity REITs that may invest in commodity interests (collectively, "underlying funds"). Because the Manager may have limited or no information as to the commodity interests in which an underlying fund invests at any given time, the CFTC has issued temporary no-action relief permitting registered investment companies, such as the funds, to continue to rely on the exclusion from the definition of CPO. The Manager, on behalf of the funds, has filed the required notice to claim this no-action relief. In order to rely on the temporary no-action relief, the Manager must meet certain conditions and the funds must otherwise comply with the trading and market limitations described above with respect to their direct investments in commodity interests.

If a fund were to invest in commodity interests in excess of the trading limitations discussed above and/or market itself as a vehicle for trading in the commodity futures, commodity options or swaps markets, the fund would withdraw its exclusion from the definition of CPO and the Manager would become subject to regulation as a CPO.

It is possible that developments in the derivatives markets, including potential government regulation, could adversely affect the ability to terminate existing derivatives positions or to realize amounts to be received in such transactions.

Futures Transactions. A futures contract is an agreement between two parties to buy and sell a security or other asset for a set price on a future date. When a fund sells a futures contract, it incurs an obligation to deliver a specified amount of the obligation underlying the futures contract at a specified time in the future for an agreed upon price. With respect to index futures, no physical transfer of the securities underlying the index is made. Rather, the parties settle by exchanging in cash an amount based on the difference between the contract price and the closing value of the index on the settlement date. An option on a futures contract gives the holder of the option the right to buy from or sell to the writer of the option a position in a futures contract at a specified price on or before a specified expiration date. When a fund writes an option on a futures contract, it becomes obligated, in return for the premium paid, to assume a position in a futures contract at a specified exercise price at any time during the term of the option. If the fund has written a call option, it assumes a short futures position. If the fund has written a put option, it assumes a long futures position. When a fund purchases an option on a futures contract, it acquires the right, in return for the premium it pays, to assume a position in a futures contract (a long position if the option is a call and a short position if the option is a put). The purchase of futures or call options on futures can serve as a long hedge, and the sale of futures or the purchase of put options on futures can serve as a short hedge. Writing call options on futures contracts can serve as a limited short hedge, using a strategy similar to that used for writing call options on securities or indexes. Similarly, writing put options on futures contracts can serve as a limited long hedge.

Futures contracts are traded on exchanges, so that, in most cases, either party can close out its position on the exchange for cash, without delivering the security or other asset. Although some futures contracts call for making or taking delivery of the underlying securities or other asset, generally these obligations are closed out before delivery by offsetting purchases or sales of matching futures contracts (same exchange, underlying asset, and delivery month). Closing out a futures contract sale is effected by purchasing a futures contract for the same aggregate amount of the specific type of financial instrument with the same delivery date. If an offsetting purchase price is less than the original sale price, a fund realizes a capital gain, or if it is more, a fund realizes a capital loss. Conversely, if an offsetting sale price is more than the original purchase price, a fund realizes a capital gain, or if it is less, a fund realizes a capital loss. Transaction costs also are included in these calculations.

Engaging in these transactions involves risk of loss to a fund which could adversely affect the value of the fund's net assets. No assurance can be given that a liquid market will exist for any particular contract at any particular time. Many futures exchanges and boards of trade limit the amount of fluctuation permitted in futures contract prices during a single trading day. Once the daily limit has been reached in a particular contract, no trades may be made that day at a price beyond that limit or trading may be suspended for specified periods during the trading day.

Futures contract prices could move to the limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of futures positions and potentially leading to substantial losses.

A fund may engage in futures transactions in foreign markets to the extent consistent with applicable law and the fund's ability to invest in foreign securities. Foreign futures markets may offer advantages such as trading opportunities or arbitrage possibilities not available in the United States. Foreign markets, however, may have greater risk potential than domestic markets. For example, some foreign exchanges are principal markets so that no common clearing facility exists and an investor may look only to the broker for performance of the contract. In addition, any profits that a fund might realize in trading could be eliminated by adverse changes in the currency exchange rate, or the fund could incur losses as a result of those changes.

Futures contracts and options on futures contracts include those with respect to securities, securities indexes, interest rates and foreign currencies and Eurodollar contracts, to the extent a fund can invest in the underlying reference security, instrument or asset.

Security Futures Contract. A security future obligates a fund to purchase or sell an amount of a specific security at a future date at a specific price.

Index Futures Contract. An index future obligates a fund to pay or receive an amount of cash based upon the change in value of the index based on the prices of the securities that comprise the index.

Interest Rate Futures Contract. An interest rate future obligates a fund to purchase or sell an amount of a specific debt security at a future date at a specific price (or, in some cases, to settle an equivalent amount in cash).

Foreign Currency Futures Contract. A foreign currency future obligates a fund to purchase or sell an amount of a specific currency at a future date at a specific price.

Eurodollar Contracts. A Eurodollar contract is a U.S. dollar-denominated futures contract or option thereon which is linked to the LIBOR, although foreign currency-denominated instruments are available from time to time. Eurodollar futures contracts enable purchasers to obtain a fixed rate for the lending of funds and sellers to obtain a fixed rate for borrowings. Certain funds might use Eurodollar futures contracts and options thereon to hedge against changes in LIBOR, to which many interest rate swaps and fixed-income instruments are linked.

Options. A call option gives the purchaser of the option the right to buy, and obligates the writer to sell, the underlying security, securities or other asset at the exercise price at any time during the option period, or at a specific date. Conversely, a put option gives the purchaser of the option the right to sell, and obligates the writer to buy, the underlying security, securities or other asset at the exercise price at any time during the option period, or at a specific date. A fund receives a premium from writing an option which it retains whether or not the option is exercised.

A covered call option written by a fund is a call option with respect to which the fund owns the underlying security or otherwise covers the transaction such as by segregating permissible liquid assets. The principal reason for writing covered call options is to realize, through the receipt of premiums, a greater return than would be realized on the underlying securities alone.

Options may be traded on U.S. or, to the extent a fund may invest in foreign securities, foreign securities exchanges or in the over-the-counter market. There is no assurance that sufficient trading interest to create a liquid secondary market on a securities exchange will exist for any particular option or at any particular time, and for some options no such secondary market may exist. A liquid secondary market in an option may cease to exist for a variety of reasons. In the past, for example, higher than anticipated trading activity or order flow, or other unforeseen events, at times have rendered certain of the clearing facilities inadequate and resulted in the institution of special procedures, such as trading rotations, restrictions on certain types of orders or trading halts or suspensions in one or more options. There can be no assurance that similar events, or events that may otherwise interfere with the timely execution of customers' orders, will not recur. In such event, it might not be possible to effect closing transactions in particular options. If, as a covered call option writer, a fund is unable to effect a closing purchase transaction in a secondary market, it will not be able to sell the underlying security until the option expires or it delivers the underlying security upon exercise or it otherwise covers its position.

Purchases or sales of options on exchanges owned by The NASDAQ OMX Group, Inc. may result, indirectly, in a portion of the transaction and other fees assessed on options trading being paid to The Bank of New York Mellon, an affiliate of the Manager, as the result of an arrangement between The NASDAQ OMX Group, Inc. and The Bank of New York Mellon.

Call and put options in which a fund may invest include the following, in each case, to the extent that a fund can invest in such securities or instruments (or securities underlying an index, in the case of options on securities indexes).

Options on Securities. Call and put options on specific securities (or groups or "baskets" of specific securities), including equity securities (including convertible securities), U.S. Government securities, municipal securities, mortgage-related securities, asset-backed securities, foreign sovereign debt, corporate debt securities or Eurodollar instruments, convey the right to buy or sell, respectively, the underlying securities at prices which are expected to be lower or higher than the current market prices of the securities at the time the options are exercised.

Options on Securities Indexes. An option on an index is similar to an option in respect of specific securities, except that settlement does not occur by delivery of the securities comprising the index. Instead, the option holder receives an amount of cash if the closing level of the index upon which the option is based is greater in the case of a call, or less, in the case of a put, than the exercise price of the option. Thus, the effectiveness of purchasing or writing index options will depend upon price movements in the level of the index rather than the price of a particular security.

Foreign Currency Options. Call and put options on foreign currency convey the right to buy or sell the underlying currency at a price which is expected to be lower or higher than the spot price of the currency at the time the option is exercised or expires.

Swap Transactions. Swap agreements involve the exchange by a fund with another party of their respective commitments to pay or receive payments at specified dates based upon or calculated by reference to changes in specified prices or rates (e.g., interest rates in the case of interest rate swaps) based on a specified amount (the "notional") amount. Some swaps are, and more in the future will be, centrally cleared. Swaps that are centrally cleared are subject to the creditworthiness of the clearing organizations involved in the transaction. For example, a fund could lose margin payments it has deposited with a clearing organization as well as the net amount of gains not yet paid by the clearing organization if the clearing organization breaches its agreement with the fund or becomes insolvent or goes into bankruptcy. In the event of bankruptcy of the clearing organization, the fund may be entitled to the net amount of gains the fund is entitled to receive plus the return of margin owed to it only in proportion to the amount received by the clearing organization's other customers, potentially resulting in losses to the fund. Swap agreements also may be two party contracts entered into primarily by institutional investors for periods ranging from a few weeks to more than one year.

Swap agreements will tend to shift investment exposure from one type of investment to another. For example, if a fund agreed to exchange payments in U.S. dollars for payments in a foreign currency, the swap agreement would tend to decrease the fund's exposure to U.S. interest rates and increase its exposure to foreign currency and interest rates. Depending on how they are used, swap agreements may increase or decrease the overall volatility of a fund's investments and its share price and yield.

Most swap agreements entered into are cash settled and calculate the obligations of the parties to the agreement on a "net basis." Thus, a fund's current obligations (or rights) under a swap agreement generally will be equal only to the net amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the "net amount"). A fund's current obligations under a swap agreement will be accrued daily (offset against any amounts owed to the fund) and any accrued but unpaid net amounts owed to a swap counterparty will be covered by the segregation of permissible liquid assets of the fund. A fund will enter into swap agreements only with counterparties that meet certain standards of creditworthiness (generally, such counterparties would have to be eligible counterparties under the terms of the Manager's repurchase agreement guidelines).

A swap option is a contract (sometimes called "swaptions") that gives a counterparty the right (but not the obligation) in return for payment of a premium, to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. A cash-settled

option on a swap gives the purchaser the right, in return for the premium paid, to receive an amount of cash equal to the value of the underlying swap as of the exercise date. These options typically are entered into with institutions, including securities brokerage firms. Depending on the terms of the particular option agreement, a fund generally will incur a greater degree of risk when it writes a swap option than it will incur when it purchases a swap option. When a fund purchases a swap option, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised. However, when a fund writes a swap option, upon exercise of the option the fund will become obligated according to the terms of the underlying agreement.

The swaps market has been an evolving and largely unregulated market. It is possible that developments in the swaps market, including new regulatory requirements, could limit or prevent a fund's ability to utilize swap agreements or options on swaps as part of its investment strategy, terminate existing swap agreements or realize amounts to be received under such agreements, which could negatively affect the fund. As discussed above, some swaps currently are, and more in the future will be, centrally cleared, which affects how swaps are transacted. In particular, the Dodd-Frank Wall Street Reform and Consumer Protection Act, enacted on July 21, 2010 (the "Dodd-Frank Act"), has resulted in new clearing and exchange-trading requirements for swaps and other over-the-counter derivatives. The Dodd-Frank Act also requires the CFTC and/or the SEC, in consultation with banking regulators, to establish capital requirements for swap dealers and major swap participants as well as requirements for margin on uncleared derivatives, including swaps, in certain circumstances that will be clarified by rules proposed by the CFTC and/or the SEC. In addition, the CFTC and the SEC are reviewing the current regulatory requirements applicable to derivatives, including swaps, and it is not certain at this time how the regulators may change these requirements. For example, some legislative and regulatory proposals would impose limits on the maximum position that could be held by a single trader in certain contracts and would subject certain derivatives transactions to new forms of regulation that could create barriers to certain types of investment activity. Other provisions would expand entity registration requirements; impose business conduct, reporting and disclosure requirements on dealers, recordkeeping on counterparties such as the funds; and require banks to move some derivatives trading units to a non-guaranteed (but capitalized) affiliate separate from the deposit-taking bank or divest them altogether. While some provisions of the Dodd-Frank Act have either already been implemented through rulemaking by the CFTC and/or the SEC or must be implemented through future rulemaking by those and other federal agencies, and any regulatory or legislative activity may not necessarily have a direct, immediate effect upon the funds, it is possible that, when compliance with these rules is required, they could potentially limit or completely restrict the ability of a fund to use certain derivatives as a part of its investment strategy, increase the cost of entering into derivatives transactions or require more assets of the fund to be used for collateral in support of those derivatives than is currently the case. Limits or restrictions applicable to the counterparties with which a fund engages in derivative transactions also could prevent the funds from using derivatives or affect the pricing or other factors relating to these transactions, or may change the availability of certain derivatives.

Specific swap agreements (and options thereon) include currency swaps; index swaps; interest rate swaps (including interest rate locks, caps, floors and collars); credit default swaps; and total return swaps (including equity swaps), in each case, to the extent that a fund can invest in the underlying reference security, instrument or asset (or fixed-income securities, in the case of interest rate swaps, or securities underlying an index, in the case of index swaps).

Currency Swap Transactions. A currency swap agreement involves the exchange of principal and interest in one currency for the same in another currency.

Index Swap Transactions. An index swap agreement involves the exchange of cash flows associated with a securities or other index.

Interest Rate Swap Transactions. An interest rate swap agreement involves the exchange of cash flows based on interest rate specifications and a specified principal amount, often a fixed payment for a floating payment that is linked to an interest rate.

An interest rate lock transaction (which may also be known as a forward rate agreement) is a contract between two parties to make or receive a payment at a future date determined on the basis of a specified interest rate or yield of a particular security (the "contracted interest rate") over a predetermined time period, with respect to a stated notional amount. These transactions typically are entered as a hedge against interest rate changes. One party to the contract locks in the contracted interest rate to seek to protect against an interest rate increase, while the other party seeks to

protect against a possible interest rate decline. The payment at maturity is determined by the difference between the contracted interest rate and the then-current market interest rate.

In an interest rate cap one party receives payments at the end of each period in which a specified interest rate on a specified principal amount exceeds an agreed rate; conversely, in an interest rate floor one party may receive payments if a specified interest rate on a specified principal amount falls below an agreed rate. Caps and floors have an effect similar to buying or writing options. Interest rate collars involve selling a cap and purchasing a floor, or vice versa, to protect a fund against interest rate movements exceeding given minimum or maximum levels.

Credit Default Swap Transactions. Credit default swap agreements and similar agreements may have as reference obligations debt securities that are or are not currently held by a fund. The protection "buyer" in a credit default contract may be obligated to pay the protection "seller" an up front payment or a periodic stream of payments over the term of the contract provided generally that no credit event on a reference obligation has occurred. If a credit event occurs, the seller generally must pay the buyer the "par value" (full notional value) of the swap in exchange for an equal face amount of deliverable obligations of the reference entity described in the swap, or the seller may be required to deliver the related net cash amount, if the swap is cash settled.

Total Return Swap Transactions. In a total return swap agreement one party makes payments based on a set rate, either fixed or variable, while the other party makes payments based on the return of an underlying asset, which includes both the income it generates and any capital gains, and recovers any capital losses from the first party. The underlying reference asset of a total return swap may include an equity index, loans or bonds.

Credit Linked Securities. Credit linked securities are issued by a limited purpose trust or other vehicle that, in turn, invests in a derivative instrument or basket of derivative instruments, such as credit default swaps or interest rate swaps, to obtain exposure to certain fixed-income markets or to remain fully invested when more traditional income producing securities are not available. Like an investment in a bond, an investment in these credit linked securities represents the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on the issuer's receipt of payments from, and the issuer's potential obligations to, the counterparties to certain derivative instruments entered into by the issuer of the credit linked security. For example, the issuer may sell one or more credit default swaps entitling the issuer to receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a default occurs, the stream of payments may stop and the issuer would be obligated to pay the counterparty the par (or other agreed upon value) of the referenced debt obligation.

Credit Derivatives. Credit derivative transactions include those involving default price risk derivatives and credit spread derivatives. Default price risk derivatives are linked to the price of reference securities or loans after a default by the issuer or borrower, respectively. Credit spread derivatives are based on the risk that changes in credit spreads and related market factors can cause a decline in the value of a security, loan or index. Credit derivatives may take the form of options, swaps, credit-linked notes and other over-the-counter instruments. The risk of loss in a credit derivative transaction varies with the form of the transaction. For example, if a fund purchases a default option on a security, and if no default occurs with respect to the security, the fund's loss is limited to the premium it paid for the default option. In contrast, if there is a default by the grantor of a default option, a fund's loss will include both the premium it paid for the option and the decline in value of any underlying security that the default option hedged (if the option was entered into for hedging purposes). If a fund is a buyer of credit protection in a credit default swap agreement and no credit event occurs, the fund recovers nothing if the swap is held through its termination date. However, if a credit event occurs, the fund may elect to receive the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity that may have little or no value. As a seller of credit protection, a fund generally receives an upfront payment or a fixed rate of income throughout the term of the swap, which typically is between six months and three years, provided that there is no credit event. If a credit event occurs, generally the seller must pay the buyer the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity that may have little or no value. Unlike credit default swaps, credit-linked notes are funded balance sheet assets that offer synthetic credit exposure to a reference entity in a structure designed to resemble a synthetic corporate bond or loan. Credit-linked notes are frequently issued by special purpose vehicles that would hold some form of collateral securities financed through the issuance of notes or certificates to a fund. The fund receives a coupon and par redemption, provided there has been

no credit event of the reference entity. The vehicle enters into a credit swap with a third party in which it sells default protection in return for a premium that subsidizes the coupon to compensate the fund for the reference entity default risk. A fund will enter into credit derivative transactions only with counterparties that meet certain standards of creditworthiness (generally, such counterparties would have to be eligible counterparties under the terms of the Manager's repurchase agreement guidelines).

Combined Transactions. Certain funds may enter into multiple transactions, including multiple options, futures, swap, currency and/or interest rate transactions, and any combination of options, futures, swaps, currency and/or interest rate transactions ("combined transactions"), instead of a single transaction, as part of a single or combined strategy when, in the opinion of the Adviser, it is in the best interests of the fund to do so. A combined transaction will usually contain elements of risk that are present in each of its component transactions. Although combined transactions are normally entered into based on the Adviser's judgment that the combined strategies will reduce risk or otherwise more effectively achieve the desired portfolio management goal, it is possible that the combination will instead increase such risks or hinder achievement of the portfolio management objective.

Future Developments. A fund may take advantage of opportunities in derivatives transactions which are not presently contemplated for use by the fund or which are not currently available but which may be developed, to the extent such opportunities are both consistent with the fund's investment objective and legally permissible for the fund. Before a fund enters into such transactions or makes any such investment, the fund will provide appropriate disclosure in its prospectus or this SAI.

Foreign Currency Transactions

Investments in foreign currencies, including investing directly in foreign currencies, holding financial instruments that provide exposure to foreign currencies, or investing in securities that trade in, or receive revenues in, foreign currencies, are subject to the risk that those currencies will decline in value relative to the U.S. dollar.

Depending on the fund, foreign currency transactions could be entered into for a variety of purposes, including: (1) to fix in U.S. dollars, between trade and settlement date, the value of a security a fund has agreed to buy or sell; (2) to hedge the U.S. dollar value of securities the fund already owns, particularly if it expects a decrease in the value of the currency in which the foreign security is denominated; or (3) to gain or reduce exposure to the foreign currency for investment purposes. Foreign currency transactions may involve, for example, a fund's purchase of foreign currencies for U.S. dollars or the maintenance of short positions in foreign currencies. A short position would involve the fund agreeing to exchange an amount of a currency it did not currently own for another currency at a future date in anticipation of a decline in the value of the currency sold relative to the currency the fund contracted to receive. A fund may engage in cross currency hedging against price movements between currencies, other than the U.S. dollar, caused by currency exchange rate fluctuations. In addition, a fund might seek to hedge against changes in the value of a particular currency when no derivative instruments on that currency are available or such derivative instruments are more expensive than certain other derivative instruments. In such cases, the fund may hedge against price movements in that currency by entering into transactions using derivative instruments on another currency or a basket of currencies, the values of which the Adviser believes will have a high degree of positive correlation to the value of the currency being hedged. The risk that movements in the price of the derivative instrument will not correlate perfectly with movements in the price of the currency being hedged is magnified when this strategy is used.

Currency hedging may substantially change a fund's exposure to changes in currency exchange rates and could result in losses if currencies do not perform as the Adviser anticipates. There is no assurance that a fund's currency hedging activities will be advantageous to the fund or that the Adviser will hedge at an appropriate time.

The cost of engaging in foreign currency exchange contracts for the purchase or sale of a specified currency at a specified future date ("forward contracts") varies with factors such as the currency involved, the length of the contract period and the market conditions then prevailing. Because forward contracts are usually entered into on a principal basis, no fees or commissions are involved. Generally, secondary markets do not exist for forward contracts, with the result that closing transactions can be made for forward contracts only by negotiating directly with the counterparty to the contract. As with other over-the-counter derivatives transactions, forward contracts are subject to the credit risk of the counterparty.

Currency exchange rates may fluctuate significantly over short periods of time. They generally are determined by the forces of supply and demand in the foreign exchange markets and the relative merits of investments in different countries, actual or perceived changes in interest rates and other complex factors, as seen from an international perspective. Currency exchange rates also can be affected unpredictably by intervention, or failure to intervene, by U.S. or foreign governments or central banks, or by currency controls or political developments in the United States or abroad.

The value of derivative instruments on foreign currencies depends on the value of the underlying currency relative to the U.S. dollar. Because foreign currency transactions occurring in the interbank market might involve substantially larger amounts than those involved in the use of foreign currency derivative instruments, a fund could be disadvantaged by having to deal in the odd lot market (generally consisting of transactions of less than \$1 million) for the underlying foreign currencies at prices that are less favorable than for round lots.

There is no systematic reporting of last sale information for foreign currencies or any regulatory requirement that quotations available through dealers or other market sources be firm or revised on a timely basis. Quotation information generally is representative of very large transactions in the interbank market and thus might not reflect odd-lot transactions where rates might be less favorable. The interbank market in foreign currencies is a global, round-the-clock market.

Settlement of transactions involving foreign currencies might be required to take place within the country issuing the underlying currency. Thus, a fund might be required to accept or make delivery of the underlying foreign currency in accordance with any U.S. or foreign regulations regarding the maintenance of foreign banking arrangements by U.S. residents and might be required to pay any fees, taxes and charges associated with such delivery assessed in the issuing country.

Short-Selling

A fund may make short sales as part of its investment strategy, to hedge positions (such as to limit exposure to a possible market decline in the value of portfolio securities), for duration and risk management, to maintain portfolio flexibility or to seek to enhance returns. A short sale involves the sale of a security that a fund does not own in the expectation of purchasing the same security (or a security exchangeable therefor) at a later date and at a lower price. To complete a short sale transaction and make delivery to the buyer, the fund must borrow the security. The fund is obligated to replace the borrowed security to the lender, which is accomplished by a later purchase of the security by the fund. Until the security is replaced, the fund is required to pay the lender any dividends or interest accruing during the period of the loan. To borrow the security, the fund also may have to pay a fee to the lender, which would increase the cost to the fund of the security it sold short. The fund will incur a loss as a result of a short sale if the price of the security increases between the date of the short sale and the date on which the fund replaces the borrowed security. The fund will realize a gain if the security declines in price between those two dates. In certain cases, purchasing a security to cover a short position can itself cause the price of the security to rise, thereby exacerbating any loss, especially in an environment where others are taking the same actions. Short positions in stocks involve more risk than long positions in stocks because the maximum sustainable loss on a stock purchased is limited to the amount paid for the stock plus the transaction costs, whereas there is no maximum attainable price on the shorted stock. In theory, stocks sold short have unlimited risk. The amount of any gain will be decreased and the amount of any loss will be increased by any interest, premium and transaction charges or other costs a fund may be required to pay in connection with the short sale. A fund may not always be able to borrow a security the fund seeks to sell short at a particular time or at an acceptable price.

A fund also may make short sales "against the box," in which the fund enters into a short sale of a security it owns or has the immediate and unconditional right to acquire at no additional cost at the time of the sale.

When a fund makes a short sale, it must leave the proceeds thereof with the broker and deposit with, or pledge to, the broker an amount of cash or liquid securities sufficient under current margin regulations to collateralize its obligation to replace the borrowed securities that have been sold. Until a fund closes its short position or replaces the borrowed security, the fund will: (1) segregate permissible liquid assets in an amount that, together with the amount provided as collateral, is at least equal to the current value of the security sold short; or (2) otherwise cover its short position through offsetting positions. Short-selling is considered "leverage" and may involve substantial risk.

Lending Portfolio Securities

Fund portfolio securities may be lent to brokers, dealers and other financial institutions needing to borrow securities to complete certain transactions. In connection with such loans, a fund would remain the owner of the loaned securities and continue to be entitled to payments in amounts equal to the interest, dividends or other distributions payable on the loaned securities. A fund also has the right to terminate a loan at any time. Any voting rights that accompany the loaned securities generally pass to the borrower of the securities, but the fund retains the right to recall a security and may then exercise the security's voting rights. In order to vote the proxies of securities out on loan, the securities must be recalled prior to the established record date. A fund may recall the loan to vote proxies if a material issue affecting the fund's investment is to be voted upon. Subject to a fund's own more restrictive limitations, if applicable, an investment company is limited in the amount of portfolio securities it may loan to 33-1/3% of its total assets (including the value of all assets received as collateral for the loan). A fund will receive collateral consisting of cash, cash equivalents, U.S. Government securities or irrevocable letters of credit, which will be maintained at all times in an amount equal to at least 100% of the current market value of the loaned securities. If the collateral consists of a letter of credit or securities, the borrower will pay the fund a loan premium fee. If the collateral consists of cash, the fund will reinvest the cash and pay the borrower a pre-negotiated fee or "rebate" from any return earned on the investment. A fund may participate in a securities lending program operated by the Lending Agent. The Lending Agent will receive a percentage of the total earnings of the fund derived from lending its portfolio securities. Should the borrower of the securities fail financially, the fund may experience delays in recovering the loaned securities or exercising its rights in the collateral. Loans are made only to borrowers that are deemed by the Adviser to be of good financial standing. In a loan transaction, a fund will also bear the risk of any decline in value of securities acquired with cash collateral. A fund will minimize this risk by limiting the investment of cash collateral to money market funds advised by the Manager, repurchase agreements or other high quality instruments with short maturities, in each case to the extent it is a permissible investment for the fund.

Borrowing Money

The 1940 Act, subject to a fund's own more restrictive limitations, if applicable, permits an investment company to borrow in an amount up to 33-1/3% of the value of its total assets. Such borrowings may be for temporary or emergency purposes or for leveraging. If borrowings are for temporary or emergency (not leveraging) purposes, when such borrowings exceed 5% of the value of a fund's total assets the fund will not make any additional investments.

Borrowing Money for Leverage. Leveraging (buying securities using borrowed money) exaggerates the effect on NAV of any increase or decrease in the market value of a fund's investments. These borrowings will be subject to interest costs which may or may not be recovered by appreciation of the securities purchased; in certain cases, interest costs may exceed the return received on the securities purchased. For borrowings for investment purposes, the 1940 Act requires a fund to maintain continuous asset coverage (total assets including borrowings, less liabilities exclusive of borrowings) of 300% of the amount borrowed. If the required coverage should decline as a result of market fluctuations or other reasons, the fund may be required to sell some of its portfolio securities within three days to reduce the amount of its borrowings and restore the 300% asset coverage, even though it may be disadvantageous from an investment standpoint to sell securities at that time. A fund also may be required to maintain minimum average balances in connection with such borrowing or pay a commitment or other fee to maintain a line of credit; either of these requirements would increase the cost of borrowing over the stated interest rate.

Reverse Repurchase Agreements. Reverse repurchase agreements may be entered into with banks, broker/dealers or other financial institutions. This form of borrowing involves the transfer by a fund of an underlying debt instrument in return for cash proceeds based on a percentage of the value of the security. The fund retains the right to receive interest and principal payments on the security. At an agreed upon future date, the fund repurchases the security at principal plus accrued interest. As a result of these transactions, the fund is exposed to greater potential fluctuations in the value of its assets and its NAV per share. These borrowings will be subject to interest costs which may or may not be recovered by appreciation of the securities purchased; in certain cases, interest costs may exceed the return received on the securities purchased. To the extent a fund enters into a reverse repurchase agreement, the fund will segregate permissible liquid assets at least equal to the aggregate amount of its reverse repurchase

obligations, plus accrued interest, in certain cases, in accordance with SEC guidance. The SEC views reverse repurchase transactions as collateralized borrowings by a fund.

Forward Commitments. The purchase or sale of securities on a forward commitment (including "TBA" (to be announced)), when-issued or delayed-delivery basis, means delivery and payment take place at a future date at a predetermined price and/or yield. Typically, no interest accrues to the purchaser until the security is delivered. When purchasing a security on a forward commitment basis, a fund assumes the risks of ownership of the security, including the risk of price and yield fluctuations, and takes such fluctuations into account when determining its NAV. Purchasing securities on a forward commitment, when-issued or delayed-delivery basis can involve the additional risk that the yield available in the market when the delivery takes place actually may be higher than that obtained in the transaction itself. The sale of securities on a forward commitment or delayed-delivery basis involves the risk that the prices available in the market on the delivery date may be greater than those obtained in the sale transaction.

Debt securities purchased on a forward commitment, when-issued or delayed-delivery basis are subject to changes in value based upon the perception of the creditworthiness of the issuer and changes, real or anticipated, in the level of interest rates (*i.e.*, appreciating when interest rates decline and depreciating when interest rates rise). Securities purchased on a forward commitment, when-issued or delayed-delivery basis may expose a fund to risks because they may experience declines in value prior to their actual delivery. A fund will make commitments to purchase such securities only with the intention of actually acquiring the securities, but the fund may sell these securities or dispose of the commitment before the settlement date if it is deemed advisable as a matter of investment strategy. A fund would engage in forward commitments to increase its portfolio's financial exposure to the types of securities in which it invests. If the fund is fully or almost fully invested when forward commitment purchases are outstanding, such purchases may result in a form of leverage. Leveraging the portfolio in this manner will increase the fund's exposure to changes in interest rates and may result in greater potential fluctuation in the value of the fund's net assets and its NAV per share. A fund will segregate permissible liquid assets at least equal at all times to the amount of the fund's purchase commitments.

Illiquid Securities

Illiquid Securities Generally. The 1940 Act, subject to a fund's own more restrictive limitations, if applicable, limits funds other than money market funds to 15% of net assets in illiquid securities. Illiquid securities, which are securities that cannot be sold or disposed of in the ordinary course of business within seven days at approximately the value ascribed to them by a fund, may include securities that are not readily marketable, such as securities that are subject to legal or contractual restrictions on resale that do not have readily available market quotations, repurchase agreements providing for settlement in more than seven days after notice and certain privately negotiated derivatives transactions and securities used to cover such derivatives transactions. As to these securities, there is a risk that, should a fund desire to sell them, a ready buyer will not be available at a price the fund deems representative of their value, which could adversely affect the value of a fund's net assets.

Section 4(2) Paper and Rule 144A Securities. "Section 4(2) paper" consists of commercial obligations issued in reliance on the so-called "private placement" exemption from registration afforded by Section 4(2) of the Securities Act. Section 4(2) paper is restricted as to disposition under the federal securities laws, and generally is sold to institutional investors that agree that they are purchasing the paper for investment and not with a view to public distribution. Any resale by the purchaser must be pursuant to registration or an exemption therefrom. Section 4(2) paper normally is resold to other institutional investors through or with the assistance of the issuer or investment dealers who make a market in the Section 4(2) paper, thus providing liquidity. "Rule 144A securities" are securities that are not registered under the Securities Act but that can be sold to qualified institutional buyers in accordance with Rule 144A under the Securities Act. Rule 144A securities generally must be sold to other qualified institutional buyers. If a particular investment in Section 4(2) paper or Rule 144A securities is not determined to be liquid, that investment will be included within the percentage limitation on investment in illiquid securities. Investing in Rule 144A securities could have the effect of increasing the level of fund illiquidity to the extent that qualified institutional buyers become, for a time, uninterested in purchasing these securities from a fund or other holders. Liquidity determinations with respect to Section 4(2) paper and Rule 144A securities will be made by the fund's board or by the Adviser pursuant to guidelines established by the board. The fund's board or the Adviser will consider availability of reliable price information and other relevant information in making such determinations.

Non-Diversified Status

A fund's classification as a "non-diversified" investment company means that the proportion of the fund's assets that may be invested in the securities of a single issuer is not limited by the 1940 Act. The 1940 Act generally requires a "diversified" investment company, with respect to 75% of its total assets, to invest not more than 5% of such assets in securities of a single issuer. Since a relatively high percentage of a fund's assets may be invested in the securities of a limited number of issuers or industries, the fund may be more sensitive to changes in the market value of a single issuer or industry. However, to meet federal tax requirements, at the close of each quarter a fund may not have more than 25% of its total assets invested in any one issuer and, with respect to 50% of its total assets, not more than 5% of its total assets invested in any one issuer. These limitations do not apply to U.S. Government securities or investments in certain other investment companies.

Investments in the Technology Sector

The technology sector has been among the most volatile sectors of the stock market. Many technology companies involve greater risks because their revenues and earnings tend to be less predictable (and some companies may be experiencing significant losses) and their share prices tend to be more volatile. Certain technology companies may have limited product lines, markets or financial resources, or may depend on a limited management group. In addition, these companies are strongly affected by worldwide technological developments, and their products and services may not be economically successful or may quickly become outdated. Investor perception may play a greater role in determining the day-to-day value of technology stocks than it does in other sectors. Investments made in anticipation of future products and services may decline dramatically in value if the anticipated products or services are delayed or cancelled.

Money Market Portfolio

The Money Market Portfolio attempts to increase yields by trading to take advantage of short-term market variations. This policy is expected to result in high portfolio turnover but should not adversely affect the fund since the fund usually does not pay brokerage commissions when purchasing short-term obligations. The value of the portfolio securities held by the fund will vary inversely to changes in prevailing interest rates and, therefore, are subject to the risk of market price fluctuations. Thus, if interest rates have increased from the time a security was purchased, such security, if sold, might be sold at a price less than its cost. Similarly, if interest rates have declined from the time a security was purchased, such security, if sold, might be sold at a price greater than its purchase cost. In any event, if a security was purchased at face value and held to maturity and was paid in full, no gain or loss would be realized. The values of fixed-income securities also may be affected by changes in the credit rating or financial condition of the issuing entities.

Ratings of Securities

If, subsequent to its purchase by the fund, (a) a portfolio security ceases to be rated in the highest rating category by at least two rating organizations (or one rating organization if the instrument was rated by only one such organization) or the board determines that it is no longer of comparable quality or (b) the Manager becomes aware that any portfolio security not so highly rated or any unrated security has been given a rating by any rating organization below the rating organization's second highest rating category, the board will reassess promptly whether such security continues to present minimal credit risks and will cause the fund to take such action as it determines is in the best interest of the fund and its shareholders; provided that the reassessments required by clauses (a) and (b) are not required if the portfolio security is disposed of or matures within five business days of the specified event and, in the case of events specified in clause (b), the board is subsequently notified of the Manager's actions. To the extent the ratings given by a Rating Agency for securities change as a result of changes in such organizations or their rating systems, the fund will attempt to use comparable ratings as standards for its investments in accordance with the investment policies described in such fund's prospectus and this SAI. The ratings of the Rating Agencies represent their opinions as to the quality of the securities which they undertake to rate. It should be emphasized, however, that ratings are relative and subjective and are not absolute standards of quality. Although these ratings may be an initial criterion for selection of portfolio investments, the Manager also will evaluate these securities and the creditworthiness of the issuers of such securities based upon financial and other available information.

Treasury Securities

Treasury securities include Treasury bills, Treasury notes and Treasury bonds that differ in their interest rates, maturities and times of issuance. Treasury bills have initial maturities of one year or less; Treasury notes have initial maturities of one to ten years; and Treasury bonds generally have initial maturities of greater than ten years.

U.S. Government Securities

U.S. Government securities are issued or guaranteed by the U.S. Government or its agencies or instrumentalities. Some obligations issued or guaranteed by U.S. Government agencies and instrumentalities are supported by the full faith and credit of the Treasury; others by the right of the issuer to borrow from the Treasury; others by discretionary authority of the U.S. Government to purchase certain obligations of the agency or instrumentality; and others only by the credit of the agency or instrumentality. These securities bear fixed, floating or variable rates of interest. Interest may fluctuate based on generally recognized reference rates or the relationship of rates. While the U.S. Government currently provides financial support to such U.S. Government-sponsored agencies or instrumentalities, no assurance can be given that it will always do so, since it is not so obligated by law. A security backed by the Treasury or the full faith and credit of the United States is guaranteed only as to timely payment of interest and principal when held to maturity. Neither the market value nor the fund's share price is guaranteed.

Repurchase Agreements

A repurchase agreement is a contract under which the fund would acquire a security for a relatively short period subject to the obligation of the seller, typically a bank, broker/dealer or other financial institution, to repurchase and the fund to resell such security at a fixed time and at a price higher than the purchase price (representing the fund's cost plus interest). The repurchase agreement thereby determines the yield during the purchaser's holding period, while the seller's obligation to repurchase is secured by the value of the underlying security. The fund's custodian or sub-custodian engaged in connection with tri-party repurchase agreement transactions will have custody of, and will segregate, securities acquired by the fund under a repurchase agreement. In connection with its third-party repurchase transactions, the fund will engage only eligible sub-custodians that meet the requirements set forth in Section 17(f) of the 1940 Act. The value of the underlying securities (or collateral) will be at least equal at all times to the total amount of the repurchase obligation, including the interest factor. The fund bears a risk of loss if the other party to the repurchase agreement defaults on its obligations and the fund is delayed or prevented from exercising its rights to dispose of the collateral securities. This risk includes the risk of procedural costs or delays in addition to a loss on the securities if their value should fall below their repurchase price. Repurchase agreements are considered by the staff of the SEC to be loans by the fund that enters into them. Repurchase agreements could involve risks in the event of a default or insolvency of the other party to the agreement, including possible delays or restrictions upon the fund's ability to dispose of the underlying securities. The fund may engage in repurchase agreement transactions that are collateralized by U.S. Government securities (which are deemed to be "collateralized fully" pursuant to the 1940 Act) or, for certain funds, to the extent consistent with the fund's investment policies, collateralized by securities other than U.S. Government securities ("credit collateral"). Transactions that are collateralized fully enable the fund to look to the collateral for diversification purposes under the 1940 Act. Conversely, transactions secured with credit collateral require the fund to look to the counterparty to the repurchase agreement for determining diversification. Because credit collateral is subject to certain credit and liquidity risks that U.S. Government securities are not subject to, the amount of collateral posted in excess of the principal value of the repurchase agreement is expected to be higher in the case of repurchase agreements secured with credit collateral compared to repurchase agreements secured with U.S. Government securities. In an attempt to reduce the risk of incurring a loss on a repurchase agreement, the fund will require that additional securities be deposited with it if the value of the securities purchased should decrease below resale price. See "Fixed-Income Securities—High Yield and Lower-Rated Securities" above under "All Funds other than the Money Market Portfolio" for a discussion of certain risks of credit collateral rated below investment grade. The fund may jointly enter into one or more repurchase agreements with other Dreyfus funds in accordance with an exemptive order granted by the SEC pursuant to Section 17(d) of the 1940 Act and Rule 17d-1 thereunder. Any joint repurchase agreements must be collateralized fully by U.S. Government securities.

Bank Obligations

Bank obligations include certificates of deposit ("CDs"), time deposits ("TDs"), bankers' acceptances and other short-term obligations issued by domestic or foreign banks or thrifts or their subsidiaries or branches and other banking institutions. CDs are negotiable certificates evidencing the obligation of a bank to repay funds deposited with it for a specified period of time. TDs are non-negotiable deposits maintained in a banking institution for a specified period of time (in no event longer than seven days) at a stated interest rate. Bankers' acceptances are credit instruments evidencing the obligation of a bank to pay a draft drawn on it by a customer. These instruments reflect the obligation both of the bank and the drawer to pay the face amount of the instrument upon maturity. The other short-term obligations may include uninsured, direct obligations bearing fixed, floating or variable interest rates. TDs and CDs may be issued by domestic or foreign banks or their subsidiaries or branches. The fund may purchase CDs issued by banks, savings and loan associations and similar institutions with less than \$1 billion in assets, the deposits of which are insured by the FDIC, provided the fund purchases any such CD in a principal amount of no more than an amount that would be fully insured by the Deposit Insurance Fund administered by the FDIC. Interest payments on such a CD are not insured by the FDIC. The fund would not own more than one such CD per such issuer.

Domestic commercial banks organized under federal law are supervised and examined by the Comptroller of the Currency and are required to be members of the Federal Reserve System and to have their deposits insured by the FDIC. Domestic banks organized under state law are supervised and examined by state banking authorities but are members of the Federal Reserve System only if they elect to join. In addition, state banks whose CDs may be purchased by the fund are insured by the FDIC (although such insurance may not be of material benefit to the fund, depending on the principal amount of the CDs of each bank held by the fund) and are subject to federal examination and to a substantial body of federal law and regulation. As a result of federal and state laws and regulations, domestic branches of domestic banks whose CDs may be purchased by the fund generally, among other things, are required to maintain specified levels of reserves and are subject to other supervision and regulation designed to promote financial soundness. However, not all of such laws and regulations apply to the foreign branches of domestic banks.

Obligations of foreign subsidiaries or branches of domestic banks may be general obligations of the parent banks in addition to the issuing subsidiary or branch, or may be limited by the terms of a specific obligation and governmental regulation. Such obligations and obligations of foreign banks or their subsidiaries or branches are subject to different risks than are those of domestic banks. These risks include foreign economic and political developments, foreign governmental restrictions that may adversely affect payment of principal and interest on the obligations, foreign exchange controls, seizure of assets, declaration of a moratorium and foreign withholding and other taxes on interest income. Foreign subsidiaries and branches of domestic banks and foreign banks are not necessarily subject to the same or similar regulatory requirements that apply to domestic banks, such as mandatory reserve requirements, loan limitations, and accounting, auditing and financial recordkeeping requirements. In addition, less information may be publicly available about a foreign subsidiary or branch of a domestic bank or about a foreign bank than about a domestic bank.

Obligations of U.S. branches of foreign banks may be general obligations of the parent bank in addition to the issuing branch, or may be limited by the terms of a specific obligation or by federal or state regulation as well as governmental action in the country in which the foreign bank has its head office. A U.S. branch of a foreign bank with assets in excess of \$1 billion may or may not be subject to reserve requirements imposed by the Federal Reserve System or by the state in which the branch is located if the branch is licensed in that state. In addition, federal branches licensed by the Comptroller of the Currency and branches licensed by certain states may be required to: (1) pledge to the regulator, by depositing assets with a designated bank within the state, a certain percentage of their assets as fixed from time to time by the appropriate regulatory authority; and (2) maintain assets within the state in an amount equal to a specified percentage of the aggregate amount of liabilities of the foreign bank payable at or through all of its agencies or branches within the state.

In view of the foregoing factors associated with the purchase of CDs and TDs issued by foreign subsidiaries or branches of domestic banks, or by foreign banks or their branches or subsidiaries, the Adviser carefully evaluates such investments on a case-by-case basis.

Bank Securities

To the extent the fund's investments are concentrated in the banking industry, the fund will have correspondingly greater exposure to the risk factors which are characteristic of such investments. Sustained increases in interest rates can adversely affect the availability or liquidity and cost of capital funds for a bank's lending activities, and a deterioration in general economic conditions could increase the exposure to credit losses. In addition, the value of and the investment return on the fund's shares could be affected by economic or regulatory developments in or related to the banking industry, which industry also is subject to the effects of competition within the banking industry as well as with other types of financial institutions. The fund, however, will seek to minimize its exposure to such risks by investing only in debt securities which are determined to be of the highest quality.

Floating and Variable Rate Obligations

Floating and variable rate demand notes and bonds are obligations ordinarily having stated maturities in excess of 397 days but which permit the holder to demand payment of principal at any time, or at specified intervals not exceeding 397 days, in each case upon not more than 30 days' notice. Frequently these obligations are secured by letters of credit or other credit support arrangements secured by banks. Variable rate demand notes include master demand notes (see "Fixed-Income Securities—Variable and Floating Rate Securities " above under "All Funds other than the Money Market Portfolio").

Participation Interests

A participation interest purchased from a financial institution gives the fund an undivided interest in a security in the proportion that the fund's participation interest bears to the total principal amount of the security. If the participation interest is unrated, or has been given a rating below that which is permissible for purchase by the fund, the participation interest will be backed by an irrevocable letter of credit or guarantee of a bank, or the payment obligation otherwise will be collateralized by U.S. Government securities, or, in the case of unrated participation interests, the Manager must have determined that the instrument is of comparable quality to those instruments in which the fund may invest. See "Fixed-Income Securities—Participation Interests and Assignments" above under "All Funds other than the Money Market Portfolio."

Asset-Backed Securities

The fund may purchase asset-backed securities, which are securities issued by special purpose entities whose primary assets consist of a pool of mortgages, loans, receivables or other assets. Payment of principal and interest may depend largely on the cash flows generated by the assets backing the securities and, in certain cases, supported by letters of credit, surety bonds or other forms of credit or liquidity enhancements. The value of these asset-backed securities also may be affected by the creditworthiness of the servicing agent for the pool of assets, the originator of the loans or receivables or the financial institution providing the credit support.

Commercial Paper

Commercial paper represents short-term, unsecured promissory notes issued to finance short-term credit needs. The commercial paper purchased by the fund will consist only of direct obligations issued by domestic and foreign entities. The other corporate obligations in which the fund may invest consist of high quality, U.S. dollar-denominated short-term bonds and notes (which may include variable rate master demand notes).

Investment Companies

See "Investment Companies" above under "All Funds other than the Money Market Portfolio."

Foreign Securities

Foreign securities may include U.S. dollar-denominated securities issued by foreign subsidiaries or foreign branches of domestic banks, domestic and foreign branches of foreign banks, foreign government obligations and commercial paper issued by foreign issuers. Foreign government obligations may include securities issued or guaranteed by foreign governments or any of their political subdivisions, agencies or instrumentalities and debt obligations of

supranational entities. Supranational entities include organizations designated or supported by governmental entities to promote economic reconstruction or development and international banking institutions and related government agencies. Examples include the International Bank of Reconstruction and Development (the World Bank), the European Coal and Steel Community, the Asian Development Bank and the InterAmerican Development Bank.

The fund's investments in foreign securities, including foreign government obligations, may be subject to additional investment risks with respect to these securities or obligations that are different in some respects from those incurred by a money market fund which invests only in debt obligations of U.S. domestic issuers. See, as applicable, "Foreign Securities" above under "All Funds other than the Money Market Portfolio."

Illiquid Securities

The 1940 Act limits money market funds to 5% of total assets in illiquid securities. Illiquid securities, which are securities that cannot be sold or disposed of in the ordinary course of business within seven days at approximately the value ascribed to them by the fund, may include securities that are not readily marketable, such as securities that are subject to legal or contractual restrictions on resale that do not have readily available market quotations, and repurchase agreements providing for settlement in more than seven days after notice. As to these securities, there is a risk that, should the fund desire to sell them, a ready buyer will not be available at a price the fund deems representative of their value, which could adversely affect the value of the fund's net assets. See "Illiquid Securities—Section 4(2) Paper and Rule 144A Securities" above under "All Funds other than the Money Market Portfolio."

Borrowing Money

The 1940 Act permits an investment company to borrow in an amount up to 33-1/3% of the value of its total assets. Such borrowings may be for temporary or emergency purposes or for leveraging. If borrowings are for temporary or emergency (not leveraging) purposes, when such borrowings exceed 5% of the value of the fund's total assets the fund will not make any additional investments.

Reverse Repurchase Agreements. See "Borrowing Money—Reverse Repurchase Agreements" above under "All Funds other than the Money Market Portfolio."

Forward Commitments. The purchase of portfolio securities on a forward commitment (including "TBA" (to be announced)), when-issued or delayed-delivery basis means that delivery and payment take place in the future after the date of the commitment to purchase. See "Borrowing Money—Forward Commitments" above under "All Funds other than the Money Market Portfolio."

Interfund Borrowing and Lending Program. Pursuant to an exemptive order issued by the SEC, the fund may lend money to, and/or borrow money from, certain other funds advised by the Manager or its affiliates. All interfund loans and borrowings must comply with the conditions set forth in the exemptive order, which are designed to ensure fair and equitable treatment of all participating funds. The fund's participation in the Interfund Borrowing and Lending Program must be consistent with its investment policies and limitations. The fund will borrow through the Interfund Borrowing and Lending Program only when the costs are equal to or lower than the costs of bank loans, and will lend through the Program only when the returns are higher than those available from an investment in repurchase agreements. Interfund loans and borrowings are normally expected to extend overnight, but can have a maximum duration of seven days. Loans may be called on one day's notice. Any delay in repayment to a lending fund could result in a lost investment opportunity or additional borrowing costs.

Lending Portfolio Securities

The fund has no intention currently or for the foreseeable future to lend portfolio securities. To the extent the fund would seek to lend portfolio securities (see "Lending Portfolio Securities" above under "All Funds other than the Money Market Portfolio"), the fund's shareholders would be notified within a reasonable time prior to such activity occurring.

RATING CATEGORIES

The following is a description of certain ratings assigned by S&P, Moody's, Fitch and DBRS.

S&P

An S&P issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation, a specific class of financial obligations or a specific financial program (including ratings on medium-term note programs and commercial paper programs). It takes into consideration the creditworthiness of guarantors, insurers or other forms of credit enhancement on the obligation and takes into account the currency in which the obligation is denominated. The opinion reflects S&P's view of the obligor's capacity and willingness to meet its financial commitments as they come due, and may assess terms, such as collateral security and subordination, which could affect ultimate payment in the event of default.

Issue credit ratings can be either long-term or short-term. Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the U.S., for example, that means obligations with an original maturity of no more than 365 days—including commercial paper. Short-term ratings also are used to indicate the creditworthiness of an obligor with respect to put features on long-term obligations. The result is a dual rating, in which the short-term rating addresses the put feature, in addition to the usual long-term rating. Medium-term notes are assigned long-term ratings.

Long-Term Issue Credit Ratings. Issue credit ratings are based, in varying degrees, on S&P's analysis of the following considerations: likelihood of payment—capacity and willingness of the obligor to meet its financial commitment on an obligation in accordance with the terms of the obligation; nature of and provisions of the obligation; and protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

Issue ratings are an assessment of default risk, but may incorporate an assessment of relative seniority or ultimate recovery in the event of default. Junior obligations are typically rated lower than senior obligations, to reflect the lower priority in bankruptcy, as noted above. (Such differentiation may apply when an entity has both senior and subordinated obligations, secured and unsecured obligations, or operating company and holding company obligations.)

An obligation rated "**AAA**" has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

An obligation rated "**AA**" differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

An obligation rated "**A**" is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

An obligation rated "**BBB**" exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated "**BB**," "**B**," "**CCC**," "**CC**" and "**C**" are regarded as having significant speculative characteristics. "**BB**" indicates the least degree of speculation and "**C**" the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

An obligation rated "**BB**" is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

An obligation rated "**B**" is more vulnerable to nonpayment than obligations rated "BB," but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

An obligation rated "**CCC**" is currently vulnerable to nonpayment, and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

An obligation rated "**CC**" is currently highly vulnerable to nonpayment.

A "**C**" rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the "**C**" rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have been suspended in accordance with the instrument's terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

An obligation rated "**D**" is in payment default. The "**D**" rating category is used when payments on an obligation, including a regulatory capital instrument, are not made on the date due even if the applicable grace period has not expired, unless S&P believes that such payments will be made during such grace period. The "**D**" rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation's rating is lowered to "**D**" upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

Note: The ratings from "**AA**" to "**CCC**" may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

An "**NR**" indicates that no rating has been requested, that there is insufficient information on which to base a rating, or that S&P does not rate a particular obligation as a matter of policy.

Short-Term Issue Credit Ratings. A short-term obligation rated "**A-1**" is rated in the highest category by S&P. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

A short-term obligation rated "**A-2**" is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

A short-term obligation rated "**A-3**" exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

A short-term obligation rated "**B**" is regarded as having significant speculative characteristics. Ratings of "**B-1**," "**B-2**," and "**B-3**" may be assigned to indicate finer distinctions within the "**B**" category. The obligor currently has the capacity to meet its financial commitment on the obligation; however, it faces major ongoing uncertainties which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

A short-term obligation rated "**B-1**" is regarded as having significant speculative characteristics, but the obligor has a relatively stronger capacity to meet its financial commitments over the short-term compared to other speculative-grade obligors.

A short-term obligation rated "**B-2**" is regarded as having significant speculative characteristics, and the obligor has an average speculative-grade capacity to meet its financial commitments over the short-term compared to other speculative-grade obligors.

A short-term obligation rated "**B-3**" is regarded as having significant speculative characteristics, and the obligor has a relatively weaker capacity to meet its financial commitments over the short-term compared to other speculative-grade obligors.

A short-term obligation rated "**C**" is currently vulnerable to nonpayment and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation.

A short-term obligation rated "**D**" is in payment default. The "D" rating category is used when payments on an obligation, including a regulatory capital instrument, are not made on the date due even if the applicable grace period has not expired, unless S&P believes that such payments will be made during such grace period. The "D" rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

Municipal Short-Term Note Ratings Definitions. An S&P U.S. municipal note rating reflects S&P's opinion about the liquidity factors and market access risks unique to the notes. Notes due in three years or less will likely receive a note rating. Notes with an original maturity of more than three years will most likely receive a long-term debt rating. In determining which type of rating, if any, to assign, S&P analysis will review the following considerations:

- amortization schedule—the larger the final maturity relative to other maturities, the more likely it will be treated as a note; and
- source of payment—the more dependent the issue is on the market for its refinancing, the more likely it will be treated as a note.

Note rating symbols are as follows:

SP-1 Strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

SP-2 Satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

SP-3 Speculative capacity to pay principal and interest.

Moody's

Long-Term Obligation Ratings and Definitions. Moody's long-term obligation ratings are opinions of the relative credit risk of fixed-income obligations with an original maturity of one year or more. They address the possibility that a financial obligation will not be honored as promised. Such ratings reflect both the likelihood of default and any financial loss suffered in the event of default.

Obligations rated "**Aaa**" are judged to be of the highest quality, with minimal credit risk.

Obligations rated "**Aa**" are judged to be of high quality and are subject to very low credit risk.

Obligations rated "**A**" are considered upper-medium grade and are subject to low credit risk.

Obligations rated "**Baa**" are subject to moderate credit risk. They are considered medium-grade and as such may possess certain speculative characteristics.

Obligations rated "**Ba**" are judged to have speculative elements and are subject to substantial credit risk.

Obligations rated "**B**" are considered speculative and are subject to high credit risk.

Obligations rated "Caa" are judged to be of poor standing and are subject to very high credit risk.

Obligations rated "Ca" are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

Obligations rated "C" are the lowest rated class of bonds and are typically in default, with little prospect for recovery of principal or interest.

Note: Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking and the modifier 3 indicates a ranking in the lower end of that generic rating category.

Short-Term Ratings. Moody's short-term ratings are opinions of the ability of issuers to honor short-term financial obligations. Ratings may be assigned to issuers, short-term programs or to individual short-term debt instruments. Such obligations generally have an original maturity not exceeding thirteen months, unless explicitly noted.

Moody's employs the following designations to indicate the relative repayment ability of rated issuers:

- P-1 Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.
- P-2 Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.
- P-3 Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term debt obligations.
- NP Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

U.S. Municipal Short-Term Debt and Demand Obligation Ratings.

Short-Term Obligation Ratings. There are three rating categories for short-term municipal obligations that are considered investment grade. These ratings are designated as Municipal Investment Grade ("MIG") and are divided into three levels—MIG 1 through MIG 3. In addition, those short-term obligations that are of speculative quality are designated SG, or speculative grade. MIG ratings expire at the maturity of the obligation.

- MIG 1** This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.
- MIG 2** This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.
- MIG 3** This designation denotes acceptable credit quality. Liquidity and cash flow protection may be narrow, and market access for refinancing is likely to be less well-established.
- SG** This designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

Demand Obligation Ratings. In the case of variable rate demand obligations ("VRDOs"), a two-component rating is assigned; a long- or short-term debt rating and a demand obligation rating. The first element represents Moody's evaluation of the degree of risk associated with scheduled principal and interest payments. The second element represents Moody's evaluation of the degree of risk associated with the ability to receive purchase price upon demand ("demand feature"), using a variation of the MIG rating scale, the Variable Municipal Investment Grade or VMIG rating.

When either the long- or short-term aspect of a VRDO is not rated, that piece is designated NR, e.g., Aaa/NR or NR/VMIG 1.

VMIG rating expirations are a function of each issue's specific structural or credit features.

- VMIG 1** This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.
- VMIG 2** This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.
- VMIG 3** This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.
- SG** This designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.

Fitch

Corporate Finance Obligations — Long-Term Rating Scales. Ratings of individual securities or financial obligations of a corporate issuer address relative vulnerability to default on an ordinal scale. In addition, for financial obligations in corporate finance, a measure of recovery given default on that liability also is included in the rating assessment. This notably applies to covered bond ratings, which incorporate both an indication of the probability of default and of the recovery given a default of this debt instrument.

The relationship between issuer scale and obligation scale assumes an historical average recovery of between 30%–50% on the senior, unsecured obligations of an issuer. As a result, individual obligations of entities, such as corporations, are assigned ratings higher, lower or the same as that entity's issuer rating.

Highest credit quality: "**AAA**" ratings denote the lowest expectation of credit risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

Very high credit quality: "**AA**" ratings denote expectations of very low credit risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

High credit quality: "**A**" ratings denote expectations of low credit risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

Good credit quality: "**BBB**" ratings indicate that expectations of credit risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

Speculative: "**BB**" ratings indicate an elevated vulnerability to credit risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial alternatives may be available to allow financial commitments to be met.

Highly speculative: "**B**" ratings indicate that material credit risk is present.

Substantial credit risk: "**CCC**" ratings indicate that substantial credit risk is present.

Very high levels of credit risk: "**CC**" ratings indicate very high levels of credit risk.

Exceptionally high levels of credit risk: "**C**" indicates exceptionally high levels of credit risk.

Defaulted obligations typically are not assigned "D" ratings, but are instead rated in the "B" to "C" rating categories, depending upon their recovery prospects and other relevant characteristics. This approach better aligns obligations that have comparable overall expected loss but varying vulnerability to default and loss.

Note: The modifiers "+" or "-" may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the "AAA" obligation rating category, or to corporate finance obligation ratings in the categories below "B."

Structured, Project & Public Finance Obligations — Long-Term Rating Scales. Ratings of structured finance, project finance and public finance obligations on the long-term scale, including the financial obligations of sovereigns, consider the obligations' relative vulnerability to default. These ratings are typically assigned to an individual security or tranche in a transaction and not to an issuer.

Highest credit quality: "AAA" ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

Very high credit quality: "AA" ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

High credit quality: "A" ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

Good credit quality: "BBB" ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

Speculative: "BB" ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time.

Highly speculative: "B" ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

Substantial credit risk: "CCC" indicates that default is a real possibility.

Very high levels of credit risk: "CC" indicates that default of some kind appears probable.

Exceptionally high levels of credit risk: "C" indicates that default appears imminent or inevitable.

Default: "D" indicates a default. Default generally is defined as one of the following: failure to make payment of principal and/or interest under the contractual terms of the rated obligation; the bankruptcy filings, administration, receivership, liquidation or other winding-up or cessation of the business of an issuer/obligor; or the coercive exchange of an obligation, where creditors were offered securities with diminished structural or economic terms compared with the existing obligation.

Short-Term Ratings Assigned to Obligations in Corporate, Public and Structured Finance. A short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-term ratings are assigned to obligations whose initial maturity is viewed as "short-term" based on market convention. Typically, this means up to 13 months for corporate, sovereign and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

Highest short-term credit quality: "F1" indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added "+" to denote any exceptionally strong credit feature.

Good short-term credit quality: "F2" indicates good intrinsic capacity for timely payment of financial commitments.

Fair short-term credit quality: "**F3**" indicates that the intrinsic capacity for timely payment of financial commitments is adequate.

Speculative short-term credit quality: "**B**" indicates minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

High short-term default risk: "**C**" indicates that default is a real possibility.

Restricted default: "**RD**" indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Applicable to entity ratings only.

Default: "**D**" indicates a broad-based default event for an entity, or the default of a specific short-term obligation.

DBRS

Long Term Obligations. The DBRS long-term rating scale provides an opinion on the risk of default. That is, the risk that an issuer will fail to satisfy its financial obligations in accordance with the terms under which an obligation has been issued. Ratings are based on quantitative and qualitative considerations relevant to the issuer, and the relative ranking of claims. All ratings categories other than AAA and D also contain subcategories "(high)" and "(low)." The absence of either a "(high)" or "(low)" designation indicates the rating is in the middle of the category.

Long-term debt rated "**AAA**" is considered to be of the highest credit quality. The capacity for the payment of financial obligations is exceptionally high and unlikely to be adversely affected by future events.

Long-term debt rated "**AA**" is considered to be of superior credit quality. The capacity for the payment of financial obligations is considered high. Credit quality differs from AAA only to a small degree. Unlikely to be significantly vulnerable to future events.

Long-term debt rated "**A**" is considered to be of good credit quality. The capacity for the payment of financial obligations is substantial, but of lesser credit quality than AA. May be vulnerable to future events, but qualifying negative factors are considered manageable.

Long-term debt rated "**BBB**" is considered to be of adequate credit quality. The capacity for the payment of financial obligations is considered acceptable. May be vulnerable to future events.

Long-term debt rated "**BB**" is considered to be of speculative, non-investment-grade credit quality. The capacity for the payment of future obligations is uncertain. Vulnerable to future events.

Long-term debt rated "**B**" is considered to be of highly speculative credit quality. There is a high level of uncertainty as to the capacity to meet financial obligations.

Long-term debt rated "**CCC**," "**CC**" or "**C**" is of very highly speculative credit quality. In danger of defaulting on financial obligations. There is little difference between these three categories, although CC and C ratings are normally applied to obligations that are seen as highly likely to default, or subordinated to obligations rated in the CCC to B range. Obligations in respect of which default has not technically taken place but is considered inevitable may be rated in the C category.

A "**D**" rating implies a financial obligation has not been met or it is clear that a financial obligation will not met in the near future or a debt instrument has been subject to a distressed exchange. A downgrade to D may not immediately follow an insolvency or restructuring filing as grace periods or extenuating circumstances may exist.

Commercial Paper and Short Term Debt. The DBRS short-term debt rating scale provides an opinion on the risk that an issuer will not meet its short-term financial obligations in a timely manner. Ratings are based on quantitative and qualitative considerations relevant to the issuer and the relative ranking of claims. The R-1 and R-2 rating are further denoted by the subcategories "(high)," "(middle)" and "(low)."

Short-term debt rated "**R-1 (high)**" is considered to be of the highest credit quality. The capacity for the payment of short-term financial obligations as they fall due is exceptionally high. Unlikely to be adversely affected by future events.

Short-term debt rated "**R-1 (middle)**" is considered to be of superior credit quality. The capacity for the payment of short-term financial obligations as they fall due is very high. Differs from R-1 (high) by a relatively modest degree. Unlikely to be significantly vulnerable to future events.

Short-term debt rated "**R-1 (low)**" is considered to be of good credit quality. The capacity for the payment of short-term financial obligations as they fall due is substantial. Overall strength is not as favorable as higher rating categories. May be vulnerable to future events, but qualifying negative factors are considered manageable.

Short-term debt rated "**R-2 (high)**" is considered to be at the upper end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events.

Short-term debt rated "**R-2 (middle)**" is considered to be of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events or may be exposed to other factors that could reduce credit quality.

Short-term debt rated "**R-2 (low)**" is considered to be at the lower end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events. A number of challenges are present that could affect the issuer's ability to meet such obligations.

Short-term debt rated "**R-3**" is considered to be at the lowest end of adequate credit quality. There is a capacity for the payment of short-term financial obligations as they fall due. May be vulnerable to future events and the certainty of meeting such obligations could be impacted by a variety of developments.

Short-term debt rated "**R-4**" is considered to be of speculative credit quality. The capacity for the payment of short-term financial obligations as they fall due is uncertain.

Short-term debt rated "**R-5**" is considered to be of highly speculative credit quality. There is a high level of uncertainty as to the capacity to meet short-term financial obligations as they fall due.

A security rated "**D**" implies that a financial obligation has not been met or it is clear that a financial obligation will not be met in the near future, or a debt instrument has been subject to a distressed exchange. A downgrade to D may not immediately follow an insolvency or restructuring filing as grace periods, other procedural considerations or extenuating circumstances may exist.

ADDITIONAL INFORMATION ABOUT THE BOARD

Boards' Oversight Role in Management

The boards' role in management of the funds is oversight. As is the case with virtually all investment companies (as distinguished from operating companies), service providers to the funds, primarily the Manager and its affiliates, have responsibility for the day-to-day management of the funds, which includes responsibility for risk management (including management of investment risk, valuation risk, issuer and counterparty credit risk, compliance risk and operational risk). As part of their oversight, the boards, acting at their scheduled meetings, or the Chairman, acting between board meetings, regularly interacts with and receives reports from senior personnel of the Manager and its affiliates, service providers, including the Manager's Chief Investment Officer (or a senior representative of his office), the funds' and the Manager's Chief Compliance Officer and portfolio management personnel. The boards' audit committee (which consists of all Independent Board Members) meets during its regularly scheduled and special meetings, and between meetings the audit committee chair is available to the funds' independent registered public accounting firm and the funds' Chief Financial Officer. The boards also receive periodic presentations from senior personnel of Dreyfus and its affiliates regarding risk management generally, as well as periodic presentations regarding specific operational, compliance or investment areas, such as business continuity, anti-money laundering, personal trading, valuation, credit, investment research and securities lending. As warranted, the boards also receive informational reports from the boards' independent legal counsel regarding regulatory compliance and governance

matters. The boards have adopted policies and procedures designed to address certain risks to the funds. In addition, the Manager and other service providers to the funds have adopted a variety of policies, procedures and controls designed to address particular risks to the funds. Different processes, procedures and controls are employed with respect to different types of risks. However, it is not possible to eliminate all of the risks applicable to the funds, and the boards' risk management oversight is subject to inherent limitations.

Board Composition and Leadership Structure

The 1940 Act requires that at least 40% of the board members be Independent Board Members and as such are not affiliated with the Manager. To rely on certain exemptive rules under the 1940 Act, a majority of the funds' board members must be Independent Board Members, and for certain important matters, such as the approval of investment advisory agreements or transactions with affiliates, the 1940 Act or the rules thereunder require the approval of a majority of the Independent Board Members. Currently, except as noted in Part I of this SAI, all of the funds' board members, including the Chairman of the Boards, are Independent Board Members. The boards have determined that their leadership structure, in which the Chairman of the Boards is not affiliated with the Manager, is appropriate in light of the specific characteristics and circumstances of the funds, including, but not limited to: (i) the services that the Manager and its affiliates provide to the funds and potential conflicts of interest that could arise from these relationships; (ii) the extent to which the day-to-day operations of the funds are conducted by fund officers and employees of the Manager and its affiliates; and (iii) the boards' oversight role in management of the funds.

Additional Information About the Boards and Their Committees

Board members are elected to serve for an indefinite term. The boards have standing audit, nominating, compensation, litigation and pricing committees.

The functions of the audit committees are (i) to oversee the funds' accounting and financial reporting processes and the audits of the funds' financial statements and (ii) to assist in the boards' oversight of the integrity of the funds' financial statements, the funds' compliance with legal and regulatory requirements and the independent registered public accounting firm's qualifications, independence and performance.

The nominating committees are responsible for selecting and nominating persons as members of the boards for election or appointment by the boards and for election by shareholders. In evaluating potential nominees, including any nominees recommended by shareholders, a committee takes into consideration various factors listed in the nominating committee charter. The nominating committees will consider recommendations for nominees from shareholders submitted to the Secretary of the Dreyfus Family of Funds, c/o The Dreyfus Corporation Legal Department, 200 Park Avenue, 7th Floor East, New York, New York 10166, which include information regarding the recommended nominee as specified in the nominating committee charter.

The function of the compensation committees is to establish appropriate compensation for serving on the boards.

The litigation committee seeks to address any potential conflicts of interest between the funds and the Manager in connection with any potential or existing litigation or other legal proceeding relating to securities held by a fund and held or otherwise deemed to have a beneficial interest held by the Manager or its affiliate.

The boards also have standing pricing committees comprised of any one board member; the function of the pricing committee is to assist in valuing fund investments.

MANAGEMENT ARRANGEMENTS

The Manager

The Manager is a wholly-owned subsidiary of BNY Mellon. Dreyfus is the primary mutual fund business of The Bank of New York Mellon Corporation, a global financial services company focused on helping clients manage and service their financial assets, operating in 36 countries and serving more than 100 markets. BNY Mellon is a leading investment management and investment services company, uniquely focused to help clients manage and

move their financial assets in the rapidly changing global marketplace. BNY Mellon Investment Management is one of the world's leading investment management organizations, and one of the top U.S. wealth managers, encompassing BNY Mellon's affiliated investment management firms, wealth management services and global distribution companies. Additional information is available at www.bnymellon.com.

Pursuant to a management or advisory agreement applicable to each fund, the Manager generally maintains office facilities on behalf of the funds, and furnishes statistical and research data, clerical help, data processing, bookkeeping and internal auditing and certain other required services to the funds (including, when a fund does not have a separate administration agreement, accounting and administration services).

As further described below under "Distributor," Dreyfus may pay the Distributor or financial intermediaries for shareholder or other services from Dreyfus' own assets, including past profits but not including the management fee paid by the funds. The Distributor may use part or all of such payments to pay Service Agents. Dreyfus also may make such advertising and promotional expenditures, using its own resources, as it from time to time deems appropriate.

Sub-Advisers

See the prospectus to determine if any of the information about Sub-Advisers (below and elsewhere in this SAI) applies to your fund.

For funds with a Sub-Adviser, the Manager or the fund has entered into a Sub-Advisory Agreement with the Sub-Adviser. The Sub-Adviser provides day-to-day investment management of a fund's portfolio, and certain related services.

The following is a list of persons (to the extent known by the fund) who are deemed to control each Sub-Adviser by virtue of ownership of stock or other interests of the Sub-Adviser.

Newton: A wholly-owned subsidiary of BNY Mellon; see "The Manager" above for ownership information.

Sarofim & Co.: Fayez S. Sarofim, Raye White, Christopher Sarofim and The Sarofim Group, Inc.

TS&W: Horace Whitworth, Cheryl Mounce, Lawrence Gibson, Herbert Thomson, Frank Reichel, Lori Anderson, Jessica Thompson, Aidan Riordan, Old Mutual (US) Holdings, Inc., OM Group (UK) Limited, Old Mutual plc and TS&W Investment GP LLC

Index Manager

Mellon Capital, a wholly owned subsidiary of BNY Mellon, provides investment advisory assistance and day-to-day management of the Dreyfus Stock Index Fund's investments pursuant to an Index Management Agreement between Mellon Capital and the Manager.

Portfolio Managers and Portfolio Manager Compensation

See the prospectus to determine which portions of the information provided below apply to your fund.

For funds other than money market funds, an Affiliated Entity or the Sub-Adviser(s), as applicable, provide the funds with portfolio managers who are authorized by the board to execute purchases and sales of securities. Portfolio managers are compensated by the company that employs them, and are not compensated by the funds. Each fund's portfolio managers are listed in Part I of this SAI.

The following provides information about the compensation policies for portfolio managers.

Mellon Capital. The primary objectives of the Mellon Capital compensation plans are to:

- Motivate and reward superior investment and business performance
- Motivate and reward continued growth and profitability

- Attract and retain high-performing individuals critical to the on-going success of Mellon Capital
- Create an ownership mentality for all plan participants

Cash compensation is comprised primarily of a market-based base salary and (variable) incentives (cash and deferred). Base salary is determined by the employees' experience and performance in the role, taking into account the ongoing compensation benchmark analyses. Base salary is generally a fixed amount that may change as a result of an annual review, upon assumption of new duties, or when a market adjustment of the position occurs. Funding for the Mellon Capital Annual and Long Term Incentive Plan is through a pre-determined fixed percentage of overall Mellon Capital profitability. Therefore, all bonus awards are based initially on Mellon Capital's financial performance. Annual incentive opportunities are pre-established for each individual, expressed as a percentage of base salary ("target awards"). These targets are derived based on a review of competitive market data for each position annually. Annual awards are determined by applying multiples to this target award. Awards are 100% discretionary. Factors considered in awards include individual performance, team performance, investment performance of the associated portfolio(s) (including both short and long term returns) and qualitative behavioral factors. Other factors considered in determining the award are the asset size and revenue growth/retention of the products managed (if applicable). Awards are paid partially in cash with the balance deferred through the Long Term Incentive Plan.

Participants in the Long Term Incentive Plan have a high level of accountability and a large impact on the success of the business due to the position's scope and overall responsibility. This plan provides for an annual award, payable in cash after a three-year cliff vesting period, as well as a grant of BNY Mellon Restricted Stock for senior level roles.

The same methodology described above is used to determine portfolio manager compensation with respect to the management of mutual funds and other accounts. Mutual fund portfolio managers are also eligible for the standard retirement benefits and health and welfare benefits available to all Mellon Capital employees. Certain portfolio managers may be eligible for additional retirement benefits under several supplemental retirement plans that Mellon Capital provides to restore dollar-for-dollar the benefits of management employees that had been cut back solely as a result of certain limits due to tax laws. These plans are structured to provide the same retirement benefits as the standard retirement benefits. In addition, mutual fund portfolio managers whose compensation exceeds certain limits may elect to defer a portion of their salary and/or bonus under the BNY Mellon Deferred Compensation Plan for Employees.

Newton. Portfolio manager compensation is primarily comprised of a market-based salary, annual cash bonus and participation in the Newton Long Term Incentive Plan. The level of variable compensation (annual cash bonus and Newton Long Term Incentive Plan) ranges from 0% of base salary to in excess of 200% of base salary, depending upon corporate profits, team performance and individual performance. The annual cash bonus is discretionary. Portfolio manager awards are heavily weighted towards their investment performance relative to both benchmarks and peer comparisons and individual qualitative performance. Awards also are reviewed against market data from industry compensation consultants such as McLagan Partners to ensure comparability with competitors. The portfolio managers also are eligible to participate, at the discretion of management, in the Newton Long Term Incentive Plan. This plan provides for an annual cash award that vests after four years. The value of the award may change during the vesting period based upon changes in Newton's operating income. Portfolio managers also are eligible to join the BNY Mellon Group Personal Pension Plan. Employer contributions are invested in individual member accounts. The value of the fund is not guaranteed and fluctuates based on market factors.

Sarofim & Co. The portfolio managers are compensated through (i) payment of a fixed annual salary and discretionary annual bonus that may be based on a number of factors, including fund performance, the performance of other accounts and the overall performance of Sarofim & Co. over various time frames, including one-year, two-year and three-year periods, and (ii) the possible issuance of stock options and incentive stock options. The fixed annual salary amounts and the discretionary annual bonus amounts constitute the largest component of the portfolio managers' compensation, and these amounts are determined annually through a comprehensive review process pursuant to which executive officers and the members of Sarofim & Co.'s board of directors review and consider the accomplishments and development of each portfolio manager, especially with respect to those client accounts involving the portfolio manager. A lesser component of the portfolio managers' compensation results from the

possible issuance of stock options and incentive stock options. Portfolio managers are sometimes granted stock options and incentive stock options to acquire shares of the capital stock of The Sarofim Group, Inc., the ultimate corporate parent of Sarofim & Co. The decisions as to whether to issue such options and to whom the options are to be issued are made in conjunction with the annual salary and bonus review process, and the options are issued pursuant to a stock option plan adopted by The Sarofim Group, Inc. The options are not based on the particular performance or asset value of any particular client account or of all client accounts as a group, but rather the performance and accomplishments of the individual to whom the option is to be granted. There are various aspects of the review process that are designed to provide objectivity, but, in the final analysis, the evaluation is a subjective one that is based upon a collective overall assessment. There are, however, no specified formulas or benchmarks tied to the particular performance or asset value of any particular client account or of all client accounts as a group.

Standish. The portfolio managers' compensation is comprised primarily of a market-based salary and an incentive compensation plan (annual and long-term). Funding for the Standish Incentive Plan is through a pre-determined fixed percentage of overall company profitability. Therefore, all bonus awards are based initially on Standish's overall performance as opposed to the performance of a single product or group. All investment professionals are eligible to receive incentive awards. Cash awards are payable in the February month end pay of the following year. Most of the awards granted have some portion deferred for three years in the form of deferred cash, BNY Mellon equity, interests in investment vehicles (consisting of investments in a range of Standish products), or a combination of the above. Individual awards for portfolio managers are discretionary, based on both individual and multi-sector product risk adjusted performance relative to both benchmarks and peer comparisons over one year, three year and five year periods. Also considered in determining individual awards are team participation and general contributions to Standish. Individual objectives and goals are also established at the beginning of each calendar year and are taken into account. Portfolio managers whose compensation exceeds certain levels may elect to defer portions of their base salaries and/or incentive compensation pursuant to BNY Mellon's Elective Deferred Compensation Plan.

TBCAM. TBCAM's rewards program was designed to be market competitive and align its compensation with the goals of its clients. This alignment is achieved through an emphasis on deferred awards which incentivizes its investment personnel to focus on long-term alpha generation. The following factors encompass its investment professional awards program: base salary, annual cash bonus, long-term incentive plan, deferred cash, BNY Mellon restricted stock, TBCAM restricted shares and a franchise dividend pool (*i.e.*, if a team meets a pre-established contribution margin, any excess contribution is shared by the team and TBCAM and is paid out in both cash and long-term incentives).

Incentive compensation awards are generally subject to management discretion and pool funding availability. Funding for TBCAM annual and long-term incentive plans is through a pre-determined fixed percentage of overall TBCAM profitability. Awards are paid in cash on an annual basis; however, some portfolio managers may receive a portion of their annual incentive award in deferred vehicles.

Awards for select senior portfolio managers are based on a two-stage model: an opportunity range based on the current level of business and an assessment of long-term business value. A significant portion of the opportunity awarded is structured and based upon the one-, three- and five-year (three-year and five-year weighted more heavily) pre-tax performance of the portfolio manager's accounts relative to the performance of the appropriate peer groups.

Certain Conflicts of Interest with Other Accounts

Portfolio managers may manage multiple accounts for a diverse client base, including mutual funds, separate accounts (assets managed on behalf of private clients or institutions such as pension funds, insurance companies and foundations), private funds, bank collective trust funds or common trust accounts and wrap fee programs that invest in securities in which a fund may invest or that may pursue a strategy similar to a fund's component strategies ("Other Accounts").

Potential conflicts of interest may arise because of an Adviser's or portfolio manager's management of a fund and Other Accounts. For example, conflicts of interest may arise with both the aggregation and allocation of securities transactions and allocation of limited investment opportunities, as an Adviser may be perceived as causing accounts it manages to participate in an offering to increase the Adviser's overall allocation of securities in that offering, or to

increase the Adviser's ability to participate in future offerings by the same underwriter or issuer. Allocations of bunched trades, particularly trade orders that were only partially filled due to limited availability, and allocation of investment opportunities generally, could raise a potential conflict of interest, as an Adviser may have an incentive to allocate securities that are expected to increase in value to preferred accounts. IPOs, in particular, are frequently of very limited availability. A potential conflict of interest may be perceived to arise if transactions in one account closely follow related transactions in a different account, such as when a fund purchase increases the value of securities previously purchased by the Other Account or when a sale in one account lowers the sale price received in a sale by a second account. Conflicts of interest may also exist with respect to portfolio managers who also manage performance-based fee accounts, which could give the portfolio managers an incentive to favor such Other Accounts over the corresponding funds such as deciding which securities to allocate to a fund versus the performance-based fee account. Additionally, portfolio managers may be perceived to have a conflict of interest if there are a large number of Other Accounts, in addition to a fund, that they are managing on behalf of an Adviser. The Advisers periodically review each portfolio manager's overall responsibilities to ensure that he or she is able to allocate the necessary time and resources to effectively manage the fund. In addition, an Adviser could be viewed as having a conflict of interest to the extent that the Adviser or its affiliates and/or portfolio managers have a materially larger investment in Other Accounts than their investment in the fund.

Other Accounts may have investment objectives, strategies and risks that differ from those of the relevant fund. In addition, the funds, as registered investment companies, are subject to different regulations than certain of the Other Accounts and, consequently, may not be permitted to engage in all the investment techniques or transactions, or to engage in such techniques or transactions to the same degree, as the Other Accounts. For these or other reasons, the portfolio managers may purchase different securities for the fund and the Other Accounts, and the performance of securities purchased for the fund may vary from the performance of securities purchased for Other Accounts. The portfolio managers may place transactions on behalf of Other Accounts that are directly or indirectly contrary to investment decisions made for the fund, which could have the potential to adversely impact the fund, depending on market conditions. In addition, if a fund's investment in an issuer is at a different level of the issuer's capital structure than an investment in the issuer by Other Accounts, in the event of credit deterioration of the issuer, there may be a conflict of interest between the fund's and such Other Accounts' investments in the issuer. If an Adviser sells securities short, it may be seen as harmful to the performance of any funds investing "long" in the same or similar securities whose market values fall as a result of short-selling activities.

BNY Mellon and its affiliates, including the Manager, Sub-Advisers affiliated with the Manager and others involved in the management, sales, investment activities, business operations or distribution of the funds, are engaged in businesses and have interests other than that of managing the funds. These activities and interests include potential multiple advisory, transactional, financial and other interests in securities, instruments and companies that may be directly or indirectly purchased or sold by the funds or the funds' service providers, which may cause conflicts that could disadvantage the funds.

BNY Mellon and its affiliates may have deposit, loan and commercial banking or other relationships with the issuers of securities purchased by the funds. BNY Mellon has no obligation to provide to the Adviser or the funds, or effect transactions on behalf of the funds in accordance with, any market or other information, analysis, or research in its possession. Consequently, BNY Mellon (including, but not limited to, BNY Mellon's central Risk Management Department) may have information that could be material to the management of the funds and may not share that information with relevant personnel of the Adviser. Accordingly, in making investment decisions for a fund, the Adviser does not seek to obtain or use material inside information that BNY Mellon may possess with respect to such issuers. However, because an Adviser, in the course of investing fund assets in loans (as described above), may have access to material non-public information regarding a Borrower, the ability of a fund or funds advised by such Adviser to purchase or sell publicly-traded securities of such Borrowers may be restricted.

Code of Ethics. The funds, the Manager, the Sub-Advisers and the Distributor each have adopted a Code of Ethics that permits its personnel, subject to such respective Code of Ethics, to invest in securities, including securities that may be purchased or held by a fund. The Code of Ethics subjects the personal securities transactions of employees to various restrictions to ensure that such trading does not disadvantage any fund. In that regard, portfolio managers and other investment personnel employed by the Manager or an Affiliated Entity or a Sub-Adviser affiliated with the Manager must preclear and report their personal securities transactions and holdings, which are reviewed for compliance with the Code of Ethics and also are subject to the oversight of BNY Mellon's Investment Ethics

Committee. Portfolio managers and other investment personnel may be permitted to purchase, sell or hold securities which also may be or are held in fund(s) they manage or for which they otherwise provide investment advice.

Distributor

The Distributor, a wholly-owned subsidiary of Dreyfus, located at 200 Park Avenue, New York, New York 10166, serves as each fund's distributor on a best efforts basis pursuant to an agreement, renewable annually, with the fund or the corporation or trust of which it is a part. The Distributor also serves as distributor for the other funds in the Dreyfus Family of Funds and BNY Mellon Funds Trust.

The Manager or the Distributor may provide cash payments out of its own resources to Participating Insurance Companies and other financial intermediaries that sell shares of the funds or provide other services. Such payments are separate from any 12b-1 fees and/or shareholder services fees or other expenses paid by the funds to those Participating Insurance Companies and other financial intermediaries. Because those payments are not made by the Policy owners or the funds, a fund's total expense ratio will not be affected by any such payments. These additional payments may be made to Participating Insurance Companies and other financial intermediaries, including affiliates of Participating Insurance Companies, that provide shareholder servicing, sub-administration, recordkeeping and/or sub-transfer agency services, marketing support and/or access to sales meetings, sales representatives and management representatives of the Participating Insurance Companies. Cash compensation also may be paid from the Manager's or the Distributor's own resources to Participating Insurance Companies for inclusion of a fund on a sales list, including a preferred or select sales list or in other sales programs. These payments sometimes are referred to as "revenue sharing." From time to time, the Manager or the Distributor also may provide cash or non-cash compensation to Participating Insurance Companies in the form of: occasional gifts; occasional meals, tickets or other entertainment; support for due diligence trips; educational conference sponsorships; support for recognition programs; technology or infrastructure support; and other forms of cash or non-cash compensation permissible under broker-dealer regulations. In some cases, these payments or compensation may create an incentive for the Participating Insurance Company to recommend or sell shares of a fund to you. In addition, the Distributor may provide additional and differing compensation from its own assets to certain of its employees who promote the sale of select funds to certain Participating Insurance Companies or other financial intermediaries, who in turn may recommend such funds to their clients. In some cases, these payments may create an incentive for the employees of the Distributor to promote a fund for which the Distributor provides a higher level of compensation. Please contact your Participating Insurance Company or other financial intermediary for details about any payments it may receive in connection with the sale of fund shares or the provision of services to the funds.

Transfer and Dividend Disbursing Agent and Custodian

The Transfer Agent, a wholly-owned subsidiary of Dreyfus, located at 200 Park Avenue, New York, New York 10166, is each fund's transfer and dividend disbursing agent. Pursuant to a transfer agency agreement with the funds, the Transfer Agent arranges for the maintenance of shareholder account records for the funds, the handling of certain communications between shareholders and the funds and the payment of dividends and distributions payable by the funds. For these services, the Transfer Agent receives a monthly fee computed on the basis of the number of shareholder accounts it maintains for each fund during the month, and is reimbursed for certain out-of-pocket expenses. The funds, other than the Index Funds, also may make payments to certain financial intermediaries, including affiliates, who provide sub-administration, recordkeeping and/or sub-transfer agency services to beneficial owners of fund shares.

The Custodian, an affiliate of the Manager, located at One Wall Street, New York, New York 10286, serves as custodian for the investments of the funds. The Custodian has no part in determining the investment policies of the funds or which securities are to be purchased or sold by the funds. Pursuant to a custody agreement applicable to each fund, the Custodian holds each fund's securities and keeps all necessary accounts and records. For its custody services, the Custodian receives a monthly fee based on the market value of each fund's assets held in custody and receives certain securities transaction charges.

Funds' Compliance Policies and Procedures

The funds have adopted compliance policies and procedures pursuant to Rule 38a-1 under the 1940 Act that cover, among other matters, certain compliance matters relevant to the management and operations of the funds.

DETERMINATION OF NAV

See the prospectus and "Investments, Investment Techniques and Risks" in Part II of this SAI to determine which sections of the discussion below apply to your fund.

Valuation of Portfolio Securities (funds other than the Money Market Portfolio)

A fund's equity securities, including option contracts (but not including investments in other open-end registered investment companies), generally are valued at the last sale price on the day of valuation on the securities exchange or national securities market on which such securities primarily are traded. Securities listed on NASDAQ markets generally will be valued at the official closing price. If there are no transactions in a security, or no official closing prices for a NASDAQ market-listed security on that day, the security will be valued at the average of the most recent bid and asked prices. Bid price is used when no asked price is available. Open short positions for which there is no sale price on a given day are valued at the lowest asked price. Investments in other open-end investment companies are valued at their reported NAVs each day, except that shares of ETFs generally are valued at the last sale price on the day of valuation on the securities exchange on which the shares are primarily traded.

Substantially all of a fund's debt securities and instruments generally will be valued, to the extent possible, by one or more independent pricing services (the "Service") approved by the board. When, in the judgment of the Service, quoted bid prices for investments are readily available and are representative of the bid side of the market, these investments are valued at the mean between the quoted bid prices (as obtained by the Service from dealers in such securities) and asked prices (as calculated by the Service based upon its evaluation of the market for such securities). The value of other debt securities and instruments is determined by the Service based on methods which include consideration of: yields or prices of securities of comparable quality, coupon, maturity and type; indications as to values from dealers; and general market conditions. The Service's procedures are reviewed by fund officers under the general supervision of the board. Overnight and certain other short-term debt securities and instruments (excluding Treasury bills) will be valued by the amortized cost method, which approximates value, unless a Service provides a valuation for such security or, in the opinion of the board or a committee or other persons designated by the board, the amortized cost method would not represent fair value.

Market quotations of foreign securities in foreign currencies and any fund assets or liabilities initially expressed in terms of foreign currency are translated into U.S. dollars at the spot rate, and foreign currency forward contracts are valued using the forward rate obtained from a Service approved by the board. If a fund has to obtain prices as of the close of trading on various exchanges throughout the world, the calculation of the fund's NAV may not take place contemporaneously with the determination of prices of certain of the fund's portfolio securities. Fair value of foreign equity securities may be determined with the assistance of a pricing service using correlations between the movement of prices of foreign securities and indexes of domestic securities and other appropriate indicators, such as closing market prices of relevant ADRs and futures contracts. The valuation of a security based on this fair value process may differ from the security's most recent closing price and from the prices used by other mutual funds to calculate their NAVs. Foreign securities held by a fund may trade on days that the fund is not open for business, thus affecting the value of the fund's assets on days when fund investors have no access to the fund.

Generally, over-the-counter option contracts and interest rate, credit default, total return and equity swap agreements, and options thereon, will be valued by the Service. Equity-linked instruments, such as contracts for difference, will be valued by the Service based on the value of the underlying reference asset(s). Futures contracts will be valued at the most recent settlement price. Restricted securities, as well as securities or other assets for which recent market quotations or official closing prices are not readily available or are determined by a fund not to reflect accurately fair value (such as when the value of a security has been materially affected by events occurring after the close of the exchange or market on which the security is principally traded (for example, a foreign exchange or market) but before the fund calculates its NAV), or which are not valued by the Service, are valued at fair value as determined in good faith based on procedures approved by the board. Fair value of investments may be

determined by the board or its pricing committee or the fund's valuation committee using such information as it deems appropriate. The factors that may be considered when fair valuing a security include fundamental analytical data, the nature and duration of restrictions on disposition, an evaluation of the forces that influence the market in which the securities are purchased and sold, and public trading in similar securities of the issuer or comparable issuers. The valuation of a security based on fair value procedures may differ from the prices used by other mutual funds to calculate their NAVs.

Valuation of Portfolio Securities (Money Market Portfolio only)

In the case of a money market fund that uses amortized cost pricing to value its portfolio securities, the valuation of the fund's portfolio securities is based upon their amortized cost which does not take into account unrealized gains or losses. This involves valuing an instrument at its cost and thereafter assuming a constant amortization to maturity of any discount or premium, regardless of the impact of fluctuating interest rates on the market value of the instrument. While this method provides certainty in valuation, it may result in periods during which value, as determined by amortized cost, is higher or lower than the price the fund would receive if it sold the instrument. Boards overseeing money market funds have established, as a particular responsibility within the overall duty of care owed to fund investors, procedures reasonably designed to stabilize the funds' price per share as computed for the purpose of purchases and redemptions at \$1.00. Such procedures include review of the funds' portfolio holdings by the board, at such intervals as it may deem appropriate, to determine whether the funds' NAV calculated by using available market quotations or market equivalents (including valuations obtained from a Service) deviates from \$1.00 per share based on amortized cost. Other investments and assets will be valued at fair value as determined in good faith by the board.

Calculation of NAV

Fund shares are sold on a continuous basis. Except as otherwise described in the prospectus, NAV per share of each fund and each class of a Multi-Class Fund is determined as of the close of trading on the floor of the NYSE (usually 4:00 p.m., Eastern time) on each day the NYSE is open for regular business. For purposes of determining NAV, certain options and futures contracts may be valued 15 minutes after the close of trading on the floor of the NYSE. The NAV per share of a fund is computed by dividing the value of the fund's net assets (*i.e.*, the value of its assets less liabilities) by the total number of shares of such fund outstanding.

Fund expenses and fees, including management fees and fees pursuant to a Distribution Plan (reduced by the fund's expense limitation, if any), are accrued daily and taken into account for the purpose of determining the NAV of a fund's shares. For funds with more than one class of shares, because of the differences in operating expenses incurred by each class of shares of a fund, the per share NAV of each class of shares of the fund will differ. The NAV of each class of a fund with more than one class of shares is computed by dividing the value of the fund's net assets represented by such class (*i.e.*, the value of its assets less liabilities) by the total number of shares of such class outstanding.

Expense Allocations

Except as may be otherwise described in "Certain Expense Arrangements and Other Disclosures" in Part II of this SAI, all expenses incurred in the operation of the series of a fund company are borne by the fund company. Expenses attributable to a particular series of a fund company are charged against the assets of that series; other expenses of the fund company are allocated among the series on the basis determined by the board, including, but not limited to, proportionately in relation to the net assets of each series. In addition, each class of shares of a fund with more than one class bears any class specific expenses allocated to such class, such as expenses related to the distribution and/or shareholder servicing of such class.

NYSE Closings

The holidays (as observed) on which the NYSE is closed currently are: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving and Christmas.

DIVIDENDS AND DISTRIBUTIONS

Dividends automatically are reinvested in additional shares of the fund from which they were paid at NAV. Dividends and distributions among share classes in the same fund may vary due to the different expenses of such share classes. All expenses are accrued daily and deducted before declaration of dividends to shareholders.

Money Market Portfolio

Dividends accrue beginning on the business day following the date of purchase and through the day a redemption is effective. A fund's earnings for Saturdays, Sundays and holidays are declared as dividends on the following business day. Dividends usually are paid on the last calendar day of each month. All expenses are accrued daily and deducted before declaration of dividends to shareholders.

TAXATION

See the prospectus and "Investment Policies and Restrictions" in Part II of this SAI to determine which sections of the discussion below apply to your funds.

The following is only a general summary of some of the important federal income tax considerations generally affecting the funds and their shareholders. No attempt is made to present a complete explanation of the federal tax treatment of the funds' activities or to discuss state and local tax matters affecting the funds. Shareholders are urged to consult their own tax advisors for more detailed information concerning the tax implications of investments in the funds.

Since the shareholders of each fund are the Participating Insurance Companies and their separate accounts, the tax treatment of dividends and distributions will depend on the tax status of the Participating Insurance Company. Accordingly, no discussion is included as to the federal income tax consequences to such shareholders or to the relevant Policy owners. For information regarding the taxation of Policy owners, Policy owners should consult the applicable prospectus of the separate account of the Participating Insurance Company. The discussion below assumes that the shares of each fund will be respected as owned by the insurance company separate accounts. If this is not true, the person or persons determined to own the shares of a fund will be currently taxed on fund distributions and upon any redemption of fund shares, pursuant to generally applicable rules of the Code and Treasury regulations.

Taxation of the Funds

Each fund intends to qualify for treatment as a regulated investment company ("RIC") under Subchapter M of the Code and intends to continue to so qualify if such qualification is in the best interests of its shareholders. As a RIC, a fund will pay no federal income tax on its net investment income and net realized capital gains to the extent that such income and gains are distributed to shareholders in accordance with applicable provisions of the Code. To qualify as a RIC, a fund must, among other things: (a) derive in each taxable year (the "gross income test") at least 90% of its gross income from (i) dividends, interest, payments with respect to securities loans and gains from the sale or other disposition of stocks, securities or foreign currencies or other income (including but not limited to gains from options, futures or forward contracts) derived with respect to its business of investing in such stocks, securities or currencies, and (ii) net income from interests in "qualified publicly traded partnerships" ("QPTPs," as defined below); and (b) distribute with respect to each taxable year at least 90% of the sum of its investment company taxable income (determined without regard to the dividends paid deduction) and net tax-exempt interest income, if any, for such year.

In general, for purposes of the gross income test described above, income derived from a partnership will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership that would be qualifying income if realized by a RIC. However, as noted above, 100% of the net income derived from an interest in a QPTP is qualifying income for purposes of the gross income test. A QPTP is defined as a partnership (i) interests in which are traded on an established securities market or readily tradable on a secondary market or the substantial equivalent thereof and (ii) that derives at least 90% of its gross income from certain enumerated passive income sources described in Code section 7704(d), but does not include a partnership that derives 90% of its gross

income from sources described in Code section 851(b)(2)(A). Although income from a QPTP is qualifying income for purposes of the gross income test, investment in QPTPs cannot exceed 25% of a fund's assets.

Gains from foreign currencies (including foreign currency options, foreign currency swaps, foreign currency futures and foreign currency forward contracts) currently constitute qualifying income for purposes of the gross income test. However, the Treasury has the authority to issue regulations (possibly with retroactive effect) treating a RIC's foreign currency gains as non-qualifying income for purposes of the gross income test to the extent that such income is not directly related to the RIC's principal business of investing in stock or securities.

A RIC that fails the gross income test for a taxable year shall nevertheless be considered to have satisfied the test for such year if (i) the RIC satisfies certain procedural requirements, and (ii) the RIC's failure to satisfy the gross income test is due to reasonable cause and not due to willful neglect. However, in such case, a tax is imposed on the RIC for the taxable year in which, absent the application of the above cure provision, it would have failed the gross income test equal to the amount by which (x) the RIC's non-qualifying gross income exceeds (y) one-ninth of the RIC's qualifying gross income, each as determined for purposes of applying the gross income test for such year.

A RIC that fails the asset diversification test as of the end of a quarter shall nevertheless be considered to have satisfied the test as of the end of such quarter in the following circumstances. If the RIC's failure to satisfy the asset diversification test at the end of the quarter is due to the ownership of assets the total value of which does not exceed the lesser of (i) one percent of the total value of the RIC's assets at the end of such quarter and (ii) \$10,000,000 (a "*de minimis* failure"), the RIC shall be considered to have satisfied the asset diversification test as of the end of such quarter if, within six months of the last day of the quarter in which the RIC identifies that it failed the asset diversification test (or such other prescribed time period), the RIC either disposes of assets in order to satisfy the asset diversification test, or otherwise satisfies the asset diversification test.

In the case of a failure to satisfy the asset diversification test at the end of a quarter under circumstances that do not constitute a *de minimis* failure, a RIC shall nevertheless be considered to have satisfied the asset diversification test as of the end of such quarter if (i) the RIC satisfies certain procedural requirements; (ii) the RIC's failure to satisfy the asset diversification test is due to reasonable cause and not due to willful neglect; and (iii) within six months of the last day of the quarter in which the RIC identifies that it failed the asset diversification test (or such other prescribed time period), the RIC either disposes of the assets that caused the asset diversification failure, or otherwise satisfies the asset diversification test. However, in such case, a tax is imposed on the RIC, at the highest prescribed corporate income tax rate, on the net income generated by the assets that caused the RIC to fail the asset diversification test during the period for which the asset diversification test was not met. In all events, however, such tax will not be less than \$50,000.

If a fund were to fail to qualify as a RIC in any taxable year, the fund would be subject to tax on its taxable income at corporate rates, and all distributions from current or accumulated earnings and profits, including any distributions of net tax-exempt income and net long-term capital gains, would be taxable to shareholders (or, potentially, Policy owners) as ordinary income. In addition, a fund could be required to recognize unrealized gains, pay substantial taxes and interest and make substantial distributions before requalifying as a RIC that is accorded special tax treatment.

A nondeductible excise tax at a rate of 4% will be imposed on the excess, if any, of a fund's "required distribution" over its actual distributions in any calendar year. Generally, the required distribution is 98% of a fund's ordinary income for the calendar year plus 98.2% of its capital gain net income, determined under prescribed rules for this purpose, recognized during the one-year period ending on October 31st of such year (or December 31st of that year if the fund is permitted to so elect and so elects) plus undistributed amounts from prior years. This excise tax, however, does not apply to a RIC whose only shareholders are separate accounts of life insurance companies supporting VA contracts and/or VLI policies and certain other prescribed shareholders. Therefore, none of the funds are expected to be subject to the excise tax.

Although in general the passive loss rules of the Code do not apply to RICs, such rules do apply to a RIC with respect to items attributable to an interest in a QPTP. A fund's investments in partnerships, including in QPTPs, may result in a fund being subject to state, local or foreign income, franchise or withholding tax liabilities.

Diversification Requirements of Section 817(h)

Each fund intends to comply with the diversification requirements of Section 817(h) of the Code and the regulations thereunder. Section 817(h) imposes certain diversification requirements on the assets of insurance company separate accounts used to fund VA contracts and/or VLI policies. Under a special "look-through" provision, if the separate account is a shareholder of a fund whose only shareholders are separate accounts of life insurance companies supporting VA contracts and/or VLI policies and certain other prescribed shareholders, the separate account will be treated as owning its pro rata portion of each of the assets of the fund for purposes of determining the account's satisfaction of the Section 817(h) diversification requirements. Accordingly, if a separate account's sole investment is shares of such a fund, and that fund satisfies the diversification requirements of Section 817(h), the separate account will be treated as having satisfied the diversification requirements of Section 817(h).
