The diversification requirements of Section 817(h) are in addition to the diversification requirements imposed on a fund by the 1940 Act and Subchapter M of the Code. Under Section 817(h), a separate account (or underlying fund) will be considered adequately diversified if, as of the end of each calendar quarter or within 30 days thereafter, (i) no more than 55% of the total assets of the separate account (or underlying fund) are represented by any one investment, (ii) no more than 70% of the total assets of the separate account (or underlying fund) are represented by any two investments, (iii) no more than 80% of the total assets of the separate account (or underlying fund) are represented by any three investments, and (iv) no more than 90% of the total assets of the separate account (or underlying fund) are represented by any four investments. Section 817(h) provides, as a safe harbor, that a separate account (or underlying fund) will be treated as being adequately diversified if the asset diversification test under Subchapter M of the Code (discussed above at "Taxation of the Funds") is satisfied and no more than 55% of the value of the separate account's (or underlying fund's) total assets are cash and cash items, U.S. government securities, and securities of other RICs.

For purposes of the diversification requirements of Section 817(h), all securities of the same issuer, all interests in the same real property project, and all interests in the same commodity are treated as a single investment. In addition, each U.S. Government agency or instrumentality is treated as a separate issuer.

Failure by a fund to qualify as a RIC or satisfy the various requirements of Section 817(h) could cause the VA contracts and the VLI policies to lose their favorable tax status and require a Policy owner to include in income any income accrued under the Policies for the current and all prior taxable years, thereby losing the benefit of tax deferral. Under certain circumstances described in applicable Treasury regulations and guidance, an inadvertent failure to satisfy the applicable diversification requirements of Section 817(h) may be corrected, but such a correction would require a payment to the IRS. Any such failure may also result in adverse tax consequences for the Participating Insurance Company issuing the Policies.

Passive Foreign Investment Companies

Certain funds that invest in foreign securities may own shares in certain foreign entities that are treated as passive foreign investment companies ("PFICs") for U.S. federal income tax purposes. A fund that owns shares of a PFIC may be subject to U.S. federal income tax (including interest charges) on distributions received from the PFIC or gains from a disposition of shares in the PFIC. To avoid this treatment, each fund owning PFIC shares may make an election to mark the gains (and to a limited extent losses) in a PFIC "to market" as though it had sold and repurchased its holdings in the PFIC on the last day of the fund's taxable year. Such gains and losses are treated as ordinary income and loss. Alternatively, a fund may in certain cases elect to treat a PFIC as a "qualified electing fund" (a "QEF"), in which case the fund will be required to include in its income annually its share of the QEF's income and net capital gains, regardless of whether the fund receives any distribution from the QEF. If the QEF incurs a loss for a taxable year, the loss will not pass through to the fund and, accordingly, cannot offset other income and/or gains of the fund. A fund may not be able to make the QEF election with respect to many PFICs because of certain requirements that the PFICs would have to satisfy.

The mark-to-market and QEF elections may accelerate the recognition of income (without the receipt of cash) and increase the amount required to be distributed by a fund to avoid taxation. Making either of these elections therefore may require a fund to liquidate investments (including when it is not advantageous to do so) to meet its distribution requirements, which also may accelerate the recognition of gain and affect the fund's total return.

Taxes on Non-U.S. Income and Investments

Investment income that may be received by a fund from sources within foreign countries may be subject to foreign withholding and other taxes. Tax treaties between the United States and certain countries may reduce or eliminate such taxes. It is not possible to determine at this time what a fund's effective rate of non-U.S. taxes will be in any given year.

Further, adverse United States tax consequences can be associated with certain foreign investments, including potential United States withholding taxes on foreign investment entities with respect to their United States investments.

Foreign Currency Transactions

Gains or losses attributable to fluctuations in exchange rates between the time a fund accrues income or receivables, or expenses or other liabilities, denominated in a foreign currency and the time that fund actually collects such income or receivables, or pays such liabilities, are generally treated as ordinary income or loss. Similarly, gains or losses on foreign currency forward contracts and the disposition of debt securities denominated in a foreign currency, to the extent attributable to fluctuations in exchange rates between the acquisition and disposition dates, also are treated as ordinary income or loss.

Financial Products

A fund's investments in options, futures contracts, forward contracts, swaps and derivatives, as well as any of its other hedging, short sale or similar transactions, may be subject to one or more special tax rules (including notional principal contract, constructive sale, straddle, wash sale, short sale and other rules), the effect of which may be to accelerate income to the fund (including, potentially, without a corresponding receipt of cash with which to make required distributions), defer fund losses, cause adjustments in the holding periods of fund securities, convert capital gains into ordinary income, convert long-term capital gains into short-term capital gains and convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing and character of distributions to shareholders of a fund. In addition, because the tax rules applicable to derivative financial instruments are in some cases uncertain under current law, an adverse determination or future guidance by the IRS with respect to these rules (which determination or guidance could be retroactive) may affect whether a fund has made sufficient distributions, and otherwise satisfied the applicable requirements, to maintain its qualification as a RIC and avoid fund-level taxation.

Securities Issued or Purchased at a Discount and Payment-in-Kind Securities

A fund's investments, if any, in securities issued or purchased at a discount, as well as certain other securities (including zero coupon obligations and certain redeemable preferred stock), may require the fund to accrue and distribute income not yet received. Similarly, a fund's investment in payment-in-kind securities will give rise to income which is required to be distributed even though the fund receives no payment in cash on the security during the year. In order to generate sufficient cash to make its requisite distributions, a fund may be required to borrow money or sell securities in its portfolio that it otherwise would have continued to hold.

Inflation-Indexed Treasury Securities

The taxation of inflation-indexed Treasury securities is similar to the taxation of conventional bonds. Both interest payments and the difference between original principal and the inflation-adjusted principal generally will be treated as interest or original issue discount income subject to taxation. Interest payments generally are taxable when received or accrued. The inflation adjustment to the principal generally is subject to tax in the year the adjustment is made, not at maturity of the security when the cash from the repayment of principal is received. Accordingly, as in the case of securities issued or purchased at a discount and zero coupon obligations, a fund's investments in inflation-indexed Treasury securities may require the fund to accrue and distribute income not yet received. Decreases in the indexed principal in a given year generally (i) will reduce the amount of interest income otherwise includible in income for that year in respect of the Treasury security, (ii) to the extent not treated as an offset to current income under (i), will constitute an ordinary loss to the extent of prior year inclusions of interest, original

issue discount and market discount in respect of the security that exceed ordinary losses in respect of the security in such prior years, and (iii) to the extent not treated as an offset to current income under (i) or an ordinary loss under (ii), can be carried forward as an ordinary loss to reduce interest, original issue discount and market discount in respect of the security in subsequent taxable years. If inflation-indexed Treasury securities are sold prior to maturity, capital losses or gains generally are realized in the same manner as traditional debt instruments. Special rules apply in respect of inflation-indexed Treasury securities issued with more than a prescribed *de minimis* amount of discount or premium.

Certain Higher-Risk and High Yield Securities

Certain funds may invest in lower-quality fixed-income securities, including debt obligations of issuers not currently paying interest or that are in default. Investments in debt obligations that are at risk of or are in default present special tax issues for a fund. Tax rules are not entirely clear on the treatment of such debt obligations, including as to whether and to what extent a fund should recognize market discount on such a debt obligation, when a fund may cease to accrue interest, original issue discount or market discount, when and to what extent a fund may take deductions for bad debts or worthless securities and how a fund shall allocate payments received on obligations in default between principal and interest. These and other related issues would be addressed by each fund if it invests in such securities as part of the fund's efforts to ensure that it distributes sufficient income to preserve its status as a RIC and does not become subject to U.S. federal income or excise tax.

Investing in Mortgage Entities

Special tax rules may apply to the investments by a fund in entities which invest in or finance mortgage debt. Such investments include residual interests in REMICs and interests in a REIT which qualifies as a taxable mortgage pool under the Code or has a qualified REIT subsidiary that is a taxable mortgage pool under the Code. Although it is the practice of each fund not to make such investments, there is no guarantee that a fund will be able to avoid an inadvertent investment in REMIC residual interests or a taxable mortgage pool.

Such investments may result in a fund receiving excess inclusion income ("EII") in which case a portion of its distributions will be characterized as EII. Among other potential adverse tax consequences, this can result in the fund being required to pay tax on the portion of its EII, if any, that is allocated to any shareholders that are disqualified organizations. Furthermore, any investment in residual interests of a REMIC can create complex tax consequences to both a fund and its shareholders.

Investor Tax Matters

The rules regarding the taxation of the separate accounts of Participating Insurance Companies that utilize the funds as investment vehicles for VA contracts and VLI policies are complex. The foregoing is only a summary of certain material United States federal income tax consequences affecting the funds. Participating Insurance Companies and Policy owners should consult their own tax advisors with respect to the particular tax consequences to them of an investment in the funds.

PORTFOLIO TRANSACTIONS

The Manager assumes general supervision over the placement of securities purchase and sale orders on behalf of the funds. The funds, except for the Money Market Portfolio, are managed by dual employees of the Manager and an Affiliated Entity or employ a Sub-Adviser. Those funds use the research facilities, and are subject to the internal policies and procedures, of the applicable Affiliated Entity or Sub-Adviser and execute portfolio transactions through the trading desk of the Affiliated Entity or Sub-Adviser, as applicable (collectively with Dreyfus' trading desk (for the money market funds only), the "Trading Desk"). All portfolio transactions of the Money Market Portfolio are placed on behalf of the Money Market Portfolio by the Manager.

Trading the Funds' Portfolio Securities

In managing the Money Market Portfolio, the Manager will draw upon BNY Mellon Cash Investment Strategies ("CIS"). CIS is a division of the Manager that provides investment and credit risk management services and

approves all money market fund eligible securities for the fund and for other investment companies and accounts managed by the Manager or its affiliates that invest primarily in money market instruments. CIS, through a team of professionals who contribute a combination of industry analysis and fund-specific expertise, monitors all issuers approved for investment by such investment companies and other accounts by analyzing third party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as internal research. CIS investment and credit professionals also utilize inputs and guidance from BNY Mellon's central Risk Management Department (the "Risk Department") as part of the investment process. These inputs and guidance focus primarily on concentration levels and market and credit risks and are based upon independent analysis done by the Risk Department relating to fundamental characteristics such as the sector, sovereign, tenor and rating of investments or potential investment. The Risk Department also may perform stress and scenario testing on various money market type portfolios advised by CIS or BNY Mellon and its other affiliates, and provides various periodic and ad-hoc reporting to the investment and credit professionals at CIS. In the event a security is removed from the "approved" credit list after being purchased by the fund, the fund is not required to sell that security.

Debt securities purchased and sold by a fund generally are traded on a net basis (*i.e.*, without a commission) through dealers acting for their own account and not as brokers, or otherwise involve transactions directly with the issuer of the instrument. This means that a dealer makes a market for securities by offering to buy at one price and sell at a slightly higher price. The difference between the prices is known as a "spread." Other portfolio transactions may be executed through brokers acting as agents, which are typically paid a commission.

The Trading Desk generally has the authority to select brokers (for equity securities) or dealers (for fixed-income securities) and the commission rates or spreads to be paid. Allocation of brokerage transactions is made in the best judgment of the Trading Desk and in a manner deemed fair and reasonable. In choosing brokers or dealers, the Trading Desk evaluates the ability of the broker or dealer to execute the transaction at the best combination of price and quality of execution.

In general, brokers or dealers involved in the execution of portfolio transactions on behalf of a fund are selected on the basis of their professional capability and the value and quality of their services. The Trading Desk seeks to obtain best execution by choosing brokers or dealers to execute transactions based on a variety of factors, which may include, but are not limited to, the following: (i) price; (ii) liquidity; (iii) the nature and character of the relevant market for the security to be purchased or sold; (iv) the quality and efficiency of the broker's or dealer's execution; (v) the broker's or dealer's willingness to commit capital; (vi) the reliability of the broker or dealer in trade settlement and clearance; (vii) the level of counterparty risk (*i.e.*, the broker's or dealer's financial condition); (viii) the commission rate or the spread; (ix) the value of research provided; (x) the availability of electronic trade entry and reporting links; and (xi) the size and type of order (*e.g.*, foreign or domestic security, large block, illiquid security). In selecting brokers or dealers no factor is necessarily determinative; however, at various times and for various reasons, certain factors will be more important than others in determining which broker or dealer to use. Seeking to obtain best execution for all trades takes precedence over all other considerations.

Investment decisions for one fund or account are made independently from those for other funds or accounts managed by the portfolio managers. Under the Trading Desk's procedures, portfolio managers and their corresponding Trading Desks may, but are not required to, seek to aggregate (or "bunch") orders that are placed or received concurrently for more than one fund or account, and available investments or opportunities for sales will be allocated equitably to each. In some cases, this policy may adversely affect the size of the position obtained or sold or the price paid or received by a fund. When transactions are aggregated, but it is not possible to receive the same price or execution on the entire volume of securities purchased or sold, the various prices may be averaged, and the fund will be charged or credited with the average price.

The portfolio managers will make investment decisions for the funds as they believe are in the best interests of the funds. Investment decisions made for a fund may differ from, and may conflict with, investment decisions made for other funds and accounts advised by the Manager and its Affiliated Entities or a Sub-Adviser. Actions taken with respect to such other funds or accounts may adversely impact a fund, and actions taken by a fund may benefit the Manager or its Affiliated Entities or a Sub-Adviser or other funds or accounts advised by the Manager or an Affiliated Entity or Sub-Adviser. Funds and accounts managed by the Manager, an Affiliated Entity or a Sub-Adviser may own significant positions in an issuer of securities which, depending on market conditions, may affect adversely the ability to dispose of some or all of such positions. Regulatory restrictions (including, but not limited to, those related to the aggregation of positions among other funds and accounts) and internal BNY Mellon policies,

guidance or limitations (including, but not limited to, those related to the aggregation of positions among all fiduciary accounts managed or advised by BNY Mellon and all its affiliates (including the Manager and its Affiliated Entities) and the aggregate exposure of such accounts) may restrict investment activities of the funds. While the allocation of investment opportunities among a fund and other funds and accounts advised by the Manager and its Affiliated Entities may raise potential conflicts because of financial, investment or other interests of BNY Mellon or its personnel (or, with respect to a fund advised by a Sub-Adviser, the Sub-Adviser and its affiliates), the portfolio managers will make allocation decisions consistent with the interests of the fund and other funds and accounts and not solely based on such other interests.

Portfolio managers may deem it appropriate for one fund or account they manage to sell a security while another fund or account they manage is purchasing the same security. Under such circumstances, the portfolio managers may arrange to have the purchase and sale transactions effected directly between the funds and/or accounts ("cross transactions"). Cross transactions will be effected in accordance with procedures adopted pursuant to Rule 17a-7 under the 1940 Act.

The Manager, an Affiliated Entity or a Sub-Adviser may buy for a fund securities of issuers in which other funds or accounts advised by the Manager, the Affiliated Entity or the Sub-Adviser may have, or are making, an investment in the same issuer that are subordinate or senior to the securities purchased for the fund. For example, a fund may invest in debt securities of an issuer at the same time that other funds or accounts are investing, or currently have an investment, in equity securities of the same issuer. To the extent that the issuer experiences financial or operational challenges which may impact the price of its securities and its ability to meet its obligations, decisions by the Manager, an Affiliated Entity or a Sub-Adviser relating to what actions are to be taken may raise conflicts of interests, and the Manager, the Affiliated Entity or the Sub-Adviser, as applicable, may take actions for certain funds or accounts that have negative impacts on other funds or accounts.

Portfolio turnover may vary from year to year as well as within a year. In periods in which extraordinary market conditions prevail, portfolio managers will not be deterred from changing a fund's investment strategy as rapidly as needed, in which case higher turnover rates can be anticipated which would result in greater brokerage expenses. The overall reasonableness of brokerage commissions paid is evaluated by the Trading Desk based upon its knowledge of available information as to the general level of commissions paid by other institutional investors for comparable services. Higher portfolio turnover rates usually generate additional brokerage commissions and transaction costs.

To the extent that a fund invests in foreign securities, certain of such fund's transactions in those securities may not benefit from the negotiated commission rates available to funds for transactions in securities of domestic issuers. For funds that permit foreign exchange transactions, such transactions are made with banks or institutions in the interbank market at prices reflecting a mark-up or mark-down and/or commission.

The Manager (and, where applicable, an Affiliated Entity or a Sub-Adviser) may utilize the services of an affiliate to effect certain client transactions when it determines that the use of such affiliate is consistent with its fiduciary obligations, including its obligation to obtain best execution, and the transactions are in the best interests of its clients. Procedures have been adopted in conformity with Rule 17e-1 under the 1940 Act to provide that all brokerage commissions paid by the funds to the Manager (or, where applicable, an Affiliated Entity or a Sub-Adviser) are reasonable and fair.

For funds that invest in municipal securities, portfolio securities are purchased from and sold to parties acting as either principal or agent. Newly-issued securities ordinarily are purchased directly from the issuer or from an underwriter; other purchases and sales usually are placed with those dealers from which it appears that the best price or execution will be obtained. Usually no brokerage commissions as such are paid by a fund for such purchases and sales, although the price paid usually includes an undisclosed compensation to the dealer acting as agent. The prices paid to underwriters of newly-issued securities usually include a concession paid by the issuer to the underwriter and purchases of after-market securities from dealers ordinarily are executed at a price between the bid and asked price.

Soft Dollars

The term "soft dollars" is commonly understood to refer to arrangements where an investment adviser uses client (or fund) brokerage commissions to pay for research and brokerage services to be used by the investment adviser.

Section 28(e) of the Exchange Act provides a "safe harbor" that permits investment advisers to enter into soft dollar arrangements if the investment adviser determines in good faith that the amount of the commission is reasonable in relation to the value of the brokerage and research services provided. Eligible products and services under Section 28(e) include those that provide lawful and appropriate assistance to the investment adviser in the performance of its investment decision-making responsibilities.

Subject to the policy of seeking best execution, the funds may execute transactions with brokerage firms that provide research services and products, as defined in Section 28(e). Any and all research products and services received in connection with brokerage commissions will be used to assist the applicable Affiliated Entity or Sub-Adviser in its investment decision-making responsibilities, as contemplated under Section 28(e). Under certain conditions, higher brokerage commissions may be paid in connection with certain transactions in return for research products and services.

The products and services provided under these arrangements permit the Trading Desk to supplement its own research and analysis activities, and provide it with information from individuals and research staff of many securities firms. Such services and products may include, but are not limited to, the following: fundamental research reports (which may discuss, among other things, the value of securities, or the advisability of investing in, purchasing or selling securities, or the availability of securities or the purchasers or sellers of securities, or issuers, industries, economic factors and trends, portfolio strategy and performance); current market data and news; statistical data; technical and portfolio analyses; economic forecasting and interest rate projections; and historical information on securities and companies. The Trading Desk also may use client brokerage commission arrangements to defray the costs of certain services and communication systems that facilitate trade execution (such as on-line quotation systems, direct data feeds from stock exchanges and on-line trading systems) or functions related thereto (such as clearance and settlement). Some of the research products or services received by the Trading Desk may have both a research function and a non-research or administrative function (a "mixed use"). If the Trading Desk determines that any research product or service has a mixed use, the Trading Desk will allocate in good faith the cost of such service or product accordingly. The portion of the product or service that the Trading Desk determines will assist it in the investment decision-making process may be paid for in soft dollars. The non-research portion is paid for by the Trading Desk in hard dollars.

The Trading Desk generally considers the amount and nature of research, execution and other services provided by brokerage firms, as well as the extent to which such services are relied on, and attempts to allocate a portion of the brokerage business of its clients on the basis of that consideration. Neither the services nor the amount of brokerage given to a particular brokerage firm are made pursuant to any agreement or commitment with any of the selected firms that would bind the Trading Desk to compensate the selected brokerage firm for research provided. The Trading Desk endeavors, but is not legally obligated, to direct sufficient commissions to broker/dealers that have provided it with research and other services to ensure continued receipt of research the Trading Desk believes is useful. Actual commissions received by a brokerage firm may be more or less than the suggested allocations.

There may be no correlation between the amount of brokerage commissions generated by a particular fund or account and the indirect benefits received by that fund or client. The Affiliated Entity or Sub-Adviser may receive a benefit from the research services and products that is not passed on to a fund in the form of a direct monetary benefit. Further, research services and products may be useful to the Affiliated Entity or Sub-Adviser in providing investment advice to any of the funds or other accounts it advises. Information made available to the Affiliated Entity or Sub-Adviser from brokerage firms effecting securities transactions for another fund or account may be utilized on behalf of a fund. Thus, there may be no correlation between the amount of brokerage commissions generated by a particular fund and the indirect benefits received by that fund. Information so received is in addition to, and not in lieu of, services required to be performed by the Affiliated Entity or Sub-Adviser and fees are not reduced as a consequence of the receipt of such supplemental information. Although the receipt of such research services does not reduce the normal independent research activities of the Affiliated Entity or Sub-Adviser, it enables it to avoid the additional expenses that might otherwise be incurred if it were to attempt to develop comparable information through its own staff.

IPO Allocations

Certain funds may participate in IPOs. In deciding whether to purchase an IPO, a fund's portfolio manager(s) generally consider the capitalization characteristics of the security, as well as other characteristics of the security,

and identifies funds and accounts with investment objectives and strategies consistent with such a purchase. Generally, as more IPOs involve small- and mid-cap companies, the funds and accounts with a small- and mid-cap focus may participate in more IPOs than funds and accounts with a large-cap focus. The Affiliated Entity or Sub-Adviser (as applicable), when consistent with the fund's and/or account's investment guidelines, generally will allocate shares of an IPO on a pro rata basis. In the case of "hot" IPOs, where the Affiliated Entity or Sub-Adviser only receives a partial allocation of the total amount requested, those shares will be distributed fairly and equitably among participating funds or accounts managed by the Affiliated Entity or Sub-Adviser. "Hot" IPOs raise special allocation concerns because opportunities to invest in such issues are limited as they are often oversubscribed. The distribution of the partial allocation among funds and/or accounts will be based on relative NAVs. Shares will be allocated on a pro rata basis to all appropriate funds and accounts, subject to a minimum allocation based on trading, custody and other associated costs. International hot IPOs may not be allocated on a pro rata basis due to transaction costs, market liquidity and other factors unique to international markets.

Disclosure of Portfolio Holdings

The funds have adopted policies and procedures with respect to the disclosure of fund portfolio holdings and any ongoing arrangements to make available information about fund portfolio holdings. It is the policy of the Manager to protect the confidentiality of fund portfolio holdings and prevent the selective disclosure of non-public information about such holdings. The policy requires that consideration always be given as to whether disclosure of information about fund portfolio holdings is in the best interests of fund shareholders, and that any conflicts of interest between the interests of fund shareholders and those of the Manager or its affiliates be addressed in a manner that places the interests of fund shareholders first.

Each fund, or its duly authorized service providers, publicly discloses its portfolio holdings in accordance with regulatory requirements, such as periodic portfolio disclosure in filings with the SEC. Each non-money market fund, or its duly authorized service providers, may publicly disclose its complete schedule of portfolio holdings at month-end, with a one-month lag at www.dreyfus.com. In addition, fifteen days following the end of each calendar quarter, each non-money market fund, or its duly authorized service providers, may publicly disclose on the website its complete schedule of portfolio holdings as of the end of such quarter. Each money market fund will disclose daily, on www.dreyfus.com, the fund's complete schedule of holdings as of the end of the previous business day. The schedule of holdings will remain on the website until the fund files its Form N-Q or Form N-CSR for the period that includes the date of the posted holdings.

If a fund's portfolio holdings are released pursuant to an ongoing arrangement with any party, such fund must have a legitimate business purpose for doing so, and neither the fund, nor the Manager or its affiliates may receive any compensation in connection with an arrangement to make available information about the fund's portfolio holdings. Funds may distribute portfolio holdings to mutual fund evaluation services such as S&P, Morningstar or Lipper Analytical Services; due diligence departments of broker-dealers and wirehouses that regularly analyze the portfolio holdings of mutual funds before their public disclosure; and broker-dealers that may be used by the fund, for the purpose of efficient trading and receipt of relevant research, provided that: (a) the recipient does not distribute the portfolio holdings to persons who are likely to use the information for purposes of purchasing or selling fund shares or fund portfolio holdings before the portfolio holdings become public information; and (b) the recipient signs a written confidentiality agreement.

A fund may also disclose any and all portfolio holdings information to its service providers and others who generally need access to such information in the performance of their contractual duties and responsibilities and are subject to duties of confidentiality, including a duty not to trade on non-public information, imposed by law and/or contract. These service providers include the fund's custodian, independent registered public accounting firm, investment adviser, administrator, and each of their respective affiliates and advisors.

Disclosure of portfolio holdings may be authorized only by the Chief Compliance Officer for the fund, and any exceptions to this policy are reported quarterly to the board.

SUMMARY OF THE PROXY VOTING POLICY, PROCEDURES AND GUIDELINES OF THE DREYFUS FAMILY OF FUNDS

The boards have delegated to Dreyfus the authority to vote proxies of companies held in a fund's portfolio, except for proxies of certain U.S. bank holding companies, savings and loan holding companies, insured depository institutions and companies that control an insured depository institution (collectively, the "Designated BHCs"), for which the boards have delegated to Institutional Shareholder Services Inc. ("ISS") the authority to vote proxies of such Designated BHCs. Except as described below, Dreyfus, through its participation in BNY Mellon's Proxy Voting and Governance Committee (the "Proxy Voting Committee"), applies BNY Mellon's Proxy Voting Guidelines, which are summarized below, when voting proxies on behalf of a fund. Similarly ISS votes proxies that it is authorized to vote, including those delegated by the boards, in accordance with the ISS benchmark proxy voting guidelines (the "ISS Guidelines"), which are summarized below.

BNY Mellon and its direct and indirect subsidiaries (collectively, "BNYM"), including Dreyfus, are subject to the requirements of the Bank Holding Company Act of 1956, as amended (the "BHCA"). Among other things, the BHCA prohibits BNYM, funds that BNYM "controls" by virtue of share ownership ("Bank Controlled Funds"), and any fund or other investment account over which BNYM exercises sole voting discretion (collectively, the "BNYM Entities"), in the aggregate, from owning or controlling or holding sole voting discretion with respect to 5% or more of any class of voting stock of any BHC without the prior approval of the Board of Governors of the Federal Reserve System (the "BHCA Rules").

Because ISS has sole voting authority over voting securities issued by the Designated BHCs, the holdings of such securities by the funds (other than Bank Controlled Funds) are excluded from the 5% aggregate computation under the BHCA Rules and the funds (other than Bank Controlled Funds) are permitted to purchase and hold securities of BHCs without limits imposed by the BHCA. (Voting securities of BHCs held by funds that are Bank Controlled Funds, however, continue to be aggregated with the holdings of other BNYM Entities because of BNYM's share ownership in those funds.)

A security will be identified as a Designated BHC (and voting authority over its voting securities will be delegated to ISS) when BNY Mellon Entities' aggregate ownership, control and voting discretion with respect to the security reaches a level that could risk a violation of BHCA Rules. If such aggregate levels decrease to a point that BNY Mellon deems appropriate to remain in compliance with BHCA Rules, the security will no longer be a Designated BHC and Dreyfus will be redelegated sole voting authority over the security. Management of the funds anticipates that ISS will have proxy voting authority over the voting securities of a limited number of Designated BHCs.

Information regarding how a fund's proxies were voted during the most recent 12-month period ended June 30th is available on Dreyfus' website, by the following August 31st, at <http://www.dreyfus.com> and on the SEC's website at <http://www.sec.gov> on a fund's Form N-PX.

Proxy Voting By Dreyfus

Dreyfus recognizes that an investment adviser is a fiduciary that owes its clients a duty of utmost good faith and full and fair disclosure of all material facts. Dreyfus further recognizes that the right to vote proxies is an asset, just as the economic investment represented by the shares is an asset. An investment adviser's duty of loyalty precludes an adviser from subrogating its clients' interests to its own. Accordingly, in voting proxies, Dreyfus seeks to act solely in the best financial and economic interests of the funds.

Dreyfus seeks to avoid material conflicts of interest between the funds and fund shareholders, on the one hand, and Dreyfus, the fund's principal underwriter, or any affiliated person of the fund, Dreyfus or the fund's principal underwriter, on the other, through its participation in the Proxy Voting Committee. The Proxy Voting Committee applies detailed, pre-determined proxy voting guidelines in an objective and consistent manner across client accounts, based on internal and external research and recommendations provided by third party vendors, and without consideration of any client relationship factors. To avoid any appearance of a conflict, Dreyfus engages a third party as an independent fiduciary (generally ISS) to vote all proxies with respect to securities issued by BNY Mellon and all proxies with respect to shares of funds sponsored by Dreyfus or another BNY Mellon affiliate (including proxies

with respect to shares issued by funds in the Dreyfus Family of Funds), and may engage an independent fiduciary to vote proxies of other issuers if deemed appropriate in its discretion.

Each proxy is reviewed, categorized and analyzed in accordance with the Proxy Voting Committee's written guidelines in effect from time to time. The guidelines are reviewed periodically and updated as necessary to reflect new issues and changes to the Proxy Voting Committee's policies on specific issues. Items that can be categorized will be voted in accordance with any applicable guidelines or referred to the Proxy Voting Committee, if the applicable guidelines so require. Proposals for which a guideline has not yet been established, such as, for example, new proposals arising from emerging economic or regulatory issues, are referred to the Proxy Voting Committee for discussion and vote. Additionally, the Proxy Voting Committee may elect to review any proposal where it has identified a particular issue for special scrutiny in light of new information. The Proxy Voting Committee will also consider specific interests and issues raised by Dreyfus on behalf of a fund, which interests and issues may require that a vote for a fund be cast differently from the collective vote in order to act in the best interests of the fund.

With regard to voting proxies with respect to shares of foreign companies, Dreyfus weighs the cost of voting, and potential inability to sell, the shares against the benefit of voting the shares to determine whether or not to vote. Proxies with respect to shares of foreign companies are voted by Dreyfus in accordance with the ISS Guidelines.

Although proxies in respect of securities held by the Dreyfus Socially Responsible Growth Fund, Inc. or The Dreyfus Third Century Fund, Inc. (each a "Socially Responsible Fund") typically are voted in accordance with BNY Mellon's Proxy Voting Guidelines, proxies pertaining to the social investment criteria of the Socially Responsible Funds are voted by the funds' portfolio managers. The Socially Responsible Funds' social investment criteria are used to determine whether a company enhances the quality of life in America by considering its record in the areas of:

- protection and improvement of the environment and the proper use of our natural resources
- occupational health and safety
- consumer protection and product purity
- equal employment opportunity

Summary of BNY Mellon's Proxy Voting Guidelines

The Proxy Voting Committee consists of representatives from certain investment advisory, banking, trust company and other fiduciary business units (each, a "Member Firm") affiliated with BNY Mellon. The Proxy Voting Committee recognizes that the responsibility for the daily management of a company's operations and strategic planning is entrusted to the company's management team, subject to oversight by the company's board of directors. As a general matter, Member Firms invest in companies believed to be led by competent management and the Proxy Voting Committee customarily votes in support of management proposals and consistent with management's recommendations. However, the Proxy Voting Committee believes that Member Firms, in their role as fiduciaries, must express their view on the performance of the directors and officers of the companies in which clients are invested and how these clients' interests as shareholders are being represented. Accordingly, the Proxy Voting Committee will vote against those proposals that it believes would negatively impact the economic value of clients' investments – even if those proposals are supported or recommended by company management.

The Proxy Voting Committee seeks to make proxy voting decisions that are in the best interest of the clients of its Member Firms. For this purpose, the Proxy Voting Committee has established detailed, pre-determined, written proxy voting guidelines for specific types of proposals and matters commonly submitted to shareholders ("Voting Guidelines"). Viewed broadly, the Voting Guidelines seek to maximize shareholder value by promoting sound corporate governance policies through the support of proposals that are consistent with four key objectives:

- The alignment of the interests of a company's management and board of directors with those of the company's shareholders;
- To promote the accountability of a company's management to its board of directors, as well as the accountability of the board of directors to the company's shareholders;

- To uphold the rights of a company's shareholders to affect change by voting on those matters submitted to shareholders for approval; and
- To promote adequate disclosure about a company's business operations and financial performance in a timely manner.

The following are summaries of how the Proxy Voting Committee generally views certain matters that are brought before the Proxy Voting Committee in connection with the voting of proxies by those Member Firms who exercise voting discretion as a fiduciary for their clients. These summaries and the views reflected below by their nature are not intended to be complete and are not detailed explanations of all the guidelines and rule sets that the Proxy Voting Committee uses to assist with the proxy voting process. The summaries below are published by the Proxy Voting Committee to provide public company issuers and investors with a broad view of how the Proxy Voting Committee approaches certain topics and proposals in the context of voting proxies for its Member Firms' fiduciary clients; and such summaries are not intended to limit in any way the Proxy Voting Committee's or any Member Firm's actions with respect to its activities regarding the voting of proxies of any particular proposal or on shareholder voting matters generally.

1. Boards and Directors

A. Election of Directors

The Proxy Voting Committee believes that a majority of a company's board members should be independent of management.

i) Incumbent / Nominee Directors

The Proxy Voting Committee generally votes **FOR** incumbent and nominee directors. However, the Proxy Voting Committee generally votes to **WITHOLD** support in cases when individual directors (or the board, as applicable): (1) adopt, amend or renew a poison pill without shareholder approval or commitment to obtain shareholder approval within 12 months (applied to incumbent directors up for re-election at annual or special meeting which follows such action), (2) attend less than 75% of meetings for two consecutive years, (3) serve on more than six boards, (4) are chief executive officers ("CEOs") of a public company and serve on more than 3 boards, or (5) fail to respond to approved shareholder proposals.

ii) Compensation Committee Members

Generally, the Proxy Voting Committee votes **FOR** incumbent members of the compensation committee. However, the Proxy Voting Committee will generally consider the proposal on a **CASE-BY-CASE** basis in situations where: (1) there are excise tax gross-ups, excise tax indemnification or "make whole" provisions in recent change-in-control or severance agreements, (2) the company's stock performance is poor relative to peers and its compensation arrangements or pay practices is deemed excessive relative to peers, or (3) there appears to be an imbalance in a company's long term incentive compensation plans between the performance-based and time-based awards for the executive officers.

i) Audit Committee

Generally, the Proxy Voting Committee votes **FOR** independent incumbent members of an audit committee. However, the Proxy Voting Committee will generally consider the proposal on a **CASE-BY-CASE** basis in situations where: (1) audit fees are either undisclosed or insufficiently disclosed such that the amount paid to the auditor for non-audit services cannot be determined, (2) a material weakness is disclosed and not remediated timely, or (3) non-audit fees exceed the sum of audit, audit-related and tax compliance/preparation fees.

ii) Management Nominees

The Proxy Voting Committee generally votes **FOR** management nominees for board or committee membership. In exceptional cases, such as severe governance concerns or when a Proxy Advisor recommends to withhold, the Proxy Voting Committee will generally consider the proposal on a **CASE-BY-CASE** basis. If a nominee received less than majority support at the prior election and the board has not addressed the cause of that low support, the Proxy Voting Committee will generally **WITHHOLD** its support.

B. Board Governance

i) Classified Board

The Proxy Voting Committee believes shareholders should annually vote for all members on a company's board of directors. The Proxy Voting Committee votes **FOR** requests to declassify the board and will generally vote **AGAINST** proposals to adopt or continue a classified board structure.

ii) Board Independence

The Proxy Voting Committee votes **FOR** management proposals for the election of independent directors that meet listing standards and generally favors an independent chairperson. Conversely, the Proxy Voting Committee votes **AGAINST** shareholder proposals that are more or less restrictive than listing standards with respect to director "independence."

iii) Board Size

The Proxy Voting Committee votes **FOR** management requests to configure the size of the board of directors with appropriate rationale, absent evidence of entrenchment or a disadvantage to shareholders. However, the Proxy Voting Committee votes **AGAINST** proposals that remove the shareholders' right to vote on board configuration matters, or that would give the board sole discretion to set the number of members.

iv) Vote Majority and Removal

Generally, the Proxy Voting Committee supports the practice of one share, one vote. As such, we vote **FOR** proposals to elect director nominees by the affirmative vote of the majority of votes cast at the annual or special meeting. The same practice is applied to proposals mandating the removal of a director upon a simple majority vote, such that the Proxy Voting Committee votes **AGAINST** management proposals that require a supermajority vote for removal.

v) Separate Chairman and CEO

Generally, the Proxy Voting Committee votes **FOR** management proposals that propose to separate the positions of Chairman and CEO. However, the Proxy Voting Committee generally votes **AGAINST** shareholder proposals to separate the Chairman and CEO positions if a lead or presiding director with appropriate authority is appointed; but is likely to vote **FOR** such a proposal if a lead or presiding director with appropriate authority has not been appointed. When considering the sufficiency of a lead or presiding director's authority, the Proxy Voting Committee will consider: whether the director: (1) presides at all meetings of the board (and executive sessions of the independent directors) at which the Chairman is not present, (2) serves as a liaison between the Chairman and the independent directors, (3) approves board meeting agendas, (4) has the authority to call meetings of the independent directors, and (5) if requested by major shareholders, ensures that s/he is available for consultation and direct communication.

2. Accounting and Audit

Generally, the Proxy Voting Committee votes **FOR** the ratification of the board's selection of an auditor for the company. The Proxy Voting Committee will vote **AGAINST** the ratification of the auditors if there are concerns of negligence due to issuance of an inaccurate audit opinion. The Proxy Voting Committee typically votes **AGAINST** shareholder proposals for auditor rotation arrangements that are more restrictive than regulatory requirements.

3. Anti-Takeover Measures

Generally, the Proxy Voting Committee opposes proposals that seem designed to insulate management unnecessarily from the wishes of a majority of the shareholders and that would lead to a determination of a company's future by a minority of its shareholders. However, the Proxy Voting Committee generally supports proposals that seem to have as their primary purpose providing management with temporary or short-term insulation from outside influences so as to enable management to bargain effectively with potential suitors and otherwise achieve identified long-term goals to the extent such proposals are discrete and not bundled with other proposals.

A. Shareholder Rights Plan or "Poison Pill"

Generally, the Proxy Voting Committee votes **FOR** proposals to rescind a "poison pill" or proposals that require shareholder approval to implement a "pill." Further, a **WITHHOLD** support vote on the election of directors will follow the adoption or renewal of a poison pill without shareholder approval.

B. Non-net Operating Loss Shareholder Rights Plan

Generally, the Proxy Voting Committee votes **FOR** non-net operating loss shareholder rights plans if all the following are in place: (1) a plan trigger that is 20% or greater, (2) a term not exceeding 3 years, (3) the plan terminates if not ratified by shareholder majority, (4) there are no "dead hand" or "modified dead hand" provisions, and (5) the plan has a qualified offer clause. The Proxy Voting Committee generally reviews these plans on a **CASE-BY-CASE** basis outside of these prescribed requirements.

C. Special Meetings and Majority Vote

The Proxy Voting Committee believes the rights to call a special meeting and to approve an action with a simple majority vote are powerful tools for shareholders. As such, we generally support proposals that uphold these rights. More specifically, with respect to calling a special meeting, the Proxy Voting Committee generally votes **FOR** proposals that would allow shareholders to call a special meeting if a reasonably high proportion of shareholders (typically of at least 10-15%, depending on the company's market capitalization, but no more than 25%, of the company's outstanding stock) are required to agree before such a meeting is called.

For companies that currently permit shareholders of 25% or less of outstanding stock to call a special meeting (or no such right exists), the Proxy Voting Committee may vote **AGAINST** proposals that would effectively lower (or initially establish) the minimum ownership threshold to less than 10% (for large cap companies) or 15% (for small cap companies). However, for companies that currently permit shareholders of greater than 25% of outstanding stock to call a special meeting (or no such right exists), the Proxy Voting Committee is likely to consider on a **CASE-BY-CASE** basis those proposals that would effectively lower (or initially establish) the minimum ownership threshold to less than 10% (for large cap companies) or 15% (for small cap companies).

D. Written Consent

The Proxy Voting Committee will generally vote **FOR** proposals to permit shareholders to act by written consent if the company does not currently permit shareholders to call for a special meeting or to act by written consent. The Proxy Voting Committee will generally vote **AGAINST** proposals on written consent if the company permits shareholders the right to call for a special meeting.

4. Capital Structure, Mergers, Sales and Transactions

A. Mergers

The Proxy Voting Committee is likely to consider on a **CASE-BY-CASE** basis those proposals to merge, reincorporate or to affect some other type of corporate reorganization. In making these decisions, the Proxy Voting Committee's primary concern is the long-term economic interests of shareholders, and it will consider Member Firm opinions, the fairness opinion, and the vote recommendations of two independent proxy advisors retained by the Proxy Voting Committee to provide comprehensive research, analysis and voting recommendations (the "Proxy Advisors") when determining a vote decision on these or similar proposals.

B. Capital Structure

In assessing asset sales, reorganizations, bankruptcy or other capital structure changes, the Proxy Voting Committee looks to the economic and strategic rationale behind the transaction and supports those proposals that reasonably can be expected to uphold or enhance the shareholders' long-term economic interest.

- i) The Proxy Voting Committee generally votes **FOR** stock split proposals if the purpose is to: (1) increase liquidity and/or (2) adjust for a significant increase in stock price.
- ii) The Proxy Voting Committee generally votes **FOR** reverse stock split proposals if the purpose is to avoid stock exchange de-listing. The Proxy Voting Committee also generally votes **FOR** proposals to decrease the number of common stock shares outstanding following reverse stock splits and proposals to eliminate unissued blank check preferred stock or a class of common stock with voting rights greater than the class held in client accounts.

C. Authorized Stock Increases

Generally, the Proxy Voting Committee votes **FOR** proposals for the authorization to issue additional shares of common or preferred stock if it determines that the increase is: (1) not excessive relative to the industry's average rate or otherwise harmful to the long-term economic interests of shareholders, or (2) necessary to avoid bankruptcy or to comply with regulatory requirements or other legally binding matters. The Proxy Voting Committee will generally vote **AGAINST** such proposals that would exceed the industry's average rate and/or the business purpose is not articulated sufficiently.

D. Preferred Stock Authorization

Where the voting power of the new issuance is specified as equal to or less than existing common stock shares, and the Proxy Advisors and the fairness opinion agree, the Proxy Voting Committee generally votes **FOR** proposals to issue preferred stock. When the voting power of the new issuance is either unspecified or exceeds that of the existing shares of common stock, the Proxy Voting Committee generally votes **AGAINST** proposals to issue preferred stock.

5. Corporate Governance

A. Cumulative Voting

The Proxy Voting Committee generally votes **AGAINST** proposals to continue or to adopt cumulative voting.

B. Amend Bylaw, Charter or Certificate

Generally, the Proxy Voting Committee votes **FOR** management proposals when the focus is administrative in nature or compliance driven and there is no evidence of negative impact to shareholder

rights. If evidence suggests that proposals would result in a reduction of shareholder rights or lead to entrenchment, the Proxy Voting Committee votes **AGAINST** such proposals.

C. Indemnity Liability Protection

Generally, the Proxy Voting Committee votes **FOR** proposals to limit directors' liability or expand indemnification on behalf of their service to the company. However, the Proxy Voting Committee votes **AGAINST** proposals that support indemnification for director actions conducted in bad faith, gross negligence or reckless disregard of duties.

D. Adjourn Meeting

In cases where the Proxy Voting Committee is supportive of the underlying transaction or proposal and the purpose of the adjournment is to obtain additional votes, the Proxy Voting Committee will vote **FOR** the adjournment.

6. Proxy Contests

In the case of proxy contests, the Proxy Voting Committee will endeavor to provide both parties an opportunity to present their case and arguments before determining a course of action.

The Proxy Voting Committee's general policy is to consider: (1) the long-term economic impact of the decision, (2) the company's record and management's ability to achieve our reasonable expectations for shareholder return, (3) overall compensation for officers and directors and share price performance relative to industry peers, (4) whether the offer fully realizes the future prospects of the company in question with the likelihood of the challenger achieving their stated goals, and (5) the relevant experience of all board nominees.

7. Social, Ethical and Environmental

The Proxy Voting Committee reviews all management sponsored social, ethical and environmental responsibility proposals on a **CASE-BY-CASE** basis. Generally, the Proxy Voting Committee considers various factors in voting decisions, including: (1) the long-term economic impact including implementation cost-to-benefit considerations, (2) the company's current legal and regulatory compliance status, (3) the binding or advisory nature of the request, and (4) whether the proposal's underlying objective is within the scope of the company's influence and control.

The Proxy Voting Committee generally votes **FOR** shareholder sponsored proposals when the proposal reasonably can be expected to enhance long-term shareholder value and when management fails to respond meaningfully to the proposal. The Proxy Voting Committee generally votes **AGAINST** shareholder proposals when management has responded meaningfully and there is no evidence of: (1) shareholder value creation, (2) regulatory non-compliance, (3) failed oversight from the board and management for the subject activity, (4) the company is operating outside of industry standard practice, or (5) the proposal request is vague or overly restrictive and unlikely to achieve the underlying intent.

8. Compensation and Benefits

A. Equity Compensation

The Proxy Voting Committee employs a shareholder value transfer model and a burn rate model to measure the value transfer from shareholders to employees and directors when considering equity compensation proposals.

The Proxy Voting Committee generally votes **FOR** proposals relating to equity compensation plans that: (1) pass our shareholder value transfer model and burn rate model and prohibit share re-pricing without shareholder approval, (2) pass our shareholder value transfer model and burn rate model, are silent on share re-pricing and the company has no history of re-pricing, (3) use section 162(m) rules for plan

administration by independent directors, or (4) require an issuance of stock or options as equal payment in lieu of cash to directors.

The Proxy Voting Committee generally votes **AGAINST** compensation plans that: (1) fail our shareholder value transfer model or burn rate model, and allow for option exchange or re-pricing without shareholder approval, (2) pass our shareholder value transfer model and burn rate model, but permit accelerated vesting without consummation of a change-in-control transaction, or (3) serve as a vehicle to perpetuate a disconnect between pay and performance or favors executive officers whose pay is already significantly higher than peers.

The Proxy Voting Committee reviews on a **CASE-BY-CASE** basis those proposals that:

- i) pass our shareholder value transfer model and either (1) fail our burn rate model, (2) the plan is "silent" on re-pricing and the company has a history of the practice, or (3) a Proxy Advisor recommends an "against" vote; or
- ii) fail our shareholder value transfer model but the plan (1) is required to complete a transaction supported by the Proxy Voting Committee or (2) includes details regarding extenuating business circumstances.

B. Say on Pay

If the ballot seeks an advisory vote on the frequency of say-on-pay proposals, the Proxy Voting Committee generally votes **FOR** proposals that call for say-on-pay on an **ANNUAL** basis.

The Proxy Voting Committee will generally vote **FOR** management proposals on say-on-pay. However, the Proxy Voting Committee will generally consider the proposal on a **CASE-BY-CASE** basis in situations where: (1) there are excise tax gross-ups, excise tax indemnification or "make whole" provisions in recent change-in-control or severance agreements, (2) the company's stock performance is poor relative to peers and its compensation arrangements or pay practices is deemed excessive relative to peers, (3) the company fails to address compensation issues identified in prior meetings when adequate opportunity to address has passed, or (4) there appears to be an imbalance in a company's long term incentive compensation plans between the performance-based and time-based awards for the executive officers.

C. Option Re-pricing or Exchange

Generally, the Proxy Voting Committee believes that stock compensation aligns managements' and shareholders' interests based on fair-market value grants.

In cases where management is proposing to address a compensation misalignment, the Proxy Voting Committee generally votes **FOR** such proposals that: (1) seek exchanges that are value-for-value, (2) exclude executives, directors and consultants, (3) do not recycle exercised options, and/or (4) involve current options that are significantly under water and the new exercise price is reasonable. The Proxy Voting Committee generally votes **FOR** proposals that require stock option exchange and re-pricing programs to be put to shareholder vote.

In cases of proposals where the exchange and/or re-pricing requests do not meet these criteria, the Proxy Voting Committee generally votes **AGAINST** the management proposal.

D. Golden Parachute Plans

In reviewing management compensation agreements, the Proxy Voting Committee generally votes **FOR** those that: (1) involve payments that do not exceed three times the executive's total compensation (salary plus bonus), (2) have a double trigger, and (3) do not provide for a tax gross-up in the contract.

Conversely, the Proxy Voting Committee generally votes **AGAINST** compensation agreements that do not adhere to these requirements. As a facet of a capital structure change, the Proxy Voting Committee will consider these compensation agreements on a **CASE-BY-CASE** basis.

In reviewing shareholder proposals, we generally support those that require the company to submit compensation agreements to a vote.

E. Clawbacks

When determining the effectiveness of a company's clawback/recoupment policy, the Proxy Voting Committee will consider: (1) the amount of information the company provides in its proxy statement on the circumstances under which the company recoups incentive or equity compensation, (2) whether the company's policy extends to named executive officers and other senior executive officers (and not simply the CEO and chief financial officer), (3) if the policy requires recoupment of incentive and equity compensation received and subsequently determined to have been "unearned" during the prior 3-year period, and (4) if the policy considers performance-based compensation to be "unearned" if the corresponding performance target(s) are later determined to have not been achieved for any reason (rather than first requiring evidence of "misconduct" or fraudulent activity and/or a formal restatement of financial results).

F. Other Compensation Requests

Generally, the Proxy Voting Committee votes **FOR** stock purchase plans that allow a broad group of employees to purchase shares and limit the discount to 15% or less. Conversely, the Proxy Voting Committee generally votes **AGAINST** proposals that are limited to senior executives and/or provides for a discount that is greater than 15%.

Generally, the Proxy Voting Committee votes **FOR** proposals that seek management and director retention of stock awards for no more than one year and/or 25% of stock awarded. Conversely, the Proxy Voting Committee generally votes **AGAINST** proposals that seek retention of stock awards for greater than one year and 75% of stock awarded.

For those proposals for which the Voting Guidelines do not provide determinative guidance (*e.g.*, new proposals arising from emerging economic or regulatory issues), they are referred to the Proxy Voting Committee for discussion and vote. In these instances, the Proxy Voting Committee votes based upon its principle of maximizing shareholder value.

Proxy Voting by ISS

ISS has policies and procedures in place to manage potential conflicts of interest that may arise as a result of work that ISS's subsidiary performs for a corporate governance client and any voting of proxies relating to such client's securities that ISS performs on behalf of the funds. Such policies and procedures include separate staffs for the work performed for corporate governance clients and ISS's proxy voting services; a firewall that includes legal, physical and technological separations of the two businesses; and the employment of a blackout period on work performed with a corporate governance client during the pendency of a live voting issue in respect of securities of such client.

Summary of the ISS Guidelines¹

Routine/Miscellaneous

Auditor Ratification

Vote for proposals to ratify auditors unless any of the following apply:

- An auditor has a financial interest in or association with the company, and is therefore not independent;
- There is reason to believe that the independent auditor has rendered an opinion that is neither accurate nor indicative of the company's financial position;
- Poor accounting practices are identified that rise to a serious level of concern, such as: fraud; misapplication of GAAP, or material weaknesses identified in Section 404 disclosures; or
- Fees for non-audit services ("Other" fees) are excessive.

Non-audit fees are excessive if:

- Non-audit ("other") fees > audit fees + audit-related fees + tax compliance/preparation fees

Board of Directors:

Voting on Director Nominees in Uncontested Elections

Four fundamental principles apply when determining votes on director nominees:

1. Accountability
2. Responsiveness
3. Composition
4. Independence

Generally vote for director nominees, except under the following circumstances:

1. Accountability

Vote against² or withhold from the entire board of directors (except new nominees,³ who should be considered case-by-case) for the following:

Problematic Takeover Defenses

Classified Board Structure:

- 1.1. The board is classified, and a continuing director responsible for a problematic governance issue at the board/committee level that would warrant a withhold/against vote recommendation is not up for election. All appropriate nominees (except new) may be held accountable.

¹ Provided by ISS

Director Performance Evaluation:

- 1.2. The board lacks accountability and oversight, coupled with sustained poor performance relative to peers. Sustained poor performance is measured by one- and three-year total shareholder returns in the bottom half of a company's four-digit GICS industry group (Russell 3000 companies only). Take into consideration the company's five-year total shareholder return and operational metrics. Problematic provisions include but are not limited to:

- A classified board structure;
- A supermajority vote requirement;
- Either a plurality vote standard in uncontested director elections or a majority vote standard with no plurality carve-out for contested elections;
- The inability of shareholders to call special meetings;
- The inability of shareholders to act by written consent;
- A dual-class capital structure; and/or

- A non–shareholder-approved poison pill.

Poison Pills:

- 1.3. The company's poison pill has a "dead-hand" or "modified dead-hand" feature. Vote against or withhold from nominees every year until this feature is removed;
- 1.4. The board adopts a poison pill with a term of more than 12 months ("long-term pill"), or renews any existing pill, including any "short-term" pill (12 months or less), without shareholder approval. A commitment or policy that puts a newly adopted pill to a binding shareholder vote may potentially offset an adverse vote recommendation. Review such companies with classified boards every year, and such companies with annually elected boards at least once every three years, and vote against or withhold votes from all nominees if the company still maintains a non-shareholder-approved poison pill; or
- 1.5. The board makes a material adverse change to an existing poison pill without shareholder approval.

Vote case-by-case on all nominees if:

- 1.6. The board adopts a poison pill with a term of 12 months or less ("short-term pill") without shareholder approval, taking into account the following factors:
 - The date of the pill's adoption relative to the date of the next meeting of shareholders—*i.e.* whether the company had time to put the pill on ballot for shareholder ratification given the circumstances;
 - The issuer's rationale;
 - The issuer's governance structure and practices; and
 - The issuer's track record of accountability to shareholders.

² In general, companies with a plurality vote standard use "Withhold" as the contrary vote option in director elections; companies with a majority vote standard use "Against." However, it will vary by company and the proxy must be checked to determine the valid contrary vote option for the particular company.

³ A "new nominee" is any current nominee who has not already been elected by shareholders and who joined the board after the problematic action in question transpired. If ISS cannot determine whether the nominee joined the board before or after the problematic action transpired, the nominee will be considered a "new nominee" if he or she joined the board within the 12 months prior to the upcoming shareholder meeting.

Problematic Audit-Related Practices

Generally vote against or withhold from the members of the Audit Committee if:

- 1.7. The non-audit fees paid to the auditor are excessive (see discussion under "Auditor Ratification");
- 1.8. The company receives an adverse opinion on the company's financial statements from its auditor; or
- 1.9. There is persuasive evidence that the Audit Committee entered into an inappropriate indemnification agreement with its auditor that limits the ability of the company, or its shareholders, to pursue legitimate legal recourse against the audit firm.

Vote case-by-case on members of the Audit Committee, and potentially the full board, if:

- 1.10. Poor accounting practices are identified that rise to a level of serious concern, such as: fraud, misapplication of GAAP; and material weaknesses identified in Section 404 disclosures. Examine the severity, breadth, chronological sequence, and duration, as well as the company's efforts at remediation or corrective actions, in determining whether withhold/against votes are warranted.

Problematic Compensation Practices/Pay for Performance Misalignment

In the absence of an Advisory Vote on Executive Compensation ballot item or in egregious situations, vote against or withhold from the members of the Compensation Committee, and potentially the full board, if:

- 1.11. There is a significant misalignment between CEO pay and company performance (pay for performance);
- 1.12. The company maintains significant problematic pay practices;
- 1.13. The board exhibits a significant level of poor communication and responsiveness to shareholders;
- 1.14. The company fails to submit one-time transfers of stock options to a shareholder vote; or
- 1.15. The company fails to fulfill the terms of a burn rate commitment made to shareholders.

Vote case-by-case on Compensation Committee members (or, in exceptional cases, the full board) and the Management Say-on-Pay proposal if:

- 1.16. The company's previous say-on-pay proposal received the support of less than 70 percent of votes cast, taking into account:
 - The company's response, including:
 - Disclosure of engagement efforts with major institutional investors regarding the issues that contributed to the low level of support;
 - Specific actions taken to address the issues that contributed to the low level of support;
 - Other recent compensation actions taken by the company;
 - Whether the issues raised are recurring or isolated;
 - The company's ownership structure; and
 - Whether the support level was less than 50 percent, which would warrant the highest degree of responsiveness.

Governance Failures

Under extraordinary circumstances, vote against or withhold from directors individually, committee members, or the entire board, due to:

- 1.17. Material failures of governance, stewardship, risk oversight⁴ or fiduciary responsibilities at the company;
- 1.18. Failure to replace management as appropriate; or
- 1.19. Egregious actions related to a director's service on other boards that raise substantial doubt about his or her ability to effectively oversee management and serve the best interests of shareholders at any company.

2. Responsiveness

Vote case-by-case on individual directors, committee members, or the entire board of directors, as appropriate, if:

- 2.1. The board failed to act on a shareholder proposal that received the support of a majority of the shares cast in the previous year. Factors that will be considered are:
 - Disclosed outreach efforts by the board to shareholders in the wake of the vote;
 - Rationale provided in the proxy statement for the level of implementation;
 - The subject matter of the proposal;

- The level of support for and opposition to the resolution in past meetings;
 - Actions taken by the board in response to the majority vote and its engagement with shareholders;
 - The continuation of the underlying issue as a voting item on the ballot (as either shareholder or management proposals); and
 - Other factors as appropriate.
- 2.2. The board failed to act on takeover offers where the majority of shares are tendered;
- 2.3. At the previous board election, any director received more than 50 percent withhold/against votes of the shares cast and the company has failed to address the issue(s) that caused the high withhold/against vote;
- 2.4. The board implements an advisory vote on executive compensation on a less frequent basis than the frequency that received the majority of votes cast at the most recent shareholder meeting at which shareholders voted on the say-on-pay frequency; or
- 2.5. The board implements an advisory vote on executive compensation on a less frequent basis than the frequency that received a plurality, but not a majority, of the votes cast at the most recent shareholder meeting at which shareholders voted on the say-on-pay frequency, taking into account:
- The board's rationale for selecting a frequency that is different from the frequency that received a plurality;
 - The company's ownership structure and vote results;
 - ISS' analysis of whether there are compensation concerns or a history of problematic compensation practices; and
 - The previous year's support level on the company's say-on-pay proposal.

⁴ Examples of failure of risk oversight include, but are not limited to: bribery; large or serial fines or sanctions from regulatory bodies; significant adverse legal judgments or settlements; hedging of company stock; or significant pledging of company stock.

⁵ For new nominees only, schedule conflicts due to commitments made prior to their appointment to the board are considered if disclosed in the proxy or another SEC filing.

3. Composition

Attendance at Board and Committee Meetings:

- 3.1. Generally vote against or withhold from directors (except new nominees, who should be considered case-by-case⁵) who attend less than 75 percent of the aggregate of their board and committee meetings for the period for which they served, unless an acceptable reason for absences is disclosed in the proxy or another SEC filing. Acceptable reasons for director absences are generally limited to the following:
- Medical issues/illness;
 - Family emergencies; and
 - Missing only one meeting (when the total of all meetings is three or fewer).
- 3.2. If the proxy disclosure is unclear and insufficient to determine whether a director attended at least 75 percent of the aggregate of his/her board and committee meetings during his/her period of service, vote against or withhold from the director(s) in question.

Overboarded Directors:

Vote against or withhold from individual directors who:

- 3.3. Sit on more than six public company boards; or

- 3.4. Are CEOs of public companies who sit on the boards of more than two public companies besides their own — withhold only at their outside boards.⁶

4. Independence

Vote against or withhold from Inside Directors and Affiliated Outside Directors when:

- 4.1. The inside or affiliated outside director serves on any of the three key committees: audit, compensation, or nominating;
- 4.2. The company lacks an audit, compensation, or nominating committee so that the full board functions as that committee;
- 4.3. The company lacks a formal nominating committee, even if the board attests that the independent directors fulfill the functions of such a committee; or
- 4.4. Independent directors make up less than a majority of the directors.

Proxy Access

ISS supports proxy access as an important shareholder right, one that is complementary to other best -practice corporate governance features. However, in the absence of a uniform standard, proposals to enact proxy access may vary widely; as such, ISS is not setting forth specific parameters at this time and will take a case-by-case approach in evaluating these proposals.

Vote case-by-case on proposals to enact proxy access, taking into account, among other factors:

- Company-specific factors; and

⁶ Although all of a CEO's subsidiary boards will be counted as separate boards, ISS will not recommend a withhold vote from the CEO of a parent company board or any of the controlled (>50 percent ownership) subsidiaries of that parent, but will do so at subsidiaries that are less than 50 percent controlled and boards outside the parent/subsidiary relationships.

- Proposal-specific factors, including:
 - The ownership thresholds proposed in the resolution (*i.e.*, percentage and duration);
 - The maximum proportion of directors that shareholders may nominate each year; and
 - The method of determining which nominations should appear on the ballot if multiple shareholders submit nominations.

Proxy Contests—Voting for Director Nominees in Contested Elections

Vote case-by-case on the election of directors in contested elections, considering the following factors:

- Long-term financial performance of the target company relative to its industry;
- Management's track record;
- Background to the proxy contest;
- Nominee qualifications and any compensatory arrangements;
- Strategic plan of dissident slate and quality of critique against management;
- Likelihood that the proposed goals and objectives can be achieved (both slates); and
- Stock ownership positions.

When the addition of shareholder nominees to the management card ("proxy access nominees") results in a number of nominees on the management card which exceeds the number of seats available for election, vote case-by-case considering the same factors listed above.

Shareholder Rights & Defenses

Poison Pills- Management Proposals to Ratify Poison Pill

Vote case-by-case on management proposals on poison pill ratification, focusing on the features of the shareholder rights plan. Rights plans should contain the following attributes:

- No lower than a 20% trigger, flip-in or flip-over;
- A term of no more than three years;
- No dead-hand, slow-hand, no-hand or similar feature that limits the ability of a future board to redeem the pill;
- Shareholder redemption feature (qualifying offer clause); if the board refuses to redeem the pill 90 days after a qualifying offer is announced, 10 percent of the shares may call a special meeting or seek a written consent to vote on rescinding the pill.

In addition, the rationale for adopting the pill should be thoroughly explained by the company. In examining the request for the pill, take into consideration the company's existing governance structure, including: board independence, existing takeover defenses, and any problematic governance concerns.

Poison Pills- Management Proposals to Ratify a Pill to Preserve Net Operating Losses (NOLs)

Vote against proposals to adopt a poison pill for the stated purpose of protecting a company's net operating losses (NOL) if the term of the pill would exceed the shorter of three years and the exhaustion of the NOL.

Vote case-by-case on management proposals for poison pill ratification, considering the following factors, if the term of the pill would be the shorter of three years (or less) and the exhaustion of the NOL:

- The ownership threshold to transfer (NOL pills generally have a trigger slightly below 5 percent);
- The value of the NOLs;
- Shareholder protection mechanisms (sunset provision, or commitment to cause expiration of the pill upon exhaustion or expiration of NOLs);
- The company's existing governance structure including: board independence, existing takeover defenses, track record of responsiveness to shareholders, and any other problematic governance concerns; and
- Any other factors that may be applicable.

Shareholder Ability to Act by Written Consent

Generally vote against management and shareholder proposals to restrict or prohibit shareholders' ability to act by written consent.

Generally vote for management and shareholder proposals that provide shareholders with the ability to act by written consent, taking into account the following factors:

- Shareholders' current right to act by written consent;
- The consent threshold;
- The inclusion of exclusionary or prohibitive language;
- Investor ownership structure; and
- Shareholder support of, and management's response to, previous shareholder proposals.

Vote case-by-case on shareholder proposals if, in addition to the considerations above, the company has the following governance and antitakeover provisions:

- An unfettered⁷ right for shareholders to call special meetings at a 10 percent threshold;
- A majority vote standard in uncontested director elections;

- No non-shareholder-approved pill; and
- An annually elected board.

CAPITAL/RESTRUCTURING

Common Stock Authorization

Vote for proposals to increase the number of authorized common shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.

Vote against proposals at companies with more than one class of common stock to increase the number of authorized shares of the class of common stock that has superior voting rights.

Vote against proposals to increase the number of authorized common shares if a vote for a reverse stock split on the same ballot is warranted despite the fact that the authorized shares would not be reduced proportionally.

Vote case-by-case on all other proposals to increase the number of shares of common stock authorized for issuance. Take into account company-specific factors that include, at a minimum, the following:

- Past Board Performance:
 - The company's use of authorized shares during the last three years
- The Current Request:
 - Disclosure in the proxy statement of the specific purposes of the proposed increase;

⁷ "Unfettered" means no restrictions on agenda items, no restrictions on the number of shareholders who can group together to reach the 10 percent threshold, and only reasonable limits on when a meeting can be called: no greater than 30 days after the last annual meeting and no greater than 90 prior to the next annual meeting.

- Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request; and
- The dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns.

Dual Class Structure

Generally vote against proposals to create a new class of common stock, unless:

- The company discloses a compelling rationale for the dual-class capital structure, such as:
- The company's auditor has concluded that there is substantial doubt about the company's ability to continue as a going concern; or
- The new class of shares will be transitory;
- The new class is intended for financing purposes with minimal or no dilution to current shareholders in both the short term and long term; and
- The new class is not designed to preserve or increase the voting power of an insider or significant shareholder.

Preferred Stock Authorization

Vote for proposals to increase the number of authorized preferred shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.

Vote against proposals at companies with more than one class or series of preferred stock to increase the number of authorized shares of the class or series of preferred stock that has superior voting rights.

Vote case-by-case on all other proposals to increase the number of shares of preferred stock authorized for issuance. Take into account company-specific factors that include, at a minimum, the following:

- Past Board Performance:
 - The company's use of authorized preferred shares during the last three years;
- The Current Request:
 - Disclosure in the proxy statement of the specific purposes for the proposed increase;
 - Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request;
 - In cases where the company has existing authorized preferred stock, the dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns; and
 - Whether the shares requested are blank check preferred shares that can be used for antitakeover purposes.

Mergers and Acquisitions

Vote case-by-case on mergers and acquisitions. Review and evaluate the merits and drawbacks of the proposed transaction, balancing various and sometimes countervailing factors including:

- *Valuation* - Is the value to be received by the target shareholders (or paid by the acquirer) reasonable? While the fairness opinion may provide an initial starting point for assessing valuation reasonableness, emphasis is placed on the offer premium, market reaction and strategic rationale.
- *Market reaction* - How has the market responded to the proposed deal? A negative market reaction should cause closer scrutiny of a deal.
- *Strategic rationale* - Does the deal make sense strategically? From where is the value derived? Cost and revenue synergies should not be overly aggressive or optimistic, but reasonably achievable. Management should also have a favorable track record of successful integration of historical acquisitions.
- *Negotiations and process* - Were the terms of the transaction negotiated at arm's-length? Was the process fair and equitable? A fair process helps to ensure the best price for shareholders. Significant negotiation "wins" can also signify the deal makers' competency. The comprehensiveness of the sales process (*e.g.*, full auction, partial auction, no auction) can also affect shareholder value.
- *Conflicts of interest* - Are insiders benefiting from the transaction disproportionately and inappropriately as compared to non-insider shareholders? As the result of potential conflicts, the directors and officers of the company may be more likely to vote to approve a merger than if they did not hold these interests. Consider whether these interests may have influenced these directors and officers to support or recommend the merger. The CIC figure presented in the "ISS Transaction Summary" section of this report is an aggregate figure that can in certain cases be a misleading indicator of the true value transfer from shareholders to insiders. Where such figure appears to be excessive, analyze the underlying assumptions to determine whether a potential conflict exists.
- *Governance* - Will the combined company have a better or worse governance profile than the current governance profiles of the respective parties to the transaction? If the governance profile is to change for the worse, the burden is on the company to prove that other issues (such as valuation) outweigh any deterioration in governance.

COMPENSATION

Executive Pay Evaluation

Underlying all evaluations are five global principles that most investors expect corporations to adhere to in designing and administering executive and director compensation programs:

1. Maintain appropriate pay-for-performance alignment, with emphasis on long-term shareholder value: This principle encompasses overall executive pay practices, which must be designed to attract, retain, and appropriately motivate the key employees who drive shareholder value creation over the long term. It will take into consideration, among other factors, the link between pay and performance; the mix between fixed and variable pay; performance goals; and equity-based plan costs;
2. Avoid arrangements that risk "pay for failure": This principle addresses the appropriateness of long or indefinite contracts, excessive severance packages, and guaranteed compensation;
3. Maintain an independent and effective compensation committee: This principle promotes oversight of executive pay programs by directors with appropriate skills, knowledge, experience, and a sound process for compensation decision-making (*e.g.*, including access to independent expertise and advice when needed);
4. Provide shareholders with clear, comprehensive compensation disclosures: This principle underscores the importance of informative and timely disclosures that enable shareholders to evaluate executive pay practices fully and fairly;
5. Avoid inappropriate pay to non-executive directors: This principle recognizes the interests of shareholders in ensuring that compensation to outside directors does not compromise their independence and ability to make appropriate judgments in overseeing managers' pay and performance. At the market level, it may incorporate a variety of generally accepted best practices.

Advisory Votes on Executive Compensation—Management Proposals (Management Say-on-Pay)

Vote case-by-case on ballot items related to executive pay and practices, as well as certain aspects of outside director compensation.

Vote against Advisory Votes on Executive Compensation (Management Say-on-Pay—MSOP) if:

- There is a significant misalignment between CEO pay and company performance (pay for performance);
- The company maintains significant problematic pay practices;
- The board exhibits a significant level of poor communication and responsiveness to shareholders.

Vote against or withhold from the members of the Compensation Committee and potentially the full board if:

- There is no MSOP on the ballot, and an against vote on an MSOP is warranted due to a pay for performance misalignment, problematic pay practices, or the lack of adequate responsiveness on compensation issues raised previously, or a combination thereof;
- The board fails to respond adequately to a previous MSOP proposal that received less than 70 percent support of votes cast;
- The company has recently practiced or approved problematic pay practices, including option repricing or option backdating; or
- The situation is egregious.

Vote against an equity plan on the ballot if:

- A pay for performance misalignment is found, and a significant portion of the CEO's misaligned pay is attributed to non-performance-based equity awards, taking into consideration:
 - Magnitude of pay misalignment;
 - Contribution of non-performance-based equity grants to overall pay; and

- The proportion of equity awards granted in the last three fiscal years concentrated at the named executive officer (NEO) level.

Primary Evaluation Factors for Executive Pay

Pay-for-Performance Evaluation

ISS annually conducts a pay-for-performance analysis to identify strong or satisfactory alignment between pay and performance over a sustained period. With respect to companies in the Russell 3000 index, this analysis considers the following:

1. Peer Group⁸ Alignment:
 - The degree of alignment between the company's annualized TSR rank and the CEO's annualized total pay rank within a peer group, each measured over a three-year period.
 - The multiple of the CEO's total pay relative to the peer group median.
2. Absolute Alignment – the absolute alignment between the trend in CEO pay and company TSR over the prior five fiscal years – *i.e.*, the difference between the trend in annual pay changes and the trend in annualized TSR during the period.

⁸ The revised peer group is generally comprised of 14-24 companies that are selected using market cap, revenue (or assets for certain financial firms), GICS industry group and company's selected peers' GICS industry group with size constraints, via a process designed to select peers that are closest to the subject company in terms of revenue/assets and industry and also within a market cap bucket that is reflective of the company's.

If the above analysis demonstrates significant unsatisfactory long-term pay-for-performance alignment or, in the case of non-Russell 3000 index companies, misaligned pay and performance are otherwise suggested, our analysis may include any of the following qualitative factors, if they are relevant to the analysis to determine how various pay elements may work to encourage or to undermine long-term value creation and alignment with shareholder interests:

- The ratio of performance- to time-based equity awards;
- The overall ratio of performance-based compensation;
- The completeness of disclosure and rigor of performance goals;
- The company's peer group benchmarking practices;
- Actual results of financial/operational metrics, such as growth in revenue, profit, cash flow, etc., both absolute and relative to peers;
- Special circumstances related to, for example, a new CEO in the prior FY or anomalous equity grant practices (*e.g.*, bi-annual awards);
- Realizable pay⁹ compared to grant pay; and
- Any other factors deemed relevant.

Problematic Pay Practices

The focus is on executive compensation practices that contravene the global pay principles, including:

- Problematic practices related to non-performance-based compensation elements;
- Incentives that may motivate excessive risk-taking; and
- Options Backdating.

Problematic Pay Practices related to Non-Performance-Based Compensation Elements

Pay elements that are not directly based on performance are generally evaluated case-by-case considering the context of a company's overall pay program and demonstrated pay-for-performance philosophy. Please refer to ISS'

Compensation FAQ document for detail on specific pay practices that have been identified as potentially problematic and may lead to negative recommendations if they are deemed to be inappropriate or unjustified relative to executive pay best practices. The list below highlights the problematic practices that carry significant weight in this overall consideration and may result in adverse vote recommendations:

- Repricing or replacing of underwater stock options/SARS without prior shareholder approval (including cash buyouts and voluntary surrender of underwater options);
- Excessive perquisites or tax gross-ups, including any gross-up related to a secular trust or restricted stock vesting;
- New or extended agreements that provide for:
 - CIC payments exceeding 3 times base salary and average/target/most recent bonus;
 - CIC severance payments without involuntary job loss or substantial diminution of duties ("single" or "modified single" triggers);
 - CIC payments with excise tax gross-ups (including "modified" gross-ups).

Incentives that may Motivate Excessive Risk-Taking

- Multi-year guaranteed bonuses;
- A single or common performance metric used for short- and long-term plans;
- Lucrative severance packages;
- High pay opportunities relative to industry peers;
- Disproportionate supplemental pensions; or
- Mega annual equity grants that provide unlimited upside with no downside risk.

⁹ ISS research reports will include realizable pay for S&P 1500 companies.

Factors that potentially mitigate the impact of risky incentives include rigorous claw-back provisions and robust stock ownership/holding guidelines.

Options Backdating

The following factors should be examined case-by-case to allow for distinctions to be made between "sloppy" plan administration versus deliberate action or fraud:

- Reason and motive for the options backdating issue, such as inadvertent vs. deliberate grant date changes;
- Duration of options backdating;
- Size of restatement due to options backdating;
- Corrective actions taken by the board or compensation committee, such as canceling or re-pricing backdated options, the recouping of option gains on backdated grants; and
- Adoption of a grant policy that prohibits backdating, and creates a fixed grant schedule or window period for equity grants in the future.

Board Communications and Responsiveness

Consider the following factors case-by-case when evaluating ballot items related to executive pay on the board's responsiveness to investor input and engagement on compensation issues:

- Failure to respond to majority-supported shareholder proposals on executive pay topics; or
- Failure to adequately respond to the company's previous say-on-pay proposal that received the support of less than 70 percent of votes cast, taking into account:
 - The company's response, including:
 - Disclosure of engagement efforts with major institutional investors regarding the issues that contributed to the low level of support;

- Specific actions taken to address the issues that contributed to the low level of support;
 - Other recent compensation actions taken by the company;
- Whether the issues raised are recurring or isolated;
- The company's ownership structure; and
- Whether the support level was less than 50 percent, which would warrant the highest degree of responsiveness.

Frequency of Advisory Vote on Executive Compensation ("Say When on Pay")

Vote for annual advisory votes on compensation, which provide the most consistent and clear communication channel for shareholder concerns about companies' executive pay programs.

Voting on Golden Parachutes in an Acquisition, Merger, Consolidation, or Proposed Sale

Vote case-by-case on say on Golden Parachute proposals, including consideration of existing change-in-control arrangements maintained with named executive officers rather than focusing primarily on new or extended arrangements.

Features that may result in an against recommendation include one or more of the following, depending on the number, magnitude, and/or timing of issue(s):

- Single- or modified-single-trigger cash severance;
- Single-trigger acceleration of unvested equity awards;
- Excessive cash severance (>3x base salary and bonus);
- Excise tax gross-ups triggered and payable (as opposed to a provision to provide excise tax gross-ups);
- Excessive golden parachute payments (on an absolute basis or as a percentage of transaction equity value); or
- Recent amendments that incorporate any problematic features (such as those above) or recent actions (such as extraordinary equity grants) that may make packages so attractive as to influence merger agreements that may not be in the best interests of shareholders; or
- The company's assertion that a proposed transaction is conditioned on shareholder approval of the golden parachute advisory vote.

Recent amendment(s) that incorporate problematic features will tend to carry more weight on the overall analysis. However, the presence of multiple legacy problematic features will also be closely scrutinized.

In cases where the golden parachute vote is incorporated into a company's advisory vote on compensation (management say-on-pay), ISS will evaluate the say-on-pay proposal in accordance with these guidelines, which may give higher weight to that component of the overall evaluation.

Equity-Based and Other Incentive Plans

Vote case-by-case on equity-based compensation plans. Vote against the equity plan if any of the following factors apply:

- The total cost of the company's equity plans is unreasonable;
- The plan expressly permits repricing;
- A pay-for-performance misalignment is found;
- The company's three year burn rate exceeds the burn rate cap of its industry group;
- The plan has a liberal change-of-control definition; or
- The plan is a vehicle for problematic pay practices.

Social/Environmental Issues

Global Approach

Issues covered under the policy include a wide range of topics, including consumer and product safety, environment and energy, labor standards and human rights, workplace and board diversity, and corporate political issues. While a variety of factors goes into each analysis, the overall principle guiding all vote recommendations focuses on how the proposal may enhance or protect shareholder value in either the short or long term.

Generally vote case-by-case, taking into consideration whether implementation of the proposal is likely to enhance or protect shareholder value, and, in addition, the following will also be considered:

- If the issues presented in the proposal are more appropriately or effectively dealt with through legislation or government regulation;
- If the company has already responded in an appropriate and sufficient manner to the issue(s) raised in the proposal;
- Whether the proposal's request is unduly burdensome (scope or timeframe) or overly prescriptive;
- The company's approach compared with any industry standard practices for addressing the issue(s) raised by the proposal;
- If the proposal requests increased disclosure or greater transparency, whether or not reasonable and sufficient information is currently available to shareholders from the company or from other publicly available sources; and
- If the proposal requests increased disclosure or greater transparency, whether or not implementation would reveal proprietary or confidential information that could place the company at a competitive disadvantage.

Political Activities

Lobbying

Vote case-by-case on proposals requesting information on a company's lobbying (including direct, indirect, and grassroots lobbying) activities, policies, or procedures, considering:

- The company's current disclosure of relevant lobbying policies, and management and board oversight;
- The company's disclosure regarding trade associations or other groups that it supports, or is a member of, that engage in lobbying activities; and
- Recent significant controversies, fines, or litigation regarding the company's lobbying-related activities.

Political Contributions

Generally vote for proposals requesting greater disclosure of a company's political contributions and trade association spending policies and activities, considering:

- The company's current disclosure of policies and oversight mechanisms related to its direct political contributions and payments to trade associations or other groups that may be used for political purposes, including information on the types of organizations supported and the business rationale for supporting these organizations; and
- Recent significant controversies, fines, or litigation related to the company's political contributions or political activities.

Vote against proposals barring a company from making political contributions. Businesses are affected by legislation at the federal, state, and local level; barring political contributions can put the company at a competitive disadvantage.

Vote against proposals to publish in newspapers and other media a company's political contributions. Such publications could present significant cost to the company without providing commensurate value to shareholders.

Political Ties

Generally vote against proposals asking a company to affirm political nonpartisanship in the workplace, so long as:

- There are no recent, significant controversies, fines, or litigation regarding the company's political contributions or trade association spending; and
- The company has procedures in place to ensure that employee contributions to company-sponsored political action committees (PACs) are strictly voluntary and prohibit coercion.

Vote against proposals asking for a list of company executives, directors, consultants, legal counsels, lobbyists, or investment bankers that have prior government service and whether such service had a bearing on the business of the company. Such a list would be burdensome to prepare without providing any meaningful information to shareholders.

Foreign Private Issuers Listed on U.S. Exchanges

Vote against (or withhold from) non-independent director nominees at companies which fail to meet the following criteria: a majority-independent board, and the presence of an audit, a compensation, and a nomination committee, each of which is entirely composed of independent directors.

Where the design and disclosure levels of equity compensation plans are comparable to those seen at U.S. companies, U.S. compensation policy will be used to evaluate the compensation plan proposals. Otherwise, they, and all other voting items, will be evaluated using the relevant ISS regional or market proxy voting guidelines.

ADDITIONAL INFORMATION ABOUT THE FUNDS' STRUCTURE; FUND SHARES AND VOTING RIGHTS

Massachusetts Business Trusts

If a fund is a series of a fund company organized as an unincorporated business trust under the laws of the Commonwealth of Massachusetts, shareholders of the fund could, under certain circumstances, be held personally liable for the obligations of the fund. However, the fund company's Agreement and Declaration of Trust (the "Trust Agreement") disclaims shareholder liability for acts or obligations of the fund company and requires that notice of such disclaimer be given in each agreement, obligation or instrument entered into or executed by the fund company or a board member. The Trust Agreement provides for indemnification from a fund's property for all losses and expenses of any shareholder held personally liable for the obligations of the fund. Thus, the risk of a shareholder incurring financial loss on account of shareholder liability is limited to circumstances in which the fund itself would be unable to meet its obligations, a possibility which management believes is remote. Upon payment of any liability incurred by a fund, the shareholder paying such liability will be entitled to reimbursement from the general assets of the fund. The fund companies intend to conduct their operations in such a way so as to avoid, as far as possible, ultimate liability of the shareholders for liabilities of a fund.

Fund Shares and Voting Rights

Fund shares have equal rights as to dividends and in liquidation. Shares have no preemptive, subscription rights or, except as described in the prospectus or this SAI, conversion rights and are freely transferable. Each fund share has one vote and, when issued and paid for in accordance with the terms of its offering, is fully paid and non-assessable.

Unless otherwise required by the 1940 Act, ordinarily it will not be necessary for a fund to hold annual meetings of shareholders. As a result, shareholders may not consider each year the election of board members or the appointment of an independent registered public accounting firm. However, for a fund that is organized as a

Massachusetts business trust or a series of a Massachusetts business trust, the holders of at least 30% of the fund's shares outstanding and entitled to vote may require the fund to hold a special meeting of shareholders for purposes of removing a board member from office. In addition, the board will call a meeting of shareholders for the purpose of electing board members if, at any time, less than a majority of the board members then holding office have been elected by shareholders.

Rule 18f-2 under the 1940 Act provides that any matter required to be submitted under the provisions of the 1940 Act or applicable state law or otherwise to the holders of the outstanding voting securities of an investment company will not be deemed to have been effectively acted upon unless approved by the holders of a majority of the outstanding shares of each series, if any, affected by such matter. Rule 18f-2 further provides that a series shall be deemed to be affected by a matter unless it is clear that the interests of each series in the matter are identical or that the matter does not affect any interest of such series. Rule 18f-2 exempts the selection of the independent registered public accounting firm and the election of board members from the separate voting requirements of the rule.

GLOSSARY

Term	Meaning
12b-1 Plan	A Plan adopted pursuant to Rule 12b-1 under the 1940 Act
1940 Act	Investment Company Act of 1940, as amended
ADRs	American Depositary Receipts and American Depositary Shares
Adviser	The Manager and/or one or more Sub-Advisers, as applicable to the relevant fund or funds
Affiliated Entity	An affiliate of Dreyfus that, along with Dreyfus, employs fund portfolio managers who are dual employees of the Dreyfus and such affiliate
Authorized Entity	A bank, broker-dealer, financial adviser or Retirement Plan that has entered into an agreement with the Distributor to receive orders to buy and sell fund shares by the close of trading on the NYSE and transmit such orders to the Distributor or its designee in accordance with the agreement with the Distributor
BNY Mellon	The Bank of New York Mellon Corporation; BNY Mellon is the corporate brand of The Bank of New York Mellon Corporation.
CEA	Commodities Exchange Act
CFTC	Commodity Futures Trading Commission
Code	Internal Revenue Code of 1986, as amended
CPO	Commodity pool operator
Custodian	The Bank of New York Mellon
Distribution Plan	A plan adopted by a fund's board pursuant to Rule 12b-1 under the 1940 Act
Distributor	MBSC Securities Corporation
Dreyfus	The Dreyfus Corporation
ETFs	Exchange traded funds
Exchange Act	Securities Exchange Act of 1934, as amended
FDIC	Federal Deposit Insurance Corporation
Federal Funds	Monies of member banks within the Federal Reserve System which are held on deposit at a Federal Reserve Bank
FINRA	Financial Industry Regulatory Authority
Fitch	Fitch Ratings
FNMA	Federal National Mortgage Association

Term	Meaning
Ginnie Maes	GNMA Mortgage Pass Through Certificates
GNMA	Government National Mortgage Association
Independent Board Member	A board member who is not an "interested person" (as defined in the 1940 Act) of the relevant fund
Index	The benchmark index of an Index Fund
Index Funds	Dreyfus Stock Index Fund and Small Cap Stock Index Portfolio
Index Manager	Mellon Capital Management Corporation
IPO	Initial public offering
IRS	Internal Revenue Service
Lending Agent	The Bank of New York Mellon
LIBOR	London Interbank Offered Rate
Manager	The Dreyfus Corporation
Mellon Capital	Mellon Capital Management Corporation
Money Market Portfolio	Money Market Portfolio, a series of Dreyfus Variable Investment Funds
Moody's	Moody's Investors Service, Inc.
NASDAQ	The Nasdaq Stock Market, Inc.
NAV	Net asset value
Newton	Newton Capital Management Ltd.
NFA	National Futures Association
NYSE	NYSE Euronext
Participating Insurance Companies	Insurance companies that establish variable annuity and variable life insurance separate accounts to fund variable annuity contracts and variable life insurance policies through which investments in the funds may be made
Policies	Variable annuity contracts and variable life insurance policies through which investments in the funds may be made
Rating Agencies	S&P, Moody's, Fitch and, with respect to money market funds, DBRS
REIT	Real estate investment trust
REMIC	Real estate mortgage investment conduit
S&P	Standard & Poor's Ratings Services
Sarofim & Co.	Fayez Sarofim & Co.
SEC	Securities and Exchange Commission
Securities Act	Securities Act of 1933, as amended
Standish	Standish Mellon Asset Management Company LLC
Sub-Adviser	A fund's sub-investment adviser, if any, as described in the prospectus
TBCAM	The Boston Company Asset Management
TIPS	Treasury Inflation-Protection Securities
Transfer Agent	Dreyfus Transfer, Inc.
Treasury	U.S. Department of the Treasury
USA PATRIOT Act	Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001
VA	Variable annuity
VLI	Variable life insurance

STATEMENT OF ADDITIONAL INFORMATION

May 1, 2014

This Statement of Additional Information (SAI), which is not a prospectus, supplements and should be read in conjunction with the current prospectus of each fund listed below, as such prospectuses may be revised from time to time. To obtain a copy of a fund's prospectus, please call your financial adviser, or write to the fund at 144 Glenn Curtiss Boulevard, Uniondale, New York 11556-0144, visit www.dreyfus.com, or call 1-800-DREYFUS (inside the U.S. only).

Fund shares are offered only to variable annuity and variable life insurance separate accounts established by Participating Insurance Companies to fund the Policies. Individuals may not purchase shares of any fund directly from the fund. The Policies are described in the separate prospectuses issued by the Participating Insurance Companies.

The most recent annual report and semi-annual report to shareholders for each fund are separate documents supplied with this SAI, and the financial statements, accompanying notes and report of the independent registered public accounting firm appearing in the annual report are incorporated by reference into this SAI. All classes of a fund have the same fiscal year end and prospectus date. Capitalized but undefined terms used in this SAI are defined in the Glossary at the end of this SAI.

Fund	Abbreviation	Share Classes	Fiscal Year End	Prospectus Date
Dreyfus Investment Portfolios	DIP			
<i>Core Value Portfolio</i>	CVP	Initial Shares	December 31 st	May 1 st
		Service Shares		
<i>MidCap Stock Portfolio</i>	MSP	Initial Shares	December 31 st	May 1 st
		Service Shares		
<i>Small Cap Stock Index Portfolio</i>	SCSIP	Initial Shares	December 31 st	May 1 st
<i>Technology Growth Portfolio</i>	TGP	Initial Shares	December 31 st	May 1 st
		Service Shares		
The Dreyfus Socially Responsible Growth Fund, Inc.	DSRGF	Initial Shares	December 31 st	May 1 st
		Service Shares

PART I

BOARD INFORMATION

Information About Each Board Member's Experience, Qualifications, Attributes or Skills

Board members for the funds, together with information as to their positions with the funds, principal occupations and other board memberships during the past five years, are shown below. The address of each board member is 200 Park Avenue, New York, New York 10166.

Independent Board Members

Name Year of Birth Position¹	Principal Occupation During Past 5 Years	Other Public Company Board Memberships During Past 5 Years
Joseph S. DiMartino 1943 Chairman of the Board	Corporate Director and Trustee	CBIZ (formerly, Century Business Services, Inc.), a provider of outsourcing functions for small and medium size companies, <i>Director</i> (1997 - present) The Newark Group, a provider of a national market of paper recovery facilities, paperboard mills and paperboard converting plants, <i>Director</i> (2000 - 2010) Sunair Services Corporation, a provider of certain outdoor-related services to homes and businesses, <i>Director</i> (2005 - 2009)
Whitney I. Gerard 1934 Board Member	Partner in the law firm of Chadbourne & Parke LLP	N/A
Nathan Leventhal 1943 Board Member	Chairman of the Avery Fisher Artist Program (1997 - present) Commissioner, NYC Planning Commission (2007 - 2011)	Movado Group, Inc., <i>Director</i> (2003 - present)

Robin A. Melvin 1963 Board Member	Board Member, Illinois Mentoring Partnership, non-profit organization dedicated to increasing the quantity and quality of mentoring services in Illinois (2013 - present) Director, Boisi Family Foundation, a private family foundation that supports youth-serving organizations that promote the self sufficiency of youth from disadvantaged circumstances (1995 - 2012)	N/A
Roslyn M. Watson 1949 Board Member	Principal, Watson Ventures, Inc., a real estate investment company (1993 – present)	N/A
Benaree Pratt Wiley 1946 Board Member	Principal, The Wiley Group, a firm specializing in strategy and business development (2005 - present)	CBIZ (formerly, Century Business Services, Inc.), a provider of outsourcing functions for small and medium size companies, <i>Director</i> (2008 - present)

¹ Each of the Independent Board Members serves on the board's audit, nominating, compensation and litigation committees.

Interested Board Members

Name Year of Birth Position	Principal Occupation During Past 5 Years	Other Public Company Board Memberships During Past 5 Years
J. Charles Cardona ¹ 1955 Board Members	President and a Director of the Manager Executive Vice President of the Distributor President of Dreyfus Institutional Services Division	N/A
Gordon J. Davis ² 1941 Board Member	Partner in the law firm of Venable LLP (2012 - present) Partner in the law firm of Dewey & LeBoeuf LLP (1994 - 2012)	Consolidated Edison, Inc., a utility company, <i>Director</i> (1997 - present) The Phoenix Companies, Inc., a life insurance company, <i>Director</i> (2000 - present)
Isabel P. Dunst ³ 1947 Board Member	Partner, Hogan Lovells LLP	N/A

¹ Mr. Cardona is deemed to be an Interested Board Member of all of the funds because of his position with the Manager and its affiliates. Mr. Cardona does not serve on the boards' audit, nominating, compensation or litigation committees.

² Mr. Davis is deemed to be an Interested Board Member of DSRGF, as a result of his affiliation with Venable LLP, which provides legal services to the fund. Mr. Davis serves on the audit, nominating, compensation and litigation committees for each fund except DSRGF.

³ Ms. Dunst is deemed to be an Interested Board Member of all the funds because the law firm in which she is partner provides legal services to BNY Mellon and certain of its affiliates, but not the Manager or the funds. Ms. Dunst is not involved in these representations. Ms. Dunst does not serve on the boards' audit, nominating, compensation or litigation committees.

The following table shows the year each board member joined each fund's board.

Fund	<i>Independent Board Members</i>					<i>Interested Board Members</i>			
	Joseph S. DiMartino	Whitney I. Gerard	Nathan Leventhal	Robin A. Melvin	Roslyn M. Watson	Benaree Pratt Wiley	J. Charles Cardona	Gordon J. Davis	Isabel P. Dunst
DIP	1998	2003	2009	2014	2014	2009	2014	2012	2014
DSRGF	1995	2003	2009	2014	2014	2009	2014	2012	2014

Each board member, except for Mr. Cardona, has been a Dreyfus Family of Funds board member for over ten years. Additional information about each board member follows (supplementing the information provided in the table above) that describes some of the specific experiences, qualifications, attributes or skills that each board member possesses which the board believes has prepared them to be effective board members. The board believes that the significance of each board member's experience, qualifications, attributes or skills is an individual matter (meaning that experience that is important for one board member may not have the same value for another) and that these factors are best evaluated at the board level, with no single board member, or particular factor, being indicative of board effectiveness. However, the board believes that board members need to have the ability to critically review, evaluate, question and discuss information provided to them, and to interact effectively with fund management, service providers and counsel, in order to exercise effective business judgment in the performance of their duties; the board believes that its members satisfy this standard. Experience relevant to having this ability may be achieved through a board member's educational background; business, professional training or practice (e.g., medicine, accounting or law), public service or academic positions; experience from service as a board member (including the board for the funds) or as an executive of investment funds, public companies or significant private or not-for-profit entities or other organizations; and/or other life experiences. The charter for the board's nominating committee contains certain other factors considered by the committee in identifying and evaluating potential board member nominees. To assist them in evaluating matters under federal and state law, the board members are counseled by their independent legal counsel, who participates in board meetings and interacts with the Manager, and also may benefit from information provided by the Manager's counsel; counsel to the funds and to the board have significant experience advising funds and fund board members. The board and its committees have the ability to engage other experts as appropriate. The board evaluates its performance on an annual basis.

Independent Board Members

- Joseph S. DiMartino – Mr. DiMartino has been the Chairman of the Board of the funds in the Dreyfus Family of Funds for over 15 years. From 1971 through 1994, Mr. DiMartino served in various roles as an employee of Dreyfus (prior to its acquisition by a predecessor of BNY Mellon in August 1994 and related management changes), including portfolio manager, President, Chief Operating Officer and a director. He ceased being an employee or director of Dreyfus by the end of 1994. From July 1995 to November 1997, Mr. DiMartino served as Chairman of the Board of The Noel Group, a public buyout firm; in that capacity, he helped manage, acquire, take public and liquidate a number of operating companies. From 1986 to 2010, Mr. DiMartino served as a Director of the Muscular Dystrophy Association.
- Whitney I. Gerard – Mr. Gerard is a partner in the law firm of Chadbourne & Parke LLP, where his practice focuses on the representation and counseling of international companies and individuals doing business and/or engaged in litigation in the United States.

- Nathan Leventhal – Mr. Leventhal was previously a Commissioner of the New York City Planning Commission. Previously, Mr. Leventhal served in a number of senior positions in New York City Government, including Fiscal Director of the Human Resources Administration and Chief of Staff to Mayor John V. Lindsay, Deputy Mayor to Mayor Ed Koch, and Transition Chairman for both Mayors David Dinkins and Michael Bloomberg. Mr. Leventhal is a former partner in the law firm Poletti Freidin Prashker Feldman & Gartner. In the not-for-profit sector, Mr. Leventhal served for 17 years as President of Lincoln Center for the Performing Arts, where he is now President Emeritus and Chairman of the Avery Fisher Artist Program.
- Robin A. Melvin – Ms. Melvin currently serves as a Board member of Illinois Mentoring Partnership, a non-profit organization dedicated to increasing the quantity and quality of mentoring services of Illinois. Ms. Melvin served as a Director of the Boisi Family Foundation, a private family foundation that supports organizations serving the needs of youth from disadvantaged circumstances, from 1995 to 2012. In that role she also managed the Boisi Family Office, providing the primary interface with all investment managers, legal advisors and other service providers to the family. She has also served in various roles with MENTOR, a national non-profit youth mentoring advocacy organization, including Executive Director of the New York City affiliate, Vice President of the national affiliate network, Vice President of Development, and, immediately prior to her departure, Senior Vice President in charge of strategy. Prior to that, Ms. Melvin served as an investment banker with Goldman Sachs Group, Inc.
- Roslyn M. Watson – Ms. Watson has been a business entrepreneur in commercial and residential real estate for over 15 years. Ms. Watson currently serves as President and Founder of Watson Ventures, Inc. a real estate development investment firm, and her current board memberships include American Express Bank, FSB, The Hyams Foundation, Inc., Pathfinder International and Simmons College. Previously, she held various positions in the public and private sectors, including General Manager for the Massachusetts Port Authority. She has received numerous awards, including the Woman of Achievement award from the Boston Big Sister Association and the Working Woman of the Year Award from Working Woman Magazine.
- Benaree Pratt Wiley – Ms. Wiley is a Principal of The Wiley Group, a firm specializing in personnel strategy, talent management and leadership development primarily for global insurance and consulting firms. Prior to that, Ms. Wiley served as the President and Chief Executive Officer of The Partnership, Inc., a talent management organization for multicultural professionals in the greater Boston region. Ms. Wiley currently serves on the board of Blue Cross Blue Shield of Massachusetts and is chair of the advisory board of PepsiCo African-American, and she has served on the boards of several public companies and charitable organizations.

Interested Board Member

- J. Charles Cardona¹ – Mr. Cardona is the President and a Director of Dreyfus and the Chief Executive Officer of BNY Mellon Cash Investment Strategies, a division of Dreyfus. Mr. Cardona is an Executive Vice President of the Distributor. He also serves as President of the Institutional Services Division of the Distributor. He joined the Institutional Services Division in 1985 with management responsibility for all Institutional Operations and Client Service units. Prior to joining the Institutional Services Division, he served as Assistant Director of Sales and Services in the Dreyfus Retail Division of the Distributor, which he joined in 1981.
- Gordon J. Davis² – Mr. Davis is a partner in the law firm of Venable LLP where his practice focuses on complex real estate, land use development and related environmental matters; state and municipal authorities and financings; and cultural and not-for-profit organizations. Prior to joining the firm in 2012, Mr. Davis was a partner in the law firm of Dewey & LeBoeuf LLP from 1994 until 2012. Mr. Davis also served as a Commissioner and member of the New York City Planning Commission, and as Commissioner of Parks and Recreation for the City of New York. Mr. Davis was a co-founder of the Central Park Conservancy and the founding Chairman of Jazz at the Lincoln Center for the Performing Arts in New York City. He has also served as President of Lincoln Center. Mr. Davis also served on the board of Dreyfus (prior to its acquisition by a predecessor of BNY Mellon in August 1994 and related management changes). He currently serves as a Director of The Phoenix Companies, Inc., a life insurance company.
- Isabel P. Dunst³ – Ms. Dunst has been practicing law for almost 40 years. Half of her career was spent at the U.S. Department of Health and Human Services, including serving as the Deputy General Counsel, the senior

career legal position. Ms. Dunst has been partner for approximately 20 years in the Washington based international law firm of Hogan Lovells, which she joined in 1990.

- 1 Mr. Cardona is deemed to be an Interested Board Member of all of the funds because of his positions with the Manager and its affiliates.
- 2 Mr. Davis is deemed to be an Interested Board Member of DSRGF as a result of his affiliation with Venable LLP, which provides legal services to the fund.
- 3 Ms. Dunst is deemed to be an Interested Board Member of all the funds because the law firm in which she is a partner provides legal services to BNY Mellon and certain of its affiliates, but not the Manager or the funds. Ms. Dunst is not involved in these representations.

Committee Meetings

The boards' audit, nominating, compensation, litigation and pricing committees met during the funds' last fiscal years as indicated below:

Fund	Audit	Nominating	Compensation	Litigation	Pricing
DIP	4	1	1	0	0
DSRGF	4	1	1	0	0

Board Members' and Officers' Fund Share Ownership

The table below indicates the dollar range of each board member's ownership of fund shares and shares of other funds in the Dreyfus Family of Funds for which he or she is a board member, in each case as of December 31, 2013.

Fund	Independent Board Members					Interested Board Members		
	Joseph S. DiMartino	Whitney I. Gerard	Nathan Leventhal	Robin A. Melvin	Roslyn M. Watson	Benaree Pratt Wiley	Gordon J. Davis¹	Isabel P. Dunst²
DIP	None	None	None	None	None	None	None	None
DSRGF	None	None	None	None	None	None	None	None
Aggregate holdings of funds in the Dreyfus Family of Funds for which responsible as a board member	Over \$100,000	Over \$100,000	Over \$100,000	None	None	\$50,001-\$100,000	\$50,001-\$100,000	None

- 1 Mr. Davis is deemed to be an Interested Board Member of DSRGF as a result of his affiliation with Venable LLP, which provides legal services to the fund.
- 2 Ms. Dunst is deemed to be an Interested Board Member of all the funds because the law firm in which she is a partner provides legal services to BNY Mellon and certain of its affiliates, but not the Manager or the funds. Ms. Dunst is not involved in these representations.

Board members and officers, as a group, owned less than 1% of each class of each fund's voting securities outstanding on April 3, 2014.

As of December 31, 2013, none of the board members or their immediate family members owned securities of the Manager, any Sub-Advisers, the Distributor or any person (other than a registered investment company) directly or indirectly controlling, controlled by or under common control with the Manager, any Sub-Advisers or the Distributor.

Board Members' Compensation

Annual retainer fees and meeting attendance fees are allocated among the funds on the basis of net assets, with the Chairman of the Boards, Joseph S. DiMartino, receiving an additional 25% of such compensation. Mr. Cardona will

receive no compensation from the funds for serving as a director. The funds reimburse board members for their expenses. The funds do not have a bonus, pension, profit-sharing or retirement plan. Each emeritus board member is entitled to receive an annual retainer of one-half the amount paid as a retainer at the time the board member became emeritus and a per meeting attended fee of one-half the amount paid to board members.

The aggregate amount of fees and expenses* received from the funds by each current board member for the funds' last fiscal years, and by all funds in the Dreyfus Family of Funds for which such person was a board member during 2013, were as follows:

	<i>Independent Board Members</i>					
Fund	Joseph S. DiMartino*	Whitney I. Gerard	Nathan Leventhal	Robin A. Melvin	Roslyn M. Watson	Benaree Pratt Wiley
DIP	\$3,431	\$2,745	\$2,745	N/A	N/A	\$2,714
DSRGF	\$1,168	\$934	\$934	N/A	N/A	\$923
Total compensation from the funds and fund complex (**)	\$1,084,688 (154)	\$193,750 (25)	\$329,717 (43)	\$511,000 (98)	\$220,000 (41)	\$393,467 (66)

	<i>Interested Board Members</i>			<i>Emeritus Board Members</i>					
Fund	J. Charles Cardona¹	Gordon J. Davis²	Isabel P. Dunst³	Clifford L. Alexander	David W. Burke	Lyle E. Gramley⁴	Arthur A. Hartman	George L. Perry	Philip Toia⁴
DIP	N/A	\$2,755	N/A	\$2,418	\$1,049	N/A	\$811	\$2,745	N/A
DSRGF	N/A	\$938	N/A	\$825	\$356	N/A	\$275	\$934	N/A
Total compensation from the funds and fund complex (**)	N/A	\$279,717 (49)	\$152,000 (10)	\$299,533 (42)	\$175,500 (81)	\$11,000 (10)	\$55,000 (25)	\$170,500 (24)	\$174,390 (57)

* Amounts shown do not include the cost of office space, secretarial services and health benefits for the Chairman of the Boards and expenses reimbursed to board members for attending board meetings.

** Represents the number of separate portfolios comprising the investment companies in the fund complex, including the funds, for which the board member served in 2013.

- 1 Mr. Cardona is deemed to be an Interested Board Member of all of the funds because of his positions with the Manager and its affiliates. Mr. Cardona became a board member as of February 27, 2014.
- 2 Mr. Davis is deemed to be an Interested Board Member of DSRGF as a result of his affiliation with Venable LLP, which provides legal services to the fund.
- 3 Ms. Dunst is deemed to be an Interested Board Member of all the funds because the law firm in which she is a partner provides legal services to BNY Mellon and certain of its affiliates, but not the Manager or the funds. Ms. Dunst is not involved in these representations.
- 4 Messrs. Gramley and Toia receive compensation from the funds for attending board meetings in an advisory role although not board members or emeritus board members of the funds.

CERTAIN PORTFOLIO MANAGER INFORMATION
(not applicable to money market funds)

The following table lists the funds' portfolio managers, if any, who are in addition to the primary portfolio managers listed in the prospectus. See the prospectus for a list of, and certain other information regarding, the primary portfolio manager(s) for your fund.

Fund	Additional Portfolio Managers
CVP	John Bailer
MSP	N/A
SCSIP	Rebecca Gao, Danny Lai, Todd Rose and Marlene Walker Smith
TGP	Matthew Griffin and Erik Swords
DSRGF	N/A

The following table lists the number and types of accounts (including the funds) advised by each fund's primary portfolio manager(s) and assets under management in those accounts as of the end of the last fiscal year of the funds they manage, unless otherwise indicated:

Primary Portfolio Manager	Registered Investment Companies	Total Assets Managed	Other Pooled Investment Vehicles	Total Assets Managed	Other Accounts	Total Assets Managed
C. Wesley Boggs	18	\$4,218	17	\$698	52	\$7,517
Richard A. Brown	97	\$83,202	97	\$79,608	76	\$113,776
Warren Chiang	18	\$4,218	17	\$698	52	\$7,517
Thomas Durante	97	\$83,202	97	\$79,608	76	\$113,776
Brian C. Ferguson	11	\$4.3B	2	\$235.2M	36	\$4.0B
Ronald Gala	18	\$4,218	17	\$698	52	\$7,517
Barry K. Mills	13	\$5.5B	3	\$214.4M	19	\$1.4B
Karen Q. Wong	97	\$83,202	97	\$79,608	76	\$113,776

The following table provides information on accounts managed (included within the table above) by each primary portfolio manager that are subject to performance-based advisory fees:

Primary Portfolio Manager	Type of Account	Number of Accounts Subject to Performance Fees	Total Assets of Accounts

Primary Portfolio Manager	Type of Account	Number of Accounts Subject to Performance Fees	Total Assets of Accounts
C. Wesley Boggs	Pooled Vehicles	2	\$136,286,437
	Other	9	\$699,680,535
Richard A. Brown	Mutual Fund	N/A	N/A
	Pooled Vehicles	N/A	N/A
	Other	1	\$1,188,942,411
Warren Chiang	Pooled Vehicles	2	\$136,286,437
	Other	9	\$699,680,535
Thomas Durante	Mutual Funds	N/A	N/A
	Pooled Vehicles	N/A	N/A
	Other	1	\$1,188,942,411
Brian C. Ferguson	Other	3	\$830.5M
Ronald Gala	Pooled Vehicles	2	\$136,286,437
	Other	9	\$699,680,535
Barry K. Mills	Other	2	\$17.0M
Karen Q. Wong	Mutual Fund	N/A	N/A
	Pooled Vehicles	N/A	N/A
	Other	1	\$1,188,942,411

The following table lists the dollar range of fund shares beneficially owned by the primary portfolio manager(s) as of the end of the fund's last fiscal year:

Primary Portfolio Manager	Fund	Dollar Range of Fund Shares Beneficially Owned
C. Wesley Boggs	MCSP	None
	DSRGF	None
Richard A. Brown	SCSIP	None
Warren Chiang	MCSP	None
	DSRGF	None
Thomas Durante	SCSIP	None
Brian C. Ferguson	CVP	None
Ronald Gala	MCSP	None
	DSRGF	None
Barry K. Mills	TGP	None
Karen Q. Wong	SCSIP	None

MANAGER'S COMPENSATION

For each fund's last three fiscal years, the management fees payable by the fund, the reduction, if any, in the amount of the fee paid due to fee waivers and/or expense reimbursements by the Manager and the net fees paid by the fund were as follows:

Fund	2013 Fiscal Year			2012 Fiscal Year			2011 Fiscal Year		
	Fee payable	Reduction in fee	Net fee paid	Fee payable	Reduction in fee	Net fee paid	Fee payable	Reduction in fee	Net fee paid
CVP	\$247,810	\$9,371	\$238,439	\$217,335	\$70,717	\$146,618	\$238,561	\$24,722	\$213,839
MSP	\$1,249,520	\$0	\$1,249,520	\$1,097,465	\$0	\$1,097,465	\$1,177,048	\$0	\$1,177,048
SCSIP	\$957,326	\$8,562	\$948,764	\$737,928	\$5,945	\$731,983	\$640,563	\$5,258	\$635,305
TGP	\$1,860,525	\$0	\$1,860,525	\$1,760,014	\$0	\$1,760,014	\$1,727,531	\$0	\$1,727,531
DSRGF	\$1,839,941	\$0	\$1,839,941	\$1,680,564	\$0	\$1,680,564	\$1,705,952	\$0	\$1,705,952

DISTRIBUTOR'S COMPENSATION

The amounts paid by each fund to the Distributor under the fund's Plan or Plans, as applicable, for services described in Part II and Part III of this SAI under "Shareholder Services Plan" and "Distribution Plans", respectively, for the fund's last fiscal year were as follows:

Fund	Plan	Class	Distributor Payments	Printing and Implementation and Operation of Plan	Amount reimbursed to Fund Pursuant to Undertaking in Effect	Total Amount
CVP	Distribution Plan	Service Shares	\$35,449	N/A	N/A	\$35,449
MSP	Distribution Plan	Service Shares	\$52,360	N/A	N/A	\$52,360
SCSIP	Distribution Plan	Service Shares	\$683,805	N/A	N/A	\$683,805
TGP	Distribution Plan	Service Shares	\$408,169	N/A	N/A	\$408,169
DSRGF	Shareholder Services Plan	Initial Shares	\$2,358	N/A	N/A	\$2,358
	Distribution Plan	Service Shares	\$19,188	N/A	N/A	\$19,188

SECURITIES OF REGULAR BROKERS OR DEALERS

A fund may acquire securities issued by one or more of its "regular brokers or dealers," as defined in Rule 10b-1 under the 1940 Act. Rule 10b-1 provides that a "regular broker or dealer" is one of the ten brokers or dealers that, during the fund's last fiscal year: (1) received the greatest dollar amount of brokerage commissions from participating, either directly or indirectly, in the fund's portfolio transactions, (2) engaged as principal in the largest dollar amount of the fund's portfolio transactions or (3) sold the largest dollar amount of the fund's securities. The following is a list of the issuers of the securities, and the aggregate value per issuer, of a fund's regular brokers or dealers held by such fund as of the end of its last fiscal year:

Fund	Regular Broker or Dealer	Aggregate Value Per Issuer
CVP	J.P. Morgan Securities LLC	\$1,181,000
	Morgan Stanley	\$450,000
	Citigroup	\$721,000
	Bank of America NA	\$876,000
	Goldman, Sachs & Co.	\$681,000
MSP	N/A	N/A

Fund	Regular Broker or Dealer	Aggregate Value Per Issuer
SCSIP	N/A	N/A
TGP	N/A	N/A
DSRGF	N/A	N/A

COMMISSIONS

The aggregate amounts of commissions paid by each fund for brokerage commissions and spreads or concessions on principal transactions (none of which were paid to affiliates) for its last three fiscal years were as follows:

Fund	2013 Fiscal Year		2012 Fiscal Year		2011 Fiscal Year	
	Commissions	Spreads/ Concessions	Commissions	Spreads/ Concessions	Commissions	Spreads/ Concessions
CVP	\$25,952	\$9,582	\$29,116	\$1,153	\$42,815	\$14,009
MSP	\$101,130	\$0	\$115,965	\$0	\$133,345	\$0
SCSIP	\$12,874	\$0	\$11,622	\$0	\$22,136	\$0
TGP	\$300,644	\$43,862	\$192,887	\$6,483	\$407,233	\$12,773
DSRGF	\$78,282	\$0	\$113,607	\$0	\$157,624	\$0

The following table provides an explanation of any material difference in the commissions or spreads/concessions paid by a fund in either of the two fiscal years preceding the last fiscal year.

Fund	Reason for Any Material Difference in Commissions or Spreads/Concessions
CVP	N/A
MSP	N/A
SCSIP	N/A
TGP	The fund increased trading activity in 2013.
DSRGF	The fund decreased trading activity in 2013.

The aggregate amount of transactions during each fund's last fiscal year in securities effected on an agency basis through a broker-dealer for, among other things, research services and the commissions and concessions related to such transactions were as follows:

Fund	Transactions	Related Commissions/Concessions
CVP	\$31,289,725	\$21,103
MSP	\$172,212,504	\$73,044
SCSIP	N/A	N/A
TGP	\$310,418,506	\$275,865
DSRGF	\$160,917,716	\$62,201

PORTFOLIO TURNOVER VARIATION (not applicable to money market funds)

Each fund's portfolio turnover rate for up to five fiscal years is shown in the prospectus. The following table provides an explanation of any significant variation in a fund's portfolio turnover rates over the last two fiscal years (or any anticipated variation in the portfolio turnover rate from that reported for the last fiscal year).

Fund	Reason for Any Significant Portfolio Turnover Rate Variation, or Anticipated Variation
CVP	N/A
MSP	N/A
SCSIP	N/A
TGP	N/A
DSRGF	N/A

SHARE OWNERSHIP

The following persons are known by each fund to own of record 5% or more of the indicated class of the fund's outstanding voting securities. A shareholder who beneficially owns, directly or indirectly, more than 25% of a fund's voting securities may be deemed to "control" (as defined in the 1940 Act) the fund. All information for a fund is as of the date indicated for the first listed class.

INVESTMENTS, INVESTMENT TECHNIQUES AND RISKS

The following charts, which supplement and should be read together with the information in the prospectus, indicate some of the specific investments and investment techniques applicable to your fund. Additional policies and restrictions are described in the prospectus and below in the next section (see "Investment Restrictions"). *See "Additional Information About Investments, Investment Techniques and Risks" in Part III of this SAI for more information, including important risk disclosure, about the investments and investment techniques applicable to your fund.*

Fund	Equity Securities¹	IPOs	U.S. Government Securities²	Corporate Debt Securities	High Yield and Lower-Rated Securities	Zero Coupon, Pay-in-Kind and Step-Up Securities	Inflation-Indexed Securities (other than TIPS)
Core Value Portfolio	✓	✓	✓	✓	✓		
MidCap Stock Portfolio	✓	✓	✓	✓			
Small Cap Stock Index Portfolio	✓	✓	✓				
Technology Growth Portfolio	✓	✓	✓	✓			
The Dreyfus Socially Responsible Growth Fund	✓	✓	✓				

¹ For each of Core Value Portfolio, MidCap Stock Portfolio and Technology Growth Portfolio (1) includes common and preferred stock, convertible securities and warrants and (2) each fund is limited to investing 5% of its net assets in warrants, except that this limitation does not apply to warrants purchased by a fund that are sold in units with, or attached to, other securities.

For The Dreyfus Socially Responsible Growth Fund, includes common and preferred stock and warrants; the fund may not purchase warrants in excess of 2% of its net assets.

For Small Cap Stock Index Portfolio, includes common and preferred stock only.

² For Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio, see "Money Market Instruments" below.

The Dreyfus Socially Responsible Growth Fund			✓	✓		✓

⁴ Includes short-term U.S. Government securities, bank obligations, repurchase agreements and, except for The Dreyfus Socially Responsible Growth Fund, commercial paper. Generally, (1) except for The Dreyfus Socially Responsible Growth Fund, when the Adviser determines that adverse market conditions exist, a fund may adopt a temporary defensive position and invest up to 100% of its assets in money market instruments, and (2) a fund also may purchase money market instruments when it has cash reserves or in anticipation of taking a market position. The commercial paper purchased by a fund will consist only of direct obligations which, at the time of their purchase, are (a) rated at least P-1 by Moody's, A-1 by S&P or F-1 by Fitch, or (b) issued by companies having an outstanding unsecured debt issue currently rated at least A by Moody's, S&P or Fitch, or (c) if unrated, determined by the Adviser to be of comparable quality to those rated obligations which may be purchased by the fund.

For The Dreyfus Socially Responsible Growth Fund, during a period when it becomes desirable to move the fund toward a defensive position because of adverse trends in the financial markets or the economy, the fund may invest some or all of its assets in securities issued or guaranteed by the U.S. Government or its agencies or instrumentalities, corporate bonds, high grade commercial paper, repurchase agreements, time deposits, bank certificates of deposit, bankers' acceptances and other short-term bank obligations issued in this country as well as those issued in dollar denominations by the foreign branches of U.S. banks, and cash or cash equivalents, without limit as to amount, as long as such investments are made in securities of eligible companies and domestic banks.

⁵ MidCap Stock Portfolio and Small Cap Stock Index Portfolio may enter into futures contracts in U.S. domestic markets only.

⁶ Each of Core Value Portfolio, MidCap Stock Portfolio and Technology Growth Portfolio (1) is limited to investing up to 5% of its assets, represented by the premium paid, in the purchase of call and put options and (2) may write (*i.e.*, sell) covered call and put option contracts to the extent of 20% of the value of its net assets at the time such option contracts are written.

For The Dreyfus Socially Responsible Growth Fund, the value of the portfolio securities underlying covered call options written by the fund will be limited to an amount not in excess of 20% of the value of the fund's net assets at the time such options are written. Additionally, the fund will purchase call options only to close out open positions.

Core Value Portfolio	✓	✓	✓	✓
MidCap Stock Portfolio	✓	✓	✓	✓
Small Cap Stock Index Portfolio		✓		✓
Technology Growth Portfolio	✓	✓	✓	✓
The Dreyfus Socially Responsible Growth Fund				✓

⁷ Small Cap Stock Index Portfolio currently intends to borrow money only for temporary or emergency (not leveraging) purposes. Each fund except The Dreyfus Socially Responsible Growth Fund may borrow for investment purposes on a secured basis through entering into reverse repurchase agreements.

⁸ The fund will not sell securities short if, after effect is given to any such short sale, the total market value of all securities sold short would exceed 25% of the value of the fund's net assets, and at no time will more than 15% of the value of the fund's net assets be in deposits on short sales against the box.

Small Cap Stock Index Portfolio. The fund is managed by determining which stocks are to be purchased or sold to match, to the extent feasible, the investment characteristics of its Index. The fund will attempt to achieve a correlation between its performance and that of the fund's Index, in both rising and falling markets, of at least 0.95, without taking into account expenses. A correlation of 1.00 would indicate perfect correlation, which would be achieved when the fund's net asset value, including the value of its dividends and capital gain distributions, increases or decreases in exact proportion to changes in the Index. The fund's ability to correlate its performance with that of its Index, however, may be affected by, among other things, changes in securities markets, the manner in which the total return of the fund's Index is calculated, the size of the fund's portfolio, the amount of cash or cash equivalents held in the fund's portfolio, and the timing, frequency and size of shareholder purchases and redemptions. The fund will use cash flows from shareholder purchase and redemption activity to maintain, to the extent feasible, the similarity of its portfolio to the securities comprising the fund's Index. Inclusion of a security in an Index in no way implies an opinion by the sponsor of the Index as to its attractiveness as an investment. In the future, subject to the approval of the fund's shareholders, the fund may select a different index if such a standard of comparison is deemed to be more representative of the performance of the securities the fund seeks to match. The fund is not sponsored, endorsed, sold or promoted by the sponsor of its Index.

The fund may not hold all of the issues that comprise its Index because of the costs involved and the illiquidity of certain securities which comprise such Index. Instead, the fund will attempt to hold a representative sample of the securities in its Index so that, in the aggregate, the investment characteristics of the fund's portfolio resemble those of its Index. The stocks to be included in the fund's portfolio will be selected using a statistical process known as "sampling." The process will be used to select stocks so that the market capitalizations, industry weightings, dividend yield, and beta closely approximate those of the Index. The sampling techniques utilized by the fund are expected to be an effective means of substantially duplicating the investment performance of the Index; however, the fund is not expected to track its Index with the same degree of accuracy that complete replication of the Index would have provided. Over time, the fund's portfolio composition will be altered (or "rebalanced") to reflect changes in the composition of the Index.

The Dreyfus Socially Responsible Growth Fund. The fund's objectives and special considerations (social screens), as described in the fund's prospectus, cannot be changed without approval by the holders of a majority, as defined in the 1940 Act, of the fund's outstanding voting shares. The board may adopt additional criteria or restrictions governing the fund's investments if the board determines that the new criteria or restrictions are consistent with the

fund's objective of investing in a socially responsible manner, but the board may not change the four existing special considerations described in the prospectus without shareholder approval.

INVESTMENT RESTRICTIONS

"Fundamental Policies" may not be changed without approval of the holders of a majority of the fund's outstanding voting securities (as defined in the 1940 Act). "Nonfundamental Policies" may be changed at any time, without shareholder approval, by a vote of a majority of the board members and in compliance with applicable law and regulatory policy.

Fundamental Policies

Except as may be otherwise disclosed in the prospectus, each fund's investment objective is a Fundamental Policy. Additionally, as a matter of Fundamental Policy, each fund, as indicated, may not:

1. **Borrowing**

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Borrow money, except to the extent permitted under the 1940 Act (which currently limits borrowing to no more than 33-1/3% of the value of the fund's total assets). For purposes of this Fundamental Policy, the entry into options, forward contracts, futures contracts, including those relating to indices, and options on futures contracts or indices shall not constitute borrowing.

The Dreyfus Socially Responsible Growth Fund. Borrow money, except to the extent permitted under the 1940 Act.

2. **Commodities**

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Invest in commodities, except that the fund may purchase and sell options, forward contracts, futures contracts, including those relating to indices, and options on futures contracts or indices.

The Dreyfus Socially Responsible Growth Fund. The fund may not purchase, hold or deal in commodities or commodity contracts, in oil, gas, or other mineral exploration or development programs, or in real estate but this shall not prohibit the fund from investing, consistent with Nonfundamental Policy No. 3 below, in securities of companies engaged in oil, gas or mineral investments or activities. This limitation shall not prevent the fund from investing in securities issued by a REIT, provided that such trust is not permitted to invest in real estate or in interests other than mortgages or other security interests.

3. **Issuer Diversification**

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Invest more than 5% of its assets in the obligations of any one issuer, except that up to 25% of the value of the fund's total assets may be invested, and securities issued or guaranteed by the U.S. Government or its agencies or instrumentalities may be purchased, without regard to any such limitation.

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Purchase the securities of any issuer if such purchase would cause the fund to hold more than 10% of the voting securities of such issuer. This Fundamental Policy applies only with respect to 75% of the fund's total assets.

The Dreyfus Socially Responsible Growth Fund. Purchase the securities of any issuer if such purchase (1) would cause more than 5% of the value of its total assets to be invested in securities of such issuer (except securities of the U.S. Government or any instrumentality thereof) or (2) would cause the fund to hold more than 10% of the outstanding voting securities of such issuer.

4. **Industry Concentration**

Core Value Portfolio, MidCap Stock Portfolio and Technology Growth Portfolio. Invest more than 25% of the value of its total assets in the securities of issuers in any single industry, provided that there shall be no limitation on the purchase of obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities. For purposes of this Fundamental Policy with respect to Technology Growth Portfolio, the technology sector in general is not considered an industry.

Small Cap Stock Index Portfolio. Invest more than 25% of the value of its total assets in the securities of issuers in any single industry (except to the extent the Index is so concentrated), provided that there shall be no limitation on the purchase of obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities.

The Dreyfus Socially Responsible Growth Fund. Concentrate its investments in any particular industry or industries, except that the fund may invest up to 25% of the value of its total assets in a single industry.

5. **Loans**

Core Value Portfolio, MidCap Stock Portfolio and Technology Growth Portfolio. Make loans to others, except through the purchase of debt obligations and the entry into repurchase agreements. However, the fund may lend its portfolio securities in an amount not to exceed 33-1/3% of the value of its total assets. Any loans of portfolio securities will be made according to guidelines established by the SEC and the board.

Small Cap Stock Index Portfolio. Lend any securities or make any other loans if, as a result, more than 33-1/3% of its total assets would be lent to others, except that this limitation does not apply to the purchase of debt obligations and the entry into repurchase agreements. Any loans of portfolio securities will be made according to guidelines established by the SEC and the board.

The Dreyfus Socially Responsible Growth Fund. Lend any securities or make loans to others, except to the extent permitted under the 1940 Act (which currently limits such loans to no more than 33-1/3% of the value of the fund's total assets) or as otherwise permitted by the SEC. For purposes of this Fundamental Policy, the purchase of debt obligations (including acquisitions of loans, loan participations or other forms of debt instruments) and the entry into repurchase agreements shall not constitute loans by the fund. Any loans of portfolio securities will be made according to guidelines established by the SEC and the board.

6. **Margin and Short Sales**

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Purchase securities on margin, but the fund may make margin deposits in connection with transactions in options, forward contracts, futures contracts, including those relating to indices, and options on futures contracts or indices.

The Dreyfus Socially Responsible Growth Fund. Purchase securities on margin, but the fund may obtain such short-term credit as may be necessary for the clearance of purchases and sales of securities.

The Dreyfus Socially Responsible Growth Fund. Sell any security short.

7. **Real Estate**

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Purchase, hold or deal in real estate, or oil, gas or other mineral leases or exploration or development programs, but the fund may purchase and sell securities that are secured by real estate or issued by companies that invest or deal in real estate or real estate investment trusts.

8. **Senior Securities**

Core Value Portfolio, MidCap Stock Portfolio and Technology Growth Portfolio. Issue any senior security (as such term is defined in Section 18(f) of the 1940 Act), except to the extent the activities permitted in Fundamental Policy Nos. 1 and 2 and the fund's Nonfundamental Policy Nos. 2 and 5 may be deemed to give rise to a senior security.

Small Cap Stock Index Portfolio. Issue any senior security (as such term is defined in Section 18(f) of the 1940 Act), except to the extent the activities permitted in Fundamental Policy Nos. 1 and 2 and the fund's Nonfundamental Policy No. 2 may be deemed to give rise to a senior security.

9. **Underwriting**

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Act as an underwriter of securities of other issuers, except to the extent the fund may be deemed an underwriter under the Securities Act by virtue of disposing of portfolio securities.

The Dreyfus Socially Responsible Growth Fund. Act as an underwriter of securities of other issuers.

10. **Investing for Control**

The Dreyfus Socially Responsible Growth Fund. Invest in the securities of a company for the purpose of exercising management or control, but the fund will vote the securities it owns in its portfolio as a shareholder in accordance with its views.

11. **Puts and Calls**

The Dreyfus Socially Responsible Growth Fund. Engage in the purchase and sale of put, call, straddle, or spread options or combinations thereof, or in writing such options, except that the fund may write and sell covered call option contracts on securities owned by the fund up to, but not in excess of, 20% of the market value of its net assets at the time such option contracts are written. The fund may also purchase call options for the purpose of terminating its outstanding obligations with respect to securities upon which covered call option contracts have been written. In connection with the writing of covered call options, the fund may pledge assets to an extent not greater than 20% of the market value of its total net assets at the time such options are written.

12. **Companies with Limited Operations**

The Dreyfus Socially Responsible Growth Fund. Purchase securities of any company having less than three years' continuous operations (including operations of any predecessors) if such purchase would cause the value of the fund's investments in all such companies to exceed 5% of the value of its net assets.

13. **Limit Where Affiliated Persons Involved**

The Dreyfus Socially Responsible Growth Fund. Purchase or retain the securities of any issuer if officers or board members of the fund or of the Manager, who own beneficially more than 0.5% of the securities of such issuer, together own beneficially more than 5% of the securities of such issuer.

The Dreyfus Socially Responsible Growth Fund. Purchase from or sell to any of its officers or board members, or firms of which any of them are members, any securities (other than capital stock of the fund), but such persons or firms may act as brokers for the fund for customary commissions.

14. **Warrants**

The Dreyfus Socially Responsible Growth Fund. Purchase warrants in excess of 2% of its net assets. Such warrants shall be valued at the lower of cost or market, except that warrants acquired by the fund in units or attached to securities shall be deemed to be without value, for purposes of this Fundamental Policy only.

In addition to the Fundamental Policies set forth above, The Dreyfus Socially Responsible Growth Fund's special considerations described in the prospectus will not be changed without stockholder approval. The board may from time to time without stockholder approval adopt additional criteria or restrictions governing the fund's investments if the board determines that the new criteria or restrictions are consistent with the fund's objective of investing in a socially responsible manner. Any such new criteria or restrictions would not be Fundamental Policies of the fund and could be subsequently terminated or changed by the board at any time without stockholder approval.

References to "commodities" or "commodity contracts" in the Fundamental Policies described above are to physical commodities or contracts in respect of physical commodities, typically natural resources or agricultural products, and are not related to the purchase or delivery of physical commodities.

Nonfundamental Policies

As a Nonfundamental Policy, which may be changed at any time, without shareholder approval, by a vote of a majority of the board members and in compliance with applicable law and regulatory policy, each fund, as indicated, may not:

1. **Investing for Control**

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Invest in the securities of a company for the purpose of exercising management or control, but the fund will vote the securities it owns as a shareholder in accordance with its views.

2. **Pledging Assets**

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio. Pledge, mortgage or hypothecate its assets, except to the extent necessary to secure permitted borrowings and to the extent related to the purchase of securities on a when-issued or forward commitment basis and the deposit of assets in escrow in connection with writing covered put and call options and collateral and initial or variation margin arrangements with respect to options, forward contracts, futures contracts, including those relating to indices, and options on futures contracts or indices.

The Dreyfus Socially Responsible Growth Fund. Pledge, mortgage, hypothecate or otherwise encumber its assets, except to the extent necessary to secure permitted borrowings.

3. **Illiquid Investments**

All funds. Enter into repurchase agreements providing for settlement in more than seven days after notice or purchase securities that are illiquid if, in the aggregate, more than 15% of the value of its net assets would be so invested.

4. **Securities of Other Investment Companies**

Core Value Portfolio, MidCap Stock Portfolio, Technology Growth Portfolio and The Dreyfus Socially Responsible Growth Fund. Purchase securities of other investment companies, except to the extent permitted under the 1940 Act.

5. **Puts/Calls**

Core Value Portfolio, MidCap Stock Portfolio and Technology Growth Portfolio. Purchase, sell or write puts, calls or combinations thereof, except as described in the prospectus and this SAI.

In addition, each fund has adopted the following policies as Nonfundamental Policies: each fund intends (i) to comply with the diversification requirements prescribed in regulations under Section 817(h) of the Code, and (ii) to comply in all material respects with insurance laws and regulations that the fund has been advised are applicable to investments of separate accounts of Participating Insurance Companies.

With respect to each fund, if a percentage restriction is adhered to at the time of investment, a later change in percentage resulting from a change in values or assets will not constitute a violation of such restriction, except as otherwise required by the 1940 Act. With respect to the funds' policies pertaining to borrowing, however, if borrowings exceed 33-1/3% of the value of a fund's total assets as a result of a change in values or assets, the fund must take steps to reduce such borrowings within three days (not including Sundays and holidays) thereafter at least to the extent of such excess.

Policies Related to Fund Names

Each of the following funds invests, under normal circumstances, at least 80% of its net assets, plus any borrowings for investment purposes (for funds that may borrow for investment purposes), in the instruments described below (or other instruments with similar economic characteristics). Each fund has adopted a policy to provide its shareholders with at least 60 days' prior notice of any change in its policy to so invest its assets.

Fund	Investment
Core Value Portfolio	Stocks
MidCap Stock Portfolio	Stocks of mid-cap companies
Technology Growth Portfolio	Stocks of growth companies of any size that the Adviser believes to be leading producers or beneficiaries of technological innovation
The Dreyfus Socially Responsible Growth Fund	Common stocks of companies that, in the opinion of the fund's management, meet traditional investment standards and conduct their business in a manner that contributes to the enhancement of the quality of life in America

SHAREHOLDER SERVICES PLAN

(The Dreyfus Socially Responsible Growth Fund—Initial shares only)

The fund has adopted a Shareholder Services Plan for its Initial shares pursuant to which the fund reimburses the Distributor an amount not to exceed an annual rate of 0.25% of the value of the fund's average daily net assets for certain allocated expenses with respect to servicing and/or maintaining shareholder accounts.

A quarterly report of the amounts expended under the fund's Shareholder Services Plan, and the purposes for which such expenditures were incurred, must be made to the board for its review. In addition, the Shareholder Services Plan provides that material amendments of the Shareholder Services Plan must be approved by the board and by the board members who are not "interested persons" (as defined in the 1940 Act) of the fund and have no direct or indirect financial interest in the operation of the Shareholder Services Plan, by vote cast in person at a meeting called for the purpose of considering such amendments. The Shareholder Services Plan is subject to annual approval by such vote of the board members cast in person at a meeting called for the purpose of voting on the Shareholder Services Plan. The Shareholder Services Plan is terminable at any time by vote of a majority of the board members who are not "interested persons" of the fund and have no direct or indirect financial interest in the operation of the Shareholder Services Plan.

INFORMATION ABOUT THE FUNDS' ORGANIZATION AND STRUCTURE

Each fund is an open-end management investment company and is "diversified" under the 1940 Act. References in this SAI to a "fund" generally refer to the series of Dreyfus Investment Portfolios and to The Dreyfus Socially Responsible Growth Fund.

Core Value Portfolio, MidCap Stock Portfolio, Small Cap Stock Index Portfolio and Technology Growth Portfolio are series of Dreyfus Investment Portfolios, and investments are made through, and shareholders invest in, the funds. Dreyfus Investment Portfolios was organized as a Massachusetts business trust on May 14, 1993. As a result of legal requirements relating to the formation of Massachusetts business trusts, there was a period of time between the

dates of organization and commencement of operations for the fund, during which time no business or other activities were conducted.

The Dreyfus Socially Responsible Growth Fund was organized as a Maryland corporation on July 20, 1992 and commenced operations on October 7, 1993.

CERTAIN EXPENSE ARRANGEMENTS AND OTHER DISCLOSURES

Expense Arrangements

Small Cap Stock Index Portfolio. All expenses incurred in the operation of Small Cap Stock Index Portfolio are borne by the Adviser, except management fees, Distribution Plan fees, taxes, interest, brokerage fees and commissions, if any, extraordinary expenses, and the fund's allocated portion of the fees and expenses of the Independent Board Members and the fees and expenses of independent counsel to Dreyfus Investment Portfolios and to the Independent Board Members.

The Dreyfus Socially Responsible Growth Fund. The Manager has agreed that if, in any fiscal year, the aggregate expenses of the fund, exclusive of taxes, brokerage fees, interest and (with the prior written consent of the necessary state securities commissions) extraordinary expenses, but including the management fee, exceed the expense limitation of any state having jurisdiction over the fund, the fund may deduct from the fees to be paid to the Manager, or the Manager will bear, the excess expense. Such deduction or payment, if any, will be estimated daily, reconciled and effected or paid, as the case may be, on a monthly basis and will be limited to the amount of fees otherwise payable to the Manager under the fund's Management Agreement.

Index Licensing Disclosures (Small Cap Stock Index Portfolio only)

The fund is not sponsored, endorsed, sold or promoted by S&P. S&P makes no representation or warranty, express or implied, to the owners of the fund or any member of the public regarding the advisability of investing in securities generally or in the fund particularly or the ability of the S&P SmallCap 600 Index to track general stock market performance. S&P's only relationship to Dreyfus Investment Portfolios is the licensing of certain trademarks and trade names of S&P and of the S&P SmallCap 600 Index which is determined, composed and calculated by S&P without regard to Dreyfus Investment Portfolios or the fund. S&P has no obligation to take the needs of Dreyfus Investment Portfolios or the owners of the fund into consideration in determining, composing or calculating the S&P SmallCap 600 Index. S&P is not responsible for and has not participated in the determination of the prices and amount of the fund or the timing of the issuance or sale of the fund or in the calculation of the equation by which the fund is to be converted into cash. S&P has no obligation or liability in connection with the administration, marketing or trading of the Small Cap Stock Index Portfolio.

S&P DOES NOT GUARANTEE THE ACCURACY AND/OR THE COMPLETENESS OF THE S&P SMALLCAP 600 INDEX OR ANY DATA INCLUDED THEREIN AND S&P SHALL HAVE NO LIABILITY FOR ANY ERRORS, OMISSIONS, OR INTERRUPTIONS THEREIN. S&P MAKES NO WARRANTY, EXPRESS OR IMPLIED, AS TO RESULTS TO BE OBTAINED BY THE FUND, OWNERS OF THE PORTFOLIO, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE S&P SMALLCAP 600 INDEX OR ANY DATA INCLUDED THEREIN. S&P MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE WITH RESPECT TO THE S&P SMALLCAP 600 INDEX OR ANY DATA INCLUDED THEREIN. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT SHALL S&P HAVE ANY LIABILITY FOR ANY SPECIAL, PUNITIVE, INDIRECT, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS), EVEN IF NOTIFIED OF THE POSSIBILITY OF SUCH DAMAGES.

COUNSEL AND INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Except for The Dreyfus Socially Responsible Growth Fund, Stroock & Stroock & Lavan LLP, 180 Maiden Lane, New York, New York 10038-4982, as counsel for the funds, has rendered its opinion as to certain legal matters regarding the due authorization and valid issuance of the shares being sold pursuant to the funds' prospectuses. For The Dreyfus Socially Responsible Growth Fund, Fulbright & Jaworski L.L.P., 666 Fifth Avenue, New York, New

York 10103-3198, as counsel for the fund, has rendered its opinion as to certain legal matters regarding the due authorization and valid issuance of the shares being sold pursuant to the fund's prospectus.

Ernst & Young LLP, 5 Times Square, New York, New York 10036-6530, an independent registered public accounting firm, has been selected to serve as the independent registered public accounting firm for the funds.

HOW TO BUY SHARES

Initial shares and Service shares are identical, except as to the expenses borne by each class, which may affect performance. See "Distribution Plans (Service Shares Only)." Shares currently are offered only to separate accounts of Participating Insurance Companies. **Individuals may not place purchase orders directly with a fund.** See the prospectus of the separate account of the Participating Insurance Company for more information on the purchase of fund shares and with respect to the availability for investment in specific funds and specific classes of the funds. The funds do not issue share certificates.

Each fund reserves the right to reject any purchase order. No fund will establish an account for a "foreign financial institution," as that term is defined in Treasury rules implementing Section 312 of the USA PATRIOT Act. Foreign financial institutions include: foreign banks (including foreign branches of U.S. depository institutions); foreign offices of U.S. securities broker-dealers, futures commission merchants and mutual funds; non-U.S. entities that, if they were located in the United States, would be securities broker-dealers, futures commission merchants or mutual funds; and non-U.S. entities engaged in the business of currency dealer or exchanger or money transmitter.

As discussed under "Management Arrangements – Distributor," Participating Insurance Companies and other financial intermediaries may receive revenue sharing payments from the Manager or the Distributor. The receipt of such payments could create an incentive for a Participating Insurance Company to recommend or sell fund shares instead of other mutual funds where such payments are not received. Please contact your Participating Insurance Company for details about any payments it may receive in connection with the sale of fund shares or the provision of services to a fund.

Purchase orders from separate accounts based on the amount of premium payments to be invested pursuant to the Policies and transaction requests received by the Participating Insurance Company on a given business day in accordance with procedures established by the Participating Insurance Company will be effected at the net asset value of the applicable fund determined on such business day if the orders are received by the Transfer Agent or other authorized entity in proper form and in accordance with applicable requirements on the next business day and Federal Funds in the net amount of such orders are received by the fund on the next business day in accordance with applicable requirements. It is each Participating Insurance Company's responsibility to properly transmit purchase orders and Federal Funds in accordance with applicable requirements. Policy owners should refer to the prospectus for their contracts or Policies in this regard.

Converting Shares

Under certain circumstances, shares of a fund with more than one class may be converted from one class of shares to another class of shares of the same fund. The aggregate dollar value of the shares of the class received upon any such conversion will equal the aggregate dollar value of the converted shares on the date of the conversion.

Information Pertaining to Purchase Orders

Dreyfus Stock Index Fund and Small Cap Stock Index Portfolio. To permit these funds to invest your money as promptly as possible after receipt, thereby maximizing each fund's ability to track its Index, you are urged to transmit your purchase order in proper form so that it may be received by the Transfer Agent prior to 12:00 noon, Eastern time, on the day you want your purchase order to be effective.

HOW TO REDEEM SHARES

Fund shares may be redeemed at any time by the separate accounts of the Participating Insurance Companies. **Individuals may not place redemption orders directly with a fund.** Redemption requests from separate accounts based on premiums and transaction requests received by the Participating Insurance Company on a given business day in accordance with procedures established by the Participating Insurance Company will be effected at the net

asset value of the applicable fund determined on such business day if the requests are received by the Transfer Agent or another authorized entity in proper form and in accordance with applicable requirements on the next business day. It is each Participating Insurance Company's responsibility to properly transmit redemption requests in accordance with applicable requirements. Policy owners should consult their Participating Insurance Company prospectus in this regard. No charges are imposed by the funds when shares are redeemed.

The funds ordinarily will make payment for all shares redeemed within seven days after receipt by the Transfer Agent of a redemption request in proper form, except as provided by the rules of the SEC.

Should any conflict between Policy owners arise which would require that a substantial amount of net assets be withdrawn, orderly portfolio management could be disrupted to the potential detriment of such Policy owners.

Redemption Commitment

Each fund has committed itself to pay in cash all redemption requests by any fund shareholder of record, limited in amount during any 90-day period to the lesser of \$250,000 or 1% of the value of the fund's net assets at the beginning of such period. Such commitment is irrevocable without the prior approval of the SEC. In the case of requests for redemption from the fund in excess of such amount, the fund's board reserves the right to make payments in whole or in part in securities or other assets of the fund in case of an emergency or any time a cash distribution would impair the liquidity of the fund to the detriment of the existing shareholders. In such event, the securities would be valued in the same manner as the fund's portfolio is valued. If the recipient sells such securities, brokerage charges would be incurred.

Suspension of Redemptions

The right of redemption may be suspended or the date of payment postponed (a) during any period when the NYSE is closed (other than customary weekend and holiday closings), (b) when the SEC determines that trading in the markets a fund ordinarily utilizes is restricted, or when an emergency exists as determined by the SEC so that disposal of the fund's investments or determination of its NAV is not reasonably practicable, or (c) for such other periods as the SEC by order may permit to protect fund shareholders.

Information Pertaining to Redemptions

Dreyfus Stock Index Fund and Small Cap Stock Index Portfolio. To maximize each fund's ability to track the Index, you are urged to transmit redemption requests so that they may be received by the fund or its Transfer Agent prior to 12:00 noon, Eastern time, on the day upon which separate accounts of Participating Insurance Companies want the redemption requests to be effective.

EXCHANGE PRIVILEGE

Investors can exchange shares of a class for shares of the same class of any other fund managed by the Manager that is offered only to separate accounts established by Participating Insurance Companies to fund Policies, subject to the terms and conditions set forth in the applicable Participating Insurance Company's prospectus. Policy holders should refer to the applicable Participating Insurance Company's prospectus for more information on exchanging fund shares. The funds reserve the right to modify or discontinue the exchange privilege at any time upon 60 days' notice to the Participating Insurance Companies.

DISTRIBUTION PLANS

(Service shares only)

Rule 12b-1 under the 1940 Act provides, among other things, that an investment company may bear expenses of distributing its shares only pursuant to a plan adopted in accordance with the Rule. Pursuant to a Distribution Plan adopted with respect to Service shares, each fund pays the Distributor at an annual rate of 0.25% of the value of the average daily net assets of the fund's Service shares for distributing Service shares, for advertising and marketing related to Service shares and for servicing and/or maintaining accounts of Service class shareholders. Under the Distribution Plan, the Distributor may make payments to Participating Insurance Companies and the principal underwriters for their variable insurance products. The fees payable under the Distribution Plan are payable without

regard to actual expenses incurred. The board believes that there is a reasonable likelihood that each Distribution Plan will benefit the relevant fund and the holders of the fund's Service shares.

A quarterly report of the amounts expended under a fund's Distribution Plan, and the purposes for which such expenditures were incurred, must be made to the board for its review. Each Distribution Plan provides that it may not be amended to increase materially the costs that holders of Service shares may bear pursuant to the Distribution Plan without the approval of the holders of Service shares; other material amendments of the Distribution Plan must be approved by the board and by the board members who are not "interested persons" (as defined in the 1940 Act) of the fund and have no direct or indirect financial interest in the operation of the Distribution Plan or in any agreements entered into in connection with the Distribution Plan, by vote cast in person at a meeting called for the purpose of considering such amendments. Each Distribution Plan is subject to annual approval by such vote of the board members cast in person at a meeting called for the purpose of voting on the Distribution Plan. As to each fund, the Distribution Plan is terminable at any time by vote of a majority of the board members who are not "interested persons" with respect to the fund and have no direct or indirect financial interest in the operation of the Distribution Plan or any agreements related to the Distribution Plan or by vote of a majority of the outstanding voting securities of such class.

ADDITIONAL INFORMATION ABOUT INVESTMENTS, INVESTMENT TECHNIQUES AND RISKS

See the prospectus and "Investments, Investment Techniques and Risks" and "Investment Restrictions" in Part II of this SAI to determine which policies and risks apply to your fund.

The funds are intended to be funding vehicles for VA contracts and VLI policies to be offered by Participating Insurance Companies and will seek to be offered in as many jurisdictions as possible. Certain states have regulations concerning concentration of investments and certain investment techniques. If applied to a fund, the fund may be limited in its ability to engage in such techniques and to manage its portfolio with the flexibility provided herein. It is each fund's intention to operate in material compliance with current insurance laws and regulations, as applied, in each jurisdiction in which the fund is offered.

All Funds other than the Money Market Portfolio

Equity Securities

Equity securities include common stocks and certain preferred stocks, convertible securities and warrants. Equity securities fluctuate in value, often based on factors unrelated to the value of the issuer of the securities, and such fluctuations can be pronounced. Changes in the value of a fund's investments will result in changes in the value of its shares and thus the fund's total return to investors.

Investing in equity securities poses risks specific to an issuer as well as to the particular type of company issuing the equity securities. For example, equity securities of small- or mid-capitalization companies tend to have more abrupt or erratic price swings than equity securities of larger, more established companies because, among other reasons, they trade less frequently and in lower volumes and their issuers typically are more subject to changes in earnings and prospects in that they are more susceptible to changes in economic conditions, may be more reliant on singular products or services and are more vulnerable to larger competitors. Equity securities of these types of companies may have a higher potential for gains, but also may be subject to greater risk of loss. If a fund, together with other investment companies and other clients advised by the Adviser and its affiliates, owns significant positions in portfolio companies, depending on market conditions, the fund's ability to dispose of some or all positions at a desirable time may be adversely affected. While common stockholders usually have voting rights on a number of significant matters, other types of equity securities, such as preferred stock, common limited partnership units and limited liability company interests, may not ordinarily have voting rights.

An investment in securities of companies that have no earnings or have experienced losses is generally based on a belief that actual or anticipated products or services will produce future earnings. If the anticipated event is delayed or does not occur, or if investor perception about the company changes, the company's stock price may decline sharply and its securities may become less liquid.

Investing in equity securities also poses risks specific to a particular industry, market or sector, such as technology, financial services, consumer goods or natural resources (*e.g.*, oil and gas). To some extent, the prices of equity securities tend to move by industry, market or sector. When market conditions favorably affect, or are expected to favorably affect, an industry, the share prices of the equity securities of companies in that industry tend to rise. Conversely, negative news or a poor outlook for a particular industry can cause the share prices of such securities of companies in that industry to decline quickly.

Common Stock. Stocks and similar securities, such as common limited partnership units and limited liability company interests, represent shares of ownership in a company. After other claims are satisfied, common stockholders and other common equity owners participate in company profits on a pro-rata basis; profits may be paid out in dividends or reinvested in the company to help it grow. Increases and decreases in earnings are usually reflected in a company's common equity securities, so common equity securities generally have the greatest appreciation and depreciation potential of all corporate securities. Common stock may be received upon the conversion of convertible securities.

Preferred Stock. Preferred stock is a form of equity ownership in a corporation. Generally, preferred stock has a specified dividend and ranks after bonds and before common stocks in its claim on income for dividend payments and on assets should the company be liquidated. The market value of preferred stock generally increases when interest rates decline and decreases when interest rates rise, but, as with debt securities, also is affected by the issuer's ability or perceived ability to make payments on the preferred stock. While most preferred stocks pay a dividend, a fund may purchase preferred stock where the issuer has omitted, or is in danger of omitting, payment of its dividend. Such investments would be made primarily for their capital appreciation potential. Certain classes of preferred stock are convertible, meaning the preferred stock is convertible into shares of common stock of the issuer. Holding convertible preferred stock can provide a steady stream of dividends and the option to convert the preferred stock to common stock.

Certain convertible preferred stocks may offer enhanced yield features. These preferred stocks may feature a mandatory conversion date and may have a capital appreciation limit expressed in terms of a stated price. Other types of convertible securities may be designed to provide the investor with high current income with some prospect of future capital appreciation and may have some built-in call protection. Investors may have the right to convert such securities into shares of common stock at a preset conversion ratio or hold them until maturity. Upon maturity they may convert into either cash or a specified number of shares of common stock.

Trust preferred securities are preferred stocks issued by a special purpose trust subsidiary backed by subordinated debt of the corporate parent. These securities typically bear a market rate coupon comparable to interest rates available on debt of a similarly rated company. Holders of trust preferred securities have limited voting rights to control the activities of the trust and no voting rights with respect to the parent company.

Convertible Securities. Convertible securities include bonds, debentures, notes, preferred stocks or other securities that may be converted or exchanged (by the holder or by the issuer) into shares of the underlying common stock (or cash or securities of equivalent value) at a stated exchange ratio or predetermined price (the conversion price). Convertible securities have characteristics similar to both equity and fixed-income securities. Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer, although convertible bonds, as corporate debt obligations, enjoy seniority in right of payment to all equity securities, and convertible preferred stock is senior to common stock of the same issuer. Because of the subordination feature, however, convertible securities typically have lower ratings than similar non-convertible securities.

Although to a lesser extent than with fixed-income securities, the market value of convertible securities tends to decline as interest rates increase and, conversely, tends to increase as interest rates decline. In addition, because of the conversion feature, the market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stock. A unique feature of convertible securities is that as the market price of the underlying common stock declines, convertible securities tend to trade increasingly on a yield basis, and so may not experience market value declines to the same extent as the underlying common stock. When the market price of the underlying common stock increases, the prices of the convertible securities tend to rise as a reflection of the value of the underlying common stock. While no securities investments are without risk, investments in convertible securities generally entail less risk than investments in common stock of the same issuer.

Convertible securities provide for a stable stream of income with generally higher yields than common stocks, but there can be no assurance of current income because the issuers of the convertible securities may default on their obligations. A convertible security, in addition to providing fixed-income, offers the potential for capital appreciation through the conversion feature, which enables the holder to benefit from increases in the market price of the underlying common stock. There can be no assurance of capital appreciation, however, because securities prices fluctuate. Convertible securities generally offer lower interest or dividend yields than non-convertible securities of similar quality because of the potential for capital appreciation.

So-called "synthetic convertible securities" are comprised of two or more different securities, each with its own market value, whose investment characteristics, taken together, resemble those of convertible securities. An example is a non-convertible debt security and a warrant or option. The "market value" of a synthetic convertible is the combined value of its fixed-income component and its convertible component. For this reason, the values of a synthetic convertible and a true convertible security may respond differently to market fluctuations.

Warrants and Stock Purchase Rights. Warrants or stock purchase rights ("rights") give the holder the right to subscribe to equity securities at a specific price for a specified period of time. Warrants and rights are subject to the same market risk as stocks, but may be more volatile in price. A fund's investment in warrants and rights will not entitle it to receive dividends or exercise voting rights, provide no rights with respect to the assets of the issuer and will become worthless if not profitably exercised before the expiration date. Warrants, rights or other non-income producing equity securities may be received in connection with a fund's investments in corporate debt securities (further described below), or restructuring of investments. Bonds with warrants attached to purchase equity securities have many characteristics of convertible bonds and their prices may, to some degree, reflect the performance of the underlying stock.

IPOs. An IPO is a corporation's first offering of stock to the public. Shares are given a market value reflecting expectations for the corporation's future growth. Special rules of FINRA apply to the distribution of IPOs. Corporations offering IPOs generally have limited operating histories and may involve greater investment risk. Special risks associated with IPOs may include a limited number of shares available for trading, unseasoned trading, lack of investor knowledge of the company, and limited operating history, all of which may contribute to price volatility. The limited number of shares available for trading in some IPOs may make it more difficult for a fund to buy or sell significant amounts of shares without an unfavorable impact on prevailing prices. In addition, some IPOs are involved in relatively new industries or lines of business, which may not be widely understood by investors. Some of the companies involved in new industries may be regarded as developmental stage companies, without revenues or operating income, or the near-term prospects of such. Foreign IPOs are subject to foreign political and currency risks. Many IPOs are issued by undercapitalized companies of small or microcap size. The prices of these companies' securities can be very volatile, rising and falling rapidly, sometimes based solely on investor perceptions rather than economic reasons.

Fixed-Income Securities

Fixed-income securities include interest-bearing securities, such as corporate debt securities. Interest-bearing securities are investments which promise a stable stream of income, although the prices of fixed rate fixed-income securities are inversely affected by changes in interest rates and, therefore, are subject to interest rate risk, as well as the risk of unrelated market price fluctuations. Fixed-income securities may have various interest rate payment and reset terms, including fixed rate, floating or adjustable rate, zero coupon, contingent, deferred, payment in kind and auction rate features. Floating rate instruments, the rates of which adjust periodically by reference to another measure, such as the market interest rate, are generally less sensitive to interest rate changes than fixed rate instruments, although the value of floating rate loans and other floating rate securities may decline if their interest rates do not rise as quickly, or as much, as general interest rates or as expected. Certain securities, such as those with interest rates that fluctuate directly or indirectly based on multiples of a stated index, are designed to be highly sensitive to changes in interest rates and can subject the holders thereof to extreme reductions of yield and possibly loss of principal. Certain fixed-income securities may be issued at a discount from their face value or purchased at a price less than their stated face amount or at a price less than their issue price plus the portion of "original issue discount" previously accrued thereon, i.e., purchased at a "market discount." The amount of original issue discount and/or market discount on certain obligations may be significant, and accretion of market discount together with original issue discount, will cause a fund to realize income prior to the receipt of cash payments with respect to these securities. To maintain its qualification as a regulated investment company and avoid liability for federal income

taxes, a fund may be required to distribute such income accrued with respect to these securities and may have to dispose of portfolio securities under disadvantageous circumstances in order to generate cash to satisfy these distribution requirements.

Failure of an issuer to make timely interest or principal payments, or a decline or perception of a decline in the credit quality of a fixed-income security (known as credit risk), can cause the security's price to fall, potentially lowering a fund's share price. The values of fixed-income securities also may be affected by changes in the credit rating of the issuer. Once the rating of a portfolio security has been changed, a fund will consider all circumstances deemed relevant in determining whether to continue to hold the security. Fixed-income securities rated below investment grade by the Rating Agencies may be subject to greater risks with respect to the issuing entity and to greater market fluctuations (and not necessarily inversely with changes in interest rates) than certain lower yielding, higher-rated fixed-income securities. See "High Yield and Lower-Rated Securities" below for a discussion of those securities and see "Rating Categories" below for a general description of the Rating Agencies' ratings.

As a measure of a fixed-income security's cash flow, duration is an alternative to the concept of "term to maturity" in assessing the price volatility associated with changes in interest rates (known as interest rate risk). Generally, the longer the duration, the more volatility an investor should expect. For example, the market price of a bond with a duration of three years would be expected to decline 3% if interest rates rose 1%. Conversely, the market price of the same bond would be expected to increase 3% if interest rates fell 1%. The market price of a bond with a duration of six years would be expected to increase or decline twice as much as the market price of a bond with a three-year duration. Duration is a way of measuring a security's maturity in terms of the average time required to receive the present value of all interest and principal payments as opposed to its term to maturity. The maturity of a security measures only the time until final payment is due; it does not take account of the pattern of a security's cash flows over time, which would include how cash flow is affected by prepayments and by changes in interest rates. Incorporating a security's yield, coupon interest payments, final maturity and option features into one measure, duration is computed by determining the weighted average maturity of a bond's cash flows, where the present values of the cash flows serve as weights. In computing the duration of a fund, the Adviser will estimate the duration of obligations that are subject to features such as prepayment or redemption by the issuer, put options retained by the investor or other imbedded options, taking into account the influence of interest rates on prepayments and coupon flows.

Average weighted maturity is the length of time, in days or years, until the securities held by a fund, on average, will mature or be redeemed by their issuers. The average maturity is weighted according to the dollar amounts invested in the various securities by the fund. In general, the longer a fund's average weighted maturity, the more its share price will fluctuate in response to changing interest rates. For purposes of calculating average effective portfolio maturity, a security that is subject to redemption at the option of the issuer on a particular date (the "call date") which is prior to the security's stated maturity may be deemed to mature on the call date rather than on its stated maturity date. The call date of a security will be used to calculate average effective portfolio maturity when the Adviser reasonably anticipates, based upon information available to it, that the issuer will exercise its right to redeem the security. The Adviser may base its conclusion on such factors as the interest rate paid on the security compared to prevailing market rates, the amount of cash available to the issuer of the security, events affecting the issuer of the security, and other factors that may compel or make it advantageous for the issuer to redeem a security prior to its stated maturity.

When interest rates fall, the principal on certain fixed-income securities, including mortgage-backed and certain asset-backed securities (discussed below), may be prepaid. The loss of higher yielding underlying mortgages and the reinvestment of proceeds at lower interest rates can reduce a fund's potential price gain in response to falling interest rates, reduce the fund's yield, or cause the fund's share price to fall. This is known as prepayment risk. Conversely, when interest rates rise, the effective duration of a fund's fixed-rate mortgage-related and other asset-backed securities may lengthen due to a drop in prepayments of the underlying mortgages or other assets. This is known as extension risk and would increase the fund's sensitivity to rising interest rates and its potential for price declines.

U.S. Government Securities. U.S. Government securities are issued or guaranteed by the U.S. Government or its agencies or instrumentalities. U.S. Government securities include Treasury bills, Treasury notes and Treasury bonds, which differ in their interest rates, maturities and times of issuance. Treasury bills have initial maturities of one year or less; Treasury notes have initial maturities of one to ten years; and Treasury bonds generally have initial

maturities of greater than ten years. Some obligations issued or guaranteed by U.S. Government agencies and instrumentalities are supported by the full faith and credit of the Treasury; others by the right of the issuer to borrow from the Treasury; others by discretionary authority of the U.S. Government to purchase certain obligations of the agency or instrumentality; and others only by the credit of the agency or instrumentality. These securities bear fixed, floating or variable rates of interest. While the U.S. Government currently provides financial support to such U.S. Government-sponsored agencies or instrumentalities, no assurance can be given that it will always do so, since it is not so obligated by law. A security backed by the Treasury or the full faith and credit of the United States is guaranteed only as to timely payment of interest and principal when held to maturity. Neither the market value nor a fund's share price is guaranteed.

TIPS are issued by the Treasury and are designed to provide investors a long-term investment vehicle that is not vulnerable to inflation. The interest rate paid by TIPS is fixed, while the principal value rises or falls semi-annually based on changes in a published Consumer Price Index. Thus, if inflation occurs, the principal and interest payments on the TIPS are adjusted accordingly to protect investors from inflationary loss. During a deflationary period, the principal and interest payments decrease, although the TIPS' principal will not drop below its face value at maturity. In exchange for the inflation protection, TIPS generally pay lower interest rates than typical Treasury securities. Only if inflation occurs will TIPS offer a higher real yield than a conventional Treasury bond of the same maturity. The secondary market for TIPS may not be as active or liquid as the secondary market for conventional Treasury securities. See also "Inflation-Indexed Securities" below.

On August 5, 2011, S&P lowered its long-term sovereign credit rating for the United States of America to "AA+" from "AAA." The value of shares of a fund that may invest in U.S. Government obligations may be adversely affected by S&P's downgrade or any future downgrades of the U.S. Government's credit rating. While the long-term impact of the downgrade is uncertain, it could, for example, lead to increased volatility in the short-term.

Corporate Debt Securities. Corporate debt securities include corporate bonds, debentures, notes and other similar instruments, including certain convertible securities. Debt securities may be acquired with warrants attached to purchase additional fixed-income securities at the same coupon rate. A decline in interest rates would permit a fund to buy additional bonds at the favorable rate or to sell the warrants at a profit. If interest rates rise, the warrants would generally expire with no value. Corporate income-producing securities also may include forms of preferred or preference stock, which may be considered equity securities. The rate of interest on a corporate debt security may be fixed, floating or variable, and may vary inversely with respect to a reference rate such as interest rates or other financial indicators. The rate of return or return of principal on some debt obligations may be linked or indexed to the level of exchange rates between the U.S. dollar and a foreign currency or currencies. Such securities may include those whose principal amount or redemption price is indexed to, and thus varies directly with, changes in the market price of certain commodities, including gold bullion or other precious metals.

Ratings of Securities; Unrated Securities. Subsequent to its purchase by a fund, an issue of rated securities may cease to be rated or its rating may be reduced below any minimum that may be required for purchase by a fund. Neither event will require the sale of such securities by the fund, but the Adviser will consider such event in determining whether the fund should continue to hold the securities. In addition, it is possible that a Rating Agency might not timely change its ratings of a particular issue to reflect subsequent events. To the extent the ratings given by a Rating Agency for any securities change as a result of changes in such organizations or their rating systems, a fund will attempt to use comparable ratings as standards for its investments in accordance with its investment policies.

A fund may purchase unrated securities, which are not rated by a Rating Agency but that the Adviser determines are of comparable quality to the rated securities in which the fund may invest. Unrated securities may be less liquid than comparable rated securities, because dealers may not maintain daily markets in such securities and retail markets for many of these securities may not exist. As a result, a fund's ability to sell these securities when, and at a price, the Adviser deems appropriate may be diminished. Investing in unrated securities involves the risk that the Adviser may not accurately evaluate the security's comparative credit rating. To the extent that a fund invests in unrated securities, the fund's success in achieving its investment objective(s) may depend more heavily on the Adviser's credit analysis than if the fund invested exclusively in rated securities.

High Yield and Lower-Rated Securities. Fixed-income securities rated below investment grade, such as those rated Ba by Moody's or BB by S&P and Fitch, and as low as those rated Caa/CCC by Rating Agencies at the time of purchase (commonly known as "high yield" or "junk" bonds), or, if unrated, deemed to be of comparable quality by the Adviser, though higher yielding, are characterized by higher risk. See "Rating Categories" below for a general description of securities ratings. These securities may be subject to certain risks with respect to the issuing entity and to greater market fluctuations than certain lower yielding, higher-rated securities. These securities generally are considered by the Rating Agencies to be, on balance, predominantly speculative with respect to the issuer's ability to make principal and interest payments in accordance with the terms of the obligation and generally will involve more credit risk than securities in the higher rating categories. The ratings of Rating Agencies represent their opinions as to the quality of the obligations which they undertake to rate. It should be emphasized, however, that ratings are relative and subjective and are not absolute standards of quality and, although ratings may be useful in evaluating the safety or interest and principal payments, they do not evaluate the market value risk of such obligations. Although these ratings may be an initial criterion for selection of portfolio investments, the Adviser also will evaluate these securities and the ability of the issuers of such securities to pay interest and principal based upon financial and other available information. The success of a fund's investments in lower-rated securities may be more dependent on the Adviser's credit analysis than might be the case for investments in higher-rated securities.

Bond prices generally are inversely related to interest rate changes; however, bond price volatility also may be inversely related to coupon. Accordingly, below investment grade securities may be relatively less sensitive to interest rate changes than higher quality securities of comparable maturity, because of their higher coupon. This higher coupon is what the investor receives in return for bearing greater credit risk. The higher credit risk associated with below investment grade securities potentially can have a greater effect on the value of such securities than may be the case with higher quality issues of comparable maturity, and will be a substantial factor in a fund's relative share price volatility.

The prices of these securities can fall dramatically in response to negative news about the issuer or its industry. The market values of many of these securities also tend to be more sensitive to general economic conditions than are higher-rated securities and will fluctuate over time. Companies that issue certain of these securities often are highly leveraged and may not have available to them more traditional methods of financing. Therefore, the risk associated with acquiring the securities of such issuers generally is greater than is the case with the higher-rated securities. These securities may be particularly susceptible to economic downturns. For example, during an economic downturn or a sustained period of rising interest rates, highly leveraged issuers of these securities may not have sufficient revenues to meet their interest payment obligations. The issuer's ability to service its debt obligations also may be affected adversely by specific corporate developments, forecasts, or the unavailability of additional financing. The risk of loss because of default by the issuer is significantly greater for the holders of these securities because such securities generally are unsecured and often are subordinated to other creditors of the issuer. It is likely that an economic recession also would disrupt severely the market for such securities and have an adverse impact on their value.

Because there is no established retail secondary market for many of these securities, it may be anticipated that such securities could be sold only to a limited number of dealers or institutional investors. To the extent a secondary trading market for these securities does exist, it generally is not as liquid as the secondary market for higher-rated securities. The lack of a liquid secondary market may have an adverse impact on market price and yield and a fund's ability to dispose of particular issues when necessary to meet the fund's liquidity needs or in response to a specific economic event such as a deterioration in the creditworthiness of the issuer. The lack of a liquid secondary market for certain securities also may make it more difficult for a fund to obtain accurate market quotations for purposes of valuing the fund's portfolio and calculating its NAV. Adverse conditions could make it difficult at times for a fund to sell certain securities or could result in lower prices than those used in calculating the fund's NAV. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the values and liquidity of these securities. In such cases, the Adviser's judgment may play a greater role in valuation because less reliable, objective data may be available.

Certain funds may invest in these securities when their issuers will be close to, or already have entered, reorganization proceedings. As a result, it is expected that these securities will cease or will have ceased to meet their interest payment obligations, and accordingly would trade in much the same manner as an equity security. Consequently, a fund would intend to make such investments on the basis of potential appreciation in the price of

these securities, rather than any expectation of realizing income. Reorganization entails a complete change in the structure of a business entity. An attempted reorganization may be unsuccessful, resulting in substantial or total loss of amounts invested. If reorganization is successful, the value of securities of the restructured entity may depend on numerous factors, including the structure of the reorganization, the market success of the entity's products or services, the entity's management, and the overall strength of the marketplace.

High yield, lower-rated securities acquired during an initial offering may involve special risks because they are new issues. A fund will not have any arrangement with any person concerning the acquisition of such securities.

Zero Coupon, Pay-In-Kind and Step-Up Securities. Zero coupon securities are issued or sold at a discount from their face value and do not entitle the holder to any periodic payment of interest prior to maturity or a specified redemption date or cash payment date. Zero coupon securities also may take the form of notes and bonds that have been stripped of their unmatured interest coupons, the coupons themselves and receipts or certificates representing interests in such stripped debt obligations and coupons. Zero coupon securities issued by corporations and financial institutions typically constitute a proportionate ownership of the issuer's pool of underlying Treasury securities. A zero coupon security pays no interest to its holders during its life and is sold at a discount to its face value at maturity. The amount of any discount varies depending on the time remaining until maturity or cash payment date, prevailing interest rates, liquidity of the security and perceived credit quality of the issuer. Pay-in-kind securities generally pay interest through the issuance of additional securities. Step-up coupon bonds are debt securities that typically do not pay interest for a specified period of time and then pay interest at a series of different rates. The amount of any discount on these securities varies depending on the time remaining until maturity or cash payment date, prevailing interest rates, liquidity of the security and perceived credit quality of the issuer. The market prices of these securities generally are more volatile and are likely to respond to a greater degree to changes in interest rates than the market prices of securities that pay cash interest periodically having similar maturities and credit qualities. In addition, unlike bonds that pay cash interest throughout the period to maturity, a fund will realize no cash until the cash payment date unless a portion of such securities are sold and, if the issuer defaults, the fund may obtain no return at all on its investment. Federal income tax law requires the holder of a zero coupon security or of certain pay-in-kind or step-up bonds to accrue income with respect to these securities prior to the receipt of cash payments. To maintain its qualification as a regulated investment company and avoid liability for federal income taxes, a fund may be required to distribute such income accrued with respect to these securities and may have to dispose of portfolio securities under disadvantageous circumstances in order to generate cash to satisfy these distribution requirements.

The credit risk factors pertaining to high-yield, lower-rated securities (discussed above) also apply to lower-rated zero coupon, pay-in-kind and step-up securities. In addition to the risks associated with the credit rating of the issuers, the market prices of these securities may be very volatile during the period no interest is paid.

Inflation-Indexed Securities. Inflation-indexed securities, such as TIPS, are fixed-income securities whose value is periodically adjusted according to the rate of inflation. Two structures are common. The Treasury and some other issuers utilize a structure that accrues inflation into the principal value of the bond. Most other issuers pay out the Consumer Price Index accruals as part of a semi-annual coupon.

Inflation-indexed securities issued by the Treasury have varying maturities and pay interest on a semi-annual basis equal to a fixed percentage of the inflation-adjusted principal amount. If the periodic adjustment rate measuring inflation falls, the principal value of inflation-index bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of Treasury inflation-indexed bonds, even during a period of deflation. However, the current market value of the bonds is not guaranteed and will fluctuate. Other inflation-related bonds may or may not provide a similar guarantee. If a guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal amount.

The periodic adjustment of U.S. inflation-indexed securities is tied to the Consumer Price Index for Urban Consumers ("CPI-U"), which is calculated monthly by the U.S. Bureau of Labor Statistics. The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation-indexed securities issued by a foreign government are generally adjusted to reflect a comparable inflation index calculated by that government. There can be no assurance that the CPI-U or any foreign inflation

index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States.

The value of inflation-indexed securities is expected to change in response to changes in real interest rates. Real interest rates in turn are tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if the rate of inflation rises at a faster rate than nominal interest rates, real interest rates might decline, leading to an increase in value of inflation-indexed securities. In contrast, if nominal interest rates increase at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation-index securities. While these securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in value. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the security's inflation measure.

Variable and Floating Rate Securities. Variable and floating rate securities provide for adjustment in the interest rate paid on the obligations. The terms of such obligations typically provide that interest rates are adjusted based upon an interest or market rate adjustment as provided in the respective obligations. The adjustment intervals may be regular, and range from daily up to annually, or may be event-based, such as based on a change in the prime rate. Variable rate obligations typically provide for a specified periodic adjustment in the interest rate, while floating rate obligations typically have an interest rate which changes whenever there is a change in the external interest or market rate. Because of the interest rate adjustment feature, variable and floating rate securities provide a fund with a certain degree of protection against rises in interest rates, although the fund will participate in any declines in interest rates as well. Generally, changes in interest rates will have a smaller effect on the market value of variable and floating rate securities than on the market value of comparable fixed-income obligations. Thus, investing in variable and floating rate securities generally allows less opportunity for capital appreciation and depreciation than investing in comparable fixed-income securities.

Variable Rate Demand Notes. Variable rate demand notes include master demand notes, which are obligations that permit a fund to invest fluctuating amounts, at varying rates of interest, pursuant to direct arrangements between the fund, as lender, and the borrower. These obligations permit daily changes in the amounts borrowed. Because these obligations are direct lending arrangements between the lender and borrower, it is not contemplated that such instruments generally will be traded, and there generally is no established secondary market for these obligations, although they are redeemable on demand at face value, plus accrued interest. Accordingly, where these obligations are not secured by letters of credit or other credit support arrangements, the fund's right to redeem is dependent on the ability of the borrower to pay principal and interest on demand. Such obligations frequently are not rated by credit rating agencies. Changes in the credit quality of banks or other financial institutions providing any credit support or liquidity enhancements could cause losses to the fund.

Floating and Inverse Floating Rate Debt Instruments. The interest rate on a floating rate debt instrument ("floater") is a variable rate which is tied to another interest rate, such as a prime rate or Treasury bill rate. The interest rate on an inverse floating rate debt instrument moves or resets in the opposite direction from the market rate of interest to which the inverse floater is indexed or inversely to a multiple of the applicable index. An inverse floating rate debt instrument may exhibit greater price volatility than a fixed rate obligation of similar credit quality, and investing in these instruments involves leveraging which may magnify gains or losses.

Loans. Senior secured loans ("Senior Loans") typically hold a first lien priority and, like other types of loans, pay interest at rates that are determined daily, monthly, quarterly or semi-annually on the basis of a floating base lending rate plus a premium or credit spread. These base lending rates are primarily LIBOR and secondarily the prime rate offered by one or more major U.S. banks and the certificate of deposit rate or other base lending rates used by commercial lenders. As short-term interest rates increase, interest payable to a fund from its investments in loans is likely to increase, and as short-term interest rates decrease, interest payable to the fund from its investments in loans is likely to decrease. To the extent a fund invests in loans with a base lending rate floor, the fund's potential for decreased income in a flat or falling rate environment may be mitigated, but the fund may not receive the benefit of increased coupon payments if the relevant interest rate increases but remains below the base lending rate floor.

Loans in which a fund may invest are typically made to U.S. and, to a limited extent, non-U.S. corporations, partnerships and other business entities that operate in various industries and geographical regions (a "Borrower"). Borrowers may obtain loans to, among other reasons, refinance existing debt and for acquisitions, dividends, leveraged buyouts and general corporate purposes. Subordinated loans generally have the same characteristics as Senior Loans except that such loans are subordinated in payment and/or lower in lien priority to first lien holders or may be unsecured.

Senior Loans hold the most senior position in the capital structure of a Borrower, are secured with specific collateral and have a claim on the assets and/or stock of the Borrower that is senior to that held by unsecured creditors, subordinated debt holders and stockholders of the Borrower. Typically, in order to borrow money pursuant to a Senior Loan, a Borrower will, for the term of the Senior Loan, pledge collateral, including, but not limited to: (i) working capital assets, such as accounts receivable and inventory, (ii) tangible fixed assets, such as real property, buildings and equipment, (iii) intangible assets, such as trademarks and patent rights (but excluding goodwill) and (iv) security interests in shares of stock of subsidiaries or affiliates. In the case of Senior Loans made to non-public companies, the company's shareholders or owners may provide collateral in the form of secured guarantees and/or security interests in assets that they own. In many instances, a Senior Loan may be secured only by stock in the Borrower or its subsidiaries. Collateral may consist of assets that may not be readily liquidated, and there is no assurance that the liquidation of such assets would satisfy fully a Borrower's obligations under a Senior Loan.

A Borrower must comply with various restrictive covenants contained in a loan agreement or note purchase agreement between the Borrower and the holders of a loan (the "Loan Agreement"). In a typical loan, an agent (the "Agent Bank") administers the terms of the Loan Agreement. In such cases, the Agent Bank is normally responsible for the collection of principal and interest payments from the Borrower and the apportionment of these payments to the credit of all institutions that are parties to the Loan Agreement. A fund will generally rely upon the Agent Bank or an intermediate participant to receive and forward to the fund its portion of the principal and interest payments on the loan. Additionally, a fund normally will rely on the Agent Bank and the other loan investors to use appropriate credit remedies against the Borrower. The Agent Bank is typically responsible for monitoring compliance with covenants contained in the Loan Agreement based upon reports prepared by the Borrower. The Agent Bank may monitor the value of any collateral and, if the value of the collateral declines, may accelerate the loan, may give the Borrower an opportunity to provide additional collateral or may seek other protection for the benefit of the participants in the loan. The Agent Bank is compensated by the Borrower for providing these services under a Loan Agreement, and such compensation may include special fees paid upon structuring and funding the Senior Loan and other fees paid on a continuing basis. With respect to loans for which the Agent Bank does not perform such administrative and enforcement functions, the Adviser may perform such tasks on a fund's behalf, although a collateral bank will typically hold any collateral on behalf of the fund and the other loan investors pursuant to the applicable Loan Agreement.

In the process of buying, selling and holding loans, a fund may receive and/or pay certain fees. These fees are in addition to interest payments received and may include facility fees, commitment fees, amendment fees, commissions and prepayment penalty fees. When a fund buys a loan it may receive a facility fee and when it sells a loan it may pay a facility fee. On an ongoing basis, a fund may receive a commitment fee based on the undrawn portion of the underlying line of credit portion of a loan. In certain circumstances, a fund may receive a prepayment penalty fee upon the prepayment of a loan by a Borrower. Other fees received by a fund may include covenant waiver fees, covenant modification fees or other amendment fees.

Offerings of Senior Loans and other loans in which a fund may invest generally are not registered with the SEC, or any state securities commission, and are not listed on any national securities exchange. Because there is less readily available or reliable information about most loans than is the case for many other types of securities, the Adviser will rely primarily on its own evaluation of a Borrower's credit quality rather than on any available independent sources. Therefore, a fund investing in loans will be particularly dependent on the analytical abilities of the Adviser. No active trading market may exist for some loans, which may make it difficult to value them. Some loans may be subject to restrictions on resale. In some cases, negotiations involved in disposing of indebtedness may require weeks to complete. Any secondary market for loans may be subject to irregular trading activity, wide bid/ask spreads and extended trade settlement periods, which may impair the ability of a seller to realize full value and thus cause a material decline in a fund's net asset value. In addition, a fund may not be able to readily dispose of its loans at prices that approximate those at which the fund could sell such loans if they were more widely-traded and, as a

result of such illiquidity, the fund may have to sell other investments or engage in borrowing transactions if necessary to raise cash to meet its obligations. If a fund's investments are focused on loans, a limited supply or relative illiquidity of loans may adversely affect a fund's yield.

The settlements of secondary market purchases of Senior Loans in the ordinary course, on a settlement date beyond the period expected by loan market participants (*i.e.*, T+7 for par loans and T+20 for distressed loans, in other words more than seven or twenty business days beyond the trade date, respectively), are subject to the delayed compensation mechanics prescribed by the Loan Syndications and Trading Association ("LSTA"). For par loans, for example, income accrues to the buyer of the loan (the "Buyer") during the period beginning on the last date by which the loan purchase should have settled (T+7) to and including the actual settlement date. Should settlement of a par loan purchased in the secondary market be delayed beyond the T+7 period prescribed by the LSTA, the Buyer is typically compensated for such delay through a payment from the seller of the loan (this payment may be netted from the wire released on settlement date for the purchase price of the loan paid by the Buyer). In brief, the adjustment is typically calculated by multiplying the notional amount of the trade by the applicable margin in the Loan Agreement pro rated for the number of business days (calculated using a year of 360 days) beyond the settlement period prescribed by the LSTA, plus any amendment or consent fees that the Buyer should have received. Furthermore, the purchase of a Senior Loan in the secondary market is typically negotiated and finalized pursuant to a binding trade confirmation, and, therefore, the risk of non-delivery of the security to the fund is reduced or eliminated.

A fund may purchase and retain in its portfolio loans where the Borrower has experienced, or may be perceived to be likely to experience, credit problems, including involvement in or recent emergence from bankruptcy court proceedings or other forms of debt restructuring. Such investments may provide opportunities for enhanced income, although they also will be subject to greater risk of loss. At times, in connection with the restructuring of a loan either outside of bankruptcy court or in the context of bankruptcy court proceedings, a fund may determine or be required to accept equity securities or junior credit securities in exchange for all or a portion of a loan. A fund may from time to time participate on ad-hoc committees formed by creditors to negotiate with the management of financially troubled Borrowers and may incur legal fees as a result of such participation. In addition, such participation may restrict the fund's ability to trade in or acquire additional positions in a particular security when it might otherwise desire to do so. Participation by a fund also may expose the fund to potential liabilities under bankruptcy or other laws governing the rights of creditors and debtors.

Loans are usually rated below investment grade and may also be unrated. As a result, the risks associated with investing in loans are similar to the risks of fixed-income securities rated below investment grade, although Senior Loans are senior and secured, in contrast to other fixed-income securities rated below investment grade, which are often subordinated and/or unsecured. Any specific collateral used to secure a loan, however, may decline in value or become illiquid, which would adversely affect the loan's value. Loans are subject to a number of risks described elsewhere in this SAI section titled "Fixed-Income Securities," including non-payment of principal and interest, liquidity risk and the risk of investing in fixed-income securities rated below investment grade.

Investing in loans is subject to legislative risk. If legislation or state or federal regulations impose additional requirements or restrictions on the ability of financial institutions to make loans, the availability of Senior Loans and other types of loans for investment by a fund may be adversely affected. In addition, such requirements or restrictions could reduce or eliminate sources of financing for certain issuers. This would increase the risk of default. If legislation or federal or state regulations require financial institutions to increase their capital requirements, this may cause financial institutions to dispose of loans that are considered highly levered transactions. If a fund attempts to sell a loan at a time when a financial institution is engaging in such a sale, the price the fund could receive for the loan may be adversely affected.

Subordinated loans generally are subject to similar risks as those associated with investments in Senior Loans, except that such loans are subordinated in payment and/or lower in lien priority to first lien holders or may be unsecured. In the event of default on a subordinated loan, the first priority lien holder has first claim to the underlying collateral of the loan. These loans are subject to the additional risk that the cash flow of the Borrower and property securing the loan or debt, if any, may be insufficient to meet scheduled payments after giving effect to the senior unsecured or senior secured obligations of the Borrower. This risk is generally higher for subordinated

unsecured loans or debt that is not backed by a security interest in any specific collateral. Subordinated loans generally have greater price volatility than Senior Loans and may be less liquid.

The Adviser and/or its affiliates may participate in the primary and secondary market for loans. Because of limitations imposed by applicable law, the presence of the Adviser and/or the Adviser's affiliates in the loan market may restrict a fund's ability to acquire certain loans, or affect the timing or price of such acquisitions. Also, because the Adviser, in the course of investing fund assets in loans, may have access to material non-public information regarding a Borrower, the ability of a fund or funds advised by such Adviser to purchase or sell publicly-traded securities of such Borrowers may be restricted. Conversely, because of the financial services and asset management activities of the Adviser and/or its affiliates, the Adviser may not have access to material non-public information regarding the Borrower to which other lenders have access.

Participation Interests and Assignments. Loans may be originated, negotiated and structured by a syndicate of lenders ("Co-Lenders"), consisting of commercial banks, thrift institutions, insurance companies, financial companies or other financial institutions one or more of which acts as Agent Bank. Co-Lenders may sell such securities to third parties called "Participants." A fund investing in such securities may participate as a Co-Lender at origination or acquire an interest in the security (a "participation interest") from a Co-Lender or a Participant. Co-Lenders and Participants interposed between a fund and the Borrower, together with the Agent Bank(s), are referred herein as "Intermediate Participants." A participation interest gives a fund an undivided interest in the security in the proportion that the fund's participation interest bears to the total principal amount of the security. These instruments may have fixed, floating or variable rates of interest.

A fund may purchase a participation interest in a portion of the rights of an Intermediate Participant, which would not establish any direct relationship between the fund and the Borrower. The fund would be required to rely on the Intermediate Participant that sold the participation interest not only for the enforcement of the fund's rights against the Borrower but also for the receipt and processing of payments due to the fund under the security. The fund would have the right to receive payments of principal, interest and any fees to which it is entitled only from the Intermediate Participant and only upon receipt of the payments from the Borrower. The fund generally will have no right to enforce compliance by the Borrower with the terms of the Loan Agreement nor any rights of set-off against the Borrower, and the fund may not directly benefit from any collateral supporting the obligation in which it has purchased the participation interest. Because it may be necessary to assert through an Intermediate Participant such rights as may exist against the Borrower, in the event the Borrower fails to pay principal and interest when due, the fund may be subject to delays, expenses and risks that are greater than those that would be involved if the fund would enforce its rights directly against the Borrower. Moreover, under the terms of a participation interest, a fund may be regarded as a creditor of the Intermediate Participant (rather than of the Borrower), so that the fund may also be subject to the risk that the Intermediate Participant may become insolvent. In the event of the insolvency of the Intermediate Participant, the fund may be treated as a general creditor of the Intermediate Participant and may not benefit from any set-off between the Intermediate Participant and the Borrower. Certain participation interests may be structured in a manner designed to avoid purchasers being subject to the credit risk of the Intermediate Participant, but even under such a structure, in the event of the Intermediate Participant's insolvency, the Intermediate Participant's servicing of the participation interests may be delayed and the assignability of the participation interest impaired. Similar risks may arise with respect to the Agent Bank if, for example, assets held by the Agent Bank for the benefit of a fund were determined by the appropriate regulatory authority or court to be subject to the claims of the Agent Bank's creditors. In such case, the fund might incur certain costs and delays in realizing payment in connection with the participation interest or suffer a loss of principal and/or interest. Further, in the event of the bankruptcy or insolvency of the Borrower, the obligation of the Borrower to repay the loan may be subject to certain defenses that can be asserted by such Borrower as a result of improper conduct by the Agent Bank or Intermediate Participant.

A fund may invest in the underlying loan to the Borrower through an assignment of all or a portion of such loan ("Assignments") from a third party. When the fund purchases Assignments from Co-Lenders it will acquire direct rights against the Borrower on the loan. Because Assignments are arranged through private negotiations between potential assignees and potential assignors, however, the rights and obligations acquired by the fund as the purchaser of an Assignment may differ from, and be more limited than, those held by the assigning Co-Lender.

A fund may have difficulty disposing of participation interests and Assignments because to do so it will have to sell such securities to a third party. Because there is no established secondary market for such securities, it is anticipated that such securities could be sold only to a limited number of institutional investors. The lack of an established secondary market may have an adverse impact on the value of such securities and the fund's ability to dispose of particular participation interests or Assignments when necessary to meet the fund's liquidity needs or in response to a specific economic event such as a deterioration in the creditworthiness of the Borrower. The lack of an established secondary market for participation interests and Assignments also may make it more difficult for the fund to assign a value to these securities for purposes of valuing the fund's portfolio and calculating its NAV.

Mortgage-Related Securities. Mortgage-related securities are a form of derivative collateralized by pools of residential or commercial mortgages. Pools of mortgage loans are assembled as securities for sale to investors by various governmental, government-related and private organizations. These securities may include complex instruments such as collateralized mortgage obligations ("CMOs") and stripped mortgage-backed securities, mortgage pass-through securities, interests in REMICs, adjustable rate mortgage loans, or other kinds of mortgage-backed securities, including those with fixed, floating and variable interest rates; interest rates based on multiples of changes in a specified index of interest rates; interest rates that change inversely to changes in interest rates; and those that do not bear interest.

Mortgage-related securities are subject to credit, prepayment and interest rate risk, and may be more volatile and less liquid, and more difficult to price accurately, than more traditional debt securities. Although certain mortgage-related securities are guaranteed by a third party (such as a U.S. Government agency or instrumentality with respect to government-related mortgage-backed securities) or otherwise similarly secured, the market value of the security, which may fluctuate, is not secured. Mortgage-backed securities issued by private issuers, whether or not such securities are subject to guarantees or another form of credit enhancement, may entail greater risk than securities directly or indirectly guaranteed by the U.S. Government. The market value of mortgage-related securities depends on, among other things, the level of interest rates, the securities' coupon rates and the payment history of the mortgagors of the underlying mortgages.

Mortgage-related securities generally are subject to credit risks associated with the performance of the underlying mortgage properties and to prepayment risk. In certain instances, the credit risk associated with mortgage-related securities can be reduced by third party guarantees or other forms of credit support. Improved credit risk does not reduce prepayment risk, which is unrelated to the rating assigned to the mortgage-related security. Prepayment risk may lead to pronounced fluctuations in value of the mortgage-related security. If a mortgage-related security is purchased at a premium, all or part of the premium may be lost if there is a decline in the market value of the security, whether resulting solely from changes in interest rates or from prepayments on the underlying mortgage collateral (the rates of which are highly dependent upon changes in interest rates, as discussed below). Mortgage loans are generally partially or completely prepaid prior to their final maturities as a result of events such as sale of the mortgaged premises, default, condemnation or casualty loss. Because these securities may be subject to extraordinary mandatory redemption in whole or in part from such prepayments of mortgage loans, a substantial portion of such securities may be redeemed prior to their scheduled maturities or even prior to ordinary call dates. Extraordinary mandatory redemption without premium could also result from the failure of the originating financial institutions to make mortgage loans in sufficient amounts within a specified time period. The ability of issuers of mortgage-backed securities to make payments depends on such factors as rental income, occupancy levels, operating expenses, mortgage default rates, taxes, government regulations and appropriation of subsidies.

Certain mortgage-related securities, such as inverse floating rate CMOs, have coupons that move inversely to a multiple of a specific index, which may result in a form of leverage. As with other interest-bearing securities, the prices of certain mortgage-related securities are inversely affected by changes in interest rates. However, although the value of a mortgage-related security may decline when interest rates rise, the converse is not necessarily true, since in periods of declining interest rates the mortgages underlying the security are more likely to be prepaid. For this and other reasons, a mortgage-related security's stated maturity may be shortened by unscheduled prepayments on the underlying mortgages, and, therefore, it is not possible to predict accurately the security's return to a fund. Moreover, with respect to certain stripped mortgage-backed securities, if the underlying mortgage securities experience greater than anticipated prepayments of principal, a fund may fail to fully recoup its initial investment even if the securities are rated in the highest rating category by a nationally recognized statistical rating organization. During periods of rapidly rising interest rates, prepayments of mortgage-related securities may occur

at slower than expected rates. Slower prepayments effectively may lengthen a mortgage-related security's expected maturity, which generally would cause the value of such security to fluctuate more widely in response to changes in interest rates. Were the prepayments on a fund's mortgage-related securities to decrease broadly, the fund's effective duration, and thus sensitivity to interest rate fluctuations, would increase. Commercial real property loans, however, often contain provisions that reduce the likelihood that such securities will be prepaid. The provisions generally impose significant prepayment penalties on loans and in some cases there may be prohibitions on principal prepayments for several years following origination.

Residential Mortgage-Related Securities. Residential mortgage-related securities representing participation interests in pools of one- to four-family residential mortgage loans issued or guaranteed by governmental agencies or instrumentalities, such as the GNMA, the FNMA and the Federal Home Loan Mortgage Corporation ("FHLMC"), or issued by private entities, have been issued using a variety of structures, including multi-class structures featuring senior and subordinated classes. Some mortgage-related securities have structures that make their reactions to interest rate changes and other factors difficult to predict, making their value highly volatile.

Mortgage-related securities issued by GNMA include Ginnie Maes which are guaranteed as to the timely payment of principal and interest by GNMA and such guarantee is backed by the full faith and credit of the U.S. Government. Ginnie Maes are created by an "issuer," which is a Federal Housing Administration ("FHA") approved mortgagee that also meets criteria imposed by GNMA. The issuer assembles a pool of FHA, Farmers' Home Administration or Veterans' Administration ("VA") insured or guaranteed mortgages which are homogeneous as to interest rate, maturity and type of dwelling. Upon application by the issuer, and after approval by GNMA of the pool, GNMA provides its commitment to guarantee timely payment of principal and interest on the Ginnie Maes backed by the mortgages included in the pool. The Ginnie Maes, endorsed by GNMA, then are sold by the issuer through securities dealers. Ginnie Maes bear a stated "coupon rate" which represents the effective FHA-VA mortgage rate at the time of issuance, less GNMA's and the issuer's fees. GNMA is authorized under the National Housing Act to guarantee timely payment of principal and interest on Ginnie Maes. This guarantee is backed by the full faith and credit of the U.S. Government. GNMA may borrow Treasury funds to the extent needed to make payments under its guarantee. When mortgages in the pool underlying a Ginnie Mae are prepaid by mortgagors or by result of foreclosure, such principal payments are passed through to the certificate holders. Accordingly, the life of the Ginnie Mae is likely to be substantially shorter than the stated maturity of the mortgages in the underlying pool. Because of such variation in prepayment rates, it is not possible to predict the life of a particular Ginnie Mae. Payments to holders of Ginnie Maes consist of the monthly distributions of interest and principal less GNMA's and the issuer's fees. The actual yield to be earned by a holder of a Ginnie Mae is calculated by dividing interest payments by the purchase price paid for the Ginnie Mae (which may be at a premium or a discount from the face value of the certificate). Monthly distributions of interest, as contrasted to semi-annual distributions which are common for other fixed interest investments, have the effect of compounding and thereby raising the effective annual yield earned on Ginnie Maes.

Mortgage-related securities issued by FNMA, including FNMA Guaranteed Mortgage Pass-Through Certificates (also known as "Fannie Maes"), are solely the obligations of FNMA and are not backed by or entitled to the full faith and credit of the U.S. Government. Fannie Maes are guaranteed as to timely payment of principal and interest by FNMA. Mortgage-related securities issued by FHLMC include FHLMC Mortgage Participation Certificates (also known as "Freddie Macs" or "PCs"). Freddie Macs are not guaranteed by the U.S. Government or by any Federal Home Loan Bank and do not constitute a debt or obligation of the U.S. Government or of any Federal Home Loan Bank. Freddie Macs entitle the holder to timely payment of interest, which is guaranteed by FHLMC. FHLMC guarantees either ultimate collection or timely payment of all principal payments on the underlying mortgage loans. When FHLMC does not guarantee timely payment of principal, FHLMC may remit the amount due on account of its guarantee of ultimate payment of principal at any time after default on an underlying mortgage, but in no event later than one year after it becomes payable.

In September 2008, the Treasury and the Federal Housing Finance Agency ("FHFA") announced that FNMA and FHLMC had been placed in conservatorship. Since that time, FNMA and FHLMC have received significant capital support through Treasury preferred stock purchases, as well as Treasury and Federal Reserve purchases of their mortgage backed securities. The FHFA and the U.S. Treasury (through its agreement to purchase FNMA and FHLMC preferred stock) have imposed strict limits on the size of their mortgage portfolios. While the mortgage-backed securities purchase programs ended in 2010, the Treasury continued its support for the entities' capital as

necessary to prevent a negative net worth through at least 2012. When a credit rating agency downgraded long-term U.S. Government debt in August 2011, the agency also downgraded FNMA and FHLMC's bond ratings, from AAA to AA+, based on their direct reliance on the U.S. Government (although that rating did not directly relate to their mortgage-backed securities). From the end of 2007 through the third quarter of 2012, FNMA and FHLMC required Treasury support of approximately \$187.5 billion through draws under the preferred stock purchase agreements. However, they have repaid approximately \$131.5 billion in dividends. FNMA and FHLMC ended the second quarter of 2013 with positive net worth and, as a result, neither required a draw from the Treasury. While the Treasury committed to offset negative equity at FNMA and FHLMC through its preferred stock purchases through 2012, FHFA has made projections for those purchases through 2015, predicting that cumulative Treasury draws (including dividends) at the end of 2015 could range from \$191 billion to \$209 billion. Nonetheless, no assurance can be given that the Federal Reserve or the Treasury will ensure that FNMA and FHLMC remain successful in meeting their obligations with respect to the debt and mortgage-backed securities that they issue.

In addition, the problems faced by FNMA and FHLMC, resulting in their being placed into federal conservatorship and receiving significant U.S. Government support, have sparked serious debate among federal policymakers regarding the continued role of the U.S. Government in providing liquidity for mortgage loans. The Obama Administration produced a report to Congress on February 11, 2011, outlining a proposal to wind down FNMA and FHLMC by increasing their guaranty fees, reducing their conforming loan limits (the maximum amount of each loan they are authorized to purchase), and continuing progressive limits on the size of their investment portfolio. In December 2011, Congress enacted the Temporary Payroll Tax Cut Continuation Act of 2011 which, among other provisions, requires that FNMA and FHLMC increase their single-family guaranty fees by at least 10 basis points and remit this increase to the Treasury with respect to all loans acquired by FNMA or FHLMC on or after April 1, 2012 and before January 1, 2022. Serious discussions among policymakers continue, however, as to whether FNMA and FHLMC should be nationalized, privatized, restructured or eliminated altogether. In July 2013, the House Financial Services Committee approved the Protect American Taxpayers and Homeowners Act of 2013. The bill, if enacted, would require FHFA to place FNMA and FHLMC into receivership within five years and repeal their corporate charters at that time, which would effectively strip them of the authority to conduct any new business. The bill would also place restrictions on FNMA's and FHLMC's activities prior to being placed into receivership and may result in FNMA and FHLMC further increasing their guaranty fees. FNMA and FHLMC also are the subject of several continuing legal actions and investigations over certain accounting, disclosure or corporate governance matters, which (along with any resulting financial restatements) may continue to have an adverse effect on the guaranteeing entities. Importantly, the future of FNMA and FHLMC is in serious question as the U.S. Government considers multiple options.

Commercial Mortgage-Related Securities. Commercial mortgage-related securities generally are multi-class debt or pass-through certificates secured by mortgage loans on commercial properties. These mortgage-related securities generally are constructed to provide protection to holders of the senior classes against potential losses on the underlying mortgage loans. This protection generally is provided by having the holders of subordinated classes of securities ("Subordinated Securities") take the first loss if there are defaults on the underlying commercial mortgage loans. Other protection, which may benefit all of the classes or particular classes, may include issuer guarantees, reserve funds, additional Subordinated Securities, cross-collateralization and over-collateralization. Commercial lending, however, generally is viewed as exposing the lender to a greater risk of loss than one- to four-family residential lending. Commercial lending, for example, typically involves larger loans to single borrowers or groups of related borrowers than residential one- to four-family mortgage loans. In addition, the repayment of loans secured by income-producing properties typically is dependent upon the successful operation of the related real estate project and the cash flow generated therefrom. Consequently, adverse changes in economic conditions and circumstances are more likely to have an adverse impact on mortgage-related securities secured by loans on certain types of commercial properties than those secured by loans on residential properties. The risks that recovery or repossessed collateral might be unavailable or inadequate to support payments on commercial mortgage-related securities may be greater than is the case for non-multifamily residential mortgage-related securities.

Subordinated Securities. Subordinated Securities, including those issued or sponsored by commercial banks, savings and loan institutions, mortgage bankers, private mortgage insurance companies and other non-governmental issuers, have no governmental guarantee, and are subordinated in some manner as to the payment of principal and/or interest to the holders of more senior mortgage-related securities arising out of the same pool of mortgages. The holders of Subordinated Securities typically are compensated with a higher stated yield than are the holders of more

senior mortgage-related securities. On the other hand, Subordinated Securities typically subject the holder to greater risk than senior mortgage-related securities and tend to be rated in a lower rating category, and frequently a substantially lower rating category, than the senior mortgage-related securities issued in respect of the same pool of mortgages. Subordinated Securities generally are likely to be more sensitive to changes in prepayment and interest rates and the market for such securities may be less liquid than is the case for traditional fixed-income securities and senior mortgage-related securities.

Collateralized Mortgage Obligations (CMOs) and Multi-Class Pass-Through-Securities. CMOs are multiclass bonds backed by pools of mortgage pass-through certificates or mortgage loans. CMOs may be collateralized by: (1) Ginnie Mae, Fannie Mae, or Freddie Mac pass-through certificates; (2) unsecuritized mortgage loans insured by the FHA or guaranteed by the Department of Veterans' Affairs; (3) unsecuritized conventional mortgages; (4) other mortgage-related securities; or (5) any combination thereof.

Each class of CMOs, often referred to as a "tranche," is issued at a specific coupon rate and has a stated maturity or final distribution date. Principal prepayments on collateral underlying a CMO may cause it to be retired substantially earlier than the stated maturities or final distribution dates. The principal and interest on the underlying mortgages may be allocated among the several classes of a series of a CMO in many ways. One or more tranches of a CMO may have coupon rates which reset periodically at a specified increment over an index or market rate, such as LIBOR (or sometimes more than one index). These floating rate CMOs typically are issued with lifetime caps on the coupon rate thereon. Inverse floating rate CMOs constitute a tranche of a CMO with a coupon rate that moves in the reverse direction to an applicable index or market rate such as LIBOR. Accordingly, the coupon rate thereon will increase as interest rates decrease. Inverse floating rate CMOs are typically more volatile than fixed or floating rate tranches of CMOs.

Many inverse floating rate CMOs have coupons that move inversely to a multiple of the applicable indexes. The effect of the coupon varying inversely to a multiple of an applicable index creates a leverage factor. Inverse floating rate CMOs based on multiples of a stated index are designed to be highly sensitive to changes in interest rates and can subject the holders thereof to extreme reductions of yield and loss of principal. The markets for inverse floating rate CMOs with highly leveraged characteristics at times may be very thin. The ability of a fund to dispose of positions in such securities will depend on the degree of liquidity in the markets for such securities. It is impossible to predict the amount of trading interest that may exist in such securities, and therefore the future degree of liquidity. It should be noted that inverse floaters based on multiples of a stated index are designed to be highly sensitive to changes in interest rates and can subject the holders thereof to extreme reductions of yield and loss of principal.

As CMOs have evolved, some classes of CMO bonds have become more prevalent. The planned amortization class ("PAC") and targeted amortization class ("TAC"), for example, were designed to reduce prepayment risk by establishing a sinking-fund structure. PAC and TAC bonds assure to varying degrees that investors will receive payments over a predetermined period under varying prepayment scenarios. Although PAC and TAC bonds are similar, PAC bonds are better able to provide stable cash flows under various prepayment scenarios than TAC bonds because of the order in which these tranches are paid.

Stripped Mortgage-Backed Securities. Stripped mortgage-backed securities are created by segregating the cash flows from underlying mortgage loans or mortgage securities to create two or more new securities, each with a specified percentage of the underlying security's principal or interest payments. Mortgage securities may be partially stripped so that each investor class receives some interest and some principal. When securities are completely stripped, however, all of the interest is distributed to holders of one type of security, known as an interest-only security ("IO") and all of the principal is distributed to holders of another type of security known as a principal-only security ("PO"). IOs and POs can be created in a pass-through structure or as tranches of a CMO. The yields to maturity on IOs and POs are very sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets. If the underlying mortgage assets experience greater than anticipated prepayments of principal, a fund may not fully recoup its initial investment in IOs. Conversely, if the underlying mortgage assets experience less than anticipated prepayments of principal, the yield on POs could be materially and adversely affected.

Adjustable-Rate Mortgage Loans ("ARMs"). ARMs eligible for inclusion in a mortgage pool will generally provide for a fixed initial mortgage interest rate for a specified period of time, generally for either the first three, six, twelve,

thirteen, thirty-six, or sixty scheduled monthly payments. Thereafter, the interest rates are subject to periodic adjustment based on changes in an index. ARMs typically have minimum and maximum rates beyond which the mortgage interest rate may not vary over the lifetime of the loans. Certain ARMs provide for additional limitations on the maximum amount by which the mortgage interest rate may adjust for any single adjustment period. Negatively amortizing ARMs may provide limitations on changes in the required monthly payment. Limitations on monthly payments can result in monthly payments that are greater or less than the amount necessary to amortize a negatively amortizing ARM by its maturity at the interest rate in effect during any particular month.

Private Entity Securities. Mortgage-related securities may be issued by commercial banks, savings and loan institutions, mortgage bankers, private mortgage insurance companies and other non-governmental issuers. Timely payment of principal and interest on mortgage-related securities backed by pools created by non-governmental issuers often is supported partially by various forms of insurance or guarantees, including individual loan, title, pool and hazard insurance. The insurance and guarantees are issued by government entities, private insurers and the mortgage poolers. There can be no assurance that the private insurers or mortgage poolers can meet their obligations under the policies, so that if the issuers default on their obligations the holders of the security could sustain a loss. No insurance or guarantee covers a fund or the price of a fund's shares. Mortgage-related securities issued by non-governmental issuers generally offer a higher rate of interest than government-agency and government-related securities because there are no direct or indirect government guarantees of payment.

Other Mortgage-Related Securities. Other mortgage-related securities include securities other than those described above that directly or indirectly represent a participation in, or are secured by and payable from, mortgage loans on real property, including a CMO tranche which collects any cash flow from collateral remaining after obligations to the other tranches have been met. Other mortgage-related securities may be equity or debt securities issued by agencies or instrumentalities of the U.S. Government or by private originators of, or investors in, mortgage loans, including savings and loan associations, homebuilders, mortgage banks, commercial banks, investment banks, partnerships, trusts and special purpose entities of the foregoing.

Asset-Backed Securities. Asset-backed securities are a form of derivative instrument. Non-mortgage asset-backed securities are securities issued by special purpose entities whose primary assets consist of a pool of loans, receivables or other assets. Payment of principal and interest may depend largely on the cash flows generated by the assets backing the securities and, in certain cases, supported by letters of credit, surety bonds or other forms of credit or liquidity enhancements. The value of these asset-backed securities also may be affected by the creditworthiness of the servicing agent for the pool of assets, the originator of the loans or receivables or the financial institution providing the credit support.

The securitization techniques used for asset-backed securities are similar to those used for mortgage-related securities, including the issuance of securities in senior and subordinated classes (see "Mortgage-Related Securities—Commercial Mortgage-Related Securities" and "—Subordinated Securities" above). These securities include debt securities and securities with debt-like characteristics. The collateral for these securities has included home equity loans, automobile and credit card receivables, boat loans, computer leases, airplane leases, mobile home loans, recreational vehicle loans and hospital account receivables. Other types of asset-backed securities may be developed in the future. The purchase of non-mortgage asset-backed securities raises considerations peculiar to the financing of the instruments underlying such securities.

Asset-backed securities present certain risks of mortgage-backed securities, such as prepayment risk, as well as risks that are not presented by mortgage-backed securities. Primarily, these securities may provide a less effective security interest in the related collateral than do mortgage-backed securities. Therefore, there is the possibility that recoveries on the underlying collateral may not, in some cases, be available to support payments on these securities.

Municipal Securities.

Municipal Securities Generally. "Municipal securities" are debt securities or other obligations issued by states, territories and possessions of the United States and the District of Columbia and their political subdivisions, agencies and instrumentalities, or multistate agencies and authorities, and certain other specified securities, the interest from which is, in the opinion of bond counsel to the issuer, exempt from federal and, with respect to municipal securities in which certain funds invest, the personal income taxes of a specified state (referred to in this SAI as Municipal Bonds or Municipal Obligations, as applicable—see "Glossary" below). Municipal securities

generally include debt obligations issued to obtain funds for various public purposes and include certain industrial development bonds issued by or on behalf of public authorities. Municipal securities are classified as general obligation bonds, revenue bonds and notes. General obligation bonds are secured by the issuer's pledge of its full faith, credit and taxing power for the payment of principal and interest. Revenue bonds are payable from the revenue derived from a particular facility or class of facilities or, in some cases, from the proceeds of a special excise or other specific revenue source, but not from the general taxing power. Tax-exempt industrial development bonds, in most cases, are revenue bonds that do not carry the pledge of the credit of the issuing municipality, but generally are guaranteed by the corporate entity on whose behalf they are issued. Notes are short-term instruments which are obligations of the issuing municipalities or agencies and are sold in anticipation of a bond issuance, collection of taxes or receipt of other revenues. Issues of municipal commercial paper typically represent short-term, unsecured, negotiable promissory notes. These obligations are issued by agencies of state and local governments to finance seasonal working capital needs of municipalities or to provide interim construction financing and are paid from general revenues of municipalities or are refinanced with long-term debt. In most cases, municipal commercial paper is backed by letters of credit, lending agreements, note repurchase agreements or other credit facility agreements offered by banks or other institutions. Municipal securities include municipal lease/purchase agreements which are similar to installment purchase contracts for property or equipment issued by municipalities.

A fund's investments in municipal securities may include investments in U.S. territories or possessions such as Puerto Rico, the U.S. Virgin Islands, Guam and the Northern Mariana Islands. A fund's investments in a territory or possession could be affected by economic, legislative, regulatory or political developments affecting issuers in the territory or possession. For example, Puerto Rico, like many other states and U.S. municipalities, experienced a significant downturn during the recent recession and continues to face significant fiscal challenges, including persistent government deficits, underfunded public pensions, sizable debt service obligations and a high unemployment rate. As a result, many rating agencies have downgraded Puerto Rico's various municipal issuers, including the Commonwealth itself and its general obligation debt, or placed them on "negative watch." If the economic situation in Puerto Rico persists or worsens, the volatility, credit quality and performance of a fund holding securities of issuers in Puerto Rico could be adversely affected.

Municipal securities bear fixed, floating or variable rates of interest, which are determined in some instances by formulas under which the municipal security's interest rate will change directly or inversely to changes in interest rates or an index, or multiples thereof, in many cases subject to a maximum and minimum. Certain municipal securities are subject to redemption at a date earlier than their stated maturity pursuant to call options, which may be separated from the related municipal security and purchased and sold separately. The purchase of call options on specific municipal securities may protect a fund from the issuer of the related municipal security redeeming, or other holder of the call option from calling away, the municipal security before maturity. The sale by a fund of a call option that it owns on a specific municipal security could result in the receipt of taxable income by the fund.

The municipal securities market is not subject to the same level of regulation as other sectors of the U.S. capital markets due to broad exemptions under the federal securities laws for municipal securities. As a result, there may be less disclosure, including current audited financial information, available about municipal issuers than is available for issuers of securities registered under the Securities Act.

While, in general, municipal securities are tax exempt securities having relatively low yields as compared to taxable, non-municipal securities of similar quality, certain municipal securities are taxable obligations, offering yields comparable to, and in some cases greater than, the yields available on other permissible investments.

For the purpose of diversification under the 1940 Act, the identification of the issuer of municipal securities depends on the terms and conditions of the security. When the assets and revenues of an agency, authority, instrumentality or other political subdivision are separate from those of the government creating the subdivision and the security is backed only by the assets and revenues of the subdivision, such subdivision would be deemed to be the sole issuer. Similarly, in the case of an industrial development bond, if the bond is backed only by the assets and revenues of the non-governmental user, then such non-governmental user would be deemed to be the sole issuer. If, however, in either case, the creating government or some other entity guarantees a security, such a guaranty would be considered a separate security and would be treated as an issue of such government or other entity.

Municipal securities include certain private activity bonds (a type of revenue bond issued by or on behalf of public authorities to raise money to finance various privately operated or public facilities and for which the payment of principal and interest is dependent solely on the ability of the facility's user to meet its financial obligations and the pledge, if any, of real and personal property so financed as security for such payment), the income from which is subject to the alternative minimum tax. Taxable municipal securities also may include remarketed certificates of participation. Certain funds may invest in these municipal securities if the Adviser determines that their purchase is consistent with a fund's investment objective.

The yields on municipal securities are dependent on a variety of factors, including general economic and monetary conditions, money market factors, conditions in the municipal securities market, size of a particular offering, maturity of the obligation and rating of the issue. The achievement of the investment objective of a municipal or other tax-exempt fund is dependent in part on the continuing ability of the issuers of municipal securities in which the fund invests to meet their obligations for the payment of principal and interest when due. Municipal securities historically have not been subject to registration with the SEC, although there have been proposals which would require registration in the future. Issuers of municipal securities, like issuers of corporate securities, may declare bankruptcy, and obligations of issuers of municipal securities are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors. Many such bankruptcies historically have been of smaller villages, towns, cities and counties, but in November 2011 Jefferson County, Alabama (the state's most populous county) became the subject of the largest municipal bankruptcy ever in the U.S., at over \$4 billion in total indebtedness, surpassing in size the 1994 bankruptcy of Orange County, California. In addition, Harrisburg, Pennsylvania (the state's capital) filed for bankruptcy in October 2011. Stockton, California also filed for bankruptcy in July 2012, making it the largest U.S. city in history to file for bankruptcy. The obligations of municipal issuers may become subject to laws enacted in the future by Congress or state legislatures, or referenda extending the time for payment of principal and/or interest, or imposing other constraints upon enforcement of such obligations or upon the ability of municipalities to levy taxes. There is also the possibility that, as a result of litigation or other conditions, the ability of any municipal issuer to pay, when due, the principal of and interest on its municipal securities may be materially affected.

Certain provisions in the Code relating to the issuance of municipal securities may reduce the volume of municipal securities qualifying for federal tax exemption. One effect of these provisions could be to increase the cost of the municipal securities available for purchase by a fund and thus reduce available yield. Shareholders should consult their tax advisors concerning the effect of these provisions on an investment in such a fund. Proposals that may restrict or eliminate the income tax exemption for interest on municipal securities may be introduced in the future. If any such proposal were enacted that would reduce the availability of municipal securities for investment by a fund so as to adversely affect fund shareholders, the fund would reevaluate its investment objective and policies and submit possible changes in the fund's structure to shareholders for their consideration.

Instruments Related to Municipal Securities. The following is a description of certain types of investments related to municipal securities.

- *Floating and Variable Rate Demand Notes and Bonds.* Floating and variable rate demand notes and bonds are tax exempt obligations ordinarily having stated maturities in excess of one year, but which permit the holder to demand payment of principal at any time, or at specified intervals. Variable rate demand notes include master demand notes. See "Fixed-Income Securities—Variable and Floating Rate Securities" above.
- *Municipal Lease Obligations.* Municipal lease obligations or installment purchase contract obligations (collectively, "lease obligations") have special risks not ordinarily associated with general obligation or revenue bonds. Leases and installment purchase or conditional sale contracts (which normally provide for title to the leased asset to pass eventually to the government issuer) have evolved as a means for governmental issuers to acquire property and equipment without meeting the constitutional and statutory requirements for the issuance of debt. Although lease obligations do not constitute general obligations of the municipality for which the municipality's taxing power is pledged, a lease obligation ordinarily is backed by the municipality's covenant to budget for, appropriate and make the payments due under the lease obligation. However, lease obligations in which a fund may invest may contain "non-appropriation" clauses which provide that the municipality has no obligation to make lease or installment purchase payments in future years unless money is appropriated for such purpose on a yearly basis. Although "non-appropriation" lease obligations are secured by the leased property,

disposition of the property in the event of foreclosure might prove difficult. Certain lease obligations may be considered illiquid. Determination as to the liquidity of such securities is made in accordance with guidelines established by the board. Pursuant to such guidelines, the board has directed the Adviser to monitor carefully a fund's investment in such securities with particular regard to: (1) the frequency of trades and quotes for the lease obligation; (2) the number of dealers willing to purchase or sell the lease obligation and the number of other potential buyers; (3) the willingness of dealers to undertake to make a market in the lease obligation; (4) the nature of the marketplace trades, including the time needed to dispose of the lease obligation, the method of soliciting offers and the mechanics of transfer; and (5) such other factors concerning the trading market for the lease obligation as the Adviser may deem relevant. In addition, in evaluating the liquidity and credit quality of a lease obligation that is unrated, the board has directed the Adviser to consider: (1) whether the lease can be canceled; (2) what assurance there is that the assets represented by the lease can be sold; (3) the strength of the lessee's general credit (e.g., its debt, administrative, economic and financial characteristics); (4) the likelihood that the municipality will discontinue appropriating funding for the leased property because the property is no longer deemed essential to the operations of the municipality (e.g., the potential for an "event of non-appropriation"); (5) the legal recourse in the event of failure to appropriate; and (6) such other factors concerning credit quality as the Adviser may deem relevant.

- *Indexed and Inverse Floating Rate Municipal Securities.* Indexed rate municipal securities are securities that pay interest or whose principal amount payable upon maturity is based on the value of an index of interest rates. Interest and principal payable on certain securities also may be based on relative changes among particular indexes. So-called "inverse floating obligations" or "residual interest bonds" ("inverse floaters") are derivative instruments created by depositing municipal securities in a trust which divides the bond's income stream into two parts: (1) a short-term variable rate demand note; and (2) a residual interest bond (the inverse floater) which receives interest based on the remaining cash flow of the trust after payment of interest on the note and various trust expenses. The interest rate on the inverse floater varies inversely with a floating rate (which may be reset periodically by a "Dutch" auction, a remarketing agent or by reference a short-term tax-exempt interest rate index), usually moving in the opposite direction as the interest on the variable rate demand note.

A fund may either participate in structuring an inverse floater or purchase an inverse floater in the secondary market. When structuring an inverse floater, a fund will transfer to a trust fixed rate municipal securities held in the fund's portfolio. The trust then typically issues the inverse floaters and the variable rate demand notes that are collateralized by the cash flows of the fixed rate municipal securities. In return for the transfer of the municipal securities to the trust, the fund receives the inverse floaters and cash associated with the sale of the notes from the trust. For accounting purposes, a fund treats these transfers as part of a secured borrowing or financing transaction (not a sale), and the interest payments and related expenses due on the notes issued by the trusts and sold to third parties as expenses and liabilities of the fund. Inverse floaters purchased in the secondary market are treated as the purchase of a security and not as a secured borrowing or financing transaction. Synthetically created inverse floating rate bonds evidenced by custodial or trust receipts are securities that have the effect of providing a degree of investment leverage, since they may increase or decrease in value in response to changes in market interest rates at a rate that is a multiple of the rate at which fixed rate securities increase or decrease in response to such changes.

An investment in inverse floaters may involve greater risk than an investment in a fixed rate municipal security. Because changes in the interest rate on the other security or index inversely affect the residual interest paid on the inverse floater, the value of an inverse floater is generally more volatile than that of a fixed rate municipal security. Inverse floaters have interest rate adjustment formulas which generally reduce or, in the extreme, eliminate the interest paid to a fund when short-term interest rates rise, and increase the interest paid to the fund when short-term interest rates fall. Investing in inverse floaters involves leveraging which may magnify the fund's gains or losses. Although volatile, inverse floaters typically offer the potential for yields exceeding the yields available on fixed rate municipal securities with comparable credit quality, coupon, call provisions and maturity. These securities usually permit the investor to convert the floating rate to a fixed rate (normally adjusted downward), and this optional conversion feature may provide a partial hedge against rising rates if exercised at an opportune time. Investments in inverse floaters may be illiquid.

Real Estate Investment Trusts (REITs)

A REIT is a corporation, or a business trust that would otherwise be taxed as a corporation, which meets the definitional requirements of the Code. The Code permits a qualifying REIT to deduct dividends paid, thereby effectively eliminating corporate level federal income tax and making the REIT a pass-through vehicle for federal income tax purposes. To meet the definitional requirements of the Code, a REIT must, among other things, invest substantially all of its assets in interests in real estate (including mortgages and other REITs) or cash and government securities, derive most of its income from rents from real property or interest on loans secured by mortgages on real property, and distribute to shareholders annually a substantial portion of its otherwise taxable income.

REITs are characterized as equity REITs, mortgage REITs and hybrid REITs. Equity REITs invest primarily in the fee ownership or leasehold ownership of land and buildings and derive their income primarily from rental income. Equity REITs also can realize capital gains (or losses) by selling properties that have appreciated (or depreciated) in value. Mortgage REITs can make construction, development or long-term mortgage loans and are sensitive to the credit quality of the borrower. Mortgage REITs derive their income from interest payments on such loans. Hybrid REITs combine the characteristics of both equity and mortgage REITs, generally by holding both ownership interests and mortgage interests in real estate. The value of securities issued by REITs is affected by tax and regulatory requirements and by perceptions of management skill. They also are subject to heavy cash flow dependency, defaults by borrowers or tenants, self-liquidation and the possibility of failing to qualify for tax-free status under the Code or to maintain exemption from the 1940 Act.

Money Market Instruments

When the Adviser determines that adverse market conditions exist, a fund may adopt a temporary defensive position and invest up to 100% of its assets in money market instruments, including U.S. Government securities, bank obligations, repurchase agreements and commercial paper. During such periods, the fund may not achieve its investment objective(s). A fund also may purchase money market instruments when it has cash reserves or in anticipation of taking a market position.

Investing in money market instruments is subject to certain risks. Money market instruments (other than certain U.S. Government securities) are not backed or insured by the U.S. Government, its agencies or its instrumentalities. Accordingly, only the creditworthiness of an issuer, or guarantees of that issuer, support such instruments.

Bank Obligations. See "Bank Obligations" below under "Money Market Portfolio."

Repurchase Agreements. See "Repurchase Agreements" below under "Money Market Portfolio."

Commercial Paper. Commercial paper represents short-term, unsecured promissory notes issued in bearer form by banks or bank holding companies, corporations and finance companies used to finance short-term credit needs and may consist of U.S. dollar-denominated obligations of domestic issuers and foreign currency-denominated obligations of domestic or foreign issuers. Commercial paper may be backed only by the credit of the issuer or may be backed by some form of credit enhancement, typically in the form of a guarantee by a commercial bank. Commercial paper backed by guarantees of foreign banks may involve additional risk due to the difficulty of obtaining and enforcing judgments against such banks and the generally less restrictive regulations to which such banks are subject.

Foreign Securities

Foreign securities include the securities of companies organized under the laws of countries other than the United States and those issued or guaranteed by governments other than the U.S. Government or by foreign supranational entities. They also include securities of companies whose principal trading market is in a country other than the United States or of companies (including those that are located in the United States or organized under U.S. law) that derive a significant portion of their revenue or profits from foreign businesses, investments or sales, or that have a majority of their assets outside the United States. They may be traded on foreign securities exchanges or in the foreign over-the-counter markets. Supranational entities include international organizations designated or supported by governmental entities to promote economic reconstruction or development and international banking institutions

and related government agencies. Examples include the International Bank for Reconstruction and Development (the World Bank), the European Coal and Steel Community, the Asian Development Bank and the InterAmerican Development Bank. Obligations of the World Bank and certain other supranational organizations are supported by subscribed but unpaid commitments of member countries. There is no assurance that these commitments will be undertaken or complied with in the future.

Investing in the securities of foreign issuers, as well as instruments that provide investment exposure to foreign securities and markets, involves risks that are not typically associated with investing in U.S. dollar-denominated securities of domestic issuers. Investments in foreign issuers may be affected by changes in currency rates (*i.e.*, affecting the value of assets as measured in U.S. dollars), changes in foreign or U.S. laws or restrictions applicable to such investments and in exchange control regulations (*e.g.*, currency blockage). A decline in the exchange rate of the currency (*i.e.*, weakening of the currency against the U.S. dollar) in which a portfolio security is quoted or denominated relative to the U.S. dollar would reduce the value of the portfolio security. A change in the value of such foreign currency against the U.S. dollar also will result in a change in the amount of income available for distribution. If a portion of a fund's investment income may be received in foreign currencies, such fund will be required to compute its income in U.S. dollars for distribution to shareholders, and therefore the fund will absorb the cost of currency fluctuations. After the fund has distributed income, subsequent foreign currency losses may result in the fund having distributed more income in a particular fiscal period than was available from investment income, which could result in a return of capital to shareholders. In addition, if the exchange rate for the currency in which a fund receives interest payments declines against the U.S. dollar before such income is distributed as dividends to shareholders, the fund may have to sell portfolio securities to obtain sufficient cash to enable the fund to pay such dividends. Commissions on transactions in foreign securities may be higher than those for similar transactions on domestic stock markets, and foreign custodial costs are higher than domestic custodial costs. In addition, clearance and settlement procedures may be different in foreign countries and, in certain markets, such procedures have on occasion been unable to keep pace with the volume of securities transactions, thus making it difficult to conduct such transactions.

Foreign securities markets generally are not as developed or efficient as those in the United States. Securities of some foreign issuers are less liquid and more volatile than securities of comparable U.S. issuers. Similarly, volume and liquidity in most foreign securities markets are less than in the United States and, at times, volatility of price can be greater than in the United States.

Because evidences of ownership of foreign securities usually are held outside the United States, additional risks of investing in foreign securities include possible adverse political and economic developments, seizure or nationalization of foreign deposits and adoption of governmental restrictions that might adversely affect or restrict the payment of principal and interest on the foreign securities to investors located outside the country of the issuer, whether from currency blockage, exchange control regulations or otherwise. Foreign securities held by a fund may trade on days when the fund does not calculate its NAV and thus may affect the fund's NAV on days when shareholders have no access to the fund.

Emerging Markets. The risks associated with investing in foreign securities are often heightened for investments in emerging market countries. These heightened risks include: (1) greater risks of expropriation, confiscatory taxation and nationalization, and less social, political and economic stability; (2) the small size of the markets for securities of emerging market issuers and a low or nonexistent volume of trading, resulting in lack of liquidity and in price volatility; (3) certain national policies which may restrict the investment opportunities including restrictions on investing in issuers or industries deemed sensitive to relevant national interests; and (4) the absence of developed legal structures governing private or foreign investment and private property. The purchase and sale of portfolio securities in certain emerging market countries may be constrained by limitations as to daily changes in the prices of listed securities, periodic trading or settlement volume and/or limitations on aggregate holdings of foreign investors. In certain cases, such limitations may be computed based upon the aggregate trading by or holdings of a fund, its Adviser and its affiliates and their respective clients and other service providers. A fund may not be able to sell securities in circumstances where price, trading or settlement volume limitations have been reached.

Economic conditions, such as volatile currency exchange rates and interest rates, political events and other conditions may, without prior warning, lead to government intervention and the imposition of "capital controls." Countries use these controls to restrict volatile movements of capital entering (inflows) and exiting (outflows) their country to respond to certain economic conditions. Such controls are mainly applied to short-term capital

transactions to counter speculative flows that threaten to undermine the stability of the exchange rate and deplete foreign exchange reserves. Capital controls include the prohibition of, or restrictions on, the ability to transfer currency, securities or other assets in such a way that may adversely affect the ability of a fund to repatriate its income and capital. These limitations may have a negative impact on the fund's performance and may adversely affect the liquidity of the fund's investment to the extent that it invests in certain emerging market countries. Some emerging market countries may have fixed or managed currencies which are not free-floating against the U.S. dollar. Further, certain emerging market countries' currencies may not be internationally traded. Certain of these currencies have experienced a steady devaluation relative to the U.S. dollar. If a fund does not hedge the U.S. dollar value of securities it owns denominated in currencies that are devalued, the fund's NAV will be adversely affected. Many emerging market countries have experienced substantial, and in some periods extremely high, rates of inflation for many years. Inflation and rapid fluctuations in inflation rates have had, and may continue to have, adverse effects on the economies and securities markets of certain of these countries.

Certain funds may invest in companies organized or with their principal place of business, or majority of assets or business, in pre-emerging markets, also known as frontier markets. The risks associated with investments in frontier market countries include all the risks described above for investments in foreign securities and emerging markets, although the risks are magnified for frontier market countries. Because frontier markets are among the smallest, least mature and least liquid of the emerging markets, investments in frontier markets generally are subject to a greater risk of loss than investments in developed markets or traditional emerging markets. Frontier market countries have smaller economies, less developed capital markets, more political and economic instability, and more governmental limitations on foreign investments than typically found in more developed countries, and frontier markets typically have greater market volatility, lower trading volume and greater risk of a market shutdown than more developed markets. Frontier markets are more prone to economic shocks associated with political and economic risks than are emerging markets generally. Many frontier market countries may be dependent on commodities, foreign trade or foreign aid.

Certain Asian Emerging Market Countries. The performance of a fund that concentrates its investments in Asian emerging market countries is expected to be closely tied to social, political and economic conditions within Asia and to be more volatile than the performance of more geographically diversified funds. Many Asian economies are characterized by over-extension of credit, frequent currency fluctuation, devaluations and restrictions, rising unemployment, rapid fluctuations in inflation, reliance on exports and less efficient markets. Currency devaluation in one Asian country can have a significant effect on the entire region. The legal systems in many Asian countries are still developing, making it more difficult to obtain and/or enforce judgments.

Furthermore, increased political and social unrest in some Asian countries could cause economic and market uncertainty throughout the region. The auditing and reporting standards in some Asian emerging market countries may not provide the same degree of shareholder protection or information to investors as those in developed countries. In particular, valuation of assets, depreciation, exchange differences, deferred taxation, contingent liability and consolidation may be treated differently than under the auditing and reporting standards of developed countries.

Certain Asian emerging market countries are undergoing a period of growth and change which may result in trading volatility and difficulties in the settlement and recording of securities transactions, and in interpreting and applying the relevant law and regulations. The securities industries in these countries are comparatively underdeveloped. Stockbrokers and other intermediaries in Asian emerging market countries may not perform as well as their counterparts in the United States and other more developed securities markets. Certain Asian emerging market countries may require substantial withholding on dividends paid on portfolio securities and on realized capital gains. There can be no assurance that repatriation of the fund's income, gains or initial capital from these countries can occur.

Depository Receipts and New York Shares. Securities of foreign issuers in the form of ADRs, EDRs and GDRs and other forms of depository receipts may not necessarily be denominated in the same currency as the securities into which they may be converted. ADRs are receipts typically issued by a U.S. bank or trust company which evidence ownership of underlying securities issued by a foreign corporation. EDRs are receipts issued in Europe, and GDRs are receipts issued outside the United States typically by non-U.S. banks and trust companies that evidence ownership of either foreign or domestic securities. Generally, ADRs in registered form are designed for use in the U.S. securities markets, EDRs in bearer form are designed for use in Europe, and GDRs in bearer form are designed

for use outside the United States. New York Shares are securities of foreign companies that are issued for trading in the United States. New York Shares are traded in the United States on national securities exchanges or in the over-the-counter market.

Depository receipts may be purchased through "sponsored" or "unsponsored" facilities. A sponsored facility is established jointly by the issuer of the underlying security and a depository. A depository may establish an unsponsored facility without participation by the issuer of the deposited security. Holders of unsponsored depository receipts generally bear all the costs of such facilities, and the depository of an unsponsored facility frequently is under no obligation to distribute shareholder communications received from the issuer of the deposited security or to pass through voting rights to the holders of such receipts in respect of the deposited securities. Purchases or sales of certain ADRs may result, indirectly, in fees being paid to the Depository Receipts Division of The Bank of New York Mellon, an affiliate of the Manager, by brokers executing the purchases or sales.

Securities of foreign issuers that are represented by ADRs or that are listed on a U.S. securities exchange or traded in the U.S. over-the-counter markets are not subject to many of the special considerations and risks discussed in the prospectus and this SAI that apply to foreign securities traded and held abroad. A U.S. dollar investment in ADRs or shares of foreign issuers traded on U.S. exchanges may be impacted differently by currency fluctuations than would an investment made in a foreign currency on a foreign exchange in shares of the same issuer.

Investment Companies

The 1940 Act, subject to a fund's own more restrictive limitations, if applicable, limits a fund's investment in securities issued by registered and unregistered investment companies, including exchange-traded funds (discussed below), subject to certain exceptions, currently is limited to: (1) 3% of the total voting stock of any one investment company; (2) 5% of the fund's total assets with respect to any one investment company; and (3) 10% of the fund's total assets in the aggregate. As a shareholder of another investment company, a fund would bear, along with other shareholders, its pro rata portion of the other investment company's expenses, including advisory fees. These expenses would be in addition to the advisory fees and other expenses that the fund bears directly in connection with its own operations. A fund also may invest its uninvested cash reserves or cash it receives as collateral from borrowers of its portfolio securities in connection with the fund's securities lending program, in shares of one or more money market funds advised by the Manager. Such investments will not be subject to the limitations described above.

Private Investment Funds. As with investments in registered investment companies, if a fund invests in a private investment fund, such as a "hedge fund" or private equity fund, the fund will be charged its proportionate share of the advisory fees, including any incentive compensation and other operating expenses, of the private investment fund. These fees, which can be substantial, would be in addition to the advisory fees and other operating expenses incurred by the fund. In addition, private investment funds are not registered with the SEC and may not be registered with any other regulatory authority. Accordingly, they are not subject to certain regulatory requirements and oversight to which registered issuers are subject. There may be very little public information available about their investments and performance. Moreover, because sales of shares of private investment funds are generally restricted to certain qualified purchasers, such shares may be illiquid and it could be difficult for the fund to sell its shares at an advantageous price and time. Finally, because shares of private investment funds are not publicly traded, a fair value for the fund's investment in these companies typically will have to be determined under policies approved by the board.

Exchange-Traded Funds (ETFs)

Although certain ETFs are actively managed, most ETFs are designed to provide investment results that generally correspond to the price and yield performance of the component securities or commodities of a benchmark index. These ETFs may include S&P Depository Receipts ("SPDRs"), DIAMONDS, Nasdaq-100 Index Tracking Stock (also referred to as "Nasdaq-100 Shares") and iShares exchange-traded funds ("iShares"), such as iShares Russell 2000 Growth Index Fund. ETFs usually are units of beneficial interest in an investment trust or represent undivided ownership interests in a portfolio of securities or commodities. For an ETF designed to correspond to a securities index benchmark, the ETF's portfolio typically consists of all or substantially all of the component securities of, and in substantially the same weighting as, the relevant benchmark index. The benchmark indexes of SPDRs, DIAMONDS and Nasdaq-100 Shares are the S&P 500 Stock Index, the Dow Jones Industrial Average and the

Nasdaq-100 Index, respectively. The benchmark index for iShares varies, generally corresponding to the name of the particular iShares fund. ETFs are listed on an exchange, and shares are generally purchased and sold in the secondary market at market price. At times, the market price may be at a premium or discount to the ETF's NAV. Because shares of ETFs trade on an exchange, they may be subject to trading halts on the exchange.

The values of ETFs are subject to change as the values of their respective component securities or commodities fluctuate according to market volatility. Investments in ETFs that are designed to correspond to an index of securities involve certain inherent risks generally associated with investments in a portfolio of such securities, including the risk that the general level of securities prices may decline, thereby adversely affecting the value of ETFs invested in by a fund. Similarly, investments in ETFs that are designed to correspond to commodity returns involve certain inherent risks generally associated with investment in commodities. Moreover, investments in ETFs designed to correspond to indexes of securities may not exactly match the performance of a direct investment in the respective indexes to which they are intended to correspond due to the temporary unavailability of certain index securities in the secondary market or other extraordinary circumstances, such as discrepancies with respect to the weighting of securities.

Derivatives

Depending on the fund, derivatives may be used for a variety of reasons, including to (1) hedge to seek to mitigate certain market, interest rate or currency risks; (2) to manage the maturity or the interest rate sensitivity (sometimes called duration) of fixed-income securities; (3) to provide a substitute for purchasing or selling particular securities to reduce portfolio turnover, to seek to obtain a particular desired return at a lower cost to a fund than if the fund had invested directly in an instrument yielding the desired return, such as when a fund "equitizes" available cash balances by using a derivative instrument to gain exposure to relevant equity investments or markets consistent with its investment objective and policies, or for other reasons; or (4) to seek to increase potential returns. Generally, a derivative is a financial contract whose value depends upon, or is derived from, the value of an underlying asset, reference rate or index, and may relate to stocks, bonds, interest rates, currencies or currency exchange rates and related indexes. Derivatives may provide a cheaper, quicker or more specifically focused way to invest than "traditional" securities would. Examples of derivative instruments include options contracts, futures contracts, options on futures contracts, forward contracts, swap agreements, credit derivatives, structured securities and participatory notes. Whether or not a fund may use some or all of these derivatives varies by fund. In addition, a fund's portfolio managers may decide not to employ some or all of these strategies, and there is no assurance that any derivatives strategy used by the fund will succeed.

Derivatives can be volatile and involve various types and degrees of risk, depending upon the characteristics of the particular derivative and the portfolio as a whole. Derivatives permit a fund to increase or decrease the level of risk, or change the character of the risk, to which its portfolio is exposed in much the same way as the fund can increase or decrease the level of risk, or change the character of the risk, of its portfolio by making investments in specific securities. However, derivatives may entail investment exposures that are greater than their cost would suggest, meaning that a small investment in derivatives could have a large potential impact on the fund's performance. Derivatives involve greater risks than if a fund had invested in the reference obligation directly.

An investment in derivatives at inopportune times or when market conditions are judged incorrectly may lower return or result in a loss. A fund could experience losses if its derivatives were poorly correlated with underlying instruments or the fund's other investments or if the fund were unable to liquidate its position because of an illiquid secondary market. The market for many derivatives is, or suddenly can become, illiquid. Changes in liquidity may result in significant, rapid and unpredictable changes in the prices for derivatives.

Derivatives may be purchased on established exchanges or through privately negotiated transactions referred to as over-the-counter derivatives. Exchange-traded derivatives, primarily futures contracts and options, generally are guaranteed by the clearing agency that is the issuer or counterparty to such derivatives. This guarantee usually is supported by a variation margin payment system operated by the clearing agency in order to reduce overall credit risk. As a result, unless the clearing agency defaults, there is relatively little counterparty credit risk associated with derivatives purchased on an exchange. In contrast, no clearing agency guarantees over-the-counter derivatives. Therefore, each party to an over-the-counter derivative bears the risk that the counterparty will default. Accordingly, the Adviser will consider the creditworthiness of counterparties to over-the-counter derivatives in the same manner as it would review the credit quality of a security to be purchased by a fund. Over-the-counter

derivatives are less liquid than exchange-traded derivatives since the other party to the transaction may be the only investor with sufficient understanding of the derivative to be interested in bidding for it. Derivatives that are considered illiquid will be subject to a fund's limit on illiquid investments.

Some derivatives may involve leverage (*e.g.*, an instrument linked to the value of a securities index may return income calculated as a multiple of the price movement of the underlying index). This economic leverage will increase the volatility of these instruments as they may increase or decrease in value more quickly than the underlying security, index, futures contract, currency or other economic variable. Pursuant to regulations and/or published positions of the SEC, a fund may be required to segregate permissible liquid assets, or engage in other measures approved by the SEC or its staff, to "cover" the fund's obligations relating to its transactions in derivatives. For example, in the case of futures contracts or forward contracts that are not contractually required to cash settle, a fund must set aside liquid assets equal to such contracts' full notional value (generally, the total numerical value of the asset underlying a future or forward contract at the time of valuation) while the positions are open. With respect to futures contracts or forward contracts that are contractually required to cash settle, however, a fund is permitted to set aside liquid assets in an amount equal to the fund's daily marked-to-market net obligation (*i.e.*, the fund's daily net liability) under the contracts, if any, rather than such contracts' full notional value. By setting aside assets equal to only its net obligations under cash-settled derivatives, a fund may employ leverage to a greater extent than if the fund were required to segregate assets equal to the full notional value of such contracts. Requirements to maintain cover might impair a fund's ability to sell a portfolio security, meet redemption requests or other current obligations, or make an investment at a time when it would otherwise be favorable to do so, or require that the fund sell a portfolio security at a disadvantageous time.

Successful use of certain derivatives may be a highly specialized activity that requires skills that may be different than the skills associated with ordinary portfolio securities transactions. If the Adviser is incorrect in its forecasts of market factors, or a counterparty defaults, investment performance would diminish compared with what it would have been if derivatives were not used. Successful use of derivatives by a fund also is subject to the Adviser's ability to predict correctly movements in the direction of the relevant market and, to the extent the transaction is entered into for hedging purposes, to ascertain the appropriate correlation between the securities or position being hedged and the price movements of the corresponding derivative position. For example, if a fund enters into a derivative position to hedge against the possibility of a decline in the market value of securities held in its portfolio and the prices of such securities instead increase, the fund will lose part or all of the benefit of the increased value of securities which it has hedged because it will have offsetting losses in the derivative position.

Options and futures contracts prices can diverge from the prices of their underlying instruments. Options and futures contracts prices are affected by such factors as current and anticipated short-term interest rates, changes in volatility of the underlying instrument, and the time remaining until expiration of the contract, which may not affect the prices of the underlying instruments in the same way. Imperfect correlation may also result from differing levels of demand in the options and futures markets and the securities markets, from structural differences in how options and futures and securities are traded, or from imposition of daily price fluctuation limits or trading halts. A fund may purchase or sell options and futures contracts with a greater or lesser value than any securities it wishes to hedge or intends to purchase in order to attempt to compensate for differences in volatility between the contract and the securities, although this may not be successful in all cases. If price changes in a fund's options or futures positions used for hedging purposes are poorly correlated with the investments the fund is attempting to hedge, the options or futures positions may fail to produce anticipated gains or result in losses that are not offset by gains in other investments.

The funds have claimed exclusions from the definition of the term "commodity pool operator" pursuant to Regulation 4.5 under the CEA and, therefore, are not subject to registration or regulation as a CPO under the CEA. The funds may be limited in their ability to use commodity futures or options thereon, engage in certain swap transactions or make certain other investments (collectively, "commodity interests") if they continue to claim the exclusion from the definition of CPO.

In order to be eligible to continue to claim this exclusion, if a fund uses commodity interests other than for bona fide hedging purposes (as defined by the CFTC), the aggregate initial margin and premiums required to establish those positions (after taking into account unrealized profits and unrealized losses on any such positions and excluding the amount by which options are "in-the-money" at the time of purchase) may not exceed 5% of the fund's NAV, or,

alternatively, the aggregate net notional value of those positions, as determined at the time the most recent position was established, may not exceed 100% of the fund's NAV (after taking into account unrealized profits and unrealized losses on any such positions). In addition to meeting one of the foregoing trading limitations, a fund may not market itself as a commodity pool or otherwise as a vehicle for trading in the commodity futures, commodity options or swaps markets. Even if a fund's direct use of commodity interests complies with the trading limitations described above, the fund may have indirect exposure to commodity interests in excess of such limitations. Such exposure may result from the fund's investment in other investment vehicles, including investment companies that are not managed by the Manager or one of its affiliates, certain securitized vehicles that may invest in commodity interests and/or non-equity REITs that may invest in commodity interests (collectively, "underlying funds"). Because the Manager may have limited or no information as to the commodity interests in which an underlying fund invests at any given time, the CFTC has issued temporary no-action relief permitting registered investment companies, such as the funds, to continue to rely on the exclusion from the definition of CPO. The Manager, on behalf of the funds, has filed the required notice to claim this no-action relief. In order to rely on the temporary no-action relief, the Manager must meet certain conditions and the funds must otherwise comply with the trading and market limitations described above with respect to their direct investments in commodity interests.

If a fund were to invest in commodity interests in excess of the trading limitations discussed above and/or market itself as a vehicle for trading in the commodity futures, commodity options or swaps markets, the fund would withdraw its exclusion from the definition of CPO and the Manager would become subject to regulation as a CPO.

It is possible that developments in the derivatives markets, including potential government regulation, could adversely affect the ability to terminate existing derivatives positions or to realize amounts to be received in such transactions.

Futures Transactions. A futures contract is an agreement between two parties to buy and sell a security or other asset for a set price on a future date. When a fund sells a futures contract, it incurs an obligation to deliver a specified amount of the obligation underlying the futures contract at a specified time in the future for an agreed upon price. With respect to index futures, no physical transfer of the securities underlying the index is made. Rather, the parties settle by exchanging in cash an amount based on the difference between the contract price and the closing value of the index on the settlement date. An option on a futures contract gives the holder of the option the right to buy from or sell to the writer of the option a position in a futures contract at a specified price on or before a specified expiration date. When a fund writes an option on a futures contract, it becomes obligated, in return for the premium paid, to assume a position in a futures contract at a specified exercise price at any time during the term of the option. If the fund has written a call option, it assumes a short futures position. If the fund has written a put option, it assumes a long futures position. When a fund purchases an option on a futures contract, it acquires the right, in return for the premium it pays, to assume a position in a futures contract (a long position if the option is a call and a short position if the option is a put). The purchase of futures or call options on futures can serve as a long hedge, and the sale of futures or the purchase of put options on futures can serve as a short hedge. Writing call options on futures contracts can serve as a limited short hedge, using a strategy similar to that used for writing call options on securities or indexes. Similarly, writing put options on futures contracts can serve as a limited long hedge.

Futures contracts are traded on exchanges, so that, in most cases, either party can close out its position on the exchange for cash, without delivering the security or other asset. Although some futures contracts call for making or taking delivery of the underlying securities or other asset, generally these obligations are closed out before delivery by offsetting purchases or sales of matching futures contracts (same exchange, underlying asset, and delivery month). Closing out a futures contract sale is effected by purchasing a futures contract for the same aggregate amount of the specific type of financial instrument with the same delivery date. If an offsetting purchase price is less than the original sale price, a fund realizes a capital gain, or if it is more, a fund realizes a capital loss. Conversely, if an offsetting sale price is more than the original purchase price, a fund realizes a capital gain, or if it is less, a fund realizes a capital loss. Transaction costs also are included in these calculations.

Engaging in these transactions involves risk of loss to a fund which could adversely affect the value of the fund's net assets. No assurance can be given that a liquid market will exist for any particular contract at any particular time. Many futures exchanges and boards of trade limit the amount of fluctuation permitted in futures contract prices during a single trading day. Once the daily limit has been reached in a particular contract, no trades may be made that day at a price beyond that limit or trading may be suspended for specified periods during the trading day.

Futures contract prices could move to the limit for several consecutive trading days with little or no trading, thereby preventing prompt liquidation of futures positions and potentially leading to substantial losses.

A fund may engage in futures transactions in foreign markets to the extent consistent with applicable law and the fund's ability to invest in foreign securities. Foreign futures markets may offer advantages such as trading opportunities or arbitrage possibilities not available in the United States. Foreign markets, however, may have greater risk potential than domestic markets. For example, some foreign exchanges are principal markets so that no common clearing facility exists and an investor may look only to the broker for performance of the contract. In addition, any profits that a fund might realize in trading could be eliminated by adverse changes in the currency exchange rate, or the fund could incur losses as a result of those changes.

Futures contracts and options on futures contracts include those with respect to securities, securities indexes, interest rates and foreign currencies and Eurodollar contracts, to the extent a fund can invest in the underlying reference security, instrument or asset.

Security Futures Contract. A security future obligates a fund to purchase or sell an amount of a specific security at a future date at a specific price.

Index Futures Contract. An index future obligates a fund to pay or receive an amount of cash based upon the change in value of the index based on the prices of the securities that comprise the index.

Interest Rate Futures Contract. An interest rate future obligates a fund to purchase or sell an amount of a specific debt security at a future date at a specific price (or, in some cases, to settle an equivalent amount in cash).

Foreign Currency Futures Contract. A foreign currency future obligates a fund to purchase or sell an amount of a specific currency at a future date at a specific price.

Eurodollar Contracts. A Eurodollar contract is a U.S. dollar-denominated futures contract or option thereon which is linked to the LIBOR, although foreign currency-denominated instruments are available from time to time. Eurodollar futures contracts enable purchasers to obtain a fixed rate for the lending of funds and sellers to obtain a fixed rate for borrowings. Certain funds might use Eurodollar futures contracts and options thereon to hedge against changes in LIBOR, to which many interest rate swaps and fixed-income instruments are linked.

Options. A call option gives the purchaser of the option the right to buy, and obligates the writer to sell, the underlying security, securities or other asset at the exercise price at any time during the option period, or at a specific date. Conversely, a put option gives the purchaser of the option the right to sell, and obligates the writer to buy, the underlying security, securities or other asset at the exercise price at any time during the option period, or at a specific date. A fund receives a premium from writing an option which it retains whether or not the option is exercised.

A covered call option written by a fund is a call option with respect to which the fund owns the underlying security or otherwise covers the transaction such as by segregating permissible liquid assets. The principal reason for writing covered call options is to realize, through the receipt of premiums, a greater return than would be realized on the underlying securities alone.

Options may be traded on U.S. or, to the extent a fund may invest in foreign securities, foreign securities exchanges or in the over-the-counter market. There is no assurance that sufficient trading interest to create a liquid secondary market on a securities exchange will exist for any particular option or at any particular time, and for some options no such secondary market may exist. A liquid secondary market in an option may cease to exist for a variety of reasons. In the past, for example, higher than anticipated trading activity or order flow, or other unforeseen events, at times have rendered certain of the clearing facilities inadequate and resulted in the institution of special procedures, such as trading rotations, restrictions on certain types of orders or trading halts or suspensions in one or more options. There can be no assurance that similar events, or events that may otherwise interfere with the timely execution of customers' orders, will not recur. In such event, it might not be possible to effect closing transactions in particular options. If, as a covered call option writer, a fund is unable to effect a closing purchase transaction in a secondary market, it will not be able to sell the underlying security until the option expires or it delivers the underlying security upon exercise or it otherwise covers its position.

Purchases or sales of options on exchanges owned by The NASDAQ OMX Group, Inc. may result, indirectly, in a portion of the transaction and other fees assessed on options trading being paid to The Bank of New York Mellon, an affiliate of the Manager, as the result of an arrangement between The NASDAQ OMX Group, Inc. and The Bank of New York Mellon.

Call and put options in which a fund may invest include the following, in each case, to the extent that a fund can invest in such securities or instruments (or securities underlying an index, in the case of options on securities indexes).

Options on Securities. Call and put options on specific securities (or groups or "baskets" of specific securities), including equity securities (including convertible securities), U.S. Government securities, municipal securities, mortgage-related securities, asset-backed securities, foreign sovereign debt, corporate debt securities or Eurodollar instruments, convey the right to buy or sell, respectively, the underlying securities at prices which are expected to be lower or higher than the current market prices of the securities at the time the options are exercised.

Options on Securities Indexes. An option on an index is similar to an option in respect of specific securities, except that settlement does not occur by delivery of the securities comprising the index. Instead, the option holder receives an amount of cash if the closing level of the index upon which the option is based is greater in the case of a call, or less, in the case of a put, than the exercise price of the option. Thus, the effectiveness of purchasing or writing index options will depend upon price movements in the level of the index rather than the price of a particular security.

Foreign Currency Options. Call and put options on foreign currency convey the right to buy or sell the underlying currency at a price which is expected to be lower or higher than the spot price of the currency at the time the option is exercised or expires.

Swap Transactions. Swap agreements involve the exchange by a fund with another party of their respective commitments to pay or receive payments at specified dates based upon or calculated by reference to changes in specified prices or rates (e.g., interest rates in the case of interest rate swaps) based on a specified amount (the "notional") amount. Some swaps are, and more in the future will be, centrally cleared. Swaps that are centrally cleared are subject to the creditworthiness of the clearing organizations involved in the transaction. For example, a fund could lose margin payments it has deposited with a clearing organization as well as the net amount of gains not yet paid by the clearing organization if the clearing organization breaches its agreement with the fund or becomes insolvent or goes into bankruptcy. In the event of bankruptcy of the clearing organization, the fund may be entitled to the net amount of gains the fund is entitled to receive plus the return of margin owed to it only in proportion to the amount received by the clearing organization's other customers, potentially resulting in losses to the fund. Swap agreements also may be two party contracts entered into primarily by institutional investors for periods ranging from a few weeks to more than one year.

Swap agreements will tend to shift investment exposure from one type of investment to another. For example, if a fund agreed to exchange payments in U.S. dollars for payments in a foreign currency, the swap agreement would tend to decrease the fund's exposure to U.S. interest rates and increase its exposure to foreign currency and interest rates. Depending on how they are used, swap agreements may increase or decrease the overall volatility of a fund's investments and its share price and yield.

Most swap agreements entered into are cash settled and calculate the obligations of the parties to the agreement on a "net basis." Thus, a fund's current obligations (or rights) under a swap agreement generally will be equal only to the net amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the "net amount"). A fund's current obligations under a swap agreement will be accrued daily (offset against any amounts owed to the fund) and any accrued but unpaid net amounts owed to a swap counterparty will be covered by the segregation of permissible liquid assets of the fund. A fund will enter into swap agreements only with counterparties that meet certain standards of creditworthiness (generally, such counterparties would have to be eligible counterparties under the terms of the Manager's repurchase agreement guidelines).

A swap option is a contract (sometimes called "swaptions") that gives a counterparty the right (but not the obligation) in return for payment of a premium, to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. A cash-settled

option on a swap gives the purchaser the right, in return for the premium paid, to receive an amount of cash equal to the value of the underlying swap as of the exercise date. These options typically are entered into with institutions, including securities brokerage firms. Depending on the terms of the particular option agreement, a fund generally will incur a greater degree of risk when it writes a swap option than it will incur when it purchases a swap option. When a fund purchases a swap option, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised. However, when a fund writes a swap option, upon exercise of the option the fund will become obligated according to the terms of the underlying agreement.

The swaps market has been an evolving and largely unregulated market. It is possible that developments in the swaps market, including new regulatory requirements, could limit or prevent a fund's ability to utilize swap agreements or options on swaps as part of its investment strategy, terminate existing swap agreements or realize amounts to be received under such agreements, which could negatively affect the fund. As discussed above, some swaps currently are, and more in the future will be, centrally cleared, which affects how swaps are transacted. In particular, the Dodd-Frank Wall Street Reform and Consumer Protection Act, enacted on July 21, 2010 (the "Dodd-Frank Act"), has resulted in new clearing and exchange-trading requirements for swaps and other over-the-counter derivatives. The Dodd-Frank Act also requires the CFTC and/or the SEC, in consultation with banking regulators, to establish capital requirements for swap dealers and major swap participants as well as requirements for margin on uncleared derivatives, including swaps, in certain circumstances that will be clarified by rules proposed by the CFTC and/or the SEC. In addition, the CFTC and the SEC are reviewing the current regulatory requirements applicable to derivatives, including swaps, and it is not certain at this time how the regulators may change these requirements. For example, some legislative and regulatory proposals would impose limits on the maximum position that could be held by a single trader in certain contracts and would subject certain derivatives transactions to new forms of regulation that could create barriers to certain types of investment activity. Other provisions would expand entity registration requirements; impose business conduct, reporting and disclosure requirements on dealers, recordkeeping on counterparties such as the funds; and require banks to move some derivatives trading units to a non-guaranteed (but capitalized) affiliate separate from the deposit-taking bank or divest them altogether. While some provisions of the Dodd-Frank Act have either already been implemented through rulemaking by the CFTC and/or the SEC or must be implemented through future rulemaking by those and other federal agencies, and any regulatory or legislative activity may not necessarily have a direct, immediate effect upon the funds, it is possible that, when compliance with these rules is required, they could potentially limit or completely restrict the ability of a fund to use certain derivatives as a part of its investment strategy, increase the cost of entering into derivatives transactions or require more assets of the fund to be used for collateral in support of those derivatives than is currently the case. Limits or restrictions applicable to the counterparties with which a fund engages in derivative transactions also could prevent the funds from using derivatives or affect the pricing or other factors relating to these transactions, or may change the availability of certain derivatives.

Specific swap agreements (and options thereon) include currency swaps; index swaps; interest rate swaps (including interest rate locks, caps, floors and collars); credit default swaps; and total return swaps (including equity swaps), in each case, to the extent that a fund can invest in the underlying reference security, instrument or asset (or fixed-income securities, in the case of interest rate swaps, or securities underlying an index, in the case of index swaps).

Currency Swap Transactions. A currency swap agreement involves the exchange of principal and interest in one currency for the same in another currency.

Index Swap Transactions. An index swap agreement involves the exchange of cash flows associated with a securities or other index.

Interest Rate Swap Transactions. An interest rate swap agreement involves the exchange of cash flows based on interest rate specifications and a specified principal amount, often a fixed payment for a floating payment that is linked to an interest rate.

An interest rate lock transaction (which may also be known as a forward rate agreement) is a contract between two parties to make or receive a payment at a future date determined on the basis of a specified interest rate or yield of a particular security (the "contracted interest rate") over a predetermined time period, with respect to a stated notional amount. These transactions typically are entered as a hedge against interest rate changes. One party to the contract locks in the contracted interest rate to seek to protect against an interest rate increase, while the other party seeks to

protect against a possible interest rate decline. The payment at maturity is determined by the difference between the contracted interest rate and the then-current market interest rate.

In an interest rate cap one party receives payments at the end of each period in which a specified interest rate on a specified principal amount exceeds an agreed rate; conversely, in an interest rate floor one party may receive payments if a specified interest rate on a specified principal amount falls below an agreed rate. Caps and floors have an effect similar to buying or writing options. Interest rate collars involve selling a cap and purchasing a floor, or vice versa, to protect a fund against interest rate movements exceeding given minimum or maximum levels.

Credit Default Swap Transactions. Credit default swap agreements and similar agreements may have as reference obligations debt securities that are or are not currently held by a fund. The protection "buyer" in a credit default contract may be obligated to pay the protection "seller" an up front payment or a periodic stream of payments over the term of the contract provided generally that no credit event on a reference obligation has occurred. If a credit event occurs, the seller generally must pay the buyer the "par value" (full notional value) of the swap in exchange for an equal face amount of deliverable obligations of the reference entity described in the swap, or the seller may be required to deliver the related net cash amount, if the swap is cash settled.

Total Return Swap Transactions. In a total return swap agreement one party makes payments based on a set rate, either fixed or variable, while the other party makes payments based on the return of an underlying asset, which includes both the income it generates and any capital gains, and recovers any capital losses from the first party. The underlying reference asset of a total return swap may include an equity index, loans or bonds.

Credit Linked Securities. Credit linked securities are issued by a limited purpose trust or other vehicle that, in turn, invests in a derivative instrument or basket of derivative instruments, such as credit default swaps or interest rate swaps, to obtain exposure to certain fixed-income markets or to remain fully invested when more traditional income producing securities are not available. Like an investment in a bond, an investment in these credit linked securities represents the right to receive periodic income payments (in the form of distributions) and payment of principal at the end of the term of the security. However, these payments are conditioned on the issuer's receipt of payments from, and the issuer's potential obligations to, the counterparties to certain derivative instruments entered into by the issuer of the credit linked security. For example, the issuer may sell one or more credit default swaps entitling the issuer to receive a stream of payments over the term of the swap agreements provided that no event of default has occurred with respect to the referenced debt obligation upon which the swap is based. If a default occurs, the stream of payments may stop and the issuer would be obligated to pay the counterparty the par (or other agreed upon value) of the referenced debt obligation.

Credit Derivatives. Credit derivative transactions include those involving default price risk derivatives and credit spread derivatives. Default price risk derivatives are linked to the price of reference securities or loans after a default by the issuer or borrower, respectively. Credit spread derivatives are based on the risk that changes in credit spreads and related market factors can cause a decline in the value of a security, loan or index. Credit derivatives may take the form of options, swaps, credit-linked notes and other over-the-counter instruments. The risk of loss in a credit derivative transaction varies with the form of the transaction. For example, if a fund purchases a default option on a security, and if no default occurs with respect to the security, the fund's loss is limited to the premium it paid for the default option. In contrast, if there is a default by the grantor of a default option, a fund's loss will include both the premium it paid for the option and the decline in value of any underlying security that the default option hedged (if the option was entered into for hedging purposes). If a fund is a buyer of credit protection in a credit default swap agreement and no credit event occurs, the fund recovers nothing if the swap is held through its termination date. However, if a credit event occurs, the fund may elect to receive the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity that may have little or no value. As a seller of credit protection, a fund generally receives an upfront payment or a fixed rate of income throughout the term of the swap, which typically is between six months and three years, provided that there is no credit event. If a credit event occurs, generally the seller must pay the buyer the full notional value of the swap in exchange for an equal face amount of deliverable obligations of the reference entity that may have little or no value. Unlike credit default swaps, credit-linked notes are funded balance sheet assets that offer synthetic credit exposure to a reference entity in a structure designed to resemble a synthetic corporate bond or loan. Credit-linked notes are frequently issued by special purpose vehicles that would hold some form of collateral securities financed through the issuance of notes or certificates to a fund. The fund receives a coupon and par redemption, provided there has been

no credit event of the reference entity. The vehicle enters into a credit swap with a third party in which it sells default protection in return for a premium that subsidizes the coupon to compensate the fund for the reference entity default risk. A fund will enter into credit derivative transactions only with counterparties that meet certain standards of creditworthiness (generally, such counterparties would have to be eligible counterparties under the terms of the Manager's repurchase agreement guidelines).

Combined Transactions. Certain funds may enter into multiple transactions, including multiple options, futures, swap, currency and/or interest rate transactions, and any combination of options, futures, swaps, currency and/or interest rate transactions ("combined transactions"), instead of a single transaction, as part of a single or combined strategy when, in the opinion of the Adviser, it is in the best interests of the fund to do so. A combined transaction will usually contain elements of risk that are present in each of its component transactions. Although combined transactions are normally entered into based on the Adviser's judgment that the combined strategies will reduce risk or otherwise more effectively achieve the desired portfolio management goal, it is possible that the combination will instead increase such risks or hinder achievement of the portfolio management objective.

Future Developments. A fund may take advantage of opportunities in derivatives transactions which are not presently contemplated for use by the fund or which are not currently available but which may be developed, to the extent such opportunities are both consistent with the fund's investment objective and legally permissible for the fund. Before a fund enters into such transactions or makes any such investment, the fund will provide appropriate disclosure in its prospectus or this SAI.

Foreign Currency Transactions

Investments in foreign currencies, including investing directly in foreign currencies, holding financial instruments that provide exposure to foreign currencies, or investing in securities that trade in, or receive revenues in, foreign currencies, are subject to the risk that those currencies will decline in value relative to the U.S. dollar.

Depending on the fund, foreign currency transactions could be entered into for a variety of purposes, including: (1) to fix in U.S. dollars, between trade and settlement date, the value of a security a fund has agreed to buy or sell; (2) to hedge the U.S. dollar value of securities the fund already owns, particularly if it expects a decrease in the value of the currency in which the foreign security is denominated; or (3) to gain or reduce exposure to the foreign currency for investment purposes. Foreign currency transactions may involve, for example, a fund's purchase of foreign currencies for U.S. dollars or the maintenance of short positions in foreign currencies. A short position would involve the fund agreeing to exchange an amount of a currency it did not currently own for another currency at a future date in anticipation of a decline in the value of the currency sold relative to the currency the fund contracted to receive. A fund may engage in cross currency hedging against price movements between currencies, other than the U.S. dollar, caused by currency exchange rate fluctuations. In addition, a fund might seek to hedge against changes in the value of a particular currency when no derivative instruments on that currency are available or such derivative instruments are more expensive than certain other derivative instruments. In such cases, the fund may hedge against price movements in that currency by entering into transactions using derivative instruments on another currency or a basket of currencies, the values of which the Adviser believes will have a high degree of positive correlation to the value of the currency being hedged. The risk that movements in the price of the derivative instrument will not correlate perfectly with movements in the price of the currency being hedged is magnified when this strategy is used.

Currency hedging may substantially change a fund's exposure to changes in currency exchange rates and could result in losses if currencies do not perform as the Adviser anticipates. There is no assurance that a fund's currency hedging activities will be advantageous to the fund or that the Adviser will hedge at an appropriate time.

The cost of engaging in foreign currency exchange contracts for the purchase or sale of a specified currency at a specified future date ("forward contracts") varies with factors such as the currency involved, the length of the contract period and the market conditions then prevailing. Because forward contracts are usually entered into on a principal basis, no fees or commissions are involved. Generally, secondary markets do not exist for forward contracts, with the result that closing transactions can be made for forward contracts only by negotiating directly with the counterparty to the contract. As with other over-the-counter derivatives transactions, forward contracts are subject to the credit risk of the counterparty.

Currency exchange rates may fluctuate significantly over short periods of time. They generally are determined by the forces of supply and demand in the foreign exchange markets and the relative merits of investments in different countries, actual or perceived changes in interest rates and other complex factors, as seen from an international perspective. Currency exchange rates also can be affected unpredictably by intervention, or failure to intervene, by U.S. or foreign governments or central banks, or by currency controls or political developments in the United States or abroad.

The value of derivative instruments on foreign currencies depends on the value of the underlying currency relative to the U.S. dollar. Because foreign currency transactions occurring in the interbank market might involve substantially larger amounts than those involved in the use of foreign currency derivative instruments, a fund could be disadvantaged by having to deal in the odd lot market (generally consisting of transactions of less than \$1 million) for the underlying foreign currencies at prices that are less favorable than for round lots.

There is no systematic reporting of last sale information for foreign currencies or any regulatory requirement that quotations available through dealers or other market sources be firm or revised on a timely basis. Quotation information generally is representative of very large transactions in the interbank market and thus might not reflect odd-lot transactions where rates might be less favorable. The interbank market in foreign currencies is a global, round-the-clock market.

Settlement of transactions involving foreign currencies might be required to take place within the country issuing the underlying currency. Thus, a fund might be required to accept or make delivery of the underlying foreign currency in accordance with any U.S. or foreign regulations regarding the maintenance of foreign banking arrangements by U.S. residents and might be required to pay any fees, taxes and charges associated with such delivery assessed in the issuing country.

Short-Selling

A fund may make short sales as part of its investment strategy, to hedge positions (such as to limit exposure to a possible market decline in the value of portfolio securities), for duration and risk management, to maintain portfolio flexibility or to seek to enhance returns. A short sale involves the sale of a security that a fund does not own in the expectation of purchasing the same security (or a security exchangeable therefor) at a later date and at a lower price. To complete a short sale transaction and make delivery to the buyer, the fund must borrow the security. The fund is obligated to replace the borrowed security to the lender, which is accomplished by a later purchase of the security by the fund. Until the security is replaced, the fund is required to pay the lender any dividends or interest accruing during the period of the loan. To borrow the security, the fund also may have to pay a fee to the lender, which would increase the cost to the fund of the security it sold short. The fund will incur a loss as a result of a short sale if the price of the security increases between the date of the short sale and the date on which the fund replaces the borrowed security. The fund will realize a gain if the security declines in price between those two dates. In certain cases, purchasing a security to cover a short position can itself cause the price of the security to rise, thereby exacerbating any loss, especially in an environment where others are taking the same actions. Short positions in stocks involve more risk than long positions in stocks because the maximum sustainable loss on a stock purchased is limited to the amount paid for the stock plus the transaction costs, whereas there is no maximum attainable price on the shorted stock. In theory, stocks sold short have unlimited risk. The amount of any gain will be decreased and the amount of any loss will be increased by any interest, premium and transaction charges or other costs a fund may be required to pay in connection with the short sale. A fund may not always be able to borrow a security the fund seeks to sell short at a particular time or at an acceptable price.

A fund also may make short sales "against the box," in which the fund enters into a short sale of a security it owns or has the immediate and unconditional right to acquire at no additional cost at the time of the sale.

When a fund makes a short sale, it must leave the proceeds thereof with the broker and deposit with, or pledge to, the broker an amount of cash or liquid securities sufficient under current margin regulations to collateralize its obligation to replace the borrowed securities that have been sold. Until a fund closes its short position or replaces the borrowed security, the fund will: (1) segregate permissible liquid assets in an amount that, together with the amount provided as collateral, is at least equal to the current value of the security sold short; or (2) otherwise cover its short position through offsetting positions. Short-selling is considered "leverage" and may involve substantial risk.

Lending Portfolio Securities

Fund portfolio securities may be lent to brokers, dealers and other financial institutions needing to borrow securities to complete certain transactions. In connection with such loans, a fund would remain the owner of the loaned securities and continue to be entitled to payments in amounts equal to the interest, dividends or other distributions payable on the loaned securities. A fund also has the right to terminate a loan at any time. Any voting rights that accompany the loaned securities generally pass to the borrower of the securities, but the fund retains the right to recall a security and may then exercise the security's voting rights. In order to vote the proxies of securities out on loan, the securities must be recalled prior to the established record date. A fund may recall the loan to vote proxies if a material issue affecting the fund's investment is to be voted upon. Subject to a fund's own more restrictive limitations, if applicable, an investment company is limited in the amount of portfolio securities it may loan to 33-1/3% of its total assets (including the value of all assets received as collateral for the loan). A fund will receive collateral consisting of cash, cash equivalents, U.S. Government securities or irrevocable letters of credit, which will be maintained at all times in an amount equal to at least 100% of the current market value of the loaned securities. If the collateral consists of a letter of credit or securities, the borrower will pay the fund a loan premium fee. If the collateral consists of cash, the fund will reinvest the cash and pay the borrower a pre-negotiated fee or "rebate" from any return earned on the investment. A fund may participate in a securities lending program operated by the Lending Agent. The Lending Agent will receive a percentage of the total earnings of the fund derived from lending its portfolio securities. Should the borrower of the securities fail financially, the fund may experience delays in recovering the loaned securities or exercising its rights in the collateral. Loans are made only to borrowers that are deemed by the Adviser to be of good financial standing. In a loan transaction, a fund will also bear the risk of any decline in value of securities acquired with cash collateral. A fund will minimize this risk by limiting the investment of cash collateral to money market funds advised by the Manager, repurchase agreements or other high quality instruments with short maturities, in each case to the extent it is a permissible investment for the fund.

Borrowing Money

The 1940 Act, subject to a fund's own more restrictive limitations, if applicable, permits an investment company to borrow in an amount up to 33-1/3% of the value of its total assets. Such borrowings may be for temporary or emergency purposes or for leveraging. If borrowings are for temporary or emergency (not leveraging) purposes, when such borrowings exceed 5% of the value of a fund's total assets the fund will not make any additional investments.

Borrowing Money for Leverage. Leveraging (buying securities using borrowed money) exaggerates the effect on NAV of any increase or decrease in the market value of a fund's investments. These borrowings will be subject to interest costs which may or may not be recovered by appreciation of the securities purchased; in certain cases, interest costs may exceed the return received on the securities purchased. For borrowings for investment purposes, the 1940 Act requires a fund to maintain continuous asset coverage (total assets including borrowings, less liabilities exclusive of borrowings) of 300% of the amount borrowed. If the required coverage should decline as a result of market fluctuations or other reasons, the fund may be required to sell some of its portfolio securities within three days to reduce the amount of its borrowings and restore the 300% asset coverage, even though it may be disadvantageous from an investment standpoint to sell securities at that time. A fund also may be required to maintain minimum average balances in connection with such borrowing or pay a commitment or other fee to maintain a line of credit; either of these requirements would increase the cost of borrowing over the stated interest rate.

Reverse Repurchase Agreements. Reverse repurchase agreements may be entered into with banks, broker/dealers or other financial institutions. This form of borrowing involves the transfer by a fund of an underlying debt instrument in return for cash proceeds based on a percentage of the value of the security. The fund retains the right to receive interest and principal payments on the security. At an agreed upon future date, the fund repurchases the security at principal plus accrued interest. As a result of these transactions, the fund is exposed to greater potential fluctuations in the value of its assets and its NAV per share. These borrowings will be subject to interest costs which may or may not be recovered by appreciation of the securities purchased; in certain cases, interest costs may exceed the return received on the securities purchased. To the extent a fund enters into a reverse repurchase agreement, the fund will segregate permissible liquid assets at least equal to the aggregate amount of its reverse repurchase

obligations, plus accrued interest, in certain cases, in accordance with SEC guidance. The SEC views reverse repurchase transactions as collateralized borrowings by a fund.

Forward Commitments. The purchase or sale of securities on a forward commitment (including "TBA" (to be announced)), when-issued or delayed-delivery basis, means delivery and payment take place at a future date at a predetermined price and/or yield. Typically, no interest accrues to the purchaser until the security is delivered. When purchasing a security on a forward commitment basis, a fund assumes the risks of ownership of the security, including the risk of price and yield fluctuations, and takes such fluctuations into account when determining its NAV. Purchasing securities on a forward commitment, when-issued or delayed-delivery basis can involve the additional risk that the yield available in the market when the delivery takes place actually may be higher than that obtained in the transaction itself. The sale of securities on a forward commitment or delayed-delivery basis involves the risk that the prices available in the market on the delivery date may be greater than those obtained in the sale transaction.

Debt securities purchased on a forward commitment, when-issued or delayed-delivery basis are subject to changes in value based upon the perception of the creditworthiness of the issuer and changes, real or anticipated, in the level of interest rates (*i.e.*, appreciating when interest rates decline and depreciating when interest rates rise). Securities purchased on a forward commitment, when-issued or delayed-delivery basis may expose a fund to risks because they may experience declines in value prior to their actual delivery. A fund will make commitments to purchase such securities only with the intention of actually acquiring the securities, but the fund may sell these securities or dispose of the commitment before the settlement date if it is deemed advisable as a matter of investment strategy. A fund would engage in forward commitments to increase its portfolio's financial exposure to the types of securities in which it invests. If the fund is fully or almost fully invested when forward commitment purchases are outstanding, such purchases may result in a form of leverage. Leveraging the portfolio in this manner will increase the fund's exposure to changes in interest rates and may result in greater potential fluctuation in the value of the fund's net assets and its NAV per share. A fund will segregate permissible liquid assets at least equal at all times to the amount of the fund's purchase commitments.

Illiquid Securities

Illiquid Securities Generally. The 1940 Act, subject to a fund's own more restrictive limitations, if applicable, limits funds other than money market funds to 15% of net assets in illiquid securities. Illiquid securities, which are securities that cannot be sold or disposed of in the ordinary course of business within seven days at approximately the value ascribed to them by a fund, may include securities that are not readily marketable, such as securities that are subject to legal or contractual restrictions on resale that do not have readily available market quotations, repurchase agreements providing for settlement in more than seven days after notice and certain privately negotiated derivatives transactions and securities used to cover such derivatives transactions. As to these securities, there is a risk that, should a fund desire to sell them, a ready buyer will not be available at a price the fund deems representative of their value, which could adversely affect the value of a fund's net assets.

Section 4(2) Paper and Rule 144A Securities. "Section 4(2) paper" consists of commercial obligations issued in reliance on the so-called "private placement" exemption from registration afforded by Section 4(2) of the Securities Act. Section 4(2) paper is restricted as to disposition under the federal securities laws, and generally is sold to institutional investors that agree that they are purchasing the paper for investment and not with a view to public distribution. Any resale by the purchaser must be pursuant to registration or an exemption therefrom. Section 4(2) paper normally is resold to other institutional investors through or with the assistance of the issuer or investment dealers who make a market in the Section 4(2) paper, thus providing liquidity. "Rule 144A securities" are securities that are not registered under the Securities Act but that can be sold to qualified institutional buyers in accordance with Rule 144A under the Securities Act. Rule 144A securities generally must be sold to other qualified institutional buyers. If a particular investment in Section 4(2) paper or Rule 144A securities is not determined to be liquid, that investment will be included within the percentage limitation on investment in illiquid securities. Investing in Rule 144A securities could have the effect of increasing the level of fund illiquidity to the extent that qualified institutional buyers become, for a time, uninterested in purchasing these securities from a fund or other holders. Liquidity determinations with respect to Section 4(2) paper and Rule 144A securities will be made by the fund's board or by the Adviser pursuant to guidelines established by the board. The fund's board or the Adviser will consider availability of reliable price information and other relevant information in making such determinations.

Non-Diversified Status

A fund's classification as a "non-diversified" investment company means that the proportion of the fund's assets that may be invested in the securities of a single issuer is not limited by the 1940 Act. The 1940 Act generally requires a "diversified" investment company, with respect to 75% of its total assets, to invest not more than 5% of such assets in securities of a single issuer. Since a relatively high percentage of a fund's assets may be invested in the securities of a limited number of issuers or industries, the fund may be more sensitive to changes in the market value of a single issuer or industry. However, to meet federal tax requirements, at the close of each quarter a fund may not have more than 25% of its total assets invested in any one issuer and, with respect to 50% of its total assets, not more than 5% of its total assets invested in any one issuer. These limitations do not apply to U.S. Government securities or investments in certain other investment companies.

Investments in the Technology Sector

The technology sector has been among the most volatile sectors of the stock market. Many technology companies involve greater risks because their revenues and earnings tend to be less predictable (and some companies may be experiencing significant losses) and their share prices tend to be more volatile. Certain technology companies may have limited product lines, markets or financial resources, or may depend on a limited management group. In addition, these companies are strongly affected by worldwide technological developments, and their products and services may not be economically successful or may quickly become outdated. Investor perception may play a greater role in determining the day-to-day value of technology stocks than it does in other sectors. Investments made in anticipation of future products and services may decline dramatically in value if the anticipated products or services are delayed or cancelled.

Money Market Portfolio

The Money Market Portfolio attempts to increase yields by trading to take advantage of short-term market variations. This policy is expected to result in high portfolio turnover but should not adversely affect the fund since the fund usually does not pay brokerage commissions when purchasing short-term obligations. The value of the portfolio securities held by the fund will vary inversely to changes in prevailing interest rates and, therefore, are subject to the risk of market price fluctuations. Thus, if interest rates have increased from the time a security was purchased, such security, if sold, might be sold at a price less than its cost. Similarly, if interest rates have declined from the time a security was purchased, such security, if sold, might be sold at a price greater than its purchase cost. In any event, if a security was purchased at face value and held to maturity and was paid in full, no gain or loss would be realized. The values of fixed-income securities also may be affected by changes in the credit rating or financial condition of the issuing entities.

Ratings of Securities

If, subsequent to its purchase by the fund, (a) a portfolio security ceases to be rated in the highest rating category by at least two rating organizations (or one rating organization if the instrument was rated by only one such organization) or the board determines that it is no longer of comparable quality or (b) the Manager becomes aware that any portfolio security not so highly rated or any unrated security has been given a rating by any rating organization below the rating organization's second highest rating category, the board will reassess promptly whether such security continues to present minimal credit risks and will cause the fund to take such action as it determines is in the best interest of the fund and its shareholders; provided that the reassessments required by clauses (a) and (b) are not required if the portfolio security is disposed of or matures within five business days of the specified event and, in the case of events specified in clause (b), the board is subsequently notified of the Manager's actions. To the extent the ratings given by a Rating Agency for securities change as a result of changes in such organizations or their rating systems, the fund will attempt to use comparable ratings as standards for its investments in accordance with the investment policies described in such fund's prospectus and this SAI. The ratings of the Rating Agencies represent their opinions as to the quality of the securities which they undertake to rate. It should be emphasized, however, that ratings are relative and subjective and are not absolute standards of quality. Although these ratings may be an initial criterion for selection of portfolio investments, the Manager also will evaluate these securities and the creditworthiness of the issuers of such securities based upon financial and other available information.

Treasury Securities

Treasury securities include Treasury bills, Treasury notes and Treasury bonds that differ in their interest rates, maturities and times of issuance. Treasury bills have initial maturities of one year or less; Treasury notes have initial maturities of one to ten years; and Treasury bonds generally have initial maturities of greater than ten years.

U.S. Government Securities

U.S. Government securities are issued or guaranteed by the U.S. Government or its agencies or instrumentalities. Some obligations issued or guaranteed by U.S. Government agencies and instrumentalities are supported by the full faith and credit of the Treasury; others by the right of the issuer to borrow from the Treasury; others by discretionary authority of the U.S. Government to purchase certain obligations of the agency or instrumentality; and others only by the credit of the agency or instrumentality. These securities bear fixed, floating or variable rates of interest. Interest may fluctuate based on generally recognized reference rates or the relationship of rates. While the U.S. Government currently provides financial support to such U.S. Government-sponsored agencies or instrumentalities, no assurance can be given that it will always do so, since it is not so obligated by law. A security backed by the Treasury or the full faith and credit of the United States is guaranteed only as to timely payment of interest and principal when held to maturity. Neither the market value nor the fund's share price is guaranteed.

Repurchase Agreements

A repurchase agreement is a contract under which the fund would acquire a security for a relatively short period subject to the obligation of the seller, typically a bank, broker/dealer or other financial institution, to repurchase and the fund to resell such security at a fixed time and at a price higher than the purchase price (representing the fund's cost plus interest). The repurchase agreement thereby determines the yield during the purchaser's holding period, while the seller's obligation to repurchase is secured by the value of the underlying security. The fund's custodian or sub-custodian engaged in connection with tri-party repurchase agreement transactions will have custody of, and will segregate, securities acquired by the fund under a repurchase agreement. In connection with its third-party repurchase transactions, the fund will engage only eligible sub-custodians that meet the requirements set forth in Section 17(f) of the 1940 Act. The value of the underlying securities (or collateral) will be at least equal at all times to the total amount of the repurchase obligation, including the interest factor. The fund bears a risk of loss if the other party to the repurchase agreement defaults on its obligations and the fund is delayed or prevented from exercising its rights to dispose of the collateral securities. This risk includes the risk of procedural costs or delays in addition to a loss on the securities if their value should fall below their repurchase price. Repurchase agreements are considered by the staff of the SEC to be loans by the fund that enters into them. Repurchase agreements could involve risks in the event of a default or insolvency of the other party to the agreement, including possible delays or restrictions upon the fund's ability to dispose of the underlying securities. The fund may engage in repurchase agreement transactions that are collateralized by U.S. Government securities (which are deemed to be "collateralized fully" pursuant to the 1940 Act) or, for certain funds, to the extent consistent with the fund's investment policies, collateralized by securities other than U.S. Government securities ("credit collateral"). Transactions that are collateralized fully enable the fund to look to the collateral for diversification purposes under the 1940 Act. Conversely, transactions secured with credit collateral require the fund to look to the counterparty to the repurchase agreement for determining diversification. Because credit collateral is subject to certain credit and liquidity risks that U.S. Government securities are not subject to, the amount of collateral posted in excess of the principal value of the repurchase agreement is expected to be higher in the case of repurchase agreements secured with credit collateral compared to repurchase agreements secured with U.S. Government securities. In an attempt to reduce the risk of incurring a loss on a repurchase agreement, the fund will require that additional securities be deposited with it if the value of the securities purchased should decrease below resale price. See "Fixed-Income Securities—High Yield and Lower-Rated Securities" above under "All Funds other than the Money Market Portfolio" for a discussion of certain risks of credit collateral rated below investment grade. The fund may jointly enter into one or more repurchase agreements with other Dreyfus funds in accordance with an exemptive order granted by the SEC pursuant to Section 17(d) of the 1940 Act and Rule 17d-1 thereunder. Any joint repurchase agreements must be collateralized fully by U.S. Government securities.

Bank Obligations

Bank obligations include certificates of deposit ("CDs"), time deposits ("TDs"), bankers' acceptances and other short-term obligations issued by domestic or foreign banks or thrifts or their subsidiaries or branches and other banking institutions. CDs are negotiable certificates evidencing the obligation of a bank to repay funds deposited with it for a specified period of time. TDs are non-negotiable deposits maintained in a banking institution for a specified period of time (in no event longer than seven days) at a stated interest rate. Bankers' acceptances are credit instruments evidencing the obligation of a bank to pay a draft drawn on it by a customer. These instruments reflect the obligation both of the bank and the drawer to pay the face amount of the instrument upon maturity. The other short-term obligations may include uninsured, direct obligations bearing fixed, floating or variable interest rates. TDs and CDs may be issued by domestic or foreign banks or their subsidiaries or branches. The fund may purchase CDs issued by banks, savings and loan associations and similar institutions with less than \$1 billion in assets, the deposits of which are insured by the FDIC, provided the fund purchases any such CD in a principal amount of no more than an amount that would be fully insured by the Deposit Insurance Fund administered by the FDIC. Interest payments on such a CD are not insured by the FDIC. The fund would not own more than one such CD per such issuer.

Domestic commercial banks organized under federal law are supervised and examined by the Comptroller of the Currency and are required to be members of the Federal Reserve System and to have their deposits insured by the FDIC. Domestic banks organized under state law are supervised and examined by state banking authorities but are members of the Federal Reserve System only if they elect to join. In addition, state banks whose CDs may be purchased by the fund are insured by the FDIC (although such insurance may not be of material benefit to the fund, depending on the principal amount of the CDs of each bank held by the fund) and are subject to federal examination and to a substantial body of federal law and regulation. As a result of federal and state laws and regulations, domestic branches of domestic banks whose CDs may be purchased by the fund generally, among other things, are required to maintain specified levels of reserves and are subject to other supervision and regulation designed to promote financial soundness. However, not all of such laws and regulations apply to the foreign branches of domestic banks.

Obligations of foreign subsidiaries or branches of domestic banks may be general obligations of the parent banks in addition to the issuing subsidiary or branch, or may be limited by the terms of a specific obligation and governmental regulation. Such obligations and obligations of foreign banks or their subsidiaries or branches are subject to different risks than are those of domestic banks. These risks include foreign economic and political developments, foreign governmental restrictions that may adversely affect payment of principal and interest on the obligations, foreign exchange controls, seizure of assets, declaration of a moratorium and foreign withholding and other taxes on interest income. Foreign subsidiaries and branches of domestic banks and foreign banks are not necessarily subject to the same or similar regulatory requirements that apply to domestic banks, such as mandatory reserve requirements, loan limitations, and accounting, auditing and financial recordkeeping requirements. In addition, less information may be publicly available about a foreign subsidiary or branch of a domestic bank or about a foreign bank than about a domestic bank.

Obligations of U.S. branches of foreign banks may be general obligations of the parent bank in addition to the issuing branch, or may be limited by the terms of a specific obligation or by federal or state regulation as well as governmental action in the country in which the foreign bank has its head office. A U.S. branch of a foreign bank with assets in excess of \$1 billion may or may not be subject to reserve requirements imposed by the Federal Reserve System or by the state in which the branch is located if the branch is licensed in that state. In addition, federal branches licensed by the Comptroller of the Currency and branches licensed by certain states may be required to: (1) pledge to the regulator, by depositing assets with a designated bank within the state, a certain percentage of their assets as fixed from time to time by the appropriate regulatory authority; and (2) maintain assets within the state in an amount equal to a specified percentage of the aggregate amount of liabilities of the foreign bank payable at or through all of its agencies or branches within the state.

In view of the foregoing factors associated with the purchase of CDs and TDs issued by foreign subsidiaries or branches of domestic banks, or by foreign banks or their branches or subsidiaries, the Adviser carefully evaluates such investments on a case-by-case basis.

Bank Securities

To the extent the fund's investments are concentrated in the banking industry, the fund will have correspondingly greater exposure to the risk factors which are characteristic of such investments. Sustained increases in interest rates can adversely affect the availability or liquidity and cost of capital funds for a bank's lending activities, and a deterioration in general economic conditions could increase the exposure to credit losses. In addition, the value of and the investment return on the fund's shares could be affected by economic or regulatory developments in or related to the banking industry, which industry also is subject to the effects of competition within the banking industry as well as with other types of financial institutions. The fund, however, will seek to minimize its exposure to such risks by investing only in debt securities which are determined to be of the highest quality.

Floating and Variable Rate Obligations

Floating and variable rate demand notes and bonds are obligations ordinarily having stated maturities in excess of 397 days but which permit the holder to demand payment of principal at any time, or at specified intervals not exceeding 397 days, in each case upon not more than 30 days' notice. Frequently these obligations are secured by letters of credit or other credit support arrangements secured by banks. Variable rate demand notes include master demand notes (see "Fixed-Income Securities—Variable and Floating Rate Securities " above under "All Funds other than the Money Market Portfolio").

Participation Interests

A participation interest purchased from a financial institution gives the fund an undivided interest in a security in the proportion that the fund's participation interest bears to the total principal amount of the security. If the participation interest is unrated, or has been given a rating below that which is permissible for purchase by the fund, the participation interest will be backed by an irrevocable letter of credit or guarantee of a bank, or the payment obligation otherwise will be collateralized by U.S. Government securities, or, in the case of unrated participation interests, the Manager must have determined that the instrument is of comparable quality to those instruments in which the fund may invest. See "Fixed-Income Securities—Participation Interests and Assignments" above under "All Funds other than the Money Market Portfolio."

Asset-Backed Securities

The fund may purchase asset-backed securities, which are securities issued by special purpose entities whose primary assets consist of a pool of mortgages, loans, receivables or other assets. Payment of principal and interest may depend largely on the cash flows generated by the assets backing the securities and, in certain cases, supported by letters of credit, surety bonds or other forms of credit or liquidity enhancements. The value of these asset-backed securities also may be affected by the creditworthiness of the servicing agent for the pool of assets, the originator of the loans or receivables or the financial institution providing the credit support.

Commercial Paper

Commercial paper represents short-term, unsecured promissory notes issued to finance short-term credit needs. The commercial paper purchased by the fund will consist only of direct obligations issued by domestic and foreign entities. The other corporate obligations in which the fund may invest consist of high quality, U.S. dollar-denominated short-term bonds and notes (which may include variable rate master demand notes).

Investment Companies

See "Investment Companies" above under "All Funds other than the Money Market Portfolio."

Foreign Securities

Foreign securities may include U.S. dollar-denominated securities issued by foreign subsidiaries or foreign branches of domestic banks, domestic and foreign branches of foreign banks, foreign government obligations and commercial paper issued by foreign issuers. Foreign government obligations may include securities issued or guaranteed by foreign governments or any of their political subdivisions, agencies or instrumentalities and debt obligations of

supranational entities. Supranational entities include organizations designated or supported by governmental entities to promote economic reconstruction or development and international banking institutions and related government agencies. Examples include the International Bank of Reconstruction and Development (the World Bank), the European Coal and Steel Community, the Asian Development Bank and the InterAmerican Development Bank.

The fund's investments in foreign securities, including foreign government obligations, may be subject to additional investment risks with respect to these securities or obligations that are different in some respects from those incurred by a money market fund which invests only in debt obligations of U.S. domestic issuers. See, as applicable, "Foreign Securities" above under "All Funds other than the Money Market Portfolio."

Illiquid Securities

The 1940 Act limits money market funds to 5% of total assets in illiquid securities. Illiquid securities, which are securities that cannot be sold or disposed of in the ordinary course of business within seven days at approximately the value ascribed to them by the fund, may include securities that are not readily marketable, such as securities that are subject to legal or contractual restrictions on resale that do not have readily available market quotations, and repurchase agreements providing for settlement in more than seven days after notice. As to these securities, there is a risk that, should the fund desire to sell them, a ready buyer will not be available at a price the fund deems representative of their value, which could adversely affect the value of the fund's net assets. See "Illiquid Securities—Section 4(2) Paper and Rule 144A Securities" above under "All Funds other than the Money Market Portfolio."

Borrowing Money

The 1940 Act permits an investment company to borrow in an amount up to 33-1/3% of the value of its total assets. Such borrowings may be for temporary or emergency purposes or for leveraging. If borrowings are for temporary or emergency (not leveraging) purposes, when such borrowings exceed 5% of the value of the fund's total assets the fund will not make any additional investments.

Reverse Repurchase Agreements. See "Borrowing Money—Reverse Repurchase Agreements" above under "All Funds other than the Money Market Portfolio."

Forward Commitments. The purchase of portfolio securities on a forward commitment (including "TBA" (to be announced)), when-issued or delayed-delivery basis means that delivery and payment take place in the future after the date of the commitment to purchase. See "Borrowing Money—Forward Commitments" above under "All Funds other than the Money Market Portfolio."

Interfund Borrowing and Lending Program. Pursuant to an exemptive order issued by the SEC, the fund may lend money to, and/or borrow money from, certain other funds advised by the Manager or its affiliates. All interfund loans and borrowings must comply with the conditions set forth in the exemptive order, which are designed to ensure fair and equitable treatment of all participating funds. The fund's participation in the Interfund Borrowing and Lending Program must be consistent with its investment policies and limitations. The fund will borrow through the Interfund Borrowing and Lending Program only when the costs are equal to or lower than the costs of bank loans, and will lend through the Program only when the returns are higher than those available from an investment in repurchase agreements. Interfund loans and borrowings are normally expected to extend overnight, but can have a maximum duration of seven days. Loans may be called on one day's notice. Any delay in repayment to a lending fund could result in a lost investment opportunity or additional borrowing costs.

Lending Portfolio Securities

The fund has no intention currently or for the foreseeable future to lend portfolio securities. To the extent the fund would seek to lend portfolio securities (see "Lending Portfolio Securities" above under "All Funds other than the Money Market Portfolio"), the fund's shareholders would be notified within a reasonable time prior to such activity occurring.

RATING CATEGORIES

The following is a description of certain ratings assigned by S&P, Moody's, Fitch and DBRS.

S&P

An S&P issue credit rating is a forward-looking opinion about the creditworthiness of an obligor with respect to a specific financial obligation, a specific class of financial obligations or a specific financial program (including ratings on medium-term note programs and commercial paper programs). It takes into consideration the creditworthiness of guarantors, insurers or other forms of credit enhancement on the obligation and takes into account the currency in which the obligation is denominated. The opinion reflects S&P's view of the obligor's capacity and willingness to meet its financial commitments as they come due, and may assess terms, such as collateral security and subordination, which could affect ultimate payment in the event of default.

Issue credit ratings can be either long-term or short-term. Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the U.S., for example, that means obligations with an original maturity of no more than 365 days—including commercial paper. Short-term ratings also are used to indicate the creditworthiness of an obligor with respect to put features on long-term obligations. The result is a dual rating, in which the short-term rating addresses the put feature, in addition to the usual long-term rating. Medium-term notes are assigned long-term ratings.

Long-Term Issue Credit Ratings. Issue credit ratings are based, in varying degrees, on S&P's analysis of the following considerations: likelihood of payment—capacity and willingness of the obligor to meet its financial commitment on an obligation in accordance with the terms of the obligation; nature of and provisions of the obligation; and protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

Issue ratings are an assessment of default risk, but may incorporate an assessment of relative seniority or ultimate recovery in the event of default. Junior obligations are typically rated lower than senior obligations, to reflect the lower priority in bankruptcy, as noted above. (Such differentiation may apply when an entity has both senior and subordinated obligations, secured and unsecured obligations, or operating company and holding company obligations.)

An obligation rated "**AAA**" has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

An obligation rated "**AA**" differs from the highest-rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

An obligation rated "**A**" is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

An obligation rated "**BBB**" exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated "**BB**," "**B**," "**CCC**," "**CC**" and "**C**" are regarded as having significant speculative characteristics. "**BB**" indicates the least degree of speculation and "**C**" the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

An obligation rated "**BB**" is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

An obligation rated "**B**" is more vulnerable to nonpayment than obligations rated "BB," but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

An obligation rated "**CCC**" is currently vulnerable to nonpayment, and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

An obligation rated "**CC**" is currently highly vulnerable to nonpayment.

A "**C**" rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the "**C**" rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have been suspended in accordance with the instrument's terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

An obligation rated "**D**" is in payment default. The "**D**" rating category is used when payments on an obligation, including a regulatory capital instrument, are not made on the date due even if the applicable grace period has not expired, unless S&P believes that such payments will be made during such grace period. The "**D**" rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation's rating is lowered to "**D**" upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

Note: The ratings from "**AA**" to "**CCC**" may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

An "**NR**" indicates that no rating has been requested, that there is insufficient information on which to base a rating, or that S&P does not rate a particular obligation as a matter of policy.

Short-Term Issue Credit Ratings. A short-term obligation rated "**A-1**" is rated in the highest category by S&P. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

A short-term obligation rated "**A-2**" is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

A short-term obligation rated "**A-3**" exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

A short-term obligation rated "**B**" is regarded as having significant speculative characteristics. Ratings of "**B-1**," "**B-2**," and "**B-3**" may be assigned to indicate finer distinctions within the "**B**" category. The obligor currently has the capacity to meet its financial commitment on the obligation; however, it faces major ongoing uncertainties which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

A short-term obligation rated "**B-1**" is regarded as having significant speculative characteristics, but the obligor has a relatively stronger capacity to meet its financial commitments over the short-term compared to other speculative-grade obligors.

A short-term obligation rated "**B-2**" is regarded as having significant speculative characteristics, and the obligor has an average speculative-grade capacity to meet its financial commitments over the short-term compared to other speculative-grade obligors.

A short-term obligation rated "**B-3**" is regarded as having significant speculative characteristics, and the obligor has a relatively weaker capacity to meet its financial commitments over the short-term compared to other speculative-grade obligors.

A short-term obligation rated "**C**" is currently vulnerable to nonpayment and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation.

A short-term obligation rated "**D**" is in payment default. The "D" rating category is used when payments on an obligation, including a regulatory capital instrument, are not made on the date due even if the applicable grace period has not expired, unless S&P believes that such payments will be made during such grace period. The "D" rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

Municipal Short-Term Note Ratings Definitions. An S&P U.S. municipal note rating reflects S&P's opinion about the liquidity factors and market access risks unique to the notes. Notes due in three years or less will likely receive a note rating. Notes with an original maturity of more than three years will most likely receive a long-term debt rating. In determining which type of rating, if any, to assign, S&P analysis will review the following considerations:

- amortization schedule—the larger the final maturity relative to other maturities, the more likely it will be treated as a note; and
- source of payment—the more dependent the issue is on the market for its refinancing, the more likely it will be treated as a note.

Note rating symbols are as follows:

SP-1 Strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus (+) designation.

SP-2 Satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

SP-3 Speculative capacity to pay principal and interest.

Moody's

Long-Term Obligation Ratings and Definitions. Moody's long-term obligation ratings are opinions of the relative credit risk of fixed-income obligations with an original maturity of one year or more. They address the possibility that a financial obligation will not be honored as promised. Such ratings reflect both the likelihood of default and any financial loss suffered in the event of default.

Obligations rated "**Aaa**" are judged to be of the highest quality, with minimal credit risk.

Obligations rated "**Aa**" are judged to be of high quality and are subject to very low credit risk.

Obligations rated "**A**" are considered upper-medium grade and are subject to low credit risk.

Obligations rated "**Baa**" are subject to moderate credit risk. They are considered medium-grade and as such may possess certain speculative characteristics.

Obligations rated "**Ba**" are judged to have speculative elements and are subject to substantial credit risk.

Obligations rated "**B**" are considered speculative and are subject to high credit risk.

Obligations rated "Caa" are judged to be of poor standing and are subject to very high credit risk.

Obligations rated "Ca" are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

Obligations rated "C" are the lowest rated class of bonds and are typically in default, with little prospect for recovery of principal or interest.

Note: Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking and the modifier 3 indicates a ranking in the lower end of that generic rating category.

Short-Term Ratings. Moody's short-term ratings are opinions of the ability of issuers to honor short-term financial obligations. Ratings may be assigned to issuers, short-term programs or to individual short-term debt instruments. Such obligations generally have an original maturity not exceeding thirteen months, unless explicitly noted.

Moody's employs the following designations to indicate the relative repayment ability of rated issuers:

- P-1 Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.
- P-2 Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.
- P-3 Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term debt obligations.
- NP Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

U.S. Municipal Short-Term Debt and Demand Obligation Ratings.

Short-Term Obligation Ratings. There are three rating categories for short-term municipal obligations that are considered investment grade. These ratings are designated as Municipal Investment Grade ("MIG") and are divided into three levels—MIG 1 through MIG 3. In addition, those short-term obligations that are of speculative quality are designated SG, or speculative grade. MIG ratings expire at the maturity of the obligation.

- MIG 1** This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.
- MIG 2** This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.
- MIG 3** This designation denotes acceptable credit quality. Liquidity and cash flow protection may be narrow, and market access for refinancing is likely to be less well-established.
- SG** This designation denotes speculative-grade credit quality. Debt instruments in this category may lack sufficient margins of protection.

Demand Obligation Ratings. In the case of variable rate demand obligations ("VRDOs"), a two-component rating is assigned; a long- or short-term debt rating and a demand obligation rating. The first element represents Moody's evaluation of the degree of risk associated with scheduled principal and interest payments. The second element represents Moody's evaluation of the degree of risk associated with the ability to receive purchase price upon demand ("demand feature"), using a variation of the MIG rating scale, the Variable Municipal Investment Grade or VMIG rating.

When either the long- or short-term aspect of a VRDO is not rated, that piece is designated NR, e.g., Aaa/NR or NR/VMIG 1.

VMIG rating expirations are a function of each issue's specific structural or credit features.

- VMIG 1** This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.
- VMIG 2** This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.
- VMIG 3** This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.
- SG** This designation denotes speculative-grade credit quality. Demand features rated in this category may be supported by a liquidity provider that does not have an investment grade short-term rating or may lack the structural and/or legal protections necessary to ensure the timely payment of purchase price upon demand.

Fitch

Corporate Finance Obligations — Long-Term Rating Scales. Ratings of individual securities or financial obligations of a corporate issuer address relative vulnerability to default on an ordinal scale. In addition, for financial obligations in corporate finance, a measure of recovery given default on that liability also is included in the rating assessment. This notably applies to covered bond ratings, which incorporate both an indication of the probability of default and of the recovery given a default of this debt instrument.

The relationship between issuer scale and obligation scale assumes an historical average recovery of between 30%–50% on the senior, unsecured obligations of an issuer. As a result, individual obligations of entities, such as corporations, are assigned ratings higher, lower or the same as that entity's issuer rating.

Highest credit quality: "**AAA**" ratings denote the lowest expectation of credit risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

Very high credit quality: "**AA**" ratings denote expectations of very low credit risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

High credit quality: "**A**" ratings denote expectations of low credit risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

Good credit quality: "**BBB**" ratings indicate that expectations of credit risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

Speculative: "**BB**" ratings indicate an elevated vulnerability to credit risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial alternatives may be available to allow financial commitments to be met.

Highly speculative: "**B**" ratings indicate that material credit risk is present.

Substantial credit risk: "**CCC**" ratings indicate that substantial credit risk is present.

Very high levels of credit risk: "**CC**" ratings indicate very high levels of credit risk.

Exceptionally high levels of credit risk: "**C**" indicates exceptionally high levels of credit risk.

Defaulted obligations typically are not assigned "D" ratings, but are instead rated in the "B" to "C" rating categories, depending upon their recovery prospects and other relevant characteristics. This approach better aligns obligations that have comparable overall expected loss but varying vulnerability to default and loss.

Note: The modifiers "+" or "-" may be appended to a rating to denote relative status within major rating categories. Such suffixes are not added to the "AAA" obligation rating category, or to corporate finance obligation ratings in the categories below "B."

Structured, Project & Public Finance Obligations — Long-Term Rating Scales. Ratings of structured finance, project finance and public finance obligations on the long-term scale, including the financial obligations of sovereigns, consider the obligations' relative vulnerability to default. These ratings are typically assigned to an individual security or tranche in a transaction and not to an issuer.

Highest credit quality: "AAA" ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

Very high credit quality: "AA" ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

High credit quality: "A" ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

Good credit quality: "BBB" ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

Speculative: "BB" ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time.

Highly speculative: "B" ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

Substantial credit risk: "CCC" indicates that default is a real possibility.

Very high levels of credit risk: "CC" indicates that default of some kind appears probable.

Exceptionally high levels of credit risk: "C" indicates that default appears imminent or inevitable.

Default: "D" indicates a default. Default generally is defined as one of the following: failure to make payment of principal and/or interest under the contractual terms of the rated obligation; the bankruptcy filings, administration, receivership, liquidation or other winding-up or cessation of the business of an issuer/obligor; or the coercive exchange of an obligation, where creditors were offered securities with diminished structural or economic terms compared with the existing obligation.

Short-Term Ratings Assigned to Obligations in Corporate, Public and Structured Finance. A short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-term ratings are assigned to obligations whose initial maturity is viewed as "short-term" based on market convention. Typically, this means up to 13 months for corporate, sovereign and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

Highest short-term credit quality: "F1" indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added "+" to denote any exceptionally strong credit feature.

Good short-term credit quality: "F2" indicates good intrinsic capacity for timely payment of financial commitments.

Fair short-term credit quality: "**F3**" indicates that the intrinsic capacity for timely payment of financial commitments is adequate.

Speculative short-term credit quality: "**B**" indicates minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near term adverse changes in financial and economic conditions.

High short-term default risk: "**C**" indicates that default is a real possibility.

Restricted default: "**RD**" indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Applicable to entity ratings only.

Default: "**D**" indicates a broad-based default event for an entity, or the default of a specific short-term obligation.

DBRS

Long Term Obligations. The DBRS long-term rating scale provides an opinion on the risk of default. That is, the risk that an issuer will fail to satisfy its financial obligations in accordance with the terms under which an obligation has been issued. Ratings are based on quantitative and qualitative considerations relevant to the issuer, and the relative ranking of claims. All ratings categories other than AAA and D also contain subcategories "(high)" and "(low)." The absence of either a "(high)" or "(low)" designation indicates the rating is in the middle of the category.

Long-term debt rated "**AAA**" is considered to be of the highest credit quality. The capacity for the payment of financial obligations is exceptionally high and unlikely to be adversely affected by future events.

Long-term debt rated "**AA**" is considered to be of superior credit quality. The capacity for the payment of financial obligations is considered high. Credit quality differs from AAA only to a small degree. Unlikely to be significantly vulnerable to future events.

Long-term debt rated "**A**" is considered to be of good credit quality. The capacity for the payment of financial obligations is substantial, but of lesser credit quality than AA. May be vulnerable to future events, but qualifying negative factors are considered manageable.

Long-term debt rated "**BBB**" is considered to be of adequate credit quality. The capacity for the payment of financial obligations is considered acceptable. May be vulnerable to future events.

Long-term debt rated "**BB**" is considered to be of speculative, non-investment-grade credit quality. The capacity for the payment of future obligations is uncertain. Vulnerable to future events.

Long-term debt rated "**B**" is considered to be of highly speculative credit quality. There is a high level of uncertainty as to the capacity to meet financial obligations.

Long-term debt rated "**CCC**," "**CC**" or "**C**" is of very highly speculative credit quality. In danger of defaulting on financial obligations. There is little difference between these three categories, although CC and C ratings are normally applied to obligations that are seen as highly likely to default, or subordinated to obligations rated in the CCC to B range. Obligations in respect of which default has not technically taken place but is considered inevitable may be rated in the C category.

A "**D**" rating implies a financial obligation has not been met or it is clear that a financial obligation will not met in the near future or a debt instrument has been subject to a distressed exchange. A downgrade to D may not immediately follow an insolvency or restructuring filing as grace periods or extenuating circumstances may exist.

Commercial Paper and Short Term Debt. The DBRS short-term debt rating scale provides an opinion on the risk that an issuer will not meet its short-term financial obligations in a timely manner. Ratings are based on quantitative and qualitative considerations relevant to the issuer and the relative ranking of claims. The R-1 and R-2 rating are further denoted by the subcategories "(high)," "(middle)" and "(low)."

Short-term debt rated "**R-1 (high)**" is considered to be of the highest credit quality. The capacity for the payment of short-term financial obligations as they fall due is exceptionally high. Unlikely to be adversely affected by future events.

Short-term debt rated "**R-1 (middle)**" is considered to be of superior credit quality. The capacity for the payment of short-term financial obligations as they fall due is very high. Differs from R-1 (high) by a relatively modest degree. Unlikely to be significantly vulnerable to future events.

Short-term debt rated "**R-1 (low)**" is considered to be of good credit quality. The capacity for the payment of short-term financial obligations as they fall due is substantial. Overall strength is not as favorable as higher rating categories. May be vulnerable to future events, but qualifying negative factors are considered manageable.

Short-term debt rated "**R-2 (high)**" is considered to be at the upper end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events.

Short-term debt rated "**R-2 (middle)**" is considered to be of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events or may be exposed to other factors that could reduce credit quality.

Short-term debt rated "**R-2 (low)**" is considered to be at the lower end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events. A number of challenges are present that could affect the issuer's ability to meet such obligations.

Short-term debt rated "**R-3**" is considered to be at the lowest end of adequate credit quality. There is a capacity for the payment of short-term financial obligations as they fall due. May be vulnerable to future events and the certainty of meeting such obligations could be impacted by a variety of developments.

Short-term debt rated "**R-4**" is considered to be of speculative credit quality. The capacity for the payment of short-term financial obligations as they fall due is uncertain.

Short-term debt rated "**R-5**" is considered to be of highly speculative credit quality. There is a high level of uncertainty as to the capacity to meet short-term financial obligations as they fall due.

A security rated "**D**" implies that a financial obligation has not been met or it is clear that a financial obligation will not be met in the near future, or a debt instrument has been subject to a distressed exchange. A downgrade to D may not immediately follow an insolvency or restructuring filing as grace periods, other procedural considerations or extenuating circumstances may exist.

ADDITIONAL INFORMATION ABOUT THE BOARD

Boards' Oversight Role in Management

The boards' role in management of the funds is oversight. As is the case with virtually all investment companies (as distinguished from operating companies), service providers to the funds, primarily the Manager and its affiliates, have responsibility for the day-to-day management of the funds, which includes responsibility for risk management (including management of investment risk, valuation risk, issuer and counterparty credit risk, compliance risk and operational risk). As part of their oversight, the boards, acting at their scheduled meetings, or the Chairman, acting between board meetings, regularly interacts with and receives reports from senior personnel of the Manager and its affiliates, service providers, including the Manager's Chief Investment Officer (or a senior representative of his office), the funds' and the Manager's Chief Compliance Officer and portfolio management personnel. The boards' audit committee (which consists of all Independent Board Members) meets during its regularly scheduled and special meetings, and between meetings the audit committee chair is available to the funds' independent registered public accounting firm and the funds' Chief Financial Officer. The boards also receive periodic presentations from senior personnel of Dreyfus and its affiliates regarding risk management generally, as well as periodic presentations regarding specific operational, compliance or investment areas, such as business continuity, anti-money laundering, personal trading, valuation, credit, investment research and securities lending. As warranted, the boards also receive informational reports from the boards' independent legal counsel regarding regulatory compliance and governance

matters. The boards have adopted policies and procedures designed to address certain risks to the funds. In addition, the Manager and other service providers to the funds have adopted a variety of policies, procedures and controls designed to address particular risks to the funds. Different processes, procedures and controls are employed with respect to different types of risks. However, it is not possible to eliminate all of the risks applicable to the funds, and the boards' risk management oversight is subject to inherent limitations.

Board Composition and Leadership Structure

The 1940 Act requires that at least 40% of the board members be Independent Board Members and as such are not affiliated with the Manager. To rely on certain exemptive rules under the 1940 Act, a majority of the funds' board members must be Independent Board Members, and for certain important matters, such as the approval of investment advisory agreements or transactions with affiliates, the 1940 Act or the rules thereunder require the approval of a majority of the Independent Board Members. Currently, except as noted in Part I of this SAI, all of the funds' board members, including the Chairman of the Boards, are Independent Board Members. The boards have determined that their leadership structure, in which the Chairman of the Boards is not affiliated with the Manager, is appropriate in light of the specific characteristics and circumstances of the funds, including, but not limited to: (i) the services that the Manager and its affiliates provide to the funds and potential conflicts of interest that could arise from these relationships; (ii) the extent to which the day-to-day operations of the funds are conducted by fund officers and employees of the Manager and its affiliates; and (iii) the boards' oversight role in management of the funds.

Additional Information About the Boards and Their Committees

Board members are elected to serve for an indefinite term. The boards have standing audit, nominating, compensation, litigation and pricing committees.

The functions of the audit committees are (i) to oversee the funds' accounting and financial reporting processes and the audits of the funds' financial statements and (ii) to assist in the boards' oversight of the integrity of the funds' financial statements, the funds' compliance with legal and regulatory requirements and the independent registered public accounting firm's qualifications, independence and performance.

The nominating committees are responsible for selecting and nominating persons as members of the boards for election or appointment by the boards and for election by shareholders. In evaluating potential nominees, including any nominees recommended by shareholders, a committee takes into consideration various factors listed in the nominating committee charter. The nominating committees will consider recommendations for nominees from shareholders submitted to the Secretary of the Dreyfus Family of Funds, c/o The Dreyfus Corporation Legal Department, 200 Park Avenue, 7th Floor East, New York, New York 10166, which include information regarding the recommended nominee as specified in the nominating committee charter.

The function of the compensation committees is to establish appropriate compensation for serving on the boards.

The litigation committee seeks to address any potential conflicts of interest between the funds and the Manager in connection with any potential or existing litigation or other legal proceeding relating to securities held by a fund and held or otherwise deemed to have a beneficial interest held by the Manager or its affiliate.

The boards also have standing pricing committees comprised of any one board member; the function of the pricing committee is to assist in valuing fund investments.

MANAGEMENT ARRANGEMENTS

The Manager

The Manager is a wholly-owned subsidiary of BNY Mellon. Dreyfus is the primary mutual fund business of The Bank of New York Mellon Corporation, a global financial services company focused on helping clients manage and service their financial assets, operating in 36 countries and serving more than 100 markets. BNY Mellon is a leading investment management and investment services company, uniquely focused to help clients manage and

move their financial assets in the rapidly changing global marketplace. BNY Mellon Investment Management is one of the world's leading investment management organizations, and one of the top U.S. wealth managers, encompassing BNY Mellon's affiliated investment management firms, wealth management services and global distribution companies. Additional information is available at www.bnymellon.com.

Pursuant to a management or advisory agreement applicable to each fund, the Manager generally maintains office facilities on behalf of the funds, and furnishes statistical and research data, clerical help, data processing, bookkeeping and internal auditing and certain other required services to the funds (including, when a fund does not have a separate administration agreement, accounting and administration services).

As further described below under "Distributor," Dreyfus may pay the Distributor or financial intermediaries for shareholder or other services from Dreyfus' own assets, including past profits but not including the management fee paid by the funds. The Distributor may use part or all of such payments to pay Service Agents. Dreyfus also may make such advertising and promotional expenditures, using its own resources, as it from time to time deems appropriate.

Sub-Advisers

See the prospectus to determine if any of the information about Sub-Advisers (below and elsewhere in this SAI) applies to your fund.

For funds with a Sub-Adviser, the Manager or the fund has entered into a Sub-Advisory Agreement with the Sub-Adviser. The Sub-Adviser provides day-to-day investment management of a fund's portfolio, and certain related services.

The following is a list of persons (to the extent known by the fund) who are deemed to control each Sub-Adviser by virtue of ownership of stock or other interests of the Sub-Adviser.

Newton: A wholly-owned subsidiary of BNY Mellon; see "The Manager" above for ownership information.

Sarofim & Co.: Fayez S. Sarofim, Raye White, Christopher Sarofim and The Sarofim Group, Inc.

TS&W: Horace Whitworth, Cheryl Mounce, Lawrence Gibson, Herbert Thomson, Frank Reichel, Lori Anderson, Jessica Thompson, Aidan Riordan, Old Mutual (US) Holdings, Inc., OM Group (UK) Limited, Old Mutual plc and TS&W Investment GP LLC

Index Manager

Mellon Capital, a wholly owned subsidiary of BNY Mellon, provides investment advisory assistance and day-to-day management of the Dreyfus Stock Index Fund's investments pursuant to an Index Management Agreement between Mellon Capital and the Manager.

Portfolio Managers and Portfolio Manager Compensation

See the prospectus to determine which portions of the information provided below apply to your fund.

For funds other than money market funds, an Affiliated Entity or the Sub-Adviser(s), as applicable, provide the funds with portfolio managers who are authorized by the board to execute purchases and sales of securities. Portfolio managers are compensated by the company that employs them, and are not compensated by the funds. Each fund's portfolio managers are listed in Part I of this SAI.

The following provides information about the compensation policies for portfolio managers.

Mellon Capital. The primary objectives of the Mellon Capital compensation plans are to:

- Motivate and reward superior investment and business performance
- Motivate and reward continued growth and profitability

- Attract and retain high-performing individuals critical to the on-going success of Mellon Capital
- Create an ownership mentality for all plan participants

Cash compensation is comprised primarily of a market-based base salary and (variable) incentives (cash and deferred). Base salary is determined by the employees' experience and performance in the role, taking into account the ongoing compensation benchmark analyses. Base salary is generally a fixed amount that may change as a result of an annual review, upon assumption of new duties, or when a market adjustment of the position occurs. Funding for the Mellon Capital Annual and Long Term Incentive Plan is through a pre-determined fixed percentage of overall Mellon Capital profitability. Therefore, all bonus awards are based initially on Mellon Capital's financial performance. Annual incentive opportunities are pre-established for each individual, expressed as a percentage of base salary ("target awards"). These targets are derived based on a review of competitive market data for each position annually. Annual awards are determined by applying multiples to this target award. Awards are 100% discretionary. Factors considered in awards include individual performance, team performance, investment performance of the associated portfolio(s) (including both short and long term returns) and qualitative behavioral factors. Other factors considered in determining the award are the asset size and revenue growth/retention of the products managed (if applicable). Awards are paid partially in cash with the balance deferred through the Long Term Incentive Plan.

Participants in the Long Term Incentive Plan have a high level of accountability and a large impact on the success of the business due to the position's scope and overall responsibility. This plan provides for an annual award, payable in cash after a three-year cliff vesting period, as well as a grant of BNY Mellon Restricted Stock for senior level roles.

The same methodology described above is used to determine portfolio manager compensation with respect to the management of mutual funds and other accounts. Mutual fund portfolio managers are also eligible for the standard retirement benefits and health and welfare benefits available to all Mellon Capital employees. Certain portfolio managers may be eligible for additional retirement benefits under several supplemental retirement plans that Mellon Capital provides to restore dollar-for-dollar the benefits of management employees that had been cut back solely as a result of certain limits due to tax laws. These plans are structured to provide the same retirement benefits as the standard retirement benefits. In addition, mutual fund portfolio managers whose compensation exceeds certain limits may elect to defer a portion of their salary and/or bonus under the BNY Mellon Deferred Compensation Plan for Employees.

Newton. Portfolio manager compensation is primarily comprised of a market-based salary, annual cash bonus and participation in the Newton Long Term Incentive Plan. The level of variable compensation (annual cash bonus and Newton Long Term Incentive Plan) ranges from 0% of base salary to in excess of 200% of base salary, depending upon corporate profits, team performance and individual performance. The annual cash bonus is discretionary. Portfolio manager awards are heavily weighted towards their investment performance relative to both benchmarks and peer comparisons and individual qualitative performance. Awards also are reviewed against market data from industry compensation consultants such as McLagan Partners to ensure comparability with competitors. The portfolio managers also are eligible to participate, at the discretion of management, in the Newton Long Term Incentive Plan. This plan provides for an annual cash award that vests after four years. The value of the award may change during the vesting period based upon changes in Newton's operating income. Portfolio managers also are eligible to join the BNY Mellon Group Personal Pension Plan. Employer contributions are invested in individual member accounts. The value of the fund is not guaranteed and fluctuates based on market factors.

Sarofim & Co. The portfolio managers are compensated through (i) payment of a fixed annual salary and discretionary annual bonus that may be based on a number of factors, including fund performance, the performance of other accounts and the overall performance of Sarofim & Co. over various time frames, including one-year, two-year and three-year periods, and (ii) the possible issuance of stock options and incentive stock options. The fixed annual salary amounts and the discretionary annual bonus amounts constitute the largest component of the portfolio managers' compensation, and these amounts are determined annually through a comprehensive review process pursuant to which executive officers and the members of Sarofim & Co.'s board of directors review and consider the accomplishments and development of each portfolio manager, especially with respect to those client accounts involving the portfolio manager. A lesser component of the portfolio managers' compensation results from the

possible issuance of stock options and incentive stock options. Portfolio managers are sometimes granted stock options and incentive stock options to acquire shares of the capital stock of The Sarofim Group, Inc., the ultimate corporate parent of Sarofim & Co. The decisions as to whether to issue such options and to whom the options are to be issued are made in conjunction with the annual salary and bonus review process, and the options are issued pursuant to a stock option plan adopted by The Sarofim Group, Inc. The options are not based on the particular performance or asset value of any particular client account or of all client accounts as a group, but rather the performance and accomplishments of the individual to whom the option is to be granted. There are various aspects of the review process that are designed to provide objectivity, but, in the final analysis, the evaluation is a subjective one that is based upon a collective overall assessment. There are, however, no specified formulas or benchmarks tied to the particular performance or asset value of any particular client account or of all client accounts as a group.

Standish. The portfolio managers' compensation is comprised primarily of a market-based salary and an incentive compensation plan (annual and long-term). Funding for the Standish Incentive Plan is through a pre-determined fixed percentage of overall company profitability. Therefore, all bonus awards are based initially on Standish's overall performance as opposed to the performance of a single product or group. All investment professionals are eligible to receive incentive awards. Cash awards are payable in the February month end pay of the following year. Most of the awards granted have some portion deferred for three years in the form of deferred cash, BNY Mellon equity, interests in investment vehicles (consisting of investments in a range of Standish products), or a combination of the above. Individual awards for portfolio managers are discretionary, based on both individual and multi-sector product risk adjusted performance relative to both benchmarks and peer comparisons over one year, three year and five year periods. Also considered in determining individual awards are team participation and general contributions to Standish. Individual objectives and goals are also established at the beginning of each calendar year and are taken into account. Portfolio managers whose compensation exceeds certain levels may elect to defer portions of their base salaries and/or incentive compensation pursuant to BNY Mellon's Elective Deferred Compensation Plan.

TBCAM. TBCAM's rewards program was designed to be market competitive and align its compensation with the goals of its clients. This alignment is achieved through an emphasis on deferred awards which incentivizes its investment personnel to focus on long-term alpha generation. The following factors encompass its investment professional awards program: base salary, annual cash bonus, long-term incentive plan, deferred cash, BNY Mellon restricted stock, TBCAM restricted shares and a franchise dividend pool (i.e., if a team meets a pre-established contribution margin, any excess contribution is shared by the team and TBCAM and is paid out in both cash and long-term incentives).

Incentive compensation awards are generally subject to management discretion and pool funding availability. Funding for TBCAM annual and long-term incentive plans is through a pre-determined fixed percentage of overall TBCAM profitability. Awards are paid in cash on an annual basis; however, some portfolio managers may receive a portion of their annual incentive award in deferred vehicles.

Awards for select senior portfolio managers are based on a two-stage model: an opportunity range based on the current level of business and an assessment of long-term business value. A significant portion of the opportunity awarded is structured and based upon the one-, three- and five-year (three-year and five-year weighted more heavily) pre-tax performance of the portfolio manager's accounts relative to the performance of the appropriate peer groups.

Certain Conflicts of Interest with Other Accounts

Portfolio managers may manage multiple accounts for a diverse client base, including mutual funds, separate accounts (assets managed on behalf of private clients or institutions such as pension funds, insurance companies and foundations), private funds, bank collective trust funds or common trust accounts and wrap fee programs that invest in securities in which a fund may invest or that may pursue a strategy similar to a fund's component strategies ("Other Accounts").

Potential conflicts of interest may arise because of an Adviser's or portfolio manager's management of a fund and Other Accounts. For example, conflicts of interest may arise with both the aggregation and allocation of securities transactions and allocation of limited investment opportunities, as an Adviser may be perceived as causing accounts it manages to participate in an offering to increase the Adviser's overall allocation of securities in that offering, or to

increase the Adviser's ability to participate in future offerings by the same underwriter or issuer. Allocations of bunched trades, particularly trade orders that were only partially filled due to limited availability, and allocation of investment opportunities generally, could raise a potential conflict of interest, as an Adviser may have an incentive to allocate securities that are expected to increase in value to preferred accounts. IPOs, in particular, are frequently of very limited availability. A potential conflict of interest may be perceived to arise if transactions in one account closely follow related transactions in a different account, such as when a fund purchase increases the value of securities previously purchased by the Other Account or when a sale in one account lowers the sale price received in a sale by a second account. Conflicts of interest may also exist with respect to portfolio managers who also manage performance-based fee accounts, which could give the portfolio managers an incentive to favor such Other Accounts over the corresponding funds such as deciding which securities to allocate to a fund versus the performance-based fee account. Additionally, portfolio managers may be perceived to have a conflict of interest if there are a large number of Other Accounts, in addition to a fund, that they are managing on behalf of an Adviser. The Advisers periodically review each portfolio manager's overall responsibilities to ensure that he or she is able to allocate the necessary time and resources to effectively manage the fund. In addition, an Adviser could be viewed as having a conflict of interest to the extent that the Adviser or its affiliates and/or portfolio managers have a materially larger investment in Other Accounts than their investment in the fund.

Other Accounts may have investment objectives, strategies and risks that differ from those of the relevant fund. In addition, the funds, as registered investment companies, are subject to different regulations than certain of the Other Accounts and, consequently, may not be permitted to engage in all the investment techniques or transactions, or to engage in such techniques or transactions to the same degree, as the Other Accounts. For these or other reasons, the portfolio managers may purchase different securities for the fund and the Other Accounts, and the performance of securities purchased for the fund may vary from the performance of securities purchased for Other Accounts. The portfolio managers may place transactions on behalf of Other Accounts that are directly or indirectly contrary to investment decisions made for the fund, which could have the potential to adversely impact the fund, depending on market conditions. In addition, if a fund's investment in an issuer is at a different level of the issuer's capital structure than an investment in the issuer by Other Accounts, in the event of credit deterioration of the issuer, there may be a conflict of interest between the fund's and such Other Accounts' investments in the issuer. If an Adviser sells securities short, it may be seen as harmful to the performance of any funds investing "long" in the same or similar securities whose market values fall as a result of short-selling activities.

BNY Mellon and its affiliates, including the Manager, Sub-Advisers affiliated with the Manager and others involved in the management, sales, investment activities, business operations or distribution of the funds, are engaged in businesses and have interests other than that of managing the funds. These activities and interests include potential multiple advisory, transactional, financial and other interests in securities, instruments and companies that may be directly or indirectly purchased or sold by the funds or the funds' service providers, which may cause conflicts that could disadvantage the funds.

BNY Mellon and its affiliates may have deposit, loan and commercial banking or other relationships with the issuers of securities purchased by the funds. BNY Mellon has no obligation to provide to the Adviser or the funds, or effect transactions on behalf of the funds in accordance with, any market or other information, analysis, or research in its possession. Consequently, BNY Mellon (including, but not limited to, BNY Mellon's central Risk Management Department) may have information that could be material to the management of the funds and may not share that information with relevant personnel of the Adviser. Accordingly, in making investment decisions for a fund, the Adviser does not seek to obtain or use material inside information that BNY Mellon may possess with respect to such issuers. However, because an Adviser, in the course of investing fund assets in loans (as described above), may have access to material non-public information regarding a Borrower, the ability of a fund or funds advised by such Adviser to purchase or sell publicly-traded securities of such Borrowers may be restricted.

Code of Ethics. The funds, the Manager, the Sub-Advisers and the Distributor each have adopted a Code of Ethics that permits its personnel, subject to such respective Code of Ethics, to invest in securities, including securities that may be purchased or held by a fund. The Code of Ethics subjects the personal securities transactions of employees to various restrictions to ensure that such trading does not disadvantage any fund. In that regard, portfolio managers and other investment personnel employed by the Manager or an Affiliated Entity or a Sub-Adviser affiliated with the Manager must preclear and report their personal securities transactions and holdings, which are reviewed for compliance with the Code of Ethics and also are subject to the oversight of BNY Mellon's Investment Ethics

Committee. Portfolio managers and other investment personnel may be permitted to purchase, sell or hold securities which also may be or are held in fund(s) they manage or for which they otherwise provide investment advice.

Distributor

The Distributor, a wholly-owned subsidiary of Dreyfus, located at 200 Park Avenue, New York, New York 10166, serves as each fund's distributor on a best efforts basis pursuant to an agreement, renewable annually, with the fund or the corporation or trust of which it is a part. The Distributor also serves as distributor for the other funds in the Dreyfus Family of Funds and BNY Mellon Funds Trust.

The Manager or the Distributor may provide cash payments out of its own resources to Participating Insurance Companies and other financial intermediaries that sell shares of the funds or provide other services. Such payments are separate from any 12b-1 fees and/or shareholder services fees or other expenses paid by the funds to those Participating Insurance Companies and other financial intermediaries. Because those payments are not made by the Policy owners or the funds, a fund's total expense ratio will not be affected by any such payments. These additional payments may be made to Participating Insurance Companies and other financial intermediaries, including affiliates of Participating Insurance Companies, that provide shareholder servicing, sub-administration, recordkeeping and/or sub-transfer agency services, marketing support and/or access to sales meetings, sales representatives and management representatives of the Participating Insurance Companies. Cash compensation also may be paid from the Manager's or the Distributor's own resources to Participating Insurance Companies for inclusion of a fund on a sales list, including a preferred or select sales list or in other sales programs. These payments sometimes are referred to as "revenue sharing." From time to time, the Manager or the Distributor also may provide cash or non-cash compensation to Participating Insurance Companies in the form of: occasional gifts; occasional meals, tickets or other entertainment; support for due diligence trips; educational conference sponsorships; support for recognition programs; technology or infrastructure support; and other forms of cash or non-cash compensation permissible under broker-dealer regulations. In some cases, these payments or compensation may create an incentive for the Participating Insurance Company to recommend or sell shares of a fund to you. In addition, the Distributor may provide additional and differing compensation from its own assets to certain of its employees who promote the sale of select funds to certain Participating Insurance Companies or other financial intermediaries, who in turn may recommend such funds to their clients. In some cases, these payments may create an incentive for the employees of the Distributor to promote a fund for which the Distributor provides a higher level of compensation. Please contact your Participating Insurance Company or other financial intermediary for details about any payments it may receive in connection with the sale of fund shares or the provision of services to the funds.

Transfer and Dividend Disbursing Agent and Custodian

The Transfer Agent, a wholly-owned subsidiary of Dreyfus, located at 200 Park Avenue, New York, New York 10166, is each fund's transfer and dividend disbursing agent. Pursuant to a transfer agency agreement with the funds, the Transfer Agent arranges for the maintenance of shareholder account records for the funds, the handling of certain communications between shareholders and the funds and the payment of dividends and distributions payable by the funds. For these services, the Transfer Agent receives a monthly fee computed on the basis of the number of shareholder accounts it maintains for each fund during the month, and is reimbursed for certain out-of-pocket expenses. The funds, other than the Index Funds, also may make payments to certain financial intermediaries, including affiliates, who provide sub-administration, recordkeeping and/or sub-transfer agency services to beneficial owners of fund shares.

The Custodian, an affiliate of the Manager, located at One Wall Street, New York, New York 10286, serves as custodian for the investments of the funds. The Custodian has no part in determining the investment policies of the funds or which securities are to be purchased or sold by the funds. Pursuant to a custody agreement applicable to each fund, the Custodian holds each fund's securities and keeps all necessary accounts and records. For its custody services, the Custodian receives a monthly fee based on the market value of each fund's assets held in custody and receives certain securities transaction charges.

Funds' Compliance Policies and Procedures

The funds have adopted compliance policies and procedures pursuant to Rule 38a-1 under the 1940 Act that cover, among other matters, certain compliance matters relevant to the management and operations of the funds.

DETERMINATION OF NAV

See the prospectus and "Investments, Investment Techniques and Risks" in Part II of this SAI to determine which sections of the discussion below apply to your fund.

Valuation of Portfolio Securities (funds other than the Money Market Portfolio)

A fund's equity securities, including option contracts (but not including investments in other open-end registered investment companies), generally are valued at the last sale price on the day of valuation on the securities exchange or national securities market on which such securities primarily are traded. Securities listed on NASDAQ markets generally will be valued at the official closing price. If there are no transactions in a security, or no official closing prices for a NASDAQ market-listed security on that day, the security will be valued at the average of the most recent bid and asked prices. Bid price is used when no asked price is available. Open short positions for which there is no sale price on a given day are valued at the lowest asked price. Investments in other open-end investment companies are valued at their reported NAVs each day, except that shares of ETFs generally are valued at the last sale price on the day of valuation on the securities exchange on which the shares are primarily traded.

Substantially all of a fund's debt securities and instruments generally will be valued, to the extent possible, by one or more independent pricing services (the "Service") approved by the board. When, in the judgment of the Service, quoted bid prices for investments are readily available and are representative of the bid side of the market, these investments are valued at the mean between the quoted bid prices (as obtained by the Service from dealers in such securities) and asked prices (as calculated by the Service based upon its evaluation of the market for such securities). The value of other debt securities and instruments is determined by the Service based on methods which include consideration of: yields or prices of securities of comparable quality, coupon, maturity and type; indications as to values from dealers; and general market conditions. The Service's procedures are reviewed by fund officers under the general supervision of the board. Overnight and certain other short-term debt securities and instruments (excluding Treasury bills) will be valued by the amortized cost method, which approximates value, unless a Service provides a valuation for such security or, in the opinion of the board or a committee or other persons designated by the board, the amortized cost method would not represent fair value.

Market quotations of foreign securities in foreign currencies and any fund assets or liabilities initially expressed in terms of foreign currency are translated into U.S. dollars at the spot rate, and foreign currency forward contracts are valued using the forward rate obtained from a Service approved by the board. If a fund has to obtain prices as of the close of trading on various exchanges throughout the world, the calculation of the fund's NAV may not take place contemporaneously with the determination of prices of certain of the fund's portfolio securities. Fair value of foreign equity securities may be determined with the assistance of a pricing service using correlations between the movement of prices of foreign securities and indexes of domestic securities and other appropriate indicators, such as closing market prices of relevant ADRs and futures contracts. The valuation of a security based on this fair value process may differ from the security's most recent closing price and from the prices used by other mutual funds to calculate their NAVs. Foreign securities held by a fund may trade on days that the fund is not open for business, thus affecting the value of the fund's assets on days when fund investors have no access to the fund.

Generally, over-the-counter option contracts and interest rate, credit default, total return and equity swap agreements, and options thereon, will be valued by the Service. Equity-linked instruments, such as contracts for difference, will be valued by the Service based on the value of the underlying reference asset(s). Futures contracts will be valued at the most recent settlement price. Restricted securities, as well as securities or other assets for which recent market quotations or official closing prices are not readily available or are determined by a fund not to reflect accurately fair value (such as when the value of a security has been materially affected by events occurring after the close of the exchange or market on which the security is principally traded (for example, a foreign exchange or market) but before the fund calculates its NAV), or which are not valued by the Service, are valued at fair value as determined in good faith based on procedures approved by the board. Fair value of investments may be

determined by the board or its pricing committee or the fund's valuation committee using such information as it deems appropriate. The factors that may be considered when fair valuing a security include fundamental analytical data, the nature and duration of restrictions on disposition, an evaluation of the forces that influence the market in which the securities are purchased and sold, and public trading in similar securities of the issuer or comparable issuers. The valuation of a security based on fair value procedures may differ from the prices used by other mutual funds to calculate their NAVs.

Valuation of Portfolio Securities (Money Market Portfolio only)

In the case of a money market fund that uses amortized cost pricing to value its portfolio securities, the valuation of the fund's portfolio securities is based upon their amortized cost which does not take into account unrealized gains or losses. This involves valuing an instrument at its cost and thereafter assuming a constant amortization to maturity of any discount or premium, regardless of the impact of fluctuating interest rates on the market value of the instrument. While this method provides certainty in valuation, it may result in periods during which value, as determined by amortized cost, is higher or lower than the price the fund would receive if it sold the instrument. Boards overseeing money market funds have established, as a particular responsibility within the overall duty of care owed to fund investors, procedures reasonably designed to stabilize the funds' price per share as computed for the purpose of purchases and redemptions at \$1.00. Such procedures include review of the funds' portfolio holdings by the board, at such intervals as it may deem appropriate, to determine whether the funds' NAV calculated by using available market quotations or market equivalents (including valuations obtained from a Service) deviates from \$1.00 per share based on amortized cost. Other investments and assets will be valued at fair value as determined in good faith by the board.

Calculation of NAV

Fund shares are sold on a continuous basis. Except as otherwise described in the prospectus, NAV per share of each fund and each class of a Multi-Class Fund is determined as of the close of trading on the floor of the NYSE (usually 4:00 p.m., Eastern time) on each day the NYSE is open for regular business. For purposes of determining NAV, certain options and futures contracts may be valued 15 minutes after the close of trading on the floor of the NYSE. The NAV per share of a fund is computed by dividing the value of the fund's net assets (*i.e.*, the value of its assets less liabilities) by the total number of shares of such fund outstanding.

Fund expenses and fees, including management fees and fees pursuant to a Distribution Plan (reduced by the fund's expense limitation, if any), are accrued daily and taken into account for the purpose of determining the NAV of a fund's shares. For funds with more than one class of shares, because of the differences in operating expenses incurred by each class of shares of a fund, the per share NAV of each class of shares of the fund will differ. The NAV of each class of a fund with more than one class of shares is computed by dividing the value of the fund's net assets represented by such class (*i.e.*, the value of its assets less liabilities) by the total number of shares of such class outstanding.

Expense Allocations

Except as may be otherwise described in "Certain Expense Arrangements and Other Disclosures" in Part II of this SAI, all expenses incurred in the operation of the series of a fund company are borne by the fund company. Expenses attributable to a particular series of a fund company are charged against the assets of that series; other expenses of the fund company are allocated among the series on the basis determined by the board, including, but not limited to, proportionately in relation to the net assets of each series. In addition, each class of shares of a fund with more than one class bears any class specific expenses allocated to such class, such as expenses related to the distribution and/or shareholder servicing of such class.

NYSE Closings

The holidays (as observed) on which the NYSE is closed currently are: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving and Christmas.

DIVIDENDS AND DISTRIBUTIONS

Dividends automatically are reinvested in additional shares of the fund from which they were paid at NAV. Dividends and distributions among share classes in the same fund may vary due to the different expenses of such share classes. All expenses are accrued daily and deducted before declaration of dividends to shareholders.

Money Market Portfolio

Dividends accrue beginning on the business day following the date of purchase and through the day a redemption is effective. A fund's earnings for Saturdays, Sundays and holidays are declared as dividends on the following business day. Dividends usually are paid on the last calendar day of each month. All expenses are accrued daily and deducted before declaration of dividends to shareholders.

TAXATION

See the prospectus and "Investment Policies and Restrictions" in Part II of this SAI to determine which sections of the discussion below apply to your funds.

The following is only a general summary of some of the important federal income tax considerations generally affecting the funds and their shareholders. No attempt is made to present a complete explanation of the federal tax treatment of the funds' activities or to discuss state and local tax matters affecting the funds. Shareholders are urged to consult their own tax advisors for more detailed information concerning the tax implications of investments in the funds.

Since the shareholders of each fund are the Participating Insurance Companies and their separate accounts, the tax treatment of dividends and distributions will depend on the tax status of the Participating Insurance Company. Accordingly, no discussion is included as to the federal income tax consequences to such shareholders or to the relevant Policy owners. For information regarding the taxation of Policy owners, Policy owners should consult the applicable prospectus of the separate account of the Participating Insurance Company. The discussion below assumes that the shares of each fund will be respected as owned by the insurance company separate accounts. If this is not true, the person or persons determined to own the shares of a fund will be currently taxed on fund distributions and upon any redemption of fund shares, pursuant to generally applicable rules of the Code and Treasury regulations.

Taxation of the Funds

Each fund intends to qualify for treatment as a regulated investment company ("RIC") under Subchapter M of the Code and intends to continue to so qualify if such qualification is in the best interests of its shareholders. As a RIC, a fund will pay no federal income tax on its net investment income and net realized capital gains to the extent that such income and gains are distributed to shareholders in accordance with applicable provisions of the Code. To qualify as a RIC, a fund must, among other things: (a) derive in each taxable year (the "gross income test") at least 90% of its gross income from (i) dividends, interest, payments with respect to securities loans and gains from the sale or other disposition of stocks, securities or foreign currencies or other income (including but not limited to gains from options, futures or forward contracts) derived with respect to its business of investing in such stocks, securities or currencies, and (ii) net income from interests in "qualified publicly traded partnerships" ("QPTPs," as defined below); (b) diversify its holdings (the "asset diversification test") so that, at the end of each quarter of the taxable year, (i) at least 50% of the market value of the fund's assets is represented by cash and cash items (including receivables), U.S. Government securities, the securities of other RICs and other securities, with such other securities of any one issuer limited for the purposes of this calculation to an amount not greater than 5% of the value of the fund's total assets and not greater than 10% of the outstanding voting securities of such issuer, and (ii) not more than 25% of the value of its total assets is invested in the securities (other than U.S. Government securities or the securities of other RICs) of a single issuer, two or more issuers that the fund controls and that are engaged in the same, similar or related trades or businesses or one or more QPTPs; and (c) distribute with respect to each taxable year at least 90% of the sum of its investment company taxable income (determined without regard to the dividends paid deduction) and net tax-exempt interest income, if any, for such year.

In general, for purposes of the gross income test described above, income derived from a partnership will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership that would be qualifying income if realized by a RIC. However, as noted above, 100% of the net income derived from an interest in a QPTP is qualifying income for purposes of the gross income test. A QPTP is defined as a partnership (i) interests in which are traded on an established securities market or readily tradable on a secondary market or the substantial equivalent thereof and (ii) that derives at least 90% of its gross income from certain enumerated passive income sources described in Code section 7704(d), but does not include a partnership that derives 90% of its gross income from sources described in Code section 851(b)(2)(A). Although income from a QPTP is qualifying income for purposes of the gross income test, investment in QPTPs cannot exceed 25% of a fund's assets.

Gains from foreign currencies (including foreign currency options, foreign currency swaps, foreign currency futures and foreign currency forward contracts) currently constitute qualifying income for purposes of the gross income test. However, the Treasury has the authority to issue regulations (possibly with retroactive effect) treating a RIC's foreign currency gains as non-qualifying income for purposes of the gross income test to the extent that such income is not directly related to the RIC's principal business of investing in stock or securities.

A RIC that fails the gross income test for a taxable year shall nevertheless be considered to have satisfied the test for such year if (i) the RIC satisfies certain procedural requirements, and (ii) the RIC's failure to satisfy the gross income test is due to reasonable cause and not due to willful neglect. However, in such case, a tax is imposed on the RIC for the taxable year in which, absent the application of the above cure provision, it would have failed the gross income test equal to the amount by which (x) the RIC's non-qualifying gross income exceeds (y) one-ninth of the RIC's qualifying gross income, each as determined for purposes of applying the gross income test for such year.

A RIC that fails the asset diversification test as of the end of a quarter shall nevertheless be considered to have satisfied the test as of the end of such quarter in the following circumstances. If the RIC's failure to satisfy the asset diversification test at the end of the quarter is due to the ownership of assets the total value of which does not exceed the lesser of (i) one percent of the total value of the RIC's assets at the end of such quarter and (ii) \$10,000,000 (a "*de minimis* failure"), the RIC shall be considered to have satisfied the asset diversification test as of the end of such quarter if, within six months of the last day of the quarter in which the RIC identifies that it failed the asset diversification test (or such other prescribed time period), the RIC either disposes of assets in order to satisfy the asset diversification test, or otherwise satisfies the asset diversification test.

In the case of a failure to satisfy the asset diversification test at the end of a quarter under circumstances that do not constitute a *de minimis* failure, a RIC shall nevertheless be considered to have satisfied the asset diversification test as of the end of such quarter if (i) the RIC satisfies certain procedural requirements; (ii) the RIC's failure to satisfy the asset diversification test is due to reasonable cause and not due to willful neglect; and (iii) within six months of the last day of the quarter in which the RIC identifies that it failed the asset diversification test (or such other prescribed time period), the RIC either disposes of the assets that caused the asset diversification failure, or otherwise satisfies the asset diversification test. However, in such case, a tax is imposed on the RIC, at the highest prescribed corporate income tax rate, on the net income generated by the assets that caused the RIC to fail the asset diversification test during the period for which the asset diversification test was not met. In all events, however, such tax will not be less than \$50,000.

If a fund were to fail to qualify as a RIC in any taxable year, the fund would be subject to tax on its taxable income at corporate rates, and all distributions from current or accumulated earnings and profits, including any distributions of net tax-exempt income and net long-term capital gains, would be taxable to shareholders (or, potentially, Policy owners) as ordinary income. In addition, a fund could be required to recognize unrealized gains, pay substantial taxes and interest and make substantial distributions before requalifying as a RIC that is accorded special tax treatment.

A nondeductible excise tax at a rate of 4% will be imposed on the excess, if any, of a fund's "required distribution" over its actual distributions in any calendar year. Generally, the required distribution is 98% of a fund's ordinary income for the calendar year plus 98.2% of its capital gain net income, determined under prescribed rules for this purpose, recognized during the one-year period ending on October 31st of such year (or December 31st of that year if the fund is permitted to so elect and so elects) plus undistributed amounts from prior years. This excise tax, however, does not apply to a RIC whose only shareholders are separate accounts of life insurance companies

supporting VA contracts and/or VLI policies and certain other prescribed shareholders. Therefore, none of the funds are expected to be subject to the excise tax.

Although in general the passive loss rules of the Code do not apply to RICs, such rules do apply to a RIC with respect to items attributable to an interest in a QPTP. A fund's investments in partnerships, including in QPTPs, may result in a fund being subject to state, local or foreign income, franchise or withholding tax liabilities.

Diversification Requirements of Section 817(h)

Each fund intends to comply with the diversification requirements of Section 817(h) of the Code and the regulations thereunder. Section 817(h) imposes certain diversification requirements on the assets of insurance company separate accounts used to fund VA contracts and/or VLI policies. Under a special "look-through" provision, if the separate account is a shareholder of a fund whose only shareholders are separate accounts of life insurance companies supporting VA contracts and/or VLI policies and certain other prescribed shareholders, the separate account will be treated as owning its pro rata portion of each of the assets of the fund for purposes of determining the account's satisfaction of the Section 817(h) diversification requirements. Accordingly, if a separate account's sole investment is shares of such a fund, and that fund satisfies the diversification requirements of Section 817(h), the separate account will be treated as having satisfied the diversification requirements of Section 817(h).

The diversification requirements of Section 817(h) are in addition to the diversification requirements imposed on a fund by the 1940 Act and Subchapter M of the Code. Under Section 817(h), a separate account (or underlying fund) will be considered adequately diversified if, as of the end of each calendar quarter or within 30 days thereafter, (i) no more than 55% of the total assets of the separate account (or underlying fund) are represented by any one investment, (ii) no more than 70% of the total assets of the separate account (or underlying fund) are represented by any two investments, (iii) no more than 80% of the total assets of the separate account (or underlying fund) are represented by any three investments, and (iv) no more than 90% of the total assets of the separate account (or underlying fund) are represented by any four investments. Section 817(h) provides, as a safe harbor, that a separate account (or underlying fund) will be treated as being adequately diversified if the asset diversification test under Subchapter M of the Code (discussed above at "Taxation of the Funds") is satisfied and no more than 55% of the value of the separate account's (or underlying fund's) total assets are cash and cash items, U.S. government securities, and securities of other RICs.

For purposes of the diversification requirements of Section 817(h), all securities of the same issuer, all interests in the same real property project, and all interests in the same commodity are treated as a single investment. In addition, each U.S. Government agency or instrumentality is treated as a separate issuer.

Failure by a fund to qualify as a RIC or satisfy the various requirements of Section 817(h) could cause the VA contracts and the VLI policies to lose their favorable tax status and require a Policy owner to include in income any income accrued under the Policies for the current and all prior taxable years, thereby losing the benefit of tax deferral. Under certain circumstances described in applicable Treasury regulations and guidance, an inadvertent failure to satisfy the applicable diversification requirements of Section 817(h) may be corrected, but such a correction would require a payment to the IRS. Any such failure may also result in adverse tax consequences for the Participating Insurance Company issuing the Policies.

Passive Foreign Investment Companies

Certain funds that invest in foreign securities may own shares in certain foreign entities that are treated as passive foreign investment companies ("PFICs") for U.S. federal income tax purposes. A fund that owns shares of a PFIC may be subject to U.S. federal income tax (including interest charges) on distributions received from the PFIC or gains from a disposition of shares in the PFIC. To avoid this treatment, each fund owning PFIC shares may make an election to mark the gains (and to a limited extent losses) in a PFIC "to market" as though it had sold and repurchased its holdings in the PFIC on the last day of the fund's taxable year. Such gains and losses are treated as ordinary income and loss. Alternatively, a fund may in certain cases elect to treat a PFIC as a "qualified electing fund" (a "QEF"), in which case the fund will be required to include in its income annually its share of the QEF's income and net capital gains, regardless of whether the fund receives any distribution from the QEF. If the QEF incurs a loss for a taxable year, the loss will not pass through to the fund and, accordingly, cannot offset other

income and/or gains of the fund. A fund may not be able to make the QEF election with respect to many PFICs because of certain requirements that the PFICs would have to satisfy.

The mark-to-market and QEF elections may accelerate the recognition of income (without the receipt of cash) and increase the amount required to be distributed by a fund to avoid taxation. Making either of these elections therefore may require a fund to liquidate investments (including when it is not advantageous to do so) to meet its distribution requirements, which also may accelerate the recognition of gain and affect the fund's total return.

Taxes on Non-U.S. Income and Investments

Investment income that may be received by a fund from sources within foreign countries may be subject to foreign withholding and other taxes. Tax treaties between the United States and certain countries may reduce or eliminate such taxes. It is not possible to determine at this time what a fund's effective rate of non-U.S. taxes will be in any given year.

Further, adverse United States tax consequences can be associated with certain foreign investments, including potential United States withholding taxes on foreign investment entities with respect to their United States investments.

Foreign Currency Transactions

Gains or losses attributable to fluctuations in exchange rates between the time a fund accrues income or receivables, or expenses or other liabilities, denominated in a foreign currency and the time that fund actually collects such income or receivables, or pays such liabilities, are generally treated as ordinary income or loss. Similarly, gains or losses on foreign currency forward contracts and the disposition of debt securities denominated in a foreign currency, to the extent attributable to fluctuations in exchange rates between the acquisition and disposition dates, also are treated as ordinary income or loss.

Financial Products

A fund's investments in options, futures contracts, forward contracts, swaps and derivatives, as well as any of its other hedging, short sale or similar transactions, may be subject to one or more special tax rules (including notional principal contract, constructive sale, straddle, wash sale, short sale and other rules), the effect of which may be to accelerate income to the fund (including, potentially, without a corresponding receipt of cash with which to make required distributions), defer fund losses, cause adjustments in the holding periods of fund securities, convert capital gains into ordinary income, convert long-term capital gains into short-term capital gains and convert short-term capital losses into long-term capital losses. These rules could therefore affect the amount, timing and character of distributions to shareholders of a fund. In addition, because the tax rules applicable to derivative financial instruments are in some cases uncertain under current law, an adverse determination or future guidance by the IRS with respect to these rules (which determination or guidance could be retroactive) may affect whether a fund has made sufficient distributions, and otherwise satisfied the applicable requirements, to maintain its qualification as a RIC and avoid fund-level taxation.

Securities Issued or Purchased at a Discount and Payment-in-Kind Securities

A fund's investments, if any, in securities issued or purchased at a discount, as well as certain other securities (including zero coupon obligations and certain redeemable preferred stock), may require the fund to accrue and distribute income not yet received. Similarly, a fund's investment in payment-in-kind securities will give rise to income which is required to be distributed even though the fund receives no payment in cash on the security during the year. In order to generate sufficient cash to make its requisite distributions, a fund may be required to borrow money or sell securities in its portfolio that it otherwise would have continued to hold.

Inflation-Indexed Treasury Securities

The taxation of inflation-indexed Treasury securities is similar to the taxation of conventional bonds. Both interest payments and the difference between original principal and the inflation-adjusted principal generally will be treated as interest or original issue discount income subject to taxation. Interest payments generally are taxable when

received or accrued. The inflation adjustment to the principal generally is subject to tax in the year the adjustment is made, not at maturity of the security when the cash from the repayment of principal is received. Accordingly, as in the case of securities issued or purchased at a discount and zero coupon obligations, a fund's investments in inflation-indexed Treasury securities may require the fund to accrue and distribute income not yet received. Decreases in the indexed principal in a given year generally (i) will reduce the amount of interest income otherwise includible in income for that year in respect of the Treasury security, (ii) to the extent not treated as an offset to current income under (i), will constitute an ordinary loss to the extent of prior year inclusions of interest, original issue discount and market discount in respect of the security that exceed ordinary losses in respect of the security in such prior years, and (iii) to the extent not treated as an offset to current income under (i) or an ordinary loss under (ii), can be carried forward as an ordinary loss to reduce interest, original issue discount and market discount in respect of the security in subsequent taxable years. If inflation-indexed Treasury securities are sold prior to maturity, capital losses or gains generally are realized in the same manner as traditional debt instruments. Special rules apply in respect of inflation-indexed Treasury securities issued with more than a prescribed *de minimis* amount of discount or premium.

Certain Higher-Risk and High Yield Securities

Certain funds may invest in lower-quality fixed-income securities, including debt obligations of issuers not currently paying interest or that are in default. Investments in debt obligations that are at risk of or are in default present special tax issues for a fund. Tax rules are not entirely clear on the treatment of such debt obligations, including as to whether and to what extent a fund should recognize market discount on such a debt obligation, when a fund may cease to accrue interest, original issue discount or market discount, when and to what extent a fund may take deductions for bad debts or worthless securities and how a fund shall allocate payments received on obligations in default between principal and interest. These and other related issues would be addressed by each fund if it invests in such securities as part of the fund's efforts to ensure that it distributes sufficient income to preserve its status as a RIC and does not become subject to U.S. federal income or excise tax.

Investing in Mortgage Entities

Special tax rules may apply to the investments by a fund in entities which invest in or finance mortgage debt. Such investments include residual interests in REMICs and interests in a REIT which qualifies as a taxable mortgage pool under the Code or has a qualified REIT subsidiary that is a taxable mortgage pool under the Code. Although it is the practice of each fund not to make such investments, there is no guarantee that a fund will be able to avoid an inadvertent investment in REMIC residual interests or a taxable mortgage pool.

Such investments may result in a fund receiving excess inclusion income ("EII") in which case a portion of its distributions will be characterized as EII. Among other potential adverse tax consequences, this can result in the fund being required to pay tax on the portion of its EII, if any, that is allocated to any shareholders that are disqualified organizations. Furthermore, any investment in residual interests of a REMIC can create complex tax consequences to both a fund and its shareholders.

Investor Tax Matters

The rules regarding the taxation of the separate accounts of Participating Insurance Companies that utilize the funds as investment vehicles for VA contracts and VLI policies are complex. The foregoing is only a summary of certain material United States federal income tax consequences affecting the funds. Participating Insurance Companies and Policy owners should consult their own tax advisors with respect to the particular tax consequences to them of an investment in the funds.

PORTFOLIO TRANSACTIONS

The Manager assumes general supervision over the placement of securities purchase and sale orders on behalf of the funds. The funds, except for the Money Market Portfolio, are managed by dual employees of the Manager and an Affiliated Entity or employ a Sub-Adviser. Those funds use the research facilities, and are subject to the internal policies and procedures, of the applicable Affiliated Entity or Sub-Adviser and execute portfolio transactions through the trading desk of the Affiliated Entity or Sub-Adviser, as applicable (collectively with Dreyfus' trading

desk (for the money market funds only), the "Trading Desk"). All portfolio transactions of the Money Market Portfolio are placed on behalf of the Money Market Portfolio by the Manager.

Trading the Funds' Portfolio Securities

In managing the Money Market Portfolio, the Manager will draw upon BNY Mellon Cash Investment Strategies ("CIS"). CIS is a division of the Manager that provides investment and credit risk management services and approves all money market fund eligible securities for the fund and for other investment companies and accounts managed by the Manager or its affiliates that invest primarily in money market instruments. CIS, through a team of professionals who contribute a combination of industry analysis and fund-specific expertise, monitors all issuers approved for investment by such investment companies and other accounts by analyzing third party inputs, such as financial statements and media sources, ratings releases and company meetings, as well as internal research. CIS investment and credit professionals also utilize inputs and guidance from BNY Mellon's central Risk Management Department (the "Risk Department") as part of the investment process. These inputs and guidance focus primarily on concentration levels and market and credit risks and are based upon independent analysis done by the Risk Department relating to fundamental characteristics such as the sector, sovereign, tenor and rating of investments or potential investment. The Risk Department also may perform stress and scenario testing on various money market type portfolios advised by CIS or BNY Mellon and its other affiliates, and provides various periodic and ad-hoc reporting to the investment and credit professionals at CIS. In the event a security is removed from the "approved" credit list after being purchased by the fund, the fund is not required to sell that security.

Debt securities purchased and sold by a fund generally are traded on a net basis (*i.e.*, without a commission) through dealers acting for their own account and not as brokers, or otherwise involve transactions directly with the issuer of the instrument. This means that a dealer makes a market for securities by offering to buy at one price and sell at a slightly higher price. The difference between the prices is known as a "spread." Other portfolio transactions may be executed through brokers acting as agents, which are typically paid a commission.

The Trading Desk generally has the authority to select brokers (for equity securities) or dealers (for fixed-income securities) and the commission rates or spreads to be paid. Allocation of brokerage transactions is made in the best judgment of the Trading Desk and in a manner deemed fair and reasonable. In choosing brokers or dealers, the Trading Desk evaluates the ability of the broker or dealer to execute the transaction at the best combination of price and quality of execution.

In general, brokers or dealers involved in the execution of portfolio transactions on behalf of a fund are selected on the basis of their professional capability and the value and quality of their services. The Trading Desk seeks to obtain best execution by choosing brokers or dealers to execute transactions based on a variety of factors, which may include, but are not limited to, the following: (i) price; (ii) liquidity; (iii) the nature and character of the relevant market for the security to be purchased or sold; (iv) the quality and efficiency of the broker's or dealer's execution; (v) the broker's or dealer's willingness to commit capital; (vi) the reliability of the broker or dealer in trade settlement and clearance; (vii) the level of counterparty risk (*i.e.*, the broker's or dealer's financial condition); (viii) the commission rate or the spread; (ix) the value of research provided; (x) the availability of electronic trade entry and reporting links; and (xi) the size and type of order (*e.g.*, foreign or domestic security, large block, illiquid security). In selecting brokers or dealers no factor is necessarily determinative; however, at various times and for various reasons, certain factors will be more important than others in determining which broker or dealer to use. Seeking to obtain best execution for all trades takes precedence over all other considerations.

Investment decisions for one fund or account are made independently from those for other funds or accounts managed by the portfolio managers. Under the Trading Desk's procedures, portfolio managers and their corresponding Trading Desks may, but are not required to, seek to aggregate (or "bunch") orders that are placed or received concurrently for more than one fund or account, and available investments or opportunities for sales will be allocated equitably to each. In some cases, this policy may adversely affect the size of the position obtained or sold or the price paid or received by a fund. When transactions are aggregated, but it is not possible to receive the same price or execution on the entire volume of securities purchased or sold, the various prices may be averaged, and the fund will be charged or credited with the average price.

The portfolio managers will make investment decisions for the funds as they believe are in the best interests of the funds. Investment decisions made for a fund may differ from, and may conflict with, investment decisions made for

other funds and accounts advised by the Manager and its Affiliated Entities or a Sub-Adviser. Actions taken with respect to such other funds or accounts may adversely impact a fund, and actions taken by a fund may benefit the Manager or its Affiliated Entities or a Sub-Adviser or other funds or accounts advised by the Manager or an Affiliated Entity or Sub-Adviser. Funds and accounts managed by the Manager, an Affiliated Entity or a Sub-Adviser may own significant positions in an issuer of securities which, depending on market conditions, may affect adversely the ability to dispose of some or all of such positions. Regulatory restrictions (including, but not limited to, those related to the aggregation of positions among other funds and accounts) and internal BNY Mellon policies, guidance or limitations (including, but not limited to, those related to the aggregation of positions among all fiduciary accounts managed or advised by BNY Mellon and all its affiliates (including the Manager and its Affiliated Entities) and the aggregate exposure of such accounts) may restrict investment activities of the funds. While the allocation of investment opportunities among a fund and other funds and accounts advised by the Manager and its Affiliated Entities may raise potential conflicts because of financial, investment or other interests of BNY Mellon or its personnel (or, with respect to a fund advised by a Sub-Adviser, the Sub-Adviser and its affiliates), the portfolio managers will make allocation decisions consistent with the interests of the fund and other funds and accounts and not solely based on such other interests.

Portfolio managers may deem it appropriate for one fund or account they manage to sell a security while another fund or account they manage is purchasing the same security. Under such circumstances, the portfolio managers may arrange to have the purchase and sale transactions effected directly between the funds and/or accounts ("cross transactions"). Cross transactions will be effected in accordance with procedures adopted pursuant to Rule 17a-7 under the 1940 Act.

The Manager, an Affiliated Entity or a Sub-Adviser may buy for a fund securities of issuers in which other funds or accounts advised by the Manager, the Affiliated Entity or the Sub-Adviser may have, or are making, an investment in the same issuer that are subordinate or senior to the securities purchased for the fund. For example, a fund may invest in debt securities of an issuer at the same time that other funds or accounts are investing, or currently have an investment, in equity securities of the same issuer. To the extent that the issuer experiences financial or operational challenges which may impact the price of its securities and its ability to meet its obligations, decisions by the Manager, an Affiliated Entity or a Sub-Adviser relating to what actions are to be taken may raise conflicts of interests, and the Manager, the Affiliated Entity or the Sub-Adviser, as applicable, may take actions for certain funds or accounts that have negative impacts on other funds or accounts.

Portfolio turnover may vary from year to year as well as within a year. In periods in which extraordinary market conditions prevail, portfolio managers will not be deterred from changing a fund's investment strategy as rapidly as needed, in which case higher turnover rates can be anticipated which would result in greater brokerage expenses. The overall reasonableness of brokerage commissions paid is evaluated by the Trading Desk based upon its knowledge of available information as to the general level of commissions paid by other institutional investors for comparable services. Higher portfolio turnover rates usually generate additional brokerage commissions and transaction costs.

To the extent that a fund invests in foreign securities, certain of such fund's transactions in those securities may not benefit from the negotiated commission rates available to funds for transactions in securities of domestic issuers. For funds that permit foreign exchange transactions, such transactions are made with banks or institutions in the interbank market at prices reflecting a mark-up or mark-down and/or commission.

The Manager (and, where applicable, an Affiliated Entity or a Sub-Adviser) may utilize the services of an affiliate to effect certain client transactions when it determines that the use of such affiliate is consistent with its fiduciary obligations, including its obligation to obtain best execution, and the transactions are in the best interests of its clients. Procedures have been adopted in conformity with Rule 17e-1 under the 1940 Act to provide that all brokerage commissions paid by the funds to the Manager (or, where applicable, an Affiliated Entity or a Sub-Adviser) are reasonable and fair.

For funds that invest in municipal securities, portfolio securities are purchased from and sold to parties acting as either principal or agent. Newly-issued securities ordinarily are purchased directly from the issuer or from an underwriter; other purchases and sales usually are placed with those dealers from which it appears that the best price or execution will be obtained. Usually no brokerage commissions as such are paid by a fund for such purchases and sales, although the price paid usually includes an undisclosed compensation to the dealer acting as agent. The prices

paid to underwriters of newly-issued securities usually include a concession paid by the issuer to the underwriter and purchases of after-market securities from dealers ordinarily are executed at a price between the bid and asked price.

Soft Dollars

The term "soft dollars" is commonly understood to refer to arrangements where an investment adviser uses client (or fund) brokerage commissions to pay for research and brokerage services to be used by the investment adviser. Section 28(e) of the Exchange Act provides a "safe harbor" that permits investment advisers to enter into soft dollar arrangements if the investment adviser determines in good faith that the amount of the commission is reasonable in relation to the value of the brokerage and research services provided. Eligible products and services under Section 28(e) include those that provide lawful and appropriate assistance to the investment adviser in the performance of its investment decision-making responsibilities.

Subject to the policy of seeking best execution, the funds may execute transactions with brokerage firms that provide research services and products, as defined in Section 28(e). Any and all research products and services received in connection with brokerage commissions will be used to assist the applicable Affiliated Entity or Sub-Adviser in its investment decision-making responsibilities, as contemplated under Section 28(e). Under certain conditions, higher brokerage commissions may be paid in connection with certain transactions in return for research products and services.

The products and services provided under these arrangements permit the Trading Desk to supplement its own research and analysis activities, and provide it with information from individuals and research staff of many securities firms. Such services and products may include, but are not limited to, the following: fundamental research reports (which may discuss, among other things, the value of securities, or the advisability of investing in, purchasing or selling securities, or the availability of securities or the purchasers or sellers of securities, or issuers, industries, economic factors and trends, portfolio strategy and performance); current market data and news; statistical data; technical and portfolio analyses; economic forecasting and interest rate projections; and historical information on securities and companies. The Trading Desk also may use client brokerage commission arrangements to defray the costs of certain services and communication systems that facilitate trade execution (such as on-line quotation systems, direct data feeds from stock exchanges and on-line trading systems) or functions related thereto (such as clearance and settlement). Some of the research products or services received by the Trading Desk may have both a research function and a non-research or administrative function (a "mixed use"). If the Trading Desk determines that any research product or service has a mixed use, the Trading Desk will allocate in good faith the cost of such service or product accordingly. The portion of the product or service that the Trading Desk determines will assist it in the investment decision-making process may be paid for in soft dollars. The non-research portion is paid for by the Trading Desk in hard dollars.

The Trading Desk generally considers the amount and nature of research, execution and other services provided by brokerage firms, as well as the extent to which such services are relied on, and attempts to allocate a portion of the brokerage business of its clients on the basis of that consideration. Neither the services nor the amount of brokerage given to a particular brokerage firm are made pursuant to any agreement or commitment with any of the selected firms that would bind the Trading Desk to compensate the selected brokerage firm for research provided. The Trading Desk endeavors, but is not legally obligated, to direct sufficient commissions to broker/dealers that have provided it with research and other services to ensure continued receipt of research the Trading Desk believes is useful. Actual commissions received by a brokerage firm may be more or less than the suggested allocations.

There may be no correlation between the amount of brokerage commissions generated by a particular fund or account and the indirect benefits received by that fund or client. The Affiliated Entity or Sub-Adviser may receive a benefit from the research services and products that is not passed on to a fund in the form of a direct monetary benefit. Further, research services and products may be useful to the Affiliated Entity or Sub-Adviser in providing investment advice to any of the funds or other accounts it advises. Information made available to the Affiliated Entity or Sub-Adviser from brokerage firms effecting securities transactions for another fund or account may be utilized on behalf of a fund. Thus, there may be no correlation between the amount of brokerage commissions generated by a particular fund and the indirect benefits received by that fund. Information so received is in addition to, and not in lieu of, services required to be performed by the Affiliated Entity or Sub-Adviser and fees are not reduced as a consequence of the receipt of such supplemental information. Although the receipt of such research services does not reduce the normal independent research activities of the Affiliated Entity or Sub-Adviser, it

enables it to avoid the additional expenses that might otherwise be incurred if it were to attempt to develop comparable information through its own staff.

IPO Allocations

Certain funds may participate in IPOs. In deciding whether to purchase an IPO, a fund's portfolio manager(s) generally consider the capitalization characteristics of the security, as well as other characteristics of the security, and identifies funds and accounts with investment objectives and strategies consistent with such a purchase. Generally, as more IPOs involve small- and mid-cap companies, the funds and accounts with a small- and mid-cap focus may participate in more IPOs than funds and accounts with a large-cap focus. The Affiliated Entity or Sub-Adviser (as applicable), when consistent with the fund's and/or account's investment guidelines, generally will allocate shares of an IPO on a pro rata basis. In the case of "hot" IPOs, where the Affiliated Entity or Sub-Adviser only receives a partial allocation of the total amount requested, those shares will be distributed fairly and equitably among participating funds or accounts managed by the Affiliated Entity or Sub-Adviser. "Hot" IPOs raise special allocation concerns because opportunities to invest in such issues are limited as they are often oversubscribed. The distribution of the partial allocation among funds and/or accounts will be based on relative NAVs. Shares will be allocated on a pro rata basis to all appropriate funds and accounts, subject to a minimum allocation based on trading, custody and other associated costs. International hot IPOs may not be allocated on a pro rata basis due to transaction costs, market liquidity and other factors unique to international markets.

Disclosure of Portfolio Holdings

The funds have adopted policies and procedures with respect to the disclosure of fund portfolio holdings and any ongoing arrangements to make available information about fund portfolio holdings. It is the policy of the Manager to protect the confidentiality of fund portfolio holdings and prevent the selective disclosure of non-public information about such holdings. The policy requires that consideration always be given as to whether disclosure of information about fund portfolio holdings is in the best interests of fund shareholders, and that any conflicts of interest between the interests of fund shareholders and those of the Manager or its affiliates be addressed in a manner that places the interests of fund shareholders first.

Each fund, or its duly authorized service providers, publicly discloses its portfolio holdings in accordance with regulatory requirements, such as periodic portfolio disclosure in filings with the SEC. Each non-money market fund, or its duly authorized service providers, may publicly disclose its complete schedule of portfolio holdings at month-end, with a one-month lag at www.dreyfus.com. In addition, fifteen days following the end of each calendar quarter, each non-money market fund, or its duly authorized service providers, may publicly disclose on the website its complete schedule of portfolio holdings as of the end of such quarter. Each money market fund will disclose daily, on www.dreyfus.com, the fund's complete schedule of holdings as of the end of the previous business day. The schedule of holdings will remain on the website until the fund files its Form N-Q or Form N-CSR for the period that includes the date of the posted holdings.

If a fund's portfolio holdings are released pursuant to an ongoing arrangement with any party, such fund must have a legitimate business purpose for doing so, and neither the fund, nor the Manager or its affiliates may receive any compensation in connection with an arrangement to make available information about the fund's portfolio holdings. Funds may distribute portfolio holdings to mutual fund evaluation services such as S&P, Morningstar or Lipper Analytical Services; due diligence departments of broker-dealers and wirehouses that regularly analyze the portfolio holdings of mutual funds before their public disclosure; and broker-dealers that may be used by the fund, for the purpose of efficient trading and receipt of relevant research, provided that: (a) the recipient does not distribute the portfolio holdings to persons who are likely to use the information for purposes of purchasing or selling fund shares or fund portfolio holdings before the portfolio holdings become public information; and (b) the recipient signs a written confidentiality agreement.

A fund may also disclose any and all portfolio holdings information to its service providers and others who generally need access to such information in the performance of their contractual duties and responsibilities and are subject to duties of confidentiality, including a duty not to trade on non-public information, imposed by law and/or contract. These service providers include the fund's custodian, independent registered public accounting firm, investment adviser, administrator, and each of their respective affiliates and advisors.

Disclosure of portfolio holdings may be authorized only by the Chief Compliance Officer for the fund, and any exceptions to this policy are reported quarterly to the board.

SUMMARY OF THE PROXY VOTING POLICY, PROCEDURES AND GUIDELINES OF THE DREYFUS FAMILY OF FUNDS

The boards have delegated to Dreyfus the authority to vote proxies of companies held in a fund's portfolio, except for proxies of certain U.S. bank holding companies, savings and loan holding companies, insured depository institutions and companies that control an insured depository institution (collectively, the "Designated BHCs"), for which the boards have delegated to Institutional Shareholder Services Inc. ("ISS") the authority to vote proxies of such Designated BHCs. Except as described below, Dreyfus, through its participation in BNY Mellon's Proxy Voting and Governance Committee (the "Proxy Voting Committee"), applies BNY Mellon's Proxy Voting Guidelines, which are summarized below, when voting proxies on behalf of a fund. Similarly ISS votes proxies that it is authorized to vote, including those delegated by the boards, in accordance with the ISS benchmark proxy voting guidelines (the "ISS Guidelines"), which are summarized below.

BNY Mellon and its direct and indirect subsidiaries (collectively, "BNYM"), including Dreyfus, are subject to the requirements of the Bank Holding Company Act of 1956, as amended (the "BHCA"). Among other things, the BHCA prohibits BNYM, funds that BNYM "controls" by virtue of share ownership ("Bank Controlled Funds"), and any fund or other investment account over which BNYM exercises sole voting discretion (collectively, the "BNYM Entities"), in the aggregate, from owning or controlling or holding sole voting discretion with respect to 5% or more of any class of voting stock of any BHC without the prior approval of the Board of Governors of the Federal Reserve System (the "BHCA Rules").

Because ISS has sole voting authority over voting securities issued by the Designated BHCs, the holdings of such securities by the funds (other than Bank Controlled Funds) are excluded from the 5% aggregate computation under the BHCA Rules and the funds (other than Bank Controlled Funds) are permitted to purchase and hold securities of BHCs without limits imposed by the BHCA. (Voting securities of BHCs held by funds that are Bank Controlled Funds, however, continue to be aggregated with the holdings of other BNYM Entities because of BNYM's share ownership in those funds.)

A security will be identified as a Designated BHC (and voting authority over its voting securities will be delegated to ISS) when BNY Mellon Entities' aggregate ownership, control and voting discretion with respect to the security reaches a level that could risk a violation of BHCA Rules. If such aggregate levels decrease to a point that BNY Mellon deems appropriate to remain in compliance with BHCA Rules, the security will no longer be a Designated BHC and Dreyfus will be redelegated sole voting authority over the security. Management of the funds anticipates that ISS will have proxy voting authority over the voting securities of a limited number of Designated BHCs.

Information regarding how a fund's proxies were voted during the most recent 12-month period ended June 30th is available on Dreyfus' website, by the following August 31st, at <http://www.dreyfus.com> and on the SEC's website at <http://www.sec.gov> on a fund's Form N-PX.

Proxy Voting By Dreyfus

Dreyfus recognizes that an investment adviser is a fiduciary that owes its clients a duty of utmost good faith and full and fair disclosure of all material facts. Dreyfus further recognizes that the right to vote proxies is an asset, just as the economic investment represented by the shares is an asset. An investment adviser's duty of loyalty precludes an adviser from subrogating its clients' interests to its own. Accordingly, in voting proxies, Dreyfus seeks to act solely in the best financial and economic interests of the funds.

Dreyfus seeks to avoid material conflicts of interest between the funds and fund shareholders, on the one hand, and Dreyfus, the fund's principal underwriter, or any affiliated person of the fund, Dreyfus or the fund's principal underwriter, on the other, through its participation in the Proxy Voting Committee. The Proxy Voting Committee applies detailed, pre-determined proxy voting guidelines in an objective and consistent manner across client accounts, based on internal and external research and recommendations provided by third party vendors, and without

consideration of any client relationship factors. To avoid any appearance of a conflict, Dreyfus engages a third party as an independent fiduciary (generally ISS) to vote all proxies with respect to securities issued by BNY Mellon and all proxies with respect to shares of funds sponsored by Dreyfus or another BNY Mellon affiliate (including proxies with respect to shares issued by funds in the Dreyfus Family of Funds), and may engage an independent fiduciary to vote proxies of other issuers if deemed appropriate in its discretion.

Each proxy is reviewed, categorized and analyzed in accordance with the Proxy Voting Committee's written guidelines in effect from time to time. The guidelines are reviewed periodically and updated as necessary to reflect new issues and changes to the Proxy Voting Committee's policies on specific issues. Items that can be categorized will be voted in accordance with any applicable guidelines or referred to the Proxy Voting Committee, if the applicable guidelines so require. Proposals for which a guideline has not yet been established, such as, for example, new proposals arising from emerging economic or regulatory issues, are referred to the Proxy Voting Committee for discussion and vote. Additionally, the Proxy Voting Committee may elect to review any proposal where it has identified a particular issue for special scrutiny in light of new information. The Proxy Voting Committee will also consider specific interests and issues raised by Dreyfus on behalf of a fund, which interests and issues may require that a vote for a fund be cast differently from the collective vote in order to act in the best interests of the fund.

With regard to voting proxies with respect to shares of foreign companies, Dreyfus weighs the cost of voting, and potential inability to sell, the shares against the benefit of voting the shares to determine whether or not to vote. Proxies with respect to shares of foreign companies are voted by Dreyfus in accordance with the ISS Guidelines.

Although proxies in respect of securities held by the Dreyfus Socially Responsible Growth Fund, Inc. or The Dreyfus Third Century Fund, Inc. (each a "Socially Responsible Fund") typically are voted in accordance with BNY Mellon's Proxy Voting Guidelines, proxies pertaining to the social investment criteria of the Socially Responsible Funds are voted by the funds' portfolio managers. The Socially Responsible Funds' social investment criteria are used to determine whether a company enhances the quality of life in America by considering its record in the areas of:

- protection and improvement of the environment and the proper use of our natural resources
- occupational health and safety
- consumer protection and product purity
- equal employment opportunity

Summary of BNY Mellon's Proxy Voting Guidelines

The Proxy Voting Committee consists of representatives from certain investment advisory, banking, trust company and other fiduciary business units (each, a "Member Firm") affiliated with BNY Mellon. The Proxy Voting Committee recognizes that the responsibility for the daily management of a company's operations and strategic planning is entrusted to the company's management team, subject to oversight by the company's board of directors. As a general matter, Member Firms invest in companies believed to be led by competent management and the Proxy Voting Committee customarily votes in support of management proposals and consistent with management's recommendations. However, the Proxy Voting Committee believes that Member Firms, in their role as fiduciaries, must express their view on the performance of the directors and officers of the companies in which clients are invested and how these clients' interests as shareholders are being represented. Accordingly, the Proxy Voting Committee will vote against those proposals that it believes would negatively impact the economic value of clients' investments – even if those proposals are supported or recommended by company management.

The Proxy Voting Committee seeks to make proxy voting decisions that are in the best interest of the clients of its Member Firms. For this purpose, the Proxy Voting Committee has established detailed, pre-determined, written proxy voting guidelines for specific types of proposals and matters commonly submitted to shareholders ("Voting Guidelines"). Viewed broadly, the Voting Guidelines seek to maximize shareholder value by promoting sound corporate governance policies through the support of proposals that are consistent with four key objectives:

- The alignment of the interests of a company's management and board of directors with those of the company's shareholders;

- To promote the accountability of a company's management to its board of directors, as well as the accountability of the board of directors to the company's shareholders;
- To uphold the rights of a company's shareholders to affect change by voting on those matters submitted to shareholders for approval; and
- To promote adequate disclosure about a company's business operations and financial performance in a timely manner.

The following are summaries of how the Proxy Voting Committee generally views certain matters that are brought before the Proxy Voting Committee in connection with the voting of proxies by those Member Firms who exercise voting discretion as a fiduciary for their clients. These summaries and the views reflected below by their nature are not intended to be complete and are not detailed explanations of all the guidelines and rule sets that the Proxy Voting Committee uses to assist with the proxy voting process. The summaries below are published by the Proxy Voting Committee to provide public company issuers and investors with a broad view of how the Proxy Voting Committee approaches certain topics and proposals in the context of voting proxies for its Member Firms' fiduciary clients; and such summaries are not intended to limit in any way the Proxy Voting Committee's or any Member Firm's actions with respect to its activities regarding the voting of proxies of any particular proposal or on shareholder voting matters generally.

1. Boards and Directors

A. Election of Directors

The Proxy Voting Committee believes that a majority of a company's board members should be independent of management.

i) Incumbent / Nominee Directors

The Proxy Voting Committee generally votes **FOR** incumbent and nominee directors. However, the Proxy Voting Committee generally votes to **WITHOLD** support in cases when individual directors (or the board, as applicable): (1) adopt, amend or renew a poison pill without shareholder approval or commitment to obtain shareholder approval within 12 months (applied to incumbent directors up for re-election at annual or special meeting which follows such action), (2) attend less than 75% of meetings for two consecutive years, (3) serve on more than six boards, (4) are chief executive officers ("CEOs") of a public company and serve on more than 3 boards, or (5) fail to respond to approved shareholder proposals.

ii) Compensation Committee Members

Generally, the Proxy Voting Committee votes **FOR** incumbent members of the compensation committee. However, the Proxy Voting Committee will generally consider the proposal on a **CASE-BY-CASE** basis in situations where: (1) there are excise tax gross-ups, excise tax indemnification or "make whole" provisions in recent change-in-control or severance agreements, (2) the company's stock performance is poor relative to peers and its compensation arrangements or pay practices is deemed excessive relative to peers, or (3) there appears to be an imbalance in a company's long term incentive compensation plans between the performance-based and time-based awards for the executive officers.

i) Audit Committee

Generally, the Proxy Voting Committee votes **FOR** independent incumbent members of an audit committee. However, the Proxy Voting Committee will generally consider the proposal on a **CASE-BY-CASE** basis in situations where: (1) audit fees are either undisclosed or insufficiently disclosed such that the amount paid to the auditor for non-audit services cannot be determined, (2) a material

weakness is disclosed and not remediated timely, or (3) non-audit fees exceed the sum of audit, audit-related and tax compliance/preparation fees.

ii) Management Nominees

The Proxy Voting Committee generally votes **FOR** management nominees for board or committee membership. In exceptional cases, such as severe governance concerns or when a Proxy Advisor recommends to withhold, the Proxy Voting Committee will generally consider the proposal on a **CASE-BY-CASE** basis. If a nominee received less than majority support at the prior election and the board has not addressed the cause of that low support, the Proxy Voting Committee will generally **WITHHOLD** its support.

B. Board Governance

i) Classified Board

The Proxy Voting Committee believes shareholders should annually vote for all members on a company's board of directors. The Proxy Voting Committee votes **FOR** requests to declassify the board and will generally vote **AGAINST** proposals to adopt or continue a classified board structure.

ii) Board Independence

The Proxy Voting Committee votes **FOR** management proposals for the election of independent directors that meet listing standards and generally favors an independent chairperson. Conversely, the Proxy Voting Committee votes **AGAINST** shareholder proposals that are more or less restrictive than listing standards with respect to director "independence."

iii) Board Size

The Proxy Voting Committee votes **FOR** management requests to configure the size of the board of directors with appropriate rationale, absent evidence of entrenchment or a disadvantage to shareholders. However, the Proxy Voting Committee votes **AGAINST** proposals that remove the shareholders' right to vote on board configuration matters, or that would give the board sole discretion to set the number of members.

iv) Vote Majority and Removal

Generally, the Proxy Voting Committee supports the practice of one share, one vote. As such, we vote **FOR** proposals to elect director nominees by the affirmative vote of the majority of votes cast at the annual or special meeting. The same practice is applied to proposals mandating the removal of a director upon a simple majority vote, such that the Proxy Voting Committee votes **AGAINST** management proposals that require a supermajority vote for removal.

v) Separate Chairman and CEO

Generally, the Proxy Voting Committee votes **FOR** management proposals that propose to separate the positions of Chairman and CEO. However, the Proxy Voting Committee generally votes **AGAINST** shareholder proposals to separate the Chairman and CEO positions if a lead or presiding director with appropriate authority is appointed; but is likely to vote **FOR** such a proposal if a lead or presiding director with appropriate authority has not been appointed. When considering the sufficiency of a lead or presiding director's authority, the Proxy Voting Committee will consider: whether the director: (1) presides at all meetings of the board (and executive sessions of the independent directors) at which the Chairman is not present, (2) serves as a liaison between the Chairman and the independent directors, (3) approves board meeting agendas, (4) has the authority

to call meetings of the independent directors, and (5) if requested by major shareholders, ensures that s/he is available for consultation and direct communication.

2. Accounting and Audit

Generally, the Proxy Voting Committee votes **FOR** the ratification of the board's selection of an auditor for the company. The Proxy Voting Committee will vote **AGAINST** the ratification of the auditors if there are concerns of negligence due to issuance of an inaccurate audit opinion. The Proxy Voting Committee typically votes **AGAINST** shareholder proposals for auditor rotation arrangements that are more restrictive than regulatory requirements.

3. Anti-Takeover Measures

Generally, the Proxy Voting Committee opposes proposals that seem designed to insulate management unnecessarily from the wishes of a majority of the shareholders and that would lead to a determination of a company's future by a minority of its shareholders. However, the Proxy Voting Committee generally supports proposals that seem to have as their primary purpose providing management with temporary or short-term insulation from outside influences so as to enable management to bargain effectively with potential suitors and otherwise achieve identified long-term goals to the extent such proposals are discrete and not bundled with other proposals.

A. Shareholder Rights Plan or "Poison Pill"

Generally, the Proxy Voting Committee votes **FOR** proposals to rescind a "poison pill" or proposals that require shareholder approval to implement a "pill." Further, a **WITHHOLD** support vote on the election of directors will follow the adoption or renewal of a poison pill without shareholder approval.

B. Non-net Operating Loss Shareholder Rights Plan

Generally, the Proxy Voting Committee votes **FOR** non-net operating loss shareholder rights plans if all the following are in place: (1) a plan trigger that is 20% or greater, (2) a term not exceeding 3 years, (3) the plan terminates if not ratified by shareholder majority, (4) there are no "dead hand" or "modified dead hand" provisions, and (5) the plan has a qualified offer clause. The Proxy Voting Committee generally reviews these plans on a **CASE-BY-CASE** basis outside of these prescribed requirements.

C. Special Meetings and Majority Vote

The Proxy Voting Committee believes the rights to call a special meeting and to approve an action with a simple majority vote are powerful tools for shareholders. As such, we generally support proposals that uphold these rights. More specifically, with respect to calling a special meeting, the Proxy Voting Committee generally votes **FOR** proposals that would allow shareholders to call a special meeting if a reasonably high proportion of shareholders (typically of at least 10-15%, depending on the company's market capitalization, but no more than 25%, of the company's outstanding stock) are required to agree before such a meeting is called.

For companies that currently permit shareholders of 25% or less of outstanding stock to call a special meeting (or no such right exists), the Proxy Voting Committee may vote **AGAINST** proposals that would effectively lower (or initially establish) the minimum ownership threshold to less than 10% (for large cap companies) or 15% (for small cap companies). However, for companies that currently permit shareholders of greater than 25% of outstanding stock to call a special meeting (or no such right exists), the Proxy Voting Committee is likely to consider on a **CASE-BY-CASE** basis those proposals that would effectively lower (or initially establish) the minimum ownership threshold to less than 10% (for large cap companies) or 15% (for small cap companies).

D. Written Consent

The Proxy Voting Committee will generally vote **FOR** proposals to permit shareholders to act by written consent if the company does not currently permit shareholders to call for a special meeting or to act by written consent. The Proxy Voting Committee will generally vote **AGAINST** proposals on written consent if the company permits shareholders the right to call for a special meeting.

4. Capital Structure, Mergers, Sales and Transactions

A. Mergers

The Proxy Voting Committee is likely to consider on a **CASE-BY-CASE** basis those proposals to merge, reincorporate or to affect some other type of corporate reorganization. In making these decisions, the Proxy Voting Committee's primary concern is the long-term economic interests of shareholders, and it will consider Member Firm opinions, the fairness opinion, and the vote recommendations of two independent proxy advisors retained by the Proxy Voting Committee to provide comprehensive research, analysis and voting recommendations (the "Proxy Advisors") when determining a vote decision on these or similar proposals.

B. Capital Structure

In assessing asset sales, reorganizations, bankruptcy or other capital structure changes, the Proxy Voting Committee looks to the economic and strategic rationale behind the transaction and supports those proposals that reasonably can be expected to uphold or enhance the shareholders' long-term economic interest.

- i) The Proxy Voting Committee generally votes **FOR** stock split proposals if the purpose is to: (1) increase liquidity and/or (2) adjust for a significant increase in stock price.
- ii) The Proxy Voting Committee generally votes **FOR** reverse stock split proposals if the purpose is to avoid stock exchange de-listing. The Proxy Voting Committee also generally votes **FOR** proposals to decrease the number of common stock shares outstanding following reverse stock splits and proposals to eliminate unissued blank check preferred stock or a class of common stock with voting rights greater than the class held in client accounts.

C. Authorized Stock Increases

Generally, the Proxy Voting Committee votes **FOR** proposals for the authorization to issue additional shares of common or preferred stock if it determines that the increase is: (1) not excessive relative to the industry's average rate or otherwise harmful to the long-term economic interests of shareholders, or (2) necessary to avoid bankruptcy or to comply with regulatory requirements or other legally binding matters. The Proxy Voting Committee will generally vote **AGAINST** such proposals that would exceed the industry's average rate and/or the business purpose is not articulated sufficiently.

D. Preferred Stock Authorization

Where the voting power of the new issuance is specified as equal to or less than existing common stock shares, and the Proxy Advisors and the fairness opinion agree, the Proxy Voting Committee generally votes **FOR** proposals to issue preferred stock. When the voting power of the new issuance is either unspecified or exceeds that of the existing shares of common stock, the Proxy Voting Committee generally votes **AGAINST** proposals to issue preferred stock.

5. Corporate Governance

A. Cumulative Voting

The Proxy Voting Committee generally votes **AGAINST** proposals to continue or to adopt cumulative voting.

B. Amend Bylaw, Charter or Certificate

Generally, the Proxy Voting Committee votes **FOR** management proposals when the focus is administrative in nature or compliance driven and there is no evidence of negative impact to shareholder rights. If evidence suggests that proposals would result in a reduction of shareholder rights or lead to entrenchment, the Proxy Voting Committee votes **AGAINST** such proposals.

C. Indemnity Liability Protection

Generally, the Proxy Voting Committee votes **FOR** proposals to limit directors' liability or expand indemnification on behalf of their service to the company. However, the Proxy Voting Committee votes **AGAINST** proposals that support indemnification for director actions conducted in bad faith, gross negligence or reckless disregard of duties.

D. Adjourn Meeting

In cases where the Proxy Voting Committee is supportive of the underlying transaction or proposal and the purpose of the adjournment is to obtain additional votes, the Proxy Voting Committee will vote **FOR** the adjournment.

6. Proxy Contests

In the case of proxy contests, the Proxy Voting Committee will endeavor to provide both parties an opportunity to present their case and arguments before determining a course of action.

The Proxy Voting Committee's general policy is to consider: (1) the long-term economic impact of the decision, (2) the company's record and management's ability to achieve our reasonable expectations for shareholder return, (3) overall compensation for officers and directors and share price performance relative to industry peers, (4) whether the offer fully realizes the future prospects of the company in question with the likelihood of the challenger achieving their stated goals, and (5) the relevant experience of all board nominees.

7. Social, Ethical and Environmental

The Proxy Voting Committee reviews all management sponsored social, ethical and environmental responsibility proposals on a **CASE-BY-CASE** basis. Generally, the Proxy Voting Committee considers various factors in voting decisions, including: (1) the long-term economic impact including implementation cost-to-benefit considerations, (2) the company's current legal and regulatory compliance status, (3) the binding or advisory nature of the request, and (4) whether the proposal's underlying objective is within the scope of the company's influence and control.

The Proxy Voting Committee generally votes **FOR** shareholder sponsored proposals when the proposal reasonably can be expected to enhance long-term shareholder value and when management fails to respond meaningfully to the proposal. The Proxy Voting Committee generally votes **AGAINST** shareholder proposals when management has responded meaningfully and there is no evidence of: (1) shareholder value creation, (2) regulatory non-compliance, (3) failed oversight from the board and management for the subject activity, (4) the company is operating outside of industry standard practice, or (5) the proposal request is vague or overly restrictive and unlikely to achieve the underlying intent.

8. Compensation and Benefits

A. Equity Compensation

The Proxy Voting Committee employs a shareholder value transfer model and a burn rate model to measure the value transfer from shareholders to employees and directors when considering equity compensation proposals.

The Proxy Voting Committee generally votes **FOR** proposals relating to equity compensation plans that: (1) pass our shareholder value transfer model and burn rate model and prohibit share re-pricing without shareholder approval, (2) pass our shareholder value transfer model and burn rate model, are silent on share re-pricing and the company has no history of re-pricing, (3) use section 162(m) rules for plan administration by independent directors, or (4) require an issuance of stock or options as equal payment in lieu of cash to directors.

The Proxy Voting Committee generally votes **AGAINST** compensation plans that: (1) fail our shareholder value transfer model or burn rate model, and allow for option exchange or re-pricing without shareholder approval, (2) pass our shareholder value transfer model and burn rate model, but permit accelerated vesting without consummation of a change-in-control transaction, or (3) serve as a vehicle to perpetuate a disconnect between pay and performance or favors executive officers whose pay is already significantly higher than peers.

The Proxy Voting Committee reviews on a **CASE-BY-CASE** basis those proposals that:

- i) pass our shareholder value transfer model and either (1) fail our burn rate model, (2) the plan is "silent" on re-pricing and the company has a history of the practice, or (3) a Proxy Advisor recommends an "against" vote; or
- ii) fail our shareholder value transfer model but the plan (1) is required to complete a transaction supported by the Proxy Voting Committee or (2) includes details regarding extenuating business circumstances.

B. Say on Pay

If the ballot seeks an advisory vote on the frequency of say-on-pay proposals, the Proxy Voting Committee generally votes **FOR** proposals that call for say-on-pay on an **ANNUAL** basis.

The Proxy Voting Committee will generally vote **FOR** management proposals on say-on-pay. However, the Proxy Voting Committee will generally consider the proposal on a **CASE-BY-CASE** basis in situations where: (1) there are excise tax gross-ups, excise tax indemnification or "make whole" provisions in recent change-in-control or severance agreements, (2) the company's stock performance is poor relative to peers and its compensation arrangements or pay practices is deemed excessive relative to peers, (3) the company fails to address compensation issues identified in prior meetings when adequate opportunity to address has passed, or (4) there appears to be an imbalance in a company's long term incentive compensation plans between the performance-based and time-based awards for the executive officers.

C. Option Re-pricing or Exchange

Generally, the Proxy Voting Committee believes that stock compensation aligns managements' and shareholders' interests based on fair-market value grants.

In cases where management is proposing to address a compensation misalignment, the Proxy Voting Committee generally votes **FOR** such proposals that: (1) seek exchanges that are value-for-value, (2) exclude executives, directors and consultants, (3) do not recycle exercised options, and/or (4) involve

current options that are significantly under water and the new exercise price is reasonable. The Proxy Voting Committee generally votes **FOR** proposals that require stock option exchange and re-pricing programs to be put to shareholder vote.

In cases of proposals where the exchange and/or re-pricing requests do not meet these criteria, the Proxy Voting Committee generally votes **AGAINST** the management proposal.

D. Golden Parachute Plans

In reviewing management compensation agreements, the Proxy Voting Committee generally votes **FOR** those that: (1) involve payments that do not exceed three times the executive's total compensation (salary plus bonus), (2) have a double trigger, and (3) do not provide for a tax gross-up in the contract. Conversely, the Proxy Voting Committee generally votes **AGAINST** compensation agreements that do not adhere to these requirements. As a facet of a capital structure change, the Proxy Voting Committee will consider these compensation agreements on a **CASE-BY-CASE** basis.

In reviewing shareholder proposals, we generally support those that require the company to submit compensation agreements to a vote.

E. Clawbacks

When determining the effectiveness of a company's clawback/recoupment policy, the Proxy Voting Committee will consider: (1) the amount of information the company provides in its proxy statement on the circumstances under which the company recoups incentive or equity compensation, (2) whether the company's policy extends to named executive officers and other senior executive officers (and not simply the CEO and chief financial officer), (3) if the policy requires recoupment of incentive and equity compensation received and subsequently determined to have been "unearned" during the prior 3-year period, and (4) if the policy considers performance-based compensation to be "unearned" if the corresponding performance target(s) are later determined to have not been achieved for any reason (rather than first requiring evidence of "misconduct" or fraudulent activity and/or a formal restatement of financial results).

F. Other Compensation Requests

Generally, the Proxy Voting Committee votes **FOR** stock purchase plans that allow a broad group of employees to purchase shares and limit the discount to 15% or less. Conversely, the Proxy Voting Committee generally votes **AGAINST** proposals that are limited to senior executives and/or provides for a discount that is greater than 15%.

Generally, the Proxy Voting Committee votes **FOR** proposals that seek management and director retention of stock awards for no more than one year and/or 25% of stock awarded. Conversely, the Proxy Voting Committee generally votes **AGAINST** proposals that seek retention of stock awards for greater than one year and 75% of stock awarded.

For those proposals for which the Voting Guidelines do not provide determinative guidance (*e.g.*, new proposals arising from emerging economic or regulatory issues), they are referred to the Proxy Voting Committee for discussion and vote. In these instances, the Proxy Voting Committee votes based upon its principle of maximizing shareholder value.

Proxy Voting by ISS

ISS has policies and procedures in place to manage potential conflicts of interest that may arise as a result of work that ISS's subsidiary performs for a corporate governance client and any voting of proxies relating to such client's securities that ISS performs on behalf of the funds. Such policies and procedures include separate staffs for the work performed for corporate governance clients and ISS's proxy voting services; a firewall that includes legal,

physical and technological separations of the two businesses; and the employment of a blackout period on work performed with a corporate governance client during the pendency of a live voting issue in respect of securities of such client.

Summary of the ISS Guidelines¹

Routine/Miscellaneous

Auditor Ratification

Vote for proposals to ratify auditors unless any of the following apply:

- An auditor has a financial interest in or association with the company, and is therefore not independent;
- There is reason to believe that the independent auditor has rendered an opinion that is neither accurate nor indicative of the company's financial position;
- Poor accounting practices are identified that rise to a serious level of concern, such as: fraud; misapplication of GAAP, or material weaknesses identified in Section 404 disclosures; or
- Fees for non-audit services ("Other" fees) are excessive.

Non-audit fees are excessive if:

- Non-audit ("other") fees > audit fees + audit-related fees + tax compliance/preparation fees

Board of Directors:

Voting on Director Nominees in Uncontested Elections

Four fundamental principles apply when determining votes on director nominees:

1. Accountability
2. Responsiveness
3. Composition
4. Independence

Generally vote for director nominees, except under the following circumstances:

1. Accountability

Vote against² or withhold from the entire board of directors (except new nominees,³ who should be considered case-by-case) for the following:

Problematic Takeover Defenses

Classified Board Structure:

- 1.1. The board is classified, and a continuing director responsible for a problematic governance issue at the board/committee level that would warrant a withhold/against vote recommendation is not up for election. All appropriate nominees (except new) may be held accountable.

¹ Provided by ISS

Director Performance Evaluation:

- 1.2. The board lacks accountability and oversight, coupled with sustained poor performance relative to peers. Sustained poor performance is measured by one- and three-year total shareholder returns in the bottom half of a company's four-digit GICS industry group (Russell 3000 companies only). Take into consideration the company's five-year total shareholder return and operational metrics. Problematic provisions include but are not limited to:
- A classified board structure;
 - A supermajority vote requirement;
 - Either a plurality vote standard in uncontested director elections or a majority vote standard with no plurality carve-out for contested elections;
 - The inability of shareholders to call special meetings;
 - The inability of shareholders to act by written consent;
 - A dual-class capital structure; and/or
 - A non-shareholder-approved poison pill.

Poison Pills:

- 1.3. The company's poison pill has a "dead-hand" or "modified dead-hand" feature. Vote against or withhold from nominees every year until this feature is removed;
- 1.4. The board adopts a poison pill with a term of more than 12 months ("long-term pill"), or renews any existing pill, including any "short-term" pill (12 months or less), without shareholder approval. A commitment or policy that puts a newly adopted pill to a binding shareholder vote may potentially offset an adverse vote recommendation. Review such companies with classified boards every year, and such companies with annually elected boards at least once every three years, and vote against or withhold votes from all nominees if the company still maintains a non-shareholder-approved poison pill; or
- 1.5. The board makes a material adverse change to an existing poison pill without shareholder approval.

Vote case-by-case on all nominees if:

- 1.6. The board adopts a poison pill with a term of 12 months or less ("short-term pill") without shareholder approval, taking into account the following factors:
- The date of the pill's adoption relative to the date of the next meeting of shareholders—i.e. whether the company had time to put the pill on ballot for shareholder ratification given the circumstances;
 - The issuer's rationale;
 - The issuer's governance structure and practices; and
 - The issuer's track record of accountability to shareholders.

² In general, companies with a plurality vote standard use "Withhold" as the contrary vote option in director elections; companies with a majority vote standard use "Against." However, it will vary by company and the proxy must be checked to determine the valid contrary vote option for the particular company.

³ A "new nominee" is any current nominee who has not already been elected by shareholders and who joined the board after the problematic action in question transpired. If ISS cannot determine whether the nominee joined the board before or after the problematic action transpired, the nominee will be considered a "new nominee" if he or she joined the board within the 12 months prior to the upcoming shareholder meeting.

Problematic Audit-Related Practices

Generally vote against or withhold from the members of the Audit Committee if:

- 1.7. The non-audit fees paid to the auditor are excessive (see discussion under "Auditor Ratification");
- 1.8. The company receives an adverse opinion on the company's financial statements from its auditor; or
- 1.9. There is persuasive evidence that the Audit Committee entered into an inappropriate indemnification agreement with its auditor that limits the ability of the company, or its shareholders, to pursue legitimate legal recourse against the audit firm.

Vote case-by-case on members of the Audit Committee, and potentially the full board, if:

- 1.10. Poor accounting practices are identified that rise to a level of serious concern, such as: fraud, misapplication of GAAP; and material weaknesses identified in Section 404 disclosures. Examine the severity, breadth, chronological sequence, and duration, as well as the company's efforts at remediation or corrective actions, in determining whether withhold/against votes are warranted.

Problematic Compensation Practices/Pay for Performance Misalignment

In the absence of an Advisory Vote on Executive Compensation ballot item or in egregious situations, vote against or withhold from the members of the Compensation Committee, and potentially the full board, if:

- 1.11. There is a significant misalignment between CEO pay and company performance (pay for performance);
- 1.12. The company maintains significant problematic pay practices;
- 1.13. The board exhibits a significant level of poor communication and responsiveness to shareholders;
- 1.14. The company fails to submit one-time transfers of stock options to a shareholder vote; or
- 1.15. The company fails to fulfill the terms of a burn rate commitment made to shareholders.

Vote case-by-case on Compensation Committee members (or, in exceptional cases, the full board) and the Management Say-on-Pay proposal if:

- 1.16. The company's previous say-on-pay proposal received the support of less than 70 percent of votes cast, taking into account:
 - The company's response, including:
 - Disclosure of engagement efforts with major institutional investors regarding the issues that contributed to the low level of support;
 - Specific actions taken to address the issues that contributed to the low level of support;
 - Other recent compensation actions taken by the company;
 - Whether the issues raised are recurring or isolated;
 - The company's ownership structure; and
 - Whether the support level was less than 50 percent, which would warrant the highest degree of responsiveness.

Governance Failures

Under extraordinary circumstances, vote against or withhold from directors individually, committee members, or the entire board, due to:

- 1.17. Material failures of governance, stewardship, risk oversight⁴ or fiduciary responsibilities at the company;
- 1.18. Failure to replace management as appropriate; or

- 1.19. Egregious actions related to a director's service on other boards that raise substantial doubt about his or her ability to effectively oversee management and serve the best interests of shareholders at any company.

2. Responsiveness

Vote case-by-case on individual directors, committee members, or the entire board of directors, as appropriate, if:

- 2.1. The board failed to act on a shareholder proposal that received the support of a majority of the shares cast in the previous year. Factors that will be considered are:
 - Disclosed outreach efforts by the board to shareholders in the wake of the vote;
 - Rationale provided in the proxy statement for the level of implementation;
 - The subject matter of the proposal;
 - The level of support for and opposition to the resolution in past meetings;
 - Actions taken by the board in response to the majority vote and its engagement with shareholders;
 - The continuation of the underlying issue as a voting item on the ballot (as either shareholder or management proposals); and
 - Other factors as appropriate.
- 2.2. The board failed to act on takeover offers where the majority of shares are tendered;
- 2.3. At the previous board election, any director received more than 50 percent withhold/against votes of the shares cast and the company has failed to address the issue(s) that caused the high withhold/against vote;
- 2.4. The board implements an advisory vote on executive compensation on a less frequent basis than the frequency that received the majority of votes cast at the most recent shareholder meeting at which shareholders voted on the say-on-pay frequency; or
- 2.5. The board implements an advisory vote on executive compensation on a less frequent basis than the frequency that received a plurality, but not a majority, of the votes cast at the most recent shareholder meeting at which shareholders voted on the say-on-pay frequency, taking into account:
 - The board's rationale for selecting a frequency that is different from the frequency that received a plurality;
 - The company's ownership structure and vote results;
 - ISS' analysis of whether there are compensation concerns or a history of problematic compensation practices; and
 - The previous year's support level on the company's say-on-pay proposal.

⁴ Examples of failure of risk oversight include, but are not limited to: bribery; large or serial fines or sanctions from regulatory bodies; significant adverse legal judgments or settlements; hedging of company stock; or significant pledging of company stock.

⁵ For new nominees only, schedule conflicts due to commitments made prior to their appointment to the board are considered if disclosed in the proxy or another SEC filing.

3. Composition

Attendance at Board and Committee Meetings:

- 3.1. Generally vote against or withhold from directors (except new nominees, who should be considered case-by-case⁵) who attend less than 75 percent of the aggregate of their board and committee meetings for the period for which they served, unless an acceptable reason for absences is disclosed in the proxy or another SEC filing. Acceptable reasons for director absences are generally limited to the following:

- Medical issues/illness;
 - Family emergencies; and
 - Missing only one meeting (when the total of all meetings is three or fewer).
- 3.2. If the proxy disclosure is unclear and insufficient to determine whether a director attended at least 75 percent of the aggregate of his/her board and committee meetings during his/her period of service, vote against or withhold from the director(s) in question.

Overboarded Directors:

Vote against or withhold from individual directors who:

- 3.3. Sit on more than six public company boards; or
- 3.4. Are CEOs of public companies who sit on the boards of more than two public companies besides their own — withhold only at their outside boards.⁶

4. Independence

Vote against or withhold from Inside Directors and Affiliated Outside Directors when:

- 4.1. The inside or affiliated outside director serves on any of the three key committees: audit, compensation, or nominating;
- 4.2. The company lacks an audit, compensation, or nominating committee so that the full board functions as that committee;
- 4.3. The company lacks a formal nominating committee, even if the board attests that the independent directors fulfill the functions of such a committee; or
- 4.4. Independent directors make up less than a majority of the directors.

Proxy Access

ISS supports proxy access as an important shareholder right, one that is complementary to other best -practice corporate governance features. However, in the absence of a uniform standard, proposals to enact proxy access may vary widely; as such, ISS is not setting forth specific parameters at this time and will take a case-by-case approach in evaluating these proposals.

Vote case-by-case on proposals to enact proxy access, taking into account, among other factors:

- Company-specific factors; and

⁶ Although all of a CEO's subsidiary boards will be counted as separate boards, ISS will not recommend a withhold vote from the CEO of a parent company board or any of the controlled (>50 percent ownership) subsidiaries of that parent, but will do so at subsidiaries that are less than 50 percent controlled and boards outside the parent/subsidiary relationships.

- Proposal-specific factors, including:
 - The ownership thresholds proposed in the resolution (i.e., percentage and duration);
 - The maximum proportion of directors that shareholders may nominate each year; and
 - The method of determining which nominations should appear on the ballot if multiple shareholders submit nominations.

Proxy Contests—Voting for Director Nominees in Contested Elections

Vote case-by-case on the election of directors in contested elections, considering the following factors:

- Long-term financial performance of the target company relative to its industry;
- Management's track record;
- Background to the proxy contest;
- Nominee qualifications and any compensatory arrangements;
- Strategic plan of dissident slate and quality of critique against management;
- Likelihood that the proposed goals and objectives can be achieved (both slates); and
- Stock ownership positions.

When the addition of shareholder nominees to the management card ("proxy access nominees") results in a number of nominees on the management card which exceeds the number of seats available for election, vote case-by-case considering the same factors listed above.

Shareholder Rights & Defenses

Poison Pills- Management Proposals to Ratify Poison Pill

Vote case-by-case on management proposals on poison pill ratification, focusing on the features of the shareholder rights plan. Rights plans should contain the following attributes:

- No lower than a 20% trigger, flip-in or flip-over;
- A term of no more than three years;
- No dead-hand, slow-hand, no-hand or similar feature that limits the ability of a future board to redeem the pill;
- Shareholder redemption feature (qualifying offer clause); if the board refuses to redeem the pill 90 days after a qualifying offer is announced, 10 percent of the shares may call a special meeting or seek a written consent to vote on rescinding the pill.

In addition, the rationale for adopting the pill should be thoroughly explained by the company. In examining the request for the pill, take into consideration the company's existing governance structure, including: board independence, existing takeover defenses, and any problematic governance concerns.

Poison Pills- Management Proposals to Ratify a Pill to Preserve Net Operating Losses (NOLs)

Vote against proposals to adopt a poison pill for the stated purpose of protecting a company's net operating losses (NOL) if the term of the pill would exceed the shorter of three years and the exhaustion of the NOL.

Vote case-by-case on management proposals for poison pill ratification, considering the following factors, if the term of the pill would be the shorter of three years (or less) and the exhaustion of the NOL:

- The ownership threshold to transfer (NOL pills generally have a trigger slightly below 5 percent);
- The value of the NOLs;
- Shareholder protection mechanisms (sunset provision, or commitment to cause expiration of the pill upon exhaustion or expiration of NOLs);
- The company's existing governance structure including: board independence, existing takeover defenses, track record of responsiveness to shareholders, and any other problematic governance concerns; and
- Any other factors that may be applicable.

Shareholder Ability to Act by Written Consent

Generally vote against management and shareholder proposals to restrict or prohibit shareholders' ability to act by written consent.

Generally vote for management and shareholder proposals that provide shareholders with the ability to act by written consent, taking into account the following factors:

- Shareholders' current right to act by written consent;
- The consent threshold;
- The inclusion of exclusionary or prohibitive language;
- Investor ownership structure; and
- Shareholder support of, and management's response to, previous shareholder proposals.

Vote case-by-case on shareholder proposals if, in addition to the considerations above, the company has the following governance and antitakeover provisions:

- An unfettered⁷ right for shareholders to call special meetings at a 10 percent threshold;
- A majority vote standard in uncontested director elections;
- No non-shareholder-approved pill; and
- An annually elected board.

CAPITAL/RESTRUCTURING

Common Stock Authorization

Vote for proposals to increase the number of authorized common shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.

Vote against proposals at companies with more than one class of common stock to increase the number of authorized shares of the class of common stock that has superior voting rights.

Vote against proposals to increase the number of authorized common shares if a vote for a reverse stock split on the same ballot is warranted despite the fact that the authorized shares would not be reduced proportionally.

Vote case-by-case on all other proposals to increase the number of shares of common stock authorized for issuance. Take into account company-specific factors that include, at a minimum, the following:

- Past Board Performance:
 - The company's use of authorized shares during the last three years
- The Current Request:
 - Disclosure in the proxy statement of the specific purposes of the proposed increase;

⁷ "Unfettered" means no restrictions on agenda items, no restrictions on the number of shareholders who can group together to reach the 10 percent threshold, and only reasonable limits on when a meeting can be called: no greater than 30 days after the last annual meeting and no greater than 90 prior to the next annual meeting.

- Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request; and
- The dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns.

Dual Class Structure

Generally vote against proposals to create a new class of common stock, unless:

- The company discloses a compelling rationale for the dual-class capital structure, such as:
- The company's auditor has concluded that there is substantial doubt about the company's ability to continue as a going concern; or

- The new class of shares will be transitory;
- The new class is intended for financing purposes with minimal or no dilution to current shareholders in both the short term and long term; and
- The new class is not designed to preserve or increase the voting power of an insider or significant shareholder.

Preferred Stock Authorization

Vote for proposals to increase the number of authorized preferred shares where the primary purpose of the increase is to issue shares in connection with a transaction on the same ballot that warrants support.

Vote against proposals at companies with more than one class or series of preferred stock to increase the number of authorized shares of the class or series of preferred stock that has superior voting rights.

Vote case-by-case on all other proposals to increase the number of shares of preferred stock authorized for issuance. Take into account company-specific factors that include, at a minimum, the following:

- Past Board Performance:
 - The company's use of authorized preferred shares during the last three years;
- The Current Request:
 - Disclosure in the proxy statement of the specific purposes for the proposed increase;
 - Disclosure in the proxy statement of specific and severe risks to shareholders of not approving the request;
 - In cases where the company has existing authorized preferred stock, the dilutive impact of the request as determined by an allowable increase calculated by ISS (typically 100 percent of existing authorized shares) that reflects the company's need for shares and total shareholder returns; and
 - Whether the shares requested are blank check preferred shares that can be used for antitakeover purposes.

Mergers and Acquisitions

Vote case-by-case on mergers and acquisitions. Review and evaluate the merits and drawbacks of the proposed transaction, balancing various and sometimes countervailing factors including:

- *Valuation* - Is the value to be received by the target shareholders (or paid by the acquirer) reasonable? While the fairness opinion may provide an initial starting point for assessing valuation reasonableness, emphasis is placed on the offer premium, market reaction and strategic rationale.
- *Market reaction* - How has the market responded to the proposed deal? A negative market reaction should cause closer scrutiny of a deal.
- *Strategic rationale* - Does the deal make sense strategically? From where is the value derived? Cost and revenue synergies should not be overly aggressive or optimistic, but reasonably achievable. Management should also have a favorable track record of successful integration of historical acquisitions.
- *Negotiations and process* - Were the terms of the transaction negotiated at arm's-length? Was the process fair and equitable? A fair process helps to ensure the best price for shareholders. Significant negotiation "wins" can also signify the deal makers' competency. The comprehensiveness of the sales process (*e.g.*, full auction, partial auction, no auction) can also affect shareholder value.
- *Conflicts of interest* - Are insiders benefiting from the transaction disproportionately and inappropriately as compared to non-insider shareholders? As the result of potential conflicts, the directors and officers of the company may be more likely to vote to approve a merger than if they did not hold these interests. Consider whether these interests may have influenced these directors

and officers to support or recommend the merger. The CIC figure presented in the "ISS Transaction Summary" section of this report is an aggregate figure that can in certain cases be a misleading indicator of the true value transfer from shareholders to insiders. Where such figure appears to be excessive, analyze the underlying assumptions to determine whether a potential conflict exists.

- *Governance* - Will the combined company have a better or worse governance profile than the current governance profiles of the respective parties to the transaction? If the governance profile is to change for the worse, the burden is on the company to prove that other issues (such as valuation) outweigh any deterioration in governance.

COMPENSATION

Executive Pay Evaluation

Underlying all evaluations are five global principles that most investors expect corporations to adhere to in designing and administering executive and director compensation programs:

1. Maintain appropriate pay-for-performance alignment, with emphasis on long-term shareholder value: This principle encompasses overall executive pay practices, which must be designed to attract, retain, and appropriately motivate the key employees who drive shareholder value creation over the long term. It will take into consideration, among other factors, the link between pay and performance; the mix between fixed and variable pay; performance goals; and equity-based plan costs;
2. Avoid arrangements that risk "pay for failure": This principle addresses the appropriateness of long or indefinite contracts, excessive severance packages, and guaranteed compensation;
3. Maintain an independent and effective compensation committee: This principle promotes oversight of executive pay programs by directors with appropriate skills, knowledge, experience, and a sound process for compensation decision-making (e.g., including access to independent expertise and advice when needed);
4. Provide shareholders with clear, comprehensive compensation disclosures: This principle underscores the importance of informative and timely disclosures that enable shareholders to evaluate executive pay practices fully and fairly;
5. Avoid inappropriate pay to non-executive directors: This principle recognizes the interests of shareholders in ensuring that compensation to outside directors does not compromise their independence and ability to make appropriate judgments in overseeing managers' pay and performance. At the market level, it may incorporate a variety of generally accepted best practices.

Advisory Votes on Executive Compensation—Management Proposals (Management Say-on-Pay)

Vote case-by-case on ballot items related to executive pay and practices, as well as certain aspects of outside director compensation.

Vote against Advisory Votes on Executive Compensation (Management Say-on-Pay—MSOP) if:

- There is a significant misalignment between CEO pay and company performance (pay for performance);
- The company maintains significant problematic pay practices;
- The board exhibits a significant level of poor communication and responsiveness to shareholders.

Vote against or withhold from the members of the Compensation Committee and potentially the full board if:

- There is no MSOP on the ballot, and an against vote on an MSOP is warranted due to a pay for performance misalignment, problematic pay practices, or the lack of adequate responsiveness on compensation issues raised previously, or a combination thereof;
- The board fails to respond adequately to a previous MSOP proposal that received less than 70 percent support of votes cast;

- The company has recently practiced or approved problematic pay practices, including option repricing or option backdating; or
- The situation is egregious.

Vote against an equity plan on the ballot if:

- A pay for performance misalignment is found, and a significant portion of the CEO's misaligned pay is attributed to non-performance-based equity awards, taking into consideration:
 - Magnitude of pay misalignment;
 - Contribution of non-performance-based equity grants to overall pay; and
 - The proportion of equity awards granted in the last three fiscal years concentrated at the named executive officer (NEO) level.

Primary Evaluation Factors for Executive Pay

Pay-for-Performance Evaluation

ISS annually conducts a pay-for-performance analysis to identify strong or satisfactory alignment between pay and performance over a sustained period. With respect to companies in the Russell 3000 index, this analysis considers the following:

1. Peer Group⁸ Alignment:
 - The degree of alignment between the company's annualized TSR rank and the CEO's annualized total pay rank within a peer group, each measured over a three-year period.
 - The multiple of the CEO's total pay relative to the peer group median.
2. Absolute Alignment – the absolute alignment between the trend in CEO pay and company TSR over the prior five fiscal years – i.e., the difference between the trend in annual pay changes and the trend in annualized TSR during the period.

⁸ The revised peer group is generally comprised of 14-24 companies that are selected using market cap, revenue (or assets for certain financial firms), GICS industry group and company's selected peers' GICS industry group with size constraints, via a process designed to select peers that are closest to the subject company in terms of revenue/assets and industry and also within a market cap bucket that is reflective of the company's.

If the above analysis demonstrates significant unsatisfactory long-term pay-for-performance alignment or, in the case of non-Russell 3000 index companies, misaligned pay and performance are otherwise suggested, our analysis may include any of the following qualitative factors, if they are relevant to the analysis to determine how various pay elements may work to encourage or to undermine long-term value creation and alignment with shareholder interests:

- The ratio of performance- to time-based equity awards;
- The overall ratio of performance-based compensation;
- The completeness of disclosure and rigor of performance goals;
- The company's peer group benchmarking practices;
- Actual results of financial/operational metrics, such as growth in revenue, profit, cash flow, etc., both absolute and relative to peers;
- Special circumstances related to, for example, a new CEO in the prior FY or anomalous equity grant practices (e.g., bi-annual awards);
- Realizable pay⁹ compared to grant pay; and
- Any other factors deemed relevant.

Problematic Pay Practices

The focus is on executive compensation practices that contravene the global pay principles, including:

- Problematic practices related to non-performance-based compensation elements;
- Incentives that may motivate excessive risk-taking; and
- Options Backdating.

Problematic Pay Practices related to Non-Performance-Based Compensation Elements

Pay elements that are not directly based on performance are generally evaluated case-by-case considering the context of a company's overall pay program and demonstrated pay-for-performance philosophy. Please refer to ISS' Compensation FAQ document for detail on specific pay practices that have been identified as potentially problematic and may lead to negative recommendations if they are deemed to be inappropriate or unjustified relative to executive pay best practices. The list below highlights the problematic practices that carry significant weight in this overall consideration and may result in adverse vote recommendations:

- Repricing or replacing of underwater stock options/SARS without prior shareholder approval (including cash buyouts and voluntary surrender of underwater options);
- Excessive perquisites or tax gross-ups, including any gross-up related to a secular trust or restricted stock vesting;
- New or extended agreements that provide for:
 - CIC payments exceeding 3 times base salary and average/target/most recent bonus;
 - CIC severance payments without involuntary job loss or substantial diminution of duties ("single" or "modified single" triggers);
 - CIC payments with excise tax gross-ups (including "modified" gross-ups).

Incentives that may Motivate Excessive Risk-Taking

- Multi-year guaranteed bonuses;
- A single or common performance metric used for short- and long-term plans;
- Lucrative severance packages;
- High pay opportunities relative to industry peers;
- Disproportionate supplemental pensions; or
- Mega annual equity grants that provide unlimited upside with no downside risk.

⁹ ISS research reports will include realizable pay for S&P 1500 companies.

Factors that potentially mitigate the impact of risky incentives include rigorous claw-back provisions and robust stock ownership/holding guidelines.

Options Backdating

The following factors should be examined case-by-case to allow for distinctions to be made between "sloppy" plan administration versus deliberate action or fraud:

- Reason and motive for the options backdating issue, such as inadvertent vs. deliberate grant date changes;
- Duration of options backdating;
- Size of restatement due to options backdating;
- Corrective actions taken by the board or compensation committee, such as canceling or re-pricing backdated options, the recouping of option gains on backdated grants; and
- Adoption of a grant policy that prohibits backdating, and creates a fixed grant schedule or window period for equity grants in the future.

Board Communications and Responsiveness

Consider the following factors case-by-case when evaluating ballot items related to executive pay on the board's responsiveness to investor input and engagement on compensation issues:

- Failure to respond to majority-supported shareholder proposals on executive pay topics; or
- Failure to adequately respond to the company's previous say-on-pay proposal that received the support of less than 70 percent of votes cast, taking into account:
 - The company's response, including:
 - Disclosure of engagement efforts with major institutional investors regarding the issues that contributed to the low level of support;
 - Specific actions taken to address the issues that contributed to the low level of support;
 - Other recent compensation actions taken by the company;
 - Whether the issues raised are recurring or isolated;
 - The company's ownership structure; and
 - Whether the support level was less than 50 percent, which would warrant the highest degree of responsiveness.

Frequency of Advisory Vote on Executive Compensation ("Say When on Pay")

Vote for annual advisory votes on compensation, which provide the most consistent and clear communication channel for shareholder concerns about companies' executive pay programs.

Voting on Golden Parachutes in an Acquisition, Merger, Consolidation, or Proposed Sale

Vote case-by-case on say on Golden Parachute proposals, including consideration of existing change-in-control arrangements maintained with named executive officers rather than focusing primarily on new or extended arrangements.

Features that may result in an against recommendation include one or more of the following, depending on the number, magnitude, and/or timing of issue(s):

- Single- or modified-single-trigger cash severance;
- Single-trigger acceleration of unvested equity awards;
- Excessive cash severance (>3x base salary and bonus);
- Excise tax gross-ups triggered and payable (as opposed to a provision to provide excise tax gross-ups);
- Excessive golden parachute payments (on an absolute basis or as a percentage of transaction equity value); or
- Recent amendments that incorporate any problematic features (such as those above) or recent actions (such as extraordinary equity grants) that may make packages so attractive as to influence merger agreements that may not be in the best interests of shareholders; or
- The company's assertion that a proposed transaction is conditioned on shareholder approval of the golden parachute advisory vote.

Recent amendment(s) that incorporate problematic features will tend to carry more weight on the overall analysis. However, the presence of multiple legacy problematic features will also be closely scrutinized.

In cases where the golden parachute vote is incorporated into a company's advisory vote on compensation (management say-on-pay), ISS will evaluate the say-on-pay proposal in accordance with these guidelines, which may give higher weight to that component of the overall evaluation.

Equity-Based and Other Incentive Plans

Vote case-by-case on equity-based compensation plans. Vote against the equity plan if any of the following factors apply:

- The total cost of the company's equity plans is unreasonable;
- The plan expressly permits repricing;
- A pay-for-performance misalignment is found;
- The company's three year burn rate exceeds the burn rate cap of its industry group;
- The plan has a liberal change-of-control definition; or
- The plan is a vehicle for problematic pay practices.

Social/Environmental Issues

Global Approach

Issues covered under the policy include a wide range of topics, including consumer and product safety, environment and energy, labor standards and human rights, workplace and board diversity, and corporate political issues. While a variety of factors goes into each analysis, the overall principle guiding all vote recommendations focuses on how the proposal may enhance or protect shareholder value in either the short or long term.

Generally vote case-by-case, taking into consideration whether implementation of the proposal is likely to enhance or protect shareholder value, and, in addition, the following will also be considered:

- If the issues presented in the proposal are more appropriately or effectively dealt with through legislation or government regulation;
- If the company has already responded in an appropriate and sufficient manner to the issue(s) raised in the proposal;
- Whether the proposal's request is unduly burdensome (scope or timeframe) or overly prescriptive;
- The company's approach compared with any industry standard practices for addressing the issue(s) raised by the proposal;
- If the proposal requests increased disclosure or greater transparency, whether or not reasonable and sufficient information is currently available to shareholders from the company or from other publicly available sources; and
- If the proposal requests increased disclosure or greater transparency, whether or not implementation would reveal proprietary or confidential information that could place the company at a competitive disadvantage.

Political Activities

Lobbying

Vote case-by-case on proposals requesting information on a company's lobbying (including direct, indirect, and grassroots lobbying) activities, policies, or procedures, considering:

- The company's current disclosure of relevant lobbying policies, and management and board oversight;
- The company's disclosure regarding trade associations or other groups that it supports, or is a member of, that engage in lobbying activities; and
- Recent significant controversies, fines, or litigation regarding the company's lobbying-related activities.

Political Contributions

Generally vote for proposals requesting greater disclosure of a company's political contributions and trade association spending policies and activities, considering:

- The company's current disclosure of policies and oversight mechanisms related to its direct political contributions and payments to trade associations or other groups that may be used for political purposes, including information on the types of organizations supported and the business rationale for supporting these organizations; and
- Recent significant controversies, fines, or litigation related to the company's political contributions or political activities.

Vote against proposals barring a company from making political contributions. Businesses are affected by legislation at the federal, state, and local level; barring political contributions can put the company at a competitive disadvantage.

Vote against proposals to publish in newspapers and other media a company's political contributions. Such publications could present significant cost to the company without providing commensurate value to shareholders.

Political Ties

Generally vote against proposals asking a company to affirm political nonpartisanship in the workplace, so long as:

- There are no recent, significant controversies, fines, or litigation regarding the company's political contributions or trade association spending; and
- The company has procedures in place to ensure that employee contributions to company-sponsored political action committees (PACs) are strictly voluntary and prohibit coercion.

Vote against proposals asking for a list of company executives, directors, consultants, legal counsels, lobbyists, or investment bankers that have prior government service and whether such service had a bearing on the business of the company. Such a list would be burdensome to prepare without providing any meaningful information to shareholders.

Foreign Private Issuers Listed on U.S. Exchanges

Vote against (or withhold from) non-independent director nominees at companies which fail to meet the following criteria: a majority-independent board, and the presence of an audit, a compensation, and a nomination committee, each of which is entirely composed of independent directors.

Where the design and disclosure levels of equity compensation plans are comparable to those seen at U.S. companies, U.S. compensation policy will be used to evaluate the compensation plan proposals. Otherwise, they, and all other voting items, will be evaluated using the relevant ISS regional or market proxy voting guidelines.

ADDITIONAL INFORMATION ABOUT THE FUNDS' STRUCTURE; FUND SHARES AND VOTING RIGHTS

Massachusetts Business Trusts

If a fund is a series of a fund company organized as an unincorporated business trust under the laws of the Commonwealth of Massachusetts, shareholders of the fund could, under certain circumstances, be held personally liable for the obligations of the fund. However, the fund company's Agreement and Declaration of Trust (the "Trust Agreement") disclaims shareholder liability for acts or obligations of the fund company and requires that notice of such disclaimer be given in each agreement, obligation or instrument entered into or executed by the fund company

or a board member. The Trust Agreement provides for indemnification from a fund's property for all losses and expenses of any shareholder held personally liable for the obligations of the fund. Thus, the risk of a shareholder incurring financial loss on account of shareholder liability is limited to circumstances in which the fund itself would be unable to meet its obligations, a possibility which management believes is remote. Upon payment of any liability incurred by a fund, the shareholder paying such liability will be entitled to reimbursement from the general assets of the fund. The fund companies intend to conduct their operations in such a way so as to avoid, as far as possible, ultimate liability of the shareholders for liabilities of a fund.

Fund Shares and Voting Rights

Fund shares have equal rights as to dividends and in liquidation. Shares have no preemptive, subscription rights or, except as described in the prospectus or this SAI, conversion rights and are freely transferable. Each fund share has one vote and, when issued and paid for in accordance with the terms of its offering, is fully paid and non-assessable.

Unless otherwise required by the 1940 Act, ordinarily it will not be necessary for a fund to hold annual meetings of shareholders. As a result, shareholders may not consider each year the election of board members or the appointment of an independent registered public accounting firm. However, for a fund that is organized as a Massachusetts business trust or a series of a Massachusetts business trust, the holders of at least 30% of the fund's shares outstanding and entitled to vote may require the fund to hold a special meeting of shareholders for purposes of removing a board member from office. In addition, the board will call a meeting of shareholders for the purpose of electing board members if, at any time, less than a majority of the board members then holding office have been elected by shareholders.

Rule 18f-2 under the 1940 Act provides that any matter required to be submitted under the provisions of the 1940 Act or applicable state law or otherwise to the holders of the outstanding voting securities of an investment company will not be deemed to have been effectively acted upon unless approved by the holders of a majority of the outstanding shares of each series, if any, affected by such matter. Rule 18f-2 further provides that a series shall be deemed to be affected by a matter unless it is clear that the interests of each series in the matter are identical or that the matter does not affect any interest of such series. Rule 18f-2 exempts the selection of the independent registered public accounting firm and the election of board members from the separate voting requirements of the rule.

GLOSSARY

Term	Meaning
12b-1 Plan	A Plan adopted pursuant to Rule 12b-1 under the 1940 Act
1940 Act	Investment Company Act of 1940, as amended
ADRs	American Depositary Receipts and American Depositary Shares
Adviser	The Manager and/or one or more Sub-Advisers, as applicable to the relevant fund or funds
Affiliated Entity	An affiliate of Dreyfus that, along with Dreyfus, employs fund portfolio managers who are dual employees of the Dreyfus and such affiliate
Authorized Entity	A bank, broker-dealer, financial adviser or Retirement Plan that has entered into an agreement with the Distributor to receive orders to buy and sell fund shares by the close of trading on the NYSE and transmit such orders to the Distributor or its designee in accordance with the agreement with the Distributor
BNY Mellon	The Bank of New York Mellon Corporation; BNY Mellon is the corporate brand of The Bank of New York Mellon Corporation.
CEA	Commodities Exchange Act
CFTC	Commodity Futures Trading Commission

Term	Meaning
Code	Internal Revenue Code of 1986, as amended
CPO	Commodity pool operator
Custodian	The Bank of New York Mellon
Distribution Plan	A plan adopted by a fund's board pursuant to Rule 12b-1 under the 1940 Act
Distributor	MBSC Securities Corporation
Dreyfus	The Dreyfus Corporation
ETFs	Exchange traded funds
Exchange Act	Securities Exchange Act of 1934, as amended
FDIC	Federal Deposit Insurance Corporation
Federal Funds	Monies of member banks within the Federal Reserve System which are held on deposit at a Federal Reserve Bank
FINRA	Financial Industry Regulatory Authority
Fitch	Fitch Ratings
FNMA	Federal National Mortgage Association
Ginnie Maes	GNMA Mortgage Pass Through Certificates
GNMA	Government National Mortgage Association
Independent Board Member	A board member who is not an "interested person" (as defined in the 1940 Act) of the relevant fund
Index	The benchmark index of an Index Fund
Index Funds	Dreyfus Stock Index Fund and Small Cap Stock Index Portfolio
Index Manager	Mellon Capital Management Corporation
IPO	Initial public offering
IRS	Internal Revenue Service
Lending Agent	The Bank of New York Mellon
LIBOR	London Interbank Offered Rate
Manager	The Dreyfus Corporation
Mellon Capital	Mellon Capital Management Corporation
Money Market Portfolio	Money Market Portfolio, a series of Dreyfus Variable Investment Funds
Moody's	Moody's Investors Service, Inc.
NASDAQ	The Nasdaq Stock Market, Inc.
NAV	Net asset value
Newton	Newton Capital Management Ltd.
NFA	National Futures Association
NYSE	NYSE Euronext
Participating Insurance Companies	Insurance companies that establish variable annuity and variable life insurance separate accounts to fund variable annuity contracts and variable life insurance policies through which investments in the funds may be made
Policies	Variable annuity contracts and variable life insurance policies through which investments in the funds may be made
Rating Agencies	S&P, Moody's, Fitch and, with respect to money market funds, DBRS
REIT	Real estate investment trust
REMIC	Real estate mortgage investment conduit
S&P	Standard & Poor's Ratings Services
Sarofim & Co.	Fayez Sarofim & Co.
SEC	Securities and Exchange Commission

Term	Meaning
Securities Act	Securities Act of 1933, as amended
Standish	Standish Mellon Asset Management Company LLC
Sub-Adviser	A fund's sub-investment adviser, if any, as described in the prospectus
TBCAM	The Boston Company Asset Management
TIPS	Treasury Inflation-Protection Securities
Transfer Agent	Dreyfus Transfer, Inc.
Treasury	U.S. Department of the Treasury
USA PATRIOT Act	Uniting and Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001
VA	Variable annuity
VLI	Variable life insurance

How is the Fund Organized?

The Fund is a diversified portfolio of Federated Insurance Series (“Trust”). The Trust is an open-end, management investment company that was established under the laws of the Commonwealth of Massachusetts on September 15, 1993. The Trust may offer separate series of shares representing interests in separate portfolios of securities. Effective February 15, 2013 the Fund changed its name from Federated Capital Appreciation Fund II to Federated Managed Tail Risk Fund II.

The Board of Trustees (the “Board”) has established two classes of shares of the Fund, known as Primary Shares and Service Shares (“Shares”). This SAI relates to both classes of Shares. The Fund’s investment adviser is Federated Global Investment Management Corp. (“Adviser”) and the Fund’s sub-adviser is Federated Investment Management Company. Prior to February 15, 2013, Federated Equity Management Company of Pennsylvania was the Adviser to the Fund. Both the current Adviser and former Adviser are wholly owned subsidiaries of Federated Investors, Inc. (“Federated”).

Securities in Which the Fund Invests

The principal securities or other investments in which the Fund invests are described in the Fund’s Prospectus. The Fund also may invest in securities or other investments as non-principal investments for any purpose that is consistent with its investment objective. The following information is either additional information in respect of a principal security or other investment referenced in the Prospectus or information in respect of a non-principal security or other investment (in which case there is no related disclosure in the Prospectus).

SECURITIES DESCRIPTIONS AND TECHNIQUES

Interests in Other Limited Liability Companies

Entities such as limited partnerships, limited liability companies, business trusts and companies organized outside the United States may issue securities comparable to common or preferred stock.

Callable Securities (A Fixed-Income Security)

Certain fixed-income securities in which the Fund invests are callable at the option of the issuer. Callable securities are subject to call risks.

Insurance Contracts (A Fixed-Income Security)

Insurance contracts include guaranteed investment contracts, funding agreements and annuities. Insurance contracts generally provide that the purchaser will deposit money with the insurance company and the insurance company will pay interest for the life of the contract and return the principal at maturity. The Fund treats these contracts as fixed-income securities.

Municipal Securities (A Fixed-Income Security)

Municipal securities are issued by states, counties, cities and other political subdivisions and authorities. Although many municipal securities are exempt from federal income tax, the Fund may invest in taxable municipal securities.

Stripped Securities

As a non-principal strategy, the Fund may have the ability to purchase participations in trusts that hold U.S. Treasury and agency securities (such as TIGRs and CATs) and also may purchase Treasury receipts and other “stripped” securities that evidence ownership in either the future interest payments or the future principal payments of U.S. government obligations. These participations are issued at a discount to their “face value,” and may (particularly in the case of stripped mortgage-backed securities) exhibit greater price volatility than ordinary debt securities because of the manner in which their principal and interest are returned to investors.

Collateralized Mortgage Obligations (A Type of Mortgage-Backed Security)

Collateralized mortgage obligations (CMOs), including interests in real estate mortgage investment conduits (REMICs), allocate payments and prepayments from an underlying pass-through certificate among holders of different classes of mortgage-backed securities. This creates different prepayment and interest rate risks for each CMO class. The degree of increased or decreased prepayment risks depends upon the structure of the CMOs. However, the actual returns on any type of mortgage-backed security depend upon the performance of the underlying pool of mortgages, which no one can predict and will vary among pools.

Sequential CMOs (A Type of CMO)

In a sequential pay CMO, one class of CMOs receives all principal payments and prepayments. The next class of CMOs receives all principal payments after the first class is paid off. This process repeats for each sequential class of CMO. As a result, each class of sequential pay CMOs reduces the prepayment risks of subsequent classes.

PACs, TACs and Companion Classes (Types of CMOs)

More sophisticated CMOs include planned amortization classes (PACs) and targeted amortization classes (TACs). PACs and TACs are issued with companion classes. PACs and TACs receive principal payments and prepayments at a specified rate. The companion classes receive principal payments and prepayments in excess of the specified rate. In addition, PACs will receive the companion classes' share of principal payments, if necessary, to cover a shortfall in the prepayment rate. This helps PACs and TACs to control prepayment risks by increasing the risks to their companion classes.

IOs and POs (A Type of CMO)

CMOs may allocate interest payments to one class ("Interest Only" or IOs) and principal payments to another class ("Principal Only" or POs). POs increase in value when prepayment rates increase. In contrast, IOs decrease in value when prepayments increase, because the underlying mortgages generate less interest payments. However, IOs tend to increase in value when interest rates rise (and prepayments decrease), making IOs a useful hedge against interest rate risks.

Floater and Inverse Floater (Types of CMO)

Another variant allocates interest payments between two classes of asset-backed securities. One class ("Floater") receives a share of interest payments based upon a market index such as the London Interbank Offered Rate (LIBOR). The other class ("Inverse Floater") receives any remaining interest payments from the underlying pools of obligations. Floater classes receive more interest (and Inverse Floater classes receive correspondingly less interest) as interest rates rise. This shifts prepayment and interest rate risks from the Floater to the Inverse Floater class, reducing the price volatility of the Floater class and increasing the price volatility of the Inverse Floater class.

Z Classes and Residual Classes (Types of CMOs)

CMOs must allocate all payments received from the underlying mortgages to some class. To capture any unallocated payments, CMOs generally have an accrual (Z) class. Z classes do not receive any payments from the underlying mortgages until all other CMO classes have been paid off. Once this happens, holders of Z class CMOs receive all payments and prepayments.

Non-Governmental Mortgage-Backed Securities

Non-governmental mortgage-backed securities (including non-governmental CMOs) are issued by private entities, rather than by U.S. government agencies. The non-governmental mortgage-backed securities in which the Fund invests will be treated as mortgage related asset-backed securities. These securities involve credit risk and liquidity risk. The degree of risks will depend significantly on the ability of borrowers to make payments on the underlying mortgages and the seniority of the security held by the Fund with respect to such payments.

Loan Assignments (A Type of Loan Instrument)

The Fund may purchase a loan assignment from the agent bank or other member of the lending syndicate. Investments in loans through an assignment may involve additional risks to the Funds. For example, if a loan is foreclosed, a Fund could become part owner of any collateral, and would bear the costs and liabilities associated with owning and disposing of the collateral. In addition, it is conceivable that under emerging legal theories of lender liability, a Fund could be held liable as co-lender. It is unclear whether loans and other forms of direct indebtedness offer securities law protections against fraud and misrepresentation. In the absence of definitive regulatory guidance, the Funds rely on the Adviser's research in an attempt to avoid situations where fraud or misrepresentation could adversely affect the Funds.

Loan Participations (A Type of Loan Instrument)

The Fund may purchase a funded participation interest in a loan, by which the Fund has the right to receive payments of principal, interest and fees from an intermediary (typically a bank, financial institution, or lending syndicate) that has a direct contractual relationship with a borrower. In loan participations, the Fund does not have a direct contractual relationship with the borrower.

The Fund may also purchase a type of a participation interest, known as risk participation interest. In this case, the Fund will receive a fee in exchange for the promise to make a payment to a lender if a borrower fails to make a payment of principal, interest, or fees, as required by the loan agreement.

When purchasing loan participations, the Fund will be exposed to credit risk of the borrower and, in some cases, the intermediary offering the participation. A participation agreement also may limit the rights of the Fund to vote on changes that may be made to the underlying loan agreement, such as waiving a breach of a covenant. The participation interests in which a Fund intends to invest may not be rated by any nationally recognized rating service or, if rated, may be below investment grade and expose the Fund to the risks of noninvestment-grade securities.

DERIVATIVE CONTRACTS

Derivative contracts are financial instruments that require payments based upon changes in the values of designated securities, commodities, currencies, indices, or other assets or instruments including other derivative contracts, (each a “Reference Instrument” and collectively, “Reference Instruments”). Each party to a derivative contract may sometimes be referred to as a counterparty. Some derivative contracts require payments relating to an actual, future trade involving the Reference Instrument. These types of derivatives are frequently referred to as “physically settled” derivatives. Other derivative contracts require payments relating to the income or returns from, or changes in the market value of, a Reference Instrument. These types of derivatives are known as “cash settled” derivatives, since they require cash payments in lieu of delivery of the Reference Instrument.

Many derivative contracts are traded on securities or commodities exchanges. In this case, the exchange sets all the terms of the contract except for the price. Investors make payments due under their contracts through the exchange. Most exchanges require investors to maintain margin accounts through their brokers to cover their potential obligations to the exchange. Parties to the contract make (or collect) daily payments to the margin accounts to reflect losses (or gains) in the value of their contracts. This protects investors against potential defaults by the other party to the contract. Trading contracts on an exchange also allows investors to close out their contracts by entering into offsetting contracts.

For example, the Fund could close out an open contract to buy an asset at a future date by entering into an offsetting contract to sell the same asset on the same date. If the offsetting sale price is more than the original purchase price, the Fund realizes a gain; if it is less, the Fund realizes a loss. Exchanges may limit the amount of open contracts permitted at any one time. Such limits may prevent the Fund from closing out a position. If this happens, the Fund will be required to keep the contract open (even if it is losing money on the contract), and to make any payments required under the contract (even if it has to sell portfolio securities at unfavorable prices to do so). Inability to close out a contract could also harm the Fund by preventing it from disposing of or trading any assets it has been using to secure its obligations under the contract.

The Fund may also trade derivative contracts over-the-counter (OTC) in transactions negotiated directly between the Fund and a financial institution. OTC contracts do not necessarily have standard terms, so they may be less liquid and more difficult to close-out than exchange-traded contracts. In addition, OTC contracts with more specialized terms may be more difficult to value than exchange traded contracts, especially in times of financial stress.

Regulations enacted by the Commodity Futures Trading Commission (the “CFTC”) under the Dodd-Frank Wall Street Reform and Consumer Protection Act may require the Fund to clear certain derivative contracts through a clearinghouse or central counterparty (a “CCP”). To clear a derivative through the CCP, the Fund will submit the contract to, and post margin with, a futures commission merchant (“FCM”) that is a clearinghouse member. The Fund may enter into the swap with a financial institution other than the FCM (the “Executing Dealer”) and arrange for the contract to be transferred to the FCM for clearing. It may also enter into the contract with the FCM itself. If the Fund must centrally clear a transaction, the CFTC’s regulations may also require that the derivative be entered into over a market facility that is known as a “swap execution facility” or “SEF”. Also, in the future, the CFTC’s regulations may require that certain electronically-traded contracts be entered into over SEFs, even if those contracts are not subject to mandatory central clearing. The CCP, SEF, FCM and Executing Dealer are all subject to regulatory oversight by the CFTC. Similar regulatory requirements will apply to contracts that are subject to the jurisdiction of the Securities and Exchange Commission (“SEC”), although the SEC has not yet finalized its regulations.

Depending on how the Fund uses derivative contracts and the relationships between the market value of a derivative contract and the Reference Instrument, derivative contracts may increase or decrease the Fund’s exposure to the risks of the Reference Instrument, and may also expose the fund to liquidity and leverage risks. OTC contracts also expose the Fund to credit risks in the event that a counterparty defaults on the contract, although this risk must be mitigated by submitting the contract for clearing through a CCP.

The Fund may invest in a derivative contract if it is permitted to own, invest in, or otherwise have economic exposure to the Reference Instrument. The Fund is not required to own a Reference Instrument in order to buy or sell a derivative contract relating to that Reference Instrument. The Fund may trade in the following specific types and/or combinations of derivative contracts.

Futures Contracts (A Type of Derivative)

Futures contracts provide for the future sale by one party and purchase by another party of a specified amount of a Reference Instrument at a specified price, date and time. Entering into a contract to buy a Reference Instrument is commonly referred to as buying a contract or holding a long position in the asset. Entering into a contract to sell a Reference Instrument is commonly referred to as selling a contract or holding a short position in the Reference Instrument. Futures contracts are considered to be

commodity contracts. The Fund has claimed an exclusion from the definition of the term “commodity pool operator” under the Commodity Exchange Act and, therefore, is not subject to registration or regulation as a commodity pool operator under that Act. Futures contracts traded OTC are frequently referred to as forward contracts. The Fund can buy or sell financial futures (such as interest rate futures, index futures and security futures), as well as currency futures and currency forward contracts.

Interest Rate Futures

An interest rate futures contract is an exchange-traded contract for which the Reference Instrument is an interest-bearing, fixed-income security or an inter-bank deposit. Two examples of common interest rate futures contracts are U.S. Treasury futures contracts and Eurodollar futures contracts. The Reference Instrument for a U.S. Treasury futures contract is a U.S. Treasury security. The Reference Instrument for a Eurodollar futures contract is the London Interbank Offered Rate (commonly referred to as LIBOR); Eurodollar futures contracts enable the purchaser to obtain a fixed rate for the lending of funds over a stated period of time and the seller to obtain a fixed rate for a borrowing of funds over that same period.

Index Futures

An index futures contract is an exchange-traded contract to make or receive a payment based upon changes in the value of an index. An index is a statistical composite that measures changes in the value of designated Reference Instruments. An index is usually computed by a sum product of a list of the designated Reference Instruments’ current prices and a list of weights assigned to these Reference Instruments.

Security Futures

A security futures contract is an exchange-traded contract to purchase or sell in the future a specific quantity of a security (other than a Treasury security) or a narrow-based securities index at a certain price. Presently, the only available security futures contracts use shares of a single equity security as the Reference Instrument. However, it is possible that in the future security futures contracts will be developed that use a single fixed-income security as the Reference Instrument.

Currency Futures and Currency Forward Contracts (Types of Futures Contracts)

A currency futures contract is an exchange-traded contract to buy or sell a particular currency at a specific price at some time in the future (commonly three months or more). A currency forward contract is not an exchange-traded contract and represents an obligation to purchase or sell a specific currency at a future date, at a price set at the time of the contract and for a period agreed upon by the parties which may be either a window of time or a fixed number of days from the date of the contract. Currency futures and forward contracts are highly volatile, with a relatively small price movement potentially resulting in substantial gains or losses to the Fund. Additionally, the Fund may lose money on currency futures and forward contracts if changes in currency rates do not occur as anticipated or if the Fund’s counterparty to the contract were to default.

Option Contracts (A Type of Derivative)

Option contracts (also called “options”) are rights to buy or sell a Reference Instrument for a specified price (the “exercise price”) during, or at the end of, a specified period. The seller (or “writer”) of the option receives a payment, or premium, from the buyer, which the writer keeps regardless of whether the buyer uses (or exercises) the option. Options may be bought or sold on a wide variety of Reference Instruments. Options that are written on futures contracts will be subject to margin requirements similar to those applied to futures contracts.

The Fund may buy and/or sell the following types of options:

Call Options

A call option gives the holder (“buyer”) the right to buy the Reference Instrument from the seller (“writer”) of the option. The Fund may use call options in the following ways:

- Buy call options on a Reference Instrument in anticipation of an increase in the value of the Reference Instrument; and
- Write call options on a Reference Instrument to generate income from premiums, and in anticipation of a decrease or only limited increase in the value of the Reference Instrument. If the Fund writes a call option on a Reference Instrument that it owns and that call option is exercised, the Fund foregoes any possible profit from an increase in the market price of the Reference Instrument over the exercise price plus the premium received.

Put Options

A put option gives the holder the right to sell the Reference Instrument to the writer of the option. The Fund may use put options in the following ways:

- Buy put options on a Reference Instrument in anticipation of a decrease in the value of the Reference Instrument; and

- Write put options on a Reference Instrument to generate income from premiums, and in anticipation of an increase or only limited decrease in the value of the Reference Instrument. In writing puts, there is a risk that the Fund may be required to take delivery of the Reference Instrument when its current market price is lower than the exercise price.

The Fund may also buy or write options, as needed, to close out existing option positions.

Finally, the Fund may enter into combinations of options contracts in an attempt to benefit from changes in the prices of those options contracts (without regard to changes in the value of the Reference Instrument).

Swap Contracts (A Type of Derivative)

A swap contract (also known as a “swap”) is a type of derivative contract in which two parties agree to pay each other (swap) the returns derived from Reference Instruments. Most swaps do not involve the delivery of the underlying assets by either party, and the parties might not own the Reference Instruments. The payments are usually made on a net basis so that, on any given day, the Fund would receive (or pay) only the amount by which its payment under the contract is less than (or exceeds) the amount of the other party’s payment. Swap agreements are sophisticated instruments that can take many different forms and are known by a variety of names. Common swap agreements that the Fund may use include:

Interest Rate Swaps

Interest rate swaps are contracts in which one party agrees to make regular payments equal to a fixed or floating interest rate times a stated principal amount (commonly referred to as a “notional principal amount”) in return for payments equal to a different fixed or floating rate times the same principal amount, for a specific period. For example, a \$10 million London Interbank Offered Rate (commonly referred to as LIBOR) swap would require one party to pay the equivalent of the London Interbank Offered Rate of interest (which fluctuates) on \$10 million principal amount in exchange for the right to receive the equivalent of a stated fixed rate of interest on \$10 million principal amount.

Caps and Floors (A Type of Swap Contract)

Caps and Floors are contracts in which one party agrees to make payments only if an interest rate or index goes above (Cap) or below (Floor) a certain level in return for a fee from the other party.

Total Return Swaps

A total return swap is an agreement between two parties whereby one party agrees to make payments of the total return from a Reference Instrument (or a basket of such instruments) during the specified period, in return for payments equal to a fixed or floating rate of interest or the total return from another Reference Instrument. Alternately, a total return swap can be structured so that one party will make payments to the other party if the value of a Reference Instrument increases, but receive payments from the other party if the value of that instrument decreases.

Credit Default Swaps

A credit default swap (CDS) is an agreement between two parties whereby one party (the “Protection Buyer”) agrees to make payments over the term of the CDS to the other party (the “Protection Seller”), provided that no designated event of default, restructuring or other credit related event (each a “Credit Event”) occurs with respect to Reference Instrument that is usually a particular bond or the unsecured credit of an issuer, in general (the “Reference Obligation”). Many CDS are physically settled, which means that if a Credit Event occurs, the Protection Seller must pay the Protection Buyer the full notional value, or “par value,” of the Reference Obligation in exchange for delivery by the Protection Buyer of the Reference Obligation or another similar obligation issued by the issuer of the Reference Obligation (the “Deliverable Obligation”). The Counterparties agree to the characteristics of the Deliverable Obligation at the time that they enter into the CDS. Alternately, a CDS can be “cash-settled,” which means that upon the occurrence of a Credit Event, the Protection Buyer will receive a payment from the Protection Seller equal to the difference between the par amount of the Reference Obligation and its market value at the time of the Credit Event. The Fund may be either the Protection Buyer or the Protection Seller in a CDS. If the Fund is a Protection Buyer and no Credit Event occurs, the Fund will lose its entire investment in the CDS (i.e., an amount equal to the payments made to the Protection Seller over the term of the CDS). However, if a Credit Event occurs, the Fund (as Protection Buyer) will deliver the Deliverable Obligation and receive a payment equal to the full notional value of the Reference Obligation, even though the Reference Obligation may have little or no value. If the Fund is the Protection Seller and no Credit Event occurs, the Fund will receive a fixed rate of income throughout the term of the CDS. However, if a Credit Event occurs, the Fund (as Protection Seller) will pay the Protection Buyer the full notional value of the Reference Obligation and receive the Deliverable Obligation from the Protection Buyer. A CDS may involve greater risks than if the Fund invested directly in the Reference Obligation. For example, a CDS may increase credit risk since the Fund has exposure to both the issuer of the Reference Obligation and the Counterparty to the CDS.

Currency Swaps

Currency swaps are contracts which provide for interest payments in different currencies. The parties might agree to exchange the notional principal amounts of the currencies as well (commonly called a “foreign exchange swap”).

Volatility Swaps

A volatility swap is an agreement between two parties to make payments based on changes in the volatility of a Reference Instrument over a stated period of time. Specifically, one party will be required to make a payment to the other party if the volatility of a Reference Instrument increases over an agreed upon period of time, but will be entitled to receive a payment from the other party if the volatility decreases over that time period. A volatility swap that requires a single payment on a stated future date will be treated as a forward contract. Payments on a volatility swap will be greater if they are based upon the mathematical square of volatility (i.e., the measured volatility multiplied by itself, which is referred to as “variance”). This type of a volatility swap is frequently referred to as a variance swap.

OTHER INVESTMENTS, TRANSACTIONS, TECHNIQUES

Reverse Repurchase Agreements

Reverse repurchase agreements are repurchase agreements in which the Fund is the seller (rather than the buyer) of the securities, and agrees to repurchase them at an agreed-upon time and price. A reverse repurchase agreement may be viewed as a type of borrowing by the Fund. Reverse repurchase agreements are subject to credit risks. In addition, reverse repurchase agreements create leverage risks because the Fund must repurchase the underlying security at a higher price, regardless of the market value of the security at the time of repurchase.

Delayed Delivery Transactions

Delayed delivery transactions, including when issued transactions, are arrangements in which the Fund buys securities for a set price, with payment and delivery of the securities scheduled for a future time. During the period between purchase and settlement, no payment is made by the Fund to the issuer and no interest accrues to the Fund. The Fund records the transaction when it agrees to buy the securities and reflects their value in determining the price of its shares. Settlement dates may be a month or more after entering into these transactions so that the market values of the securities bought may vary from the purchase prices. Therefore, delayed delivery transactions create interest rate risks for the Fund. Delayed delivery transactions also involve credit risks in the event of a counterparty default. These transactions create leverage risks.

To Be Announced Securities (TBAs)

As with other delayed delivery transactions, a seller agrees to issue a TBA security at a future date. However, the seller does not specify the particular securities to be delivered. Instead, the Fund agrees to accept any security that meets specified terms. For example, in a TBA mortgage-backed transaction, the Fund and the seller would agree upon the issuer, interest rate and terms of the underlying mortgages. The seller would not identify the specific underlying mortgages until it issues the security. TBA mortgage-backed securities increase interest rate risk because the underlying mortgages may be less favorable than anticipated by the Fund.

Dollar Rolls

Dollar rolls are transactions where the Fund sells mortgage-backed securities with a commitment to buy similar, but not identical, mortgage-backed securities on a future date at a lower price. Normally, one or both securities involved are TBA mortgage-backed securities. Dollar rolls are subject to interest rate risk and credit risk.

Hybrid Instruments

Hybrid instruments combine elements of two different kinds of securities or financial instruments (such as a derivative contract). Frequently, the value of a hybrid instrument is determined by reference to changes in the value of a Reference Instrument (that is a designated security, commodity, currency, index or other asset or instrument including a derivative contract). Hybrid instruments can take on many forms including, but not limited to, the following forms. First, a common form of a hybrid instrument combines elements of a derivative contract with those of another security (typically a fixed-income security). In this case all or a portion of the interest or principal payable on a hybrid security is determined by reference to changes in the price of a Reference Instrument. Second, a hybrid instrument may also combine elements of a fixed-income security and an equity security. Third, hybrid instruments may include convertible securities with conversion terms related to a Reference Instrument.

Depending on the type and terms of the hybrid instrument, its risks may reflect a combination of the risks of investing in the Reference Instrument with the risks of investing in other securities, currencies and derivative contracts. Thus, an investment in a hybrid instrument may entail significant risks in addition to those associated with traditional securities or the Reference Instrument. Hybrid instruments are also potentially more volatile than traditional securities or the Reference Instrument. Moreover, depending on the structure of the particular hybrid, it may expose the Fund to leverage risks or carry liquidity risks.

Credit Linked Note (A Type of Hybrid Instrument)

A credit linked note (CLN) is a type of hybrid instrument in which a special purpose entity issues a structured note (the “Note Issuer”) with respect to which the Reference Instrument is a single bond, a portfolio of bonds, or the unsecured credit of an issuer, in general (each a “Reference Credit”). The purchaser of the CLN (the “Note Purchaser”) invests a par amount and receives a payment during the term of the CLN that equals a fixed or floating rate of interest equivalent to a high rated funded asset (such as a bank certificate of deposit) plus an additional premium that relates to taking on the credit risk of the Reference Credit. Upon maturity of the CLN, the Note Purchaser will receive a payment equal to: (i) the original par amount paid to the Note Issuer, if there is no occurrence of a designated event of default, restructuring or other credit event (each a “Credit Event”) with respect to the issuer of the Reference Credit; or (ii) the market value of the Reference Credit, if a Credit Event has occurred. Depending upon the terms of the CLN, it is also possible that the Note Purchaser may be required to take physical delivery of the Reference Credit in the event of a Credit Event. Most credit linked notes use a corporate bond (or a portfolio of corporate bonds) as the Reference Credit. However, almost any type of fixed-income security (including foreign government securities), index or derivative contract (such as a credit default swap) can be used as the Reference Credit.

Equity Linked Note (A Type of Hybrid Instrument)

An equity linked note (ELN) is a type of hybrid instrument that provides the noteholder with exposure to a single equity security, a basket of equity securities or an equity index (the “Reference Equity Instrument”). Typically, an ELN pays interest at agreed rates over a specified time period and, at maturity, either converts into shares of a Reference Equity Instrument or returns a payment to the noteholder based on the change in value of a Reference Equity Instrument.

Asset Segregation

In accordance with the Securities and Exchange Commission (SEC) and SEC staff positions regarding the interpretation of the Investment Company Act of 1940 (“1940 Act”), with respect to derivatives that create a future payment obligation of the Fund, the Fund must “set aside” (referred to sometimes as “asset segregation”) liquid assets, or engage in other SEC- or staff-approved measures, while the derivative contracts are open. For example, with respect to forwards and futures contracts that are not contractually required to “cash-settle,” the Fund must cover its open positions by setting aside cash or readily marketable securities equal to the contracts’ full, notional value. With respect to forwards and futures that are contractually required to “cash-settle,” however, the Fund is permitted to set aside cash or readily marketable securities in an amount equal to the Fund’s daily marked-to-market (“net”) obligations, if any (i.e., the Fund’s daily net liability, if any), rather than the notional value.

The Fund will employ another approach to segregating assets to cover options that it sells. If the Fund sells a call option, the Fund will set aside either the Reference Instrument subject to the option, cash or readily marketable securities with a value that equals or exceeds the current market value of the Reference Instrument. In no event, will the value of the cash or readily marketable securities set aside by the Fund be less than the exercise price of the call option. If the Fund sells a put option, the Fund will set aside cash or readily marketable securities with a value that equals or exceeds the exercise price of the put option.

The Fund’s asset segregation approach for swap agreements varies among different types of swaps. For example, if the Fund enters into a credit default swap as the Protection Buyer, then it will set aside cash or readily marketable securities necessary to meet any accrued payment obligations under the swap. By comparison, if the Fund enters into a credit default swap as the Protection Seller, then the Fund will set aside cash or readily marketable securities equal to the full notional amount of the swap that must be paid upon the occurrence of a Credit Event. For some other types of swaps, such as interest rate swaps, the Fund will calculate the obligations of the counterparties to the swap on a net basis. Consequently, the Fund’s current obligation (or rights) under this type of swap will equal only the net amount to be paid or received based on the relative values of the positions held by each counterparty to the swap (the “net amount”). The net amount currently owed by or to the Fund will be accrued daily and the Fund will set aside cash or readily marketable securities equal to any accrued but unpaid net amount owed by the Fund under the swap.

The Fund may reduce the liquid assets segregated to cover obligations under a derivative contract by entering into an offsetting derivative contract. For example, if the Fund sells a put option for the same Reference Instrument as a call option the Fund has sold, and the exercise price of the call option is the same as or higher than the exercise price of the put option, then the Fund may net its obligations under the options and set aside cash or readily marketable securities (including any margin deposited for the options) with a value equal to the greater of: (a) the current market value of the Reference Instrument deliverable under the call option; or (b) the exercise price of the put option.

By setting aside cash or readily marketable securities equal to only its net obligations under swaps and certain cash-settled derivative contracts, the Fund will have the ability to employ leverage to a greater extent than if the Fund were required to segregate cash or readily marketable securities equal to the full notional value of such contracts. The use of leverage involves certain risks. See “Risk Factors.” Unless the Fund has other cash or readily marketable securities to set aside, it cannot trade assets set aside

in connection with derivative contracts or special transactions without entering into an offsetting derivative contract or terminating a special transaction. This may cause the Fund to miss favorable trading opportunities or to realize losses on derivative contracts or special transactions. The Fund reserves the right to modify its asset segregation policies in the future to comply with any changes in the positions articulated from time to time by the SEC and its staff.

Generally, special transactions do not cash-settle on a net basis. Consequently, with respect to special transactions, the Fund will set aside cash or readily marketable securities with a value that equals or exceeds the Fund's obligations.

Inter-Fund Borrowing and Lending Arrangements

The SEC has granted an exemption that permits the Fund and all other funds advised by subsidiaries of Federated Investors, Inc. ("Federated funds") to lend and borrow money for certain temporary purposes directly to and from other Federated funds. Participation in this inter-fund lending program is voluntary for both borrowing and lending Federated funds, and an inter-fund loan is only made if it benefits each participating Federated fund. Federated Investors, Inc. ("Federated") administers the program according to procedures approved by the Fund's Board, and the Board monitors the operation of the program. Any inter-fund loan must comply with certain conditions set out in the exemption, which are designed to assure fairness and protect all participating Federated funds.

For example, inter-fund lending is permitted only: (a) to meet shareholder redemption requests; (b) to meet commitments arising from "failed" trades; and (c) for other temporary purposes. All inter-fund loans must be repaid in seven days or less. The Fund's participation in this program must be consistent with its investment policies and limitations, and must meet certain percentage tests. Inter-fund loans may be made only when the rate of interest to be charged is more attractive to the lending Federated fund than market-competitive rates on overnight repurchase agreements ("Repo Rate") and more attractive to the borrowing Federated fund than the rate of interest that would be charged by an unaffiliated bank for short-term borrowings ("Bank Loan Rate"), as determined by the Board. The interest rate imposed on inter-fund loans is the average of the Repo Rate and the Bank Loan Rate.

INVESTMENT RATINGS FOR INVESTMENT-GRADE SECURITIES

The Adviser will determine whether a security is investment grade based upon the credit ratings given by one or more nationally recognized rating services. For example, Standard & Poor's, a rating service, assigns ratings to investment-grade securities (AAA, AA, A and BBB) based on their assessment of the likelihood of the issuer's inability to pay interest or principal (default) when due on each security. Lower credit ratings correspond to higher credit risk. If a security has not received a rating, the Fund must rely entirely upon the Adviser's credit assessment that the security is comparable to investment grade.

Portfolio Turnover

Although the Fund does not intend to invest for the purpose of seeking short-term profits, securities in its portfolio will be sold whenever the Adviser believes it is appropriate to do so in light of the Fund's investment objectives, without regard to the length of time a particular security may have been held. For the fiscal years ended December 31, 2013 and 2012, the portfolio turnover rates were 137% and 103%, respectively.

Investment Risks

There are many risk factors which may affect an investment in the Fund. The Fund's principal risks are described in its Prospectus. The following information is either additional information in respect of a principal risk factor referenced in the Prospectus or information in respect of a non-principal risk factor applicable to the Fund (in which case there is no related disclosure in the Prospectus).

Risk Associated with Complex CMOs

CMOs with complex or highly variable prepayment terms, such as companion classes, IOs, POs, Inverse Floaters and residuals, generally entail greater market, prepayment and liquidity risk than other mortgage-backed securities. For example, their prices are more volatile and their trading market may be more limited.

Risk of Investing in Derivative Contracts and Hybrid Instruments

The Fund's exposure to derivative contracts and hybrid instruments (either directly or through its investment in another investment company) involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. First, changes in the value of the derivative contracts and hybrid instruments in which the Fund invests may not be correlated with changes in the value of the underlying Reference Instruments or, if they are correlated, may move in the opposite direction than originally anticipated. Second, while some strategies involving derivatives may reduce the risk of loss, they may also reduce potential gains or, in some cases, result in losses by offsetting favorable price movements in portfolio holdings. Third, there is a risk that derivative contracts and hybrid instruments may be erroneously priced or improperly valued and, as a result, the Fund may need to make increased cash payments to the counterparty. Fourth, a common provision in OTC

derivative contracts permits the counterparty to terminate any such contract between it and the Fund, if the value of the Fund's total net assets declines below a specified level over a given time period. Factors that may contribute to such a decline (which usually must be substantial) include significant shareholder redemptions and/or a marked decrease in the market value of the Fund's investments. Any such termination of the Fund's OTC derivative contracts may adversely affect the Fund (for example, by increasing losses and/or costs, and/or preventing the Fund from fully implementing its investment strategies). Fifth, the Fund may use a derivative contract to benefit from a decline in the value of a Reference Instrument. If the value of the Reference Instrument declines during the term of the contract, the Fund makes a profit on the difference (less any payments the Fund is required to pay under the terms of the contract). Any such strategy involves risk. There is no assurance that the Reference Instrument will decline in value during the term of the contract and make a profit for the Fund. The Reference Instrument may instead appreciate in value, creating a loss for the Fund. Sixth, a default or failure by a CCP or an FCM (also sometimes called a "futures broker"), or the failure of a contract to be transferred from an Executing Dealer to the FCM for clearing, may expose the Fund to losses, increase its costs, or prevent the Fund from entering or exiting derivative positions, accessing margin or fully implementing its investment strategies. The central clearing of a derivative and trading of a contract over a SEF could reduce the liquidity in, or increase costs of entering into or holding, any contracts. Finally, derivative contracts and hybrid instruments may also involve other risks described herein or in the Fund's prospectus, such as stock market, interest rate, credit, currency, liquidity and leverage risks.

Risk Associated with the Investment Activities of Other Accounts

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. Therefore, it is possible that investment-related actions taken by such other accounts could adversely impact the Fund with respect to, for example, the value of Fund portfolio holdings, and/or prices paid to or received by the Fund on its portfolio transactions, and/or the Fund's ability to obtain or dispose of portfolio securities. Related considerations are discussed elsewhere in this SAI under "Brokerage Transactions and Investment Allocation."

VARIABLE ASSET REGULATIONS

The Fund is also subject to variable contract asset regulations prescribed by the U.S. Treasury Department under Section 817(h) of the Internal Revenue Code. After a one-year start-up period, the regulations generally require that, as of the end of each calendar quarter or within 30 days thereafter, no more than 55% of the total assets of the Fund may be represented by any one investment, no more than 70% of the total assets of the Fund may be represented by any two investments, no more than 80% of the total assets of the Fund may be represented by any three investments and no more than 90% of the total assets of the Fund may be represented by any four investments. In applying these diversification rules, all securities of the same issuer, all interests of the same real property project and all interests in the same commodity are each treated as a single investment. In the case of government securities, each government agency or instrumentality shall be treated as a separate issuer. If the Fund fails to achieve the diversification required by the regulations, unless relief is obtained from the Internal Revenue Service, the contracts invested in the Fund will not be treated as annuity endowment or life insurance contracts.

Investment Objective and Investment Limitations

The Fund's fundamental investment objective is capital appreciation.

INVESTMENT LIMITATIONS

Diversification

With respect to securities comprising 75% of the value of its total assets, the Fund will not purchase securities of any one issuer (other than cash; cash items; securities issued or guaranteed by the government of the United States or its agencies or instrumentalities and repurchase agreements collateralized by such U.S. government securities; and securities of other investment companies) if, as a result, more than 5% of the value of its total assets would be invested in the securities of that issuer, or the Fund would own more than 10% of the outstanding voting securities of that issuer.

Concentration

The Fund will not make investments that will result in the concentration of its investments in the securities of issuers primarily engaged in the same industry. For purposes of this restriction, the term concentration has the meaning set forth in the Investment Company Act of 1940 ("1940 Act"), any rule or order thereunder, or any SEC staff interpretation thereof. Government securities and municipal securities will not be deemed to constitute an industry.

Underwriting

The Fund may not underwrite the securities of other issuers, except that the Fund may engage in transactions involving the acquisition, disposition or resale of its portfolio securities, under circumstances where it may be considered to be an underwriter under the Securities Act of 1933.

Investing in Commodities

The Fund may not purchase or sell physical commodities, provided that the Fund may purchase securities of companies that deal in commodities.

Investing in Real Estate

The Fund may not purchase or sell real estate, provided that this restriction does not prevent the Fund from investing in issuers which invest, deal, or otherwise engage in transactions in real estate or interests therein, or investing in securities that are secured by real estate or interests therein. The Fund may exercise its rights under agreements relating to such securities, including the right to enforce security interests and to hold real estate acquired by reason of such enforcement until that real estate can be liquidated in an orderly manner.

Borrowing Money and Issuing Senior Securities

The Fund may borrow money, directly or indirectly, and issue senior securities to the maximum extent permitted under the 1940 Act, any rule or order there under, or any SEC staff interpretation thereof.

Lending

The Fund may not make loans, provided that this restriction does not prevent the Fund from purchasing debt obligations, entering into repurchase agreements, lending its assets to broker/dealers or institutional investors and investing in loans, including assignments and participation interests.

The above limitations cannot be changed unless authorized by the Board and by the “vote of a majority of its outstanding voting securities,” as defined by the 1940 Act. The following limitations, however, may be changed by the Board without shareholder approval. Shareholders will be notified before any material change in these limitations becomes effective.

Illiquid Securities

The Fund will not purchase securities for which there is no readily available market, or enter into repurchase agreements or purchase time deposits that the Fund cannot dispose of within seven days, if immediately after and as a result, the value of such securities would exceed, in the aggregate, 15% of the Fund's net assets.

INVESTING IN OTHER INVESTMENT COMPANIES

The Fund may invest its assets in securities of other investment companies as an efficient means of carrying out its investment policies. It should be noted that investment companies incur certain expenses, such as management fees, and, therefore, any investment by the Fund in shares of other investment companies may be subject to such duplicate expenses. At the present time, the Fund expects that its investments in other investment companies may include shares of money market funds, including funds affiliated with the Fund's investment adviser.

The Fund may invest in the securities of affiliated money market funds as an efficient means of managing the Fund's uninvested cash.

Purchases on Margin

The Fund will not purchase securities on margin, provided that the Fund may obtain short-term credits necessary for the clearance of purchases and sales of securities, and further provided that the Fund may make margin deposits in connection with its use of financial options and futures, forward and spot currency contracts, swap transactions and other financial contracts or derivative instruments.

Pledging Assets

The Fund will not mortgage, pledge or hypothecate any of its assets, provided that this shall not apply to the transfer of securities in connection with any permissible borrowing or to collateral arrangements in connection with permissible activities.

Additional Information

In applying the concentration restriction: (a) utility companies will be divided according to their services (for example, gas, gas transmission, electric and telephone will be considered a separate industry); (b) financial service companies will be classified according to the end users of their services (for example, automobile finance, bank finance and diversified finance will each be considered a separate industry); and (c) asset-backed securities will be classified according to the underlying assets securing such securities.

To conform to the current view of the SEC that only domestic bank instruments may be excluded from industry concentration limitations, as a matter of non-fundamental policy, the Fund will not exclude foreign bank instruments from industry concentration limitations so long as the policy of the SEC remains in effect. In addition, investments in bank instruments, and investments in certain industrial development bonds funded by activities in a single industry, will be deemed to constitute investment in an industry, except when held for temporary defensive purposes. The investment of more than 25% of the value of the Fund's total assets in any one industry will constitute "concentration."

For purposes of the limitation on investing in commodities, investments in transactions involving futures contracts and options, forward currency contracts, swap transactions and other financial contracts that settle by payment of cash are not deemed to be investments in commodities.

For purposes of the above limitations, the Fund considers certificates of deposit and demand and time deposits issued by a U.S. branch of a domestic bank or savings association having capital, surplus, and undivided profits in excess of \$100,000,000 at the time of investment to be "cash items" and "bank instruments." Except with respect to borrowing money, if a percentage limitation is adhered to at the time of investment, a later increase or decrease in percentage resulting from any change in value or net assets will not result in a violation of such limitation.

What Do Shares Cost?

DETERMINING MARKET VALUE OF SECURITIES

A Share's net asset value (NAV) is determined as of the end of regular trading on the New York Stock Exchange (NYSE) (normally 4:00 p.m. Eastern time) each day the NYSE is open. The Fund calculates the NAV of each class by valuing the assets allocated to the Share's class, subtracting the liabilities allocated to the class and dividing the balance by the number of Shares of the class outstanding. The NAV for each class of Shares may differ due to the variance in daily net income realized by each class. Such variance will reflect only accrued net income to which the Shareholders of a particular class are entitled. The NAV is calculated to the nearest whole cent per Share.

In calculating its NAV, the Fund generally values investments as follows:

- Equity securities listed on a U.S. securities exchange or traded through the U.S. national market system are valued at their last reported sale price or official closing price in their principal exchange or market. If a price is not readily available, such equity securities are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Other equity securities traded primarily in the United States are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Equity securities traded primarily through securities exchanges and regulated market systems outside the United States are valued at their last reported sale price or official closing price in their principal exchange or market. These prices may be adjusted for significant events occurring after the closing of such exchanges or market systems as described below. If a price is not readily available, such equity securities are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Fixed-income securities and repurchase agreements acquired with remaining maturities of greater than 60 days are fair valued using price evaluations provided by a pricing service approved by the Board. The methods used by pricing services to determine such price evaluations are described below. If a price evaluation is not readily available, such fixed-income securities are fair valued based upon price evaluations from one or more dealers.
- Fixed-income securities and repurchase agreements acquired with remaining maturities of 60 days or less are valued at their amortized cost as described below, unless the issuer's creditworthiness is impaired or other factors indicate that amortized cost is not an accurate estimate of the investment's fair value, in which case it would be valued in the same manner as a longer-term security or repurchase agreement.
- Futures contracts listed on exchanges are valued at their reported settlement price. Option contracts listed on exchanges are valued based upon the mean of closing bid and asked quotations reported by the exchange or from one or more futures commission merchants.

- OTC derivative contracts are fair valued using price evaluations provided by various pricing services approved by the Board. The methods used by pricing services to determine such price evaluations are described below. If a price evaluation is not readily available, such derivative contracts are fair valued based upon price evaluations from one or more dealers or using a recognized pricing model for the contract.
- Shares of other mutual funds are valued based upon their reported NAVs. The prospectuses for these mutual funds explain the circumstances under which they will use fair value pricing and the effects of using fair value pricing.

If any price, quotation, price evaluation or other pricing source is not readily available when the NAV is calculated, or if the Fund cannot obtain price evaluations from a pricing service or from more than one dealer for an investment within a reasonable time (for example, within five business days after a new security is delivered to the Fund), the Fund will use the fair value of the investment determined in accordance with the procedures described below. There can be no assurance that the Fund could purchase or sell an investment at the price used to calculate the Fund's NAV. The Fund will not use a pricing service or dealer who is an affiliated person of the Adviser to value investments.

Noninvestment assets and liabilities are valued in accordance with Generally Accepted Accounting Principles (GAAP). The NAV calculation includes expenses, dividend income, interest income and other income through the date of the calculation. Changes in holdings of investments and in the number of outstanding Shares are included in the calculation not later than the first business day following such change. Any assets or liabilities denominated in foreign currencies are converted into U.S. dollars using an exchange rate obtained from one or more currency dealers.

The Fund follows procedures that are common in the mutual fund industry regarding errors made in the calculation of its NAV. This means that, generally, the Fund will not correct errors of less than one cent per Share or errors that did not result in net dilution to the Fund.

Amortized Cost Values

Under the amortized cost valuation method, an investment is valued initially at its cost as determined in accordance with GAAP. The Fund then adjusts the amount of interest income accrued each day over the term of the investment to account for any difference between the initial cost of the investment and the amount payable at its maturity. If the amount payable at maturity exceeds the initial cost (a "discount"), then the daily accrual is increased; if the initial cost exceeds the amount payable at maturity (a "premium"), then the daily accrual is decreased. The Fund adds the amount of the increase to (in the case of a discount), or subtracts the amount of the decrease from (in the case of a premium), the investment's cost each day. The Fund uses this adjusted cost to value the investment.

Fair Valuation and Significant Events Procedures

The Board has ultimate responsibility for determining the fair value of investments for which market quotations are not readily available. The Board has appointed a Valuation Committee comprised of officers of the Fund, the Adviser and the Adviser's affiliated companies to assist in this responsibility and in overseeing the calculation of the NAV. The Board has also authorized the use of pricing services recommended by the Valuation Committee to provide price evaluations of the current fair value of certain investments for purposes of calculating the NAV.

Pricing Service Valuations. Based on the recommendations of the Valuation Committee, the Board has authorized the Fund to use pricing services that provide daily fair value evaluations of the current value of certain investments, primarily fixed-income securities and OTC derivatives contracts. Different pricing services may provide different price evaluations for the same security because of differences in their methods of evaluating market values. Factors considered by pricing services in evaluating an investment include the yields or prices of investments of comparable quality, coupon, maturity, call rights and other potential prepayments, terms and type, reported transactions, indications as to values from dealers and general market conditions. A pricing service may find it more difficult to apply these and other factors to relatively illiquid or volatile investments, which may result in less frequent or more significant changes in the price evaluations of these investments. If a pricing service determines that it does not have sufficient information to use its standard methodology, it may evaluate an investment based on the present value of what investors can reasonably expect to receive from the issuer's operations or liquidation.

Some pricing services provide a single price evaluation reflecting the bid-side of the market for an investment (a "bid" evaluation). Other pricing services offer both bid evaluations and price evaluations indicative of a price between the prices bid and asked for the investment (a "mid" evaluation). The Fund normally uses bid evaluations for U.S. Treasury and Agency securities, mortgage-backed securities and municipal securities. The Fund normally uses mid evaluations for other types of fixed-income securities and OTC derivative contracts.

Fair Valuation Procedures. The Board has established procedures for determining the fair value of investments for which price evaluations from pricing services or dealers and market quotations are not readily available. The procedures define an investment's "fair value" as the price that the Fund might reasonably expect to receive upon its current sale. The procedures assume that any sale would be made to a willing buyer in the ordinary course of trading. The procedures require consideration of factors that vary based

on the type of investment and the information available. Factors that may be considered in determining an investment's fair value include: (1) the last reported price at which the investment was traded; (2) information provided by dealers or investment analysts regarding the investment or the issuer; (3) changes in financial conditions and business prospects disclosed in the issuer's financial statements and other reports; (4) publicly announced transactions (such as tender offers and mergers) involving the issuer; (5) comparisons to other investments or to financial indices that are correlated to the investment; (6) with respect to fixed-income investments, changes in market yields and spreads; (7) with respect to investments that have been suspended from trading, the circumstances leading to the suspension; and (8) other factors that might affect the investment's value.

The Valuation Committee is responsible for the day-to-day implementation of these procedures. The Valuation Committee may also authorize the use of a financial valuation model to determine the fair value of a specific type of investment. The Board periodically reviews and approves the fair valuations made by the Valuation Committee and any changes made to the procedures.

Using fair value to price investments may result in a value that is different from an investment's most recent closing price and from the prices used by other mutual funds to calculate their NAVs. The fair value of an investment will generally remain unchanged in the absence of new information relating to the investment or its issuer, such as changes in the issuer's business or financial results, or relating to external market factors, such as trends in the market values of comparable securities. This may result in less frequent, and larger, changes in fair value prices as compared to prices based on market quotations or price evaluations from pricing services or dealers.

Significant Events. The Board has adopted procedures requiring an investment to be priced at its fair value whenever the Adviser determines that a significant event affecting the value of the investment has occurred between the time as of which the price of the investment would otherwise be determined and the time as of which the NAV is computed. An event is considered significant if there is both an affirmative expectation that the investment's value will change in response to the event and a reasonable basis for quantifying the resulting change in value. Examples of significant events that may occur after the close of the principal market on which a security is traded, or the time of a price evaluation provided by a pricing service or a dealer, include:

- With respect to securities traded principally in foreign markets, significant trends in U.S. equity markets or in the trading of foreign securities index futures contracts;
- With respect to price evaluations of fixed-income securities determined before the close of regular trading on the NYSE, actions by the Federal Reserve Open Market Committee and other significant trends in U.S. fixed-income markets;
- Political or other developments affecting the economy or markets in which an issuer conducts its operations or its securities are traded; and
- Announcements concerning matters such as acquisitions, recapitalizations or litigation developments, or a natural disaster affecting the issuer's operations or regulatory changes or market developments affecting the issuer's industry.

The Valuation Committee uses a pricing service to determine the fair value of equity securities traded principally in foreign markets when the Adviser determines that there has been a significant trend in the U.S. equity markets or in index futures trading. The pricing service uses models that correlate changes between the closing and opening price of equity securities traded primarily in non-U.S. markets to changes in prices in U.S.-traded securities and derivative contracts. The pricing service seeks to employ the model that provides the most significant correlation based on a periodic review of the results. The model uses the correlation to adjust the reported closing price of a foreign equity security based on information available up to the close of the NYSE.

For other significant events, the Fund may seek to obtain more current quotations or price evaluations from alternative pricing sources. If a reliable alternative pricing source is not available, the fair value of the investment is determined using the methods discussed above in "*Fair Valuation Procedures*." The Fund currently does not rely on price evaluations determined before the close of regular trading on the NYSE for any fixed-income securities. The Board has ultimate responsibility for any fair valuations made in response to a significant event.

Mixed Funding and Shared Funding

The practice of using shares as investments for both variable annuity contracts and variable life insurance policies is called "mixed funding." The practice of using shares as investments by separate accounts of unaffiliated life insurance companies is called "shared funding."

The Fund does engage in mixed funding and shared funding. Although the Fund does not currently foresee any disadvantage to contract owners due to differences in redemption rates, tax treatment or other considerations resulting from mixed funding or shared funding, the Trustees will closely monitor the operation of mixed funding and shared funding and will consider appropriate action to avoid material conflicts and take appropriate action in response to any material conflicts which occur. Such action could result in one or more participating insurance companies withdrawing their investment in the Fund.

How is the Fund Sold?

Under the Distributor's Contract with the Fund, the Distributor (Federated Securities Corp.) offers Shares on a continuous, best-efforts basis.

RULE 12B-1 PLAN (PRIMARY SHARES AND SERVICE SHARES)

As a compensation-type plan, the Rule 12b-1 Plan is designed to pay the Distributor for activities principally intended to result in the sale of Shares such as advertising and marketing of Shares (including printing and distributing prospectuses and sales literature to prospective shareholders and financial intermediaries) and providing incentives to financial intermediaries to sell Shares. The Plan is also designed to cover the cost of administrative services performed in conjunction with the sale of Shares, including, but not limited to, shareholder services, recordkeeping services and educational services, as well as the costs of implementing and operating the Plan. The Rule 12b-1 Plan allows the Distributor to contract with financial intermediaries to perform activities covered by the Plan. The Rule 12b-1 Plan is expected to benefit the Fund in a number of ways. For example, it is anticipated that the Plan will help the Fund attract and retain assets, thus providing cash for orderly portfolio management and Share redemptions and possibly helping to stabilize or reduce other operating expenses.

Regarding the Fund's P class, the P class of the Fund currently does not accrue, pay or incur any Rule 12b-1 Plan fee, although the Board of Trustees has adopted a Plan that permits the P class of the Fund to accrue, pay and incur a Rule 12b-1 Plan fee of up to a maximum amount of 0.25% of average net assets, or some lesser amount as the Board of Trustees shall approve from time to time. The P class of the Fund will not incur or charge such Rule 12b-1 Plan fees until such time as approved by the Fund's Board of Trustees.

ADDITIONAL PAYMENTS TO FINANCIAL INTERMEDIARIES

The Distributor may pay out of its own resources amounts (including items of material value) to certain financial intermediaries. In some cases, such payments may be made by, or funded from the resources of, companies affiliated with the Distributor (including the Adviser). While Financial Industry Regulatory Authority (FINRA) regulations limit the sales charges that you may bear, there are no limits with regard to the amounts that the Distributor may pay out of its own resources. In addition to the payments which are generally described herein and in the Prospectus, the financial intermediary also may receive payments under the Rule 12b-1 Plan and/or Service Fees. In connection with these payments, the financial intermediary may elevate the prominence or profile of the Fund and/or other Federated funds within the financial intermediary's organization by, for example, placement on a list of preferred or recommended funds and/or granting the Distributor preferential or enhanced opportunities to promote the funds in various ways within the financial intermediary's organization. You can ask your financial intermediary for information about any payments it receives from the Distributor or the Federated funds and any services provided.

Regarding the Fund's P and S classes, the P and S classes of the Fund currently do not accrue, pay or incur any administrative service fees, although the Board of Trustees has approved the P and S classes of the Fund to accrue, pay and incur such fees in amounts up to a maximum amount of 0.25%, or some lesser amount as the Board of Trustees shall approve from time to time. The P and S classes of the Fund will not incur or charge such fees until such time as approved by the Fund's Board of Trustees.

The following examples illustrate the types of instances in which the Distributor may make additional payments to financial intermediaries.

Supplemental Payments

The Distributor may make supplemental payments to certain financial intermediaries that are holders or dealers of record for accounts in one or more of the Federated funds. These payments may be based on such factors as: the number or value of Shares the financial intermediary sells or may sell; the value of client assets invested; or the type and nature of services or support furnished by the financial intermediary.

Processing Support Payments

The Distributor may make payments to financial intermediaries that sell Federated fund shares to help offset their costs associated with client account maintenance support, statement processing and transaction processing. The types of payments that the Distributor may make under this category include: payment of ticket charges on a per-transaction basis; payment of networking fees; and payment for ancillary services such as setting up funds on the financial intermediary's mutual fund trading system.

Other Benefits to Financial Intermediaries

From time to time, the Distributor, at its expense, may provide additional compensation to financial intermediaries that sell or arrange for the sale of Shares. Such compensation may include financial assistance to financial intermediaries that enable the Distributor to participate in or present at conferences or seminars, sales or training programs for invited employees, client and investor events and other financial intermediary-sponsored events.

The Distributor also may hold or sponsor, at its expense, sales events, conferences and programs for employees or associated persons of financial intermediaries and may pay the travel and lodging expenses of attendees. The Distributor also may provide, at its expense, meals and entertainment in conjunction with meetings with financial intermediaries. Other compensation may be offered to the extent not prohibited by applicable laws, regulations or the rules of any self-regulatory agency, such as FINRA.

Purchases In-Kind

You may contact the Distributor to request a purchase of Shares using securities you own. The Fund reserves the right to determine whether to accept your securities and the minimum market value to accept. The Fund will value your securities in the same manner as it values its assets. An in-kind purchase may be treated as a sale of your securities for federal tax purposes; please consult your tax adviser regarding potential tax liability.

Subaccounting Services

Certain participating insurance companies may wish to use the transfer agent's subaccounting system to minimize their internal recordkeeping requirements. The transfer agent may charge a fee based on the level of subaccounting services rendered. Participating insurance companies holding Shares in a fiduciary, agency, custodial or similar capacity may charge or pass through subaccounting fees as part of or in addition to normal trust or agency account fees. They may also charge fees for other services that may be related to the ownership of Shares. This information should, therefore, be read together with any agreement between the customer and the participating insurance company about the services provided, the fees charged for those services and any restrictions and limitations imposed.

Redemption In-Kind

Although the Fund generally intends to pay Share redemptions in cash, it reserves the right, on its own initiative or in response to a shareholder request, to pay the redemption price in whole or in part by a distribution of the Fund's portfolio securities.

Because the Fund has elected to be governed by Rule 18f-1 under the 1940 Act, the Fund is obligated to pay Share redemptions to any one shareholder in cash only up to the lesser of \$250,000 or 1% of the net assets represented by such Share class during any 90-day period.

Any Share redemption payment greater than this amount will also be in cash unless the Fund elects to pay all or a portion of the remainder of the redemption in portfolio securities, valued in the same way as the Fund determines its NAV.

Redemption in-kind is not as liquid as a cash redemption. Shareholders receiving the portfolio securities could have difficulty selling them, may incur related transaction costs and would be subject to risks of fluctuations in the securities' values prior to sale.

Massachusetts Partnership Law

Under certain circumstances, shareholders may be held personally liable as partners under Massachusetts law for obligations of the Trust. To protect its shareholders, the Trust has filed legal documents with Massachusetts that expressly disclaim the liability of its shareholders for acts or obligations of the Trust.

In the unlikely event a shareholder is held personally liable for the Trust's obligations, the Trust is required by the Declaration of Trust to use its property to protect or compensate the shareholder. On request, the Trust will defend any claim made and pay any judgment against a shareholder for any act or obligation of the Trust. Therefore, financial loss resulting from liability as a shareholder will occur only if the Trust itself cannot meet its obligations to indemnify shareholders and pay judgments against them.

Account and Share Information

VOTING RIGHTS

The insurance company separate accounts, as shareholders of the Fund, will vote the Fund Shares held in their separate accounts at meetings of the shareholders. Voting will be in accordance with instructions received from contract owners of the separate accounts, as more fully outlined in the prospectus of the separate account.

Each Share of the Fund gives the shareholder one vote in Trustee elections and other matters submitted to shareholders for vote.

All Shares of the Trust have equal voting rights, except that in matters affecting only a particular Fund or class, only shares of that Fund or class are entitled to vote.

Trustees may be removed by the Board or by shareholders at a special meeting. A special meeting of shareholders will be called by the Board upon the written request of shareholders who own at least 10% of the Trust's outstanding Shares of all series entitled to vote.

As of April 3, 2014, the following shareholders owned of record, beneficially, or both, 5% or more of outstanding Primary Shares: GE Life & Annuity, Richmond, VA, owned approximately 1,677,303 Shares (5.66%); Union Security Insurance Company, Hartford, CT, owned approximately 1,709,979 Shares (5.77%); ING Life Insurance and Annuity Co., Windsor, CT, owned approximately 1,757,995 Shares (5.93%); Farm Bureau Life Insurance Company, West Des Moines, IA, owned approximately 19,028,209 Shares (64.25%).

As of April 3, 2014, the following shareholders owned of record, beneficially, or both, 5% or more of outstanding Service Shares: Transamerica Life Insurance Co., Cedar Rapids, IA, owned approximately 252,380 Shares (5.13%); Ohio National Life Insurance Co., Cincinnati, OH, owned approximately 4,114,510 Shares (83.69%).

Shareholders owning 25% or more of outstanding Shares may be in control and be able to affect the outcome of certain matters presented for a vote of shareholders.

Farm Bureau Life Insurance Company is organized in the state of Iowa and is a subsidiary of FBL Financial Group; organized in the state of Iowa.

Ohio National Life Insurance Co is organized in the state of Ohio and is a subsidiary of Ohio National Financial Services Inc., organized in the state of Ohio

Tax Information

FEDERAL INCOME TAX

The Fund intends to meet requirements of Subchapter M of the Internal Revenue Code (“Code”) applicable to regulated investment companies. If these requirements are not met, it will not receive special tax treatment and will be subject to federal corporate income tax. Additionally, the Fund intends to comply with the diversification requirements of Section 817(h) of the Code.

The Fund will be treated as a single, separate entity for federal income tax purposes so that income earned and capital gains and losses realized by the Trust’s other portfolios will be separate from those realized by the Fund.

The Fund is entitled to a loss carryforward, which may reduce the taxable income or gain that the Fund would realize, and to which the shareholder would be subject, in the future.

TAX BASIS INFORMATION

Under the Energy Improvement and Extension Act of 2008, the Fund’s Transfer Agent will be required to provide you with the cost basis information on the sale of any of your Shares in the Fund, subject to certain exceptions. This cost basis reporting requirement is effective for shares purchased in the Fund on or after January 1, 2012.

FOREIGN INVESTMENTS

If the Fund purchases foreign securities, their investment income may be subject to foreign withholding or other taxes that could reduce the return on these securities. Tax treaties between the United States and foreign countries, however, may reduce or eliminate the amount of foreign taxes to which the Fund would be subject. The effective rate of foreign tax cannot be predicted since the amount of Fund assets to be invested within various countries is uncertain. However, the Fund intends to operate so as to qualify for treaty-reduced tax rates when applicable.

Distributions from a Fund may be based on estimates of book income for the year. Book income generally consists solely of the income generated by the securities in the portfolio, whereas tax-basis income includes, in addition, gains or losses attributable to currency fluctuation. Due to differences in the book and tax treatment of fixed-income securities denominated in foreign currencies, it is difficult to project currency effects on an interim basis. Therefore, to the extent that currency fluctuations cannot be anticipated, a portion of distributions to shareholders could later be designated as a return of capital, rather than income, for income tax purposes, which may be of particular concern to simple trusts.

If the Fund invests in the stock of certain foreign corporations, they may constitute Passive Foreign Investment Companies (PFIC), and the Fund may be subject to federal income taxes upon disposition of PFIC investments.

If more than 50% of the value of the Fund’s assets at the end of the tax year is represented by stock or securities of foreign corporations, the Fund will qualify for certain Code provisions that allow its shareholders to claim a foreign tax credit or deduction on their U.S. income tax returns. The Code may limit a shareholder’s ability to claim a foreign tax credit. Shareholders who elect to deduct their portion of the Fund’s foreign taxes rather than take the foreign tax credit must itemize deductions on their income tax returns.

Who Manages and Provides Services to the Fund?

BOARD OF TRUSTEES

The Board of Trustees is responsible for managing the Trust's business affairs and for exercising all the Trust's powers except those reserved for the shareholders. The following tables give information about each Trustee and the senior officers of the Fund. Where required, the tables separately list Trustees who are "interested persons" of the Fund (i.e., "Interested" Trustees) and those who are not (i.e., "Independent" Trustees). Unless otherwise noted, the address of each person listed is Federated Investors Tower, 1001 Liberty Avenue, Pittsburgh, PA 15222. The address of all Independent Trustees listed is 4000 Ericsson Drive, Warrendale, PA 15086-7561; Attention: Mutual Fund Board. As of December 31, 2013, the Trust comprised 7 portfolios, and the Federated Fund Complex consisted of 42 investment companies (comprising 135 portfolios). Unless otherwise noted, each Officer is elected annually. Unless otherwise noted, each Trustee oversees all portfolios in the Federated Fund Complex and serves for an indefinite term.

As of April 3, 2014, the Fund's Board and Officers as a group owned less than 1% of the Fund's outstanding Shares.

QUALIFICATIONS OF INDEPENDENT TRUSTEES

Individual Trustee qualifications are noted in the "Independent Trustees Background and Compensation" chart. In addition, the following characteristics are among those that were considered for each existing Trustee and will be considered for any Nominee Trustee.

- Outstanding skills in disciplines deemed by the Independent Trustees to be particularly relevant to the role of Independent Trustee and to the Federated funds, including legal, accounting, business management, the financial industry generally and the investment industry particularly.
- Desire and availability to serve for a substantial period of time, taking into account the Board's current mandatory retirement age of 73 years.
- No conflicts which would interfere with qualifying as independent.
- Appropriate interpersonal skills to work effectively with other Independent Trustees.
- Understanding and appreciation of the important role occupied by Independent Trustees in the regulatory structure governing regulated investment companies.
- Diversity of background.

However, the Executive Committee cannot elect or remove Board members, increase or decrease the number of Trustees, elect or remove any Officer, declare dividends, issue shares or recommend to shareholders any action requiring shareholder approval.	One
Audit	Maureen Lally-Green Charles F. Mansfield, Jr. Thomas M. O'Neill John S. Walsh	The purposes of the Audit Committee are to oversee the accounting and financial reporting process of the Fund, the Fund's internal control over financial reporting and the quality, integrity and independent audit of the Fund's financial statements. The Committee also oversees or assists the Board with the oversight of compliance with legal requirements relating to those matters, approves the engagement and reviews the qualifications, independence and performance of the Fund's independent registered public accounting firm, acts as a liaison between the independent registered public accounting firm and the Board and reviews the Fund's internal audit function.	Seven
Nominating	John T. Collins Maureen Lally-Green Peter E. Madden Charles F. Mansfield, Jr. Thomas M. O'Neill P. Jerome Richey John S. Walsh	The Nominating Committee, whose members consist of all Independent Trustees, selects and nominates persons for election to the Fund's Board when vacancies occur. The Committee will consider candidates recommended by shareholders, Independent Trustees, officers or employees of any of the Fund's agents or service providers and counsel to the Fund. Any shareholder who desires to have an individual considered for nomination by the Committee must submit a recommendation in writing to the Secretary of the Fund, at the Fund's address appearing on the back cover of this SAI. The recommendation should include the name and address of both the shareholder and the candidate and detailed information concerning the candidate's qualifications and experience. In identifying and evaluating candidates for consideration, the Committee shall consider such factors as it deems appropriate. Those factors will ordinarily include: integrity, intelligence, collegiality, judgment, diversity, skill, business and other experience, qualification as an "Independent Trustee," the existence of material relationships which may create the appearance of a lack of independence, financial or accounting knowledge and experience and dedication and willingness to devote the time and attention necessary to fulfill Board responsibilities.	Two

BOARD'S ROLE IN RISK OVERSIGHT

The Board's role in overseeing the Fund's general risks includes receiving performance reports for the Fund and risk management reports from Federated's Chief Risk Officer at each regular Board meeting. The Chief Risk Officer is responsible for enterprise risk management at Federated, which includes risk management committees for investment management and for investor services. The Board also receives regular reports from the Fund's Chief Compliance Officer regarding significant compliance risks.

On behalf of the Board, the Audit Committee plays a key role overseeing the Fund's financial reporting and valuation risks. The Audit Committee meets regularly with the Fund's Principal Financial Officer and outside auditors, as well as with Federated's Chief Audit Executive to discuss financial reporting and audit issues, including risks relating to financial controls.

BOARD OWNERSHIP OF SHARES IN THE FUND AND IN THE FEDERATED FAMILY OF INVESTMENT COMPANIES AS OF DECEMBER 31, 2013

INVESTMENT ADVISER

The Adviser conducts investment research and makes investment decisions for the Fund.

The Adviser is a wholly owned subsidiary of Federated.

The Adviser shall not be liable to the Trust or any Fund shareholder for any losses that may be sustained in the purchase, holding or sale of any security or for anything done or omitted by it, except acts or omissions involving willful misfeasance, bad faith, gross negligence or reckless disregard of the duties imposed upon it by its contract with the Trust.

Portfolio Manager Information

As a general matter, certain conflicts of interest may arise in connection with a portfolio manager's management of a fund's investments, on the one hand, and the investments of other accounts for which the portfolio manager is responsible, on the other. For example, it is possible that the various accounts managed could have different investment strategies that, at times, might conflict with one another to the possible detriment of the Fund. Alternatively, to the extent that the same investment opportunities might be desirable for more than one account, possible conflicts could arise in determining how to allocate them. Other potential conflicts might include conflicts created by specific portfolio manager compensation arrangements, and conflicts relating to selection of brokers or dealers to execute Fund portfolio trades and/or specific uses of commissions from Fund portfolio trades (for example, research or "soft dollars"). The Adviser has adopted policies and procedures and has structured the portfolio managers' compensation in a manner reasonably designed to safeguard the Fund from being negatively affected as a result of any such potential conflicts.

The following information about the Fund's Portfolio Manager is provided as of the end of the Fund's most recently completed fiscal year unless otherwise indicated.

Philip Orlando, Portfolio Manager

Types of Accounts Managed by Philip Orlando	Total Number of Additional Accounts Managed/Total Assets*
Registered Investment Companies	2/\$418.4 million
Other Pooled Investment Vehicles	0/\$0
Other Accounts	0/\$0

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

Philip Orlando is paid a fixed-base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager’s experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. (“Federated”). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

IPP is based on meeting investment guidelines and assessed by the Chief Investment Officer in charge of the portfolio manager’s group. Performance periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one-year of performance history under a portfolio manager may be excluded. For purposes of calculating IPP, each account managed and or overseen is categorized into a designated “Strategy.” Within each Strategy and performance measurement period, IPP is calculated with an equal weighting of each included account. In his role as Chief Market Strategist, Mr. Orlando provides support to most of Federated’s equity accounts, including the accounts for which he serves as portfolio manager. A portion of the IPP score is determined by the investment product performance of this group of accounts, measured as described above, vs. product specific benchmarks and peer groups. A portion of the bonus tied to the IPP score may be adjusted based on management’s assessment of overall contributions to fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager’s bonus, in part, to Federated’s overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

In addition, Mr. Orlando was awarded a grant of restricted Federated stock. Awards of restricted stock are discretionary and are made in variable amounts based on the subjective judgment of Federated’s senior management.

James P. Gordon, Jr., Portfolio Manager

Types of Accounts Managed by James P. Gordon, Jr.	Total Number of Additional Accounts Managed/Total Assets*
Registered Investment Companies	1/\$1.0 million
Other Pooled Investment Vehicles	0/\$0
Other Accounts	0/\$0

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

James P. Gordon, Jr. is paid a fixed base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager’s experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. (“Federated”). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

In addition, Mr. Wu was awarded a grant of restricted Federated stock. Awards of restricted stock are discretionary and are made in variable amounts based on the subjective judgment of Federated's senior management.

Services Agreement

Federated Advisory Services Company, an affiliate of the Adviser, provides research, quantitative analysis, equity trading and transaction settlement and certain support services to the Adviser. The fee for these services is paid by the Adviser and not by the Fund.

Other Related Services

Affiliates of the Adviser may, from time to time, provide certain electronic equipment and software to institutional customers in order to facilitate the purchase of Fund Shares offered by the Distributor.

CODE OF ETHICS RESTRICTIONS ON PERSONAL TRADING

As required by SEC rules, the Fund, its Adviser and its Distributor have adopted codes of ethics. These codes govern securities trading activities of investment personnel, Fund Trustees and certain other employees. Although they do permit these people to trade in securities, including those that the Fund could buy, as well as Shares of the Fund, they also contain significant safeguards designed to protect the Fund and its shareholders from abuses in this area, such as requirements to obtain prior approval for, and to report, particular transactions.

VOTING PROXIES ON FUND PORTFOLIO SECURITIES

The Board has delegated to the Adviser authority to vote proxies on the securities held in the Fund's portfolio. The Board has also approved the Adviser's policies and procedures for voting the proxies, which are described below.

Proxy Voting Policies

The Adviser's general policy is to cast proxy votes in favor of proposals that the Adviser anticipates will enhance the long-term value of the securities being voted. Generally, this will mean voting for proposals that the Adviser believes will: improve the management of a company; increase the rights or preferences of the voted securities; and/or increase the chance that a premium offer would be made for the company or for the voted securities.

The following examples illustrate how these general policies may apply to proposals submitted by a company's board of directors. However, whether the Adviser supports or opposes a proposal will always depend on the specific circumstances described in the proxy statement and other available information.

On matters of corporate governance, generally the Adviser will vote *for* the full slate of directors nominated in an uncontested election; and *for* proposals to: require a company's audit committee to be comprised entirely of independent directors; require independent tabulation of proxies and/or confidential voting by shareholders; reorganize in another jurisdiction (unless it would reduce the rights or preferences of the securities being voted); ratify the board's selection of auditors (unless compensation for non-audit services exceeded 50% of the total compensation received from the company, or the previous auditor was dismissed because of a disagreement with the company); and repeal a shareholder rights plan (also known as a "poison pill"). The Adviser will generally vote *against* the adoption of such a plan (unless the plan is designed to facilitate, rather than prevent, unsolicited offers for the company).

On matters of capital structure, generally the Adviser will vote: *against* proposals to authorize or issue shares that are senior in priority or voting rights to the securities being voted; and *for* proposals to: reduce the amount of shares authorized for issuance; authorize a stock repurchase program; and grant preemptive rights to the securities being voted. The Adviser will generally vote *against* proposals to eliminate such preemptive rights.

On matters relating to management compensation, generally the Adviser will vote: *for* stock incentive plans that align the recipients' interests with the interests of shareholders without creating undue dilution; *against* proposals that would permit the amendment or replacement of outstanding stock incentives with new stock incentives having more favorable terms; and *against* executive compensation plans that do not disclose the maximum amounts of compensation that may be awarded or the criteria for determining awards.

On matters relating to corporate transactions, the Adviser will vote proxies relating to proposed mergers, capital reorganizations and similar transactions in accordance with the general policy, based upon its analysis of the proposed transaction. The Adviser will vote proxies in contested elections of directors in accordance with the general policy, based upon its analysis of the opposing slates and their respective proposed business strategies. Some transactions may also involve proposed changes to the company's corporate governance, capital structure or management compensation. The Adviser will vote on such changes based on its evaluation of the proposed transaction or contested election. In these circumstances, the Adviser may vote in a manner contrary to the general practice for similar proposals made outside the context of such a proposed transaction or change in the board. For example, if the Adviser decides to vote against a proposed transaction, it may vote for anti-takeover measures reasonably designed to prevent the transaction, even though the Adviser typically votes against such measures in other contexts.

The Adviser generally votes *against* proposals submitted by shareholders without the favorable recommendation of a company's board. The Adviser believes that a company's board should manage its business and policies, and that shareholders who seek specific changes should strive to convince the board of their merits or seek direct representation on the board.

In addition, the Adviser will not vote if it determines that the consequences or costs outweigh the potential benefit of voting. For example, if a foreign market requires shareholders casting proxies to retain the voted shares until the meeting date (thereby rendering the shares "illiquid" for some period of time), the Adviser will not vote proxies for such shares.

Proxy Voting Procedures

The Adviser has established a Proxy Voting Committee ("Proxy Committee"), to exercise all voting discretion granted to the Adviser by the Board in accordance with the proxy voting policies. The Adviser has hired Glass Lewis & Co. (GL) to obtain, vote and record proxies in accordance with the Proxy Committee's directions. The Proxy Committee has supplied GL with general voting instructions that represent decisions made by the Proxy Committee in order to vote common proxy proposals; however, the Proxy Committee retains the right to modify these voting instructions at any time or to vote contrary to the voting instructions at any time in order to cast proxy votes in a manner that the Proxy Committee believes is consistent with the Adviser's general policy. GL may vote any proxy as directed in the voting instructions without further direction from the Proxy Committee and may make any determinations required to implement the voting instructions. However, if the voting instructions require case-by-case direction for a proposal, GL shall provide the Proxy Committee with all information that it has obtained regarding the proposal and the Proxy Committee will provide specific direction to GL.

Conflicts of Interest

The Adviser has adopted procedures to address situations where a matter on which a proxy is sought may present a potential conflict between the interests of the Fund (and its shareholders) and those of the Adviser or Distributor. This may occur where a significant business relationship exists between the Adviser (or its affiliates) and a company involved with a proxy vote. A company that is a proponent, opponent or the subject of a proxy vote and which to the knowledge of the Proxy Committee has this type of significant business relationship, is referred to as an "Interested Company."

The Adviser has implemented the following procedures in order to avoid concerns that the conflicting interests of the Adviser have influenced proxy votes. Any employee of the Adviser who is contacted by an Interested Company regarding proxies to be voted by the Adviser must refer the Interested Company to a member of the Proxy Committee, and must inform the Interested Company that the Proxy Committee has exclusive authority to determine how the Adviser will vote. Any Proxy Committee

member contacted by an Interested Company must report it to the full Proxy Committee and provide a written summary of the communication. Under no circumstances will the Proxy Committee or any member of the Proxy Committee make a commitment to an Interested Company regarding the voting of proxies or disclose to an Interested Company how the Proxy Committee has directed such proxies to be voted. If the voting instructions already provide specific direction on the proposal in question, the Proxy Committee shall not alter or amend such directions. If the voting instructions require the Proxy Committee to provide further direction, the Proxy Committee shall do so in accordance with the proxy voting policies, without regard for the interests of the Adviser with respect to the Interested Company. If the Proxy Committee provides any direction as to the voting of proxies relating to a proposal affecting an Interested Company, it must disclose to the Fund's Board information regarding: the significant business relationship; any material communication with the Interested Company; the matter(s) voted on; and how, and why, the Adviser voted as it did. Alternatively, the Proxy Committee may seek direction from the Fund's Board on how a proposal concerning an Interested Company shall be voted, and shall follow any such direction provided by the Board. In seeking such direction, the Proxy Committee will disclose the reason such company is considered an Interested Company and may provide a recommendation on how such proposal should be voted and the basis for such recommendation.

If the Fund holds shares of another investment company for which the Adviser (or an affiliate) acts as an investment adviser, the Proxy Committee will vote the Fund's proxies in the same proportion as the votes cast by shareholders who are not clients of the Adviser at any shareholders' meeting called by such investment company, unless otherwise directed by the Board.

Proxy Voting Report

A report on "Form N-PX" of how the Fund voted any proxies during the most recent 12-month period ended June 30 is available via the Proxy Voting Record (Form N-PX) link associated with the Fund and share class name at www.Federatedinvestors.com/FundInformation. Form N-PX filings are also available at the SEC's website at www.sec.gov.

PORTFOLIO HOLDINGS INFORMATION

Information concerning the Fund's portfolio holdings is available via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. A complete listing of the Fund's portfolio holdings as of the end of each calendar quarter is posted on the website 30 days (or the next business day) after the end of the quarter and remains posted for six months thereafter. Summary portfolio composition information as of the close of each month is posted on the website 15 days (or the next business day) after month-end and remains posted until replaced by the information for the succeeding month. The summary portfolio composition information may include: identification of the Fund's top 10 holdings, recent purchase and sale transactions and a percentage breakdown of the portfolio by asset class and sector.

You may also access portfolio information as of the end of the Fund's fiscal quarters via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. The Fund's Annual Shareholder Report and Semi-Annual Shareholder Report contain complete listings of the Fund's portfolio holdings as of the end of the Fund's second and fourth fiscal quarters. The Fund's Form N-Q filings contain complete listings of the Fund's portfolio holdings as of the end of the Fund's first and third fiscal quarters. Fiscal quarter information is made available on the website within 70 days after the end of the fiscal quarter. This information is also available in reports filed with the SEC at the SEC's website at www.sec.gov.

The disclosure policy of the Fund and the Adviser prohibits the disclosure of portfolio holdings information to any investor or intermediary before the same information is made available to other investors. Employees of the Adviser or its affiliates who have access to nonpublic information concerning the Fund's portfolio holdings are prohibited from trading securities on the basis of this information. Such persons must report all personal securities trades and obtain pre-clearance for all personal securities trades other than mutual fund shares.

Firms that provide administrative, custody, financial, accounting, legal or other services to the Fund may receive nonpublic information about Fund portfolio holdings for purposes relating to their services. The Fund may also provide portfolio holdings information to publications that rate, rank or otherwise categorize investment companies. Traders or portfolio managers may provide "interest" lists to facilitate portfolio trading if the list reflects only that subset of the portfolio for which the trader or portfolio manager is seeking market interest. A list of service providers, publications and other third parties who may receive nonpublic portfolio holdings information appears in the Appendix to this SAI.

The furnishing of nonpublic portfolio holdings information to any third party (other than authorized governmental or regulatory personnel) requires the prior approval of the President of the Adviser and of the Chief Compliance Officer of the Fund. The President of the Adviser and the Chief Compliance Officer will approve the furnishing of nonpublic portfolio holdings information to a third party only if they consider the furnishing of such information to be in the best interests of the Fund and its shareholders. In that regard, and to address possible conflicts between the interests of Fund shareholders and those of the Adviser and its affiliates, the following procedures apply. No consideration may be received by the Fund, the Adviser, any affiliate of the Adviser or any of their employees in connection with the disclosure of portfolio holdings information. Before information is furnished, the third party must sign a written agreement that it will safeguard the confidentiality of the information, will use it only

for the purposes for which it is furnished and will not use it in connection with the trading of any security. Persons approved to receive nonpublic portfolio holdings information will receive it as often as necessary for the purpose for which it is provided. Such information may be furnished as frequently as daily and often with no time lag between the date of the information and the date it is furnished. The Board receives and reviews annually a list of the persons who receive nonpublic portfolio holdings information and the purposes for which it is furnished.

BROKERAGE TRANSACTIONS AND INVESTMENT ALLOCATION

Equity securities may be traded in the over-the-counter market through broker/dealers acting as principal or agent, or in transactions directly with other investors. Transactions may also be executed on a securities exchange or through an electronic communications network. The Adviser seeks to obtain best execution of trades in equity securities by balancing the costs inherent in trading, including opportunity costs, market impact costs and commissions. As a general matter, the Adviser seeks to add value to its investment management by using market information to capitalize on market opportunities, actively seek liquidity and discover price. The Adviser continually monitors its trading results in an effort to improve execution. Fixed-income securities are generally traded in an over-the-counter market on a net basis (i.e., without commission) through dealers acting as principal or in transactions directly with the issuer. Dealers derive an undisclosed amount of compensation by offering securities at a higher price than they bid for them. Some fixed-income securities may have only one primary market maker. The Adviser seeks to use dealers it believes to be actively and effectively trading the security being purchased or sold, but may not always obtain the lowest purchase price or highest sale price with respect to a fixed-income security. The Adviser's receipt of research services (as described below) may also be a factor in the Adviser's selection of brokers and dealers. The Adviser may also direct certain portfolio trades to a broker that, in turn, pays a portion of the Fund's operating expenses. The Adviser makes decisions on portfolio transactions and selects brokers and dealers subject to review by the Fund's Board.

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. Except as noted below, when the Fund and one or more of those accounts invests in, or disposes of, the same security, available investments or opportunities for sales will be allocated among the Fund and the account(s) in a manner believed by the Adviser to be equitable. While the coordination and ability to participate in volume transactions may benefit the Fund, it is possible that this procedure could adversely impact the price paid or received and/or the position obtained or disposed of by the Fund. Investments for Federated Kaufmann Fund and other accounts managed by that fund's portfolio managers in initial public offerings (IPO) are made independently from any other accounts, and much of their non-IPO trading may also be conducted independently from other accounts. Trading and allocation of investments, including IPOs, for accounts managed by Federated MDTA LLC are also made independently from the Fund. Investment decisions and trading for certain separately managed or wrap-fee accounts, and other accounts, of the Adviser and/or certain investment adviser affiliates of the Adviser also are generally made and conducted independently from the Fund. It is possible that such independent trading activity could adversely impact the prices paid or received and/or positions obtained or disposed of by the Fund.

Brokerage and Research Services

Brokerage services include execution of trades and products and services that relate to the execution of trades, including communications services related to trade execution, clearing and settlement, trading software used to route orders to market centers, software that provides algorithmic trading strategies and software used to transmit orders to direct market access (DMA) systems. Research services may include: advice as to the advisability of investing in securities; security analysis and reports; economic studies; industry studies; receipt of quotations for portfolio evaluations; and similar services. Research services assist the Adviser and its affiliates in terms of their overall investment responsibilities to funds and investment accounts for which they have investment discretion. However, particular brokerage and research services received by the Adviser and its affiliates may not be used to service every fund or account, and may not benefit the particular funds and accounts that generated the brokerage commissions. In addition, brokerage and research services paid for with commissions generated by the Fund may be used in managing other funds and accounts. To the extent that receipt of these services may replace services for which the Adviser or its affiliates might otherwise have paid, it would tend to reduce their expenses. The Adviser and its affiliates exercise reasonable business judgment in selecting brokers to execute securities transactions where receipt of research services is a factor. They determine in good faith that commissions charged by such persons are reasonable in relationship to the value of the brokerage and research services provided.

ADMINISTRATOR

Federated Administrative Services (FAS), a subsidiary of Federated, provides administrative personnel and services, including certain legal, compliance, recordkeeping and financial reporting services (“Administrative Services”), necessary for the operation of the Fund. FAS provides Administrative Services for a fee based upon the rates set forth below paid on the average daily net assets of the Fund. For purposes of determining the appropriate rate breakpoint, “Investment Complex” is defined as all of the Federated Funds subject to a fee under the Administrative Services Agreement with FAS. FAS is also entitled to reimbursement for certain out-of-pocket expenses incurred in providing Administrative Services to the Fund.

Administrative Services Fee Rate	Average Daily Net Assets of the Investment Complex
0.150 of 1%	on the first \$5 billion
0.125 of 1%	on the next \$5 billion
0.100 of 1%	on the next \$10 billion
0.075 of 1%	on assets over \$20 billion

CUSTODIAN

State Street Bank and Trust Company, Boston, Massachusetts, is custodian for the securities and cash of the Fund. Foreign instruments purchased by the Fund are held by foreign banks participating in a network coordinated by State Street Bank and Trust Company.

TRANSFER AGENT AND DIVIDEND DISBURSING AGENT

State Street Bank and Trust Company, the Fund’s registered transfer agent, maintains all necessary shareholder records.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The independent registered public accounting firm for the Fund, KPMG LLP, conducts its audits in accordance with the standards of the Public Company Accounting Oversight Board (United States), which require it to plan and perform its audits to provide reasonable assurance about whether the Fund’s financial statements and financial highlights are free of material misstatement.

FEES PAID BY THE FUND FOR SERVICES

For the Year Ended December 31	2013	2012	2011
Advisory Fee Earned	\$1,403,891	\$1,543,403	\$1,061,233
Advisory Fee Waived	\$ 932,377	—	—
Brokerage Commissions	\$ 120,594	\$ 407,102	\$ 514,483
Net Administrative Fee	\$ 137,222	\$ 149,617	\$ 156,249
Net 12b-1 Fee:			
Service Shares	\$ 11,678	\$ 11,804	\$ 15,274

Fees are allocated among classes based on their pro rata share of Fund assets, except for marketing (“Rule 12b-1”) fees and shareholder services fees, which are borne only by the applicable class of Shares.

Financial Information

The Financial Statements for the Fund for the fiscal year ended December 31, 2013, are incorporated herein by reference to the Annual Report to Shareholders of Federated Managed Tail Risk Fund II dated December 31, 2013.

Investment Ratings

STANDARD & POOR’S RATING SERVICES (S&P) LONG-TERM ISSUE RATINGS

Issue credit ratings are based, in varying degrees, on S&P’s analysis of the following considerations: the likelihood of payment—capacity and willingness of the obligor to meet its financial commitment on an obligation in accordance with the terms of the obligation; the nature of and provisions of the obligation; and the protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors’ rights.

AAA—An obligation rated “AAA” has the highest rating assigned by S&P. The obligor’s capacity to meet its financial commitment on the obligation is extremely strong.

AA—An obligation rated “AA” differs from the highest rated obligations only to a small degree. The obligor’s capacity to meet its financial commitment on the obligation is very strong.

A—An obligation rated “A” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor’s capacity to meet its financial commitment on the obligation is still strong.

BBB—An obligation rated “BBB” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated “BB,” “B,” “CCC,” “CC” and “C” are regarded as having significant speculative characteristics. “BB” indicates the least degree of speculation and “C” the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

BB—An obligation rated “BB” is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor’s inadequate capacity to meet its financial commitment on the obligation.

B—An obligation rated “B” is more vulnerable to nonpayment than obligations rated “BB,” but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial or economic conditions will likely impair the obligor’s capacity or willingness to meet its financial commitment on the obligation.

CCC—An obligation rated “CCC” is currently vulnerable to nonpayment, and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

CC—An obligation rated “CC” is currently highly vulnerable to nonpayment.

C—A “C” rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents, or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the “C” rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have been suspended in accordance with the instrument’s terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

D—An obligation rated “D” is in payment default. The “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within five business days, irrespective of any grace period. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation’s rating is lowered to “D” upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

The ratings from “AA” to “CCC” may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

S&P RATING OUTLOOK

An S&P rating outlook assesses the potential direction of a long-term credit rating over the intermediate term (typically six months to two years). In determining a rating outlook, consideration is given to any changes in the economic and/or fundamental business conditions.

Positive—Positive means that a rating may be raised.

Negative—Negative means that a rating may be lowered.

Stable—Stable means that a rating is not likely to change.

Developing—Developing means a rating may be raised or lowered.

N.M.—N.M. means not meaningful.

S&P SHORT-TERM ISSUE RATINGS

Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the United States, for example, that means obligations with an original maturity of no more than 365 days—including commercial paper.

A-1—A short-term obligation rated “A-1” is rated in the highest category by S&P. The obligor’s capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor’s capacity to meet its financial commitment on these obligations is extremely strong.

A-2—A short-term obligation rated “A-2” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor’s capacity to meet its financial commitment on the obligation is satisfactory.

A-3—A short-term obligation rated “A-3” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

B—A short-term obligation rated “B” is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor’s inadequate capacity to meet its financial commitments.

C—A short-term obligation rated “C” is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

D—A short-term obligation rated “D” is in payment default. The “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

MOODY’S INVESTOR SERVICES, INC. (MOODY’S) LONG-TERM RATINGS

Moody’s long-term ratings are assigned to issuers or obligations with an original maturity of one year or more and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default.

Aaa—Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa—Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A—Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa—Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba—Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B—Obligations rated B are considered speculative and are subject to high credit risk.

Caa—Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca—Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C—Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Moody’s appends numerical modifiers 1, 2 and 3 to each generic rating classification from Aaa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

MOODY’S SHORT-TERM RATINGS

Moody’s short-term ratings are assigned to obligations with an original maturity of 13 months or less and reflect the likelihood of a default on contractually promised payments.

P-1—Issuers (or supporting institutions) rated P-1 have a superior ability to repay short-term debt obligations.

P-2—Issuers (or supporting institutions) rated P-2 have a strong ability to repay short-term debt obligations.

P-3—Issuers (or supporting institutions) rated P-3 have an acceptable ability to repay short-term obligations.

NP—Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

FITCH, INC. (FITCH) LONG-TERM DEBT RATINGS

Fitch long-term ratings report Fitch’s opinion on an entity’s relative vulnerability to default on financial obligations. The “threshold” default risk addressed by the rating is generally that of the financial obligations whose non-payment would best reflect the uncured failure of that entity. As such, Fitch long-term ratings also address relative vulnerability to bankruptcy, administrative receivership or similar concepts, although the agency recognizes that issuers may also make pre-emptive and therefore voluntary use of such mechanisms.

AAA: Highest Credit Quality—“AAA” ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA: Very High Credit Quality—“AA” ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A: High Credit Quality—“A” ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB: Good Credit Quality—“BBB” ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity.

BB: Speculative—“BB” ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial flexibility exists which supports the servicing of financial commitments.

B: Highly Speculative—“B” ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

CCC: Substantial Credit Risk—Default is a real possibility.

CC: Very High Levels of Credit Risk—Default of some kind appears probable.

C: Exceptionally High Levels of Credit Risk—Default is imminent or inevitable, or the issuer is in standstill. Conditions that are indicative of a “C” category rating for an issuer include: (a) the issuer has entered into a grace or cure period following non-payment of a material financial obligation; (b) the issuer has entered into a temporary negotiated waiver or standstill agreement following a payment default on a material financial obligation; or (c) Fitch otherwise believes a condition of “RD” or “D” to be imminent or inevitable, including through the formal announcement of a distressed debt exchange.

RD: Restricted Default—“RD” ratings indicate an issuer that in Fitch’s opinion has experienced an uncured payment default on a bond, loan or other material financial obligation but which has not entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, and which has not otherwise ceased operating. This would include: (a) the selective payment default on a specific class or currency of debt; (b) the uncured expiry of any applicable grace period, cure period or default forbearance period following a payment default on a bank loan, capital markets security or other material financial obligation; (c) the extension of multiple waivers or forbearance periods upon a payment default on one or more material financial obligations, either in series or in parallel; or (d) execution of a distressed debt exchange on one or more material financial obligations.

D: Default—“D” ratings indicate an issuer that in Fitch’s opinion has entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, or which has otherwise ceased business.

Default ratings are not assigned prospectively to entities or their obligations; within this context, non-payment on an instrument that contains a deferral feature or grace period will generally not be considered a default until after the expiration of the deferral or grace period, unless a default is otherwise driven by bankruptcy or other similar circumstance, or by a distressed debt exchange.

“Imminent” default typically refers to the occasion where a payment default has been intimated by the issuer, and is all but inevitable. This may, for example, be where an issuer has missed a scheduled payment, but (as is typical) has a grace period during which it may cure the payment default. Another alternative would be where an issuer has formally announced a distressed debt exchange, but the date of the exchange still lies several days or weeks in the immediate future.

In all cases, the assignment of a default rating reflects the agency’s opinion as to the most appropriate rating category consistent with the rest of its universe of ratings, and may differ from the definition of default under the terms of an issuer’s financial obligations or local commercial practice.

FITCH SHORT-TERM DEBT RATINGS

A Fitch short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-Term Ratings are assigned to obligations whose initial maturity is viewed as “short-term” based on market convention. Typically, this means up to 13 months for corporate, sovereign, and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

F1: Highest Short-Term Credit Quality—Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

F2: Good Short-Term Credit Quality—Good intrinsic capacity for timely payment of financial commitments.

F3: Fair Short-Term Credit Quality—The intrinsic capacity for timely payment of financial commitments is adequate.

B: Speculative Short-Term Credit Quality—Minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near-term adverse changes in financial and economic conditions.

C: High Short-Term Default Risk—Default is a real possibility.

RD: Restricted Default—Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Applicable to entity ratings only.

D: Default—Indicates a broad-based default event for an entity, or the default of a short-term obligation.

A.M. BEST COMPANY, INC. (A.M. BEST) LONG-TERM DEBT AND PREFERRED STOCK RATINGS

A Best's long-term debt rating is Best's independent opinion of an issuer/entity's ability to meet its ongoing financial obligations to security holders when due.

aaa: Exceptional—Assigned to issues where the issuer has an exceptional ability to meet the terms of the obligation.

aa: Very Strong—Assigned to issues where the issuer has a very strong ability to meet the terms of the obligation.

a: Strong—Assigned to issues where the issuer has a strong ability to meet the terms of the obligation.

bbb: Adequate—Assigned to issues where the issuer has an adequate ability to meet the terms of the obligation; however, the issue is more susceptible to changes in economic or other conditions.

bb: Speculative—Assigned to issues where the issuer has speculative credit characteristics, generally due to a modest margin or principal and interest payment protection and vulnerability to economic changes.

b: Very Speculative—Assigned to issues where the issuer has very speculative credit characteristics, generally due to a modest margin of principal and interest payment protection and extreme vulnerability to economic changes.

ccc, cc, c: Extremely Speculative—Assigned to issues where the issuer has extremely speculative credit characteristics, generally due to a minimal margin of principal and interest payment protection and/or limited ability to withstand adverse changes in economic or other conditions.

d: In Default—Assigned to issues in default on payment of principal, interest or other terms and conditions, or when a bankruptcy petition or similar action has been filed.

Ratings from "aa" to "ccc" may be enhanced with a "+" (plus) or "-" (minus) to indicate whether credit quality is near the top or bottom of a category.

A.M. BEST SHORT-TERM DEBT RATINGS

A Best's short-term debt rating is Best's opinion of an issuer/entity's ability to meet its financial obligations having original maturities of generally less than one year, such as commercial paper.

AMB-1+ Strongest—Assigned to issues where the issuer has the strongest ability to repay short-term debt obligations.

AMB-1 Outstanding—Assigned to issues where the issuer has an outstanding ability to repay short-term debt obligations.

AMB-2 Satisfactory—Assigned to issues where the issuer has a satisfactory ability to repay short-term debt obligations.

AMB-3 Adequate—Assigned to issues where the issuer has an adequate ability to repay short-term debt obligations; however, adverse economic conditions likely will reduce the issuer's capacity to meet its financial commitments.

AMB-4 Speculative—Assigned to issues where the issuer has speculative credit characteristics and is vulnerable to adverse economic or other external changes, which could have a marked impact on the company's ability to meet its financial commitments.

d: In Default—Assigned to issues in default on payment of principal, interest or other terms and conditions, or when a bankruptcy petition or similar action has been filed.

A.M. BEST RATING MODIFIERS

Both long- and short-term credit ratings can be assigned a modifier.

u—Indicates the rating may change in the near term, typically within six months. Generally is event-driven, with positive, negative or developing implications.

pd—Indicates ratings assigned to a company that chose not to participate in A.M. Best's interactive rating process. (Discontinued in 2010).

i—Indicates rating assigned is indicative.

A.M. BEST RATING OUTLOOK

A.M. Best Credit Ratings are assigned a Rating Outlook that indicates the potential direction of a credit rating over an intermediate term, generally defined as the next 12 to 36 months.

Positive—Indicates possible ratings upgrade due to favorable financial/market trends relative to the current trading level.

Negative—Indicates possible ratings downgrade due to unfavorable financial/market trends relative to the current trading level.

Stable—Indicates low likelihood of rating change due to stable financial/market trends.

NOT RATED

Certain nationally recognized statistical rating organizations (NRSROs) may designate certain issues as NR, meaning that the issue or obligation is not rated.

How is the Fund Organized?

The Fund is a diversified portfolio of Federated Insurance Series (“Trust”). The Trust is an open-end, management investment company that was established under the laws of the Commonwealth of Massachusetts on September 15, 1993. The Trust may offer separate series of shares representing interests in separate portfolios of securities. The Fund’s investment adviser is Federated Investment Management Company (“Adviser”).

Description of the Fund and its Investments and Risks

INVESTMENT OBJECTIVE

The Fund’s investment objective is to provide current income. The investment objective may not be changed by the Board without shareholder approval. While there is no assurance that the Fund will achieve its investment objective, it endeavors to do so by following the strategies and policies described in this SAI.

INVESTMENT STRATEGIES

Under normal market conditions, the Fund invests primarily in mortgage-backed securities (MBS) of investment-grade quality and seeks to provide returns consistent with investments in the market for U.S. home mortgages. There can be no assurances that the Fund will achieve its investment objective or that the investment strategies used by the Adviser will be successful. The Fund will invest in MBS that are issued or guaranteed by U.S. government agencies or U.S. government-sponsored enterprises (GSEs). The Fund may invest in non-agency MBS, which are those not issued or guaranteed by GSEs. The Fund also may invest in U.S. government securities and certain derivative instruments. A security is considered investment-grade quality if it is either: (i) rated within the four highest ratings categories by at least one nationally recognized statistical rating organization (an NRSRO); or (ii) if unrated, considered by the Adviser to be of investment-grade quality.

The Fund typically seeks to maintain an overall average dollar-weighted portfolio duration that is within 20% above or below the Barclays Mortgage-Backed Securities Index (the “Index”) (formerly, Barclays Capital Mortgage-Backed Securities.) At times, the Adviser’s calculation of portfolio duration will result in variances outside this range. Duration is a measure of the price volatility of a debt instrument as a result of changes in market rates of interest, based on the weighted average timing of the instrument’s expected fixed interest and principal payments. Securities with longer durations tend to be more sensitive to interest rate changes than securities with shorter durations. The Adviser seeks to create a portfolio, consisting of MBS, derivative instruments and other securities, that outperforms the Index. In implementing the Fund’s investment strategy, the Adviser typically will take into consideration: (i) overall levels of interest rates; (ii) volatility of interest rates; (iii) relative interest rates of securities with longer and shorter durations (known as a “yield curve”); and (iv) relative interest rates of different types of securities (such as U.S. Treasury, agency and MBS).

Based on fundamental analysis, the Adviser will consider a variety of factors when making decisions to purchase or sell particular securities or derivative contracts, including: the securities’ specific interest rate and prepayment risks, and price sensitivity to changes in market spread levels and in the level of interest rate volatility. In analyzing MBS, the Adviser also may consider the average interest rates of the underlying loans, the prior and expected prepayments, any ratings issued by NRSROs and any guarantee of the security or underlying loans by a GSE or non-agency issuer.

The Fund may, but is not required to, use derivative instruments, which are instruments that have a value based on another instrument, exchange rate or index, and may be used as substitutes for securities in which the Fund can invest, or to hedge against a potential loss in the underlying asset. The Fund may use futures contracts, options, options on futures (including those relating to interest rates) and swaps as tools in the management of portfolio assets. There can be no assurance that the Fund’s use of derivative instruments will work as intended.

Teams of investment professionals formulate the Adviser’s interest rate outlook and otherwise attempt to anticipate changes in market conditions. They base their analysis on a number of factors, which may include:

- current and expected U.S. economic growth;
- current and expected changes in the rate of inflation;
- the Federal Reserve Board’s monetary policy; and
- technical factors affecting the supply or demand for specific securities or types of securities.

These teams also recommend how to structure the portfolio in response to their interest rate outlook. In order to manage the risks taken by the Fund, these recommendations may set additional limits on the extent to which the portfolio’s duration and composition may differ from the Index. Uncertainty as to the amount and timing of prepayments make calculating the durations of mortgage-backed and some asset-backed securities more difficult than some other types of fixed-income securities. The Adviser calculates the duration of the portfolio using standard analytical models that quantify the expected changes in the value of the

portfolio resulting from changes in the applicable yield curve. The Index may calculate its duration using different assumptions and models. The Adviser will rely on its calculations for purposes of complying with any limitations established with respect to the portfolio's duration. There is no assurance that the Adviser's efforts to forecast market conditions and interest rates, or to assess the impact of changes in interest rates and the yield curve, will be successful.

The Fund's portfolio manager follows these recommendations in selecting a portfolio of mortgage- and asset-backed securities, U.S. government securities and related derivative contracts that have the potential to provide better returns than the Index. Characteristics that the Adviser may consider in analyzing mortgage-backed securities include the average interest rates of the underlying loans, the prior prepayment history, any ratings issued by NRSROs and any guarantee of the security or underlying loans by a GSE or company. This analysis relies on information from a variety of sources (such as U.S. government securities dealers, electronic data services and financial publications), and employs quantitative models and analytic tools provided by third parties or developed by the Adviser. The analysis also draws on the experience of the Adviser's staff of investment analysts, portfolio managers and traders.

The portfolio manager uses this fundamental analysis to compare the potential returns from available securities with comparable durations, risks and other characteristics. For mortgage-backed securities, the decision to buy or sell also involves assessment of available securities relative to specific interest rate and prepayment risks, such as average life variability, price sensitivity to changes in market spread levels and price sensitivity to changes in the level of interest rate volatility. The Adviser assesses these risks by analyzing how the timing, amount and division of cash flows from the loans underlying a security might change in response to changing economic and market conditions. If a security has not been issued or guaranteed by a U.S. government agency or U.S. government-sponsored entity (GSE), the assessment will also consider the security's relative credit risk and ratings from one or more NRSROs. However, there is no assurance that a security or derivative contract will perform as expected or that the fundamental analysis will incorporate all relevant information.

The investment-grade, mortgage-backed securities held by the Fund will include both pass-through certificates and various kinds of collateralized mortgage obligations (CMOs). They will also include securities not issued or guaranteed by any U.S. government-sponsored entity. The Fund does not limit the amount of the portfolio that it may invest in these types of securities. In addition, the portion of the Fund's portfolio not invested in investment-grade, mortgage-backed securities may consist of any combination of U.S. government securities, asset-backed securities and lower-rated, mortgage-backed securities, including lower-rated CMOs. The composition of the portfolio, therefore, will change over time as a result of the securities selection process.

The Fund may also enter into derivative contracts for U.S. government securities in order to implement its investment strategy. The Fund may purchase and sell futures contracts and options to manage the duration of the portfolio. The Fund may also sell options and enter into swaps in order to generate additional investment income.

Mortgage-backed pass-through certificates are typically offered or traded on a "to-be-announced" or other delayed delivery basis. Other U.S. government securities may also be offered on a delayed delivery basis. The Fund will enter into trades on this basis in order to participate in these offerings or trade these securities. The Fund may also seek to increase its income by engaging in dollar-roll transactions and by lending its portfolio securities.

The Fund invests in overnight repurchase agreements in order to maintain sufficient cash to pay for daily net redemptions and portfolio transactions. In the event that the Fund does not have sufficient cash for these purposes, it could incur overdrafts, enter into reverse repurchase agreements or otherwise borrow money in accordance with its investment limitations. The Fund also reserves the right to redeem Shares in kind with portfolio securities. See "Payment Method for Redemptions – Redemptions In-Kind."

The Fund may also enter into repurchase agreements with longer terms (up to 12 months) if they offer higher returns than those expected from U.S. Treasury or agency securities having the same maturity.

Because the Fund refers to U.S. government securities in its name, it will notify shareholders at least 60 days in advance of any change in its investment policies that would enable the Fund to invest, under normal circumstances, less than 80% of its assets in U.S. government investments.

Securities in Which the Fund Invests

The principal securities or other investments in which the Fund invests are described in the Fund's Prospectus. The Fund also may invest in securities or other investments as non-principal investments for any purpose that is consistent with its investment objective. The following information is either additional information in respect of a principal security or other investment referenced in the Prospectus or information in respect of a non-principal security or other investment (in which case there is no related disclosure in the Prospectus).

SECURITIES DESCRIPTIONS AND TECHNIQUES

FIXED-INCOME SECURITIES

Fixed-income securities pay interest, dividends or distributions at a specified rate. The rate may be a fixed percentage of the principal or may be adjusted periodically. In addition, the principal amount of the security must be paid normally within a specified time.

A security's yield measures the annual income earned on a security as a percentage of its price. A security's yield will increase or decrease depending upon whether it costs less (a "discount") or more (a "premium") than the principal amount. If the issuer may redeem the security before its scheduled maturity, the price and yield on a discount or premium security may change based upon the probability of an early redemption. Securities with higher risks generally have higher yields.

The following further describes the types of fixed-income securities in which the Fund invests. This information is either additional information in respect of a principal security referenced in the Prospectus or information in respect of a non-principal security (in which case there is no related disclosure in the Prospectus).

Mortgage-Backed Securities (MBS) (A Fixed-Income Security)

An MBS is a type of pass-through security, which is a pooled debt obligation repackaged as interests that pass principal and interest through an intermediary to investors. In the case of MBS, the ownership interest is in a pool of mortgage loans. MBS represent participation interests in pools of adjustable and fixed-rate mortgage loans. MBS are most commonly issued or guaranteed by the U.S. government (or one of its agencies or instrumentalities), but also may be issued or guaranteed by other private issuers ("non-agency MBS"). Unlike conventional debt obligations, MBS provide monthly payments derived from the monthly interest and principal payments (including any prepayments) made by the individual borrowers on the pooled mortgage loans.

There are two markets for MBS. A specified pool transaction is a trade in which the pool number of the security to be delivered on the settlement date is known at the time the trade is made. This is in contrast with the typical MBS transaction, called a TBA ("To Be Announced") transaction, in which the type of MBS to be delivered is specified at the time of trade but the actual pool numbers of the securities that will be delivered are not known at the time of the trade. The pool numbers of the pools to be delivered at settlement are announced shortly before settlement takes place. The terms of the TBA trade may be made more specific if desired. Generally, agency pass-through MBS are traded on a TBA basis. The Fund may enter into TBA trades in order to buy or sell MBS on a delayed delivery basis."

Lease-Backed Securities and Rental-Based MBS

Rental-based MBS are mortgage backed securities where the underlying properties are rental homes. In rental-based MBS the mortgage loan or loans may be different in structure from typical owner occupied single family mortgage as the loans may be secured by more than one property and the mortgage loans may have terms and conditions that are different a typical owner occupied single family home mortgage. The structure of the MBS themselves may also have characteristics that are different from typical MBS. Lease-backed securities are securities whereby the investor cash flows are generated from lease payments on rental properties.

Collateralized Mortgage Obligations (A Type of Mortgage-Backed Security)

Collateralized mortgage obligations (CMOs), including interests in real estate mortgage investment conduits (REMICs), allocate payments and prepayments from an underlying pass-through certificate among holders of different classes of mortgage-backed securities. This creates different prepayment and interest rate risks for each CMO class. The degree of increased or decreased prepayment risks depends upon the structure of the CMOs. However, the actual returns on any type of mortgage-backed security depend upon the performance of the underlying pool of mortgages, which no one can predict and will vary among pools.

Sequential CMOs (A Type of CMO)

In a sequential pay CMO, one class of CMOs receives all principal payments and prepayments. The next class of CMOs receives all principal payments after the first class is paid off. This process repeats for each sequential class of CMO. As a result, each class of sequential pay CMOs reduces the prepayment risks of subsequent classes.

PACs, TACs and Companion Classes (Types of CMOs)

More sophisticated CMOs include planned amortization classes (PACs) and targeted amortization classes (TACs). PACs and TACs are issued with companion classes. PACs and TACs receive principal payments and prepayments at a specified rate. The companion classes receive principal payments and prepayments in excess of the specified rate. In addition, PACs will receive the companion classes' share of principal payments, if necessary, to cover a shortfall in the prepayment rate. This helps PACs and TACs to control prepayment risks by increasing the risks to their companion classes.

IOs and POs (Types of CMOs)

CMOs may allocate interest payments to one class (“Interest Only” or IOs) and principal payments to another class (“Principal Only” or POs). POs increase in value when prepayment rates increase. In contrast, IOs decrease in value when prepayments increase, because the underlying mortgages generate less interest payments. However, IOs tend to increase in value when interest rates rise (and prepayments decrease), making IOs a useful hedge against interest rate risks.

Floater and Inverse Floaters (Types of CMOs)

Another variant allocates interest payments between two classes of CMOs. One class (“Floaters”) receives a share of interest payments based upon a market index such as the London Interbank Offered Rate (LIBOR). The other class (“Inverse Floaters”) receives any remaining interest payments from the underlying mortgages. Floater classes receive more interest (and Inverse Floater classes receive correspondingly less interest) as interest rates rise. This shifts prepayment and interest rate risks from the Floater to the Inverse Floater class, reducing the price volatility of the Floater class and increasing the price volatility of the Inverse Floater class.

Z Classes and Residual Classes (Types of CMOs)

CMOs must allocate all payments received from the underlying mortgages to some class. To capture any unallocated payments, CMOs generally have an accrual (Z) class. Z classes do not receive any payments from the underlying mortgages until all other CMO classes have been paid off. Once this happens, holders of Z class CMOs receive all payments and prepayments.

Government Securities (A Fixed-Income Security)

Government securities are issued or guaranteed by a federal agency or instrumentality acting under federal authority. Some government securities, including those issued by Government National Mortgage Association (“Ginnie Mae”), are supported by the full faith and credit of the United States.

Other government securities receive support through federal subsidies, loans or other benefits. For example, the U.S. Treasury is authorized to purchase specified amounts of securities issued by (or otherwise make funds available to) the Federal Home Loan Bank System, Federal Home Loan Mortgage Corporation (“Freddie Mac”) and Federal National Mortgage Association (“Fannie Mae”) in support of such obligations.

A few government securities have no explicit financial support, but are regarded as having implied support because the federal government sponsors their activities.

The Fund treats mortgage-backed securities guaranteed by a federal agency or instrumentality as government securities. Although such a guarantee helps protect against credit risk, it does not eliminate it entirely or reduce other risks.

Additional Information Related To Freddie Mac And Fannie Mae. The extreme and unprecedented volatility and disruption that impacted the capital and credit markets beginning in 2008 led to market concerns regarding the ability of Freddie Mac and Fannie Mae to withstand future credit losses associated with securities held in their investment portfolios, and on which they provide guarantees, without the direct support of the federal government. On September 7, 2008, Freddie Mac and Fannie Mae were placed under the conservatorship of the Federal Housing Finance Agency (FHFA). Under the plan of conservatorship, the FHFA assumed control of, and generally has the power to direct, the operations of Freddie Mac and Fannie Mae, and is empowered to exercise all powers collectively held by their respective shareholders, directors and officers, including the power to: (1) take over the assets of and operate Freddie Mac and Fannie Mae with all the powers of the shareholders, the directors and the officers of Freddie Mac and Fannie Mae and conduct all business of Freddie Mac and Fannie Mae; (2) collect all obligations and money due to Freddie Mac and Fannie Mae; (3) perform all functions of Freddie Mac and Fannie Mae which are consistent with the conservator’s appointment; (4) preserve and conserve the assets and property of Freddie Mac and Fannie Mae; and (5) contract for assistance in fulfilling any function, activity, action or duty of the conservator.

In connection with the actions taken by the FHFA, the Treasury has entered into certain preferred stock purchase agreements (SPAs) with each of Freddie Mac and Fannie Mae which establish the Treasury as the holder of a new class of senior preferred stock in each of Freddie Mac and Fannie Mae. The senior preferred stock was issued in connection with financial contributions from the Treasury to Freddie Mac and Fannie Mae. Although the SPAs are subject to amendment from time to time, currently the Treasury is obligated to provide such financial contributions up to an aggregate maximum amount determined by a formula set forth in the SPAs, and until such aggregate maximum amount is reached, there is not a specific end date to the Treasury’s obligations.

The future status and role of Freddie Mac and Fannie Mae could be impacted by (among other things) the actions taken and restrictions placed on Freddie Mac and Fannie Mae by the FHFA in its role as conservator, the restrictions placed on Freddie Mac's and Fannie Mae's operations and activities under the SPAs, market responses to developments at Freddie Mac and Fannie Mae, downgrades or upgrades in the credit ratings assigned to Freddie Mac and Fannie Mae by nationally recognized statistical rating organizations (NRSROs) or ratings services, and future legislative and regulatory action that alters the operations, ownership, structure and/or mission of these institutions, each of which may, in turn, impact the value of, and cash flows on, any securities guaranteed by Freddie Mac and Fannie Mae.

Zero-Coupon Securities (A Fixed-Income Security)

Zero-coupon securities do not pay interest or principal until final maturity unlike debt securities that provide periodic payments of interest (referred to as a coupon payment). Investors buy zero-coupon securities at a price below the amount payable at maturity. The difference between the purchase price and the amount paid at maturity represents interest on the zero-coupon security. Investors must wait until maturity to receive interest and principal, which increases the interest rate and credit risks of a zero-coupon security. A zero-coupon, step-up security converts to a coupon security before final maturity.

There are many forms of zero-coupon securities. Some are issued at a discount and are referred to as zero-coupon or capital appreciation bonds. Others are created from interest bearing bonds by separating the right to receive the bond's coupon payments from the right to receive the bond's principal due at maturity, a process known as coupon stripping. Treasury STRIPs, IOs and POs are the most common forms of stripped, zero-coupon securities. In addition, some securities give the issuer the option to deliver additional securities in place of cash interest payments, thereby increasing the amount payable at maturity. These are referred to as pay-in-kind or PIK securities.

DERIVATIVE CONTRACTS

Derivative contracts are financial instruments that require payments based upon changes in the values of designated securities, commodities, currencies, indices or other assets or instruments including other derivative contracts (each a "Reference Instrument" and collectively, "Reference Instruments"). Each party to a derivative contract may sometimes be referred to as a counterparty. Some derivative contracts require payments relating to an actual, future trade involving the Reference Instrument. These types of derivatives are frequently referred to as "physically settled" derivatives. Other derivative contracts require payments relating to the income or returns from, or changes in the market value of, a Reference Instrument. These types of derivatives are known as "cash-settled" derivatives, since they require cash payments in lieu of delivery of the Reference Instrument.

Many derivative contracts are traded on securities or commodities exchanges. In this case, the exchange sets all the terms of the contract except for the price. Investors make payments due under their contracts through the exchange. Most exchanges require investors to maintain margin accounts through their brokers to cover their potential obligations to the exchange. Parties to the contract make (or collect) daily payments to the margin accounts to reflect losses (or gains) in the value of their contracts. This protects investors against potential defaults by the other party to the contract. Trading contracts on an exchange also allows investors to close out their contracts by entering into offsetting contracts.

For example, the Fund could close out an open contract to buy an asset at a future date by entering into an offsetting contract to sell the same asset on the same date. If the offsetting sale price is more than the original purchase price, the Fund realizes a gain; if it is less, the Fund realizes a loss. Exchanges may limit the amount of open contracts permitted at any one time. Such limits may prevent the Fund from closing out a position. If this happens, the Fund will be required to keep the contract open (even if it is losing money on the contract), and to make any payments required under the contract (even if it has to sell portfolio securities at unfavorable prices to do so). Inability to close out a contract could also harm the Fund by preventing it from disposing of or trading any assets it has been using to secure its obligations under the contract.

The Fund may also trade derivative contracts over-the-counter (OTC) in transactions negotiated directly between the Fund and a financial institution. OTC contracts do not necessarily have standard terms, so they may be less liquid and more difficult to close-out than exchange-traded contracts. In addition, OTC contracts with more specialized terms may be more difficult to value than exchange-traded contracts, especially in times of financial stress.

Regulations enacted by the Commodity Futures Trading Commission (the "CFTC") under the Dodd-Frank Wall Street Reform and Consumer Protection Act may require the Fund to clear certain derivative contracts through a clearinghouse or central counterparty (a "CCP"). To clear a derivative through the CCP, the Fund will submit the contract to, and post margin with, a futures commission merchant ("FCM") that is a clearinghouse member. The Fund may enter into the swap with a financial institution other than the FCM (the "Executing Dealer") and arrange for the contract to be transferred to the FCM for clearing. It may also enter into the contract with the FCM itself. If the Fund must centrally clear a transaction, the CFTC's regulations may also require that the derivative be entered into over a market facility that is known as a "swap execution facility" or "SEF". Also, in

the future, the CFTC's regulations may require that certain electronically-traded contracts be entered into over SEFs, even if those contracts are not subject to mandatory central clearing. The CCP, SEF, FCM and Executing Dealer are all subject to regulatory oversight by the CFTC. Similar regulatory requirements will apply to contracts that are subject to the jurisdiction of the Securities and Exchange Commission ("SEC"), although the SEC has not yet finalized its regulations.

Depending on how the Fund uses derivative contracts and the relationships between the market value of a derivative contract and the Reference Instrument, derivative contracts may increase or decrease the Fund's exposure to the risks of the Reference Instrument, and may also expose the fund to liquidity and leverage risks. OTC contracts also expose the Fund to credit risks in the event that a counterparty defaults on the contract, although this risk may be mitigated by submitting the contract for clearing through a CCP.

The Fund may invest in a derivative contract if it is permitted to own, invest in or otherwise have economic exposure to the Reference Instrument. The Fund is not required to own a Reference Instrument in order to buy or sell a derivative contract relating to that Reference Instrument. The Fund may trade in the following types of derivative contracts, including combinations thereof:

Futures Contracts (A Type of Derivative)

Futures contracts provide for the future sale by one party and purchase by another party of a specified amount of a Reference Instrument at a specified price, date and time. Entering into a contract to buy a Reference Instrument is commonly referred to as buying a contract or holding a long position in the asset. Entering into a contract to sell a Reference Instrument is commonly referred to as selling a contract or holding a short position in the Reference Instrument. Futures contracts are considered to be commodity contracts. The Fund has claimed an exclusion from the definition of the term "commodity pool operator" under the Commodity Exchange Act and, therefore, is not subject to registration or regulation as a commodity pool operator under that Act. Futures contracts traded OTC are frequently referred to as forward contracts. The Fund can buy or sell financial futures (such as index futures and security futures).

Option Contracts (A Type of Derivative)

Option contracts (also called "options") are rights to buy or sell a Reference Instrument for a specified price (the "exercise price") during, or at the end of, a specified period. The seller (or "writer") of the option receives a payment, or premium, from the buyer, which the writer keeps regardless of whether the buyer uses (or exercises) the option. A call option gives the holder ("buyer") the right to buy the Reference Instrument from the seller (writer) of the option. A put option gives the holder the right to sell the Reference Instrument to the writer of the option. Options may be bought or sold on a wide variety of Reference Instruments. Options that are written on futures contracts will be subject to margin requirements similar to those applied to futures contracts.

The Fund may buy and/or sell the following types of options:

Call Options

A call option gives the holder (buyer) the right to buy the Reference Instrument from the seller (writer) of the option. The Fund may use call options in the following ways:

- Buy call options on a Reference Instrument in anticipation of an increase in the value of the Reference Instrument; and
- Write call options on a Reference Instrument to generate income from premiums, and in anticipation of a decrease or only limited increase in the value of the Reference Instrument. If the Fund writes a call option on a Reference Instrument that it owns and that call option is exercised, the Fund foregoes any possible profit from an increase in the market price of the Reference Instrument over the exercise price plus the premium received.

Put Options

A put option gives the holder the right to sell the Reference Instrument to the writer of the option. The Fund may use put options in the following ways:

- Buy put options on a Reference Instrument in anticipation of a decrease in the value of the Reference Instrument; and
- Write put options on a Reference Instrument to generate income from premiums, and in anticipation of an increase or only limited decrease in the value of the Reference Instrument. In writing puts, there is a risk that the Fund may be required to take delivery of the Reference Instrument when its current market price is lower than the exercise price.

The Fund may also buy or write options, as needed, to close out existing option positions.

Finally, the Fund may enter into combinations of options contracts in an attempt to benefit from changes in the prices of those options contracts (without regard to changes in the value of the Reference Instrument).

Swap Contracts (A Type of Derivative)

A swap contract (also known as a “swap”) is a type of derivative contract in which two parties agree to pay each other (swap) the returns derived from Reference Instruments. Most swaps do not involve the delivery of the underlying assets by either party, and the parties might not own the Reference Instruments. The payments are usually made on a net basis so that, on any given day, the Fund would receive (or pay) only the amount by which its payment under the contract is less than (or exceeds) the amount of the other party’s payment. Swap agreements are sophisticated instruments that can take many different forms and are known by a variety of names. Common swap agreements that the Fund may use include:

Interest Rate Swaps

Interest rate swaps are contracts in which one party agrees to make regular payments equal to a fixed or floating interest rate times a stated principal amount (commonly referred to as a “notional principal amount”) in return for payments equal to a different fixed or floating rate times the same principal amount, for a specific period. For example, a \$10 million London Interbank Offered Rate (LIBOR) swap would require one party to pay the equivalent of the London Interbank Offered Rate of interest (which fluctuates) on \$10 million principal amount in exchange for the right to receive the equivalent of a stated fixed rate of interest on \$10 million principal amount.

Total Return Swaps

A total return swap is an agreement between two parties whereby one party agrees to make payments of the total return from a Reference Instrument (or a basket of such instruments) during the specified period, in return for payments equal to a fixed or floating rate of interest or the total return from another Reference Instrument. Alternately, a total return swap can be structured so that one party will make payments to the other party if the value of a Reference Instrument increases, but receive payments from the other party if the value of that instrument decreases.

Caps and Floors

Caps and Floors are contracts in which one party agrees to make payments only if an interest rate or index goes above (Cap) or below (Floor) a certain level in return for a fee from the other party.

OTHER INVESTMENTS, TRANSACTIONS, TECHNIQUES

Reverse Repurchase Agreements

Reverse repurchase agreements are repurchase agreements in which the Fund is the seller (rather than the buyer) of the securities, and agrees to repurchase them at an agreed-upon time and price. A reverse repurchase agreement may be viewed as a type of borrowing by the Fund. Reverse repurchase agreements are subject to credit risks. In addition, reverse repurchase agreements create leverage risks because the Fund must repurchase the underlying security at a higher price, regardless of the market value of the security at the time of repurchase. The Fund may borrow an amount up to one third of the Fund’s net assets (exclusive of such borrowings) for leverage purposes.

Hedging

Hedging transactions are intended to reduce specific risks. For example, to protect the Fund against circumstances that would normally cause the Fund’s portfolio securities to decline in value, the Fund may buy or sell a derivative contract that would normally increase in value under the same circumstances. The Fund may also attempt to hedge by using combinations of different derivative contracts, or derivative contracts and securities. The Fund’s ability to hedge may be limited by the costs of the derivative contracts. The Fund may attempt to lower the cost of hedging by entering into transactions that provide only limited protection, including transactions that: (1) hedge only a portion of its portfolio; (2) use derivative contracts that cover a narrow range of circumstances; or (3) involve the sale of derivative contracts with different terms. Consequently, hedging transactions will not eliminate risk even if they work as intended. In addition, hedging strategies are not always successful, and could result in increased expenses and losses to the Fund.

Securities Lending

The Fund may lend portfolio securities to borrowers that the Adviser deems creditworthy. In return, the Fund receives cash or liquid securities from the borrower as collateral. The borrower must furnish additional collateral if the market value of the loaned securities increases. Also, the borrower must pay the Fund the equivalent of any dividends or interest received on the loaned securities.

The Fund will reinvest cash collateral in securities that qualify as an acceptable investment for the Fund. However, the Fund must pay interest to the borrower for the use of cash collateral.

Loans are subject to termination at the option of the Fund or the borrower. The Fund will not have the right to vote on securities while they are on loan. However, the Fund will attempt to terminate a loan in an effort to reacquire the securities in time to vote on matters that are deemed to be material by the Adviser. There can be no assurance that the Fund will have sufficient notice of such matters to be able to terminate the loan in time to vote thereon. The Fund may pay administrative and custodial fees in connection with a loan and may pay a negotiated portion of the interest earned on the cash collateral to a securities lending agent or broker.

Securities lending activities are subject to interest rate risks and counterparty credit risks.

Asset Segregation

In accordance with the Securities and Exchange Commission (SEC) and SEC staff positions regarding the interpretation of the Investment Company Act of 1940 (“1940 Act”), with respect to derivatives that create a future payment obligation of the Fund, the Fund must “set aside” (referred to sometimes as “asset segregation”) liquid assets, or engage in other SEC- or staff-approved measures, while the derivative contracts are open. For example, with respect to forwards and futures contracts that are not contractually required to “cash-settle,” the Fund must cover its open positions by setting aside cash or readily marketable securities equal to the contracts’ full, notional value. With respect to forwards and futures that are contractually required to “cash-settle,” however, the Fund is permitted to set aside cash or readily marketable securities in an amount equal to the Fund’s daily marked-to-market (“net”) obligations, if any (i.e., the Fund’s daily net liability, if any), rather than the notional value.

The Fund will employ another approach to segregating assets to cover options that it sells. If the Fund sells a call option, the Fund will set aside either the Reference Instrument subject to the option, cash or readily marketable securities with a value that equals or exceeds the current market value of the Reference Instrument. In no event, will the value of the cash or readily marketable securities set aside by the Fund be less than the exercise price of the call option. If the Fund sells a put option, the Fund will set aside cash or readily marketable securities with a value that equals or exceeds the exercise price of the put option.

The Fund’s asset segregation approach for swap agreements varies among different types of swaps. For example, if the Fund enters into a credit default swap as the Protection Buyer, then it will set aside cash or readily marketable securities necessary to meet any accrued payment obligations under the swap. By comparison, if the Fund enters into a credit default swap as the Protection Seller, then the Fund will set aside cash or readily marketable securities equal to the full notional amount of the swap that must be paid upon the occurrence of a Credit Event. For some other types of swaps, such as interest rate swaps, the Fund will calculate the obligations of the counterparties to the swap on a net basis. Consequently, the Fund’s current obligation (or rights) under this type of swap will equal only the net amount to be paid or received based on the relative values of the positions held by each counterparty to the swap (the “net amount”). The net amount currently owed by or to the Fund will be accrued daily and the Fund will set aside cash or readily marketable securities equal to any accrued but unpaid net amount owed by the Fund under the swap.

The Fund may reduce the liquid assets segregated to cover obligations under a derivative contract by entering into an offsetting derivative contract. For example, if the Fund sells a put option for the same Reference Instrument as a call option the Fund has sold, and the exercise price of the call option is the same as or higher than the exercise price of the put option, then the Fund may net its obligations under the options and set aside cash or readily marketable securities (including any margin deposited for the options) with a value equal to the greater of: (a) the current market value of the Reference Instrument deliverable under the call option; or (b) the exercise price of the put option.

By setting aside cash or readily marketable securities equal to only its net obligations under swaps and certain cash-settled derivative contracts, the Fund will have the ability to employ leverage to a greater extent than if the Fund were required to segregate cash or readily marketable securities equal to the full notional value of such contracts. The use of leverage involves certain risks. See “Risk Factors.” Unless the Fund has other cash or readily marketable securities to set aside, it cannot trade assets set aside in connection with derivative contracts or special transactions without entering into an offsetting derivative contract or terminating a special transaction. This may cause the Fund to miss favorable trading opportunities or to realize losses on derivative contracts or special transactions. The Fund reserves the right to modify its asset segregation policies in the future to comply with any changes in the positions articulated from time to time by the SEC and its staff.

Generally, special transactions do not cash-settle on a net basis. Consequently, with respect to special transactions, the Fund will set aside cash or readily marketable securities with a value that equals or exceeds the Fund’s obligations.

Investing in Securities of Other Investment Companies

The Fund may invest its assets in securities of other investment companies, including the securities of affiliated money market funds, as an efficient means of implementing its investment strategies and/or managing its uninvested cash. These other investment companies are managed independently of the Fund and incur additional fees and/or expenses which would, therefore, be borne indirectly by the Fund in connection with any such investment. However, the Adviser believes that the benefits and efficiencies of this approach should outweigh the potential additional fees and/or expenses.

Inter-Fund Borrowing and Lending Arrangements

The SEC has granted an exemption that permits the Fund and all other funds advised by subsidiaries of Federated Investors, Inc. (“Federated funds”) to lend and borrow money for certain temporary purposes directly to and from other Federated funds. Participation in this inter-fund lending program is voluntary for both borrowing and lending Federated funds, and an inter-fund loan is only made if it benefits each participating Federated fund. Federated Investors, Inc. (“Federated”) administers the program according to procedures approved by the Fund’s Board, and the Board monitors the operation of the program. Any inter-fund loan must comply with certain conditions set out in the exemption, which are designed to assure fairness and protect all participating Federated funds.

For example, inter-fund lending is permitted only: (a) to meet shareholder redemption requests; (b) to meet commitments arising from “failed” trades; and (c) for other temporary purposes. All inter-fund loans must be repaid in seven days or less. The Fund’s participation in this program must be consistent with its investment policies and limitations, and must meet certain percentage tests. Inter-fund loans may be made only when the rate of interest to be charged is more attractive to the lending Federated fund than market-competitive rates on overnight repurchase agreements (“Repo Rate”) and more attractive to the borrowing Federated fund than the rate of interest that would be charged by an unaffiliated bank for short-term borrowings (“Bank Loan Rate”), as determined by the Board. The interest rate imposed on inter-fund loans is the average of the Repo Rate and the Bank Loan Rate.

INVESTMENT RATINGS FOR INVESTMENT-GRADE SECURITIES

The Adviser will determine whether a security is investment grade based upon the credit ratings given by one or more nationally recognized rating services. For example, Standard & Poor’s, a rating service, assigns ratings to investment-grade securities (AAA, AA, A and BBB) based on their assessment of the likelihood of the issuer’s inability to pay interest or principal (default) when due on each security. Lower credit ratings correspond to higher credit risk. If a security has not received a rating, the Fund must rely entirely upon the Adviser’s credit assessment that the security is comparable to investment grade. If a security is downgraded below the minimum quality grade discussed above, the Adviser will reevaluate the security, but will not be required to sell it.

Investment Risks

There are many risk factors which may affect an investment in the Fund. The Fund’s principal risks are described in its Prospectus. The following information is either additional information in respect of a principal risk factor referenced in the Prospectus or information in respect of a non-principal risk factor applicable to the Fund (in which case there is no related disclosure in the Prospectus).

Risk of Investing in Certain MBS

MBS backed by participations in reverse mortgages may carry risk different from and in addition to risk of other MBS. A reverse mortgage is a home loan in which a lender makes a loan to a homeowner based on the equity in the home. To qualify for a reverse mortgage loan, a homeowner must be older than a certain specified age. Unlike a traditional mortgage, there are no scheduled payments of principal or interest. Repayment does not occur until, in most cases, the borrower ceases to own the home (including, as a result of the borrower’s death) or to use it as a primary residence. Accordingly, the timing of payments made on these loans (and, by extension, MBS backed by such loans) is uncertain and may occur sooner or later than anticipated. The rate of principal and total amount of interest payments on any reverse mortgage is based on many factors, including relevant interest rates and borrower mortality, that may in turn affect the value of the pools of such mortgages. Due to the nature of reverse mortgages, they may react differently from traditional mortgages to economic, geographic and other factors. There is a limited amount of historical data regarding the performance of reverse MBS pools.

Risk of Lease-Backed Securities and Rental-Based MBS

The market for lease-backed securities and rental-based MBS is new and there may be variation in how the securities are collateralized. By way of nonlimiting example, some structures may afford a bondholder with indirect, limited or even no rights to the underlying real estate. Further, different classes of a particular issue may receive different credit ratings than other classes of the same issue depending upon the level of collateral or distribution of collateral in a default scenario. Several factors may adversely affect the performance of an investment in these lease-backed securities and rental-based MBS. First, the renters of the pooled properties underlying the securities generally sign monthly or yearly leases, increasing the likelihood of the renters canceling their leases. As a result, renters have the opportunity to not renew their leases, which would result in decreased payments being made into the pooled structure. Second, renters may also have low incentive for paying their rent on time. Finally, there is risk related to the ability of large institutional investors to manage rental homes where there are potentially greater maintenance costs given the lack of construction uniformity.

Risk of Inflation-Protected Securities

The value of inflation-protected securities is subject to the effects of changes in market interest rates caused by factors other than inflation (“real interest rates”). If interest rates rise due to reasons other than inflation, the Fund’s investment in these securities may not be protected to the extent that the increase is not reflected in the security’s inflation measure. Generally, when real interest rates rise, the value of inflation-protected securities will fall and the Fund’s value may decline as a result of this exposure to these securities. The greatest risk occurs when interest rates rise and inflation declines.

Risk of Investing in Derivative Contracts

The Fund’s exposure to derivative contracts (either directly or through its investment in another investment company) involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. First, changes in the value of the derivative contracts in which the Fund invests may not be correlated with changes in the value of the underlying Reference Instruments or, if they are correlated, may move in the opposite direction than originally anticipated. Second, while some strategies involving derivatives may reduce the risk of loss, they may also reduce potential gains or, in some cases, result in losses by offsetting favorable price movements in portfolio holdings. Third, there is a risk that derivative contracts may be erroneously priced or improperly valued and, as a result, the Fund may need to make increased cash payments to the counterparty. Fourth, a common provision in OTC derivative contracts permits the counterparty to terminate any such contract between it and the Fund, if the value of the Fund’s total net assets declines below a specified level over a given time period. Factors that may contribute to such a decline (which usually must be substantial) include significant shareholder redemptions and/or a marked decrease in the market value of the Fund’s investments. Any such termination of the Fund’s OTC derivative contracts may adversely affect the Fund (for example, by increasing losses and/or costs, and/or preventing the Fund from fully implementing its investment strategies). Fifth, the Fund may use a derivative contract to benefit from a decline in the value of a Reference Instrument. If the value of the Reference Instrument declines during the term of the contract, the Fund makes a profit on the difference (less any payments the Fund is required to pay under the terms of the contract). Any such strategy involves risk. There is no assurance that the Reference Instrument will decline in value during the term of the contract and make a profit for the Fund. The Reference Instrument may instead appreciate in value, creating a loss for the Fund. Sixth, a default or failure by a CCP or an FCM (also sometimes called a “futures broker”), or the failure of a contract to be transferred from an Executing Dealer to the FCM for clearing, may expose the Fund to losses, increase its costs, or prevent the Fund from entering or exiting derivative positions, accessing margin or fully implementing its investment strategies. The central clearing of a derivative and trading of a contract over a SEF could reduce the liquidity in, or increase costs of entering into or holding, any contracts. Finally, derivative contracts and hybrid instruments may also involve other risks described herein or in the Fund’s prospectus, such as stock market, interest rate, credit, currency, liquidity and leverage risks.

Risk Associated with the Investment Activities of Other Accounts

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. Therefore, it is possible that investment-related actions taken by such other accounts could adversely impact the Fund with respect to, for example, the value of Fund portfolio holdings, and/or prices paid to or received by the Fund on its portfolio transactions, and/or the Fund’s ability to obtain or dispose of portfolio securities. Related considerations are discussed elsewhere in this SAI under “Brokerage Transactions and Investment Allocation.”

VARIABLE ASSET REGULATIONS

The Fund is also subject to variable contract asset regulations prescribed by the U.S. Treasury Department under Section 817(h) of the Internal Revenue Code. After a one-year start-up period, the regulations generally require that, as of the end of each calendar quarter or within 30 days thereafter, no more than 55% of the total assets of the Fund may be represented by any one investment, no more than 70% of the total assets of the Fund may be represented by any two investments, no more than 80% of the total assets of the Fund may be represented by any three investments and no more than 90% of the total assets of the Fund may be represented by any four investments. In applying these diversification rules, all securities of the same issuer, all interests of the same real property project and all interests in the same commodity are each treated as a single investment. In the case of government securities, each government agency or instrumentality shall be treated as a separate issuer. If the Fund fails to achieve the diversification required by the regulations, unless relief is obtained from the Internal Revenue Service, the contracts invested in the Fund will not be treated as annuity endowment or life insurance contracts.

Investment Objective (and Policies) and Investment Limitations

The Fund’s investment objective is to provide current income. The investment objective may not be changed by the Fund’s Board of Trustees without shareholder approval.

INVESTMENT LIMITATIONS

Diversification of Investments

With respect to securities comprising 75% of the value of its total assets, the Fund will not purchase securities of any one issuer (other than cash; cash items; securities issued or guaranteed by the government of the United States or its agencies or instrumentalities and repurchase agreements collateralized by such U.S. government securities; and securities of other investment companies) if, as a result, more than 5% of the value of its total assets would be invested in the securities of that issuer, or the Fund would own more than 10% of the outstanding voting securities of that issuer.

Borrowing Money and Issuing Senior Securities

The Fund may borrow money, directly or indirectly, and issue senior securities to the maximum extent permitted under the Investment Company Act of 1940 (“1940 Act”).

Investing in Real Estate

The Fund may not purchase or sell real estate, provided that this restriction does not prevent the Fund from investing in issuers which invest, deal or otherwise engage in transactions in real estate or interests therein, or investing in securities that are secured by real estate or interests therein. The Fund may exercise its rights under agreements relating to such securities, including the right to enforce security interests and to hold real estate acquired by reason of such enforcement until that real estate can be liquidated in an orderly manner.

Investing in Commodities

The Fund may not purchase or sell physical commodities, provided that the Fund may purchase securities of companies that deal in commodities.

Underwriting

The Fund may not underwrite the securities of other issuers, except that the Fund may engage in transactions involving the acquisition, disposition or resale of its portfolio securities, under circumstances where it may be considered to be an underwriter under the Securities Act of 1933.

Lending

The Fund may not make loans, provided that this restriction does not prevent the Fund from purchasing debt obligations, entering into repurchase agreements, lending its assets to broker/dealers or institutional investors and investing in loans, including assignments and participation interests.

Concentration

The Fund will not make investments that will result in the concentration of its investments in the securities of issuers primarily engaged in the same industry. Government securities, municipal securities and bank instruments will not be deemed to constitute an industry.

The above limitations cannot be changed unless authorized by the Board and by the “vote of a majority of its outstanding voting securities,” as defined by the 1940 Act. The following limitations, however, may be changed by the Board without shareholder approval. Shareholders will be notified before any material change in these limitations becomes effective.

Concentration of Investments

In applying the Fund’s concentration restriction: (a) utility companies will be divided according to their services (for example, gas, gas transmission, electric and telephone will each be considered a separate industry); (b) financial service companies will be classified according to the end users of their services (for example, automobile finance, bank finance and diversified finance will each be considered a separate industry); and (c) asset-backed securities will be classified according to the underlying assets securing such securities.

To conform to the current view of the SEC staff that only domestic bank instruments may be excluded from industry concentration limitations, as a matter of non-fundamental policy, the Fund will not exclude foreign bank instruments from industry concentration limitation tests so long as the policy of the SEC remains in effect. In addition, investments in bank instruments, and investments in certain industrial development bonds funded by activities in a single industry, will be deemed to constitute investment in an industry, except when held for temporary defensive purposes. The investment of more than 25% of the value of the Fund’s total assets in any one industry will constitute “concentration.”

Illiquid Securities

The Fund will not purchase securities for which there is no readily available market, or enter into repurchase agreements or purchase time deposits that the Fund cannot dispose of within seven days, if immediately after and as a result, the value of such securities would exceed, in the aggregate, 15% of the Fund's net assets.

Purchases on Margin

The Fund will not purchase securities on margin, provided that the Fund may obtain short-term credits necessary for the clearance of purchases and sales of securities.

Pledging Assets

The Fund will not mortgage, pledge or hypothecate any of its assets, provided that this shall not apply to the transfer of securities in connection with any permissible borrowing or to collateral arrangements in connection with permissible activities.

Investing in Commodities

As a matter of non-fundamental operating policy, for purposes of the commodities policy, investments in transactions involving futures contracts and options, forward currency contracts, swap transactions and other financial contracts that settle by payment of cash are not deemed to be investments in commodities.

Additional Information

For purposes of the above limitations, the Fund considers certificates of deposit and demand and time deposits issued by a U.S. branch of a domestic bank or savings association having capital, surplus and undivided profits in excess of \$100,000,000 at the time of investment to be "cash items" and "bank instruments." Except with respect to borrowing money, if a percentage limitations is adhered to at the time of investment, a later increase or decrease in percentage resulting from any change in value or net assets will not result in a violation of such limitation.

Non-Fundamental Names Rule Policy

Because the Fund refers to U.S. government securities in its name, it will notify shareholders at least 60 days in advance of any change in its investment policies that would enable the Fund to invest, under normal circumstances, less than 80% of its assets in U.S. government investments.

What Do Shares Cost?

DETERMINING MARKET VALUE OF SECURITIES

A Share's net asset value (NAV) is determined as of the end of regular trading on the New York Stock Exchange (NYSE) (normally 4:00 p.m. Eastern time) each day the NYSE is open. The Fund calculates the NAV by valuing its assets, subtracting its liabilities and dividing the balance by the number of Shares outstanding. The NAV is calculated to the nearest whole cent per Share.

In calculating its NAV, the Fund generally values investments as follows:

- Equity securities listed on a U.S. securities exchange or traded through the U.S. national market system are valued at their last reported sale price or official closing price in their principal exchange or market. If a price is not readily available, such equity securities are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Other equity securities traded primarily in the United States are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Equity securities traded primarily through securities exchanges and regulated market systems outside the United States are valued at their last reported sale price or official closing price in their principal exchange or market. These prices may be adjusted for significant events occurring after the closing of such exchanges or market systems as described below. If a price is not readily available, such equity securities are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Fixed-income securities and repurchase agreements acquired with remaining maturities of greater than 60 days are fair valued using price evaluations provided by a pricing service approved by the Board. The methods used by pricing services to determine such price evaluations are described below. If a price evaluation is not readily available, such fixed-income securities are fair valued based upon price evaluations from one or more dealers.
- Fixed-income securities and repurchase agreements acquired with remaining maturities of 60 days or less are valued at their amortized cost as described below, unless the issuer's creditworthiness is impaired or other factors indicate that amortized cost is not an accurate estimate of the investment's fair value, in which case it would be valued in the same manner as a longer-term security or repurchase agreement.

- Futures contracts listed on exchanges are valued at their reported settlement price. Option contracts listed on exchanges are valued based upon the mean of closing bid and asked quotations reported by the exchange or from one or more futures commission merchants.
- OTC derivative contracts are fair valued using price evaluations provided by various pricing services approved by the Board. The methods used by pricing services to determine such price evaluations are described below. If a price evaluation is not readily available, such derivative contracts are fair valued based upon price evaluations from one or more dealers or using a recognized pricing model for the contract.
- Shares of other mutual funds are valued based upon their reported NAVs. The prospectuses for these mutual funds explain the circumstances under which they will use fair value pricing and the effects of using fair value pricing.

If any price, quotation, price evaluation or other pricing source is not readily available when the NAV is calculated, or if the Fund cannot obtain price evaluations from a pricing service or from more than one dealer for an investment within a reasonable time (for example, within five business days after a new security is delivered to the Fund), the Fund will use the fair value of the investment determined in accordance with the procedures described below. There can be no assurance that the Fund could purchase or sell an investment at the price used to calculate the Fund's NAV. The Fund will not use a pricing service or dealer who is an affiliated person of the Adviser to value investments.

Noninvestment assets and liabilities are valued in accordance with Generally Accepted Accounting Principles (GAAP). The NAV calculation includes expenses, dividend income, interest income and other income through the date of the calculation. Changes in holdings of investments and in the number of outstanding Shares are included in the calculation not later than the first business day following such change. Any assets or liabilities denominated in foreign currencies are converted into U.S. dollars using an exchange rate obtained from one or more currency dealers.

The Fund follows procedures that are common in the mutual fund industry regarding errors made in the calculation of its NAV. This means that, generally, the Fund will not correct errors of less than one cent per Share or errors that did not result in net dilution to the Fund.

Amortized Cost Values

Under the amortized cost valuation method, an investment is valued initially at its cost as determined in accordance with GAAP. The Fund then adjusts the amount of interest income accrued each day over the term of the investment to account for any difference between the initial cost of the investment and the amount payable at its maturity. If the amount payable at maturity exceeds the initial cost (a "discount"), then the daily accrual is increased; if the initial cost exceeds the amount payable at maturity (a "premium"), then the daily accrual is decreased. The Fund adds the amount of the increase to (in the case of a discount), or subtracts the amount of the decrease from (in the case of a premium), the investment's cost each day. The Fund uses this adjusted cost to value the investment.

Fair Valuation and Significant Events Procedures

The Board has ultimate responsibility for determining the fair value of investments for which market quotations are not readily available. The Board has appointed a Valuation Committee comprised of officers of the Fund, the Adviser and the Adviser's affiliated companies to assist in this responsibility and in overseeing the calculation of the NAV. The Board has also authorized the use of pricing services recommended by the Valuation Committee to provide price evaluations of the current fair value of certain investments for purposes of calculating the NAV.

Pricing Service Valuations. Based on the recommendations of the Valuation Committee, the Board has authorized the Fund to use pricing services that provide daily fair value evaluations of the current value of certain investments, primarily fixed-income securities and OTC derivatives contracts. Different pricing services may provide different price evaluations for the same security because of differences in their methods of evaluating market values. Factors considered by pricing services in evaluating an investment include the yields or prices of investments of comparable quality, coupon, maturity, call rights and other potential prepayments, terms and type, reported transactions, indications as to values from dealers and general market conditions. A pricing service may find it more difficult to apply these and other factors to relatively illiquid or volatile investments, which may result in less frequent or more significant changes in the price evaluations of these investments. If a pricing service determines that it does not have sufficient information to use its standard methodology, it may evaluate an investment based on the present value of what investors can reasonably expect to receive from the issuer's operations or liquidation.

Some pricing services provide a single price evaluation reflecting the bid-side of the market for an investment (a "bid" evaluation). Other pricing services offer both bid evaluations and price evaluations indicative of a price between the prices bid and asked for the investment (a "mid" evaluation). The Fund normally uses bid evaluations for U.S. Treasury and Agency securities, mortgage-backed securities and municipal securities. The Fund normally uses mid evaluations for other types of fixed-income securities and OTC derivative contracts.

Fair Valuation Procedures. The Board has established procedures for determining the fair value of investments for which price evaluations from pricing services or dealers and market quotations are not readily available. The procedures define an investment's "fair value" as the price that the Fund might reasonably expect to receive upon its current sale. The procedures assume that any sale would be made to a willing buyer in the ordinary course of trading. The procedures require consideration of factors that vary based on the type of investment and the information available. Factors that may be considered in determining an investment's fair value include: (1) the last reported price at which the investment was traded; (2) information provided by dealers or investment analysts regarding the investment or the issuer; (3) changes in financial conditions and business prospects disclosed in the issuer's financial statements and other reports; (4) publicly announced transactions (such as tender offers and mergers) involving the issuer; (5) comparisons to other investments or to financial indices that are correlated to the investment; (6) with respect to fixed-income investments, changes in market yields and spreads; (7) with respect to investments that have been suspended from trading, the circumstances leading to the suspension; and (8) other factors that might affect the investment's value.

The Valuation Committee is responsible for the day-to-day implementation of these procedures. The Valuation Committee may also authorize the use of a financial valuation model to determine the fair value of a specific type of investment. The Board periodically reviews and approves the fair valuations made by the Valuation Committee and any changes made to the procedures.

Using fair value to price investments may result in a value that is different from an investment's most recent closing price and from the prices used by other mutual funds to calculate their NAVs. The fair value of an investment will generally remain unchanged in the absence of new information relating to the investment or its issuer, such as changes in the issuer's business or financial results, or relating to external market factors, such as trends in the market values of comparable securities. This may result in less frequent, and larger, changes in fair value prices as compared to prices based on market quotations or price evaluations from pricing services or dealers.

Significant Events. The Board has adopted procedures requiring an investment to be priced at its fair value whenever the Adviser determines that a significant event affecting the value of the investment has occurred between the time as of which the price of the investment would otherwise be determined and the time as of which the NAV is computed. An event is considered significant if there is both an affirmative expectation that the investment's value will change in response to the event and a reasonable basis for quantifying the resulting change in value. Examples of significant events that may occur after the close of the principal market on which a security is traded, or the time of a price evaluation provided by a pricing service or a dealer, include:

- With respect to securities traded principally in foreign markets, significant trends in U.S. equity markets or in the trading of foreign securities index futures contracts;
- With respect to price evaluations of fixed-income securities determined before the close of regular trading on the NYSE, actions by the Federal Reserve Open Market Committee and other significant trends in U.S. fixed-income markets;
- Political or other developments affecting the economy or markets in which an issuer conducts its operations or its securities are traded; and
- Announcements concerning matters such as acquisitions, recapitalizations or litigation developments, or a natural disaster affecting the issuer's operations or regulatory changes or market developments affecting the issuer's industry.

The Valuation Committee uses a pricing service to determine the fair value of equity securities traded principally in foreign markets when the Adviser determines that there has been a significant trend in the U.S. equity markets or in index futures trading. The pricing service uses models that correlate changes between the closing and opening price of equity securities traded primarily in non-U.S. markets to changes in prices in U.S.-traded securities and derivative contracts. The pricing service seeks to employ the model that provides the most significant correlation based on a periodic review of the results. The model uses the correlation to adjust the reported closing price of a foreign equity security based on information available up to the close of the NYSE.

For other significant events, the Fund may seek to obtain more current quotations or price evaluations from alternative pricing sources. If a reliable alternative pricing source is not available, the fair value of the investment is determined using the methods discussed above in "Fair Valuation Procedures." The Fund currently does not rely on price evaluations determined before the close of regular trading on the NYSE for any fixed-income securities. The Board has ultimate responsibility for any fair valuations made in response to a significant event.

Mixed Funding and Shared Funding

The practice of using shares as investments for both variable annuity contracts and variable life insurance policies is called "mixed funding." The practice of using shares as investments by separate accounts of unaffiliated life insurance companies is called "shared funding."

The Fund does engage in mixed funding and shared funding. Although the Fund does not currently foresee any disadvantage to contract owners due to differences in redemption rates, tax treatment or other considerations resulting from mixed funding or shared funding, the Trustees will closely monitor the operation of mixed funding and shared funding and will consider appropriate action to avoid material conflicts and take appropriate action in response to any material conflicts which occur. Such action could result in one or more participating insurance companies withdrawing their investment in the Fund.

How is the Fund Sold?

Under the Distributor's Contract with the Fund, the Distributor (Federated Securities Corp.) offers Shares on a continuous, best-efforts basis.

ADDITIONAL PAYMENTS TO FINANCIAL INTERMEDIARIES

The Distributor may pay out of its own resources amounts (including items of material value) to certain financial intermediaries. In some cases, such payments may be made by, or funded from the resources of, companies affiliated with the Distributor (including the Adviser). While Financial Industry Regulatory Authority (FINRA) regulations limit the sales charges that you may bear, there are no limits with regard to the amounts that the Distributor may pay out of its own resources. In addition to the payments which are generally described herein and in the Prospectus, the financial intermediary also may receive payments under the Rule 12b-1 Plan and/or Service Fees. In connection with these payments, the financial intermediary may elevate the prominence or profile of the Fund and/or other Federated funds within the financial intermediary's organization by, for example, placement on a list of preferred or recommended funds and/or granting the Distributor preferential or enhanced opportunities to promote the funds in various ways within the financial intermediary's organization. You can ask your financial intermediary for information about any payments it receives from the Distributor or the Federated funds and any services provided.

Regarding the Fund's share class, the share class of the Fund currently do not accrue, pay or incur any administrative service fees, although the Board of Trustees has approved the share class of the Fund to accrue, pay and incur such fees in amounts up to a maximum amount of 0.25%, or some lesser amount as the Board of Trustees shall approve from time to time. The share class of the Fund will not incur or charge such fees until such time as approved by the Fund's Board of Trustees.

The following examples illustrate the types of instances in which the Distributor may make additional payments to financial intermediaries.

Supplemental Payments

The Distributor may make supplemental payments to certain financial intermediaries that are holders or dealers of record for accounts in one or more of the Federated funds. These payments may be based on such factors as: the number or value of Shares the financial intermediary sells or may sell; the value of client assets invested; or the type and nature of services or support furnished by the financial intermediary.

Processing Support Payments

The Distributor may make payments to financial intermediaries that sell Federated fund shares to help offset their costs associated with client account maintenance support, statement processing and transaction processing. The types of payments that the Distributor may make under this category include: payment of ticket charges on a per-transaction basis; payment of networking fees; and payment for ancillary services such as setting up funds on the financial intermediary's mutual fund trading system.

Other Benefits to Financial Intermediaries

From time to time, the Distributor, at its expense, may provide additional compensation to financial intermediaries that sell or arrange for the sale of Shares. Such compensation may include financial assistance to financial intermediaries that enable the Distributor to participate in or present at conferences or seminars, sales or training programs for invited employees, client and investor events and other financial intermediary-sponsored events.

The Distributor also may hold or sponsor, at its expense, sales events, conferences and programs for employees or associated persons of financial intermediaries and may pay the travel and lodging expenses of attendees. The Distributor also may provide, at its expense, meals and entertainment in conjunction with meetings with financial intermediaries. Other compensation may be offered to the extent not prohibited by applicable laws, regulations or the rules of any self-regulatory agency, such as FINRA.

Purchases In-Kind

You may contact the Distributor to request a purchase of Shares using securities you own. The Fund reserves the right to determine whether to accept your securities and the minimum market value to accept. The Fund will value your securities in the same manner as it values its assets. An in-kind purchase may be treated as a sale of your securities for federal tax purposes; please consult your tax adviser regarding potential tax liability.

Subaccounting Services

Certain participating insurance companies may wish to use the transfer agent's subaccounting system to minimize their internal recordkeeping requirements. The transfer agent may charge a fee based on the level of subaccounting services rendered.

Participating insurance companies holding Shares in a fiduciary, agency, custodial or similar capacity may charge or pass through subaccounting fees as part of or in addition to normal trust or agency account fees. They may also charge fees for other services that may be related to the ownership of Shares. This information should, therefore, be read together with any agreement between the customer and the participating insurance company about the services provided, the fees charged for those services and any restrictions and limitations imposed.

Redemption In-Kind

Although the Fund generally intends to pay Share redemptions in cash, it reserves the right, on its own initiative or in response to a shareholder request, to pay the redemption price in whole or in part by a distribution of the Fund's portfolio securities.

Because the Fund has elected to be governed by Rule 18f-1 under the 1940 Act, the Fund is obligated to pay Share redemptions to any one shareholder in cash only up to the lesser of \$250,000 or 1% of the net assets represented by such Share class during any 90-day period.

Any Share redemption payment greater than this amount will also be in cash unless the Fund elects to pay all or a portion of the remainder of the redemption in portfolio securities, valued in the same way as the Fund determines its NAV.

Redemption in-kind is not as liquid as a cash redemption. Shareholders receiving the portfolio securities could have difficulty selling them, may incur related transaction costs and would be subject to risks of fluctuations in the securities' values prior to sale.

Massachusetts Partnership Law

Under certain circumstances, shareholders may be held personally liable as partners under Massachusetts law for obligations of the Trust. To protect its shareholders, the Trust has filed legal documents with Massachusetts that expressly disclaim the liability of its shareholders for acts or obligations of the Trust.

In the unlikely event a shareholder is held personally liable for the Trust's obligations, the Trust is required by the Declaration of Trust to use its property to protect or compensate the shareholder. On request, the Trust will defend any claim made and pay any judgment against a shareholder for any act or obligation of the Trust. Therefore, financial loss resulting from liability as a shareholder will occur only if the Trust itself cannot meet its obligations to indemnify shareholders and pay judgments against them.

Account and Share Information

VOTING RIGHTS

The insurance company separate accounts, as shareholders of the Fund, will vote the Fund Shares held in their separate accounts at meetings of the shareholders. Voting will be in accordance with instructions received from contract owners of the separate accounts, as more fully outlined in the prospectus of the separate account.

Each Share of the Fund gives the shareholder one vote in Trustee elections and other matters submitted to shareholders for vote.

All Shares of the Trust have equal voting rights, except that in matters affecting only a particular Fund or class, only shares of that Fund or class are entitled to vote.

Trustees may be removed by the Board or by shareholders at a special meeting. A special meeting of shareholders will be called by the Board upon the written request of shareholders who own at least 10% of the Trust's outstanding Shares of all series entitled to vote.

As of April 3, 2014, the following shareholders owned of record, beneficially, or both, 5% or more of outstanding Shares: Phoenix Home Life Variable Insurance Company, E. Greenbush, NY, owned approximately 8,468,780 Shares (46.75%); Phoenix Home Life Insurance Company, E. Greenbush, NY, owned approximately 2,399,462 Shares (13.24%); Great-West Life & Annuity Insurance Company, Greenwood Village, CO, owned approximately 1,649,935 Shares (9.10%); and Great-West Life & Annuity Insurance Company, Englewood, CO, owned approximately 1,586,032 Shares (8.75%).

Shareholders owning 25% or more of outstanding Shares may be in control and be able to affect the outcome of certain matters presented for a vote of shareholders.

Phoenix Home Life Variable Insurance Company is organized in the state of New York and is a subsidiary of PM Holdings, Inc.; organized in the state of Connecticut.

Tax Information

FEDERAL INCOME TAX

The Fund intends to meet requirements of Subchapter M of the Internal Revenue Code (“Code”) applicable to regulated investment companies. If these requirements are not met, it will not receive special tax treatment and will be subject to federal corporate income tax. Additionally, the Fund intends to comply with the diversification requirements of Section 817(h) of the Code.

The Fund will be treated as a single, separate entity for federal income tax purposes so that income earned and capital gains and losses realized by the Trust’s other portfolios will be separate from those realized by the Fund.

The Fund is entitled to a loss carryforward, which may reduce the taxable income or gain that the Fund would realize, and to which the shareholder would be subject, in the future.

TAX BASIS INFORMATION

Under the Energy Improvement and Extension Act of 2008, the Fund’s Transfer Agent will be required to provide you with the cost basis information on the sale of any of your Shares in the Fund, subject to certain exceptions. This cost basis reporting requirement is effective for shares purchased in the Fund on or after January 1, 2012.

Who Manages and Provides Services to the Fund?

BOARD OF TRUSTEES

The Board of Trustees is responsible for managing the Trust’s business affairs and for exercising all the Trust’s powers except those reserved for the shareholders. The following tables give information about each Trustee and the senior officers of the Fund. Where required, the tables separately list Trustees who are “interested persons” of the Fund (i.e., “Interested” Trustees) and those who are not (i.e., “Independent” Trustees). Unless otherwise noted, the address of each person listed is Federated Investors Tower, 1001 Liberty Avenue, Pittsburgh, PA 15222. The address of all Independent Trustees listed is 4000 Ericsson Drive, Warrendale, PA 15086-7561; Attention: Mutual Fund Board. As of December 31, 2013, the Trust comprised 7 portfolios, and the Federated Fund Complex consisted of 42 investment companies (comprising 135 portfolios). Unless otherwise noted, each Officer is elected annually. Unless otherwise noted, each Trustee oversees all portfolios in the Federated Fund Complex and serves for an indefinite term.

As of April 3, 2014, the Fund’s Board and Officers as a group owned less than 1% of the Fund’s outstanding Shares.

QUALIFICATIONS OF INDEPENDENT TRUSTEES

Individual Trustee qualifications are noted in the “Independent Trustees Background and Compensation” chart. In addition, the following characteristics are among those that were considered for each existing Trustee and will be considered for any Nominee Trustee.

- Outstanding skills in disciplines deemed by the Independent Trustees to be particularly relevant to the role of Independent Trustee and to the Federated funds, including legal, accounting, business management, the financial industry generally and the investment industry particularly.
- Desire and availability to serve for a substantial period of time, taking into account the Board’s current mandatory retirement age of 73 years.
- No conflicts which would interfere with qualifying as independent.
- Appropriate interpersonal skills to work effectively with other Independent Trustees.
- Understanding and appreciation of the important role occupied by Independent Trustees in the regulatory structure governing regulated investment companies.
- Diversity of background.

(investment advisory subsidiary of Federated); Senior Vice President, Global Portfolio Management Services Division; Senior Vice President, Federated Investment Management Company and Passport Research, Ltd.; Senior Managing Director and Portfolio Manager, Prudential Investments.
Robert J. Ostrowski Birth Date: April 26, 1963 CHIEF INVESTMENT OFFICER Officer since: May 2004	Principal Occupations: Robert J. Ostrowski joined Federated in 1987 as an Investment Analyst and became a Portfolio Manager in 1990. He was named Chief Investment Officer of Federated's taxable fixed-income products in 2004 and also serves as a Senior Portfolio Manager. Mr. Ostrowski became an Executive Vice President of the Fund's Adviser in 2009 and served as a Senior Vice President of the Fund's Adviser from 1997 to 2009. Mr. Ostrowski has received the Chartered Financial Analyst designation. He received his M.S. in Industrial Administration from Carnegie Mellon University.
Deborah A. Cunningham Birth Date: September 15, 1959 CHIEF INVESTMENT OFFICER Officer since: June 2012	Principal Occupations: Deborah A. Cunningham was named Chief Investment Officer of Federated's money market products in 2004. She joined Federated in 1981 and has been a Senior Portfolio Manager since 1997 and an Executive Vice President of the Fund's Adviser since 2009. Ms. Cunningham has received the Chartered Financial Analyst designation and holds an M.S.B.A. in Finance from Robert Morris College.

** Officers do not receive any compensation from the Fund.

In addition, the Fund has appointed an Anti-Money Laundering Compliance Officer.

BOARD LEADERSHIP STRUCTURE

As required under the terms of certain regulatory settlements, the Chairman of the Board is not an interested person of the Fund and neither the Chairman, nor any firm with which the Chairman is affiliated, has a prior relationship with Federated or its affiliates or (other than his position as a Trustee) with the Fund.

COMMITTEES OF THE BOARD

Board Committee	Committee Members	Committee Functions	Meetings Held During Last Fiscal Year
Executive	John F. Donahue Peter E. Madden John S. Walsh	In between meetings of the full Board, the Executive Committee generally may exercise all the powers of the full Board in the management and direction of the business and conduct of the affairs of the Trust in such manner as the Executive Committee shall deem to be in the best interests of the Trust. However, the Executive Committee cannot elect or remove Board members, increase or decrease the number of Trustees, elect or remove any Officer, declare dividends, issue shares or recommend to shareholders any action requiring shareholder approval.	One
Audit	Maureen Lally-Green Charles F. Mansfield, Jr. Thomas M. O'Neill John S. Walsh	The purposes of the Audit Committee are to oversee the accounting and financial reporting process of the Fund, the Fund's internal control over financial reporting and the quality, integrity and independent audit of the Fund's financial statements. The Committee also oversees or assists the Board with the oversight of compliance with legal requirements relating to those matters, approves the engagement and reviews the qualifications, independence and performance of the Fund's independent registered public accounting firm, acts as a liaison between the independent registered public accounting firm and the Board and reviews the Fund's internal audit function.	Eight
Nominating	John T. Collins Maureen Lally-Green Peter E. Madden Charles F. Mansfield, Jr. Thomas M. O'Neill P. Jerome Richey John S. Walsh	The Nominating Committee, whose members consist of all Independent Trustees, selects and nominates persons for election to the Fund's Board when vacancies occur. The Committee will consider candidates recommended by shareholders, Independent Trustees, officers or employees of any of the Fund's agents or service providers and counsel to the Fund. Any shareholder who desires to have an individual considered for nomination by the Committee must submit a recommendation in writing to the Secretary of the Fund, at the Fund's address appearing on the back cover of this SAI. The recommendation should include the name and address of both the shareholder and the candidate and detailed information concerning the candidate's qualifications and experience. In identifying and evaluating candidates for consideration, the Committee shall consider such factors as it deems appropriate. Those factors will ordinarily include: integrity, intelligence, collegiality, judgment, diversity, skill, business and other experience, qualification as an "Independent Trustee," the existence of material relationships which may create the appearance of a lack of independence, financial or accounting knowledge and experience and dedication and willingness to devote the time and attention necessary to fulfill Board responsibilities.	Two

BOARD'S ROLE IN RISK OVERSIGHT

The Board's role in overseeing the Fund's general risks includes receiving performance reports for the Fund and risk management reports from Federated's Chief Risk Officer at each regular Board meeting. The Chief Risk Officer is responsible for enterprise risk management at Federated, which includes risk management committees for investment management and for investor services. The Board also receives regular reports from the Fund's Chief Compliance Officer regarding significant compliance risks.

On behalf of the Board, the Audit Committee plays a key role overseeing the Fund's financial reporting and valuation risks. The Audit Committee meets regularly with the Fund's Principal Financial Officer and outside auditors, as well as with Federated's Chief Audit Executive to discuss financial reporting and audit issues, including risks relating to financial controls.

BOARD OWNERSHIP OF SHARES IN THE FUND AND IN THE FEDERATED FAMILY OF INVESTMENT COMPANIES AS OF DECEMBER 31, 2013

Interested Board Member Name	Dollar Range of Shares Owned in Federated Fund for U.S. Government Securities II	Aggregate Dollar Range of Shares Owned in Federated Family of Investment Companies

John T. Collins		None
Maureen Lally-Green		Over \$100,000
Peter E. Madden	None	Over \$100,000
Charles F. Mansfield, Jr.	None	Over \$100,000
Thomas M. O'Neill	None	Over \$100,000
P. Jerome Richey		None
John S. Walsh	None	Over \$100,000

INVESTMENT ADVISER

The Adviser conducts investment research and makes investment decisions for the Fund.

The Adviser is a wholly owned subsidiary of Federated.

The Adviser shall not be liable to the Trust or any Fund shareholder for any losses that may be sustained in the purchase, holding or sale of any security or for anything done or omitted by it, except acts or omissions involving willful misfeasance, bad faith, gross negligence or reckless disregard of the duties imposed upon it by its contract with the Trust.

Portfolio Manager Information

As a general matter, certain conflicts of interest may arise in connection with a portfolio manager's management of a fund's investments, on the one hand, and the investments of other accounts for which the portfolio manager is responsible, on the other. For example, it is possible that the various accounts managed could have different investment strategies that, at times, might conflict with one another to the possible detriment of the Fund. Alternatively, to the extent that the same investment opportunities might be desirable for more than one account, possible conflicts could arise in determining how to allocate them. Other potential conflicts might include conflicts created by specific portfolio manager compensation arrangements, and conflicts relating to selection of brokers or dealers to execute Fund portfolio trades and/or specific uses of commissions from Fund portfolio trades (for example, research or "soft dollars"). The Adviser has adopted policies and procedures and has structured the portfolio managers' compensation in a manner reasonably designed to safeguard the Fund from being negatively affected as a result of any such potential conflicts.

The following information about the Fund's Portfolio Manager is provided as of the end of the Fund's most recently completed fiscal year unless otherwise indicated.

Todd Abraham, Portfolio Manager

Types of Accounts Managed by Todd Abraham	Total Number of Additional Accounts Managed/Total Assets*
Registered Investment Companies	17/\$4.8 billion
Other Pooled Investment Vehicles	0/\$0
Other Accounts	0/\$0

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

Todd Abraham is paid a fixed-base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager's experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. ("Federated"). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

Mr. Abraham's IPP is measured on a rolling one, three and five calendar year pre-tax gross total return basis vs. the Fund's benchmark (i.e., Barclays Mortgage-Backed Securities Index) and vs. the Fund's designated peer group of comparable accounts. Performance periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one year of performance history under a portfolio manager may be excluded. As noted above, Mr. Abraham is also the portfolio manager for other accounts in addition to the Fund. Such other accounts may have different benchmarks. The performance of certain of these accounts is excluded when calculating IPP. Within each performance measurement period, IPP is calculated with an equal weighting of each included account managed by the portfolio manager. In his role as co-head of the government/mortgage-backed, fixed-income group, Mr. Abraham has oversight responsibility for other portfolios that he does not personally manage. A portion of the IPP score is determined by the investment performance of these other portfolios vs. product specific benchmarks. In addition, Mr. Abraham serves on one or more Investment Teams that establish guidelines on various performance drivers (e.g., currency, duration, sector, volatility and/or yield curve) for taxable, fixed-income funds. A portion of the IPP score is based on Federated's senior management's assessment of team contributions. A portion of the bonus tied to the IPP score may be adjusted based on management's assessment of overall contributions to Fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager's bonus, in part, to Federated's overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

In addition, Mr. Abraham was awarded a grant of restricted Federated stock. Awards of restricted stock are discretionary and are made in variable amounts based on the subjective judgment of Federated's senior management.

Services Agreement

Federated Advisory Services Company, an affiliate of the Adviser, provides certain support services to the Adviser. The fee for these services is paid by the Adviser and not by the Fund.

Other Related Services

Affiliates of the Adviser may, from time to time, provide certain electronic equipment and software to institutional customers in order to facilitate the purchase of Fund Shares offered by the Distributor.

CODE OF ETHICS RESTRICTIONS ON PERSONAL TRADING

As required by SEC rules, the Fund, its Adviser and its Distributor have adopted codes of ethics. These codes govern securities trading activities of investment personnel, Fund Trustees and certain other employees. Although they do permit these people to trade in securities, including those that the Fund could buy, as well as Shares of the Fund, they also contain significant safeguards designed to protect the Fund and its shareholders from abuses in this area, such as requirements to obtain prior approval for, and to report, particular transactions.

VOTING PROXIES ON FUND PORTFOLIO SECURITIES

The Board has delegated to the Adviser authority to vote proxies on the securities held in the Fund's portfolio. The Board has also approved the Adviser's policies and procedures for voting the proxies, which are described below.

Proxy Voting Policies

The Adviser's general policy is to cast proxy votes in favor of proposals that the Adviser anticipates will enhance the long-term value of the securities being voted. Generally, this will mean voting for proposals that the Adviser believes will: improve the management of a company; increase the rights or preferences of the voted securities; and/or increase the chance that a premium offer would be made for the company or for the voted securities.

The following examples illustrate how these general policies may apply to proposals submitted by a company's board of directors. However, whether the Adviser supports or opposes a proposal will always depend on the specific circumstances described in the proxy statement and other available information.

On matters of corporate governance, generally the Adviser will vote *for* the full slate of directors nominated in an uncontested election; and *for* proposals to: require a company's audit committee to be comprised entirely of independent directors; require independent tabulation of proxies and/or confidential voting by shareholders; reorganize in another jurisdiction (unless it would reduce the rights or preferences of the securities being voted); ratify the board's selection of auditors (unless compensation for non-audit services exceeded 50% of the total compensation received from the company, or the previous auditor was dismissed because of a disagreement with the company); and repeal a shareholder rights plan (also known as a "poison pill"). The Adviser will generally vote *against* the adoption of such a plan (unless the plan is designed to facilitate, rather than prevent, unsolicited offers for the company).

On matters of capital structure, generally the Adviser will vote: *against* proposals to authorize or issue shares that are senior in priority or voting rights to the securities being voted; and *for* proposals to: reduce the amount of shares authorized for issuance; authorize a stock repurchase program; and grant preemptive rights to the securities being voted. The Adviser will generally vote *against* proposals to eliminate such preemptive rights.

On matters relating to management compensation, generally the Adviser will vote: *for* stock incentive plans that align the recipients' interests with the interests of shareholders without creating undue dilution; *against* proposals that would permit the amendment or replacement of outstanding stock incentives with new stock incentives having more favorable terms; and *against* executive compensation plans that do not disclose the maximum amounts of compensation that may be awarded or the criteria for determining awards.

On matters relating to corporate transactions, the Adviser will vote proxies relating to proposed mergers, capital reorganizations and similar transactions in accordance with the general policy, based upon its analysis of the proposed transaction. The Adviser will vote proxies in contested elections of directors in accordance with the general policy, based upon its analysis of the opposing slates and their respective proposed business strategies. Some transactions may also involve proposed changes to the company's corporate governance, capital structure or management compensation. The Adviser will vote on such changes based on its evaluation of the proposed transaction or contested election. In these circumstances, the Adviser may vote in a manner contrary to the general practice for similar proposals made outside the context of such a proposed transaction or change in the board. For example, if the Adviser decides to vote against a proposed transaction, it may vote for anti-takeover measures reasonably designed to prevent the transaction, even though the Adviser typically votes against such measures in other contexts.

The Adviser generally votes *against* proposals submitted by shareholders without the favorable recommendation of a company's board. The Adviser believes that a company's board should manage its business and policies, and that shareholders who seek specific changes should strive to convince the board of their merits or seek direct representation on the board.

In addition, the Adviser will not vote if it determines that the consequences or costs outweigh the potential benefit of voting. For example, if a foreign market requires shareholders casting proxies to retain the voted shares until the meeting date (thereby rendering the shares "illiquid" for some period of time), the Adviser will not vote proxies for such shares.

Proxy Voting Procedures

The Adviser has established a Proxy Voting Committee ("Proxy Committee"), to exercise all voting discretion granted to the Adviser by the Board in accordance with the proxy voting policies. The Adviser has hired Glass Lewis & Co. (GL) to obtain, vote and record proxies in accordance with the Proxy Committee's directions. The Proxy Committee has supplied GL with general voting instructions that represent decisions made by the Proxy Committee in order to vote common proxy proposals; however, the Proxy Committee retains the right to modify these voting instructions at any time or to vote contrary to the voting instructions at any time in order to cast proxy votes in a manner that the Proxy Committee believes is consistent with the Adviser's general policy. GL may vote any proxy as directed in the voting instructions without further direction from the Proxy Committee and may make any determinations required to implement the voting instructions. However, if the voting instructions require case-by-case direction for a proposal, GL shall provide the Proxy Committee with all information that it has obtained regarding the proposal and the Proxy Committee will provide specific direction to GL.

Conflicts of Interest

The Adviser has adopted procedures to address situations where a matter on which a proxy is sought may present a potential conflict between the interests of the Fund (and its shareholders) and those of the Adviser or Distributor. This may occur where a significant business relationship exists between the Adviser (or its affiliates) and a company involved with a proxy vote. A company that is a proponent, opponent or the subject of a proxy vote and which to the knowledge of the Proxy Committee has this type of significant business relationship, is referred to as an "Interested Company."

The Adviser has implemented the following procedures in order to avoid concerns that the conflicting interests of the Adviser have influenced proxy votes. Any employee of the Adviser who is contacted by an Interested Company regarding proxies to be voted by the Adviser must refer the Interested Company to a member of the Proxy Committee, and must inform the Interested Company that the Proxy Committee has exclusive authority to determine how the Adviser will vote. Any Proxy Committee

member contacted by an Interested Company must report it to the full Proxy Committee and provide a written summary of the communication. Under no circumstances will the Proxy Committee or any member of the Proxy Committee make a commitment to an Interested Company regarding the voting of proxies or disclose to an Interested Company how the Proxy Committee has directed such proxies to be voted. If the voting instructions already provide specific direction on the proposal in question, the Proxy Committee shall not alter or amend such directions. If the voting instructions require the Proxy Committee to provide further direction, the Proxy Committee shall do so in accordance with the proxy voting policies, without regard for the interests of the Adviser with respect to the Interested Company. If the Proxy Committee provides any direction as to the voting of proxies relating to a proposal affecting an Interested Company, it must disclose to the Fund's Board information regarding: the significant business relationship; any material communication with the Interested Company; the matter(s) voted on; and how, and why, the Adviser voted as it did. Alternatively, the Proxy Committee may seek direction from the Fund's Board on how a proposal concerning an Interested Company shall be voted, and shall follow any such direction provided by the Board. In seeking such direction, the Proxy Committee will disclose the reason such company is considered an Interested Company and may provide a recommendation on how such proposal should be voted and the basis for such recommendation.

If the Fund holds shares of another investment company for which the Adviser (or an affiliate) acts as an investment adviser, the Proxy Committee will vote the Fund's proxies in the same proportion as the votes cast by shareholders who are not clients of the Adviser at any shareholders' meeting called by such investment company, unless otherwise directed by the Board.

Proxy Voting Report

A report on "Form N-PX" of how the Fund voted any proxies during the most recent 12-month period ended June 30 is available via the Proxy Voting Record (Form N-PX) link associated with the Fund and share class name at www.Federatedinvestors.com/FundInformation. Form N-PX filings are also available at the SEC's website at www.sec.gov.

PORTFOLIO HOLDINGS INFORMATION

Information concerning the Fund's portfolio holdings is available via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. A complete listing of the Fund's portfolio holdings as of the end of each calendar quarter is posted on the website 30 days (or the next business day) after the end of the quarter and remains posted for six months thereafter. Summary portfolio composition information as of the close of each month is posted on the website 15 days (or the next business day) after month-end and remains posted until replaced by the information for the succeeding month. The summary portfolio composition information may include: identification of the Fund's top 10 holdings, and a percentage breakdown of the portfolio by sector.

You may also access portfolio information as of the end of the Fund's fiscal quarters via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. The Fund's Annual Shareholder Report and Semi-Annual Shareholder Report contain complete listings of the Fund's portfolio holdings as of the end of the Fund's second and fourth fiscal quarters. The Fund's Form N-Q filings contain complete listings of the Fund's portfolio holdings as of the end of the Fund's first and third fiscal quarters. Fiscal quarter information is made available on the website within 70 days after the end of the fiscal quarter. This information is also available in reports filed with the SEC at the SEC's website at www.sec.gov.

The disclosure policy of the Fund and the Adviser prohibits the disclosure of portfolio holdings information to any investor or intermediary before the same information is made available to other investors. Employees of the Adviser or its affiliates who have access to nonpublic information concerning the Fund's portfolio holdings are prohibited from trading securities on the basis of this information. Such persons must report all personal securities trades and obtain pre-clearance for all personal securities trades other than mutual fund shares.

Firms that provide administrative, custody, financial, accounting, legal or other services to the Fund may receive nonpublic information about Fund portfolio holdings for purposes relating to their services. The Fund may also provide portfolio holdings information to publications that rate, rank or otherwise categorize investment companies. Traders or portfolio managers may provide "interest" lists to facilitate portfolio trading if the list reflects only that subset of the portfolio for which the trader or portfolio manager is seeking market interest. A list of service providers, publications and other third parties who may receive nonpublic portfolio holdings information appears in the Appendix to this SAI.

The furnishing of nonpublic portfolio holdings information to any third party (other than authorized governmental or regulatory personnel) requires the prior approval of the President of the Adviser and of the Chief Compliance Officer of the Fund. The President of the Adviser and the Chief Compliance Officer will approve the furnishing of nonpublic portfolio holdings information to a third party only if they consider the furnishing of such information to be in the best interests of the Fund and its shareholders. In that regard, and to address possible conflicts between the interests of Fund shareholders and those of the Adviser and its affiliates, the following procedures apply. No consideration may be received by the Fund, the Adviser, any affiliate of the Adviser or any of their employees in connection with the disclosure of portfolio holdings information. Before information is furnished, the third party must sign a written agreement that it will safeguard the confidentiality of the information, will use it only

for the purposes for which it is furnished and will not use it in connection with the trading of any security. Persons approved to receive nonpublic portfolio holdings information will receive it as often as necessary for the purpose for which it is provided. Such information may be furnished as frequently as daily and often with no time lag between the date of the information and the date it is furnished. The Board receives and reviews annually a list of the persons who receive nonpublic portfolio holdings information and the purposes for which it is furnished.

BROKERAGE TRANSACTIONS AND INVESTMENT ALLOCATION

When selecting brokers and dealers to handle the purchase and sale of portfolio instruments, the Adviser looks for prompt execution of the order at a favorable price. Fixed-income securities are generally traded in an over-the-counter market on a net basis (i.e., without commission) through dealers acting as principal or in transactions directly with the issuer. Dealers derive an undisclosed amount of compensation by offering securities at a higher price than they bid for them. Some fixed-income securities may have only one primary market maker. The Adviser seeks to use dealers it believes to be actively and effectively trading the security being purchased or sold, but may not always obtain the lowest purchase price or highest sale price with respect to a security. The Adviser makes decisions on portfolio transactions and selects brokers and dealers subject to review by the Fund’s Board.

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. When the Fund and one or more of those accounts invests in, or disposes of, the same security, available investments or opportunities for sales will be allocated among the Fund and the account(s) in a manner believed by the Adviser to be equitable. While the coordination and ability to participate in volume transactions may benefit the Fund, it is possible that this procedure could adversely impact the price paid or received and/or the position obtained or disposed of by the Fund. Investment decisions, and trading, for certain separately managed or wrap-fee accounts, and other accounts, of the Adviser and/or certain investment adviser affiliates of the Adviser are generally made, and conducted, independently from the Fund. It is possible that such independent trading activity could adversely impact the prices paid or received and/or positions obtained or disposed of by the Fund.

ADMINISTRATOR

Federated Administrative Services (FAS), a subsidiary of Federated, provides administrative personnel and services, including certain legal, compliance, recordkeeping and financial reporting services (“Administrative Services”), necessary for the operation of the Fund. FAS provides Administrative Services for a fee based upon the rates set forth below paid on the average daily net assets of the Fund. For purposes of determining the appropriate rate breakpoint, “Investment Complex” is defined as all of the Federated Funds subject to a fee under the Administrative Services Agreement with FAS. FAS is also entitled to reimbursement for certain out-of-pocket expenses incurred in providing Administrative Services to the Fund.

Administrative Services Fee Rate	Average Daily Net Assets of the Investment Complex
0.150 of 1%	on the first \$5 billion
0.125 of 1%	on the next \$5 billion
0.100 of 1%	on the next \$10 billion
0.075 of 1%	on assets over \$20 billion

CUSTODIAN

State Street Bank and Trust Company, Boston, Massachusetts, is custodian for the securities and cash of the Fund.

TRANSFER AGENT AND DIVIDEND DISBURSING AGENT

State Street Bank and Trust Company, the Fund’s registered transfer agent, maintains all necessary shareholder records.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The independent registered public accounting firm for the Fund, KPMG LLP, conducts its audits in accordance with the standards of the Public Company Accounting Oversight Board (United States), which require it to plan and perform its audits to provide reasonable assurance about whether the Fund’s financial statements and financial highlights are free of material misstatement.

FEES PAID BY THE FUND FOR SERVICES

For the Year Ended December 31	2013	2012	2011
Advisory Fee Earned	\$1,335,751	\$1,568,983	\$1,741,883
Advisory Fee Waived	\$ 63,144	\$ 10,839	\$ 54,732
Net Administrative Fee	\$ 173,733	\$ 200,667	\$ 220,929

Financial Information

The Financial Statements for the Fund for the fiscal year ended December 31, 2013, are incorporated herein by reference to the Annual Report to Shareholders of Federated Fund for U.S. Government Securities II dated December 31, 2013.

Investment Ratings

STANDARD & POOR'S RATING SERVICES (S&P) LONG-TERM ISSUE RATINGS

Issue credit ratings are based, in varying degrees, on S&P's analysis of the following considerations: the likelihood of payment—capacity and willingness of the obligor to meet its financial commitment on an obligation in accordance with the terms of the obligation; the nature of and provisions of the obligation; and the protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

AAA—An obligation rated “AAA” has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

AA—An obligation rated “AA” differs from the highest rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

A—An obligation rated “A” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

BBB—An obligation rated “BBB” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated “BB,” “B,” “CCC,” “CC” and “C” are regarded as having significant speculative characteristics. “BB” indicates the least degree of speculation and “C” the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

BB—An obligation rated “BB” is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

B—An obligation rated “B” is more vulnerable to nonpayment than obligations rated “BB,” but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

CCC—An obligation rated “CCC” is currently vulnerable to nonpayment, and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

CC—An obligation rated “CC” is currently highly vulnerable to nonpayment.

C—A “C” rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents, or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the “C” rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have been suspended in accordance with the instrument's terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

D—An obligation rated “D” is in payment default. The “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within five business days, irrespective of any grace period. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation's rating is lowered to “D” upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

The ratings from “AA” to “CCC” may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

S&P RATING OUTLOOK

An S&P rating outlook assesses the potential direction of a long-term credit rating over the intermediate term (typically six months to two years). In determining a rating outlook, consideration is given to any changes in the economic and/or fundamental business conditions.

Positive—Positive means that a rating may be raised.

Negative—Negative means that a rating may be lowered.

Stable—Stable means that a rating is not likely to change.

Developing—Developing means a rating may be raised or lowered.

N.M.—N.M. means not meaningful.

S&P SHORT-TERM ISSUE RATINGS

Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the United States, for example, that means obligations with an original maturity of no more than 365 days—including commercial paper.

A-1—A short-term obligation rated “A-1” is rated in the highest category by S&P. The obligor’s capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor’s capacity to meet its financial commitment on these obligations is extremely strong.

A-2—A short-term obligation rated “A-2” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor’s capacity to meet its financial commitment on the obligation is satisfactory.

A-3—A short-term obligation rated “A-3” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

B—A short-term obligation rated “B” is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor’s inadequate capacity to meet its financial commitments.

C—A short-term obligation rated “C” is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

D—A short-term obligation rated “D” is in payment default. The “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

MOODY’S INVESTOR SERVICES, INC. (MOODY’S) LONG-TERM RATINGS

Moody’s long-term ratings are assigned to issuers or obligations with an original maturity of one year or more and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default.

Aaa—Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa—Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A—Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa—Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba—Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B—Obligations rated B are considered speculative and are subject to high credit risk.

Caa—Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca—Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C—Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Moody’s appends numerical modifiers 1, 2 and 3 to each generic rating classification from Aaa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

MOODY'S SHORT-TERM RATINGS

Moody's short-term ratings are assigned to obligations with an original maturity of 13 months or less and reflect the likelihood of a default on contractually promised payments.

P-1—Issuers (or supporting institutions) rated P-1 have a superior ability to repay short-term debt obligations.

P-2—Issuers (or supporting institutions) rated P-2 have a strong ability to repay short-term debt obligations.

P-3—Issuers (or supporting institutions) rated P-3 have an acceptable ability to repay short-term obligations.

NP—Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

FITCH, INC. (FITCH) LONG-TERM DEBT RATINGS

Fitch long-term ratings report Fitch's opinion on an entity's relative vulnerability to default on financial obligations. The "threshold" default risk addressed by the rating is generally that of the financial obligations whose non-payment would best reflect the uncured failure of that entity. As such, Fitch long-term ratings also address relative vulnerability to bankruptcy, administrative receivership or similar concepts, although the agency recognizes that issuers may also make pre-emptive and therefore voluntary use of such mechanisms.

AAA: Highest Credit Quality—"AAA" ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA: Very High Credit Quality—"AA" ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A: High Credit Quality—"A" ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB: Good Credit Quality—"BBB" ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity.

BB: Speculative—"BB" ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial flexibility exists which supports the servicing of financial commitments.

B: Highly Speculative—"B" ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

CCC: Substantial Credit Risk—Default is a real possibility.

CC: Very High Levels of Credit Risk—Default of some kind appears probable.

C: Exceptionally High Levels of Credit Risk—Default is imminent or inevitable, or the issuer is in standstill. Conditions that are indicative of a "C" category rating for an issuer include: (a) the issuer has entered into a grace or cure period following non-payment of a material financial obligation; (b) the issuer has entered into a temporary negotiated waiver or standstill agreement following a payment default on a material financial obligation; or (c) Fitch otherwise believes a condition of "RD" or "D" to be imminent or inevitable, including through the formal announcement of a distressed debt exchange.

RD: Restricted Default—"RD" ratings indicate an issuer that in Fitch's opinion has experienced an uncured payment default on a bond, loan or other material financial obligation but which has not entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, and which has not otherwise ceased operating. This would include: (a) the selective payment default on a specific class or currency of debt; (b) the uncured expiry of any applicable grace period, cure period or default forbearance period following a payment default on a bank loan, capital markets security or other material financial obligation; (c) the extension of multiple waivers or forbearance periods upon a payment default on one or more material financial obligations, either in series or in parallel; or (d) execution of a distressed debt exchange on one or more material financial obligations.

D: Default—"D" ratings indicate an issuer that in Fitch's opinion has entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, or which has otherwise ceased business.

Default ratings are not assigned prospectively to entities or their obligations; within this context, non-payment on an instrument that contains a deferral feature or grace period will generally not be considered a default until after the expiration of the deferral or grace period, unless a default is otherwise driven by bankruptcy or other similar circumstance, or by a distressed debt exchange.

“Imminent” default typically refers to the occasion where a payment default has been intimated by the issuer, and is all but inevitable. This may, for example, be where an issuer has missed a scheduled payment, but (as is typical) has a grace period during which it may cure the payment default. Another alternative would be where an issuer has formally announced a distressed debt exchange, but the date of the exchange still lies several days or weeks in the immediate future.

In all cases, the assignment of a default rating reflects the agency’s opinion as to the most appropriate rating category consistent with the rest of its universe of ratings, and may differ from the definition of default under the terms of an issuer’s financial obligations or local commercial practice.

FITCH SHORT-TERM DEBT RATINGS

A Fitch short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-Term Ratings are assigned to obligations whose initial maturity is viewed as “short-term” based on market convention. Typically, this means up to 13 months for corporate, sovereign, and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

F1: Highest Short-Term Credit Quality—Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

F2: Good Short-Term Credit Quality—Good intrinsic capacity for timely payment of financial commitments.

F3: Fair Short-Term Credit Quality—The intrinsic capacity for timely payment of financial commitments is adequate.

B: Speculative Short-Term Credit Quality—Minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near-term adverse changes in financial and economic conditions.

C: High Short-Term Default Risk—Default is a real possibility.

RD: Restricted Default—Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Applicable to entity ratings only.

D: Default—Indicates a broad-based default event for an entity, or the default of a short-term obligation.

A.M. BEST COMPANY, INC. (A.M. BEST) LONG-TERM DEBT AND PREFERRED STOCK RATINGS

A Best’s long-term debt rating is Best’s independent opinion of an issuer/entity’s ability to meet its ongoing financial obligations to security holders when due.

aaa: Exceptional—Assigned to issues where the issuer has an exceptional ability to meet the terms of the obligation.

aa: Very Strong—Assigned to issues where the issuer has a very strong ability to meet the terms of the obligation.

a: Strong—Assigned to issues where the issuer has a strong ability to meet the terms of the obligation.

bbb: Adequate—Assigned to issues where the issuer has an adequate ability to meet the terms of the obligation; however, the issue is more susceptible to changes in economic or other conditions.

bb: Speculative—Assigned to issues where the issuer has speculative credit characteristics, generally due to a modest margin or principal and interest payment protection and vulnerability to economic changes.

b: Very Speculative—Assigned to issues where the issuer has very speculative credit characteristics, generally due to a modest margin of principal and interest payment protection and extreme vulnerability to economic changes.

ccc, cc, c: Extremely Speculative—Assigned to issues where the issuer has extremely speculative credit characteristics, generally due to a minimal margin of principal and interest payment protection and/or limited ability to withstand adverse changes in economic or other conditions.

d: In Default—Assigned to issues in default on payment of principal, interest or other terms and conditions, or when a bankruptcy petition or similar action has been filed.

Ratings from “aa” to “ccc” may be enhanced with a “+” (plus) or “-” (minus) to indicate whether credit quality is near the top or bottom of a category.

A.M. BEST SHORT-TERM DEBT RATINGS

A Best’s short-term debt rating is Best’s opinion of an issuer/entity’s ability to meet its financial obligations having original maturities of generally less than one year, such as commercial paper.

AMB-1+ Strongest—Assigned to issues where the issuer has the strongest ability to repay short-term debt obligations.

AMB-1 Outstanding—Assigned to issues where the issuer has an outstanding ability to repay short-term debt obligations.

AMB-2 Satisfactory—Assigned to issues where the issuer has a satisfactory ability to repay short-term debt obligations.

AMB-3 Adequate—Assigned to issues where the issuer has an adequate ability to repay short-term debt obligations; however, adverse economic conditions likely will reduce the issuer’s capacity to meet its financial commitments.

AMB-4 Speculative—Assigned to issues where the issuer has speculative credit characteristics and is vulnerable to adverse economic or other external changes, which could have a marked impact on the company’s ability to meet its financial commitments.

d: In Default—Assigned to issues in default on payment of principal, interest or other terms and conditions, or when a bankruptcy petition or similar action has been filed.

A.M. BEST RATING MODIFIERS

Both long- and short-term credit ratings can be assigned a modifier.

u—Indicates the rating may change in the near term, typically within six months. Generally is event-driven, with positive, negative or developing implications.

pd—Indicates ratings assigned to a company that chose not to participate in A.M. Best’s interactive rating process. (Discontinued in 2010).

i—Indicates rating assigned is indicative.

A.M. BEST RATING OUTLOOK

A.M. Best Credit Ratings are assigned a Rating Outlook that indicates the potential direction of a credit rating over an intermediate term, generally defined as the next 12 to 36 months.

Positive—Indicates possible ratings upgrade due to favorable financial/market trends relative to the current trading level.

Negative—Indicates possible ratings downgrade due to unfavorable financial/market trends relative to the current trading level.

Stable—Indicates low likelihood of rating change due to stable financial/market trends.

NOT RATED

Certain nationally recognized statistical rating organizations (NRSROs) may designate certain issues as NR, meaning that the issue or obligation is not rated.

How is the Fund Organized?

The Fund is a diversified portfolio of Federated Insurance Series (“Trust”). The Trust is an open-end, management investment company that was established under the laws of the Commonwealth of Massachusetts on September 15, 1993. The Trust may offer separate series of shares representing interests in separate portfolios of securities.

The Board of Trustees (the “Board”) has established two classes of shares of the Fund, known as Primary Shares and Service Shares (“Shares”). This SAI relates to both classes of Shares. The Fund’s investment adviser is Federated Investment Management Company (“Adviser”).

Securities in Which the Fund Invests

The principal securities or other investments in which the Fund invests are described in the Fund’s Prospectus. The Fund also may invest in securities or other investments as non-principal investments for any purpose that is consistent with its investment objective. The following information is either additional information in respect of a principal security or other investment referenced in the Prospectus or information in respect of a non-principal security or other investment (in which case there is no related disclosure in the Prospectus).

SECURITIES DESCRIPTIONS AND TECHNIQUES

FIXED-INCOME SECURITIES

Fixed-income securities pay interest, dividends or distributions at a specified rate. The rate may be a fixed percentage of the principal or adjusted periodically. In addition, the issuer of a fixed-income security must repay the principal amount of the security, normally within a specified time. Fixed-income securities provide more regular income than equity securities. However, the returns on fixed-income securities are limited and normally do not increase with the issuer’s earnings. This limits the potential appreciation of fixed-income securities as compared to equity securities.

A security’s yield measures the annual income earned on a security as a percentage of its price. A security’s yield will increase or decrease depending upon whether it costs less (a “discount”) or more (a “premium”) than the principal amount. If the issuer may redeem the security before its scheduled maturity, the price and yield on a discount or premium security may change based upon the probability of an early redemption. Securities with higher risks generally have higher yields.

The following further describes the types of fixed-income securities in which the Fund invests. This information is either additional information in respect of a principal security referenced in the Prospectus or information in respect of a non-principal security (in which case there is no related disclosure in the Prospectus).

Loan Instruments (A Fixed-Income Security)

The Fund may invest in loans and loan-related instruments, which are generally interests in amounts owed by a corporate, governmental, or other borrower to lenders or groups of lenders known as lending syndicates (loans and loan participations). Such instruments include, but are not limited to, interests in trade finance loan transactions, pre-export/import finance transactions, factoring, syndicated loan transactions and forfaiting transactions.

Trade finance refers generally to loans made to producers, sellers, importers and/or exporters in relation to commodities, goods or services. Such loans typically have short- to medium-term maturities and will generally be self-liquidating (i.e., as the goods or commodities are sold, proceeds from payments for such goods or commodities are used to pay the principal on the loan prior to being distributed to the borrower). Types of trade finance related loans include, but are not limited to structured finance transactions, pre-export/import finance transactions, project financing and forfaiting transactions.

Typically, administration of the instrument, including the collection and allocation of principal and interest payments due from the borrower, is the responsibility of a single bank that is a member of the lending syndicate and referred to as the agent bank or mandated lead arranger. A financial institution’s employment as agent bank might be terminated in the event that it fails to observe a requisite standard of care or becomes insolvent. A successor agent bank would generally be appointed to replace the terminated agent bank, and assets held by the agent bank under the loan agreement should remain available to holders of such indebtedness. However, if assets held by the agent bank for the benefit of a Fund were determined to be subject to the claims of the agent bank’s general creditors, the Fund might incur certain costs and delays in realizing payment on a loan assignment or loan participation and could suffer a loss of principal and/or interest. In situations involving other interposed financial institutions (e.g., an insurance company or governmental agency) similar risks may arise.

Loan instruments may be secured or unsecured. If secured, then the lenders have been granted rights to specific property, which is commonly referred to as collateral. The purpose of securing loans is to allow the lenders to exercise rights over the collateral if a loan is not repaid as required by the terms of the loan agreement. Collateral may include security interests in receivables, goods, commodities or real property. With regard to trade finance loan transactions the collateral itself may be the source of proceeds to repay the loan (i.e., the borrower's ability to repay the loan will be dependent on the borrower's ability to sell, and the purchaser's ability to buy, the goods or commodities that are collateral for the loan). Interests in loan instruments may also be tranching or tiered with respect to collateral rights. Unsecured loans expose the lenders to increased credit risk.

The loan instruments in which the Fund may invest may involve borrowers, agent banks, co-lenders and collateral located both in the United States and outside of the United States (in both developed and emerging markets).

The Fund treats loan instruments as a type of fixed-income security. Investments in loan instruments may expose the Fund to interest rate risk, risks of investing in foreign securities, credit risk, liquidity risk, risks of noninvestment-grade securities, risks of emerging markets and leverage risk. (For purposes of the descriptions in this SAI of these various risks, references to "issuer," include borrowers under loan instruments.) Many loan instruments incorporate risk mitigation, credit enhancement (e.g., standby letters of credit) and insurance products into their structures, in order to manage these risks. There is no guarantee that these risk management techniques will work as intended.

Loans and loan-related instruments are generally considered to be illiquid due to the length of time required to transfer an interest in a loan or a related instrument. Additionally, in the case of some loans, such as those related to trade finance, there is a limited secondary market. The liquidity of a particular loan will be determined by the Adviser under guidelines adopted by the Fund's board.

Loan Assignments (A Type of Loan Instrument)

The Fund may purchase a loan assignment from the agent bank or other member of the lending syndicate. Investments in loans through an assignment may involve additional risks to the Funds. For example, if a loan is foreclosed, a Fund could become part owner of any collateral, and would bear the costs and liabilities associated with owning and disposing of the collateral. In addition, it is conceivable that under emerging legal theories of lender liability, a Fund could be held liable as co-lender. It is unclear whether loans and other forms of direct indebtedness offer securities law protections against fraud and misrepresentation. In the absence of definitive regulatory guidance, the Funds rely on the Adviser's research in an attempt to avoid situations where fraud or misrepresentation could adversely affect the Funds.

Loan Participations (A Type of Loan Instrument)

The Fund may purchase a funded participation interest in a loan, by which the Fund has the right to receive payments of principal, interest and fees from an intermediary (typically a bank, financial institution or lending syndicate) that has a direct contractual relationship with a borrower. In loan participations, the Fund does not have a direct contractual relationship with the borrower.

The Fund may also purchase a type of a participation interest, known as risk participation interest. In this case, the Fund will receive a fee in exchange for the promise to make a payment to a lender if a borrower fails to make a payment of principal, interest or fees, as required by the loan agreement.

When purchasing loan participations, the Fund will be exposed to credit risk of the borrower and, in some cases, the intermediary offering the participation. A participation agreement also may limit the rights of the Fund to vote on changes that may be made to the underlying loan agreement, such as waiving a breach of a covenant. The participation interests in which a Fund intends to invest may not be rated by any nationally recognized rating service or, if rated, may be below investment grade and expose the fund to the risks of noninvestment-grade securities.

Commercial Paper (A Type of Corporate Debt Security)

Commercial paper is an issuer's obligation with a maturity of less than nine months. Companies typically issue commercial paper to pay for current expenditures. Most issuers constantly reissue their commercial paper and use the proceeds (or bank loans) to repay maturing paper. If the issuer cannot continue to obtain liquidity in this fashion, its commercial paper may default. The short maturity of commercial paper generally reduces both the market and credit risks as compared to other debt securities of the same issuer.

Treasury Securities (A Fixed-Income Security)

Treasury securities are direct obligations of the federal government of the United States. Treasury securities are generally regarded as having minimal credit risks.

Government Securities (A Fixed-Income Security)

Government securities are issued or guaranteed by a federal agency or instrumentality acting under federal authority. Some government securities, including those issued by Government National Mortgage Association (“Ginnie Mae”), are supported by the full faith and credit of the United States.

Other government securities receive support through federal subsidies, loans or other benefits. For example, the U.S. Treasury is authorized to purchase specified amounts of securities issued by (or otherwise make funds available to) the Federal Home Loan Bank System, Federal Home Loan Mortgage Corporation (“Freddie Mac”) and Federal National Mortgage Association (“Fannie Mae”) in support of such obligations.

A few government securities have no explicit financial support, but are regarded as having implied support because the federal government sponsors their activities.

The Fund treats mortgage-backed securities guaranteed by a federal agency or instrumentality as government securities. Although such a guarantee helps protect against credit risk, it does not eliminate it entirely or reduce other risks.

Additional Information Related To Freddie Mac And Fannie Mae. The extreme and unprecedented volatility and disruption that impacted the capital and credit markets beginning in 2008 led to market concerns regarding the ability of Freddie Mac and Fannie Mae to withstand future credit losses associated with securities held in their investment portfolios, and on which they provide guarantees, without the direct support of the federal government. On September 7, 2008, Freddie Mac and Fannie Mae were placed under the conservatorship of the Federal Housing Finance Agency (FHFA). Under the plan of conservatorship, the FHFA assumed control of, and generally has the power to direct, the operations of Freddie Mac and Fannie Mae, and is empowered to exercise all powers collectively held by their respective shareholders, directors and officers, including the power to: (1) take over the assets of and operate Freddie Mac and Fannie Mae with all the powers of the shareholders, the directors and the officers of Freddie Mac and Fannie Mae and conduct all business of Freddie Mac and Fannie Mae; (2) collect all obligations and money due to Freddie Mac and Fannie Mae; (3) perform all functions of Freddie Mac and Fannie Mae which are consistent with the conservator’s appointment; (4) preserve and conserve the assets and property of Freddie Mac and Fannie Mae; and (5) contract for assistance in fulfilling any function, activity, action or duty of the conservator.

In connection with the actions taken by the FHFA, the Treasury has entered into certain preferred stock purchase agreements (SPAs) with each of Freddie Mac and Fannie Mae which establish the Treasury as the holder of a new class of senior preferred stock in each of Freddie Mac and Fannie Mae. The senior preferred stock was issued in connection with financial contributions from the Treasury to Freddie Mac and Fannie Mae. Although the SPAs are subject to amendment from time to time, currently the Treasury is obligated to provide such financial contributions up to an aggregate maximum amount determined by a formula set forth in the SPAs, and until such aggregate maximum amount is reached, there is not a specific end date to the Treasury’s obligations.

The future status and role of Freddie Mac and Fannie Mae could be impacted by (among other things) the actions taken and restrictions placed on Freddie Mac and Fannie Mae by the FHFA in its role as conservator, the restrictions placed on Freddie Mac’s and Fannie Mae’s operations and activities under the SPAs, market responses to developments in Freddie Mac and Fannie Mae, downgrades or upgrades in the credit ratings assigned to Freddie Mac and Fannie Mae by nationally recognized statistical rating organizations (NRSROs) or ratings services, and future legislative and regulatory action that alters the operations, ownership, structure and/or mission of these institutions, each of which may, in turn, impact the value of, and cash flows on, any securities guaranteed by Freddie Mac and Fannie Mae.

Asset-Backed Securities (A Fixed-Income Security)

Asset-backed securities are payable from pools of obligations other than mortgages. Most asset-backed securities involve consumer or commercial debts with maturities of less than 10 years. However, almost any type of fixed-income assets (including other fixed-income securities) may be used to create an asset-backed security. Asset-backed securities may take the form of commercial paper, notes or pass-through certificates. Asset-backed securities have prepayment risks. Asset-backed securities are structured in many ways, including, but not limited to the following:

Zero-Coupon Securities (A Fixed-Income Security)

Zero-coupon securities do not pay interest or principal until final maturity unlike debt securities that provide periodic payments of interest (referred to as a coupon payment). Investors buy zero-coupon securities at a price below the amount payable at maturity. The difference between the purchase price and the amount paid at maturity represents interest on the zero-coupon security. Investors must wait until maturity to receive interest and principal, which increases the interest rate and credit risks of a zero-coupon security.

There are many forms of zero-coupon securities. Some are issued at a discount and are referred to as zero-coupon or capital appreciation bonds. Others are created from interest bearing bonds by separating the right to receive the bond's coupon payments from the right to receive the bond's principal due at maturity, a process known as coupon stripping. In addition, some securities give the issuer the option to deliver additional securities in place of cash interest payments, thereby increasing the amount payable at maturity. These are referred to as pay-in-kind or PIK securities.

IOs and POs (Types of Asset-Backed Securities)

Asset-backed securities may allocate interest payments to one class ("Interest Only" or IOs) and principal payments to another class ("Principal Only" or POs). POs increase in value when prepayment rates increase. In contrast, IOs decrease in value when prepayments increase, because the underlying mortgages generate less interest payments. However, IOs tend to increase in value when interest rates rise (and prepayments decrease), making IOs a useful hedge against interest rate risks.

Floaters and Inverse Floaters (Types of Asset-Backed Securities)

Another variant allocates interest payments between two classes of asset-backed securities. One class (Floaters) receives a share of interest payments based upon a market index such as the London Interbank Offered Rate (LIBOR). The other class (Inverse Floaters) receives any remaining interest payments from the underlying mortgages. Floater classes receive more interest (and Inverse Floater classes receive correspondingly less interest) as interest rates rise. This shifts prepayment and interest rate risks from the Floater to the Inverse Floater class, reducing the price volatility of the Floater class and increasing the price volatility of the Inverse Floater class.

Bank Instruments (A Fixed-Income Security)

Bank instruments are unsecured interest bearing deposits with banks. Bank instruments include, but are not limited to, bank accounts, time deposits, certificates of deposit and banker's acceptances. Yankee instruments are denominated in U.S. dollars and issued by U.S. branches of foreign banks. Eurodollar instruments are denominated in U.S. dollars and issued by non-U.S. branches of U.S. or foreign banks.

Credit Enhancement

Credit enhancement consists of an arrangement in which a company agrees to pay amounts due on a fixed-income security if the issuer defaults. In some cases the company providing credit enhancement makes all payments directly to the security holders and receives reimbursement from the issuer. Normally, the credit enhancer may have greater financial resources and liquidity than the issuer. For this reason, the Adviser may evaluate the credit risk of a fixed-income security based solely upon its credit enhancement.

Common types of credit enhancement include guarantees, letters of credit, bond insurance and surety bonds. Credit enhancement also includes arrangements where securities or other liquid assets secure payment of a fixed-income security. If a default occurs, these assets may be sold and the proceeds paid to security's holders. Either form of credit enhancement reduces credit risks by providing another source of payment for a fixed-income security.

EQUITY SECURITIES

Equity securities represent a share of an issuer's earnings and assets, after the issuer pays its liabilities. The Fund cannot predict the income it will receive from equity securities because issuers generally have discretion as to the payment of any dividends or distributions. However, equity securities may offer greater potential for appreciation than many other types of securities, because their value usually increases directly with the value of the issuer's business.

The following further describes the types of equity securities in which the Fund invests. This information is either additional information in respect of a principal security referenced in the Prospectus or information in respect of a non-principal security (in which case there is no related disclosure in the Prospectus).

Common Stocks

Common stocks are the most prevalent type of equity security. Common stocks receive the issuer's earnings after the issuer pays its creditors and any preferred stockholders. As a result, changes in an issuer's earnings directly influence the value of its common stock.

Interests in Other Limited Liability Companies

Entities such as limited partnerships, limited liability companies, business trusts and companies organized outside the United States may issue securities comparable to common or preferred stock.

Real Estate Investment Trusts (REITs)

REITs are real estate investment trusts that lease, operate and finance commercial real estate. REITs are exempt from federal corporate income tax if they limit their operations and distribute most of their income. Such tax requirements limit a REIT's ability to respond to changes in the commercial real estate market.

Warrants

Warrants give the Fund the option to buy the issuer's equity securities at a specified price (the "exercise price") at a specified future date (the "expiration date"). The Fund may buy the designated securities by paying the exercise price before the expiration date. Warrants may become worthless if the price of the stock does not rise above the exercise price by the expiration date. This increases the market risks of warrants as compared to the underlying security. Rights are the same as warrants, except companies typically issue rights to existing stockholders.

Foreign Government Securities (A Type of Foreign Fixed-Income Security)

Foreign government securities generally consist of fixed-income securities supported by national, state or provincial governments or similar political subdivisions. Foreign government securities also include debt obligations of supranational entities, such as international organizations designed or supported by governmental entities to promote economic reconstruction or development, international banking institutions and related government agencies. Examples of these include, but are not limited to, the International Bank for Reconstruction and Development (the "World Bank"), the Asian Development Bank, the European Investment Bank and the Inter-American Development Bank.

Foreign government securities also include fixed-income securities of quasi-governmental agencies that are either issued by entities owned by a national, state or equivalent government or are obligations of a political unit that are not backed by the national government's full faith and credit. Further, foreign government securities include mortgage-related securities issued or guaranteed by national, state or provincial governmental instrumentalities, including quasi-governmental agencies.

Depository Receipts (A Type of Foreign Equity Security)

Depository receipts represent interests in underlying securities issued by a foreign company. Depository receipts are not traded in the same market as the underlying security. The foreign securities underlying American Depository Receipts (ADRs) are not traded in the United States. ADRs provide a way to buy shares of foreign-based companies in the United States rather than in overseas markets. ADRs are also traded in U.S. dollars, eliminating the need for foreign exchange transactions. The foreign securities underlying European Depository Receipts (EDRs), Global Depository Receipts (GDRs) and International Depository Receipts (IDRs) are traded globally or outside the United States. Depository receipts involve many of the same risks of investing directly in foreign securities, including currency risks and risks of foreign investing.

DERIVATIVE CONTRACTS

Derivative contracts are financial instruments that require payments based upon changes in the values of designated securities, commodities, currencies, indices or other assets or instruments including other derivative contracts (each a "Reference Instrument" and collectively, "Reference Instruments"). Each party to a derivative contract may sometimes be referred to as a counterparty. Some derivative contracts require payments relating to an actual, future trade involving the Reference Instrument. These types of derivatives are frequently referred to as "physically settled" derivatives. Other derivative contracts require payments relating to the income or returns from, or changes in the market value of, a Reference Instrument. These types of derivatives are known as "cash-settled" derivatives, since they require cash payments in lieu of delivery of the Reference Instrument.

Many derivative contracts are traded on securities or commodities exchanges. In this case, the exchange sets all the terms of the contract except for the price. Investors make payments due under their contracts through the exchange. Most exchanges require investors to maintain margin accounts through their brokers to cover their potential obligations to the exchange. Parties to the contract make (or collect) daily payments to the margin accounts to reflect losses (or gains) in the value of their contracts. This protects investors against potential defaults by the other party to the contract. Trading contracts on an exchange also allows investors to close out their contracts by entering into offsetting contracts.

For example, the Fund could close out an open contract to buy an asset at a future date by entering into an offsetting contract to sell the same asset on the same date. If the offsetting sale price is more than the original purchase price, the Fund realizes a gain; if it is less, the Fund realizes a loss. Exchanges may limit the amount of open contracts permitted at any one time. Such limits may prevent the Fund from closing out a position. If this happens, the Fund will be required to keep the contract open (even if it is losing money on the contract), and to make any payments required under the contract (even if it has to sell portfolio securities at unfavorable prices to do so). Inability to close out a contract could also harm the Fund by preventing it from disposing of or trading any assets it has been using to secure its obligations under the contract.

The Fund may also trade derivative contracts over-the-counter (OTC) in transactions negotiated directly between the Fund and a financial institution. OTC contracts do not necessarily have standard terms, so they may be less liquid and more difficult to value than exchange-traded contracts. In addition, OTC contracts with more specialized terms may be more difficult to close-out than exchange traded contracts, especially in times of financial stress.

Regulations enacted by the Commodity Futures Trading Commission (the “CFTC”) under the Dodd-Frank Wall Street Reform and Consumer Protection Act may require the Fund to clear certain derivative contracts through a clearinghouse or central counterparty (a “CCP”). To clear a derivative through the CCP, the Fund will submit the contract to, and post margin with, a futures commission merchant (“FCM”) that is a clearinghouse member. The Fund may enter into the swap with a financial institution other than the FCM (the “Executing Dealer”) and arrange for the contract to be transferred to the FCM for clearing. It may also enter into the contract with the FCM itself. If the Fund must centrally clear a transaction, the CFTC’s regulations may also require that the derivative be entered into over a market facility that is known as a “swap execution facility” or “SEF”. Also, in the future, the CFTC’s regulations may require that certain electronically-traded contracts be entered into over SEFs, even if those contracts are not subject to mandatory central clearing. The CCP, SEF, FCM and Executing Dealer are all subject to regulatory oversight by the CFTC. Similar regulatory requirements will apply to contracts that are subject to the jurisdiction of the Securities and Exchange Commission (“SEC”), although the SEC has not yet finalized its regulations.

Depending on how the Fund uses derivative contracts and the relationships between the market value of a derivative contract and the Reference Instrument, derivative contracts may increase or decrease the Fund’s exposure to the risks of the Reference Instrument, and may also expose the fund to liquidity and leverage risks. OTC contracts also expose the Fund to credit risks in the event that a counterparty defaults on the contract, although this risk may be mitigated by submitting the contract for clearing through a CCP.

The Fund may invest in a derivative contract if it is permitted to own, invest in or otherwise have economic exposure to the Reference Instrument. The Fund is not required to own a Reference Instrument in order to buy or sell a derivative contract relating to that Reference Instrument. The Fund may trade in the following specific types and/or combinations of derivative contracts:

Futures Contracts (A Type of Derivative)

Futures contracts provide for the future sale by one party and purchase by another party of a specified amount of a Reference Instrument at a specified price, date and time. Entering into a contract to buy a Reference Instrument is commonly referred to as buying a contract or holding a long position in the asset. Entering into a contract to sell a Reference Instrument is commonly referred to as selling a contract or holding a short position in the Reference Instrument. Futures contracts are considered to be commodity contracts. The Fund has claimed an exclusion from the definition of the term “commodity pool operator” under the Commodity Exchange Act and, therefore, is not subject to registration or regulation as a commodity pool operator under that Act. Futures contracts traded OTC are frequently referred to as forward contracts. The Fund can buy or sell financial futures (such as interest rate futures, index futures and security futures), as well as currency futures and currency forward contracts.

Interest-Rate Futures

An interest-rate futures contract is an exchange-traded contract for which the Reference Instrument is an interest-bearing, fixed-income security or an inter-bank deposit. Two examples of common interest rate futures contracts are U.S. Treasury futures contracts and Eurodollar futures contracts. The Reference Instrument for a U.S. Treasury futures contract is a U.S. Treasury security. The Reference Instrument for a Eurodollar futures contract is the London Interbank Offered Rate (commonly referred to as LIBOR); Eurodollar futures contracts enable the purchaser to obtain a fixed rate for the lending of funds over a stated period of time and the seller to obtain a fixed rate for a borrowing of funds over that same period.

Index Futures

An index futures contract is an exchange-traded contract to make or receive a payment based upon changes in the value of an index. An index is a statistical composite that measures changes in the value of designated Reference Instruments. An index is usually computed by a sum product of a list of the designated Reference Instruments’ current prices and a list of weights assigned to these Reference Instruments.

Security Futures

A security futures contract is an exchange-traded contract to purchase or sell in the future a specific quantity of a security (other than a Treasury security) or a narrow-based securities index at a certain price. Presently, the only available security futures contracts use shares of a single equity security as the Reference Instrument. However, it is possible that in the future security futures contracts will be developed that use a single fixed-income security as the Reference Instrument.

Currency Futures and Currency Forward Contracts (Types of Futures Contracts)

A currency futures contract is an exchange-traded contract to buy or sell a particular currency at a specific price at some time in the future (commonly three months or more). A currency forward contract is not an exchanged-traded contract and represents an obligation to purchase or sell a specific currency at a future date, at a price set at the time of the contract and for a period agreed upon by the parties which may be either a window of time or a fixed number of days from the date of the contract. Currency futures and forward contracts are highly volatile, with a relatively small price movement potentially resulting in substantial gains or losses to the Fund. Additionally, the Fund may lose money on currency futures and forward contracts if changes in currency rates do not occur as anticipated or if the Fund's counterparty to the contract were to default.

Option Contracts (A Type of Derivative)

Option contracts (also called "options") are rights to buy or sell a Reference Instrument for a specified price (the "exercise price") during, or at the end of, a specified period. The seller (or "writer") of the option receives a payment, or premium, from the buyer, which the writer keeps regardless of whether the buyer uses (or "exercises") the option. Options may be bought or sold on a wide variety of Reference Instruments. Options that are written on futures contracts will be subject to margin requirements similar to those applied to futures contracts.

The Fund may buy and/or sell the following types of options:

Call Options

A call option gives the holder (buyer) the right to buy the Reference Instrument from the seller (writer) of the option. The Fund may use call options in the following ways:

- Buy call options on a Reference Instrument in anticipation of an increase in the value of the Reference Instrument; and
- Write call options on a Reference Instrument to generate income from premiums, and in anticipation of a decrease or only limited increase in the value of the Reference Instrument. If the Fund writes a call option on a Reference Instrument that it owns and that call option is exercised, the Fund foregoes any possible profit from an increase in the market price of the Reference Instrument over the exercise price plus the premium received.

Put Options

A put option gives the holder the right to sell the Reference Instrument to the writer of the option. The Fund may use put options in the following ways:

- Buy put options on a Reference Instrument in anticipation of a decrease in the value of the Reference Instrument; and
- Write put options on a Reference Instrument to generate income from premiums, and in anticipation of an increase or only limited decrease in the value of the Reference Instrument. In writing puts, there is a risk that the Fund may be required to take delivery of the Reference Instrument when its current market price is lower than the exercise price.

The Fund may also buy or write options, as needed, to close out existing option positions.

Finally, the Fund may enter into combinations of options contracts in an attempt to benefit from changes in the prices of those options contracts (without regard to changes in the value of the Reference Instrument).

Swap Contracts (A Type of Derivative)

A swap contract (also known as a "swap") is a type of derivative contract in which two parties agree to pay each other (swap) the returns derived from Reference Instruments. Most swaps do not involve the delivery of the underlying assets by either party, and the parties might not own the Reference Instruments. The payments are usually made on a net basis so that, on any given day, the Fund would receive (or pay) only the amount by which its payment under the contract is less than (or exceeds) the amount of the other party's payment. Swap agreements are sophisticated instruments that can take many different forms and are known by a variety of names. Common swap agreements that the Fund may use include:

Interest Rate Swaps

Interest rate swaps are contracts in which one party agrees to make regular payments equal to a fixed or floating interest rate times a stated principal amount (commonly referred to as a "notional principal amount") in return for payments equal to a different fixed or floating rate times the same principal amount, for a specific period. For example, a \$10 million London Interbank Offered Rate (commonly referred to as LIBOR) swap would require one party to pay the equivalent of the London Interbank Offered Rate of interest (which fluctuates) on \$10 million principal amount in exchange for the right to receive the equivalent of a stated fixed rate of interest on \$10 million principal amount.

Caps and Floors (A Type of Swap Contract)

Caps and Floors are contracts in which one party agrees to make payments only if an interest rate or index goes above (Cap) or below (Floor) a certain level in return for a fee from the other party.

Total Return Swaps

A total return swap is an agreement between two parties whereby one party agrees to make payments of the total return from a Reference Instrument (or a basket of such instruments) during the specified period, in return for payments equal to a fixed or floating rate of interest or the total return from another Reference Instrument. Alternately, a total return swap can be structured so that one party will make payments to the other party if the value of a Reference Instrument increases, but receive payments from the other party if the value of that instrument decreases.

Credit Default Swaps

A credit default swap (CDS) is an agreement between two parties whereby one party (the “Protection Buyer”) agrees to make payments over the term of the CDS to the other party (the “Protection Seller”), provided that no designated event of default, restructuring or other credit related event (each a “Credit Event”) occurs with respect to Reference Instrument that is usually a particular bond or the unsecured credit of an issuer, in general (the “Reference Obligation”). Many CDS are physically settled, which means that if a Credit Event occurs, the Protection Seller must pay the Protection Buyer the full notional value, or “par value,” of the Reference Obligation in exchange for delivery by the Protection Buyer of the Reference Obligation or another similar obligation issued by the issuer of the Reference Obligation (the “Deliverable Obligation”). The Counterparties agree to the characteristics of the Deliverable Obligation at the time that they enter into the CDS. Alternately, a CDS can be “cash settled,” which means that upon the occurrence of a Credit Event, the Protection Buyer will receive a payment from the Protection Seller equal to the difference between the par amount of the Reference Obligation and its market value at the time of the Credit Event. The Fund may be either the Protection Buyer or the Protection Seller in a CDS. If the Fund is a Protection Buyer and no Credit Event occurs, the Fund will lose its entire investment in the CDS (i.e., an amount equal to the payments made to the Protection Seller over the term of the CDS). However, if a Credit Event occurs, the Fund (as Protection Buyer) will deliver the Deliverable Obligation and receive a payment equal to the full notional value of the Reference Obligation, even though the Reference Obligation may have little or no value. If the Fund is the Protection Seller and no Credit Event occurs, the Fund will receive a fixed rate of income throughout the term of the CDS. However, if a Credit Event occurs, the Fund (as Protection Seller) will pay the Protection Buyer the full notional value of the Reference Obligation and receive the Deliverable Obligation from the Protection Buyer. A CDS may involve greater risks than if the Fund invested directly in the Reference Obligation. For example, a CDS may increase credit risk since the Fund has exposure to both the issuer of the Reference Obligation and the Counterparty to the CDS.

Currency Swaps

Currency swaps are contracts which provide for interest payments in different currencies. The parties might agree to exchange the notional principal amounts of the currencies as well (commonly called a “foreign exchange swap”).

OTHER INVESTMENTS, TRANSACTIONS, TECHNIQUES

Repurchase Agreements

Repurchase agreements are transactions in which the Fund buys a security from a dealer or bank and agrees to sell the security back at a mutually agreed upon time and price. The repurchase price exceeds the sale price, reflecting the Fund’s return on the transaction. This return is unrelated to the interest rate on the underlying security. The Fund will enter into repurchase agreements only with banks and other recognized financial institutions, such as securities dealers, deemed creditworthy by the Adviser.

A Fund’s custodian or subcustodian will take possession of the securities subject to repurchase agreements. The Adviser or subcustodian will monitor the value of the underlying security each day to ensure that the value of the security always equals or exceeds the repurchase price.

Repurchase agreements are subject to credit risks.

Reverse Repurchase Agreements

Reverse repurchase agreements (which are considered a type of special transaction for asset segregation or asset coverage purposes) are repurchase agreements in which the Fund is the seller (rather than the buyer) of the securities, and agrees to repurchase them at an agreed-upon time and price. A reverse repurchase agreement may be viewed as a type of borrowing by the Fund. Reverse repurchase agreements are subject to credit risks. In addition, reverse repurchase agreements create leverage risks because the Fund must repurchase the underlying security at a higher price, regardless of the market value of the security at the time of repurchase.

Delayed Delivery Transactions

Delayed delivery transactions, including when-issued transactions, are arrangements in which the Fund buys securities for a set price, with payment and delivery of the securities scheduled for a future time. During the period between purchase and settlement, no payment is made by the Fund to the issuer and no interest accrues to the Fund. The Fund records the transaction when it agrees to buy the securities and reflects their value in determining the price of its Shares. Settlement dates may be a month or more after entering into these transactions so that the market values of the securities bought may vary from the purchase prices. Therefore, delayed delivery transactions create interest rate risks for the Fund. Delayed delivery transactions also involve credit risks in the event of a counterparty default.

Securities Lending

The Fund may lend portfolio securities to borrowers that the Adviser deems creditworthy. In return, the Fund receives cash or liquid securities from the borrower as collateral. The borrower must furnish additional collateral if the market value of the loaned securities increases. Also, the borrower must pay the Fund the equivalent of any dividends or interest received on the loaned securities.

The Fund will reinvest cash collateral in securities that qualify as an acceptable investment for the Fund. However, the Fund must pay interest to the borrower for the use of cash collateral.

Loans are subject to termination at the option of the Fund or the borrower. The Fund will not have the right to vote on securities while they are on loan. However, the Fund will attempt to terminate a loan in an effort to reacquire the securities in time to vote on matters that are deemed to be material by the Adviser. There can be no assurance that the Fund will have sufficient notice of such matters to be able to terminate the loan in time to vote thereon. The Fund may pay administrative and custodial fees in connection with a loan and may pay a negotiated portion of the interest earned on the cash collateral to a securities lending agent or broker.

Securities lending activities are subject to interest rate risks and credit risks.

Hedging

Hedging transactions are intended to reduce specific risks. For example, to protect the Fund against circumstances that would normally cause the Fund's portfolio securities to decline in value, the Fund may buy or sell a derivative contract that would normally increase in value under the same circumstances. The Fund may also attempt to hedge by using combinations of different derivative contracts, or derivative contracts and securities. The Fund's ability to hedge may be limited by the costs of the derivative contracts. The Fund may attempt to lower the cost of hedging by entering into transactions that provide only limited protection, including transactions that: (1) hedge only a portion of its portfolio; (2) use derivative contracts that cover a narrow range of circumstances; or (3) involve the sale of derivative contracts with different terms. Consequently, hedging transactions will not eliminate risk even if they work as intended. In addition, hedging strategies are not always successful, and could result in increased expenses and losses to the Fund.

Hybrid Instruments

Hybrid instruments combine elements of two different kinds of securities or financial instruments (such as a derivative contract). Frequently, the value of a hybrid instrument is determined by reference to changes in the value of a Reference Instrument (that is a designated security, commodity, currency, index or other asset or instrument including a derivative contract). Hybrid instruments can take on many forms including, but not limited to, the following forms. First, a common form of a hybrid instrument combines elements of a derivative contract with those of another security (typically a fixed-income security). In this case all or a portion of the interest or principal payable on a hybrid security is determined by reference to changes in the price of a Reference Instrument. Second, a hybrid instrument may also combine elements of a fixed-income security and an equity security. Third, hybrid instruments may include convertible securities with conversion terms related to a Reference Instrument.

Depending on the type and terms of the hybrid instrument, its risks may reflect a combination of the risks of investing in the Reference Instrument with the risks of investing in other securities, currencies and derivative contracts. Thus, an investment in a hybrid instrument may entail significant risks in addition to those associated with traditional securities or the Reference Instrument. Hybrid instruments are also potentially more volatile than traditional securities or the Reference Instrument. Moreover, depending on the structure of the particular hybrid, it may expose the Fund to leverage risks or carry liquidity risks.

Credit Linked Note (A Type of Hybrid Instrument)

A credit linked note (CLN) is a type of hybrid instrument in which a special purpose entity issues a structured note (the "Note Issuer") with respect to which the Reference Instrument is a single bond, a portfolio of bonds, or the unsecured credit of an issuer, in general (each a "Reference Credit"). The purchaser of the CLN (the "Note Purchaser") invests a par amount and receives a payment during the term of the CLN that equals a fixed or floating rate of interest equivalent to a high rated funded asset (such as a bank certificate of deposit) plus an additional premium that relates to taking on the credit risk of the Reference Credit. Upon

maturity of the CLN, the Note Purchaser will receive a payment equal to: (i) the original par amount paid to the Note Issuer, if there is no occurrence of a designated event of default, restructuring or other credit event (each a “Credit Event”) with respect to the issuer of the Reference Credit; or (ii) the market value of the Reference Credit, if a Credit Event has occurred. Depending upon the terms of the CLN, it is also possible that the Note Purchaser may be required to take physical delivery of the Reference Credit in the event of Credit Event. Most credit linked notes use a corporate bond (or a portfolio of corporate bonds) as the Reference Credit. However, almost any type of fixed-income security (including foreign government securities), index or derivative contract (such as a credit default swap) can be used as the Reference Credit.

Equity Linked Note (A Type of Hybrid Instrument)

An equity linked note (ELN) is a type of hybrid instrument that provides the noteholder with exposure to a single equity security, a basket of equity securities, or an equity index (the “Reference Equity Instrument”). Typically, an ELN pays interest at agreed rates over a specified time period and, at maturity, either converts into shares of a Reference Equity Instrument or returns a payment to the noteholder based on the change in value of a Reference Equity Instrument.

Asset Segregation

In accordance with the Securities and Exchange Commission (SEC) and SEC staff positions regarding the interpretation of the Investment Company Act of 1940 (“1940 Act”), with respect to derivatives that create a future payment obligation of the Fund, the Fund must “set aside” (referred to sometimes as “asset segregation”) liquid assets, or engage in other SEC- or staff-approved measures, while the derivative contracts are open. For example, with respect to forwards and futures contracts that are not contractually required to “cash-settle,” the Fund must cover its open positions by setting aside cash or readily marketable securities equal to the contracts’ full, notional value. With respect to forwards and futures that are contractually required to “cash-settle,” however, the Fund is permitted to set aside cash or readily marketable securities in an amount equal to the Fund’s daily marked-to-market (“net”) obligations, if any (i.e., the Fund’s daily net liability, if any), rather than the notional value.

The Fund will employ another approach to segregating assets to cover options that it sells. If the Fund sells a call option, the Fund will set aside either the Reference Instrument subject to the option, cash or readily marketable securities with a value that equals or exceeds the current market value of the Reference Instrument. In no event, will the value of the cash or readily marketable securities set aside by the Fund be less than the exercise price of the call option. If the Fund sells a put option, the Fund will set aside cash or readily marketable securities with a value that equals or exceeds the exercise price of the put option.

The Fund’s asset segregation approach for swap agreements varies among different types of swaps. For example, if the Fund enters into a credit default swap as the Protection Buyer, then it will set aside cash or readily marketable securities necessary to meet any accrued payment obligations under the swap. By comparison, if the Fund enters into a credit default swap as the Protection Seller, then the Fund will set aside cash or readily marketable securities equal to the full notional amount of the swap that must be paid upon the occurrence of a Credit Event. For some other types of swaps, such as interest rate swaps, the Fund will calculate the obligations of the counterparties to the swap on a net basis. Consequently, the Fund’s current obligation (or rights) under this type of swap will equal only the net amount to be paid or received based on the relative values of the positions held by each counterparty to the swap (the “net amount”). The net amount currently owed by or to the Fund will be accrued daily and the Fund will set aside cash or readily marketable securities equal to any accrued but unpaid net amount owed by the Fund under the swap.

The Fund may reduce the liquid assets segregated to cover obligations under a derivative contract by entering into an offsetting derivative contract. For example, if the Fund sells a put option for the same Reference Instrument as a call option the Fund has sold, and the exercise price of the call option is the same as or higher than the exercise price of the put option, then the Fund may net its obligations under the options and set aside cash or readily marketable securities (including any margin deposited for the options) with a value equal to the greater of: (a) the current market value of the Reference Instrument deliverable under the call option; or (b) the exercise price of the put option.

By setting aside cash or readily marketable securities equal to only its net obligations under swaps and certain cash-settled derivative contracts, the Fund will have the ability to employ leverage to a greater extent than if the Fund were required to segregate cash or readily marketable securities equal to the full notional value of such contracts. The use of leverage involves certain risks. See “Risk Factors.” Unless the Fund has other cash or readily marketable securities to set aside, it cannot trade assets set aside in connection with derivative contracts or special transactions without entering into an offsetting derivative contract or terminating a special transaction. This may cause the Fund to miss favorable trading opportunities or to realize losses on derivative contracts or special transactions. The Fund reserves the right to modify its asset segregation policies in the future to comply with any changes in the positions articulated from time to time by the SEC and its staff.

Generally, special transactions do not cash-settle on a net basis. Consequently, with respect to special transactions, the Fund will set aside cash or readily marketable securities with a value that equals or exceeds the Fund’s obligations.

Investing In Securities of Other Investment Companies

The Fund may invest its assets in securities of other investment companies, including the securities of affiliated money market funds, as an efficient means of implementing its investment strategies and/or managing its uninvested cash. These other investment companies are managed independently of the Fund and incur additional fees and/or expenses which would, therefore, be borne indirectly by the Fund in connection with any such investment. However, the Adviser believes that the benefits and efficiencies of this approach should outweigh the potential additional fees and/or expenses. The Fund may invest in money market securities directly.

Investing in Exchange-Traded Funds

The Fund may invest in exchange-traded funds (ETFs) as an efficient means of carrying out its investment strategies. As with traditional mutual funds, ETFs charge asset-based fees, although these fees tend to be relatively low. ETFs are traded on stock exchanges or on the over-the-counter market. ETFs do not charge initial sales charges or redemption fees and investors pay only customary brokerage fees to buy and sell ETF shares.

Inter-Fund Borrowing and Lending Arrangements

The Securities and Exchange Commission (SEC) has granted an exemption that permits the Fund and all other funds advised by subsidiaries of Federated Investors, Inc. (“Federated funds”) to lend and borrow money for certain temporary purposes directly to and from other Federated funds. Participation in this inter-fund lending program is voluntary for both borrowing and lending Federated funds, and an inter-fund loan is only made if it benefits each participating Federated fund. Federated Investors, Inc. (“Federated”) administers the program according to procedures approved by the Fund’s Board, and the Board monitors the operation of the program. Any inter-fund loan must comply with certain conditions set out in the exemption, which are designed to assure fairness and protect all participating Federated funds.

For example, inter-fund lending is permitted only: (a) to meet shareholder redemption requests; (b) to meet commitments arising from “failed” trades; and (c) for other temporary purposes. All inter-fund loans must be repaid in seven days or less. The Fund’s participation in this program must be consistent with its investment policies and limitations, and must meet certain percentage tests. Inter-fund loans may be made only when the rate of interest to be charged is more attractive to the lending Federated fund than market-competitive rates on overnight repurchase agreements (“Repo Rate”) and more attractive to the borrowing Federated fund than the rate of interest that would be charged by an unaffiliated bank for short-term borrowings (“Bank Loan Rate”), as determined by the Board. The interest rate imposed on inter-fund loans is the average of the Repo Rate and the Bank Loan Rate.

Investment Risks

There are many risk factors which may affect an investment in the Fund. The Fund’s principal risks are described in its Prospectus. The following information is either additional information in respect of a principal risk factor referenced in the Prospectus or information in respect of a non-principal risk factor applicable to the Fund (in which case there is no related disclosure in the Prospectus).

Call Risk

Call risk is the possibility that an issuer may redeem a fixed-income security before maturity (a call) at a price below its current market price. An increase in the likelihood of a call may reduce the security’s price.

If a fixed-income security is called, the Fund may have to reinvest the proceeds in other fixed-income securities with lower interest rates, higher credit risks or other less favorable characteristics.

Credit Enhancement Risk

The securities in which the Fund invests may be subject to credit enhancement (for example, guarantees, letters of credit or bond insurance). Credit enhancement is designed to help assure timely payment of the security; it does not protect the Fund against losses caused by declines in a security’s value due to changes in market conditions. Securities subject to credit enhancement generally would be assigned a lower credit rating if the rating were based primarily on the credit quality of the issuer without regard to the credit enhancement. If the credit quality of the credit enhancement provider (for example, a bank or bond insurer) is downgraded, the rating on a security credit enhanced by such credit enhancement provider also may be downgraded.

A single enhancement provider may provide credit enhancement to more than one of the Fund’s investments. Having multiple securities credit enhanced by the same enhancement provider will increase the adverse effects on the Fund that are likely to result from a downgrading of, or a default by, such an enhancement provider. Adverse developments in the banking or bond insurance industries also may negatively affect the Fund, as the Fund may invest in securities credit enhanced by banks or by bond insurers without limit. Bond insurers that provide credit enhancement for large segments of the fixed income markets, including the municipal bond market, may be more susceptible to being downgraded or defaulting during recessions or similar periods of economic stress.

Risk of Investing in Derivative Contracts and Hybrid Instruments

The Fund's exposure to derivative contracts and hybrid instruments (either directly or through its investment in another investment company) involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. First, changes in the value of the derivative contracts and hybrid instruments in which the Fund invests may not be correlated with changes in the value of the underlying Reference Instruments or, if they are correlated, may move in the opposite direction than originally anticipated. Second, while some strategies involving derivatives may reduce the risk of loss, they may also reduce potential gains or, in some cases, result in losses by offsetting favorable price movements in portfolio holdings. Third, there is a risk that derivative contracts and hybrid instruments may be erroneously priced or improperly valued and, as a result, the Fund may need to make increased cash payments to the counterparty. Fourth, a common provision in OTC derivative contracts permits the counterparty to terminate any such contract between it and the Fund, if the value of the Fund's total net assets declines below a specified level over a given time period. Factors that may contribute to such a decline (which usually must be substantial) include significant shareholder redemptions and/or a marked decrease in the market value of the Fund's investments. Any such termination of the Fund's OTC derivative contracts may adversely affect the Fund (for example, by increasing losses and/or costs, and/or preventing the Fund from fully implementing its investment strategies). Fifth, the Fund may use a derivative contract to benefit from a decline in the value of a Reference Instrument. If the value of the Reference Instrument declines during the term of the contract, the Fund makes a profit on the difference (less any payments the Fund is required to pay under the terms of the contract). Any such strategy involves risk. There is no assurance that the Reference Instrument will decline in value during the term of the contract and make a profit for the Fund. The Reference Instrument may instead appreciate in value, creating a loss for the Fund. Sixth, a default or failure by a CCP or an FCM (also sometimes called a "futures broker"), or the failure of a contract to be transferred from an Executing Dealer to the FCM for clearing, may expose the Fund to losses, increase its costs, or prevent the Fund from entering or exiting derivative positions, accessing margin or fully implementing its investment strategies. The central clearing of a derivative and trading of a contract over a SEF could reduce the liquidity in, or increase costs of entering into or holding, any contracts. Finally, derivative contracts and hybrid instruments may also involve other risks described herein or in the Fund's prospectus, such as stock market, interest rate, credit, currency, liquidity and leverage risks.

Risk Associated With the Investment Activities of Other Accounts

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. Therefore, it is possible that investment-related actions taken by such other accounts could adversely impact the Fund with respect to, for example, the value of Fund portfolio holdings, and/or prices paid to or received by the Fund on its portfolio transactions, and/or the Fund's ability to obtain or dispose of portfolio securities. Related considerations are discussed elsewhere in this SAI under "Brokerage Transactions and Investment Allocation."

STOCK MARKET RISK

The value of equity securities in the Fund's portfolio will rise and fall. These fluctuations could be a sustained trend or a drastic movement. The Fund's portfolio will reflect changes in prices of individual portfolio stocks or general changes in stock valuations. Consequently, the Fund's Share price may decline. The Adviser attempts to manage market risk by limiting the amount the Fund invests in each company's equity securities. However, diversification will not protect the Fund against widespread or prolonged declines in the stock market.

Information publicly available about a company, whether from the company's financial statements or other disclosures or from third parties, or information available to some but not all market participants, can affect the price of a company's shares in the market. The price of a company's shares depends significantly on the information publicly available about the company. The restatement of a company's financial statements or corrections to other information regarding a company or its business may adversely affect the price of its shares, as would allegations of fraud or other misconduct by the company's management. The Fund may also be disadvantaged if some market participants have access to material information not readily available to other market participants, including the Fund.

VARIABLE ASSET REGULATIONS

The Fund is also subject to variable contract asset regulations prescribed by the U.S. Treasury Department under Section 817(h) of the Internal Revenue Code. After a one-year start-up period, the regulations generally require that, as of the end of each calendar quarter or within 30 days thereafter, no more than 55% of the total assets of the Fund may be represented by any one investment, no more than 70% of the total assets of the Fund may be represented by any two investments, no more than 80% of the total assets of the Fund may be represented by any three investments and no more than 90% of the total assets of the Fund may be represented by any four investments. In applying these diversification rules, all securities of the same issuer, all interests of the same

real property project and all interests in the same commodity are each treated as a single investment. In the case of government securities, each government agency or instrumentality shall be treated as a separate issuer. If the Fund fails to achieve the diversification required by the regulations, unless relief is obtained from the Internal Revenue Service, the contracts invested in the Fund will not be treated as annuity endowment or life insurance contracts.

Investment Objective (and Policies) and Investment Limitations

The Fund's fundamental investment objective is to seek high current income. The investment objective may not be changed by the Fund's Board without shareholder approval.

INVESTMENT LIMITATIONS

Diversification of Investments

With respect to securities comprising 75% of the value of its total assets, the Fund will not purchase securities of any one issuer (other than cash; cash items; securities issued or guaranteed by the government of the United States or its agencies or instrumentalities and repurchase agreements collateralized by such U.S. government securities; and securities of other investment companies) if, as a result, more than 5% of the value of its total assets would be invested in the securities of that issuer, or the Fund would own more than 10% of the outstanding voting securities of that issuer.

Borrowing Money and Issuing Senior Securities

The Fund may borrow money, directly or indirectly, and issue senior securities to the maximum extent permitted under the 1940 Act.

Investing in Real Estate

The Fund may not purchase or sell real estate, provided that this restriction does not prevent the Fund from investing in issuers which invest, deal, or otherwise engage in transactions in real estate or interests therein, or investing in securities that are secured by real estate or interests therein. The Fund may exercise its rights under agreements relating to such securities, including the right to enforce security interests and to hold real estate acquired by reason of such enforcement until that real estate can be liquidated in an orderly manner.

Investing in Commodities

The Fund may not purchase or sell physical commodities, provided that the Fund may purchase securities of companies that deal in commodities.

Underwriting

The Fund may not underwrite the securities of other issuers, except that the Fund may engage in transactions involving the acquisition, disposition or resale of its portfolio securities, under circumstances where it may be considered to be an underwriter under the Securities Act of 1933.

Lending

The Fund may not make loans, provided that this restriction does not prevent the Fund from purchasing debt obligations, entering into repurchase agreements, lending its assets to broker/dealers or institutional investors and investing in loans, including assignments and participation interests.

Concentration

The Fund will not make investments that will result in the concentration of its investments in the securities of issuers primarily engaged in the same industry. Government securities, municipal securities and bank instruments will not be deemed to constitute an industry.

The above limitations cannot be changed unless authorized by the Board and by the "vote of a majority of its outstanding voting securities," as defined by the Investment Company Act of 1940. The following limitations, however, may be changed by the Board without shareholder approval. Shareholders will be notified before any material change in these limitations becomes effective.

Concentration

In applying the Fund's concentration restriction: (a) utility companies will be divided according to their services (for example, gas, gas transmission, electric and telephone will each be considered a separate industry); (b) financial service companies will be classified according to the end users of their services for example, automobile finance, bank finance and diversified finance will each be considered a separate industry; and (c) asset-backed securities will be classified according to the underlying assets securing such securities.

To conform to the current view of the SEC staff that only domestic bank instruments may be excluded from industry concentration limitations, as a matter of non-fundamental policy, the Fund will not exclude foreign bank instruments from industry concentration limitation tests so long as the policy of the SEC remains in effect. In addition, investments in bank instruments, and investments in certain industrial development bonds funded by activities in a single industry, will be deemed to constitute investment in an industry, except when held for temporary defensive purposes. The investment of more than 25% of the value of the Fund's total assets in any one industry will constitute "concentration."

Illiquid Securities

The Fund will not purchase securities for which there is no readily available market, or enter into repurchase agreements or purchase time deposits maturing in more than seven days, if immediately after and as a result, the value of such securities would exceed, in the aggregate, 15% of the Fund's net assets.

Purchases on Margin

The Fund will not purchase securities on margin, provided that the Fund may obtain short-term credits necessary for the clearance of purchases and sales of securities.

Pledging Assets

The Fund will not mortgage, pledge, or hypothecate any of its assets, provided that this shall not apply to the transfer of securities in connection with any permissible borrowing or to collateral arrangements in connection with permissible activities.

Additional Information

As a matter of non-fundamental operating policy, for purposes of the commodities policy, investments in transactions involving futures contracts and options, forward currency contracts, swap transactions and other financial contracts that settle by payment of cash are not deemed to be investments in commodities.

As a matter of non-fundamental investment policy, the Fund may invest in zero-coupon securities. There are many forms of zero-coupon securities. Some are issued at a discount and are referred to as zero coupon or capital appreciation bonds. Others are created from interest bearing bonds by separating the right to receive the bond's coupon payments from the right to receive the bond's principal due at maturity, a process known as coupon stripping. Treasury STRIPs, IOs and POs are the most common forms of stripped zero-coupon securities. In addition, some securities give the issuer the option to deliver additional securities in place of cash interest payments, thereby increasing the amount payable at maturity. These are referred to as PIK securities.

For purposes of the above limitations, the Fund considers certificates of deposit and demand and time deposits issued by a U.S. branch of a domestic bank or savings association having capital, surplus and undivided profits in excess of \$100,000,000 at the time of investment to be "cash items" and "bank instruments." Except with respect to borrowing money, if a percentage limitations is adhered to at the time of investment, a later increase or decrease in percentage resulting from any change in value or net assets will not result in a violation of such limitation.

Non-Fundamental Names Rule Policy

Because the Fund refers to high-income bond investments in its name, it will notify shareholders at least 60 days in advance of any change in its investment policies that would enable the Fund to normally invest less than 80% of its assets in fixed-income investments rated below investment grade.

What Do Shares Cost?

DETERMINING MARKET VALUE OF SECURITIES

A Share's net asset value (NAV) is determined as of the end of regular trading on the New York Stock Exchange (NYSE) (normally 4:00 p.m. Eastern time) each day the NYSE is open. The Fund calculates the NAV of each class by valuing the assets allocated to the Share's class, subtracting the liabilities allocated to the class and dividing the balance by the number of Shares of the class outstanding. The NAV for each class of Shares may differ due to the variance in daily net income realized by each class. Such variance will reflect only accrued net income to which the Shareholders of a particular class are entitled. The NAV is calculated to the nearest whole cent per Share.

In calculating its NAV, the Fund generally values investments as follows:

- Equity securities listed on a U.S. securities exchange or traded through the U.S. national market system are valued at their last reported sale price or official closing price in their principal exchange or market. If a price is not readily available, such equity securities are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Other equity securities traded primarily in the United States are valued based upon the mean of closing bid and asked quotations from one or more dealers.

- Equity securities traded primarily through securities exchanges and regulated market systems outside the United States are valued at their last reported sale price or official closing price in their principal exchange or market. These prices may be adjusted for significant events occurring after the closing of such exchanges or market systems as described below. If a price is not readily available, such equity securities are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Fixed-income securities and repurchase agreements acquired with remaining maturities of greater than 60 days are fair valued using price evaluations provided by a pricing service approved by the Board. The methods used by pricing services to determine such price evaluations are described below. If a price evaluation is not readily available, such fixed-income securities are fair valued based upon price evaluations from one or more dealers.
- Fixed-income securities and repurchase agreements acquired with remaining maturities of 60 days or less are valued at their amortized cost as described below, unless the issuer's creditworthiness is impaired or other factors indicate that amortized cost is not an accurate estimate of the investment's fair value, in which case it would be valued in the same manner as a longer-term security or repurchase agreement.
- Futures contracts listed on exchanges are valued at their reported settlement price. Option contracts listed on exchanges are valued based upon the mean of closing bid and asked quotations reported by the exchange or from one or more futures commission merchants.
- OTC derivative contracts are fair valued using price evaluations provided by various pricing services approved by the Board. The methods used by pricing services to determine such price evaluations are described below. If a price evaluation is not readily available, such derivative contracts are fair valued based upon price evaluations from one or more dealers or using a recognized pricing model for the contract.
- Shares of other mutual funds are valued based upon their reported NAVs. The prospectuses for these mutual funds explain the circumstances under which they will use fair value pricing and the effects of using fair value pricing.

If any price, quotation, price evaluation or other pricing source is not readily available when the NAV is calculated, or if the Fund cannot obtain price evaluations from a pricing service or from more than one dealer for an investment within a reasonable time (for example, within five business days after a new security is delivered to the Fund), the Fund will use the fair value of the investment determined in accordance with the procedures described below. There can be no assurance that the Fund could purchase or sell an investment at the price used to calculate the Fund's NAV. The Fund will not use a pricing service or dealer who is an affiliated person of the Adviser to value investments.

Noninvestment assets and liabilities are valued in accordance with Generally Accepted Accounting Principles (GAAP). The NAV calculation includes expenses, dividend income, interest income and other income through the date of the calculation. Changes in holdings of investments and in the number of outstanding Shares are included in the calculation not later than the first business day following such change. Any assets or liabilities denominated in foreign currencies are converted into U.S. dollars using an exchange rate obtained from one or more currency dealers.

The Fund follows procedures that are common in the mutual fund industry regarding errors made in the calculation of its NAV. This means that, generally, the Fund will not correct errors of less than one cent per Share or errors that did not result in net dilution to the Fund.

Amortized Cost Values

Under the amortized cost valuation method, an investment is valued initially at its cost as determined in accordance with GAAP. The Fund then adjusts the amount of interest income accrued each day over the term of the investment to account for any difference between the initial cost of the investment and the amount payable at its maturity. If the amount payable at maturity exceeds the initial cost (a "discount"), then the daily accrual is increased; if the initial cost exceeds the amount payable at maturity (a "premium"), then the daily accrual is decreased. The Fund adds the amount of the increase to (in the case of a discount), or subtracts the amount of the decrease from (in the case of a premium), the investment's cost each day. The Fund uses this adjusted cost to value the investment.

Fair Valuation and Significant Events Procedures

The Board has ultimate responsibility for determining the fair value of investments for which market quotations are not readily available. The Board has appointed a Valuation Committee comprised of officers of the Fund, the Adviser and the Adviser's affiliated companies to assist in this responsibility and in overseeing the calculation of the NAV. The Board has also authorized the use of pricing services recommended by the Valuation Committee to provide price evaluations of the current fair value of certain investments for purposes of calculating the NAV.

Pricing Service Valuations. Based on the recommendations of the Valuation Committee, the Board has authorized the Fund to use pricing services that provide daily fair value evaluations of the current value of certain investments, primarily fixed-income securities and OTC derivatives contracts. Different pricing services may provide different price evaluations for the same security because of differences in their methods of evaluating market values. Factors considered by pricing services in evaluating an investment include the yields or prices of investments of comparable quality, coupon, maturity, call rights and other potential prepayments, terms and type, reported transactions, indications as to values from dealers and general market conditions. A pricing service may find it more difficult to apply these and other factors to relatively illiquid or volatile investments, which may result in less frequent or more significant changes in the price evaluations of these investments. If a pricing service determines that it does not have sufficient information to use its standard methodology, it may evaluate an investment based on the present value of what investors can reasonably expect to receive from the issuer's operations or liquidation.

Some pricing services provide a single price evaluation reflecting the bid-side of the market for an investment (a "bid" evaluation). Other pricing services offer both bid evaluations and price evaluations indicative of a price between the prices bid and asked for the investment (a "mid" evaluation). The Fund normally uses bid evaluations for U.S. Treasury and Agency securities, mortgage-backed securities and municipal securities. The Fund normally uses mid evaluations for other types of fixed-income securities and OTC derivative contracts.

Fair Valuation Procedures. The Board has established procedures for determining the fair value of investments for which price evaluations from pricing services or dealers and market quotations are not readily available. The procedures define an investment's "fair value" as the price that the Fund might reasonably expect to receive upon its current sale. The procedures assume that any sale would be made to a willing buyer in the ordinary course of trading. The procedures require consideration of factors that vary based on the type of investment and the information available. Factors that may be considered in determining an investment's fair value include: (1) the last reported price at which the investment was traded; (2) information provided by dealers or investment analysts regarding the investment or the issuer; (3) changes in financial conditions and business prospects disclosed in the issuer's financial statements and other reports; (4) publicly announced transactions (such as tender offers and mergers) involving the issuer; (5) comparisons to other investments or to financial indices that are correlated to the investment; (6) with respect to fixed-income investments, changes in market yields and spreads; (7) with respect to investments that have been suspended from trading, the circumstances leading to the suspension; and (8) other factors that might affect the investment's value.

The Valuation Committee is responsible for the day-to-day implementation of these procedures. The Valuation Committee may also authorize the use of a financial valuation model to determine the fair value of a specific type of investment. The Board periodically reviews and approves the fair valuations made by the Valuation Committee and any changes made to the procedures.

Using fair value to price investments may result in a value that is different from an investment's most recent closing price and from the prices used by other mutual funds to calculate their NAVs. The fair value of an investment will generally remain unchanged in the absence of new information relating to the investment or its issuer, such as changes in the issuer's business or financial results, or relating to external market factors, such as trends in the market values of comparable securities. This may result in less frequent, and larger, changes in fair value prices as compared to prices based on market quotations or price evaluations from pricing services or dealers.

Significant Events. The Board has adopted procedures requiring an investment to be priced at its fair value whenever the Adviser determines that a significant event affecting the value of the investment has occurred between the time as of which the price of the investment would otherwise be determined and the time as of which the NAV is computed. An event is considered significant if there is both an affirmative expectation that the investment's value will change in response to the event and a reasonable basis for quantifying the resulting change in value. Examples of significant events that may occur after the close of the principal market on which a security is traded, or the time of a price evaluation provided by a pricing service or a dealer, include:

- With respect to securities traded principally in foreign markets, significant trends in U.S. equity markets or in the trading of foreign securities index futures contracts;
- With respect to price evaluations of fixed-income securities determined before the close of regular trading on the NYSE, actions by the Federal Reserve Open Market Committee and other significant trends in U.S. fixed-income markets;
- Political or other developments affecting the economy or markets in which an issuer conducts its operations or its securities are traded; and
- Announcements concerning matters such as acquisitions, recapitalizations or litigation developments, or a natural disaster affecting the issuer's operations or regulatory changes or market developments affecting the issuer's industry.

The Valuation Committee uses a pricing service to determine the fair value of equity securities traded principally in foreign markets when the Adviser determines that there has been a significant trend in the U.S. equity markets or in index futures trading. The pricing service uses models that correlate changes between the closing and opening price of equity securities traded primarily in non-U.S. markets to changes in prices in U.S.-traded securities and derivative contracts. The pricing service seeks to employ the model that provides the most significant correlation based on a periodic review of the results. The model uses the correlation to adjust the reported closing price of a foreign equity security based on information available up to the close of the NYSE.

For other significant events, the Fund may seek to obtain more current quotations or price evaluations from alternative pricing sources. If a reliable alternative pricing source is not available, the fair value of the investment is determined using the methods discussed above in “*Fair Valuation Procedures*.” The Fund currently does not rely on price evaluations determined before the close of regular trading on the NYSE for any fixed-income securities. The Board has ultimate responsibility for any fair valuations made in response to a significant event.

Mixed Funding and Shared Funding

The practice of using shares as investments for both variable annuity contracts and variable life insurance policies is called “mixed funding.” The practice of using shares as investments by separate accounts of unaffiliated life insurance companies is called “shared funding.”

The Fund does engage in mixed funding and shared funding. Although the Fund does not currently foresee any disadvantage to contract owners due to differences in redemption rates, tax treatment or other considerations resulting from mixed funding or shared funding, the Trustees will closely monitor the operation of mixed funding and shared funding and will consider appropriate action to avoid material conflicts and take appropriate action in response to any material conflicts which occur. Such action could result in one or more participating insurance companies withdrawing their investment in the Fund.

How is the Fund Sold?

Under the Distributor’s Contract with the Fund, the Distributor (Federated Securities Corp.) offers Shares on a continuous, best-efforts basis.

RULE 12B-1 PLAN (SERVICE SHARES)

As a compensation-type plan, the Rule 12b-1 Plan is designed to pay the Distributor for activities principally intended to result in the sale of Shares such as advertising and marketing of Shares (including printing and distributing prospectuses and sales literature to prospective shareholders and financial intermediaries) and providing incentives to financial intermediaries to sell Shares. The Plan is also designed to cover the cost of administrative services performed in conjunction with the sale of Shares, including, but not limited to, shareholder services, recordkeeping services and educational services, as well as the costs of implementing and operating the Plan. The Rule 12b-1 Plan allows the Distributor to contract with financial intermediaries to perform activities covered by the Plan. The Rule 12b-1 Plan is expected to benefit the Fund in a number of ways. For example, it is anticipated that the Plan will help the Fund attract and retain assets, thus providing cash for orderly portfolio management and Share redemptions and possibly helping to stabilize or reduce other operating expenses.

In addition, the Plan is integral to the multiple class structure of the Fund, which promotes the sale of Shares by providing a range of options to investors. The Fund’s service providers that receive asset-based fees also benefit from stable or increasing Fund assets.

The Fund may compensate the Distributor more or less than its actual marketing expenses. In no event will the Fund pay for any expenses of the Distributor that exceed the maximum Rule 12b-1 Plan fee.

For some classes of shares the maximum Rule 12b-1 Plan fee that can be paid in any one year may not be sufficient to cover the marketing-related expenses the Distributor has incurred. Therefore, it may take the Distributor a number of years to recoup these expenses.

ADDITIONAL PAYMENTS TO FINANCIAL INTERMEDIARIES

The Distributor may pay out of its own resources amounts (including items of material value) to certain financial intermediaries. In some cases, such payments may be made by, or funded from the resources of, companies affiliated with the Distributor (including the Adviser). While Financial Industry Regulatory Authority (FINRA) regulations limit the sales charges that you may bear, there are no limits with regard to the amounts that the Distributor may pay out of its own resources. In addition to the payments which are generally described herein and in the Prospectus, the financial intermediary also may receive payments under the Rule 12b-1 Plan and/or Service Fees. In connection with these payments, the financial intermediary may elevate the prominence or profile of

the Fund and/or other Federated funds within the financial intermediary's organization by, for example, placement on a list of preferred or recommended funds and/or granting the Distributor preferential or enhanced opportunities to promote the funds in various ways within the financial intermediary's organization. You can ask your financial intermediary for information about any payments it receives from the Distributor or the Federated funds and any services provided.

Regarding the Fund's P class and S class, the P class and S class of the Fund currently do not accrue, pay or incur any administrative service fees, although the Board of Trustees has approved the P class and S class of the Fund to accrue, pay and incur such fees in amounts up to a maximum amount of 0.25%, or some lesser amount as the Board of Trustees shall approve from time to time. The P class and S class of the Fund will not incur or charge such fees until such time as approved by the Fund's Board of Trustees.

The following examples illustrate the types of instances in which the Distributor may make additional payments to financial intermediaries.

Supplemental Payments

The Distributor may make supplemental payments to certain financial intermediaries that are holders or dealers of record for accounts in one or more of the Federated funds. These payments may be based on such factors as: the number or value of Shares the financial intermediary sells or may sell; the value of client assets invested; or the type and nature of services or support furnished by the financial intermediary.

Processing Support Payments

The Distributor may make payments to financial intermediaries that sell Federated fund shares to help offset their costs associated with client account maintenance support, statement processing and transaction processing. The types of payments that the Distributor may make under this category include: payment of ticket charges on a per-transaction basis; payment of networking fees; and payment for ancillary services such as setting up funds on the financial intermediary's mutual fund trading system.

Other Benefits to Financial Intermediaries

From time to time, the Distributor, at its expense, may provide additional compensation to financial intermediaries that sell or arrange for the sale of Shares. Such compensation may include financial assistance to financial intermediaries that enable the Distributor to participate in or present at conferences or seminars, sales or training programs for invited employees, client and investor events and other financial intermediary-sponsored events.

The Distributor also may hold or sponsor, at its expense, sales events, conferences and programs for employees or associated persons of financial intermediaries and may pay the travel and lodging expenses of attendees. The Distributor also may provide, at its expense, meals and entertainment in conjunction with meetings with financial intermediaries. Other compensation may be offered to the extent not prohibited by applicable laws, regulations or the rules of any self-regulatory agency, such as FINRA.

Purchases In-Kind

You may contact the Distributor to request a purchase of Shares using securities you own. The Fund reserves the right to determine whether to accept your securities and the minimum market value to accept. The Fund will value your securities in the same manner as it values its assets. An in-kind purchase may be treated as a sale of your securities for federal tax purposes; please consult your tax adviser regarding potential tax liability.

Subaccounting Services

Certain participating insurance companies may wish to use the transfer agent's subaccounting system to minimize their internal recordkeeping requirements. The transfer agent may charge a fee based on the level of subaccounting services rendered. Participating insurance companies holding Shares in a fiduciary, agency, custodial or similar capacity may charge or pass through subaccounting fees as part of or in addition to normal trust or agency account fees. They may also charge fees for other services that may be related to the ownership of Shares. This information should, therefore, be read together with any agreement between the customer and the participating insurance company about the services provided, the fees charged for those services and any restrictions and limitations imposed.

Redemption In-Kind

Although the Fund generally intends to pay Share redemptions in cash, it reserves the right, on its own initiative or in response to a shareholder request, to pay the redemption price in whole or in part by a distribution of the Fund's portfolio securities.

Because the Fund has elected to be governed by Rule 18f-1 under the 1940 Act, the Fund is obligated to pay Share redemptions to any one shareholder in cash only up to the lesser of \$250,000 or 1% of the net assets represented by such Share class during any 90-day period.

Any Share redemption payment greater than this amount will also be in cash unless the Fund elects to pay all or a portion of the remainder of the redemption in portfolio securities, valued in the same way as the Fund determines its NAV.

Redemption in-kind is not as liquid as a cash redemption. Shareholders receiving the portfolio securities could have difficulty selling them, may incur related transaction costs and would be subject to risks of fluctuations in the securities' values prior to sale.

Massachusetts Partnership Law

Under certain circumstances, shareholders may be held personally liable as partners under Massachusetts law for obligations of the Trust. To protect its shareholders, the Trust has filed legal documents with Massachusetts that expressly disclaim the liability of its shareholders for acts or obligations of the Trust.

In the unlikely event a shareholder is held personally liable for the Trust's obligations, the Trust is required by the Declaration of Trust to use its property to protect or compensate the shareholder. On request, the Trust will defend any claim made and pay any judgment against a shareholder for any act or obligation of the Trust. Therefore, financial loss resulting from liability as a shareholder will occur only if the Trust itself cannot meet its obligations to indemnify shareholders and pay judgments against them.

Account and Share Information

VOTING RIGHTS

The insurance company separate accounts, as shareholders of the Fund, will vote the Fund Shares held in their separate accounts at meetings of the shareholders. Voting will be in accordance with instructions received from contract owners of the separate accounts, as more fully outlined in the prospectus of the separate account.

Each Share of the Fund gives the shareholder one vote in Trustee elections and other matters submitted to shareholders for vote.

All Shares of the Trust have equal voting rights, except that in matters affecting only a particular Fund or class, only shares of that Fund or class are entitled to vote.

Trustees may be removed by the Board or by shareholders at a special meeting. A special meeting of shareholders will be called by the Board upon the written request of shareholders who own at least 10% of the Trust's outstanding Shares of all series entitled to vote.

As of April 3, 2014, the following shareholders owned of record, beneficially, or both, 5% or more of outstanding Primary Shares: Federated Capital Income Fund II, State Street Corporation, Boston, MA, owned approximately 15,871,101 Shares (43.94%); GE Life & Annuity, Richmond, VA, owned approximately 3,012,109 Shares (8.34%); and Jefferson National Life Insurance Company, Louisville, KY, owned approximately 2,770,726 Shares (7.67%).

As of April 3, 2014, the following shareholders owned of record, beneficially, or both, 5% or more of outstanding Service Shares: GE Life & Annuity, Richmond, VA, owned approximately 4,641,658 Shares (48.64%); Security Benefit Life, Topeka, KS, owned approximately 3,349,691 Shares (35.10%); and Nationwide Life Insurance Company, Columbus, OH, owned approximately 495,636 Shares (5.19%).

Shareholders owning 25% or more of outstanding Shares may be in control and be able to affect the outcome of certain matters presented for a vote of shareholders.

State Street Corporation is organized in the state of Massachusetts and is a subsidiary of State Street Corporation; organized in the state of Massachusetts.

GE Life & Annuity is organized in the state of Virginia and is a subsidiary of General Electric Capital Assurance Company; organized in the state of Virginia.

Security Benefit Life is organized in the state of Kansas.

Tax Information

FEDERAL INCOME TAX

The Fund intends to meet requirements of Subchapter M of the Internal Revenue Code ("Code") applicable to regulated investment companies. If these requirements are not met, it will not receive special tax treatment and will be subject to federal corporate income tax. Additionally, the Fund intends to comply with the diversification requirements of Section 817(h) of the Code.

The Fund will be treated as a single, separate entity for federal income tax purposes so that income earned and capital gains and losses realized by the Trust's other portfolios will be separate from those realized by the Fund.

The Fund is entitled to a loss carryforward, which may reduce the taxable income or gain that the Fund would realize, and to which the shareholder would be subject, in the future.

TAX BASIS INFORMATION

Under the Energy Improvement and Extension Act of 2008, the Fund's Transfer Agent will be required to provide you with the cost basis information on the sale of any of your Shares in the Fund, subject to certain exceptions. This cost basis reporting requirement is effective for shares purchased in the Fund on or after January 1, 2012.

FOREIGN INVESTMENTS

If the Fund purchases foreign securities, their investment income may be subject to foreign withholding or other taxes that could reduce the return on these securities. Tax treaties between the United States and foreign countries, however, may reduce or eliminate the amount of foreign taxes to which the Fund would be subject. The effective rate of foreign tax cannot be predicted since the amount of Fund assets to be invested within various countries is uncertain. However, the Fund intends to operate so as to qualify for treaty-reduced tax rates when applicable.

Distributions from a Fund may be based on estimates of book income for the year. Book income generally consists solely of the income generated by the securities in the portfolio, whereas tax-basis income includes, in addition, gains or losses attributable to currency fluctuation. Due to differences in the book and tax treatment of fixed-income securities denominated in foreign currencies, it is difficult to project currency effects on an interim basis. Therefore, to the extent that currency fluctuations cannot be anticipated, a portion of distributions to shareholders could later be designated as a return of capital, rather than income, for income tax purposes, which may be of particular concern to simple trusts.

If the Fund invests in the stock of certain foreign corporations, they may constitute Passive Foreign Investment Companies (PFIC), and the Fund may be subject to federal income taxes upon disposition of PFIC investments.

If more than 50% of the value of the Fund's assets at the end of the tax year is represented by stock or securities of foreign corporations, the Fund will qualify for certain Code provisions that allow its shareholders to claim a foreign tax credit or deduction on their U.S. income tax returns. The Code may limit a shareholder's ability to claim a foreign tax credit. Shareholders who elect to deduct their portion of the Fund's foreign taxes rather than take the foreign tax credit must itemize deductions on their income tax returns.

Who Manages and Provides Services to the Fund?

BOARD OF TRUSTEES

The Board of Trustees is responsible for managing the Trust's business affairs and for exercising all the Trust's powers except those reserved for the shareholders. The following tables give information about each Trustee and the senior officers of the Fund. Where required, the tables separately list Trustees who are "interested persons" of the Fund (i.e., "Interested" Trustees) and those who are not (i.e., "Independent" Trustees). Unless otherwise noted, the address of each person listed is Federated Investors Tower, 1001 Liberty Avenue, Pittsburgh, PA 15222. The address of all Independent Trustees listed is 4000 Ericsson Drive, Warrendale, PA 15086-7561; Attention: Mutual Fund Board. As of December 31, 2013, the Trust comprised 7 portfolios, and the Federated Fund Complex consisted of 42 investment companies (comprising 135 portfolios). Unless otherwise noted, each Officer is elected annually. Unless otherwise noted, each Trustee oversees all portfolios in the Federated Fund Complex and serves for an indefinite term.

As of April 3, 2014, the Fund's Board and Officers as a group owned less than 1% of the Fund's outstanding Shares.

QUALIFICATIONS OF INDEPENDENT TRUSTEES

Individual Trustee qualifications are noted in the "Independent Trustees Background and Compensation" chart. In addition, the following characteristics are among those that were considered for each existing Trustee and will be considered for any Nominee Trustee.

- Outstanding skills in disciplines deemed by the Independent Trustees to be particularly relevant to the role of Independent Trustee and to the Federated funds, including legal, accounting, business management, the financial industry generally and the investment industry particularly.
- Desire and availability to serve for a substantial period of time, taking into account the Board's current mandatory retirement age of 73 years.
- No conflicts which would interfere with qualifying as independent.
- Appropriate interpersonal skills to work effectively with other Independent Trustees.

- Understanding and appreciation of the important role occupied by Independent Trustees in the regulatory structure governing regulated investment companies.
- Diversity of background.

Ms. Cunningham has received the Chartered Financial Analyst designation and holds an M.S.B.A. in Finance from Robert Morris College.

** Officers do not receive any compensation from the Fund.

In addition, the Fund has appointed an Anti-Money Laundering Compliance Officer.

BOARD LEADERSHIP STRUCTURE

As required under the terms of certain regulatory settlements, the Chairman of the Board is not an interested person of the Fund and neither the Chairman, nor any firm with which the Chairman is affiliated, has a prior relationship with Federated or its affiliates or (other than his position as a Trustee) with the Fund.

COMMITTEES OF THE BOARD

Board Committee	Committee Members	Committee Functions	Meetings Held During Last Fiscal Year
Executive	John F. Donahue Peter E. Madden John S. Walsh	In between meetings of the full Board, the Executive Committee generally may exercise all the powers of the full Board in the management and direction of the business and conduct of the affairs of the Trust in such manner as the Executive Committee shall deem to be in the best interests of the Trust. However, the Executive Committee cannot elect or remove Board members, increase or decrease the number of Trustees, elect or remove any Officer, declare dividends, issue shares or recommend to shareholders any action requiring shareholder approval.	One
Audit	Maureen Lally-Green Charles F. Mansfield, Jr. Thomas M. O'Neill John S. Walsh	The purposes of the Audit Committee are to oversee the accounting and financial reporting process of the Fund, the Fund's internal control over financial reporting and the quality, integrity and independent audit of the Fund's financial statements. The Committee also oversees or assists the Board with the oversight of compliance with legal requirements relating to those matters, approves the engagement and reviews the qualifications, independence and performance of the Fund's independent registered public accounting firm, acts as a liaison between the independent registered public accounting firm and the Board and reviews the Fund's internal audit function.	Eight
Nominating	John T. Collins Maureen Lally-Green Peter E. Madden Charles F. Mansfield, Jr. Thomas M. O'Neill P. Jerome Richey John S. Walsh	The Nominating Committee, whose members consist of all Independent Trustees, selects and nominates persons for election to the Fund's Board when vacancies occur. The Committee will consider candidates recommended by shareholders, Independent Trustees, officers or employees of any of the Fund's agents or service providers and counsel to the Fund. Any shareholder who desires to have an individual considered for nomination by the Committee must submit a recommendation in writing to the Secretary of the Fund, at the Fund's address appearing on the back cover of this SAI. The recommendation should include the name and address of both the shareholder and the candidate and detailed information concerning the candidate's qualifications and experience. In identifying and evaluating candidates for consideration, the Committee shall consider such factors as it deems appropriate. Those factors will ordinarily include: integrity, intelligence, collegiality, judgment, diversity, skill, business and other experience, qualification as an "Independent Trustee," the existence of material relationships which may create the appearance of a lack of independence, financial or accounting knowledge and experience and dedication and willingness to devote the time and attention necessary to fulfill Board responsibilities.	Two

BOARD'S ROLE IN RISK OVERSIGHT

The Board's role in overseeing the Fund's general risks includes receiving performance reports for the Fund and risk management reports from Federated's Chief Risk Officer at each regular Board meeting. The Chief Risk Officer is responsible for enterprise risk management at Federated, which includes risk management committees for investment management and for investor services. The Board also receives regular reports from the Fund's Chief Compliance Officer regarding significant compliance risks.

On behalf of the Board, the Audit Committee plays a key role overseeing the Fund's financial reporting and valuation risks. The Audit Committee meets regularly with the Fund's Principal Financial Officer and outside auditors, as well as with Federated's Chief Audit Executive to discuss financial reporting and audit issues, including risks relating to financial controls.

BOARD OWNERSHIP OF SHARES IN THE FUND AND IN THE FEDERATED FAMILY OF INVESTMENT COMPANIES AS OF DECEMBER 31, 2013

John S. Walsh	None	Over \$100,000

INVESTMENT ADVISER

The Adviser conducts investment research and makes investment decisions for the Fund.

The Adviser is a wholly owned subsidiary of Federated.

The Adviser shall not be liable to the Trust or any Fund shareholder for any losses that may be sustained in the purchase, holding or sale of any security or for anything done or omitted by it, except acts or omissions involving willful misfeasance, bad faith, gross negligence or reckless disregard of the duties imposed upon it by its contract with the Trust.

Portfolio Manager Information

As a general matter, certain conflicts of interest may arise in connection with a portfolio manager's management of a fund's investments, on the one hand, and the investments of other accounts for which the portfolio manager is responsible, on the other. For example, it is possible that the various accounts managed could have different investment strategies that, at times, might conflict with one another to the possible detriment of the Fund. Alternatively, to the extent that the same investment opportunities might be desirable for more than one account, possible conflicts could arise in determining how to allocate them. Other potential conflicts might include conflicts created by specific portfolio manager compensation arrangements, and conflicts relating to selection of brokers or dealers to execute Fund portfolio trades and/or specific uses of commissions from Fund portfolio trades (for example, research or "soft dollars"). The Adviser has adopted policies and procedures and has structured the portfolio managers' compensation in a manner reasonably designed to safeguard the Fund from being negatively affected as a result of any such potential conflicts.

The following information about the Fund's Portfolio Manager is provided as of the end of the Fund's most recently completed fiscal year unless otherwise indicated.

Mark Durbiano, Portfolio Manager

Types of Accounts Managed by Mark Durbiano	Total Number of Additional Accounts Managed/Total Assets*	Additional Accounts/Assets Managed that are Subject to Advisory Fee Based on Account Performance
Registered Investment Companies	20/\$11.5 billion	0/\$0
Other Pooled Investment Vehicles	1/\$29.7 million	0/\$0
Other Accounts	2/\$86.0 million	2/\$192.3 million

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

Mark Durbiano is paid a fixed base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager's experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. ("Federated"). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

IPP is measured on a rolling one, three and five calendar year pre-tax gross total return basis vs. the Fund's benchmark (i.e., Barclays U.S. Corporate High Yield 2% Issuer Capped Index) and vs. the Fund's designated peer group of comparable accounts. Performance periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one year of performance history under a portfolio manager may be excluded. As noted above, Mr. Durbiano is also the portfolio manager for other accounts in addition to the Fund. Such other accounts may have different benchmarks. The performance of certain of these accounts is excluded when calculating IPP. Within each performance measurement period, IPP is calculated with an equal weighting of each included account managed by the portfolio manager. In addition, Mr. Durbiano serves on one or more Investment Teams that establish guidelines on various performance drivers (e.g., currency, duration, sector, volatility and/or yield curve) for taxable, fixed-income funds. A portion of the IPP score is based on Federated's senior management's assessment of team contributions. A portion of the bonus tied to the IPP score may be adjusted based on management's assessment of overall contributions to Fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager's bonus, in part, to Federated's overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

Services Agreement

Federated Advisory Services Company, an affiliate of the Adviser, provides certain support services to the Adviser. The fee for these services is paid by the Adviser and not by the Fund.

Other Related Services

Affiliates of the Adviser may, from time to time, provide certain electronic equipment and software to institutional customers in order to facilitate the purchase of Fund Shares offered by the Distributor.

CODE OF ETHICS RESTRICTIONS ON PERSONAL TRADING

As required by SEC rules, the Fund, its Adviser and its Distributor have adopted codes of ethics. These codes govern securities trading activities of investment personnel, Fund Trustees and certain other employees. Although they do permit these people to trade in securities, including those that the Fund could buy, as well as Shares of the Fund, they also contain significant safeguards designed to protect the Fund and its shareholders from abuses in this area, such as requirements to obtain prior approval for, and to report, particular transactions.

VOTING PROXIES ON FUND PORTFOLIO SECURITIES

The Board has delegated to the Adviser authority to vote proxies on the securities held in the Fund's portfolio. The Board has also approved the Adviser's policies and procedures for voting the proxies, which are described below.

Proxy Voting Policies

The Adviser's general policy is to cast proxy votes in favor of proposals that the Adviser anticipates will enhance the long-term value of the securities being voted. Generally, this will mean voting for proposals that the Adviser believes will: improve the management of a company; increase the rights or preferences of the voted securities; and/or increase the chance that a premium offer would be made for the company or for the voted securities.

The following examples illustrate how these general policies may apply to proposals submitted by a company's board of directors. However, whether the Adviser supports or opposes a proposal will always depend on the specific circumstances described in the proxy statement and other available information.

On matters of corporate governance, generally the Adviser will vote *for* the full slate of directors nominated in an uncontested election; and *for* proposals to: require a company's audit committee to be comprised entirely of independent directors; require independent tabulation of proxies and/or confidential voting by shareholders; reorganize in another jurisdiction (unless it would reduce the rights or preferences of the securities being voted); ratify the board's selection of auditors (unless compensation for non-audit services exceeded 50% of the total compensation received from the company, or the previous auditor was dismissed because of a disagreement with the company); and repeal a shareholder rights plan (also known as a "poison pill"). The Adviser will generally vote *against* the adoption of such a plan (unless the plan is designed to facilitate, rather than prevent, unsolicited offers for the company).

On matters of capital structure, generally the Adviser will vote: *against* proposals to authorize or issue shares that are senior in priority or voting rights to the securities being voted; and *for* proposals to: reduce the amount of shares authorized for issuance; authorize a stock repurchase program; and grant preemptive rights to the securities being voted. The Adviser will generally vote *against* proposals to eliminate such preemptive rights.

On matters relating to management compensation, generally the Adviser will vote: *for* stock incentive plans that align the recipients' interests with the interests of shareholders without creating undue dilution; *against* proposals that would permit the amendment or replacement of outstanding stock incentives with new stock incentives having more favorable terms; and *against* executive compensation plans that do not disclose the maximum amounts of compensation that may be awarded or the criteria for determining awards.

On matters relating to corporate transactions, the Adviser will vote proxies relating to proposed mergers, capital reorganizations and similar transactions in accordance with the general policy, based upon its analysis of the proposed transaction. The Adviser will vote proxies in contested elections of directors in accordance with the general policy, based upon its analysis of the opposing slates and their respective proposed business strategies. Some transactions may also involve proposed changes to the company's corporate governance, capital structure or management compensation. The Adviser will vote on such changes based on its evaluation of the proposed transaction or contested election. In these circumstances, the Adviser may vote in a manner contrary to the general practice for similar proposals made outside the context of such a proposed transaction or change in the board. For example, if the Adviser decides to vote against a proposed transaction, it may vote for anti-takeover measures reasonably designed to prevent the transaction, even though the Adviser typically votes against such measures in other contexts.

The Adviser generally votes *against* proposals submitted by shareholders without the favorable recommendation of a company's board. The Adviser believes that a company's board should manage its business and policies, and that shareholders who seek specific changes should strive to convince the board of their merits or seek direct representation on the board.

In addition, the Adviser will not vote if it determines that the consequences or costs outweigh the potential benefit of voting. For example, if a foreign market requires shareholders casting proxies to retain the voted shares until the meeting date (thereby rendering the shares "illiquid" for some period of time), the Adviser will not vote proxies for such shares.

Proxy Voting Procedures

The Adviser has established a Proxy Voting Committee ("Proxy Committee"), to exercise all voting discretion granted to the Adviser by the Board in accordance with the proxy voting policies. The Adviser has hired Glass Lewis & Co. (GL) to obtain, vote and record proxies in accordance with the Proxy Committee's directions. The Proxy Committee has supplied GL with general voting instructions that represent decisions made by the Proxy Committee in order to vote common proxy proposals; however, the Proxy Committee retains the right to modify these voting instructions at any time or to vote contrary to the voting instructions at any time in order to cast proxy votes in a manner that the Proxy Committee believes is consistent with the Adviser's general policy. GL may vote any proxy as directed in the voting instructions without further direction from the Proxy Committee and may make any determinations required to implement the voting instructions. However, if the voting instructions require case-by-case direction for a proposal, GL shall provide the Proxy Committee with all information that it has obtained regarding the proposal and the Proxy Committee will provide specific direction to GL.

Conflicts of Interest

The Adviser has adopted procedures to address situations where a matter on which a proxy is sought may present a potential conflict between the interests of the Fund (and its shareholders) and those of the Adviser or Distributor. This may occur where a significant business relationship exists between the Adviser (or its affiliates) and a company involved with a proxy vote. A company that is a proponent, opponent or the subject of a proxy vote and which to the knowledge of the Proxy Committee has this type of significant business relationship, is referred to as an "Interested Company."

The Adviser has implemented the following procedures in order to avoid concerns that the conflicting interests of the Adviser have influenced proxy votes. Any employee of the Adviser who is contacted by an Interested Company regarding proxies to be voted by the Adviser must refer the Interested Company to a member of the Proxy Committee, and must inform the Interested Company that the Proxy Committee has exclusive authority to determine how the Adviser will vote. Any Proxy Committee member contacted by an Interested Company must report it to the full Proxy Committee and provide a written summary of the communication. Under no circumstances will the Proxy Committee or any member of the Proxy Committee make a commitment to an Interested Company regarding the voting of proxies or disclose to an Interested Company how the Proxy Committee has directed such proxies to be voted. If the voting instructions already provide specific direction on the proposal in question, the Proxy Committee shall not alter or amend such directions. If the voting instructions require the Proxy Committee to provide further direction, the Proxy Committee shall do so in accordance with the proxy voting policies, without regard for the interests of the Adviser with respect to the Interested Company. If the Proxy Committee provides any direction as to the voting of proxies relating to a proposal affecting an Interested Company, it must disclose to the Fund's Board information regarding: the significant business

relationship; any material communication with the Interested Company; the matter(s) voted on; and how, and why, the Adviser voted as it did. Alternatively, the Proxy Committee may seek direction from the Fund's Board on how a proposal concerning an Interested Company shall be voted, and shall follow any such direction provided by the Board. In seeking such direction, the Proxy Committee will disclose the reason such company is considered an Interested Company and may provide a recommendation on how such proposal should be voted and the basis for such recommendation.

If the Fund holds shares of another investment company for which the Adviser (or an affiliate) acts as an investment adviser, the Proxy Committee will vote the Fund's proxies in the same proportion as the votes cast by shareholders who are not clients of the Adviser at any shareholders' meeting called by such investment company, unless otherwise directed by the Board.

Proxy Voting Report

A report on "Form N-PX" of how the Fund voted any proxies during the most recent 12-month period ended June 30 is available via the Proxy Voting Record (Form N-PX) link associated with the Fund and share class name at www.Federatedinvestors.com/FundInformation. Form N-PX filings are also available at the SEC's website at www.sec.gov.

PORTFOLIO HOLDINGS INFORMATION

Information concerning the Fund's portfolio holdings is available via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. A complete listing of the Fund's portfolio holdings as of the end of each calendar quarter is posted on the website 30 days (or the next business day) after the end of the quarter and remains posted for six months thereafter. Summary portfolio composition information as of the close of each month is posted on the website 15 days (or the next business day) after month-end and remains posted until replaced by the information for the succeeding month. The summary portfolio composition information may include: identification of the Fund's top 10 holdings, recent purchase and sale transactions and percentage breakdowns of the portfolio by sector, asset class and credit quality.

You may also access portfolio information as of the end of the Fund's fiscal quarters via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. The Fund's Annual Shareholder Report and Semi-Annual Shareholder Report contain complete listings of the Fund's portfolio holdings as of the end of the Fund's second and fourth fiscal quarters. The Fund's Form N-Q filings contain complete listings of the Fund's portfolio holdings as of the end of the Fund's first and third fiscal quarters. Fiscal quarter information is made available on the website within 70 days after the end of the fiscal quarter. This information is also available in reports filed with the SEC at the SEC's website at www.sec.gov.

The disclosure policy of the Fund and the Adviser prohibits the disclosure of portfolio holdings information to any investor or intermediary before the same information is made available to other investors. Employees of the Adviser or its affiliates who have access to nonpublic information concerning the Fund's portfolio holdings are prohibited from trading securities on the basis of this information. Such persons must report all personal securities trades and obtain pre-clearance for all personal securities trades other than mutual fund shares.

Firms that provide administrative, custody, financial, accounting, legal or other services to the Fund may receive nonpublic information about Fund portfolio holdings for purposes relating to their services. The Fund may also provide portfolio holdings information to publications that rate, rank or otherwise categorize investment companies. Traders or portfolio managers may provide "interest" lists to facilitate portfolio trading if the list reflects only that subset of the portfolio for which the trader or portfolio manager is seeking market interest. A list of service providers, publications and other third parties who may receive nonpublic portfolio holdings information appears in the Appendix to this SAI.

The furnishing of nonpublic portfolio holdings information to any third party (other than authorized governmental or regulatory personnel) requires the prior approval of the President of the Adviser and of the Chief Compliance Officer of the Fund. The President of the Adviser and the Chief Compliance Officer will approve the furnishing of nonpublic portfolio holdings information to a third party only if they consider the furnishing of such information to be in the best interests of the Fund and its shareholders. In that regard, and to address possible conflicts between the interests of Fund shareholders and those of the Adviser and its affiliates, the following procedures apply. No consideration may be received by the Fund, the Adviser, any affiliate of the Adviser or any of their employees in connection with the disclosure of portfolio holdings information. Before information is furnished, the third party must sign a written agreement that it will safeguard the confidentiality of the information, will use it only for the purposes for which it is furnished and will not use it in connection with the trading of any security. Persons approved to receive nonpublic portfolio holdings information will receive it as often as necessary for the purpose for which it is provided. Such information may be furnished as frequently as daily and often with no time lag between the date of the information and the date it is furnished. The Board receives and reviews annually a list of the persons who receive nonpublic portfolio holdings information and the purposes for which it is furnished.

BROKERAGE TRANSACTIONS AND INVESTMENT ALLOCATION

Equity securities may be traded in the over-the-counter market through broker/dealers acting as principal or agent, or in transactions directly with other investors. Transactions may also be executed on a securities exchange or through an electronic communications network. The Adviser seeks to obtain best execution of trades in equity securities by balancing the costs inherent in trading, including opportunity costs, market impact costs and commissions. As a general matter, the Adviser seeks to add value to its investment management by using market information to capitalize on market opportunities, actively seek liquidity and discover price. The Adviser continually monitors its trading results in an effort to improve execution. Fixed-income securities are generally traded in an over-the-counter market on a net basis (i.e., without commission) through dealers acting as principal or in transactions directly with the issuer. Dealers derive an undisclosed amount of compensation by offering securities at a higher price than they bid for them. Some fixed-income securities may have only one primary market maker. The Adviser seeks to use dealers it believes to be actively and effectively trading the security being purchased or sold, but may not always obtain the lowest purchase price or highest sale price with respect to a fixed-income security. The Adviser's receipt of research services (as described below) may also be a factor in the Adviser's selection of brokers and dealers. The Adviser may also direct certain portfolio trades to a broker that, in turn, pays a portion of the Fund's operating expenses. The Adviser makes decisions on portfolio transactions and selects brokers and dealers subject to review by the Fund's Board.

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. Except as noted below, when the Fund and one or more of those accounts invests in, or disposes of, the same security, available investments or opportunities for sales will be allocated among the Fund and the account(s) in a manner believed by the Adviser to be equitable. While the coordination and ability to participate in volume transactions may benefit the Fund, it is possible that this procedure could adversely impact the price paid or received and/or the position obtained or disposed of by the Fund. Investments for Federated Kaufmann Fund and other accounts managed by that fund's portfolio managers in initial public offerings (IPO) are made independently from any other accounts, and much of their non-IPO trading may also be conducted independently from other accounts. Trading and allocation of investments, including IPOs, for accounts managed by Federated MDTA LLC are also made independently from the Fund. Investment decisions and trading for certain separately managed or wrap-fee accounts, and other accounts, of the Adviser and/or certain investment adviser affiliates of the Adviser also are generally made and conducted independently from the Fund. It is possible that such independent trading activity could adversely impact the prices paid or received and/or positions obtained or disposed of by the Fund.

Brokerage and Research Services

Brokerage services include execution of trades and products and services that relate to the execution of trades, including communications services related to trade execution, clearing and settlement, trading software used to route orders to market centers, software that provides algorithmic trading strategies and software used to transmit orders to direct market access (DMA) systems. Research services may include: advice as to the advisability of investing in securities; security analysis and reports; economic studies; industry studies; receipt of quotations for portfolio evaluations; and similar services. Research services assist the Adviser and its affiliates in terms of their overall investment responsibilities to funds and investment accounts for which they have investment discretion. However, particular brokerage and research services received by the Adviser and its affiliates may not be used to service every fund or account, and may not benefit the particular funds and accounts that generated the brokerage commissions. In addition, brokerage and research services paid for with commissions generated by the Fund may be used in managing other funds and accounts. To the extent that receipt of these services may replace services for which the Adviser or its affiliates might otherwise have paid, it would tend to reduce their expenses. The Adviser and its affiliates exercise reasonable business judgment in selecting brokers to execute securities transactions where receipt of research services is a factor. They determine in good faith that commissions charged by such persons are reasonable in relationship to the value of the brokerage and research services provided.

For the fiscal year ended December 31, 2012, the Fund's Adviser directed brokerage transactions to certain brokers in connection with the Adviser's receipt of research services. The total amount of these transactions was \$218,702 for which the Fund paid \$705 in brokerage commissions.

ADMINISTRATOR

Federated Administrative Services (FAS), a subsidiary of Federated, provides administrative personnel and services, including certain legal, compliance, recordkeeping and financial reporting services ("Administrative Services"), necessary for the operation of the Fund. FAS provides Administrative Services for a fee based upon the rates set forth below paid on the average daily net assets of the Fund. For purposes of determining the appropriate rate breakpoint, "Investment Complex" is defined as all of the Federated Funds subject to a fee under the Administrative Services Agreement with FAS. FAS is also entitled to reimbursement for certain out-of-pocket expenses incurred in providing Administrative Services to the Fund.

Administrative Services Fee Rate	Average Daily Net Assets of the Investment Complex
0.150 of 1%	on the first \$5 billion
0.125 of 1%	on the next \$5 billion
0.100 of 1%	on the next \$10 billion
0.075 of 1%	on assets over \$20 billion

CUSTODIAN

State Street Bank and Trust Company, Boston, Massachusetts, is custodian for the securities and cash of the Fund. Foreign instruments purchased by the Fund are held by foreign banks participating in a network coordinated by State Street Bank and Trust Company.

TRANSFER AGENT AND DIVIDEND DISBURSING AGENT

State Street Bank and Trust Company, the Fund’s registered transfer agent, maintains all necessary shareholder records.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The independent registered public accounting firm for the Fund, KPMG LLP, conducts its audits in accordance with the standards of the Public Company Accounting Oversight Board (United States), which require it to plan and perform its audits to provide reasonable assurance about whether the Fund’s financial statements and financial highlights are free of material misstatement.

FEES PAID BY THE FUND FOR SERVICES

For the Year Ended December 31	2013	2012	2011
Advisory Fee Earned	\$1,762,458	\$1,572,533	\$1,435,110
Advisory Fee Waived	—	—	—
Brokerage Commissions	—	\$ 705	—
Net Administrative Fee	\$ 229,244	\$ 201,302	\$ 182,019
Net 12b-1 Fee:			
Service Shares	\$ 172,761	\$ 193,421	\$ 199,707

Fees are allocated among classes based on their pro rata share of Fund assets, except for marketing (“Rule 12b-1”) fees and administrative service fees, which are borne only by the applicable class of Shares.

Financial Information

The Financial Statements for the Fund for the fiscal year ended December 31, 2013, are incorporated herein by reference to the Annual Report to Shareholders of Federated High Income Bond Fund II dated December 31, 2013.

Investment Ratings

STANDARD & POOR’S RATING SERVICES (S&P) LONG-TERM ISSUE RATINGS

Issue credit ratings are based, in varying degrees, on S&P’s analysis of the following considerations: the likelihood of payment—capacity and willingness of the obligor to meet its financial commitment on an obligation in accordance with the terms of the obligation; the nature of and provisions of the obligation; and the protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors’ rights.

AAA—An obligation rated “AAA” has the highest rating assigned by S&P. The obligor’s capacity to meet its financial commitment on the obligation is extremely strong.

AA—An obligation rated “AA” differs from the highest rated obligations only to a small degree. The obligor’s capacity to meet its financial commitment on the obligation is very strong.

A—An obligation rated “A” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor’s capacity to meet its financial commitment on the obligation is still strong.

BBB—An obligation rated “BBB” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated “BB,” “B,” “CCC,” “CC” and “C” are regarded as having significant speculative characteristics. “BB” indicates the least degree of speculation and “C” the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

BB—An obligation rated “BB” is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor’s inadequate capacity to meet its financial commitment on the obligation.

B—An obligation rated “B” is more vulnerable to nonpayment than obligations rated “BB,” but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial or economic conditions will likely impair the obligor’s capacity or willingness to meet its financial commitment on the obligation.

CCC—An obligation rated “CCC” is currently vulnerable to nonpayment, and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

CC—An obligation rated “CC” is currently highly vulnerable to nonpayment.

C—A “C” rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents, or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the “C” rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have been suspended in accordance with the instrument’s terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

D—An obligation rated “D” is in payment default. The “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within five business days, irrespective of any grace period. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation’s rating is lowered to “D” upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

The ratings from “AA” to “CCC” may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

S&P RATING OUTLOOK

An S&P rating outlook assesses the potential direction of a long-term credit rating over the intermediate term (typically six months to two years). In determining a rating outlook, consideration is given to any changes in the economic and/or fundamental business conditions.

Positive—Positive means that a rating may be raised.

Negative—Negative means that a rating may be lowered.

Stable—Stable means that a rating is not likely to change.

Developing—Developing means a rating may be raised or lowered.

N.M.—N.M. means not meaningful.

S&P SHORT-TERM ISSUE RATINGS

Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the United States, for example, that means obligations with an original maturity of no more than 365 days—including commercial paper.

A-1—A short-term obligation rated “A-1” is rated in the highest category by S&P. The obligor’s capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor’s capacity to meet its financial commitment on these obligations is extremely strong.

A-2—A short-term obligation rated “A-2” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor’s capacity to meet its financial commitment on the obligation is satisfactory.

A-3—A short-term obligation rated “A-3” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

B—A short-term obligation rated “B” is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor’s inadequate capacity to meet its financial commitments.

C—A short-term obligation rated “C” is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

D—A short-term obligation rated “D” is in payment default. The “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

MOODY’S INVESTOR SERVICES, INC. (MOODY’S) LONG-TERM RATINGS

Moody’s long-term ratings are assigned to issuers or obligations with an original maturity of one year or more and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default.

Aaa—Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa—Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A—Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa—Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba—Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B—Obligations rated B are considered speculative and are subject to high credit risk.

Caa—Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca—Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C—Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Moody’s appends numerical modifiers 1, 2 and 3 to each generic rating classification from Aaa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

MOODY’S SHORT-TERM RATINGS

Moody’s short-term ratings are assigned to obligations with an original maturity of 13 months or less and reflect the likelihood of a default on contractually promised payments.

P-1—Issuers (or supporting institutions) rated P-1 have a superior ability to repay short-term debt obligations.

P-2—Issuers (or supporting institutions) rated P-2 have a strong ability to repay short-term debt obligations.

P-3—Issuers (or supporting institutions) rated P-3 have an acceptable ability to repay short-term obligations.

NP—Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

FITCH, INC. (FITCH) LONG-TERM DEBT RATINGS

Fitch long-term ratings report Fitch’s opinion on an entity’s relative vulnerability to default on financial obligations. The “threshold” default risk addressed by the rating is generally that of the financial obligations whose non-payment would best reflect the uncured failure of that entity. As such, Fitch long-term ratings also address relative vulnerability to bankruptcy, administrative receivership or similar concepts, although the agency recognizes that issuers may also make pre-emptive and therefore voluntary use of such mechanisms.

AAA: Highest Credit Quality—“AAA” ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA: Very High Credit Quality—“AA” ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A: High Credit Quality—“A” ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB: Good Credit Quality—“BBB” ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity.

BB: Speculative—“BB” ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial flexibility exists which supports the servicing of financial commitments.

B: Highly Speculative—“B” ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

CCC: Substantial Credit Risk—Default is a real possibility.

CC: Very High Levels of Credit Risk—Default of some kind appears probable.

C: Exceptionally High Levels of Credit Risk—Default is imminent or inevitable, or the issuer is in standstill. Conditions that are indicative of a “C” category rating for an issuer include: (a) the issuer has entered into a grace or cure period following non-payment of a material financial obligation; (b) the issuer has entered into a temporary negotiated waiver or standstill agreement following a payment default on a material financial obligation; or (c) Fitch otherwise believes a condition of “RD” or “D” to be imminent or inevitable, including through the formal announcement of a distressed debt exchange.

RD: Restricted Default—“RD” ratings indicate an issuer that in Fitch’s opinion has experienced an uncured payment default on a bond, loan or other material financial obligation but which has not entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, and which has not otherwise ceased operating. This would include: (a) the selective payment default on a specific class or currency of debt; (b) the uncured expiry of any applicable grace period, cure period or default forbearance period following a payment default on a bank loan, capital markets security or other material financial obligation; (c) the extension of multiple waivers or forbearance periods upon a payment default on one or more material financial obligations, either in series or in parallel; or (d) execution of a distressed debt exchange on one or more material financial obligations.

D: Default—“D” ratings indicate an issuer that in Fitch’s opinion has entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, or which has otherwise ceased business.

Default ratings are not assigned prospectively to entities or their obligations; within this context, non-payment on an instrument that contains a deferral feature or grace period will generally not be considered a default until after the expiration of the deferral or grace period, unless a default is otherwise driven by bankruptcy or other similar circumstance, or by a distressed debt exchange.

“Imminent” default typically refers to the occasion where a payment default has been intimated by the issuer, and is all but inevitable. This may, for example, be where an issuer has missed a scheduled payment, but (as is typical) has a grace period during which it may cure the payment default. Another alternative would be where an issuer has formally announced a distressed debt exchange, but the date of the exchange still lies several days or weeks in the immediate future.

In all cases, the assignment of a default rating reflects the agency’s opinion as to the most appropriate rating category consistent with the rest of its universe of ratings, and may differ from the definition of default under the terms of an issuer’s financial obligations or local commercial practice.

FITCH SHORT-TERM DEBT RATINGS

A Fitch short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-Term Ratings are assigned to obligations whose initial maturity is viewed as “short-term” based on market convention. Typically, this means up to 13 months for corporate, sovereign, and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

F1: Highest Short-Term Credit Quality—Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

F2: Good Short-Term Credit Quality—Good intrinsic capacity for timely payment of financial commitments.

F3: Fair Short-Term Credit Quality—The intrinsic capacity for timely payment of financial commitments is adequate.

B: Speculative Short-Term Credit Quality—Minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near-term adverse changes in financial and economic conditions.

C: High Short-Term Default Risk—Default is a real possibility.

RD: Restricted Default—Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Applicable to entity ratings only.

D: Default—Indicates a broad-based default event for an entity, or the default of a short-term obligation.

A.M. BEST COMPANY, INC. (A.M. BEST) LONG-TERM DEBT AND PREFERRED STOCK RATINGS

A Best’s long-term debt rating is Best’s independent opinion of an issuer/entity’s ability to meet its ongoing financial obligations to security holders when due.

aaa: Exceptional—Assigned to issues where the issuer has an exceptional ability to meet the terms of the obligation.

aa: Very Strong—Assigned to issues where the issuer has a very strong ability to meet the terms of the obligation.

a: Strong—Assigned to issues where the issuer has a strong ability to meet the terms of the obligation.

bbb: Adequate—Assigned to issues where the issuer has an adequate ability to meet the terms of the obligation; however, the issue is more susceptible to changes in economic or other conditions.

bb: Speculative—Assigned to issues where the issuer has speculative credit characteristics, generally due to a modest margin or principal and interest payment protection and vulnerability to economic changes.

b: Very Speculative—Assigned to issues where the issuer has very speculative credit characteristics, generally due to a modest margin of principal and interest payment protection and extreme vulnerability to economic changes.

ccc, cc, c: Extremely Speculative—Assigned to issues where the issuer has extremely speculative credit characteristics, generally due to a minimal margin of principal and interest payment protection and/or limited ability to withstand adverse changes in economic or other conditions.

d: In Default—Assigned to issues in default on payment of principal, interest or other terms and conditions, or when a bankruptcy petition or similar action has been filed.

Ratings from “aa” to “ccc” may be enhanced with a “+” (plus) or “-” (minus) to indicate whether credit quality is near the top or bottom of a category.

A.M. BEST SHORT-TERM DEBT RATINGS

A Best’s short-term debt rating is Best’s opinion of an issuer/entity’s ability to meet its financial obligations having original maturities of generally less than one year, such as commercial paper.

AMB-1+ Strongest—Assigned to issues where the issuer has the strongest ability to repay short-term debt obligations.

AMB-1 Outstanding—Assigned to issues where the issuer has an outstanding ability to repay short-term debt obligations.

AMB-2 Satisfactory—Assigned to issues where the issuer has a satisfactory ability to repay short-term debt obligations.

AMB-3 Adequate—Assigned to issues where the issuer has an adequate ability to repay short-term debt obligations; however, adverse economic conditions likely will reduce the issuer’s capacity to meet its financial commitments.

AMB-4 Speculative—Assigned to issues where the issuer has speculative credit characteristics and is vulnerable to adverse economic or other external changes, which could have a marked impact on the company’s ability to meet its financial commitments.

d: In Default—Assigned to issues in default on payment of principal, interest or other terms and conditions, or when a bankruptcy petition or similar action has been filed.

A.M. BEST RATING MODIFIERS

Both long- and short-term credit ratings can be assigned a modifier.

u—Indicates the rating may change in the near term, typically within six months. Generally is event-driven, with positive, negative or developing implications.

pd—Indicates ratings assigned to a company that chose not to participate in A.M. Best’s interactive rating process. (Discontinued in 2010).

i—Indicates rating assigned is indicative.

A.M. BEST RATING OUTLOOK

A.M. Best Credit Ratings are assigned a Rating Outlook that indicates the potential direction of a credit rating over an intermediate term, generally defined as the next 12 to 36 months.

Positive—Indicates possible ratings upgrade due to favorable financial/market trends relative to the current trading level.

Negative—Indicates possible ratings downgrade due to unfavorable financial/market trends relative to the current trading level.

Stable—Indicates low likelihood of rating change due to stable financial/market trends.

NOT RATED

Certain nationally recognized statistical rating organizations (NRSROs) may designate certain issues as NR, meaning that the issue or obligation is not rated.

Federated Securities Corp., Distributor

3113008B (4/14)

Federated is a registered trademark
of Federated Investors, Inc.
2014 ©Federated Investors, Inc.

How is the Fund Organized?

The Fund is a diversified portfolio of Federated Insurance Series (“Trust”). The Trust is an open-end, management investment company that was established under the laws of the Commonwealth of Massachusetts on September 15, 1993. The Trust may offer separate series of shares representing interests in separate portfolios of securities. Effective December 2, 2011, the Fund changed its name from Federated Capital Income Fund II to Federated Managed Volatility Fund II.

The Fund’s investment adviser is Federated Equity Management Company of Pennsylvania (“Adviser”). Due to changes in Commodity Futures Trading Commission’s interpretation of the Commodity Exchange Act, effective January 1, 2013, the Adviser has become registered as a “commodity pool operator” with respect to its operation of the Fund.

What are the Fund’s Investment Strategies?

The Fund seeks competitive returns with more consistent volatility of returns by targeting an annualized volatility level of approximately 10%. To implement this volatility management strategy, the Adviser will monitor the Fund’s forecasted annualized volatility of returns, placing a greater weight on recent historical data. It is expected that the Adviser will take action to manage the Fund’s volatility when the forecasted annualized Fund volatility goes outside of a lower (8%) and an upper (12%) band.

Securities in Which the Fund Invests

The principal securities or other investments in which the Fund invests are described in the Fund’s Prospectus. The Fund also may invest in securities or other investments as non-principal investments for any purpose that is consistent with its investment objective. The following information is either additional information in respect of a principal security or other investment referenced in the Prospectus or information in respect of a non-principal security or other investment (in which case there is no related disclosure in the Prospectus).

SECURITIES DESCRIPTIONS AND TECHNIQUES

Interests in Other Limited Liability Companies

Entities such as limited partnerships, limited liability companies, business trusts and companies organized outside the United States may issue securities comparable to common or preferred stock.

Warrants

Warrants give the Fund the option to buy the issuer’s equity securities at a specified price (the “exercise price”) by a specified future date (the “expiration date”). The Fund may buy the designated securities by paying the exercise price before the expiration date. Warrants may become worthless if the price of the stock does not rise above the exercise price by the expiration date. This increases the market risks of warrants as compared to the underlying security. Rights are the same as warrants, except companies typically issue rights to existing stockholders.

Commercial Paper (A Type of Corporate Debt Security)

Commercial paper is an issuer’s obligation with a maturity of less than nine months. Companies typically issue commercial paper to pay for current expenditures. Most issuers constantly reissue their commercial paper and use the proceeds (or bank loans) to repay maturing paper. If the issuer cannot continue to obtain liquidity in this fashion, its commercial paper may default. The short maturity of commercial paper reduces both the interest rate and credit risks as compared to other debt securities of the same issuer.

Demand Instruments (A Type of Tax-Exempt Security)

Demand instruments are corporate debt securities that the issuer must repay upon demand. Other demand instruments require a third party, such as a dealer or bank, to repurchase the security for its face value upon demand. The Fund treats demand instruments as short-term securities, even though their stated maturity may extend beyond one year.

Municipal Securities (A Fixed-Income Security)

Municipal securities are issued by states, counties, cities and other political subdivisions and authorities. Although many municipal securities are exempt from federal income tax, the Fund may invest in taxable municipal securities.

Collateralized Mortgage Obligations (A Type of Mortgage-Backed Security)

CMOs, including interests in real estate mortgage investment conduits (REMICs), allocate payments and prepayments from an underlying pass-through certificate among holders of different classes of Mortgage-backed securities. This creates different prepayment and interest rate risks for each CMO class. The degree of increased or decreased prepayment risks depends upon the structure of the CMOs. However, the actual returns on any type of mortgage-backed security depend upon the performance of the underlying pool of mortgages, which no one can predict and will vary among pools.

Sequential CMOs (A Type of CMO)

In a sequential pay CMO, one class of CMOs receives all principal payments and prepayments. The next class of CMOs receives all principal payments after the first class is paid off. This process repeats for each sequential class of CMO. As a result, each class of sequential pay CMOs reduces the prepayment risks of subsequent classes.

PACs, TACs and Companion Classes Types of CMOs)

More sophisticated CMOs include planned amortization classes (PACs) and targeted amortization classes (TACs). PACs and TACs are issued with companion classes. PACs and TACs receive principal payments and prepayments at a specified rate. The companion classes receive principal payments and prepayments in excess of the specified rate. In addition, PACs will receive the companion classes share of principal payments, if necessary, to cover a shortfall in the prepayment rate. This helps PACs and TACs to control prepayment risks by increasing the risks to their companion classes.

IOs and POs (Types of CMOs)

CMOs may allocate interest payments to one class (Interest Only or IOs) and principal payments to another class (Principal Only or POs). POs increase in value when prepayment rates increase. In contrast, IOs decrease in value when prepayments increase, because the underlying mortgages generate less interest payments. However, IOs tend to increase in value when interest rates rise (and prepayments decrease), making IOs a useful hedge against interest rate risks.

Floater and Inverse Floaters (Types of CMOs)

Another variant allocates interest payments between two classes of CMOs. One class (Floaters) receives a share of interest payments based upon a market index such as The London Interbank Offer Rate (LIBOR). The other class (Inverse Floaters) receives any remaining interest payments from the underlying mortgages. Floater classes receive more interest (and Inverse Floater classes receive correspondingly less interest) as interest rates rise. This shifts prepayment and interest rate risks from the Floater to the Inverse Floater class, reducing the price volatility of the Floater class and increasing the price volatility of the Inverse Floater class.

Z Classes and Residual Classes (Types of CMOs)

CMOs must allocate all payments received from the underlying mortgages to some class. To capture any unallocated payments, CMOs generally have an accrual (Z) class. Z classes do not receive any payments from the underlying mortgages until all other CMO classes have been paid off. Once this happens, holders of Z class CMOs receive all payments and prepayments. Similarly, REMICs have residual interests that receive any mortgage payments not allocated to another REMIC class.

Non-Governmental Mortgage-Backed Securities (A Type of Mortgage-Backed Security)

Non-governmental mortgage-backed securities (including non-governmental CMOs) are issued by private entities, rather than by U.S. government agencies. The non-governmental mortgage-backed securities in which the Fund invests will be treated as mortgage related asset-backed securities. These securities involve credit risks and liquidity risks. The degree of risks will depend significantly on the ability of borrowers to make payments on the underlying mortgages and the seniority of the security held by the Fund with respect to such payments.

Asset-Backed Securities (A Fixed-Income Security)

Asset-backed securities are payable from pools of obligations other than mortgages. Most asset-backed securities involve consumer or commercial debts with maturities of less than ten years. However, almost any type of fixed income assets (including other fixed-income securities) may be used to create an asset-backed security. Asset-backed securities may take the form of commercial paper, notes, or pass-through certificates. Asset-backed securities have prepayment risks. Like CMOs, asset-backed securities may be structured like Floaters, Inverse Floaters, IOs and POs.

Zero-Coupon Securities (A Fixed-Income Security)

Zero-coupon securities do not pay interest or principal until final maturity unlike debt securities that provide periodic payments of interest (referred to as a "coupon payment"). Investors buy zero-coupon securities at a price below the amount payable at maturity. The difference between the purchase price and the amount paid at maturity represents interest on the zero-coupon security. Investors must wait until maturity to receive interest and principal, which increases the market and credit risks of a zero-coupon security.

There are many forms of zero-coupon securities. Some are issued at a discount and are referred to as zero-coupon or capital appreciation bonds. Others are created from interest bearing bonds by separating the right to receive the bond's coupon payments from the right to receive the bond's principal due at maturity, a process known as "coupon stripping." In addition, some securities give the issuer the option to deliver additional securities in place of cash interest payments, thereby increasing the amount payable at maturity. These are referred to as pay-in-kind or PIK securities.

Bank Instruments (A Fixed-Income Security)

Bank instruments are unsecured interest bearing deposits with banks. Bank instruments include, but are not limited to, bank accounts, time deposits, certificates of deposit and banker's acceptances. Yankee instruments are denominated in U.S. dollars and issued by U.S. branches of foreign banks. Eurodollar instruments are denominated in U.S. dollars and issued by non-U.S. branches of U.S. or foreign banks.

Insurance Contracts (A Fixed-Income Security)

Insurance contracts include guaranteed investment contracts, funding agreements and annuities. Insurance contracts generally provide that the purchaser will deposit money with the insurance company and the insurance company will pay interest for the life of the contract and return the principal at maturity. The Fund treats these contracts as fixed-income securities.

Foreign Corporate Debt Instruments

The Fund will also invest in high yield debt instruments of foreign corporations. Notes, bonds, debentures, loans and commercial paper are the most prevalent types of corporate debt securities.

The credit risks of corporate debt instruments vary widely among issuers. The credit risk of an issuer's debt instrument may also vary based on its priority for repayment. For example, higher ranking ("senior") debt instruments have a higher priority than lower ranking ("subordinated") debt instruments. This means that the issuer might not make payments on subordinated debt instruments while continuing to make payments on senior debt instruments. In addition, in the event of bankruptcy, holders of senior debt instruments may receive amounts otherwise payable to the holders of subordinated debt instruments.

Loan Instruments (A Fixed-Income Security)

The Fund may invest in loans and loan-related instruments, which are generally interests in amounts owed by a corporate, governmental, or other borrower to lenders or groups of lenders known as lending syndicates (loans and loan participations). Such instruments include, but are not limited to, interests in trade finance loan transactions, pre-export/import finance transactions, factoring, syndicated loan transactions and forfaiting transactions.

Trade finance refers generally to loans made to producers, sellers, importers and/or exporters in relation to commodities, goods, or services. Such loans typically have short-to-medium term maturities and will generally be self-liquidating (i.e., as the goods or commodities are sold, proceeds from payments for such goods or commodities are used to pay the principal on the loan prior to being distributed to the borrower). Types of trade finance related loans include, but are not limited to, structured finance transactions, pre-export/import finance transactions, project financing and forfaiting transactions.

Typically, administration of the instrument, including the collection and allocation of principal and interest payments due from the borrower, is the responsibility of a single bank that is a member of the lending syndicate and referred to as the agent bank or mandated lead arranger. A financial institution's employment as agent bank might be terminated in the event that it fails to observe a requisite standard of care or becomes insolvent. A successor agent bank would generally be appointed to replace the terminated agent bank, and assets held by the agent bank under the loan agreement should remain available to holders of such indebtedness. However, if assets held by the agent bank for the benefit of a Fund were determined to be subject to the claims of the agent bank's general creditors, the Fund might incur certain costs and delays in realizing payment on a loan assignment or loan participation and could suffer a loss of principal and/or interest. In situations involving other interposed financial institutions (e.g., an insurance company or governmental agency) similar risks may arise.

Loan instruments may be secured or unsecured. If secured, then the lenders have been granted rights to specific property, which is commonly referred to as collateral. The purpose of securing loans is to allow the lenders to exercise rights over the collateral if a loan is not repaid as required by the terms of the loan agreement. Collateral may include security interests in receivables, goods, commodities, or real property. With regard to trade finance loan transactions the collateral itself may be the source of proceeds to repay the loan (i.e., the borrower's ability to repay the loan will be dependent on the borrower's ability to sell, and the purchaser's ability to buy, the goods or commodities that are collateral for the loan). Interests in loan instruments may also be tranching or tiered with respect to collateral rights. Unsecured loans expose the lenders to increased credit risk.

The loan instruments in which the Fund may invest may involve borrowers, agent banks, co-lenders and collateral located both in the United States and outside of the United States (in both developed and emerging markets).

The Fund treats loan instruments as a type of fixed-income security. Investments in loan instruments may expose the Fund to interest rate risk, risks of investing in foreign securities, credit risk, liquidity risk, risks of noninvestment-grade securities, risks of emerging markets, and leverage risk. (For purposes of the descriptions in this SAI of these various risks, references to "issuer" include borrowers under loan instruments.) Many loan instruments incorporate risk mitigation, credit enhancement (e.g., standby letters of credit) and insurance products into their structures, in order to manage these risks. There is no guarantee that these risk management techniques will work as intended.

Loans and loan-related instruments are generally considered to be illiquid due to the length of time required to transfer an interest in a loan or a related instrument. Additionally, in the case of some loans, such as those related to trade finance, there is a limited secondary market. The liquidity of a particular loan will be determined by the Adviser under guidelines adopted by the Fund's board.

Loan Assignments (A Type of Loan Instrument)

The Fund may purchase a loan assignment from the agent bank or other member of the lending syndicate. Investments in loans through an assignment may involve additional risks to the Funds. For example, if a loan is foreclosed, a Fund could become part owner of any collateral, and would bear the costs and liabilities associated with owning and disposing of the collateral. In addition, it is conceivable that under emerging legal theories of lender liability, a Fund could be held liable as co-lender. It is unclear whether loans and other forms of direct indebtedness offer securities law protections against fraud and misrepresentation. In the absence of definitive regulatory guidance, the Fund relies on the Adviser's research in an attempt to avoid situations where fraud or misrepresentation could adversely affect the Fund.

Loan Participations (A Type of Loan Instrument)

The Fund may purchase a funded participation interest in a loan, by which the Fund has the right to receive payments of principal, interest and fees from an intermediary (typically a bank, financial institution, or lending syndicate) that has a direct contractual relationship with a borrower. In loan participations, the Fund does not have a direct contractual relationship with the borrower.

The fund may also purchase a type of a participation interest, known as risk participation interest. In this case, the Fund will receive a fee in exchange for the promise to make a payment to a lender if a borrower fails to make a payment of principal, interest, or fees, as required by the loan agreement.

When purchasing loan participations, the Fund will be exposed to credit risk of the borrower and, in some cases, the intermediary offering the participation. A participation agreement also may limit the rights of the Fund to vote on changes that may be made to the underlying loan agreement, such as waiving a breach of a covenant. The participation interests in which a Fund intends to invest may not be rated by any nationally recognized rating service or, if rated, may be below investment grade and expose the Fund to the risks of noninvestment-grade securities.

Floating Rate Loans

Floating rate loans are debt instruments issued by companies or other entities with floating interest rates that reset periodically. Most floating rate loans are secured by specific collateral of the borrower and are senior to most other instruments of the borrower (e.g., common stock or debt instruments) in the event of bankruptcy. Floating rate loans are often issued in connection with recapitalizations, acquisitions, leveraged buyouts and refinancing. Floating rate loans are typically structured and administered by a financial institution that acts as the agent of the lenders participating in the floating rate loan. Floating rate loans may be acquired directly through the agent, as an assignment from another lender who holds a direct interest in the floating rate loan, or as a participation interest in another lender's portion of the floating rate loan.

Lower-Rated, Debt Instruments

Lower-rated debt instruments are debt instruments rated below investment-grade (i.e., BB or lower) by a nationally recognized statistical rating organization (NRSRO). There is no minimal acceptable rating for a debt instrument to be purchased or held by the Fund, and the Fund may purchase or hold unrated securities and debt instruments whose issuers are in default.

DERIVATIVE CONTRACTS

Derivative contracts are financial instruments that require payments based upon changes in the values of designated securities, commodities, currencies, indices, or other assets or instruments including other derivative contracts, (each a "Reference Instrument" and collectively, "Reference Instruments"). Each party to a derivative contract may sometimes be referred to as a counterparty. Some derivative contracts require payments relating to an actual, future trade involving the Reference Instrument. These types of derivatives are frequently referred to as "physically settled" derivatives. Other derivative contracts require payments relating to the income or returns from, or changes in the market value of, a Reference Instrument. These types of derivatives are known as "cash settled" derivatives, since they require cash payments in lieu of delivery of the Reference Instrument.

Many derivative contracts are traded on securities or commodities exchanges. In this case, the exchange sets all the terms of the contract except for the price. Investors make payments due under their contracts through the exchange. Most exchanges require investors to maintain margin accounts through their brokers to cover their potential obligations to the exchange. Parties to the contract make (or collect) daily payments to the margin accounts to reflect losses (or gains) in the value of their contracts. This protects investors against potential defaults by the other party to the contract. Trading contracts on an exchange also allows investors to close out their contracts by entering into offsetting contracts.

For example, the Fund could close out an open contract to buy an asset at a future date by entering into an offsetting contract to sell the same asset on the same date. If the offsetting sale price is more than the original purchase price, the Fund realizes a gain; if it is less, the Fund realizes a loss. Exchanges may limit the amount of open contracts permitted at any one time. Such limits may prevent the Fund from closing out a position. If this happens, the Fund will be required to keep the contract open (even if it is losing money on the contract), and to make any payments required under the contract (even if it has to sell portfolio securities at unfavorable prices to do so). Inability to close out a contract could also harm the Fund by preventing it from disposing of or trading any assets it has been using to secure its obligations under the contract.

The Fund may also trade derivative contracts over-the-counter (OTC) in transactions negotiated directly between the Fund and a financial institution. OTC contracts do not necessarily have standard terms, so they may be less liquid and more difficult to close-out than exchange-traded contracts. In addition, OTC contracts with more specialized terms may be more difficult to value than exchange traded contracts, especially in times of financial stress.

Regulations enacted by the Commodity Futures Trading Commission (the CFTC) under the Dodd-Frank Wall Street Reform and Consumer Protection Act may require the Fund to clear certain derivative contracts through a clearinghouse or central counterparty (a CCP). To clear a derivative through the CCP, the Fund will submit the contract to, and post margin with, a futures commission merchant (FCM) that is a clearinghouse member. The Fund may enter into the swap with a financial institution other than the FCM (the “Executing Dealer”) and arrange for the contract to be transferred to the FCM for clearing. It may also enter into the contract with the FCM itself. If the Fund must centrally clear a transaction, the CFTC’s regulations may also require that the derivative be entered into over a market facility that is known as a “swap execution facility” or SEF. Also, in the future, the CFTC’s regulations may require that certain electronically traded contracts be entered into over SEFs, even if those contracts are not subject to mandatory central clearing. The CCP, SEF, FCM and Executing Dealer are all subject to regulatory oversight by the CFTC. Similar regulatory requirements will apply to contracts that are subject to the jurisdiction of the Securities and Exchange Commission (SEC), although the SEC has not yet finalized its regulations.

Depending on how the Fund uses derivative contracts and the relationships between the market value of a derivative contract and the Reference Instrument, derivative contracts may increase or decrease the Fund’s exposure to the risks of the Reference Instrument, and may also expose the fund to liquidity and leverage risks. OTC contracts also expose the Fund to credit risks in the event that a counterparty defaults on the contract, although this risk must be mitigated by submitting the contract for clearing through a CCP.

The Fund may invest in a derivative contract if it is permitted to own, invest in, or otherwise have economic exposure to the Reference Instrument. The Fund is not required to own a Reference Instrument in order to buy or sell a derivative contract relating to that Reference Instrument. The Fund may trade in the following types of derivative contracts, including combinations thereof:

Futures Contracts (A Type of Derivative)

Futures contracts provide for the future sale by one party and purchase by another party of a specified amount of a Reference Instrument at a specified price, date and time. Entering into a contract to buy a Reference Instrument is commonly referred to as buying a contract or holding a long position in the asset. Entering into a contract to sell a Reference Instrument is commonly referred to as selling a contract or holding a short position in the Reference Instrument. Futures contracts are considered to be commodity contracts. Futures contracts traded OTC are frequently referred to as forward contracts. The Fund can buy or sell financial futures (such as interest rate futures, index futures and security futures), as well as, currency futures and currency forward contracts.

Interest Rate Futures

An interest-rate futures contract is an exchange-traded contract for which the Reference Instrument is an interest-bearing fixed-income security or an inter-bank deposit. Two examples of common interest rate futures contracts are U.S. Treasury futures contracts and Eurodollar futures contracts. The Reference Instrument for a U.S. Treasury futures contract is a U.S. Treasury security. The Reference Instrument for a Eurodollar futures contract is the London Interbank Offered Rate (commonly referred to as LIBOR); Eurodollar futures contracts enable the purchaser to obtain a fixed rate for the lending of funds over a stated period of time and the seller to obtain a fixed rate for a borrowing of funds over that same period.

Index Futures

An index futures contract is an exchange-traded contract to make or receive a payment based upon changes in the value of an index. An index is a statistical composite that measures changes in the value of designated Reference Instruments. An index is usually computed by a sum product of a list of the designated Reference Instruments’ current prices and a list of weights assigned to these Reference Instruments.

Security Futures

A security futures contract is an exchange-traded contract to purchase or sell in the future a specific quantity of a security (other than a Treasury security) or a narrow-based securities index at a certain price. Presently, the only available security futures contracts use shares of a single equity security as the Reference Instrument. However, it is possible that in the future security futures contracts will be developed that use a single fixed-income security as the Reference Instrument.

Currency Futures and Currency Forward Contracts (Types of Futures Contracts)

A currency futures contract is an exchange-traded contract to buy or sell a particular currency at a specific price at some time in the future (commonly three months or more). A currency forward contract is an OTC derivative that represents an obligation to purchase or sell a specific currency at a future date, at a price set at the time of the contract and for a period agreed upon by the parties which may be either a window of time or a fixed number of days from the date of the contract. Currency futures and forward contracts are highly volatile, with a relatively small price movement potentially resulting in substantial gains or losses to the Fund. Additionally, the Fund may lose money on currency futures and forward contracts if changes in currency rates do not occur as anticipated or if the Fund's counterparty to the contract were to default.

Option Contracts (A Type of Derivative)

Option contracts (also called "options") are rights to buy or sell a Reference Instrument for a specified price (the exercise price) during, or at the end of, a specified period. The seller (or writer) of the option receives a payment, or premium, from the buyer, which the writer keeps regardless of whether the buyer uses (or exercises) the option. Options may be bought or sold on a wide variety of Reference Instruments. Options that are written on futures contracts will be subject to margin requirements similar to those applied to futures contracts.

The Fund may buy and/or sell the following types of options:

Call Options

A call option gives the holder (buyer) the right to buy the Reference Instrument from the seller (writer) of the option. The Fund may use call options in the following ways:

- Buy call options on a Reference Instrument in anticipation of an increase in the value of the Reference Instrument; and
- Write call options on a Reference Instrument to generate income from premiums, and in anticipation of a decrease or only limited increase in the value of the Reference Instrument. If the Fund writes a call option on a Reference Instrument that it owns and that call option is exercised, the Fund foregoes any possible profit from an increase in the market price of the Reference Instrument over the exercise price plus the premium received.

Put Options

A put option gives the holder the right to sell the Reference Instrument to the writer of the option. The Fund may use put options in the following ways:

- Buy put options on a Reference Instrument in anticipation of a decrease in the value of the Reference Instrument; and
- Write put options on a Reference Instrument to generate income from premiums, and in anticipation of an increase or only limited decrease in the value of the Reference Instrument. In writing puts, there is a risk that the Fund may be required to take delivery of the Reference Instrument when its current market price is lower than the exercise price.

The Fund may also buy or write options, as needed, to close out existing option positions.

Finally, the Fund may enter into combinations of options contracts in an attempt to benefit from changes in the prices of those options contracts (without regard to changes in the value of the Reference Instrument).

Swap Contracts (A Type of Derivative)

A swap contract (also known as a “swap”) is a type of derivative contract in which two parties agree to pay each other (swap) the returns derived from Reference Instruments. Most swaps do not involve the delivery of the underlying assets by either party, and the parties might not own the Reference Instruments. The payments are usually made on a net basis so that, on any given day, the Fund would receive (or pay) only the amount by which its payment under the contract is less than (or exceeds) the amount of the other party’s payment. Swap agreements are sophisticated instruments that can take many different forms and are known by a variety of names. Common swap agreements that the Fund may use include:

Interest Rate Swaps

Interest rate swaps are contracts in which one party agrees to make regular payments equal to a fixed or floating interest rate times a stated principal amount (commonly referred to as a “notional principal amount”) in return for payments equal to a different fixed or floating rate times the same principal amount, for a specific period. For example, a \$10 million London Interbank Offered Rate (commonly referred to as LIBOR) swap would require one party to pay the equivalent of the London Interbank Offered Rate of interest (which fluctuates) on \$10 million principal amount in exchange for the right to receive the equivalent of a stated fixed rate of interest on \$10 million principal amount.

Caps and Floors (A Type of Swap Contract)

Caps and Floors are contracts in which one party agrees to make payments only if an interest rate or index goes above (Cap) or below (Floor) a certain level in return for a fee from the other party.

Total Return Swaps

A total return swap is an agreement between two parties whereby one party agrees to make payments of the total return from a Reference Instrument (or a basket of such instruments) during the specified period, in return for payments equal to a fixed or floating rate of interest or the total return from another Reference Instrument. Alternately, a total return swap can be structured so that one party will make payments to the other party if the value of a Reference Instrument increases, but receive payments from the other party if the value of that instrument decreases.

Credit Default Swaps

A credit default swap (CDS) is an agreement between two parties whereby one party (the “Protection Buyer”) agrees to make payments over the term of the CDS to the other party (the “Protection Seller”), provided that no designated event of default, restructuring or other credit related event (each a “Credit Event”) occurs with respect to Reference Instrument that is usually a particular bond, loan or the unsecured credit of an issuer, in general (the “Reference Obligation”). Many CDS are physically settled, which means that if a Credit Event occurs, the Protection Seller must pay the Protection Buyer the full notional value, or “par value,” of the Reference Obligation in exchange for delivery by the Protection Buyer of the Reference Obligation or another similar obligation issued by the issuer of the Reference Obligation (the “Deliverable Obligation”). The Counterparties agree to the characteristics of the Deliverable Obligation at the time that they enter into the CDS. Alternately, a CDS can be “cash settled,” which means that upon the occurrence of a Credit Event, the Protection Buyer will receive a payment from the Protection Seller equal to the difference between the par amount of the Reference Obligation and its market value at the time of the Credit Event. The Fund may be either the Protection Buyer or the Protection Seller in a CDS. If the Fund is a Protection Buyer and no Credit Event occurs, the Fund will lose its entire investment in the CDS (i.e., an amount equal to the payments made to the Protection Seller over the term of the CDS). However, if a Credit Event occurs, the Fund (as Protection Buyer) will deliver the Deliverable Obligation and receive a payment equal to the full notional value of the Reference Obligation, even though the Reference Obligation may have little or no value. If the Fund is the Protection Seller and no Credit Event occurs, the Fund will receive a fixed rate of income throughout the term of the CDS. However, if a Credit Event occurs, the Fund (as Protection Seller) will pay the Protection Buyer the full notional value of the Reference Obligation and receive the Deliverable Obligation from the Protection Buyer. A CDS may involve greater risks than if the Fund invested directly in the Reference Obligation. For example, a CDS may increase credit risk since the Fund has exposure to both the issuer of the Reference Obligation and the Counterparty to the CDS.

Currency Swaps

Currency swaps are contracts which provide for interest payments in different currencies. The parties might agree to exchange the notional principal amounts of the currencies as well (commonly called a “foreign exchange swap”).

OTHER INVESTMENTS, TRANSACTIONS, TECHNIQUES

Repurchase Agreements (A Fixed-Income Security)

Repurchase agreements are transactions in which the Fund buys a security from a dealer or bank and agrees to sell the security back at a mutually agreed-upon time and price. The repurchase price exceeds the sale price, reflecting the Fund's return on the transaction. This return is unrelated to the interest rate on the underlying security. The Fund will enter into repurchase agreements only with banks and other recognized financial institutions, such as securities dealers, deemed creditworthy by the Adviser.

The Fund's custodian or subcustodian will take possession of the securities subject to repurchase agreements. The Adviser or subcustodian will monitor the value of the underlying security each day to ensure that the value of the security always equals or exceeds the repurchase price.

Repurchase agreements are subject to credit risks.

Reverse Repurchase Agreements (A Fixed-Income Security)

Reverse repurchase agreements are repurchase agreements in which the Fund is the seller (rather than the buyer) of the securities, and agrees to repurchase them at an agreed-upon time and price. A reverse repurchase agreement may be viewed as a type of borrowing by the Fund. Reverse repurchase agreements are subject to credit risks. In addition, reverse repurchase agreements create leverage risks because the Fund must repurchase the underlying security at a higher price, regardless of the market value of the security at the time of repurchase.

Delayed Delivery Transactions

Delayed delivery transactions, including when-issued transactions, are arrangements in which the Fund buys securities for a set price, with payment and delivery of the securities scheduled for a future time. During the period between purchase and settlement, no payment is made by the Fund to the issuer and no interest accrues to the Fund. The Fund records the transaction when it agrees to buy the securities and reflects their value in determining the price of its shares. Settlement dates may be a month or more after entering into these transactions so that the market values of the securities bought may vary from the purchase prices. Therefore, delayed delivery transactions create interest rate risks for the Fund. Delayed delivery transactions also involve credit risks in the event of a counterparty default.

Hybrid Instruments

Hybrid instruments combine elements of two different kinds of securities or financial instruments (such as a derivative contract). Frequently, the value of a hybrid instrument is determined by reference to changes in the value of a Reference Instrument (that is a designated security, commodity, currency, index, or other asset or instrument including a derivative contract). Hybrid instruments can take on many forms including, but not limited to, the following forms. First, a common form of a hybrid instrument combines elements of a derivative contract with those of another security (typically a fixed-income security). In this case all or a portion of the interest or principal payable on a hybrid security is determined by reference to changes in the price of a Reference Instrument. Second, a hybrid instrument may also combine elements of a fixed-income security and an equity security. Third, hybrid instruments may include convertible securities with conversion terms related to a Reference Instrument.

Depending on the type and terms of the hybrid instrument, its risks may reflect a combination of the risks of investing in the Reference Instrument with the risks of investing in other securities, currencies and derivative contracts. Thus, an investment in a hybrid instrument may entail significant risks in addition to those associated with traditional securities or the Reference Instrument. Hybrid instruments are also potentially more volatile than traditional securities or the Reference Instrument. Moreover, depending on the structure of the particular hybrid, it may expose the Fund to leverage risks or carry liquidity risks.

Credit Linked Note (A Type of Hybrid Instrument)

A credit linked note (CLN) is a type of hybrid instrument in which a special purpose entity issues a structured note (the "Note Issuer") with respect to which the Reference Instrument is a single bond, a portfolio of bonds, or the unsecured credit of an issuer, in general (each a "Reference Credit"). The purchaser of the CLN (the "Note Purchaser") invests a par amount and receives a payment during the term of the CLN that equals a fixed or floating rate of interest equivalent to a high rated funded asset (such as a bank certificate of deposit) plus an additional premium that relates to taking on the credit risk of the Reference Credit. Upon maturity of the CLN, the Note Purchaser will receive a payment equal to: (i) the original par amount paid to the Note Issuer, if there is no occurrence of a designated event of default, restructuring or other credit event (each, a "Credit Event") with respect to the issuer of the Reference Credit; or (ii) the market value of the Reference Credit, if a Credit Event has occurred. Depending upon the terms of the CLN, it is also possible that the Note Purchaser may be required to take physical delivery of the Reference Credit in the event of Credit Event. Most credit linked notes use a corporate bond (or a portfolio of corporate bonds) as the Reference Credit. However, almost any type of fixed-income security (including foreign government securities), index, or derivative contract (such as a credit default swap) can be used as the Reference Credit.

Equity Linked Note (A Type of Hybrid Instrument)

An equity linked note (ELN) is a type of hybrid instrument that provides the noteholder with exposure to a single equity security, a basket of equity securities, or an equity index (the “Reference Equity Instrument”). Typically, an ELN pays interest at agreed rates over a specified time period and, at maturity, either converts into shares of a Reference Equity Instrument or returns a payment to the noteholder based on the change in value of a Reference Equity Instrument.

Securities Lending

The Fund may lend portfolio securities to borrowers that the Adviser deems creditworthy. In return, the Fund receives cash or liquid securities from the borrower as collateral. The borrower must furnish additional collateral if the market value of the loaned securities increases. Also, the borrower must pay the Fund the equivalent of any dividends or interest received on the loaned securities.

The Fund will reinvest cash collateral in securities that qualify as an acceptable investment for the Fund. However, the Fund must pay interest to the borrower for the use of cash collateral.

Loans are subject to termination at the option of the Fund or the borrower. The Fund will not have the right to vote on securities while they are on loan. However, the Fund will attempt to terminate a loan in an effort to reacquire the securities in time to vote on matters that are deemed to be material by the Adviser. There can be no assurance that the Fund will have sufficient notice of such matters to be able to terminate the loan in time to vote thereon. The Fund may pay administrative and custodial fees in connection with a loan and may pay a negotiated portion of the interest earned on the cash collateral to a securities lending agent or broker.

Securities lending activities are subject to interest rate risks and credit risks. These transactions create leverage risks.

Asset Segregation

In accordance with the Securities and Exchange Commission (SEC) and SEC staff positions regarding the interpretation of the Investment Company Act of 1940 (“1940 Act”), with respect to derivatives that create a future payment obligation of the Fund, the Fund must “set aside” (referred to sometimes as “asset segregation”) liquid assets, or engage in other SEC- or staff-approved measures, while the derivative contracts are open. For example, with respect to forwards and futures contracts that are not contractually required to “cash-settle,” the Fund must cover its open positions by setting aside cash or readily marketable securities equal to the contracts’ full, notional value. With respect to forwards and futures that are contractually required to “cash-settle,” however, the Fund is permitted to set aside cash or readily marketable securities in an amount equal to the Fund’s daily marked-to-market (net) obligations, if any (i.e., the Fund’s daily net liability, if any), rather than the notional value.

The Fund will employ another approach to segregating assets to cover options that it sells. If the Fund sells a call option, the Fund will set aside either the Reference Instrument subject to the option, cash or readily marketable securities with a value that equals or exceeds the current market value of the Reference Instrument. In no event, will the value of the cash or readily marketable securities set aside by the Fund be less than the exercise price of the call option. If the Fund sells a put option, the Fund will set aside cash or readily marketable securities with a value that equals or exceeds the exercise price of the put option.

The Fund’s asset segregation approach for swap agreements varies among different types of swaps. For example, if the Fund enters into a credit default swap as the Protection Buyer, then it will set aside cash or readily marketable securities necessary to meet any accrued payment obligations under the swap. By comparison, if the Fund enters into a credit default swap as the Protection Seller, then the Fund will set aside cash or readily marketable securities equal to the full notional amount of the swap that must be paid upon the occurrence of a Credit Event. For some other types of swaps, such as interest rate swaps, the Fund will calculate the obligations of the counterparties to the swap on a net basis. Consequently, the Fund’s current obligation (or rights) under this type of swap will equal only the net amount to be paid or received based on the relative values of the positions held by each counterparty to the swap (the “net amount”). The net amount currently owed by or to the Fund will be accrued daily and the Fund will set aside cash or readily marketable securities equal to any accrued but unpaid net amount owed by the Fund under the swap.

The Fund may reduce the liquid assets segregated to cover obligations under a derivative contract by entering into an offsetting derivative contract. For example, if the Fund sells a put option for the same Reference Instrument as a call option the Fund has sold, and the exercise price of the call option is the same as or higher than the exercise price of the put option, then the Fund may net its obligations under the options and set aside cash or readily marketable securities (including any margin deposited for the options) with a value equal to the greater of: (a) the current market value of the Reference Instrument deliverable under the call option; or (b) the exercise price of the put option.

By setting aside cash or readily marketable securities equal to only its net obligations under swaps and certain cash-settled derivative contracts, the Fund will have the ability to employ leverage to a greater extent than if the Fund were required to segregate cash or readily marketable securities equal to the full notional value of such contracts. The use of leverage involves certain risks. See “Risk Factors.” Unless the Fund has other cash or readily marketable securities to set aside, it cannot trade assets set aside

in connection with derivative contracts or special transactions without entering into an offsetting derivative contract or terminating a special transaction. This may cause the Fund to miss favorable trading opportunities or to realize losses on derivative contracts or special transactions. The Fund reserves the right to modify its asset segregation policies in the future to comply with any changes in the positions articulated from time to time by the SEC and its staff.

Generally, special transactions do not cash-settle on a net basis. Consequently, with respect to special transactions, the Fund will set aside cash or readily marketable securities with a value that equals or exceeds the Fund's obligations.

Inter-Fund Borrowing and Lending Arrangements

The SEC has granted an exemption that permits the Fund and all other funds advised by subsidiaries of Federated Investors, Inc. ("Federated funds") to lend and borrow money for certain temporary purposes directly to and from other Federated funds. Participation in this inter-fund lending program is voluntary for both borrowing and lending Federated funds, and an inter-fund loan is only made if it benefits each participating Federated fund. Federated Investors, Inc. ("Federated") administers the program according to procedures approved by the Fund's Board, and the Board monitors the operation of the program. Any inter-fund loan must comply with certain conditions set out in the exemption, which are designed to assure fairness and protect all participating Federated funds.

For example, inter-fund lending is permitted only: (a) to meet shareholder redemption requests; and (b) to meet commitments arising from "failed" trades; and (c) for other temporary purposes. All inter-fund loans must be repaid in seven days or less. The Fund's participation in this program must be consistent with its investment policies and limitations, and must meet certain percentage tests. Inter-fund loans may be made only when the rate of interest to be charged is more attractive to the lending Federated fund than market-competitive rates on overnight repurchase agreements (Repo Rate) *and* more attractive to the borrowing Federated fund than the rate of interest that would be charged by an unaffiliated bank for short-term borrowings (Bank Loan Rate), as determined by the Board. The interest rate imposed on inter-fund loans is the average of the Repo Rate and the Bank Loan Rate.

INVESTMENT RATINGS FOR INVESTMENT-GRADE SECURITIES

The Adviser will determine whether a security is investment grade based upon the credit ratings given by one or more nationally recognized rating services. For example, Standard & Poor's, a rating service, assigns ratings to investment-grade securities (AAA, AA, A and BBB) based on their assessment of the likelihood of the issuer's inability to pay interest or principal (default) when due on each security. Lower credit ratings correspond to higher credit risk. If a security has not received a rating, the Fund must rely entirely upon the Adviser's credit assessment that the security is comparable to investment grade.

Investment Risks

There are many risk factors which may affect an investment in the Fund. The Fund's principal risks are described in its Prospectus. The following information is either additional information in respect of a principal risk factor referenced in the Prospectus or information in respect of a non-principal risk factor applicable to the Fund (in which case there is no related disclosure in the Prospectus).

EQUITY SECURITIES INVESTMENT RISKS

Small-Cap Company Risk

The Fund may invest in small capitalization (or "small-cap") companies. Market capitalization is determined by multiplying the number of a company's outstanding shares by the current market price per share. Generally, the smaller the market capitalization of a company, the fewer the number of shares traded daily, the less liquid its stock and the more volatile its price. Companies with smaller market capitalizations also tend to have unproven track records, a limited product or service base and limited access to capital. Newer companies with unproven business strategies also tend to be smaller companies. The above factors increase risks and make these companies more likely to fail than companies with larger market capitalizations, and could increase the volatility of the Fund's portfolio and performance. Shareholders should expect that the value of the Fund's Shares will be more volatile than a fund that invests exclusively in mid-cap or large-cap companies.

FIXED-INCOME INVESTMENT RISKS

Issuer Credit Risk

It is possible that interest or principal on securities will not be paid when due. Such non-payment or default may reduce the value of the Fund's portfolio holdings, its share price and its performance.

Many fixed-income securities receive credit ratings from services such as Standard & Poor's and Moody's Investor Services, Inc. These services assign ratings to securities by assessing the likelihood of issuer default. Lower credit ratings correspond to higher credit risk. If a security has not received a rating, the Fund must rely entirely upon the Adviser's credit assessment.

Many fixed-income securities receive credit ratings from NRSROs such as Fitch Rating Service, Moody's Investor Services, Inc. and Standard & Poor's that assign ratings to securities by assessing the likelihood of an issuer and/or guarantor default. Higher credit ratings correspond to lower perceived credit risk and lower credit ratings correspond to higher perceived credit risk. Credit ratings may be upgraded or downgraded from time to time as an NRSRO's assessment of the financial condition of a party obligated to make payments with respect to such securities and credit risk changes. The impact of any credit rating downgrade can be uncertain. Credit rating downgrades may lead to increased interest rates and volatility in financial markets, which in turn could negatively affect the value of the Fund's portfolio holdings, its share price and its investment performance. Credit ratings are not a guarantee of quality. Credit ratings may lag behind the current financial conditions of the issuer and/or guarantor and do not provide assurance against default or other loss of money. Credit ratings do not protect against a decline in the value of a security. If a security has not received a rating, the Fund must rely entirely upon the Adviser's credit assessment.

Fixed-income securities generally compensate for greater credit risk by paying interest at a higher rate. The difference between the yield of a security and the yield of a U.S. Treasury security or other appropriate benchmark with a comparable maturity (the "spread") measures the additional interest paid for risk. Spreads may increase generally in response to adverse economic or market conditions. A security's spread may also increase if the security's rating is lowered, or the security is perceived to have an increased credit risk. An increase in the spread will cause the price of the security to decline if interest rates remain unchanged.

As a general matter, the leveraged loans in which the Fund invests have a higher default risk than investment-grade debt instruments. Many fixed-income instruments receive credit ratings from services such as Standard & Poor's and Moody's Investors Service. These services assign ratings by assessing the likelihood of issuer default. Lower credit ratings correspond to higher credit risk. If an asset has not received a rating, the Fund must rely entirely upon the Adviser's credit assessment.

The senior secured corporate loans and corporate debt instruments in which the Fund invests generally are subject to less credit risk than unsecured high-yield bonds (also known as "junk bonds"). Leveraged loans often have features that junk bonds generally do not have. They usually are senior obligations of the borrower or issuer, usually are secured by collateral and generally are subject to certain restrictive covenants in favor of the lenders or debt instrument holders that invest in them. Leveraged loans often are issued in connection with highly leveraged transactions. Such transactions include leveraged buyout loans, leveraged recapitalization loans and other types of acquisition financing. These obligations are subject to greater credit risks than other investments including a greater possibility that the borrower may default or enter bankruptcy. Some of these loans may be "covenant lite" loans which do not include terms which allow the lender to control and track the performance of the borrower and declare a default if certain criteria are breached.

Risk of Investing In Loans

In addition to the risks generally associated with debt instruments, such as credit, market, interest rate, liquidity and derivatives risks, bank loans are also subject to the risk that the value of the collateral securing a loan may decline, be insufficient to meet the obligations of the borrower or be difficult to liquidate. The Fund's access to the collateral may be limited by bankruptcy, other insolvency laws or by the type of loan the Fund has purchased. For example, if the Fund purchases a participation instead of an assignment, it would not have direct access to collateral of the borrower. As a result, a floating rate loan may not be fully collateralized and can decline significantly in value. Loans generally are subject to legal or contractual restrictions on resale.

Agent Insolvency Risk

In a syndicated loan, the agent bank is the bank in the syndicate that undertakes the bulk of the administrative duties involved in the day-to-day administration of the loan. In the event of the insolvency of an agent bank, a loan could be subject to settlement risk as well as the risk of interruptions in the administrative duties performed in the day to day administration of the loan (such as processing LIBOR calculations, processing draws, etc.).

Loan Prepayment Risk

During periods of declining interest rates or for other purposes, borrowers may exercise their option to prepay principal earlier than scheduled which may force the Fund to reinvest in lower-yielding debt instruments.

Call Risk

Call risk is the possibility that an issuer may redeem a fixed-income security before maturity (a "call") at a price below its current market price. An increase in the likelihood of a call may reduce the security's price.

If a fixed-income security is called, the Fund may have to reinvest the proceeds in other fixed-income securities with lower interest rates, higher credit risks, or other less favorable characteristics.

Loan Liquidity Risk

Loans generally are subject to legal or contractual restrictions on resale. In some cases, negotiations involved in disposing of loans may require weeks to complete. Additionally, collateral on loan instruments may consist of assets that may not be readily liquidated, and there is no assurance that the liquidation of such assets will satisfy a borrower's obligations under the loan. The liquidity of loans, including the volume and frequency of secondary market trading in such loans, varies significantly over time and among individual loans. For example, if the credit quality of a loan unexpectedly declines significantly, secondary market trading in that loan can also decline for a period of time. During periods of infrequent trading, valuing a loan can be more difficult and buying and selling a loan at an acceptable price can be more difficult and delayed. Difficulty in selling a loan can result in a loss.

The Fund's investments in loan instruments may be considerably less liquid than debt instruments traded on national exchanges. Market quotations for such assets may be volatile and/or subject to large spreads between bid and ask prices.

Risk Associated with Complex CMOs

CMOs with complex or highly variable prepayment terms, such as companion classes, IOs, POs, Inverse Floaters and residuals, generally entail greater market, prepayment and liquidity risks than other mortgage-backed securities. For example, their prices are more volatile and their trading market may be more limited.

Risk of Foreign Investing

The foreign sovereign debt securities the Fund purchases involve specific risks, including that: (i) the governmental entity that controls the repayment of sovereign debt may not be willing or able to repay the principal and/or interest when it becomes due because of political constraints, cash flow problems and other national economic factors; (ii) governments may default on their sovereign debt, which may require holders of such sovereign debt to participate in debt rescheduling or additional lending to defaulting governments; and (iii) there is no bankruptcy proceedings by which defaulted sovereign debt may be collected in whole or in part.

Risk of Investing in Derivative Contracts and Hybrid Instruments

The Fund's exposure to derivative contracts and hybrid instruments (either directly or through its investment in another investment company) involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. First, changes in the value of the derivative contracts and hybrid instruments in which the Fund invests may not be correlated with changes in the value of the underlying Reference Instruments or, if they are correlated, may move in the opposite direction than originally anticipated. Second, while some strategies involving derivatives may reduce the risk of loss, they may also reduce potential gains or, in some cases, result in losses by offsetting favorable price movements in portfolio holdings. Third, there is a risk that derivative contracts and hybrid instruments may be erroneously priced or improperly valued and, as a result, the Fund may need to make increased cash payments to the counterparty. Fourth, a common provision in OTC derivative contracts permits the counterparty to terminate any such contract between it and the Fund, if the value of the Fund's total net assets declines below a specified level over a given time period. Factors that may contribute to such a decline (which usually must be substantial) include significant shareholder redemptions and/or a marked decrease in the market value of the Fund's investments. Any such termination of the Fund's OTC derivative contracts may adversely affect the Fund (for example, by increasing losses and/or costs, and/or preventing the Fund from fully implementing its investment strategies). Fifth, the Fund may use a derivative contract to benefit from a decline in the value of a Reference Instrument. If the value of the Reference Instrument declines during the term of the contract, the Fund makes a profit on the difference (less any payments the Fund is required to pay under the terms of the contract). Any such strategy involves risk. There is no assurance that the Reference Instrument will decline in value during the term of the contract and make a profit for the Fund. The Reference Instrument may instead appreciate in value creating a loss for the Fund. Sixth, a default or failure by a CCP or an FCM (also sometimes called a "futures broker"), or the failure of a contract to be transferred from an Executing Dealer to the FCM for clearing, may expose the Fund to losses, increase its costs, or prevent the Fund from entering or exiting derivative positions, accessing margin or fully implementing its investment strategies. The central clearing of a derivative and trading of a contract over a SEF could reduce the liquidity in, or increase costs of entering into or holding, any contracts. Finally, derivative contracts and hybrid instruments may also involve other risks described herein or in the Fund's prospectus, such as stock market, interest rate, credit, currency, liquidity and leverage risks.

Risk Associated with the Investment Activities of Other Accounts

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. Therefore, it is possible that investment-related actions taken by such other accounts could adversely impact the Fund with respect to, for example, the value of Fund portfolio holdings, and/or prices paid to or received by the Fund on its portfolio transactions, and/or the Fund's ability to obtain or dispose of portfolio securities. Related considerations are discussed elsewhere in this SAI under "Brokerage Transactions and Investment Allocation."

VARIABLE ASSET REGULATIONS

The Fund is also subject to variable contract asset regulations prescribed by the U.S. Treasury Department under Section 817(h) of the Internal Revenue Code. After a one-year start-up period, the regulations generally require that, as of the end of each calendar quarter or within 30 days thereafter, no more than 55% of the total assets of the Fund may be represented by any one investment, no more than 70% of the total assets of the Fund may be represented by any two investments, no more than 80% of the total assets of the Fund may be represented by any three investments and no more than 90% of the total assets of the Fund may be represented by any four investments. In applying these diversification rules, all securities of the same issuer, all interests of the same real property project and all interests in the same commodity are each treated as a single investment. In the case of government securities, each government agency or instrumentality shall be treated as a separate issuer. If the Fund fails to achieve the diversification required by the regulations, unless relief is obtained from the Internal Revenue Service, the contracts invested in the Fund will not be treated as annuity endowment or life insurance contracts.

Investment Objective and Investment Limitations

The Fund's fundamental investment objective is to achieve high current income and moderate capital appreciation. The investment objective may not be changed by the Fund's Trustees without shareholder approval.

INVESTMENT LIMITATIONS

Diversification of Investments

With respect to securities comprising 75% of the value of its total assets, the Fund will not purchase securities of any one issuer (other than cash; cash items; securities issued or guaranteed by the government of the United States or its agencies or instrumentalities and repurchase agreements collateralized by such U.S. government securities; and securities of other investment companies) if, as a result, more than 5% of the value of its total assets would be invested in the securities of that issuer, or the Fund would own more than 10% of the outstanding voting securities of that issuer.

Borrowing Money and Issuing Senior Securities

The Fund may borrow money, directly or indirectly, and issue senior securities to the maximum extent permitted under the Investment Company Act of 1940 ("1940 Act").

Investing in Real Estate

The Fund may not purchase or sell real estate, provided that this restriction does not prevent the Fund from investing in issuers which invest, deal, or otherwise engage in transactions in real estate or interests therein, or investing in securities that are secured by real estate or interests therein. The Fund may exercise its rights under agreements relating to such securities, including the right to enforce security interests and to hold real estate acquired by reason of such enforcement until that real estate can be liquidated in an orderly manner.

Investing in Commodities

The Fund may not purchase or sell physical commodities, provided that the Fund may purchase securities of companies that deal in commodities.

Underwriting

The Fund may not underwrite the securities of other issuers, except that the Fund may engage in transactions involving the acquisition, disposition or resale of its portfolio securities, under circumstances where it may be considered to be an underwriter under the Securities Act of 1933.

Lending

The Fund may not make loans, provided that this restriction does not prevent the Fund from purchasing debt obligations, entering into repurchase agreements, lending its assets to broker/dealers or institutional investors and investing in loans, including assignments and participation interests.

Concentration

The Fund will not make investments that will result in the concentration of its investments in the securities of issuers primarily engaged in the same industry, provided that the Fund may concentrate its investments in the securities of issuers in the utilities industry. Government securities, municipal securities and bank instruments will not be deemed to constitute an industry.

The above limitations cannot be changed unless authorized by the Board and by the “vote of a majority of its outstanding voting securities,” as defined by the 1940 Act. The following limitations, however, may be changed by the Board without shareholder approval. Shareholders will be notified before any material change in these limitations becomes effective.

Illiquid Securities

The Fund will not purchase securities for which there is no readily available market, or enter into repurchase agreements or purchase time deposits that the fund cannot dispose of within seven days, if immediately after and as a result, the value of such securities would exceed, in the aggregate, 15% of the Fund’s net assets.

Purchases on Margin

The Fund will not purchase securities on margin, provided that the Fund may obtain short-term credits necessary for the clearance of purchases and sales of securities, and further provided that the Fund may make margin deposits in connection with its use of financial options and futures, forward and spot currency contracts, swap transactions and other financial contracts or derivative instruments.

Pledging Assets

The Fund will not mortgage, pledge, or hypothecate any of its assets, provided that this shall not apply to the transfer of securities in connection with any permissible borrowing or to collateral arrangements in connection with permissible activities.

Commodities

As a matter of non-fundamental operating policy, for purposes of the commodities policy, investments in transactions involving futures contracts and options, forward currency contracts, swap transactions and other financial contracts that settle by payment of cash are not deemed to be investments in commodities.

Additional Information

For purposes of the above limitations, the Fund considers certificates of deposit and demand and time deposits issued by a U.S. branch of a domestic bank or savings association having capital, surplus and undivided profits in excess of \$100,000,000 at the time of investment to be “cash items” and “bank instruments.” Except with respect to borrowing money, if a percentage limitations is adhered to at the time of investment, a later increase or decrease in percentage resulting from any change in value or net assets will not result in a violation of such limitation.

What Do Shares Cost?

DETERMINING MARKET VALUE OF SECURITIES

A Share’s net asset value (NAV) is determined as of the end of regular trading on the New York Stock Exchange (NYSE) (normally 4:00 p.m. Eastern time) each day the NYSE is open. The Fund calculates the NAV by valuing its assets, subtracting its liabilities and dividing the balance by the number of Shares outstanding. The NAV is calculated to the nearest whole cent per Share.

In calculating its NAV, the Fund generally values investments as follows:

- Equity securities listed on a U.S. securities exchange or traded through the U.S. national market system are valued at their last reported sale price or official closing price in their principal exchange or market. If a price is not readily available, such equity securities are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Other equity securities traded primarily in the United States are valued based upon the mean of closing bid and asked quotations from one or more dealers.
- Equity securities traded primarily through securities exchanges and regulated market systems outside the United States are valued at their last reported sale price or official closing price in their principal exchange or market. These prices may be adjusted for significant events occurring after the closing of such exchanges or market systems as described below. If a price is not readily available, such equity securities are valued based upon the mean of closing bid and asked quotations from one or more dealers.

- Fixed-income securities and repurchase agreements acquired with remaining maturities of greater than 60 days are fair valued using price evaluations provided by a pricing service approved by the Board. The methods used by pricing services to determine such price evaluations are described below. If a price evaluation is not readily available, such fixed-income securities are fair valued based upon price evaluations from one or more dealers.
- Fixed-income securities and repurchase agreements acquired with remaining maturities of 60 days or less are valued at their amortized cost as described below, unless the issuer's creditworthiness is impaired or other factors indicate that amortized cost is not an accurate estimate of the investment's fair value, in which case it would be valued in the same manner as a longer-term security or repurchase agreement.
- Futures contracts listed on exchanges are valued at their reported settlement price. Option contracts listed on exchanges are valued based upon the mean of closing bid and asked quotations reported by the exchange or from one or more futures commission merchants.
- OTC derivative contracts are fair valued using price evaluations provided by various pricing services approved by the Board. The methods used by pricing services to determine such price evaluations are described below. If a price evaluation is not readily available, such derivative contracts are fair valued based upon price evaluations from one or more dealers or using a recognized pricing model for the contract.
- Shares of other mutual funds are valued based upon their reported NAVs. The prospectuses for these mutual funds explain the circumstances under which they will use fair value pricing and the effects of using fair value pricing.

If any price, quotation, price evaluation or other pricing source is not readily available when the NAV is calculated, or if the Fund cannot obtain price evaluations from a pricing service or from more than one dealer for an investment within a reasonable time (for example, within five business days after a new security is delivered to the Fund), the Fund will use the fair value of the investment determined in accordance with the procedures described below. There can be no assurance that the Fund could purchase or sell an investment at the price used to calculate the Fund's NAV. The Fund will not use a pricing service or dealer who is an affiliated person of the Adviser to value investments.

Noninvestment assets and liabilities are valued in accordance with Generally Accepted Accounting Principles (GAAP). The NAV calculation includes expenses, dividend income, interest income and other income through the date of the calculation. Changes in holdings of investments and in the number of outstanding Shares are included in the calculation not later than the first business day following such change. Any assets or liabilities denominated in foreign currencies are converted into U.S. dollars using an exchange rate obtained from one or more currency dealers.

The Fund follows procedures that are common in the mutual fund industry regarding errors made in the calculation of its NAV. This means that, generally, the Fund will not correct errors of less than one cent per Share or errors that did not result in net dilution to the Fund.

Amortized Cost Values

Under the amortized cost valuation method, an investment is valued initially at its cost as determined in accordance with GAAP. The Fund then adjusts the amount of interest income accrued each day over the term of the investment to account for any difference between the initial cost of the investment and the amount payable at its maturity. If the amount payable at maturity exceeds the initial cost (a "discount"), then the daily accrual is increased; if the initial cost exceeds the amount payable at maturity (a "premium"), then the daily accrual is decreased. The Fund adds the amount of the increase to (in the case of a discount), or subtracts the amount of the decrease from (in the case of a premium), the investment's cost each day. The Fund uses this adjusted cost to value the investment.

Fair Valuation and Significant Events Procedures

The Board has ultimate responsibility for determining the fair value of investments for which market quotations are not readily available. The Board has appointed a Valuation Committee comprised of officers of the Fund, the Adviser and the Adviser's affiliated companies to assist in this responsibility and in overseeing the calculation of the NAV. The Board has also authorized the use of pricing services recommended by the Valuation Committee to provide price evaluations of the current fair value of certain investments for purposes of calculating the NAV.

Pricing Service Valuations. Based on the recommendations of the Valuation Committee, the Board has authorized the Fund to use pricing services that provide daily fair value evaluations of the current value of certain investments, primarily fixed-income securities and OTC derivatives contracts. Different pricing services may provide different price evaluations for the same security because of differences in their methods of evaluating market values. Factors considered by pricing services in evaluating an investment include the yields or prices of investments of comparable quality, coupon, maturity, call rights and other potential prepayments, terms and type, reported transactions, indications as to values from dealers and general market conditions. A pricing

service may find it more difficult to apply these and other factors to relatively illiquid or volatile investments, which may result in less frequent or more significant changes in the price evaluations of these investments. If a pricing service determines that it does not have sufficient information to use its standard methodology, it may evaluate an investment based on the present value of what investors can reasonably expect to receive from the issuer's operations or liquidation.

Some pricing services provide a single price evaluation reflecting the bid-side of the market for an investment (a "bid" evaluation). Other pricing services offer both bid evaluations and price evaluations indicative of a price between the prices bid and asked for the investment (a "mid" evaluation). The Fund normally uses bid evaluations for U.S. Treasury and Agency securities, mortgage-backed securities and municipal securities. The Fund normally uses mid evaluations for other types of fixed-income securities and OTC derivative contracts.

Fair Valuation Procedures. The Board has established procedures for determining the fair value of investments for which price evaluations from pricing services or dealers and market quotations are not readily available. The procedures define an investment's "fair value" as the price that the Fund might reasonably expect to receive upon its current sale. The procedures assume that any sale would be made to a willing buyer in the ordinary course of trading. The procedures require consideration of factors that vary based on the type of investment and the information available. Factors that may be considered in determining an investment's fair value include: (1) the last reported price at which the investment was traded; (2) information provided by dealers or investment analysts regarding the investment or the issuer; (3) changes in financial conditions and business prospects disclosed in the issuer's financial statements and other reports; (4) publicly announced transactions (such as tender offers and mergers) involving the issuer; (5) comparisons to other investments or to financial indices that are correlated to the investment; (6) with respect to fixed-income investments, changes in market yields and spreads; (7) with respect to investments that have been suspended from trading, the circumstances leading to the suspension; and (8) other factors that might affect the investment's value.

The Valuation Committee is responsible for the day-to-day implementation of these procedures. The Valuation Committee may also authorize the use of a financial valuation model to determine the fair value of a specific type of investment. The Board periodically reviews and approves the fair valuations made by the Valuation Committee and any changes made to the procedures.

Using fair value to price investments may result in a value that is different from an investment's most recent closing price and from the prices used by other mutual funds to calculate their NAVs. The fair value of an investment will generally remain unchanged in the absence of new information relating to the investment or its issuer, such as changes in the issuer's business or financial results, or relating to external market factors, such as trends in the market values of comparable securities. This may result in less frequent, and larger, changes in fair value prices as compared to prices based on market quotations or price evaluations from pricing services or dealers.

Significant Events. The Board has adopted procedures requiring an investment to be priced at its fair value whenever the Adviser determines that a significant event affecting the value of the investment has occurred between the time as of which the price of the investment would otherwise be determined and the time as of which the NAV is computed. An event is considered significant if there is both an affirmative expectation that the investment's value will change in response to the event and a reasonable basis for quantifying the resulting change in value. Examples of significant events that may occur after the close of the principal market on which a security is traded, or the time of a price evaluation provided by a pricing service or a dealer, include:

- With respect to securities traded principally in foreign markets, significant trends in U.S. equity markets or in the trading of foreign securities index futures contracts;
- With respect to price evaluations of fixed-income securities determined before the close of regular trading on the NYSE, actions by the Federal Reserve Open Market Committee and other significant trends in U.S. fixed-income markets;
- Political or other developments affecting the economy or markets in which an issuer conducts its operations or its securities are traded; and
- Announcements concerning matters such as acquisitions, recapitalizations or litigation developments, or a natural disaster affecting the issuer's operations or regulatory changes or market developments affecting the issuer's industry.

The Valuation Committee uses a pricing service to determine the fair value of equity securities traded principally in foreign markets when the Adviser determines that there has been a significant trend in the U.S. equity markets or in index futures trading. The pricing service uses models that correlate changes between the closing and opening price of equity securities traded primarily in non-U.S. markets to changes in prices in U.S.-traded securities and derivative contracts. The pricing service seeks to employ the model that provides the most significant correlation based on a periodic review of the results. The model uses the correlation to adjust the reported closing price of a foreign equity security based on information available up to the close of the NYSE.

For other significant events, the Fund may seek to obtain more current quotations or price evaluations from alternative pricing sources. If a reliable alternative pricing source is not available, the fair value of the investment is determined using the methods discussed above in “*Fair Valuation Procedures.*” The Fund currently does not rely on price evaluations determined before the close of regular trading on the NYSE for any fixed-income securities. The Board has ultimate responsibility for any fair valuations made in response to a significant event.

Mixed Funding and Shared Funding

The practice of using shares as investments for both variable annuity contracts and variable life insurance policies is called “mixed funding.” The practice of using shares as investments by separate accounts of unaffiliated life insurance companies is called “shared funding.”

The Fund does engage in mixed funding and shared funding. Although the Fund does not currently foresee any disadvantage to contract owners due to differences in redemption rates, tax treatment or other considerations resulting from mixed funding or shared funding, the Trustees will closely monitor the operation of mixed funding and shared funding and will consider appropriate action to avoid material conflicts and take appropriate action in response to any material conflicts which occur. Such action could result in one or more participating insurance companies withdrawing their investment in the Fund.

How is the Fund Sold?

Under the Distributor’s Contract with the Fund, the Distributor (Federated Securities Corp.) offers Shares on a continuous, best-efforts basis.

ADDITIONAL PAYMENTS TO FINANCIAL INTERMEDIARIES

The Distributor may pay out of its own resources amounts (including items of material value) to certain financial intermediaries. In some cases, such payments may be made by, or funded from the resources of, companies affiliated with the Distributor (including the Adviser). While Financial Industry Regulatory Authority (FINRA) regulations limit the sales charges that you may bear, there are no limits with regard to the amounts that the Distributor may pay out of its own resources. In addition to the payments which are generally described herein and in the Prospectus, the financial intermediary also may receive Service Fees. In connection with these payments, the financial intermediary may elevate the prominence or profile of the Fund and/or other Federated funds within the financial intermediary’s organization by, for example, placement on a list of preferred or recommended funds and/or granting the Distributor preferential or enhanced opportunities to promote the funds in various ways within the financial intermediary’s organization. You can ask your financial intermediary for information about any payments it receives from the Distributor or the Federated funds and any services provided.

The Fund currently does not accrue, pay or incur any administrative service fees, although the Board of Trustees has approved the Fund to accrue, pay and incur such fees in amounts up to a maximum amount of 0.25%, or some lesser amount as the Board of Trustees shall approve from time to time. The Fund will not incur or charge such fees until such time as approved by the Fund’s Board of Trustees.

The following examples illustrate the types of instances in which the Distributor may make additional payments to financial intermediaries.

Supplemental Payments

The Distributor may make supplemental payments to certain financial intermediaries that are holders or dealers of record for accounts in one or more of the Federated funds. These payments may be based on such factors as: the number or value of Shares the financial intermediary sells or may sell; the value of client assets invested; or the type and nature of services or support furnished by the financial intermediary.

Processing Support Payments

The Distributor may make payments to financial intermediaries that sell Federated fund shares to help offset their costs associated with client account maintenance support, statement processing and transaction processing. The types of payments that the Distributor may make under this category include: payment of ticket charges on a per-transaction basis; payment of networking fees; and payment for ancillary services such as setting up funds on the financial intermediary’s mutual fund trading system.

Other Benefits to Financial Intermediaries

From time to time, the Distributor, at its expense, may provide additional compensation to financial intermediaries that sell or arrange for the sale of Shares. Such compensation may include financial assistance to financial intermediaries that enable the Distributor to participate in or present at conferences or seminars, sales or training programs for invited employees, client and investor events and other financial intermediary-sponsored events.

The Distributor also may hold or sponsor, at its expense, sales events, conferences and programs for employees or associated persons of financial intermediaries and may pay the travel and lodging expenses of attendees. The Distributor also may provide, at its expense, meals and entertainment in conjunction with meetings with financial intermediaries. Other compensation may be offered to the extent not prohibited by applicable laws, regulations or the rules of any self-regulatory agency, such as FINRA.

Purchases In-Kind

You may contact the Distributor to request a purchase of Shares using securities you own. The Fund reserves the right to determine whether to accept your securities and the minimum market value to accept. The Fund will value your securities in the same manner as it values its assets. An in-kind purchase may be treated as a sale of your securities for federal tax purposes; please consult your tax adviser regarding potential tax liability.

Subaccounting Services

Certain participating insurance companies may wish to use the transfer agent's subaccounting system to minimize their internal recordkeeping requirements. The transfer agent may charge a fee based on the level of subaccounting services rendered. Participating insurance companies holding Shares in a fiduciary, agency, custodial or similar capacity may charge or pass through subaccounting fees as part of or in addition to normal trust or agency account fees. They may also charge fees for other services that may be related to the ownership of Shares. This information should, therefore, be read together with any agreement between the customer and the participating insurance company about the services provided, the fees charged for those services and any restrictions and limitations imposed.

Redemption In-Kind

Although the Fund generally intends to pay Share redemptions in cash, it reserves the right, on its own initiative or in response to a shareholder request, to pay the redemption price in whole or in part by a distribution of the Fund's portfolio securities.

Because the Fund has elected to be governed by Rule 18f-1 under the 1940 Act, the Fund is obligated to pay Share redemptions to any one shareholder in cash only up to the lesser of \$250,000 or 1% of the net assets represented by such Share class during any 90-day period.

Any Share redemption payment greater than this amount will also be in cash unless the Fund elects to pay all or a portion of the remainder of the redemption in portfolio securities, valued in the same way as the Fund determines its NAV.

Redemption in-kind is not as liquid as a cash redemption. Shareholders receiving the portfolio securities could have difficulty selling them, may incur related transaction costs and would be subject to risks of fluctuations in the securities' values prior to sale.

Massachusetts Partnership Law

Under certain circumstances, shareholders may be held personally liable as partners under Massachusetts law for obligations of the Trust. To protect its shareholders, the Trust has filed legal documents with Massachusetts that expressly disclaim the liability of its shareholders for acts or obligations of the Trust.

In the unlikely event a shareholder is held personally liable for the Trust's obligations, the Trust is required by the Declaration of Trust to use its property to protect or compensate the shareholder. On request, the Trust will defend any claim made and pay any judgment against a shareholder for any act or obligation of the Trust. Therefore, financial loss resulting from liability as a shareholder will occur only if the Trust itself cannot meet its obligations to indemnify shareholders and pay judgments against them.

Account and Share Information

VOTING RIGHTS

The insurance company separate accounts, as shareholders of the Fund, will vote the Fund Shares held in their separate accounts at meetings of the shareholders. Voting will be in accordance with instructions received from contract owners of the separate accounts, as more fully outlined in the prospectus of the separate account.

Each Share of the Fund gives the shareholder one vote in Trustee elections and other matters submitted to shareholders for vote.

All Shares of the Trust have equal voting rights, except that in matters affecting only a particular Fund or class, only shares of that Fund or class are entitled to vote.

Trustees may be removed by the Board or by shareholders at a special meeting. A special meeting of shareholders will be called by the Board upon the written request of shareholders who own at least 10% of the Trust's outstanding Shares of all series entitled to vote.

As of April 3, 2014, the following shareholders owned of record, beneficially, or both, 5% or more of outstanding Shares: Farm Bureau Life Insurance Co., West Des Moines, IA, owned approximately 7,465,314 Shares (15.35%); Ohio National Life Insurance Co., Cincinnati, OH, owned approximately 33,160,319 Shares (68.20%).

Shareholders owning 25% or more of outstanding Shares may be in control and be able to affect the outcome of certain matters presented for a vote of shareholders.

Ohio National Life Insurance Co is organized in Ohio and is a subsidiary of Ohio National Financial Services Inc. organized in Ohio.

Tax Information

FEDERAL INCOME TAX

The Fund intends to meet requirements of Subchapter M of the Internal Revenue Code (“Code”) applicable to regulated investment companies. If these requirements are not met, it will not receive special tax treatment and will be subject to federal corporate income tax. Additionally, the Fund intends to comply with the diversification requirements of Section 817(h) of the Code.

The Fund will be treated as a single, separate entity for federal income tax purposes so that income earned and capital gains and losses realized by the Trust’s other portfolios will be separate from those realized by the Fund.

The Fund is entitled to a loss carryforward, which may reduce the taxable income or gain that the Fund would realize, and to which the shareholder would be subject, in the future.

TAX BASIS INFORMATION

Under the Energy Improvement and Extension Act of 2008, the Fund’s Transfer Agent will be required to provide you with the cost basis information on the sale of any of your Shares in the Fund, subject to certain exceptions. This cost basis reporting requirement is effective for shares purchased in the Fund on or after January 1, 2012.

FOREIGN INVESTMENTS

If the Fund purchases foreign securities, their investment income may be subject to foreign withholding or other taxes that could reduce the return on these securities. Tax treaties between the United States and foreign countries, however, may reduce or eliminate the amount of foreign taxes to which the Fund would be subject. The effective rate of foreign tax cannot be predicted since the amount of Fund assets to be invested within various countries is uncertain. However, the Fund intends to operate so as to qualify for treaty-reduced tax rates when applicable.

Distributions from a Fund may be based on estimates of book income for the year. Book income generally consists solely of the income generated by the securities in the portfolio, whereas tax-basis income includes, in addition, gains or losses attributable to currency fluctuation. Due to differences in the book and tax treatment of fixed-income securities denominated in foreign currencies, it is difficult to project currency effects on an interim basis. Therefore, to the extent that currency fluctuations cannot be anticipated, a portion of distributions to shareholders could later be designated as a return of capital, rather than income, for income tax purposes, which may be of particular concern to simple trusts.

If the Fund invests in the stock of certain foreign corporations, they may constitute Passive Foreign Investment Companies (PFIC), and the Fund may be subject to federal income taxes upon disposition of PFIC investments.

If more than 50% of the value of the Fund’s assets at the end of the tax year is represented by stock or securities of foreign corporations, the Fund will qualify for certain Code provisions that allow its shareholders to claim a foreign tax credit or deduction on their U.S. income tax returns. The Code may limit a shareholder’s ability to claim a foreign tax credit. Shareholders who elect to deduct their portion of the Fund’s foreign taxes rather than take the foreign tax credit must itemize deductions on their income tax returns.

Who Manages and Provides Services to the Fund?

BOARD OF TRUSTEES

The Board of Trustees is responsible for managing the Trust’s business affairs and for exercising all the Trust’s powers except those reserved for the shareholders. The following tables give information about each Trustee and the senior officers of the Fund. Where required, the tables separately list Trustees who are “interested persons” of the Fund (i.e., “Interested” Trustees) and those who are not (i.e., “Independent” Trustees). Unless otherwise noted, the address of each person listed is Federated Investors Tower,

1001 Liberty Avenue, Pittsburgh, PA 15222. The address of all Independent Trustees listed is 4000 Ericsson Drive, Warrendale, PA 15086-7561; Attention: Mutual Fund Board. As of December 31, 2013, the Trust comprised 7 portfolios, and the Federated Fund Complex consisted of 42 investment companies (comprising 135 portfolios). Unless otherwise noted, each Officer is elected annually. Unless otherwise noted, each Trustee oversees all portfolios in the Federated Fund Complex and serves for an indefinite term.

As of April 3, 2014, the Fund's Board and Officers as a group owned less than 1% of the Fund's outstanding Shares.

QUALIFICATIONS OF INDEPENDENT TRUSTEES

Individual Trustee qualifications are noted in the "Independent Trustees Background and Compensation" chart. In addition, the following characteristics are among those that were considered for each existing Trustee and will be considered for any Nominee Trustee.

- Outstanding skills in disciplines deemed by the Independent Trustees to be particularly relevant to the role of Independent Trustee and to the Federated funds, including legal, accounting, business management, the financial industry generally and the investment industry particularly.
- Desire and availability to serve for a substantial period of time, taking into account the Board's current mandatory retirement age of 73 years.
- No conflicts which would interfere with qualifying as independent.
- Appropriate interpersonal skills to work effectively with other Independent Trustees.
- Understanding and appreciation of the important role occupied by Independent Trustees in the regulatory structure governing regulated investment companies.
- Diversity of background.

Ms. Cunningham has received the Chartered Financial Analyst designation and holds an M.S.B.A. in Finance from Robert Morris College.

** Officers do not receive any compensation from the Fund.

In addition, the Fund has appointed an Anti-Money Laundering Compliance Officer.

BOARD LEADERSHIP STRUCTURE

As required under the terms of certain regulatory settlements, the Chairman of the Board is not an interested person of the Fund and neither the Chairman, nor any firm with which the Chairman is affiliated, has a prior relationship with Federated or its affiliates or (other than his position as a Trustee) with the Fund.

COMMITTEES OF THE BOARD

Board Committee	Committee Members	Committee Functions	Meetings Held During Last Fiscal Year
Executive	John F. Donahue Peter E. Madden John S. Walsh	In between meetings of the full Board, the Executive Committee generally may exercise all the powers of the full Board in the management and direction of the business and conduct of the affairs of the Trust in such manner as the Executive Committee shall deem to be in the best interests of the Trust. However, the Executive Committee cannot elect or remove Board members, increase or decrease the number of Trustees, elect or remove any Officer, declare dividends, issue shares or recommend to shareholders any action requiring shareholder approval.	One
Audit	Maureen Lally-Green Charles F. Mansfield, Jr. Thomas M. O'Neill John S. Walsh	The purposes of the Audit Committee are to oversee the accounting and financial reporting process of the Fund, the Fund's internal control over financial reporting and the quality, integrity and independent audit of the Fund's financial statements. The Committee also oversees or assists the Board with the oversight of compliance with legal requirements relating to those matters, approves the engagement and reviews the qualifications, independence and performance of the Fund's independent registered public accounting firm, acts as a liaison between the independent registered public accounting firm and the Board and reviews the Fund's internal audit function.	Seven
Nominating	John T. Collins Maureen Lally-Green Peter E. Madden Charles F. Mansfield, Jr. Thomas M. O'Neill P. Jerome Richey John S. Walsh	The Nominating Committee, whose members consist of all Independent Trustees, selects and nominates persons for election to the Fund's Board when vacancies occur. The Committee will consider candidates recommended by shareholders, Independent Trustees, officers or employees of any of the Fund's agents or service providers and counsel to the Fund. Any shareholder who desires to have an individual considered for nomination by the Committee must submit a recommendation in writing to the Secretary of the Fund, at the Fund's address appearing on the back cover of this SAI. The recommendation should include the name and address of both the shareholder and the candidate and detailed information concerning the candidate's qualifications and experience. In identifying and evaluating candidates for consideration, the Committee shall consider such factors as it deems appropriate. Those factors will ordinarily include: integrity, intelligence, collegiality, judgment, diversity, skill, business and other experience, qualification as an "Independent Trustee," the existence of material relationships which may create the appearance of a lack of independence, financial or accounting knowledge and experience and dedication and willingness to devote the time and attention necessary to fulfill Board responsibilities.	Two

BOARD'S ROLE IN RISK OVERSIGHT

The Board's role in overseeing the Fund's general risks includes receiving performance reports for the Fund and risk management reports from Federated's Chief Risk Officer at each regular Board meeting. The Chief Risk Officer is responsible for enterprise risk management at Federated, which includes risk management committees for investment management and for investor services. The Board also receives regular reports from the Fund's Chief Compliance Officer regarding significant compliance risks.

On behalf of the Board, the Audit Committee plays a key role overseeing the Fund's financial reporting and valuation risks. The Audit Committee meets regularly with the Fund's Principal Financial Officer and outside auditors, as well as with Federated's Chief Audit Executive to discuss financial reporting and audit issues, including risks relating to financial controls.

INVESTMENT ADVISER

The Adviser conducts investment research and makes investment decisions for the Fund.

The Adviser is a wholly owned subsidiary of Federated.

The Adviser shall not be liable to the Trust or any Fund shareholder for any losses that may be sustained in the purchase, holding or sale of any security or for anything done or omitted by it, except acts or omissions involving willful misfeasance, bad faith, gross negligence or reckless disregard of the duties imposed upon it by its contract with the Trust.

Portfolio Manager Information

As a general matter, certain conflicts of interest may arise in connection with a portfolio manager's management of a fund's investments, on the one hand, and the investments of other accounts for which the portfolio manager is responsible, on the other. For example, it is possible that the various accounts managed could have different investment strategies that, at times, might conflict with one another to the possible detriment of the Fund. Alternatively, to the extent that the same investment opportunities might be desirable for more than one account, possible conflicts could arise in determining how to allocate them. Other potential conflicts might include conflicts created by specific portfolio manager compensation arrangements, and conflicts relating to selection of brokers or dealers to execute Fund portfolio trades and/or specific uses of commissions from Fund portfolio trades (for example, research or "soft dollars"). The Adviser has adopted policies and procedures and has structured the portfolio managers' compensation in a manner reasonably designed to safeguard the Fund from being negatively affected as a result of any such potential conflicts.

The following information about the Fund's Portfolio Managers is provided as of the end of the Fund's most recently completed fiscal year unless otherwise indicated.

John Nichol, Portfolio Manager

Types of Accounts Managed by John Nichol	Total Number of Additional Accounts Managed/Total Assets*
Registered Investment Companies	4/\$2.6 billion
Other Pooled Investment Vehicles	0/\$0
Other Accounts	7/\$4.8 million

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

John Nichol is paid a fixed base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager’s experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. (“Federated”). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

IPP is determined by analyzing performance in respect of the following factors: a) rolling one, three and five calendar year pre-tax gross total returns; b) average gross distribution yields for one, three and five-calendar year periods; and c) a one, three and five year volatility measurement. With respect to each factor, IPP is measured on a relative basis by comparing performance for a particular measurement period to a designated peer group of comparable accounts, and on an absolute basis by comparing performance for that same period to a specified level based upon the historical performance of the Fund. IPP measurement periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one year of performance history under a portfolio manager may be excluded. As noted above, John Nichol is also the portfolio manager for other accounts in addition to the Fund. Such other accounts may have different benchmarks. For purposes of calculating the annual incentive amount, each fund or account managed by the portfolio manager is categorized into one of two IPP groups. Within each performance measurement period and IPP group, IPP is calculated on the basis of an assigned weighting to each account or fund managed by the portfolio manager and included in the IPP groups. The combined weighting assigned to the Fund and other similar funds is the same as the weighting assigned to other accounts or funds in the IPP groups. A portion of the bonus tied to the IPP score may be adjusted based on management’s assessment of overall contributions to Fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager’s bonus, in part, to Federated’s overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

In addition, John Nichol was awarded a grant of restricted Federated stock. Awards of restricted stock are discretionary and are made in variable amounts based on the subjective judgment of Federated’s senior management.

Linda Bakhshian, Portfolio Manager

Types of Accounts Managed by Linda Bakhshian	Total Number of Additional Accounts Managed/Total Assets*
Registered Investment Companies	3/\$2.6 billion
Other Pooled Investment Vehicles	0/\$0
Other Accounts	7/\$4.8 million

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

Linda Bakhshian is paid a fixed base salary and a variable annual incentive. IPP is determined by analyzing performance in respect of the following factors: a) rolling one, three and five calendar year pre-tax gross total returns; b) average gross distribution yields for one, three and five-calendar year periods; and c) a one, three and five year volatility measurement. With respect to each factor, IPP is measured on a relative basis by comparing performance for a particular measurement period to a designated peer group of comparable accounts, and on an absolute basis by comparing performance for that same period to a specified level based upon the historical performance of the Fund. IPP measurement periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one year of performance history under a portfolio manager may be excluded. As noted above, Linda Bakhshian is also the portfolio manager for other accounts in addition to the Fund. Such other accounts may have different benchmarks. For purposes of calculating the annual incentive amount, each fund or account managed by the portfolio manager is categorized into one of two IPP groups. Within each performance measurement period and IPP group, IPP is calculated on the basis of an assigned weighting to each

account or fund managed by the portfolio manager and included in the IPP groups. The combined weighting assigned to the Fund and other similar funds is the same as the weighting assigned to other accounts or funds in the IPP groups. A portion of the bonus tied to the IPP score may be adjusted based on management’s assessment of overall contributions to Fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager’s bonus, in part, to Federated’s overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

In addition, Linda Bakhshian was awarded a grant of restricted Federated stock. Awards of restricted stock are discretionary and are made in variable amounts based on the subjective judgment of Federated’s senior management.

Todd Abraham, Portfolio Manager

Types of Accounts Managed by Todd Abraham	Total Number of Additional Accounts Managed/Total Assets*
Registered Investment Companies	17/\$5.0 billion
Other Pooled Investment Vehicles	0/\$0
Other Accounts	0/\$0

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

Todd Abraham is paid a fixed base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager’s experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. (“Federated”). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

IPP is calculated based on another account managed by the portfolio manager (i.e., Federated Mortgage Core Portfolio). IPP is measured on a rolling one, three and five calendar year pre-tax gross return basis vs. the Federated Mortgage Core Portfolio’s benchmark (i.e., Barclays Mortgage-Backed Securities Index). Mr. Abraham manages only the mortgage asset class portion of the Fund’s portfolio. Performance periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one year of performance history under a portfolio manager may be excluded. As noted above, Mr. Abraham is the portfolio manager for other accounts. Such other accounts may have different benchmarks. The performance of certain of these accounts is excluded when calculating IPP. Within each performance measurement period, IPP is calculated with an equal weighting of each included account managed by the portfolio manager. In his role as co-head of the Government/Mortgage-backed Fixed Income Group, Mr. Abraham has oversight responsibility for other portfolios that he does not personally manage. A portion of the IPP score is determined by the investment performance of these other portfolios vs. product specific benchmarks. In addition, Mr. Abraham serves on one or more Investment Teams that establish guidelines on various performance drivers (e.g., currency, duration, sector, volatility and/or yield curve) for taxable, fixed-income funds. A portion of the IPP score is based on Federated’s senior management’s assessment of team contributions. A portion of the bonus tied to the IPP score may be adjusted based on management’s assessment of overall contributions to Fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager’s bonus, in part, to Federated’s overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

In addition, Mr. Abraham was awarded a grant of restricted Federated stock. Awards of restricted stock are discretionary and are made in variable amounts based on the subjective judgment of Federated’s senior management.

Mark Durbiano, Portfolio Manager

High Yield Affiliated Fund

Types of Accounts Managed by Mark Durbiano	Total Number of Additional Accounts Managed/Total Assets*	Additional Accounts/Assets Managed that are Subject to Advisory Fee Based on Account Performance
Registered Investment Companies	20/\$11.8 billion	0/\$0
Other Pooled Investment Vehicles	1/\$29.7 million	0/\$0
Other Accounts	2/\$86.0 million	2/\$192.3 million

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

Mark Durbiano is paid a fixed base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager's experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. ("Federated"). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

The Fund will gain exposure to high yield securities by investing in an affiliated investment company (the "Affiliated Fund"). Mr. Durbiano manages the Affiliated Fund according to its specific investment program. Thus, although Mr. Durbiano is not responsible for making investment decisions directly on behalf of the Fund, the high yield fixed income portion of the Fund's portfolio may be subject to his management of the Affiliated Fund. Mr. Durbiano's IPP is measured on a rolling one, three and five calendar year pre-tax gross return basis vs. the Affiliated Fund's benchmark (i.e., Barclays U.S. Corporate High Yield 2% Issuer Capped Index) and vs. the Affiliated Fund's designated peer group of comparable accounts. Performance periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one year of performance history under a portfolio manager may be excluded. As noted above, Mr. Durbiano is the portfolio manager for other accounts. Such other accounts may have different benchmarks. The performance of certain of these accounts is excluded when calculating IPP. Within each performance measurement period, IPP is calculated with an equal weighting of each included account managed by the portfolio manager. In addition, Mr. Durbiano serves on one or more Investment Teams that establish guidelines on various performance drivers (e.g., currency, duration, sector, volatility and/or yield curve) for taxable, fixed-income funds. A portion of the IPP score is based on Federated's senior management's assessment of team contributions. A portion of the bonus tied to the IPP score may be adjusted based on management's assessment of overall contributions to Fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager's bonus, in part, to Federated's overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

Jerome Conner, Portfolio Manager

Types of Accounts Managed by Jerome Conner	Total Number of Additional Accounts Managed/Total Assets*
Registered Investment Companies	2/\$1.2 billion
Other Pooled Investment Vehicles	0/\$0
Other Accounts	0/\$0

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

Jerome Conner is paid a fixed base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager's experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. ("Federated"). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

IPP is determined by analyzing performance in respect of the following factors: a) rolling one, three and five calendar year pre-tax gross total returns; b) average gross distribution yields for one, three and five-calendar year periods; and c) a one, three and five year volatility measurement. With respect to each factor, IPP is measured on a relative basis by comparing performance for a particular measurement period to a designated peer group of comparable accounts, and on an absolute basis by comparing performance for that same period to a specified level based upon the historical performance of the Fund. IPP measurement periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one year of performance history under a portfolio manager may be excluded. Mr. Conner manages only the fixed income portion of the Fund's portfolio. As noted above, Jerome Conner is also the portfolio manager for other accounts in addition to the Fund. Such other accounts may have different benchmarks. For purposes of calculating the annual incentive amount, each fund or account is categorized into one of three IPP groups. Within each performance measurement period and IPP group, IPP is calculated on the basis of an assigned weighting to each account or fund managed by the portfolio manager and included in the IPP groups. The weighting assigned to the Fund is less than the weighting assigned to other accounts or funds used to determine IPP. Additionally, a portion of Mr. Conner's IPP score is based on the performance of portfolios for which he provides fundamental credit research. A portion of the bonus tied to the IPP score may be adjusted based on management's assessment of overall contributions to fund performance and any other factors as deemed relevant. Mr. Conner serves on one or more Investment Teams that establish guidelines on various performance drivers (e.g., currency, duration, sector, volatility and/or yield curve) for taxable fixed-income funds. A portion of the IPP score is based on Federated's senior management's assessment of team contributions. A portion of the bonus tied to the IPP score may be adjusted based on management's assessment of overall contributions to Fund performance and any other factors as deemed relevant.

The Financial Success category is designed to tie the portfolio manager's bonus, in part, to Federated's overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

Ihab Salib, Portfolio Manager

Types of Accounts Managed by Ihab Salib	Total Number of Additional Accounts Managed/Total Assets*	Additional Accounts/Assets Managed that are Subject to Advisory Fee Based on Account Performance
Registered Investment Companies	13/\$1.6 billion	0/\$0
Other Pooled Investment Vehicles	6/\$511.7 million	0/\$0
Other Accounts	0/\$0	7/\$1.1 billion

* None of the Accounts has an advisory fee that is based on the performance of the account.

Dollar value range of shares owned in the Fund: None.

Ihab Salib is paid a fixed base salary and a variable annual incentive. Base salary is determined within a market competitive position-specific salary range, based on the portfolio manager's experience and performance. The annual incentive amount is determined based primarily on Investment Product Performance (IPP) and, to a lesser extent, Financial Success, and may be paid entirely in cash, or in a combination of cash and restricted stock of Federated Investors, Inc. ("Federated"). The total combined annual incentive opportunity is intended to be competitive in the market for this portfolio manager role.

IPP is measured on a rolling one, three and five calendar year pre-tax gross total return basis vs. the EM Sub Portfolio for Managed Volatility Fund's benchmark (i.e., Barclay's Capital US Emerging Markets Index). Mr. Salib manages only the international bond and emerging markets portion of the Fund's portfolio. Performance periods are adjusted if a portfolio manager has been managing an account for less than five years; accounts with less than one year of performance history under a portfolio manager may be excluded. For purposes of calculating the annual incentive amount, each fund or account managed by the portfolio manager is categorized into one of two IPP groups. Within each performance measurement period and IPP group, IPP is calculated on the basis of an assigned weighting to each account or fund managed by the portfolio manager and included in the IPP groups. In his role as Head of the International Bond Group, Mr. Salib has oversight responsibility for other portfolios that he does not personally manage. A portion of the IPP score is determined by the investment performance of these other portfolios vs. product specific benchmarks and peer groups. In addition, Mr. Salib serves on one or more Investment Teams that establish guidelines on various performance drivers (e.g., currency, duration, sector, volatility and/or yield curve) for taxable, fixed-income products. A portion of the IPP score is based on Federated's senior management's assessment of team contributions.

The Financial Success category is designed to tie the portfolio manager's bonus, in part, to Federated's overall financial results. Funding for the Financial Success category may be determined on a product or asset class basis, as well as on corporate financial results. Senior Management determines individual Financial Success bonuses on a discretionary basis, considering overall contributions and any other factors deemed relevant.

Services Agreement

Federated Advisory Services Company, an affiliate of the Adviser, provides research, quantitative analysis, equity trading and transaction settlement and certain support services to the Adviser. The fee for these services is paid by the Adviser and not by the Fund.

Other Related Services

Affiliates of the Adviser may, from time to time, provide certain electronic equipment and software to institutional customers in order to facilitate the purchase of Fund Shares offered by the Distributor.

CODE OF ETHICS RESTRICTIONS ON PERSONAL TRADING

As required by SEC rules, the Fund, its Adviser and its Distributor have adopted codes of ethics. These codes govern securities trading activities of investment personnel, Fund Trustees and certain other employees. Although they do permit these people to trade in securities, including those that the Fund could buy, as well as Shares of the Fund, they also contain significant safeguards designed to protect the Fund and its shareholders from abuses in this area, such as requirements to obtain prior approval for, and to report, particular transactions.

VOTING PROXIES ON FUND PORTFOLIO SECURITIES

The Board has delegated to the Adviser authority to vote proxies on the securities held in the Fund's portfolio. The Board has also approved the Adviser's policies and procedures for voting the proxies, which are described below.

Proxy Voting Policies

The Adviser's general policy is to cast proxy votes in favor of proposals that the Adviser anticipates will enhance the long-term value of the securities being voted. Generally, this will mean voting for proposals that the Adviser believes will: improve the management of a company; increase the rights or preferences of the voted securities; and/or increase the chance that a premium offer would be made for the company or for the voted securities.

The following examples illustrate how these general policies may apply to proposals submitted by a company's board of directors. However, whether the Adviser supports or opposes a proposal will always depend on the specific circumstances described in the proxy statement and other available information.

On matters of corporate governance, generally the Adviser will vote *for* the full slate of directors nominated in an uncontested election; and *for* proposals to: require a company's audit committee to be comprised entirely of independent directors; require independent tabulation of proxies and/or confidential voting by shareholders; reorganize in another jurisdiction (unless it would reduce the rights or preferences of the securities being voted); ratify the board's selection of auditors (unless compensation for non-audit services exceeded 50% of the total compensation received from the company, or the previous auditor was dismissed because of a disagreement with the company); and repeal a shareholder rights plan (also known as a "poison pill"). The Adviser will generally vote *against* the adoption of such a plan (unless the plan is designed to facilitate, rather than prevent, unsolicited offers for the company).

On matters of capital structure, generally the Adviser will vote: *against* proposals to authorize or issue shares that are senior in priority or voting rights to the securities being voted; and *for* proposals to: reduce the amount of shares authorized for issuance; authorize a stock repurchase program; and grant preemptive rights to the securities being voted. The Adviser will generally vote *against* proposals to eliminate such preemptive rights.

On matters relating to management compensation, generally the Adviser will vote: *for* stock incentive plans that align the recipients' interests with the interests of shareholders without creating undue dilution; *against* proposals that would permit the amendment or replacement of outstanding stock incentives with new stock incentives having more favorable terms; and *against* executive compensation plans that do not disclose the maximum amounts of compensation that may be awarded or the criteria for determining awards.

On matters relating to corporate transactions, the Adviser will vote proxies relating to proposed mergers, capital reorganizations and similar transactions in accordance with the general policy, based upon its analysis of the proposed transaction. The Adviser will vote proxies in contested elections of directors in accordance with the general policy, based upon its analysis of the opposing slates and their respective proposed business strategies. Some transactions may also involve proposed changes to the company's corporate governance, capital structure or management compensation. The Adviser will vote on such changes based on its evaluation of the

proposed transaction or contested election. In these circumstances, the Adviser may vote in a manner contrary to the general practice for similar proposals made outside the context of such a proposed transaction or change in the board. For example, if the Adviser decides to vote against a proposed transaction, it may vote for anti-takeover measures reasonably designed to prevent the transaction, even though the Adviser typically votes against such measures in other contexts.

The Adviser generally votes *against* proposals submitted by shareholders without the favorable recommendation of a company's board. The Adviser believes that a company's board should manage its business and policies, and that shareholders who seek specific changes should strive to convince the board of their merits or seek direct representation on the board.

In addition, the Adviser will not vote if it determines that the consequences or costs outweigh the potential benefit of voting. For example, if a foreign market requires shareholders casting proxies to retain the voted shares until the meeting date (thereby rendering the shares "illiquid" for some period of time), the Adviser will not vote proxies for such shares.

Proxy Voting Procedures

The Adviser has established a Proxy Voting Committee ("Proxy Committee"), to exercise all voting discretion granted to the Adviser by the Board in accordance with the proxy voting policies. The Adviser has hired Glass Lewis & Co. (GL) to obtain, vote and record proxies in accordance with the Proxy Committee's directions. The Proxy Committee has supplied GL with general voting instructions that represent decisions made by the Proxy Committee in order to vote common proxy proposals; however, the Proxy Committee retains the right to modify these voting instructions at any time or to vote contrary to the voting instructions at any time in order to cast proxy votes in a manner that the Proxy Committee believes is consistent with the Adviser's general policy. GL may vote any proxy as directed in the voting instructions without further direction from the Proxy Committee and may make any determinations required to implement the voting instructions. However, if the voting instructions require case-by-case direction for a proposal, GL shall provide the Proxy Committee with all information that it has obtained regarding the proposal and the Proxy Committee will provide specific direction to GL.

Conflicts of Interest

The Adviser has adopted procedures to address situations where a matter on which a proxy is sought may present a potential conflict between the interests of the Fund (and its shareholders) and those of the Adviser or Distributor. This may occur where a significant business relationship exists between the Adviser (or its affiliates) and a company involved with a proxy vote. A company that is a proponent, opponent or the subject of a proxy vote and which to the knowledge of the Proxy Committee has this type of significant business relationship, is referred to as an "Interested Company."

The Adviser has implemented the following procedures in order to avoid concerns that the conflicting interests of the Adviser have influenced proxy votes. Any employee of the Adviser who is contacted by an Interested Company regarding proxies to be voted by the Adviser must refer the Interested Company to a member of the Proxy Committee, and must inform the Interested Company that the Proxy Committee has exclusive authority to determine how the Adviser will vote. Any Proxy Committee member contacted by an Interested Company must report it to the full Proxy Committee and provide a written summary of the communication. Under no circumstances will the Proxy Committee or any member of the Proxy Committee make a commitment to an Interested Company regarding the voting of proxies or disclose to an Interested Company how the Proxy Committee has directed such proxies to be voted. If the voting instructions already provide specific direction on the proposal in question, the Proxy Committee shall not alter or amend such directions. If the voting instructions require the Proxy Committee to provide further direction, the Proxy Committee shall do so in accordance with the proxy voting policies, without regard for the interests of the Adviser with respect to the Interested Company. If the Proxy Committee provides any direction as to the voting of proxies relating to a proposal affecting an Interested Company, it must disclose to the Fund's Board information regarding: the significant business relationship; any material communication with the Interested Company; the matter(s) voted on; and how, and why, the Adviser voted as it did. Alternatively, the Proxy Committee may seek direction from the Fund's Board on how a proposal concerning an Interested Company shall be voted, and shall follow any such direction provided by the Board. In seeking such direction, the Proxy Committee will disclose the reason such company is considered an Interested Company and may provide a recommendation on how such proposal should be voted and the basis for such recommendation.

If the Fund holds shares of another investment company for which the Adviser (or an affiliate) acts as an investment adviser, the Proxy Committee will vote the Fund's proxies in the same proportion as the votes cast by shareholders who are not clients of the Adviser at any shareholders' meeting called by such investment company, unless otherwise directed by the Board.

Proxy Voting Report

A report on "Form N-PX" of how the Fund voted any proxies during the most recent 12-month period ended June 30 is available via the Proxy Voting Record (Form N-PX) link associated with the Fund and share class name at www.Federatedinvestors.com/FundInformation. Form N-PX filings are also available at the SEC's website at www.sec.gov.

PORTFOLIO HOLDINGS INFORMATION

Information concerning the Fund's portfolio holdings is available via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. A complete listing of the Fund's portfolio holdings as of the end of each calendar quarter is posted on the website 30 days (or the next business day) after the end of the quarter and remains posted for six months thereafter. Summary portfolio composition information as of the close of each month is posted on the website 15 days (or the next business day) after month-end and remains posted until replaced by the information for the succeeding month. The summary portfolio composition information may include: identification of the Fund's top 10 equity and fixed-income holdings, a percentage breakdown of the portfolio by asset class and a percentage breakdown of the equity portfolio by sector.

You may also access portfolio information as of the end of the Fund's fiscal quarters via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. The Fund's Annual Shareholder Report and Semi-Annual Shareholder Report contain complete listings of the Fund's portfolio holdings as of the end of the Fund's second and fourth fiscal quarters. The Fund's Form N-Q filings contain complete listings of the Fund's portfolio holdings as of the end of the Fund's first and third fiscal quarters. Fiscal quarter information is made available on the website within 70 days after the end of the fiscal quarter. This information is also available in reports filed with the SEC at the SEC's website at www.sec.gov.

The disclosure policy of the Fund and the Adviser prohibits the disclosure of portfolio holdings information to any investor or intermediary before the same information is made available to other investors. Employees of the Adviser or its affiliates who have access to nonpublic information concerning the Fund's portfolio holdings are prohibited from trading securities on the basis of this information. Such persons must report all personal securities trades and obtain pre-clearance for all personal securities trades other than mutual fund shares.

Firms that provide administrative, custody, financial, accounting, legal or other services to the Fund may receive nonpublic information about Fund portfolio holdings for purposes relating to their services. The Fund may also provide portfolio holdings information to publications that rate, rank or otherwise categorize investment companies. Traders or portfolio managers may provide "interest" lists to facilitate portfolio trading if the list reflects only that subset of the portfolio for which the trader or portfolio manager is seeking market interest. A list of service providers, publications and other third parties who may receive nonpublic portfolio holdings information appears in the Appendix to this SAI.

The furnishing of nonpublic portfolio holdings information to any third party (other than authorized governmental or regulatory personnel) requires the prior approval of the President of the Adviser and of the Chief Compliance Officer of the Fund. The President of the Adviser and the Chief Compliance Officer will approve the furnishing of nonpublic portfolio holdings information to a third party only if they consider the furnishing of such information to be in the best interests of the Fund and its shareholders. In that regard, and to address possible conflicts between the interests of Fund shareholders and those of the Adviser and its affiliates, the following procedures apply. No consideration may be received by the Fund, the Adviser, any affiliate of the Adviser or any of their employees in connection with the disclosure of portfolio holdings information. Before information is furnished, the third party must sign a written agreement that it will safeguard the confidentiality of the information, will use it only for the purposes for which it is furnished and will not use it in connection with the trading of any security. Persons approved to receive nonpublic portfolio holdings information will receive it as often as necessary for the purpose for which it is provided. Such information may be furnished as frequently as daily and often with no time lag between the date of the information and the date it is furnished. The Board receives and reviews annually a list of the persons who receive nonpublic portfolio holdings information and the purposes for which it is furnished.

BROKERAGE TRANSACTIONS AND INVESTMENT ALLOCATION

Equity securities may be traded in the over-the-counter market through broker/dealers acting as principal or agent, or in transactions directly with other investors. Transactions may also be executed on a securities exchange or through an electronic communications network. The Adviser seeks to obtain best execution of trades in equity securities by balancing the costs inherent in trading, including opportunity costs, market impact costs and commissions. As a general matter, the Adviser seeks to add value to its investment management by using market information to capitalize on market opportunities, actively seek liquidity and discover price. The Adviser continually monitors its trading results in an effort to improve execution. Fixed-income securities are generally traded in an over-the-counter market on a net basis (i.e., without commission) through dealers acting as principal or in transactions directly with the issuer. Dealers derive an undisclosed amount of compensation by offering securities at a higher price than they bid for them. Some fixed-income securities may have only one primary market maker. The Adviser seeks to use dealers it believes to be actively and effectively trading the security being purchased or sold, but may not always obtain the lowest purchase price or highest sale price with respect to a fixed-income security. The Adviser's receipt of research services (as described below) may also be a factor in the Adviser's selection of brokers and dealers. The Adviser may also direct certain portfolio trades to a broker that, in turn, pays a portion of the Fund's operating expenses. The Adviser makes decisions on portfolio transactions and selects brokers and dealers subject to review by the Fund's Board.

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. Except as noted below, when the Fund and one or more of those accounts invests in, or disposes of, the same security, available investments or opportunities for sales will be allocated among the Fund and the account(s) in a manner believed by the Adviser to be equitable. While the coordination and ability to participate in volume transactions may benefit the Fund, it is possible that this procedure could adversely impact the price paid or received and/or the position obtained or disposed of by the Fund. Investments for Federated Kaufmann Fund and other accounts managed by that fund's portfolio managers in initial public offerings (IPO) are made independently from any other accounts, and much of their non-IPO trading may also be conducted independently from other accounts. Trading and allocation of investments, including IPOs, for accounts managed by Federated MDTA LLC are also made independently from the Fund. Investment decisions and trading for certain separately managed or wrap-fee accounts, and other accounts, of the Adviser and/or certain investment adviser affiliates of the Adviser also are generally made and conducted independently from the Fund. It is possible that such independent trading activity could adversely impact the prices paid or received and/or positions obtained or disposed of by the Fund.

On December 31, 2013, the Fund owned securities of the following regular broker/dealers:

Broker Dealer	Value of Securities Owned
Bank of America	\$5,236,756
Royal Bank of Canada	\$6,895,695
JPMorgan Chase & Co.	\$7,398,561
Goldman Sachs & Co.	\$1,728,975

Brokerage and Research Services

Brokerage services include execution of trades and products and services that relate to the execution of trades, including communications services related to trade execution, clearing and settlement, trading software used to route orders to market centers, software that provides algorithmic trading strategies and software used to transmit orders to direct market access (DMA) systems. Research services may include: advice as to the advisability of investing in securities; security analysis and reports; economic studies; industry studies; receipt of quotations for portfolio evaluations; and similar services. Research services assist the Adviser and its affiliates in terms of their overall investment responsibilities to funds and investment accounts for which they have investment discretion. However, particular brokerage and research services received by the Adviser and its affiliates may not be used to service every fund or account, and may not benefit the particular funds and accounts that generated the brokerage commissions. In addition, brokerage and research services paid for with commissions generated by the Fund may be used in managing other funds and accounts. To the extent that receipt of these services may replace services for which the Adviser or its affiliates might otherwise have paid, it would tend to reduce their expenses. The Adviser and its affiliates exercise reasonable business judgment in selecting brokers to execute securities transactions where receipt of research services is a factor. They determine in good faith that commissions charged by such persons are reasonable in relationship to the value of the brokerage and research services provided.

ADMINISTRATOR

Federated Administrative Services (FAS), a subsidiary of Federated, provides administrative personnel and services, including certain legal, compliance, recordkeeping and financial reporting services ("Administrative Services"), necessary for the operation of the Fund. FAS provides Administrative Services for a fee based upon the rates set forth below paid on the average daily net assets of the Fund. For purposes of determining the appropriate rate breakpoint, "Investment Complex" is defined as all of the Federated Funds subject to a fee under the Administrative Services Agreement with FAS. FAS is also entitled to reimbursement for certain out-of-pocket expenses incurred in providing Administrative Services to the Fund.

Administrative Services Fee Rate	Average Daily Net Assets of the Investment Complex
0.150 of 1%	on the first \$5 billion
0.125 of 1%	on the next \$5 billion
0.100 of 1%	on the next \$10 billion
0.075 of 1%	on assets over \$20 billion

CUSTODIAN

State Street Bank and Trust Company, Boston, Massachusetts, is custodian for the securities and cash of the Fund. Foreign instruments purchased by the Fund are held by foreign banks participating in a network coordinated by State Street Bank and Trust Company.

TRANSFER AGENT AND DIVIDEND DISBURSING AGENT

State Street Bank and Trust Company, the Fund's registered transfer agent, maintains all necessary shareholder records.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The independent registered public accounting firm for the Fund, KPMG LLP, conducts its audits in accordance with the standards of the Public Company Accounting Oversight Board (United States), which require it to plan and perform its audits to provide reasonable assurance about whether the Fund's financial statements and financial highlights are free of material misstatement.

FEES PAID BY THE FUND FOR SERVICES

For the Year Ended December 31	2013	2012	2011
Advisory Fee Earned	\$2,485,141	\$1,271,719	\$642,216

Financial Information

The Financial Statements for the Fund for the fiscal year ended December 31, 2013, are incorporated herein by reference to the Annual Reports to Shareholders of Federated Managed Volatility Fund II dated December 31, 2013.

Investment Ratings

STANDARD & POOR'S RATING SERVICES (S&P) LONG-TERM ISSUE RATINGS

Issue credit ratings are based, in varying degrees, on S&P's analysis of the following considerations: the likelihood of payment—capacity and willingness of the obligor to meet its financial commitment on an obligation in accordance with the terms of the obligation; the nature of and provisions of the obligation; and the protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

AAA—An obligation rated “AAA” has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

AA—An obligation rated “AA” differs from the highest rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

A—An obligation rated “A” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

BBB—An obligation rated “BBB” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

Obligations rated “BB,” “B,” “CCC,” “CC” and “C” are regarded as having significant speculative characteristics. “BB” indicates the least degree of speculation and “C” the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposures to adverse conditions.

BB—An obligation rated “BB” is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to the obligor's inadequate capacity to meet its financial commitment on the obligation.

B—An obligation rated “B” is more vulnerable to nonpayment than obligations rated “BB,” but the obligor currently has the capacity to meet its financial commitment on the obligation. Adverse business, financial or economic conditions will likely impair the obligor's capacity or willingness to meet its financial commitment on the obligation.

CCC—An obligation rated “CCC” is currently vulnerable to nonpayment, and is dependent upon favorable business, financial and economic conditions for the obligor to meet its financial commitment on the obligation. In the event of adverse business, financial or economic conditions, the obligor is not likely to have the capacity to meet its financial commitment on the obligation.

CC—An obligation rated “CC” is currently highly vulnerable to nonpayment.

C—A “C” rating is assigned to obligations that are currently highly vulnerable to nonpayment, obligations that have payment arrearages allowed by the terms of the documents, or obligations of an issuer that is the subject of a bankruptcy petition or similar action which have not experienced a payment default. Among others, the “C” rating may be assigned to subordinated debt, preferred stock or other obligations on which cash payments have been suspended in accordance with the instrument’s terms or when preferred stock is the subject of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

D—An obligation rated “D” is in payment default. The “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within five business days, irrespective of any grace period. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of similar action if payments on an obligation are jeopardized. An obligation’s rating is lowered to “D” upon completion of a distressed exchange offer, whereby some or all of the issue is either repurchased for an amount of cash or replaced by other instruments having a total value that is less than par.

The ratings from “AA” to “CCC” may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

S&P RATING OUTLOOK

An S&P rating outlook assesses the potential direction of a long-term credit rating over the intermediate term (typically six months to two years). In determining a rating outlook, consideration is given to any changes in the economic and/or fundamental business conditions.

Positive—Positive means that a rating may be raised.

Negative—Negative means that a rating may be lowered.

Stable—Stable means that a rating is not likely to change.

Developing—Developing means a rating may be raised or lowered.

N.M.—N.M. means not meaningful.

S&P SHORT-TERM ISSUE RATINGS

Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the United States, for example, that means obligations with an original maturity of no more than 365 days—including commercial paper.

A-1—A short-term obligation rated “A-1” is rated in the highest category by S&P. The obligor’s capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor’s capacity to meet its financial commitment on these obligations is extremely strong.

A-2—A short-term obligation rated “A-2” is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor’s capacity to meet its financial commitment on the obligation is satisfactory.

A-3—A short-term obligation rated “A-3” exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

B—A short-term obligation rated “B” is regarded as vulnerable and has significant speculative characteristics. The obligor currently has the capacity to meet its financial commitments; however, it faces major ongoing uncertainties which could lead to the obligor’s inadequate capacity to meet its financial commitments.

C—A short-term obligation rated “C” is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitment on the obligation.

D—A short-term obligation rated “D” is in payment default. The “D” rating category is used when payments on an obligation are not made on the date due, unless S&P believes that such payments will be made within any stated grace period. However, any stated grace period longer than five business days will be treated as five business days. The “D” rating also will be used upon the filing of a bankruptcy petition or the taking of a similar action if payments on an obligation are jeopardized.

MOODY’S INVESTOR SERVICES, INC. (MOODY’S) LONG-TERM RATINGS

Moody’s long-term ratings are assigned to issuers or obligations with an original maturity of one year or more and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default.

Aaa—Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa—Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A—Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa—Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba—Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B—Obligations rated B are considered speculative and are subject to high credit risk.

Caa—Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca—Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C—Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Moody's appends numerical modifiers 1, 2 and 3 to each generic rating classification from Aaa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

MOODY'S SHORT-TERM RATINGS

Moody's short-term ratings are assigned to obligations with an original maturity of 13 months or less and reflect the likelihood of a default on contractually promised payments.

P-1—Issuers (or supporting institutions) rated P-1 have a superior ability to repay short-term debt obligations.

P-2—Issuers (or supporting institutions) rated P-2 have a strong ability to repay short-term debt obligations.

P-3—Issuers (or supporting institutions) rated P-3 have an acceptable ability to repay short-term obligations.

NP—Issuers (or supporting institutions) rated Not Prime do not fall within any of the Prime rating categories.

FITCH, INC. (FITCH) LONG-TERM DEBT RATINGS

Fitch long-term ratings report Fitch's opinion on an entity's relative vulnerability to default on financial obligations. The "threshold" default risk addressed by the rating is generally that of the financial obligations whose non-payment would best reflect the uncured failure of that entity. As such, Fitch long-term ratings also address relative vulnerability to bankruptcy, administrative receivership or similar concepts, although the agency recognizes that issuers may also make pre-emptive and therefore voluntary use of such mechanisms.

AAA: Highest Credit Quality—"AAA" ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA: Very High Credit Quality—"AA" ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A: High Credit Quality—"A" ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB: Good Credit Quality—"BBB" ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity.

BB: Speculative—"BB" ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial flexibility exists which supports the servicing of financial commitments.

B: Highly Speculative—"B" ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

CCC: Substantial Credit Risk—Default is a real possibility.

CC: Very High Levels of Credit Risk—Default of some kind appears probable.

C: Exceptionally High Levels of Credit Risk—Default is imminent or inevitable, or the issuer is in standstill. Conditions that are indicative of a "C" category rating for an issuer include: (a) the issuer has entered into a grace or cure period following non-payment of a material financial obligation; (b) the issuer has entered into a temporary negotiated waiver or standstill agreement following a payment default on a material financial obligation; or (c) Fitch otherwise believes a condition of "RD" or "D" to be imminent or inevitable, including through the formal announcement of a distressed debt exchange.

RD: Restricted Default—“RD” ratings indicate an issuer that in Fitch’s opinion has experienced an uncured payment default on a bond, loan or other material financial obligation but which has not entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, and which has not otherwise ceased operating. This would include: (a) the selective payment default on a specific class or currency of debt; (b) the uncured expiry of any applicable grace period, cure period or default forbearance period following a payment default on a bank loan, capital markets security or other material financial obligation; (c) the extension of multiple waivers or forbearance periods upon a payment default on one or more material financial obligations, either in series or in parallel; or (d) execution of a distressed debt exchange on one or more material financial obligations.

D: Default—“D” ratings indicate an issuer that in Fitch’s opinion has entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure, or which has otherwise ceased business.

Default ratings are not assigned prospectively to entities or their obligations; within this context, non-payment on an instrument that contains a deferral feature or grace period will generally not be considered a default until after the expiration of the deferral or grace period, unless a default is otherwise driven by bankruptcy or other similar circumstance, or by a distressed debt exchange.

“Imminent” default typically refers to the occasion where a payment default has been intimated by the issuer, and is all but inevitable. This may, for example, be where an issuer has missed a scheduled payment, but (as is typical) has a grace period during which it may cure the payment default. Another alternative would be where an issuer has formally announced a distressed debt exchange, but the date of the exchange still lies several days or weeks in the immediate future.

In all cases, the assignment of a default rating reflects the agency’s opinion as to the most appropriate rating category consistent with the rest of its universe of ratings, and may differ from the definition of default under the terms of an issuer’s financial obligations or local commercial practice.

FITCH SHORT-TERM DEBT RATINGS

A Fitch short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-Term Ratings are assigned to obligations whose initial maturity is viewed as “short-term” based on market convention. Typically, this means up to 13 months for corporate, sovereign, and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

F1: Highest Short-Term Credit Quality—Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added “+” to denote any exceptionally strong credit feature.

F2: Good Short-Term Credit Quality—Good intrinsic capacity for timely payment of financial commitments.

F3: Fair Short-Term Credit Quality—The intrinsic capacity for timely payment of financial commitments is adequate.

B: Speculative Short-Term Credit Quality—Minimal capacity for timely payment of financial commitments, plus heightened vulnerability to near-term adverse changes in financial and economic conditions.

C: High Short-Term Default Risk—Default is a real possibility.

RD: Restricted Default—Indicates an entity that has defaulted on one or more of its financial commitments, although it continues to meet other financial obligations. Applicable to entity ratings only.

D: Default—Indicates a broad-based default event for an entity, or the default of a short-term obligation.

A.M. BEST COMPANY, INC. (A.M. BEST) LONG-TERM DEBT AND PREFERRED STOCK RATINGS

A Best’s long-term debt rating is Best’s independent opinion of an issuer/entity’s ability to meet its ongoing financial obligations to security holders when due.

aaa: Exceptional—Assigned to issues where the issuer has an exceptional ability to meet the terms of the obligation.

aa: Very Strong—Assigned to issues where the issuer has a very strong ability to meet the terms of the obligation.

a: Strong—Assigned to issues where the issuer has a strong ability to meet the terms of the obligation.

bbb: Adequate—Assigned to issues where the issuer has an adequate ability to meet the terms of the obligation; however, the issue is more susceptible to changes in economic or other conditions.

bb: Speculative—Assigned to issues where the issuer has speculative credit characteristics, generally due to a modest margin or principal and interest payment protection and vulnerability to economic changes.

b: Very Speculative—Assigned to issues where the issuer has very speculative credit characteristics, generally due to a modest margin of principal and interest payment protection and extreme vulnerability to economic changes.

ccc, cc, c: Extremely Speculative—Assigned to issues where the issuer has extremely speculative credit characteristics, generally due to a minimal margin of principal and interest payment protection and/or limited ability to withstand adverse changes in economic or other conditions.

d: In Default—Assigned to issues in default on payment of principal, interest or other terms and conditions, or when a bankruptcy petition or similar action has been filed.

Ratings from “aa” to “ccc” may be enhanced with a “+” (plus) or “-” (minus) to indicate whether credit quality is near the top or bottom of a category.

A.M. BEST SHORT-TERM DEBT RATINGS

A Best’s short-term debt rating is Best’s opinion of an issuer/entity’s ability to meet its financial obligations having original maturities of generally less than one year, such as commercial paper.

AMB-1+ Strongest—Assigned to issues where the issuer has the strongest ability to repay short-term debt obligations.

AMB-1 Outstanding—Assigned to issues where the issuer has an outstanding ability to repay short-term debt obligations.

AMB-2 Satisfactory—Assigned to issues where the issuer has a satisfactory ability to repay short-term debt obligations.

AMB-3 Adequate—Assigned to issues where the issuer has an adequate ability to repay short-term debt obligations; however, adverse economic conditions likely will reduce the issuer’s capacity to meet its financial commitments.

AMB-4 Speculative—Assigned to issues where the issuer has speculative credit characteristics and is vulnerable to adverse economic or other external changes, which could have a marked impact on the company’s ability to meet its financial commitments.

d: In Default—Assigned to issues in default on payment of principal, interest or other terms and conditions, or when a bankruptcy petition or similar action has been filed.

A.M. BEST RATING MODIFIERS

Both long- and short-term credit ratings can be assigned a modifier.

u—Indicates the rating may change in the near term, typically within six months. Generally is event-driven, with positive, negative or developing implications.

pd—Indicates ratings assigned to a company that chose not to participate in A.M. Best’s interactive rating process. (Discontinued in 2010).

i—Indicates rating assigned is indicative.

A.M. BEST RATING OUTLOOK

A.M. Best Credit Ratings are assigned a Rating Outlook that indicates the potential direction of a credit rating over an intermediate term, generally defined as the next 12 to 36 months.

Positive—Indicates possible ratings upgrade due to favorable financial/market trends relative to the current trading level.

Negative—Indicates possible ratings downgrade due to unfavorable financial/market trends relative to the current trading level.

Stable—Indicates low likelihood of rating change due to stable financial/market trends.

NOT RATED

Certain nationally recognized statistical rating organizations (NRSROs) may designate certain issues as NR, meaning that the issue or obligation is not rated.

How is the Fund Organized?

The Fund is a diversified portfolio of Federated Insurance Series (“Trust”). The Trust is an open-end, management investment company that was established under the laws of the Commonwealth of Massachusetts on September 15, 1993. The Trust may offer separate series of shares representing interests in separate portfolios of securities.

The Fund’s investment adviser is Federated Investment Management Company (“Adviser”).

Securities in Which the Fund Invests

The principal securities or other investments in which the Fund invests are described in the Fund’s Prospectus. The Fund also may invest in securities or other investments as non-principal investments for any purpose that is consistent with its investment objective. The following information is either additional information in respect of a principal security or other investment referenced in the Prospectus or information in respect of a non-principal security or other investment (in which case there is no related disclosure in the Prospectus).

SECURITIES DESCRIPTIONS AND TECHNIQUES

Government Securities (A Fixed-Income Security)

Government securities are issued or guaranteed by a federal agency or instrumentality acting under federal authority. Some government securities are supported by the full faith and credit of the United States. These include the Government National Mortgage Association (“Ginnie Mae”), Small Business Administration, Federal Financing Bank, Department of Housing and Urban Development, Export-Import Bank, Overseas Private Investment Corporation and the Federal Deposit Insurance Corporation.

Other government securities receive support through federal subsidies, loans or other benefits. For example, the U.S. Treasury is authorized to purchase specified amounts of securities issued by (or otherwise make funds available to) the Federal Home Loan Bank System, Federal Home Loan Mortgage Corporation (“Freddie Mac”), Federal National Mortgage Association (“Fannie Mae”) and Tennessee Valley Authority in support of such obligations.

A few government securities have no explicit financial support, but are regarded as having implied support because the federal government sponsors their activities. These include Farm Credit System and Financing Corporation securities.

The Fund treats mortgage-backed securities guaranteed by a federal agency or instrumentality as government securities. Although such a guarantee helps protect against credit risk, it does not eliminate it entirely or reduce other risks.

Additional Information Related to Freddie Mac and Fannie Mae. The extreme and unprecedented volatility and disruption that impacted the capital and credit markets beginning in 2008 led to market concerns regarding the ability of Freddie Mac and Fannie Mae to withstand future credit losses associated with securities held in their investment portfolios, and on which they provide guarantees, without the direct support of the federal government. On September 7, 2008, Freddie Mac and Fannie Mae were placed under the conservatorship of the Federal Housing Finance Agency (FHFA). Under the plan of conservatorship, the FHFA assumed control of, and generally has the power to direct, the operations of Freddie Mac and Fannie Mae, and is empowered to exercise all powers collectively held by their respective shareholders, directors and officers, including the power to: (1) take over the assets of and operate Freddie Mac and Fannie Mae with all the powers of the shareholders, the directors and the officers of Freddie Mac and Fannie Mae and conduct all business of Freddie Mac and Fannie Mae; (2) collect all obligations and money due to Freddie Mac and Fannie Mae; (3) perform all functions of Freddie Mac and Fannie Mae which are consistent with the conservator’s appointment; (4) preserve and conserve the assets and property of Freddie Mac and Fannie Mae; and (5) contract for assistance in fulfilling any function, activity, action or duty of the conservator.

In connection with the actions taken by the FHFA, the Treasury has entered into certain preferred stock purchase agreements (SPAs) with each of Freddie Mac and Fannie Mae which establish the Treasury as the holder of a new class of senior preferred stock in each of Freddie Mac and Fannie Mae. The senior preferred stock was issued in connection with financial contributions from the Treasury to Freddie Mac and Fannie Mae. Although the SPAs are subject to amendment from time to time, currently the Treasury is obligated to provide such financial contributions up to an aggregate maximum amount determined by a formula set forth in the SPAs, and until such aggregate maximum amount is reached, there is not a specific end date to the Treasury’s obligations.

The future status and role of Freddie Mac and Fannie Mae could be impacted by (among other things) the actions taken and restrictions placed on Freddie Mac and Fannie Mae by the FHFA in its role as conservator, the restrictions placed on Freddie Mac’s and Fannie Mae’s operations and activities under the SPAs, market responses to developments at Freddie Mac and Fannie Mae, downgrades or upgrades in the credit ratings assigned to Freddie Mac and Fannie Mae by nationally recognized statistical rating organizations (NRSROs) or ratings services, and future legislative and regulatory action that alters the operations, ownership, structure and/or mission of these institutions, each of which may, in turn, impact the value of, and cash flows on, any securities guaranteed by Freddie Mac and Fannie Mae.

Zero-Coupon Securities (A Fixed-Income Security)

Certain fixed-income securities in which the Fund invests are zero-coupon securities. Zero-coupon securities do not pay interest or principal until final maturity unlike debt securities that provide periodic payments of interest (referred to as a coupon payment). Investors buy zero-coupon securities at a price below the amount payable at maturity. The difference between the purchase price and the amount paid at maturity represents interest on the zero-coupon security. Investors must wait until maturity to receive interest and principal, which increases the interest rate and credit risks of a zero-coupon security.

Callable Securities (A Fixed-Income Security)

Certain fixed-income securities in which the Fund invests are callable at the option of the issuer. Callable securities are subject to call risks.

Mortgage-Backed Securities (MBS) (A Fixed-Income Security)

An MBS is a type of pass-through security, which is a pooled debt obligation repackaged as interests that pass principal and interest through an intermediary to investors. In the case of MBS, the ownership interest is issued by a trust and represents participation interests in pools of adjustable and fixed-rate mortgage loans. MBS are most commonly issued or guaranteed by the U.S. government (or one of its agencies or instrumentalities) ("agency MBS"), but also may be issued or guaranteed by private entities ("non-agency MBS"). Unlike conventional debt obligations, MBS provide monthly payments derived from the monthly interest and principal payments (including any prepayments) made by the individual borrowers on the pooled mortgage loans. Most MBS make these payments monthly; however, certain MBS are backed by mortgage loans which do not generate monthly payments but rather generate payments less frequently.

The mortgage loan collateral for non-agency MBS consists of residential mortgage loans that do not conform to GSEs underwriting guidelines. Non-agency MBS generally offer a higher yield than agency MBS because there are no direct or indirect government guarantees of payment.

Investments in MBS expose the Fund to interest rate, prepayment and credit risks.

Bank Instruments (A Fixed-Income Security)

Bank instruments are unsecured interest-bearing deposits with banks. Bank instruments include, but are not limited to, bank accounts, time deposits, certificates of deposit and banker's acceptances. Yankee instruments are denominated in U.S. dollars and issued by U.S. branches of foreign banks. Eurodollar instruments are denominated in U.S. dollars and issued by non-U.S. branches of U.S. or foreign banks.

The Fund will not invest in instruments of domestic and foreign banks and savings and loans unless they have capital, surplus and undivided profits of over \$100,000,000, or if the principal amount of the instrument is insured by the Bank Insurance Fund or the Savings Association Insurance Fund which are administered by the Federal Deposit Insurance Corporation. These instruments may include Eurodollar Certificates of Deposit, Yankee Certificates of Deposit and Eurodollar Time Deposits.

For purposes of applying the Fund's concentration limitation, bank instruments also include fixed-income securities credit enhanced by a bank.

Insurance Contracts (A Fixed-Income Security)

Insurance contracts include guaranteed investment contracts, funding agreements and annuities. Insurance contracts generally provide that the purchaser will deposit money with the insurance company and the insurance company will pay interest for the life of the contract and return the principal at maturity. The Fund treats these contracts as fixed-income securities.

OTHER INVESTMENTS, TRANSACTIONS, TECHNIQUES**Reverse Repurchase Agreements**

Reverse repurchase agreements (which are considered a type of special transaction for asset segregation or asset coverage purposes) are repurchase agreements in which the Fund is the seller (rather than the buyer) of the securities, and agrees to repurchase them at an agreed-upon time and price. A reverse repurchase agreement may be viewed as a type of borrowing by the Fund. Reverse repurchase agreements are subject to credit risks. In addition, reverse repurchase agreements create leverage risks because the Fund must repurchase the underlying security at a higher price, regardless of the market value of the security at the time of repurchase.

Delayed Delivery Transactions

Delayed delivery transactions, including when-issued transactions, are arrangements in which the Fund buys securities for a set price, with payment and delivery of the securities scheduled for a future time. During the period between purchase and settlement, no payment is made by the Fund to the issuer and no interest accrues to the Fund. The Fund records the transaction when it agrees to buy the securities and reflects their value in determining the price of its Shares. Settlement dates may be a month or more after entering into these transactions so that the market values of the securities bought may vary from the purchase prices. Therefore, delayed delivery transactions create interest rate risks for the Fund. Delayed delivery transactions also involve credit risks in the event of a counterparty default.

Securities Lending

The Fund may lend portfolio securities to borrowers that the Adviser deems creditworthy. In return, the Fund receives cash or liquid securities from the borrower as collateral. The borrower must furnish additional collateral if the market value of the loaned securities increases. Also, the borrower must pay the Fund the equivalent of any dividends or interest received on the loaned securities.

The Fund will reinvest cash collateral in securities that qualify as an acceptable investment for the Fund. However, the Fund must pay interest to the borrower for the use of cash collateral.

Loans are subject to termination at the option of the Fund or the borrower. The Fund will not have the right to vote on securities while they are on loan. However, the Fund will attempt to terminate a loan in an effort to reacquire the securities in time to vote on matters that are deemed to be material by the Adviser. There can be no assurance that the Fund will have sufficient notice of such matters to be able to terminate the loan in time to vote thereon. The Fund may pay administrative and custodial fees in connection with a loan and may pay a negotiated portion of the interest earned on the cash collateral to a securities lending agent or broker.

Securities lending activities are subject to interest rate risks and credit risks.

Asset Segregation

In order to secure its obligations in connection with special transactions, the Fund will either enter into offsetting transactions or set aside readily marketable securities. Unless the Fund has other readily marketable assets to set aside, it cannot trade assets used to secure such obligations without terminating a special transaction. This may cause the Fund to miss favorable trading opportunities or to realize losses on special transactions.

Inter-Fund Borrowing and Lending Arrangements

The Securities and Exchange Commission (SEC) has granted an exemption that permits the Fund and all other funds advised by subsidiaries of Federated Investors, Inc. (“Federated funds”) to lend and borrow money for certain temporary purposes directly to and from other Federated funds. Participation in this inter-fund lending program is voluntary for both borrowing and lending Federated funds, and an inter-fund loan is only made if it benefits each participating Federated fund. Federated Investors, Inc. (“Federated”) administers the program according to procedures approved by the Fund’s Board, and the Board monitors the operation of the program. Any inter-fund loan must comply with certain conditions set out in the exemption, which are designed to assure fairness and protect all participating Federated funds.

For example, inter-fund lending is permitted only: (a) to meet shareholder redemption requests; (b) to meet commitments arising from “failed” trades; and (c) for other temporary purposes. All inter-fund loans must be repaid in seven days or less. The Fund’s participation in this program must be consistent with its investment policies and limitations, and must meet certain percentage tests. Inter-fund loans may be made only when the rate of interest to be charged is more attractive to the lending Federated fund than market-competitive rates on overnight repurchase agreements (“Repo Rate”) and more attractive to the borrowing Federated fund than the rate of interest that would be charged by an unaffiliated bank for short-term borrowings (“Bank Loan Rate”), as determined by the Board. The interest rate imposed on inter-fund loans is the average of the Repo Rate and the Bank Loan Rate.

INVESTMENT RATINGS

The securities in which the Fund invests must be rated in one of the two highest short-term rating categories (without regard for gradations or subcategories) by one or more nationally recognized statistical rating organizations (NRSROs) or be deemed by the Adviser to be of comparable quality to securities having such ratings. The Fund will rely on the two highest ratings given to a security by the NRSROs for purposes of complying with this requirement. If one or both of the two highest ratings are in the second highest short-term rating category, the security is treated as a Second Tier Security. Generally, Rule 2a-7 prohibits the Fund from investing more than 3% of its assets in Second Tier Securities.

The Fund complies with these rating requirements at the time a security is acquired. If a security is downgraded to Second Tier after its acquisition, the Fund may continue to hold the security even if the portfolio exceeds Rule 2a-7's limits on Second Tier Securities. Other factors, such as substantial redemptions, may cause the Fund's portfolio to exceed Rule 2a-7 limits on the acquisition of securities. The Fund may continue to hold securities in excess of these limits, even if the Fund has the right to tender the security for purchase for its amortized cost value.

Investment Risks

There are many risk factors which may affect an investment in the Fund. The Fund's principal risks are described in its Prospectus. The following information is either additional information in respect of a principal risk factor referenced in the Prospectus or information in respect of a non-principal risk factor applicable to the Fund (in which case there is no related disclosure in the Prospectus).

LEVERAGE RISK

Leverage risk is created when an investment exposes the Fund to a level of risk that exceeds the amount invested. Changes in the value of such an investment magnify the Fund's risk of loss and potential for gain.

CALL RISK

Call risk is the possibility that an issuer may redeem a fixed-income security before maturity (a "call") at a price below its current market price. An increase in the likelihood of a call may reduce the security's price.

If a fixed-income security is called, the Fund may have to reinvest the proceeds in other fixed-income securities with lower interest rates, higher credit risks or other less favorable characteristics.

RISK ASSOCIATED WITH THE INVESTMENT ACTIVITIES OF OTHER ACCOUNTS

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. Therefore, it is possible that investment-related actions taken by such other accounts could adversely impact the Fund with respect to, for example, the value of Fund portfolio holdings, and/or prices paid to or received by the Fund on its portfolio transactions, and/or the Fund's ability to obtain or dispose of portfolio securities. Related considerations are discussed elsewhere in this SAI under "Brokerage Transactions and Investment Allocation."

Investment Objective and Investment Limitations

The Fund's fundamental investment objective is to provide current income consistent with stability of principal and liquidity. The investment objective may not be changed by the Fund's Trustees without shareholder approval.

INVESTMENT LIMITATIONS

Diversification of Investments

With respect to securities comprising 75% of the value of its total assets, the Fund will not purchase securities of any one issuer (other than cash; cash items; securities issued or guaranteed by the government of the United States or its agencies or instrumentalities and repurchase agreements collateralized by such U.S. government securities; and securities of other investment companies) if, as a result, more than 5% of the value of its total assets would be invested in the securities of that issuer, or the Fund would own more than 10% of the outstanding voting securities of that issuer.

Borrowing Money and Issuing Senior Securities

The Fund may borrow money, directly or indirectly, and issue senior securities to the maximum extent permitted under the Investment Company Act of 1940 ("1940 Act").

Investing in Real Estate

The Fund may not purchase or sell real estate, provided that this restriction does not prevent the Fund from investing in issuers which invest, deal, or otherwise engage in transactions in real estate or interests therein, or investing in securities that are secured by real estate or interests therein. The Fund may exercise its rights under agreements relating to such securities, including the right to enforce security interests and to hold real estate acquired by reason of such enforcement until that real estate can be liquidated in an orderly manner.

Investing in Commodities

The Fund may not purchase or sell physical commodities, provided that the Fund may purchase securities of companies that deal in commodities.

Underwriting

The Fund may not underwrite the securities of other issuers, except that the Fund may engage in transactions involving the acquisition, disposition or resale of its portfolio securities, under circumstances where it may be considered to be an underwriter under the Securities Act of 1933.

Lending

The Fund may not make loans, provided that this restriction does not prevent the Fund from purchasing debt obligations, entering into repurchase agreements, lending its assets to broker/dealers or institutional investors and investing in loans, including assignments and participation interests.

Concentration

The Fund may not purchase the securities of any issuer (other than securities issued or guaranteed by the U.S. Government or any of its agencies or instrumentalities) if, as a result, more than 25% of the Fund's total assets would be invested in the securities of companies whose principal business activities are in the same industry, except that the Fund will invest more than 25% of its total assets in the financial services industry.

The above limitations cannot be changed unless authorized by the Board and by the “vote of a majority of its outstanding voting securities,” as defined by the 1940 Act. The following limitations, however, may be changed by the Board without shareholder approval. Shareholders will be notified before any material change in these limitations becomes effective.

Illiquid Securities

The Fund will not acquire securities that cannot be sold or disposed of in the ordinary course of business within seven days at approximately the value ascribed to them by the Fund, if immediately after the acquisition, the Fund would have invested more than 5% of its total assets in such securities.

Restricted Securities

The Fund may invest in securities subject to restrictions on resale under federal securities laws.

Purchases on Margin

The Fund will not purchase securities on margin, provided that the Fund may obtain short-term credits necessary for the clearance of purchases and sales of securities.

Pledging Assets

The Fund will not mortgage, pledge or hypothecate any of its assets, provided that this shall not apply to the transfer of securities in connection with any permissible borrowing or to collateral arrangements in connection with permissible activities.

Additional Information

Except with respect to borrowing money, if a percentage limitations is adhered to at the time of investment, a later increase or decrease in percentage resulting from any change in value or net assets will not result in a violation of such limitation.

For purposes of the diversification limitation, the Fund considers certificates of deposit and demand and time deposits issued by a U.S. branch of a domestic bank or savings association having capital, surplus and undivided profits in excess of \$100,000,000 at the time of investment to be “cash items.”

For purposes of the concentration limitation, the Adviser: (a) deems the financial services industry to include the group of industries in the financial services sector, and the financial services sector to include banks, broker-dealers and financial companies; (b) divides utility companies according to their services (for example, gas, gas transmission, electric and telephone); (c) classifies financial companies according to the end users of their services (for example, automobile finance, bank finance and diversified finance); (d) classifies asset-backed securities according to the underlying assets securing such securities; and (e) deems investment in certain industrial development bonds funded by activities in a single industry to constitute investment in an industry. The Adviser may analyze the characteristics of a particular issuer and security and assign an industry or sector classification consistent with those characteristics in the event that the third party provider used by the Adviser does not assign a classification. The Fund will consider concentration to be the investment of more than 25% of the value of its total assets in any one industry.

REGULATORY COMPLIANCE

The Fund may follow non-fundamental operational policies that are more restrictive than its fundamental investment limitations, as set forth in the Prospectus and this SAI, in order to comply with applicable laws and regulations, including the provisions of and regulations under the 1940 Act. In particular, the Fund will comply with the various requirements of Rule 2a-7 (the “Rule”), which regulates money market mutual funds. The Fund may change these operational policies to reflect changes in the laws and regulations without the approval of its shareholders.

What Do Shares Cost?

DETERMINING MARKET VALUE OF SECURITIES

The Board has decided that the best method for determining the value of portfolio instruments is amortized cost. Under the amortized cost valuation method, an investment is valued initially at its cost as determined in accordance with generally accepted accounting principles in the United States (GAAP). The Fund then adjusts the amount of interest income accrued each day over the term of the investment to account for any difference between the initial cost of their investment and the amount payable at its maturity. If the amount payable at maturity exceeds the initial cost (a “discount”), then the daily accrual is increased; if the initial cost exceeds the amount payable at maturity (a “premium”), then the daily accrual is decreased. The Fund adds the amount of the increase to (in the case of a discount), or subtracts the amount of the decrease from (in the case of a premium), the investment’s cost each day. The Fund uses this adjusted cost to value the investment.

Accordingly, neither the amount of daily income nor the net asset value (NAV) is affected by any unrealized appreciation or depreciation of the portfolio. In periods of declining interest rates, the indicated daily yield on Shares of the Fund, computed by dividing the annualized daily income on the Fund’s portfolio by the NAV, computed as above, may tend to be higher than a similar computation made by using a method of valuation based upon market prices and estimates. In periods of rising interest rates, the opposite may be true.

The Fund’s use of the amortized cost method of valuing portfolio instruments depends on its compliance with certain conditions in the Rule. Under the Rule, the Board must establish procedures reasonably designed to stabilize the NAV per Share, as computed for purposes of distribution and redemption, at \$1.00 per Share, taking into account current market conditions and the Fund’s investment objective. The procedures include monitoring the relationship between the amortized cost value per Share and the NAV per Share based upon available indications of market value. The Board will decide what, if any, steps should be taken if there is a difference of more than 0.5 of 1% between the two values. The Board will take any steps it considers appropriate (such as redemption in-kind or shortening the average portfolio maturity) to minimize any material dilution or other unfair results arising from differences between the two methods of determining NAV.

Mixed Funding and Shared Funding

The practice of using shares as investments for both variable annuity contracts and variable life insurance policies is called “mixed funding.” The practice of using shares as investments by separate accounts of unaffiliated life insurance companies is called “shared funding.”

The Fund does engage in mixed funding and shared funding. Although the Fund does not currently foresee any disadvantage to contract owners due to differences in redemption rates, tax treatment or other considerations resulting from mixed funding or shared funding, the Trustees will closely monitor the operation of mixed funding and shared funding and will consider appropriate action to avoid material conflicts and take appropriate action in response to any material conflicts which occur. Such action could result in one or more participating insurance companies withdrawing their investment in the Fund.

How is the Fund Sold?

Under the Distributor’s Contract with the Fund, the Distributor (Federated Securities Corp.) offers Shares on a continuous, best-efforts basis.

ADDITIONAL PAYMENTS TO FINANCIAL INTERMEDIARIES

The Distributor may pay out of its own resources amounts (including items of material value) to certain financial intermediaries. In some cases, such payments may be made by, or funded from the resources of, companies affiliated with the Distributor (including the Adviser). While Financial Industry Regulatory Authority (FINRA) regulations limit the sales charges that you may bear, there are no limits with regard to the amounts that the Distributor may pay out of its own resources. In addition to the payments which are generally described herein and in the Prospectus, the financial intermediary also may receive Service Fees. In connection with these payments, the financial intermediary may elevate the prominence or profile of the Fund and/or other Federated funds within the financial intermediary’s organization by, for example, placement on a list of preferred or recommended funds and/or granting the Distributor preferential or enhanced opportunities to promote the funds in various ways within the financial intermediary’s organization. You can ask your financial intermediary for information about any payments it receives from the Distributor or the Federated funds and any services provided.

The Fund currently does not accrue, pay or incur any administrative service fees, although the Board of Trustees has approved the Fund to accrue, pay and incur such fees in amounts up to a maximum amount of 0.25%, or some lesser amount as the Board of Trustees shall approve from time to time. The Fund will not incur or charge such fees until such time as approved by the Fund's Board of Trustees.

The following examples illustrate the types of instances in which the Distributor may make additional payments to financial intermediaries.

Supplemental Payments

The Distributor may make supplemental payments to certain financial intermediaries that are holders or dealers of record for accounts in one or more of the Federated funds. These payments may be based on such factors as: the number or value of Shares the financial intermediary sells or may sell; the value of client assets invested; or the type and nature of services or support furnished by the financial intermediary.

Processing Support Payments

The Distributor may make payments to financial intermediaries that sell Federated fund shares to help offset their costs associated with client account maintenance support, statement processing and transaction processing. The types of payments that the Distributor may make under this category include: payment of ticket charges on a per-transaction basis; payment of networking fees; and payment for ancillary services such as setting up funds on the financial intermediary's mutual fund trading system.

Other Benefits to Financial Intermediaries

From time to time, the Distributor, at its expense, may provide additional compensation to financial intermediaries that sell or arrange for the sale of Shares. Such compensation may include financial assistance to financial intermediaries that enable the Distributor to participate in or present at conferences or seminars, sales or training programs for invited employees, client and investor events and other financial intermediary-sponsored events.

The Distributor also may hold or sponsor, at its expense, sales events, conferences and programs for employees or associated persons of financial intermediaries and may pay the travel and lodging expenses of attendees. The Distributor also may provide, at its expense, meals and entertainment in conjunction with meetings with financial intermediaries. Other compensation may be offered to the extent not prohibited by applicable laws, regulations or the rules of any self-regulatory agency, such as FINRA.

Purchases In-Kind

You may contact the Distributor to request a purchase of Shares using securities you own. The Fund reserves the right to determine whether to accept your securities and the minimum market value to accept. The Fund will value your securities in the same manner as it values its assets in determining the market value of the portfolio for purposes of its comparison with amortized cost valuation. An in-kind purchase may be treated as a sale of your securities for federal tax purposes; please consult your tax adviser regarding potential tax liability.

Subaccounting Services

Certain participating insurance companies may wish to use the transfer agent's subaccounting system to minimize their internal recordkeeping requirements. The transfer agent may charge a fee based on the level of subaccounting services rendered. Participating insurance companies holding Shares in a fiduciary, agency, custodial or similar capacity may charge or pass through subaccounting fees as part of or in addition to normal trust or agency account fees. They may also charge fees for other services that may be related to the ownership of Shares. This information should, therefore, be read together with any agreement between the customer and the participating insurance company about the services provided, the fees charged for those services and any restrictions and limitations imposed.

Redemption In-Kind

Although the Fund generally intends to pay Share redemptions in cash, it reserves the right, on its own initiative or in response to a shareholder request, to pay the redemption price in whole or in part by a distribution of the Fund's portfolio securities.

Because the Fund has elected to be governed by Rule 18f-1 under the 1940 Act, the Fund is obligated to pay Share redemptions to any one shareholder in cash only up to the lesser of \$250,000 or 1% of the net assets represented by such Share class during any 90-day period.

Any Share redemption payment greater than this amount will also be in cash unless the Fund elects to pay all or a portion of the remainder of the redemption in portfolio securities, valued in the same way as the Fund determines its NAV.

Redemption in-kind is not as liquid as a cash redemption. Shareholders receiving the portfolio securities could have difficulty selling them, may incur related transaction costs and would be subject to risks of fluctuations in the securities' values prior to sale.

Massachusetts Partnership Law

Under certain circumstances, shareholders may be held personally liable as partners under Massachusetts law for obligations of the Trust. To protect its shareholders, the Trust has filed legal documents with Massachusetts that expressly disclaim the liability of its shareholders for acts or obligations of the Trust.

In the unlikely event a shareholder is held personally liable for the Trust's obligations, the Trust is required by the Declaration of Trust to use its property to protect or compensate the shareholder. On request, the Trust will defend any claim made and pay any judgment against a shareholder for any act or obligation of the Trust. Therefore, financial loss resulting from liability as a shareholder will occur only if the Trust itself cannot meet its obligations to indemnify shareholders and pay judgments against them.

Account and Share Information

VOTING RIGHTS

The insurance company separate accounts, as shareholders of the Fund, will vote the Fund Shares held in their separate accounts at meetings of the shareholders. Voting will be in accordance with instructions received from contract owners of the separate accounts, as more fully outlined in the prospectus of the separate account.

Each Share of the Fund gives the shareholder one vote in Trustee elections and other matters submitted to shareholders for vote.

All Shares of the Trust have equal voting rights, except that in matters affecting only a particular Fund or class, only shares of that Fund or class are entitled to vote.

Trustees may be removed by the Board or by shareholders at a special meeting. A special meeting of shareholders will be called by the Board upon the written request of shareholders who own at least 10% of the Trust's outstanding Shares of all series entitled to vote.

As of April 3, 2014, the following shareholders owned of record, beneficially, or both, 5% or more of outstanding Shares: Monumental Life Insurance Company, Cedar Rapids, IA, owned approximately 21,222,129 Shares (13.35%); Phoenix Home Life Insurance Co., E. Greenbush, NY, owned approximately 48,038,977 Shares (30.23%); Phoenix Home Life Variable Insurance Co., E. Greenbush, NY, owned approximately 48,475,181, Shares (30.51%).

Shareholders owning 25% or more of outstanding Shares may be in control and be able to affect the outcome of certain matters presented for a vote of shareholders.

Phoenix Home Life Insurance Company is organized in the state of New York and is a subsidiary of PM Holdings, Inc.; organized in the state of Connecticut.

Phoenix Home Life Variable Insurance Company is organized in the state of New York and is a subsidiary of PM Holdings, Inc.; organized in the state of Connecticut.

Tax Information

FEDERAL INCOME TAX

The Fund intends to meet requirements of Subchapter M of the Internal Revenue Code ("Code") applicable to regulated investment companies. If these requirements are not met, it will not receive special tax treatment and will be subject to federal corporate income tax.

The Fund will be treated as a single, separate entity for federal income tax purposes so that income earned and capital gains and losses realized by the Trust's other portfolios will be separate from those realized by the Fund.

The Fund is entitled to a loss carryforward, which may reduce the taxable income or gain that the Fund would realize, and to which the shareholder would be subject, in the future.

FOREIGN INVESTMENTS

If the Fund purchases foreign securities, their investment income may be subject to foreign withholding or other taxes that could reduce the return on these securities. Tax treaties between the United States and foreign countries, however, may reduce or eliminate the amount of foreign taxes to which the Fund would be subject. The effective rate of foreign tax cannot be predicted since the amount of Fund assets to be invested within various countries is uncertain. However, the Fund intends to operate so as to qualify for treaty-reduced tax rates when applicable.

Who Manages and Provides Services to the Fund?

BOARD OF TRUSTEES

The Board of Trustees is responsible for managing the Trust's business affairs and for exercising all the Trust's powers except those reserved for the shareholders. The following tables give information about each Trustee and the senior officers of the Fund. Where required, the tables separately list Trustees who are "interested persons" of the Fund (i.e., "Interested" Trustees) and those who are not (i.e., "Independent" Trustees). Unless otherwise noted, the address of each person listed is Federated Investors Tower, 1001 Liberty Avenue, Pittsburgh, PA 15222. The address of all Independent Trustees listed is 4000 Ericsson Drive, Warrendale, PA 15086-7561; Attention: Mutual Fund Board. As of December 31, 2013, the Trust comprised 7 portfolios, and the Federated Fund Complex consisted of 42 investment companies (comprising 135 portfolios). Unless otherwise noted, each Officer is elected annually. Unless otherwise noted, each Trustee oversees all portfolios in the Federated Fund Complex and serves for an indefinite term.

As of April 3, 2014, the Fund's Board and Officers as a group owned less than 1% of the Fund's outstanding Shares.

QUALIFICATIONS OF INDEPENDENT TRUSTEES

Individual Trustee qualifications are noted in the "Independent Trustees Background and Compensation" chart. In addition, the following characteristics are among those that were considered for each existing Trustee and will be considered for any Nominee Trustee.

- Outstanding skills in disciplines deemed by the Independent Trustees to be particularly relevant to the role of Independent Trustee and to the Federated funds, including legal, accounting, business management, the financial industry generally and the investment industry particularly.
- Desire and availability to serve for a substantial period of time, taking into account the Board's current mandatory retirement age of 73 years.
- No conflicts which would interfere with qualifying as independent.
- Appropriate interpersonal skills to work effectively with other Independent Trustees.
- Understanding and appreciation of the important role occupied by Independent Trustees in the regulatory structure governing regulated investment companies.
- Diversity of background.

Mr. Ostrowski became an Executive Vice President of the Fund's Adviser in 2009 and served as a Senior Vice President of the Fund's Adviser from 1997 to 2009. Mr. Ostrowski has received the Chartered Financial Analyst designation. He received his M.S. in Industrial Administration from Carnegie Mellon University.
Deborah A. Cunningham Birth Date: September 15, 1959 CHIEF INVESTMENT OFFICER Officer since: June 2012	Principal Occupations: Deborah A. Cunningham was named Chief Investment Officer of Federated's money market products in 2004. She joined Federated in 1981 and has been a Senior Portfolio Manager since 1997 and an Executive Vice President of the Fund's Adviser since 2009. Ms. Cunningham has received the Chartered Financial Analyst designation and holds an M.S.B.A. in Finance from Robert Morris College.

** Officers do not receive any compensation from the Fund.

In addition, the Fund has appointed an Anti-Money Laundering Compliance Officer.

BOARD LEADERSHIP STRUCTURE

As required under the terms of certain regulatory settlements, the Chairman of the Board is not an interested person of the Fund and neither the Chairman, nor any firm with which the Chairman is affiliated, has a prior relationship with Federated or its affiliates or (other than his position as a Trustee) with the Fund.

COMMITTEES OF THE BOARD

Board Committee	Committee Members	Committee Functions	Meetings Held During Last Fiscal Year
Executive	John F. Donahue Peter E. Madden John S. Walsh	In between meetings of the full Board, the Executive Committee generally may exercise all the powers of the full Board in the management and direction of the business and conduct of the affairs of the Trust in such manner as the Executive Committee shall deem to be in the best interests of the Trust. However, the Executive Committee cannot elect or remove Board members, increase or decrease the number of Trustees, elect or remove any Officer, declare dividends, issue shares or recommend to shareholders any action requiring shareholder approval.	One
Audit	Maureen Lally-Green Charles F. Mansfield, Jr. Thomas M. O'Neill John S. Walsh	The purposes of the Audit Committee are to oversee the accounting and financial reporting process of the Fund, the Fund's internal control over financial reporting and the quality, integrity and independent audit of the Fund's financial statements. The Committee also oversees or assists the Board with the oversight of compliance with legal requirements relating to those matters, approves the engagement and reviews the qualifications, independence and performance of the Fund's independent registered public accounting firm, acts as a liaison between the independent registered public accounting firm and the Board and reviews the Fund's internal audit function.	Seven
Nominating	John T. Collins Maureen Lally-Green Peter E. Madden Charles F. Mansfield, Jr. Thomas M. O'Neill P. Jerome Richey John S. Walsh	The Nominating Committee, whose members consist of all Independent Trustees, selects and nominates persons for election to the Fund's Board when vacancies occur. The Committee will consider candidates recommended by shareholders, Independent Trustees, officers or employees of any of the Fund's agents or service providers and counsel to the Fund. Any shareholder who desires to have an individual considered for nomination by the Committee must submit a recommendation in writing to the Secretary of the Fund, at the Fund's address appearing on the back cover of this SAI. The recommendation should include the name and address of both the shareholder and the candidate and detailed information concerning the candidate's qualifications and experience. In identifying and evaluating candidates for consideration, the Committee shall consider such factors as it deems appropriate. Those factors will ordinarily include: integrity, intelligence, collegiality, judgment, diversity, skill, business and other experience, qualification as an "Independent Trustee," the existence of material relationships which may create the appearance of a lack of independence, financial or accounting knowledge and experience and dedication and willingness to devote the time and attention necessary to fulfill Board responsibilities.	Two

BOARD'S ROLE IN RISK OVERSIGHT

The Board's role in overseeing the Fund's general risks includes receiving performance reports for the Fund and risk management reports from Federated's Chief Risk Officer at each regular Board meeting. The Chief Risk Officer is responsible for enterprise risk management at Federated, which includes risk management committees for investment management and for investor services. The Board also receives regular reports from the Fund's Chief Compliance Officer regarding significant compliance risks.

On behalf of the Board, the Audit Committee plays a key role overseeing the Fund's financial reporting and valuation risks. The Audit Committee meets regularly with the Fund's Principal Financial Officer and outside auditors, as well as with Federated's Chief Audit Executive to discuss financial reporting and audit issues, including risks relating to financial controls.

BOARD OWNERSHIP OF SHARES IN THE FUND AND IN THE FEDERATED FAMILY OF INVESTMENT COMPANIES AS OF DECEMBER 31, 2013

Maureen Lally-Green		Over \$100,000
Peter E. Madden	None	Over \$100,000
Charles F. Mansfield, Jr.	None	Over \$100,000
Thomas M. O'Neill	None	Over \$100,000
P. Jerome Richey	None	None
John S. Walsh	None	Over \$100,000

INVESTMENT ADVISER

The Adviser conducts investment research and makes investment decisions for the Fund.

The Adviser is a wholly owned subsidiary of Federated.

The Adviser shall not be liable to the Trust or any Fund shareholder for any losses that may be sustained in the purchase, holding or sale of any security or for anything done or omitted by it, except acts or omissions involving willful misfeasance, bad faith, gross negligence or reckless disregard of the duties imposed upon it by its contract with the Trust.

Services Agreement

Federated Advisory Services Company, an affiliate of the Adviser, provides certain support services to the Adviser. The fee for these services is paid by the Adviser and not by the Fund.

Other Related Services

Affiliates of the Adviser may, from time to time, provide certain electronic equipment and software to institutional customers in order to facilitate the purchase of Fund Shares offered by the Distributor.

CODE OF ETHICS RESTRICTIONS ON PERSONAL TRADING

As required by SEC rules, the Fund, its Adviser and its Distributor have adopted codes of ethics. These codes govern securities trading activities of investment personnel, Fund Trustees and certain other employees. Although they do permit these people to trade in securities, including those that the Fund could buy, as well as Shares of the Fund, they also contain significant safeguards designed to protect the Fund and its shareholders from abuses in this area, such as requirements to obtain prior approval for, and to report, particular transactions.

VOTING PROXIES ON FUND PORTFOLIO SECURITIES

The Board has delegated to the Adviser authority to vote proxies on the securities held in the Fund's portfolio. The Board has also approved the Adviser's policies and procedures for voting the proxies, which are described below.

Proxy Voting Policies

The Adviser's general policy is to cast proxy votes in favor of proposals that the Adviser anticipates will enhance the long-term value of the securities being voted. Generally, this will mean voting for proposals that the Adviser believes will: improve the management of a company; increase the rights or preferences of the voted securities; and/or increase the chance that a premium offer would be made for the company or for the voted securities.

The following examples illustrate how these general policies may apply to proposals submitted by a company's board of directors. However, whether the Adviser supports or opposes a proposal will always depend on the specific circumstances described in the proxy statement and other available information.

On matters of corporate governance, generally the Adviser will vote *for* the full slate of directors nominated in an uncontested election; and *for* proposals to: require a company's audit committee to be comprised entirely of independent directors; require independent tabulation of proxies and/or confidential voting by shareholders; reorganize in another jurisdiction (unless it would reduce the rights or preferences of the securities being voted); ratify the board's selection of auditors (unless compensation for non-audit services exceeded 50% of the total compensation received from the company, or the previous auditor was dismissed because of a disagreement with the company); and repeal a shareholder rights plan (also known as a "poison pill"). The Adviser will generally vote *against* the adoption of such a plan (unless the plan is designed to facilitate, rather than prevent, unsolicited offers for the company).

On matters of capital structure, generally the Adviser will vote: *against* proposals to authorize or issue shares that are senior in priority or voting rights to the securities being voted; and *for* proposals to: reduce the amount of shares authorized for issuance; authorize a stock repurchase program; and grant preemptive rights to the securities being voted. The Adviser will generally vote *against* proposals to eliminate such preemptive rights.

On matters relating to management compensation, generally the Adviser will vote: *for* stock incentive plans that align the recipients' interests with the interests of shareholders without creating undue dilution; *against* proposals that would permit the amendment or replacement of outstanding stock incentives with new stock incentives having more favorable terms; and *against* executive compensation plans that do not disclose the maximum amounts of compensation that may be awarded or the criteria for determining awards.

On matters relating to corporate transactions, the Adviser will vote proxies relating to proposed mergers, capital reorganizations and similar transactions in accordance with the general policy, based upon its analysis of the proposed transaction. The Adviser will vote proxies in contested elections of directors in accordance with the general policy, based upon its analysis of the opposing slates and their respective proposed business strategies. Some transactions may also involve proposed changes to the company's corporate governance, capital structure or management compensation. The Adviser will vote on such changes based on its evaluation of the proposed transaction or contested election. In these circumstances, the Adviser may vote in a manner contrary to the general practice for similar proposals made outside the context of such a proposed transaction or change in the board. For example, if the Adviser decides to vote against a proposed transaction, it may vote for anti-takeover measures reasonably designed to prevent the transaction, even though the Adviser typically votes against such measures in other contexts.

The Adviser generally votes *against* proposals submitted by shareholders without the favorable recommendation of a company's board. The Adviser believes that a company's board should manage its business and policies, and that shareholders who seek specific changes should strive to convince the board of their merits or seek direct representation on the board.

In addition, the Adviser will not vote if it determines that the consequences or costs outweigh the potential benefit of voting. For example, if a foreign market requires shareholders casting proxies to retain the voted shares until the meeting date (thereby rendering the shares "illiquid" for some period of time), the Adviser will not vote proxies for such shares.

Proxy Voting Procedures

The Adviser has established a Proxy Voting Committee ("Proxy Committee"), to exercise all voting discretion granted to the Adviser by the Board in accordance with the proxy voting policies. The Adviser has hired Glass Lewis & Co. (GL) to obtain, vote and record proxies in accordance with the Proxy Committee's directions. The Proxy Committee has supplied GL with general voting instructions that represent decisions made by the Proxy Committee in order to vote common proxy proposals; however, the Proxy Committee retains the right to modify these voting instructions at any time or to vote contrary to the voting instructions at any time in order to cast proxy votes in a manner that the Proxy Committee believes is consistent with the Adviser's general policy. GL may vote any proxy as directed in the voting instructions without further direction from the Proxy Committee and may make any determinations required to implement the voting instructions. However, if the voting instructions require case-by-case direction for a proposal, GL shall provide the Proxy Committee with all information that it has obtained regarding the proposal and the Proxy Committee will provide specific direction to GL.

Conflicts of Interest

The Adviser has adopted procedures to address situations where a matter on which a proxy is sought may present a potential conflict between the interests of the Fund (and its shareholders) and those of the Adviser or Distributor. This may occur where a significant business relationship exists between the Adviser (or its affiliates) and a company involved with a proxy vote. A company that is a proponent, opponent or the subject of a proxy vote and which to the knowledge of the Proxy Committee has this type of significant business relationship, is referred to as an "Interested Company."

The Adviser has implemented the following procedures in order to avoid concerns that the conflicting interests of the Adviser have influenced proxy votes. Any employee of the Adviser who is contacted by an Interested Company regarding proxies to be voted by the Adviser must refer the Interested Company to a member of the Proxy Committee, and must inform the Interested Company that the Proxy Committee has exclusive authority to determine how the Adviser will vote. Any Proxy Committee

member contacted by an Interested Company must report it to the full Proxy Committee and provide a written summary of the communication. Under no circumstances will the Proxy Committee or any member of the Proxy Committee make a commitment to an Interested Company regarding the voting of proxies or disclose to an Interested Company how the Proxy Committee has directed such proxies to be voted. If the voting instructions already provide specific direction on the proposal in question, the Proxy Committee shall not alter or amend such directions. If the voting instructions require the Proxy Committee to provide further direction, the Proxy Committee shall do so in accordance with the proxy voting policies, without regard for the interests of the Adviser with respect to the Interested Company. If the Proxy Committee provides any direction as to the voting of proxies relating to a proposal affecting an Interested Company, it must disclose to the Fund's Board information regarding: the significant business relationship; any material communication with the Interested Company; the matter(s) voted on; and how, and why, the Adviser voted as it did. Alternatively, the Proxy Committee may seek direction from the Fund's Board on how a proposal concerning an Interested Company shall be voted, and shall follow any such direction provided by the Board. In seeking such direction, the Proxy Committee will disclose the reason such company is considered an Interested Company and may provide a recommendation on how such proposal should be voted and the basis for such recommendation.

If the Fund holds shares of another investment company for which the Adviser (or an affiliate) acts as an investment adviser, the Proxy Committee will vote the Fund's proxies in the same proportion as the votes cast by shareholders who are not clients of the Adviser at any shareholders' meeting called by such investment company, unless otherwise directed by the Board.

Proxy Voting Report

A report on "Form N-PX" of how the Fund voted any proxies during the most recent 12-month period ended June 30 is available via the Proxy Voting Record (Form N-PX) link associated with the Fund and share class name at www.Federatedinvestors.com/FundInformation. Form N-PX filings are also available at the SEC's website at www.sec.gov.

PORTFOLIO HOLDINGS INFORMATION

Information concerning the Fund's portfolio holdings as of the end of each month, as well as the Fund's DWAM and WAL, is available via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. Such information is posted on the website five business days after the end of the month and remains posted on the website for six months thereafter. Summary portfolio composition information as of the close of each month is posted on the website 15 days (or the next business day) after month-end and remains until replaced by the information for the succeeding month. The summary portfolio composition information may include identification of the Fund's top 10 holdings and a percentage breakdown of the portfolio by sector.

You may also access portfolio information as of the end of the Fund's fiscal quarters via the link to the Fund and share class name at www.Federatedinvestors.com/FundInformation. The Fund's Annual Shareholder Report and Semi-Annual Shareholder Report contain complete listings of the Fund's portfolio holdings as of the end of the Fund's second and fourth fiscal quarters. The Fund's Form N-Q filings contain complete listings of the Fund's portfolio holdings as of the end of the Fund's first and third fiscal quarters. Fiscal quarter information is made available on the website within 70 days after the end of the fiscal quarter. This information is also available in reports filed with the SEC at the SEC's website at www.sec.gov.

The disclosure policy of the Fund and the Adviser prohibits the disclosure of portfolio holdings information to any investor or intermediary before the same information is made available to other investors. Employees of the Adviser or its affiliates who have access to nonpublic information concerning the Fund's portfolio holdings are prohibited from trading securities on the basis of this information. Such persons must report all personal securities trades and obtain pre-clearance for all personal securities trades other than mutual fund shares.

Firms that provide administrative, custody, financial, accounting, legal or other services to the Fund may receive nonpublic information about Fund portfolio holdings for purposes relating to their services. The Fund may also provide portfolio holdings information to publications that rate, rank or otherwise categorize investment companies. Traders or portfolio managers may provide "interest" lists to facilitate portfolio trading if the list reflects only that subset of the portfolio for which the trader or portfolio manager is seeking market interest. A list of service providers, publications and other third parties who may receive nonpublic portfolio holdings information appears in the Appendix to this SAI.

The furnishing of nonpublic portfolio holdings information to any third party (other than authorized governmental or regulatory personnel) requires the prior approval of the President of the Adviser and of the Chief Compliance Officer of the Fund. The President of the Adviser and the Chief Compliance Officer will approve the furnishing of nonpublic portfolio holdings information to a third party only if they consider the furnishing of such information to be in the best interests of the Fund and its shareholders. In that regard, and to address possible conflicts between the interests of Fund shareholders and those of the Adviser and its affiliates, the following procedures apply. No consideration may be received by the Fund, the Adviser, any affiliate of the Adviser or any of their employees in connection with the disclosure of portfolio holdings information. Before information is furnished, the third party must sign a written agreement that it will safeguard the confidentiality of the information, will use it only

for the purposes for which it is furnished and will not use it in connection with the trading of any security. Persons approved to receive nonpublic portfolio holdings information will receive it as often as necessary for the purpose for which it is provided. Such information may be furnished as frequently as daily and often with no time lag between the date of the information and the date it is furnished. The Board receives and reviews annually a list of the persons who receive nonpublic portfolio holdings information and the purposes for which it is furnished.

BROKERAGE TRANSACTIONS AND INVESTMENT ALLOCATION

When selecting brokers and dealers to handle the purchase and sale of portfolio instruments, the Adviser looks for prompt execution of the order at a favorable price. Fixed-income securities are generally traded in an over-the-counter market on a net basis (i.e., without commission) through dealers acting as principal or in transactions directly with the issuer. Dealers derive an undisclosed amount of compensation by offering securities at a higher price than they bid for them. Some fixed-income securities may have only one primary market maker. The Adviser seeks to use dealers it believes to be actively and effectively trading the security being purchased or sold, but may not always obtain the lowest purchase price or highest sale price with respect to a security. The Adviser makes decisions on portfolio transactions and selects brokers and dealers subject to review by the Fund's Board.

Investment decisions for the Fund are made independently from those of other accounts managed by the Adviser and accounts managed by affiliates of the Adviser. When the Fund and one or more of those accounts invests in, or disposes of, the same security, available investments or opportunities for sales will be allocated among the Fund and the account(s) in a manner believed by the Adviser to be equitable. While the coordination and ability to participate in volume transactions may benefit the Fund, it is possible that this procedure could adversely impact the price paid or received and/or the position obtained or disposed of by the Fund. Investment decisions, and trading, for certain separately managed or wrap-fee accounts, and other accounts, of the Adviser and/or certain investment adviser affiliates of the Adviser are generally made, and conducted, independently from the Fund. It is possible that such independent trading activity could adversely impact the prices paid or received and/or positions obtained or disposed of by the Fund.

On December 31, 2013, the Fund owned securities of the following regular broker/dealers:

Broker Dealer	Value of Securities Owned
Bank of America	\$1,000,000
Citigroup	\$7,000,000
Mizuho	\$7,000,000
JPMorgan Chase and Company	\$799,253
Credit Suisse	\$3,000,000
Barclays	\$999,551
Natixis	\$3,000,000

ADMINISTRATOR

Federated Administrative Services (FAS), a subsidiary of Federated, provides administrative personnel and services, including certain legal, compliance, recordkeeping and financial reporting services ("Administrative Services"), necessary for the operation of the Fund. FAS provides Administrative Services for a fee based upon the rates set forth below paid on the average daily net assets of the Fund. For purposes of determining the appropriate rate breakpoint, "Investment Complex" is defined as all of the Federated Funds subject to a fee under the Administrative Services Agreement with FAS. FAS is also entitled to reimbursement for certain out-of-pocket expenses incurred in providing Administrative Services to the Fund.

Administrative Services Fee Rate	Average Daily Net Assets of the Investment Complex
0.150 of 1%	on the first \$5 billion
0.125 of 1%	on the next \$5 billion
0.100 of 1%	on the next \$10 billion
0.075 of 1%	on assets over \$20 billion

CUSTODIAN

State Street Bank and Trust Company, Boston, Massachusetts, is custodian for the securities and cash of the Fund. Foreign instruments purchased by the Fund are held by foreign banks participating in a network coordinated by State Street Bank and Trust Company.

TRANSFER AGENT AND DIVIDEND DISBURSING AGENT

State Street Bank and Trust Company, the Fund's registered transfer agent, maintains all necessary shareholder records.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

The independent registered public accounting firm for the Fund, KPMG LLP, conducts its audits in accordance with the standards of the Public Company Accounting Oversight Board (United States), which require it to plan and perform its audits to provide reasonable assurance about whether the Fund's financial statements and financial highlights are free of material misstatement.

FEES PAID BY THE FUND FOR SERVICES

For the Year Ended December 31	2013	2012	2011
Advisory Fee Earned	\$800,500	\$907,427	\$1,016,270
Advisory Fee Waiver	\$657,779	\$465,465	\$ 645,553
Net Administrative Fee	\$124,945	\$139,266	\$ 154,676

If the Fund's expenses are capped at a particular level, the cap does not include reimbursement to the Fund of any expenses incurred by shareholders who use the transfer agent's subaccounting facilities.

Financial Information

The Financial Statements for the Fund for the fiscal year ended December 31, 2013, are incorporated herein by reference to the Annual Report to Shareholders of Federated Prime Money Fund II dated December 31, 2013.

Investment Ratings

STANDARD & POOR'S (S&P) SHORT-TERM MUNICIPAL OBLIGATION RATINGS

An S&P U.S. municipal note rating reflects the liquidity factors and market access risks unique to the notes. Notes due in three years or less will likely receive a note rating. Notes with an original maturity of more than three years will most likely receive a long-term debt rating.

SP-1—Strong capacity to pay principal and interest. An issue determined to possess a very strong capacity to pay debt service is given a plus sign (+) designation.

SP-2—Satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.

SP-3—Speculative capacity to pay principal and interest.

S&P VARIABLE RATE DEMAND NOTES (VRDMS) AND TENDER OPTION BONDS (TOBS) RATINGS

S&P assigns "dual" ratings to all debt issues that have a put option or demand feature as part of their structure. The first rating addresses the likelihood of repayment of principal and interest as due, and the second rating addresses only the demand feature. The long-term rating symbols are used for bonds to denote the long-term maturity and the short-term rating symbols for the put option (for example, 'AAA/A-1+'). With U.S. municipal short-term demand notes rating symbols are used with the short-term issue credit rating symbols (for example, 'SP-1+/A-1+').

S&P SHORT-TERM ISSUE RATINGS

Short-term ratings are generally assigned to those obligations considered short-term in the relevant market. In the United States, for example, that means obligations with an original maturity of no more than 365 days—including commercial paper.

A-1—A short-term obligation rated 'A-1' is rated in the highest category by S&P. The obligor's capacity to meet its financial commitment on the obligation is strong. Within this category, certain obligations are designated with a plus sign (+). This indicates that the obligor's capacity to meet its financial commitment on these obligations is extremely strong.

A-2—A short-term obligation rated 'A-2' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories. However, the obligor's capacity to meet its financial commitment on the obligation is satisfactory.

A-3—A short-term obligation rated 'A-3' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

S&P LONG-TERM ISSUE RATINGS

Issue credit ratings are based, in varying degrees, on S&P's analysis of the following considerations: the likelihood of payment—capacity and willingness of the obligor to meet its financial commitment on an obligation in accordance with the terms of the obligation; the nature of and provisions of the obligation; and the protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting creditors' rights.

AAA—An obligation rated 'AAA' has the highest rating assigned by S&P. The obligor's capacity to meet its financial commitment on the obligation is extremely strong.

AA—An obligation rated 'AA' differs from the highest rated obligations only to a small degree. The obligor's capacity to meet its financial commitment on the obligation is very strong.

A—An obligation rated 'A' is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor's capacity to meet its financial commitment on the obligation is still strong.

BBB—An obligation rated 'BBB' exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity of the obligor to meet its financial commitment on the obligation.

The ratings 'AA,' 'A' and 'BBB' may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the major rating categories.

S&P RATING OUTLOOK

An S&P rating outlook assesses the potential direction of a long-term credit rating over the intermediate term (typically six months to two years). In determining a rating outlook, consideration is given to any changes in the economic and/or fundamental business conditions.

Positive—Positive means that a rating may be raised.

Negative—Negative means that a rating may be lowered.

Stable—Stable means that a rating is not likely to change.

Developing—Developing means a rating may be raised or lowered.

N.M.—N.M. means not meaningful.

MOODY'S INVESTORS SERVICE, INC. (MOODY'S) SHORT-TERM MUNICIPAL OBLIGATION RATINGS

Moody's Municipal Investment Grade (MIG) scale is used to rate U.S. municipal bond anticipation notes of up to three years maturity. Municipal notes rated on the MIG scale may be secured by either pledged revenues or proceeds of a take-out financing received prior to note maturity. MIG ratings expire at the maturity of the obligation, and the issuer's long-term rating is only one consideration in assigning the MIG rating.

MIG 1—This designation denotes superior credit quality. Excellent protection is afforded by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

MIG 2—This designation denotes strong credit quality. Margins of protection are ample, although not as large as in the preceding group.

MIG 3—This designation denotes acceptable credit quality. Liquidity and cash-flow protection may be narrow, and market access for refinancing is likely to be less well-established.

MOODY'S VRDMS AND TOBS RATINGS

In the case of issues with variable rate demand obligations, a two-component rating is assigned: a long or short-term debt rating and a demand obligation rating. The first element represents Moody's evaluation of risk associated with scheduled principal and interest payments. The second element represents Moody's evaluation of risk associated with the ability to receive purchase price upon demand ("demand feature"). The second element uses a rating from a variation of the MIG scale called the Variable Municipal Investment Grade (VMIG) scale.

VMIG 1—This designation denotes superior credit quality. Excellent protection is afforded by the superior short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

VMIG 2—This designation denotes strong credit quality. Good protection is afforded by the strong short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

VMIG 3—This designation denotes acceptable credit quality. Adequate protection is afforded by the satisfactory short-term credit strength of the liquidity provider and structural and legal protections that ensure the timely payment of purchase price upon demand.

MOODY'S SHORT-TERM RATINGS

Moody's short-term ratings are assigned to obligations with an original maturity of thirteen months or less and reflect the likelihood of a default on contractually promised payments.

P-1—Issuers (or supporting institutions) rated Prime-1 have a superior ability to repay short-term debt obligations.

P-2—Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.

P-3—Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term obligations.

MOODY'S LONG-TERM RATINGS

Moody's long-term ratings are assigned to issuers or obligations with an original maturity of one year or more and reflect both on the likelihood of a default on contractually promised payments and the expected financial loss suffered in the event of default.

Aaa—Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa—Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A—Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa—Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Moody's appends numerical modifiers 1, 2, and 3 to its generic rating classifications. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category.

FITCH, INC. (FITCH) SHORT-TERM DEBT RATINGS

A Fitch short-term issuer or obligation rating is based in all cases on the short-term vulnerability to default of the rated entity or security stream and relates to the capacity to meet financial obligations in accordance with the documentation governing the relevant obligation. Short-Term Ratings are assigned to obligations whose initial maturity is viewed as "short term" based on market convention. Typically, this means up to 13 months for corporate, sovereign, and structured obligations, and up to 36 months for obligations in U.S. public finance markets.

F1: Highest Short-Term Credit Quality—Indicates the strongest intrinsic capacity for timely payment of financial commitments; may have an added "+" to denote any exceptionally strong credit feature.

F2: Good Short-Term Credit Quality—Good intrinsic capacity for timely payment of financial commitments.

F3: Fair Short-Term Credit Quality—The intrinsic capacity for timely payment of financial commitments is adequate.

FITCH LONG-TERM DEBT RATINGS

Fitch long-term ratings report Fitch's opinion on an entity's relative vulnerability to default on financial obligations. The "threshold" default risk addressed by the rating is generally that of the financial obligations whose non-payment would best reflect the uncured failure of that entity. As such, Fitch long-term ratings also address relative vulnerability to bankruptcy, administrative receivership or similar concepts, although the agency recognizes that issuers may also make pre-emptive and therefore voluntary use of such mechanisms.

AAA: Highest Credit Quality—'AAA' ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA: Very High Credit Quality—'AA' ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A: High Credit Quality—'A' ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB: Good Credit Quality—'BBB' ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate but adverse business or economic conditions are more likely to impair this capacity.

DBRS, INC. (DBRS) COMMERCIAL PAPER AND SHORT-TERM DEBT RATINGS

The DBRS short-term debt rating scale provides DBRS's opinion on the risk that an issuer will not meet its short-term financial obligations in a timely manner. Ratings are based on quantitative and qualitative considerations relevant to the issuer and the relative ranking of claims.

R-1 (high)—Highest credit quality. The capacity for the payment of short-term financial obligations as they fall due is exceptionally high. Unlikely to be adversely affected by future events.

R-1 (middle)—Superior credit quality. The capacity for the payment of short-term financial obligations as they fall due is very high. Differs from R-1 (high) by a relatively modest degree. Unlikely to be significantly vulnerable to future events.

R-1 (low)—Good credit quality. The capacity for the payment of short-term financial obligations as they fall due is substantial. Overall strength is not as favorable as higher rating categories. May be vulnerable to future events, but qualifying negative factors are considered manageable.

R-2 (high)—Upper end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events.

R-2 (middle)—Adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events or may be exposed to other factors that could reduce credit quality.

R-2 (low)—Lower end of adequate credit quality. The capacity for the payment of short-term financial obligations as they fall due is acceptable. May be vulnerable to future events. A number of challenges are present that could affect the issuer's ability to meet such obligations.

R-3—Lowest end of adequate credit quality. There is a capacity for the payment of short-term financial obligations as they fall due. May be vulnerable to future events and the certainty of meeting such obligations could be impacted by a variety of developments.

DBRS LONG-TERM OBLIGATIONS RATINGS

The DBRS long-term rating scale provides DBRS's opinion on the risk of default. That is, the risk that an issuer will fail to satisfy its financial obligations in accordance with the terms under which an obligations has been issued. Ratings are based on quantitative and qualitative considerations relevant to the issuer, and the relative ranking of claims.

AAA—Highest credit quality. The capacity for the payment of financial obligations is exceptionally high and unlikely to be adversely affected by future events.

AA—Superior credit quality. The capacity for the payment of financial obligations is considered high. Credit quality differs from AAA only to a small degree. Unlikely to be significantly vulnerable to future events.

A—Good credit quality. The capacity for the payment of financial obligations is substantial, but of lesser credit quality than **AA**. May be vulnerable to future events, but qualifying negative factors are considered manageable.

BBB—Adequate credit quality. The capacity for the payment of financial obligations is considered acceptable. May be vulnerable to future events.

“High” or “low”—All rating categories other than AAA also contain subcategories “(high)” and “(low).” The absence of either a “(high)” or “(low)” designation indicates the rating is in the middle of the category.

A.M. BEST COMPANY, INC. (A.M. BEST) SHORT-TERM DEBT RATINGS

A Best's short-term debt rating is Best's opinion of an issuer/entity's ability to meet its financial obligations having original maturities of generally less than one year, such as commercial paper.

AMB-1+: Strongest—Assigned to issues where the issuer has the strongest ability to repay short-term debt obligations.

AMB-1: Outstanding—Assigned to issues where the issuer has an outstanding ability to repay short-term debt obligations.

AMB-2: Satisfactory—Assigned to issues where the issuer has a satisfactory ability to repay short-term debt obligations.

A.M. BEST LONG-TERM DEBT AND PREFERRED STOCK RATINGS

A Best's long-term debt rating is Best's independent opinion of an issuer/entity's ability to meet its ongoing financial obligations to security holders when due.

aaa: Exceptional—Assigned to issues where the issuer has an exceptional ability to meet the terms of the obligation.

aa: Very Strong—Assigned to issues where the issuer has a very strong ability to meet the terms of the obligation.

a: Strong—Assigned to issues where the issuer has a strong ability to meet the terms of the obligation.

bbb: Adequate—Assigned to issues where the issuer has an adequate ability to meet the terms of the obligation; however, the issue is more susceptible to changes in economic or other conditions.

Ratings may be enhanced with a “+” (plus) or “-” (minus) to indicate whether credit quality is near the top or bottom of a category.

A.M. BEST RATING MODIFIERS

Both long- and short-term credit ratings can be assigned a modifier.

u—Indicates the rating may change in the near term, typically within six months. Generally is event-driven, with positive, negative or developing implications.

pd—Indicates ratings assigned to a company that chose not to participate in A.M. Best’s interactive rating process.
(Discontinued in 2010)

i—Indicates rating assigned is indicative.

A.M. BEST RATING OUTLOOK

A.M. Best Credit Ratings are assigned a Rating Outlook that indicates the potential direction of a credit rating over an intermediate term, generally defined as the next 12 to 36 months.

Positive—Indicates possible ratings upgrade due to favorable financial/market trends relative to the current trading level.

Negative—Indicates possible ratings downgrade due to unfavorable financial/market trends relative to the current trading level.

Stable—Indicates low likelihood of rating change due to stable financial/market trends.

NOT RATED

Certain nationally recognized statistical rating organizations (NRSROs) may designate certain issues as NR, meaning that the issue or obligation is not rated.

GENERAL INFORMATION AND HISTORY

Nationwide Variable Insurance Trust is an open-end management investment company organized under the laws of Delaware by an Amended and Restated Agreement and Declaration of Trust, dated October 28, 2004, as amended and restated on June 17, 2009. The Trust currently offers shares in 62 separate series, each with its own investment objective.

The following Funds are diversified funds as defined in the Investment Company Act of 1940, as amended (the "1940 Act"):

American Century NVIT Growth Fund,
American Century NVIT Multi Cap Value Fund,
Federated NVIT High Income Bond Fund,
Invesco NVIT Comstock Value Fund,
Neuberger Berman NVIT Multi Cap Opportunities Fund,
Neuberger Berman NVIT Socially Responsible Fund,
NVIT Bond Index Fund,
NVIT Core Bond Fund,
NVIT Core Plus Bond Fund,
NVIT Developing Markets Fund,
NVIT Emerging Markets Fund,
NVIT Enhanced Income Fund,
NVIT Government Bond Fund,
NVIT International Equity Fund,
NVIT International Index Fund,
NVIT Large Cap Growth Fund
NVIT Mid Cap Index Fund,
NVIT Money Market Fund,
NVIT Multi-Manager International Growth Fund,
NVIT Multi-Manager International Value Fund,
NVIT Multi-Manager Large Cap Growth Fund,
NVIT Multi-Manager Large Cap Value Fund,
NVIT Multi-Manager Mid Cap Growth Fund,
NVIT Multi-Manager Mid Cap Value Fund,
NVIT Multi-Manager Small Cap Growth Fund,
NVIT Multi-Manager Small Cap Value Fund,
NVIT Multi-Manager Small Company Fund,
NVIT Multi Sector Bond Fund,
NVIT Nationwide Fund,
NVIT S&P 500 Index Fund,
NVIT Short Term Bond Fund,
NVIT Small Cap Index Fund, and
Templeton NVIT International Value Fund

The following Fund is not a diversified fund as defined in the 1940 Act:

NVIT Real Estate Fund.

**ADDITIONAL INFORMATION ON PORTFOLIO INSTRUMENTS,
STRATEGIES AND INVESTMENT POLICIES**

The Funds invest in a variety of securities and employ a number of investment techniques, which involve certain risks. The Prospectuses discuss each Fund’s principal investment strategies, investment techniques and risks. Therefore, you should carefully review a Fund’s Prospectus. This SAI contains information about non-principal investment strategies the Funds may use, as well as further information about certain principal strategies that are discussed in the Prospectuses.

For purposes of this SAI, each of the following Funds (either singly or collectively) is referred to as the **“Equity Funds”**:

American Century NVIT Growth Fund	NVIT Multi-Manager Large Cap Growth Fund
American Century NVIT Multi Cap Value Fund	NVIT Multi-Manager Large Cap Value Fund
Invesco NVIT Comstock Value Fund	NVIT Multi-Manager Mid Cap Growth Fund
Neuberger Berman NVIT Multi Cap Opportunities Fund	NVIT Multi-Manager Mid Cap Value Fund
Neuberger Berman NVIT Socially Responsible Fund	NVIT Multi-Manager Small Cap Growth Fund
NVIT Developing Markets Fund	NVIT Multi-Manager Small Cap Value Fund
NVIT Emerging Markets Fund	NVIT Multi-Manager Small Company Fund
NVIT International Equity Fund	NVIT Nationwide Fund
NVIT International Index Fund	NVIT Real Estate Fund
NVIT Large Cap Growth Fund	NVIT S&P 500 Index Fund
NVIT Mid Cap Index Fund	NVIT Small Cap Index Fund
NVIT Multi-Manager International Growth Fund	Templeton NVIT International Value Fund
NVIT Multi-Manager International Value Fund	

For purposes of this SAI, each of the following Funds (either singly or collectively) is referred to as the **“Fixed-Income Funds”**:

Federated NVIT High Income Bond Fund	NVIT Government Bond Fund
NVIT Bond Index Fund	NVIT Money Market Fund
NVIT Core Bond Fund	NVIT Multi Sector Bond Fund
NVIT Core Plus Bond Fund	NVIT Short Term Bond Fund
NVIT Enhanced Income Fund	

For purposes of this SAI, each of the following Funds (either singly or collectively) is referred to as the **“Index Funds”**:

NVIT Bond Index Fund	NVIT S&P 500 Index Fund
NVIT International Index Fund	NVIT Small Cap Index Fund
NVIT Mid Cap Index Fund	

THE EQUITY FUNDS

Initial Public Offerings

Each of the Equity Funds may participate in initial public offerings (“IPOs”). Securities issued in initial public offerings have no trading history, and information about the companies may be available for very limited periods. The volume of IPOs and the levels at which the newly issued stocks trade in the secondary market are affected by the performance of the stock market overall. If IPOs are brought to the market, availability may be limited and a Fund may not be able to buy any shares at the offering price, or if it is able to buy shares, it may not be able to buy as many shares at the offering price as it would like. In addition, the prices of securities involved in IPOs are often subject to greater and more unpredictable price changes than more established stocks.

Preferred Stocks and Convertible Securities

Each of the Equity Funds may invest in preferred stocks and other forms of convertible securities.

Preferred stocks, like many debt obligations, are generally fixed-income securities. Shareholders of preferred stocks normally have the right to receive dividends at a fixed rate when and as declared by the issuer’s board of directors, but do not participate in other amounts available for distribution by the issuing corporation. In some countries, dividends on preferred stocks may be variable, rather than fixed. Dividends on the preferred stock may be cumulative, and all cumulative dividends usually must be paid prior to common shareholders of common stock receiving any dividends. Because preferred stock dividends must be paid before common stock dividends, preferred stocks generally entail less risk than common stocks. Upon liquidation, preferred stocks are entitled to a specified liquidation preference, which is generally the same as the par or stated value, and are senior in right of payment to common stock. Preferred stocks are, however, equity securities in the sense that they do not represent a liability of the issuer and, therefore, do not offer as great a degree of protection of capital or assurance of continued income as investments in corporate debt securities. Preferred stocks are generally subordinated in right of payment to all debt obligations and creditors of the issuer, and convertible preferred stocks may be subordinated to other preferred stock of the same issuer.

Convertible securities are bonds, debentures, notes, preferred stocks, or other securities that may be converted into or exchanged for a specified amount of common stock of the same or a different issuer within a particular period of time at a specified price or formula. Convertible securities have general characteristics similar to both debt obligations and equity securities. The value of a convertible security is a function of its “investment value” (determined by its yield in comparison with the yields of other securities of comparable maturity and quality that do not have a conversion privilege) and its “conversion value” (the security’s worth, at market value, if converted into the underlying common stock). The investment value of a convertible security is influenced by changes in interest rates, the credit standing of the issuer and other factors. The market value of convertible securities tends to decline as interest rates increase and, conversely, tends to increase as interest rates decline. The conversion value of a convertible security is determined by the market price of the underlying common stock. The market value of convertible securities tends to vary with fluctuations in the market value of the underlying common stock and therefore will react to variations in the general market for equity securities. If the conversion value is low relative to the investment value, the price of the convertible security is governed principally by its investment value. Generally, the conversion value decreases as the convertible security approaches maturity. To the extent the market price of the underlying common stock approaches or exceeds the conversion price, the price of the convertible security will be increasingly influenced by its conversion value. A convertible security generally will sell at a premium over its conversion value by the extent to which investors place value on the right to acquire the underlying common stock while holding a fixed-income security. While no securities investments are without risk, investments in convertible securities generally entail less risk than investments in common stock of the same issuer.

A convertible security entitles the holder to receive interest normally paid or accrued on debt or the dividend paid on preferred stock until the convertible security matures or is redeemed, converted, or exchanged. Convertible securities have unique investment characteristics in that they generally (i) have higher yields than common stocks, but lower yields than comparable non-convertible securities, (ii) are less subject to fluctuation in

value than the underlying stock since they have fixed-income characteristics, and (iii) provide the potential for capital appreciation if the market price of the underlying common stock increases. Most convertible securities currently are issued by U.S. companies, although a substantial Eurodollar convertible securities market has developed, and the markets for convertible securities denominated in local currencies are increasing.

A convertible security may be subject to redemption at the option of the issuer at a price established in the convertible security's governing instrument. If a convertible security held by a Fund is called for redemption, a Fund will be required to permit the issuer to redeem the security, convert it into the underlying common stock, or sell it to a third party.

Convertible securities generally are subordinated to other similar but non-convertible securities of the same issuer, although convertible bonds, as corporate debt obligations, generally enjoy seniority in right of payment to all equity securities, and convertible preferred stock is senior to common stock of the same issuer. Because of the subordination feature, however, some convertible securities typically are rated below investment grade or are not rated, depending on the general creditworthiness of the issuer.

Certain Funds may invest in convertible preferred stocks that offer enhanced yield features, such as Preferred Equity Redemption Cumulative Stocks ("PERCS"), which provide an investor, such as a Fund, with the opportunity to earn higher dividend income than is available on a company's common stock. PERCS are preferred stocks that generally feature a mandatory conversion date, as well as a capital appreciation limit, which is usually expressed in terms of a stated price. Most PERCS expire three years from the date of issue, at which time they are convertible into common stock of the issuer. PERCS are generally not convertible into cash at maturity. Under a typical arrangement, after three years PERCS convert into one share of the issuer's common stock if the issuer's common stock is trading at a price below that set by the capital appreciation limit, and into less than one full share if the issuer's common stock is trading at a price above that set by the capital appreciation limit. The amount of that fractional share of common stock is determined by dividing the price set by the capital appreciation limit by the market price of the issuer's common stock. PERCS can be called at any time prior to maturity, and hence do not provide call protection. If called early, however, the issuer must pay a call premium over the market price to the investor. This call premium declines at a preset rate daily, up to the maturity date.

A Fund may also invest in other classes of enhanced convertible securities. These include but are not limited to Automatically Convertible Equity Securities ("ACES"), Participating Equity Preferred Stock ("PEPS"), Preferred Redeemable Increased Dividend Equity Securities ("PRIDES"), Stock Appreciation Income Linked Securities ("SAILS"), Term Convertible Notes ("TECONS"), Quarterly Income Cumulative Securities ("QICS"), and Dividend Enhanced Convertible Securities ("DECS"). ACES, PEPS, PRIDES, SAILS, TECONS, QICS, and DECS all have the following features: they are issued by the company, the common stock of which will be received in the event the convertible preferred stock is converted; unlike PERCS they do not have a capital appreciation limit; they seek to provide the investor with high current income with some prospect of future capital appreciation; they are typically issued with three or four-year maturities; they typically have some built-in call protection for the first two to three years; and, upon maturity, they will convert into either cash or a specified number of shares of common stock.

Similarly, there may be enhanced convertible debt obligations issued by the operating company, whose common stock is to be acquired in the event the security is converted, or by a different issuer, such as an investment bank. These securities may be identified by names such as Equity Linked Securities ("ELKS") or similar names. Typically they share most of the salient characteristics of an enhanced convertible preferred stock but will be ranked as senior or subordinated debt in the issuer's corporate structure according to the terms of the debt indenture. There may be additional types of convertible securities not specifically referred to herein, which may be similar to those described above in which a Fund may invest, consistent with its goals and policies.

An investment in an enhanced convertible security or any other security may involve additional risks to the Fund. A Fund may have difficulty disposing of such securities because there may be a thin trading market for a particular security at any given time. Reduced liquidity may have an adverse impact on market price and a Fund's ability to dispose of particular securities, when necessary, to meet the Fund's liquidity needs or in response to a

specific economic event, such as the deterioration in the creditworthiness of an issuer. Reduced liquidity in the secondary market for certain securities may also make it more difficult for the Fund to obtain market quotations based on actual trades for purposes of valuing the Fund's portfolio. A Fund, however, intends to acquire liquid securities, though there can be no assurances that it will always be able to do so.

Certain Funds may also invest in zero coupon convertible securities. Zero coupon convertible securities are debt securities which are issued at a discount to their face amount and do not entitle the holder to any periodic payments of interest prior to maturity. Rather, interest earned on zero coupon convertible securities accretes at a stated yield until the security reaches its face amount at maturity. Zero coupon convertible securities are convertible into a specific number of shares of the issuer's common stock. In addition, zero coupon convertible securities usually have put features that provide the holder with the opportunity to sell the securities back to the issuer at a stated price before maturity. Generally, the prices of zero coupon convertible securities may be more sensitive to market interest rate fluctuations than conventional convertible securities. For more information about zero coupon securities generally, see "Zero Coupon Securities, Step-Coupon Securities, Pay-In-Kind Bonds ("PIK Bonds") and Deferred Payment Securities" below.

Current federal income tax law requires the holder of zero coupon securities to accrue income with respect to these securities prior to the receipt of cash payments. Accordingly, to avoid liability for federal income and excise taxes, a Fund may be required to distribute income accrued with respect to these securities and may have to dispose of portfolio securities under disadvantageous circumstances in order to generate cash to satisfy these distribution requirements.

Publicly Traded Limited Partnerships and Limited Liability Companies

Entities such as limited partnerships, limited liability companies, business trusts and companies organized outside the United States may issue securities comparable to common or preferred stock. Each of the Equity Funds may invest in interests in limited liability companies, as well as publicly traded limited partnerships (limited partnership interests or units), which represent equity interests in the assets and earnings of the company's or partnership's trade or business. Unlike common stock in a corporation, limited partnership interests have limited or no voting rights. However, many of the risks of investing in common stocks are still applicable to investments in limited partnership interests. In addition, limited partnership interests are subject to risks not present in common stock. For example, income derived from a limited partnership deemed not to be a "qualified publicly traded partnership" may not be considered "qualifying income" under the Internal Revenue Code of 1986, as amended ("Internal Revenue Code") and may trigger adverse tax consequences. Also, since publicly traded limited partnerships and limited liability companies are a less common form of organizational structure than corporations, their units may be less liquid than publicly traded common stock. Also, because of the difference in organizational structure, the fair value of limited liability company or limited partnership units in a Fund's portfolio may be based either upon the current market price of such units, or if there is no current market price, upon the pro rata value of the underlying assets of the company or partnership. Limited partnership units also have the risk that the limited partnership might, under certain circumstances, be treated as a general partnership giving rise to broader liability exposure to the limited partners for activities of the partnership. Further, the general partners of a limited partnership may be able to significantly change the business or asset structure of a limited partnership without the limited partners having any ability to disapprove any such changes. In certain limited partnerships, limited partners may also be required to return distributions previously made in the event that excess distributions have been made by the partnership, or in the event that the general partners, or their affiliates, are entitled to indemnification.

Real Estate Investment Trusts

Although no Fund will invest in real estate directly, the Equity Funds may invest in securities of real estate investment trusts ("REITs") and other real estate industry companies or companies with substantial real estate investments and, as a result, such Funds may be subject to certain risks associated with direct ownership of real estate and with the real estate industry in general. These risks include, among others: possible declines in the value of real estate; possible lack of availability of mortgage funds; extended vacancies of properties; risks related to general and local economic conditions; overbuilding; increases in competition, property taxes and operating

expenses; changes in zoning laws; costs resulting from the clean-up of, and liability to third parties for damages resulting from, environmental problems; casualty or condemnation losses; uninsured damages from floods, earthquakes or other natural disasters; limitations on and variations in rents; and changes in interest rates.

REITs are pooled investment vehicles which invest primarily in income-producing real estate or real estate-related loans or interests. REITs are generally classified as equity REITs, mortgage REITs or hybrid REITs. Equity REITs invest the majority of their assets directly in real property and derive income primarily from the collection of rents. Equity REITs can also realize capital gains by selling properties that have appreciated in value. Mortgage REITs invest the majority of their assets in real estate mortgages and derive income from the collection of interest payments. Hybrid REITs combine the investment strategies of equity REITs and mortgage REITs. REITs are not taxed on income distributed to shareholders provided they comply with several requirements of the Internal Revenue Code. The Funds pay the fees and expenses of the REITs, which, ultimately, are paid by a Fund's shareholders.

Small Company and Emerging Growth Stocks

The Equity Funds may invest in small company and emerging growth stocks. Investing in securities of small-sized companies, including micro-capitalization companies and emerging growth companies, may involve greater risks than investing in the stocks of larger, more established companies, including possible risk of loss. Also, because these securities may have limited marketability, their prices may be more volatile than securities of larger, more established companies or the market averages in general. Because small-sized and emerging growth companies normally have fewer shares outstanding than larger companies, it may be more difficult for a Fund to buy or sell significant numbers of such shares without an unfavorable impact on prevailing prices. Small-sized and emerging growth companies may have limited product lines, markets or financial resources and may lack management depth. In addition, small-sized and emerging growth companies are typically subject to wider variations in earnings and business prospects than are larger, more established companies. There is typically less publicly available information concerning small-sized and emerging growth companies than for larger, more established ones.

Special Situation Companies

Each of the Equity Funds may invest in "special situation companies," which include those involved in an actual or prospective acquisition or consolidation; reorganization; recapitalization; merger, liquidation or distribution of cash, securities or other assets; a tender or exchange offer; a breakup or workout of a holding company; or litigation which, if resolved favorably, would improve the value of the company's stock. If the actual or prospective situation does not materialize as anticipated, the market price of the securities of a "special situation company" may decline significantly. Therefore, an investment in a Fund that invests a significant portion of its assets in these securities may involve a greater degree of risk than an investment in other mutual funds that seek long-term growth of capital by investing in better-known, larger companies. The subadviser of such a Fund believes, however, that if it analyzes "special situation companies" carefully and invests in the securities of these companies at the appropriate time, a Fund may achieve capital growth. There can be no assurance however, that a special situation that exists at the time a Fund makes its investment will be consummated under the terms and within the time period contemplated, if it is consummated at all.

U.S. Treasury Securities

Each of the Equity Funds may invest in U.S. Treasury securities, which are discussed in "U.S. Government Securities and U.S. Government Agency Securities" below.

Warrants and Rights

Each of the Equity Funds may invest in or hold warrants and rights. Warrants are securities giving the holder the right, but not the obligation, to buy the stock of an issuer at a given price (generally higher than the value of the stock at the time of issuance), on a specified date, during a specified period, or perpetually. Rights are similar to warrants, but normally have a shorter duration. Warrants and rights may be acquired separately or in connection with the acquisition of securities. Warrants and rights do not carry with them the right to dividends or voting rights

with respect to the securities that they entitle their holder to purchase, and they do not represent any rights in the assets of the issuer. As a result, warrants and rights may be considered more speculative than certain other types of investments. In addition, the value of a warrant or right does not necessarily change with the value of the underlying securities, and a warrant or right ceases to have value if it is not exercised prior to its expiration date.

THE FIXED-INCOME FUNDS

Bank and Corporate Loans

With the exception of the NVIT Money Market Fund, each of the Fixed-Income Funds may invest in bank and corporate loans. Commercial banks and other financial institutions or institutional investors make bank or corporate loans to companies that need capital to grow or restructure. Borrowers generally pay interest on bank or corporate loans at rates that change in response to changes in market interest rates such as the London Interbank Offered Rate (“LIBOR”) or the prime rates of U.S. banks. As a result, the value of bank and corporate loan investments is generally less exposed to the adverse effects of shifts in market interest rates than investments that pay a fixed rate of interest. The loan instruments in which a Fund may invest may involve borrowers, agents, co-lenders and collateral located both within and outside the United States, including in emerging market countries. Bank and corporate loans may include, but are not limited to, interests in trade finance loan transactions, pre-export/import finance transactions, factoring, syndicated loan transactions and forfeiting transactions.

Leading financial institutions often act as agent for a broader group of lenders, generally referred to as a syndicate. The syndicate’s agent arranges the bank or corporate loans, holds collateral and accepts payments of principal and interest. By investing in a corporate or bank loan, a Fund may become a member of the syndicate. A financial institution’s employment as agent might be terminated in the event that it fails to observe a requisite standard of care or becomes insolvent. A successor agent would generally be appointed to replace the terminated agent, and assets held by the agent under the loan agreement should remain available to holders of such indebtedness. However, if assets held by the agent for the benefit of a Fund were determined to be subject to the claims of the agent’s general creditors, the Fund might incur certain costs and delays in realizing payment on a bank or corporate loan and could suffer a loss of principal and/or interest.

The bank and corporate loans in which a Fund invests are subject to the risks that generally apply to fixed-income securities, such as interest rate risk, credit risk, liquidity risk, as well as, where applicable, foreign securities risk, emerging markets risk, and lower quality or high-yield risk. Although borrowers frequently provide collateral to secure repayment of these obligations, they do not always do so. If they do provide collateral, the value of the collateral may not completely cover the borrower’s obligations at the time of a default. Collateral may include security interests in receivables, goods, commodities, or real property. For trade finance loan transactions, the collateral itself may be the source of proceeds to repay the loan (i.e., the borrower’s ability to repay the loan will be dependent on the borrower’s ability to sell, and the purchaser’s ability to buy, the goods or commodities that are collateral for the loan). Interests in loan instruments may be tranching or tiered with respect to collateral rights. If a borrower files for protection from its creditors under the U.S. bankruptcy laws, these laws may limit a Fund’s rights to its collateral. In addition, the value of collateral may erode during a bankruptcy case. In the event of a bankruptcy, the holder of a bank or corporate loan may not recover its principal, may experience a long delay in recovering its investment and may not receive interest during the delay. Unsecured loans expose the lenders, and thus the Fund, to increased credit risk.

The trading market for many bank and corporate loans, including those relating to trade finance, may be limited or less developed than the secondary market for bonds and notes. Therefore, a Fund may experience difficulties in selling its bank or corporate loans. In many cases, loans and loan-related instruments may be considered to be illiquid due to the length of time required to transfer an interest in a loan or a related instrument.

Brady Bonds

Except for the NVIT Money Market Fund, each of the Fixed-Income Funds may invest in Brady Bonds. Brady Bonds are debt securities, generally denominated in U.S. dollars, issued under the framework of the Brady

Plan. The Brady Plan is an initiative announced by former U.S. Treasury Secretary Nicholas F. Brady in 1989 as a mechanism for debtor nations to restructure their outstanding external commercial bank indebtedness. In restructuring its external debt under the Brady Plan framework, a debtor nation negotiates with its existing bank lenders as well as multilateral institutions such as the International Bank for Reconstruction and Development (the “World Bank”) and the International Monetary Fund (the “IMF”). The Brady Plan framework, as it has developed, contemplates the exchange of external commercial bank debt for newly issued bonds known as “Brady Bonds.” Brady Bonds may also be issued in respect of new money being advanced by existing lenders in connection with the debt restructuring. The World Bank and/or the IMF support the restructuring by providing funds pursuant to loan agreements or other arrangements that enable the debtor nation to collateralize the new Brady Bonds or to repurchase outstanding bank debt at a discount. Under these arrangements with the World Bank and/or the IMF, debtor nations have been required to agree to the implementation of certain domestic monetary and fiscal reforms. Such reforms have included the liberalization of trade and foreign investment, the privatization of state-owned enterprises and the setting of targets for public spending and borrowing. These policies and programs seek to promote the debtor country’s economic growth and development. Investors should also recognize that the Brady Plan only sets forth general guiding principles for economic reform and debt reduction, emphasizing that solutions must be negotiated on a case-by-case basis between debtor nations and their creditors. A Fund’s subadviser may believe that economic reforms undertaken by countries in connection with the issuance of Brady Bonds may make the debt of countries which have issued or have announced plans to issue Brady Bonds an attractive opportunity for investment. However, there can be no assurance that the subadviser’s expectations with respect to Brady Bonds will be realized.

Agreements implemented under the Brady Plan to date are designed to achieve debt and debt-service reduction through specific options negotiated by a debtor nation with its creditors. As a result, the financial packages offered by each country differ. The types of options have included the exchange of outstanding commercial bank debt for bonds issued at 100% of face value of such debt which carry a below-market stated rate of interest (generally known as par bonds), bonds issued at a discount from the face value of such debt (generally known as discount bonds), bonds bearing an interest rate which increases over time and bonds issued in exchange for the advancement of new money by existing lenders. Regardless of the stated face amount and stated interest rate of the various types of Brady Bonds, the applicable Funds will purchase Brady Bonds in secondary markets, as described below, in which the price and yield to the investor reflect market conditions at the time of purchase. Certain sovereign bonds are entitled to “value recovery payments” in certain circumstances, which in effect constitute supplemental interest payments but generally are not collateralized. Certain Brady Bonds have been collateralized as to principal due date at maturity (typically 30 years from the date of issuance) by U.S. Treasury zero coupon bonds with a maturity equal to the final maturity of such Brady Bonds. The U.S. Treasury bonds purchased as collateral for such Brady Bonds are financed by the IMF, the World Bank and the debtor nations’ reserves. In addition, interest payments on certain types of Brady Bonds may be collateralized by cash or high-grade securities in amounts that typically represent between 12 and 18 months of interest accruals on these instruments with the balance of the interest accruals being uncollateralized. In the event of a default with respect to collateralized Brady Bonds as a result of which the payment obligations of the issuer are accelerated, the U.S. Treasury zero coupon obligations held as collateral for the payment of principal will not be distributed to investors, nor will such obligations be sold and the proceeds distributed. The collateral will be held by the collateral agent to the scheduled maturity of the defaulted Brady Bonds, which will continue to be outstanding, at which time the face amount of the collateral will equal the principal payments that would have then been due on the Brady Bonds in the normal course. However, in light of the residual risk of the Brady Bonds and, among other factors, the history of default with respect to commercial bank loans by public and private entities of countries issuing Brady Bonds, investments in Brady Bonds are considered speculative. A Fund may purchase Brady Bonds with no or limited collateralization, and, for payment of interest and (except in the case of principal collateralized Brady Bonds) principal, will be relying primarily on the willingness and ability of the foreign government to make payment in accordance with the terms of the Brady Bonds.

Debt Obligations

Debt obligations are subject to the risk of an issuer’s inability to meet principal and interest payments on its obligations when due (“credit risk”) and are subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer, and general market liquidity. Lower-rated securities are

more likely to react to developments affecting these risks than are more highly rated securities, which react primarily to movements in the general level of interest rates. Although the fluctuation in the price of debt securities is normally less than that of common stocks, in the past there have been extended periods of cyclical increases in interest rates that have caused significant declines in the price of debt securities in general and have caused the effective maturity of securities with prepayment features to be extended, thus effectively converting short or intermediate securities (which tend to be less volatile in price) into long-term securities (which tend to be more volatile in price). In addition, a corporate event such as a restructuring, merger, leveraged buyout, takeover, or similar action may cause a decline in market value of its securities or credit quality of the company's bonds due to factors including an unfavorable market response or a resulting increase in the company's debt. Added debt may significantly reduce the credit quality and market value of a company's bonds, and may thereby affect the value of its equity securities as well.

Recent market data indicates that primary dealer inventories of corporate bonds appear to be at an all-time low, relative to the market size. A significant reduction in dealer market-making capacity has the potential to decrease liquidity and increase volatility in the fixed-income markets.

Duration. Duration is a measure of the average life of a fixed-income security that was developed as a more precise alternative to the concepts of "term to maturity" or "average dollar weighted maturity" as measures of "volatility" or "risk" associated with changes in interest rates. Duration incorporates a security's yield, coupon interest payments, final maturity and call features into one measure.

Most debt obligations provide interest ("coupon") payments in addition to final ("par") payment at maturity. Some obligations also have call provisions. Depending on the relative magnitude of these payments and the nature of the call provisions, the market values of debt obligations may respond differently to changes in interest rates.

Traditionally, a debt security's "term-to-maturity" has been used as a measure of the sensitivity of the security's price to changes in interest rates (which is the "interest rate risk" or "volatility" of the security). However, "term-to-maturity" measures only the time until a debt security provides its final payment, taking no account of the pattern of the security's payments prior to maturity. Average dollar weighted maturity is calculated by averaging the terms of maturity of each debt security held with each maturity "weighted" according to the percentage of assets that it represents. Duration is a measure of the expected life of a debt security on a present value basis and reflects both principal and interest payments. Duration takes the length of the time intervals between the present time and the time that the interest and principal payments are scheduled or, in the case of a callable security, expected to be received, and weights them by the present values of the cash to be received at each future point in time. For any debt security with interest payments occurring prior to the payment of principal, duration is ordinarily less than maturity. In general, all other factors being the same, the lower the stated or coupon rate of interest of a debt security, the longer the duration of the security; conversely, the higher the stated or coupon rate of interest of a debt security, the shorter the duration of the security.

There are some situations where the standard duration calculation does not properly reflect the interest rate exposure of a security. For example, floating- and variable-rate securities often have final maturities of ten or more years; however, their interest rate exposure corresponds to the frequency of the coupon reset. Another example where the interest rate exposure is not properly captured by duration is the case of mortgage pass-through securities. The stated final maturity of such securities is generally 30 years, but current prepayment rates are more critical in determining the securities' interest rate exposure. In these and other similar situations, a Fund's subadviser will use more sophisticated analytical techniques to project the economic life of a security and estimate its interest rate exposure. Since the computation of duration is based on predictions of future events rather than known factors, there can be no assurance that a Fund will at all times achieve its targeted portfolio duration.

The change in market value of U.S. government fixed-income securities is largely a function of changes in the prevailing level of interest rates. When interest rates are falling, a portfolio with a shorter duration generally will not generate as high a level of total return as a portfolio with a longer duration. When interest rates are stable, shorter duration portfolios generally will not generate as high a level of total return as longer duration portfolios (assuming that long-term interest rates are higher than short-term rates, which is commonly the case.) When interest

rates are rising, a portfolio with a shorter duration will generally outperform longer duration portfolios. With respect to the composition of a fixed-income portfolio, the longer the duration of the portfolio, generally, the greater the anticipated potential for total return, with, however, greater attendant interest rate risk and price volatility than for a portfolio with a shorter duration.

Ratings as Investment Criteria. High-quality, medium-quality and non-investment grade debt obligations are characterized as such based on their ratings by nationally recognized statistical rating organizations (“NRSROs”), such as Standard & Poor’s Ratings Services (“Standard & Poor’s”) or Moody’s Investors Service (“Moody’s”). In general, the ratings of NRSROs represent the opinions of these agencies as to the quality of securities that they rate. Such ratings, however, are relative and subjective, are not absolute standards of quality and do not evaluate the market value risk of the securities. Further, credit ratings do not provide assurance against default or other loss of money. These ratings are considered in the selection of a Fund’s portfolio securities, but the Fund also relies upon the independent advice of its subadviser(s) to evaluate potential investments. This is particularly important for lower-quality securities. Among the factors that will be considered is the long-term ability of the issuer to pay principal and interest and general economic trends, as well as an issuer’s capital structure, existing debt and earnings history. Appendix A to this SAI contains further information about the rating categories of NRSROs and their significance. If a security has not received a credit rating, the Fund must rely entirely on the credit assessment of the subadviser(s).

Subsequent to its purchase by a Fund, an issuer of securities may cease to be rated or its rating may be reduced below the minimum required for purchase by such Fund. In addition, it is possible that an NRSRO might not change its rating of a particular issuer to reflect subsequent events. None of these events generally will require sale of such securities, but a Fund’s subadviser will consider such events in its determination of whether the Fund should continue to hold the securities.

In addition, to the extent that the ratings change as a result of changes in an NRSRO or its rating systems, or due to a corporate reorganization, a Fund will attempt to use comparable ratings as standards for its investments in accordance with its investment objective and policies.

Floating- and Variable-Rate Securities

Each of the Fixed-Income Funds may invest in floating- or variable-rate securities. Floating- or variable-rate obligations bear interest at rates that are not fixed, but vary with changes in specified market rates or indices, such as the prime rate, or at specified intervals. The interest rate on floating-rate securities varies with changes in the underlying index (such as the Treasury bill rate), while the interest rate on variable or adjustable rate securities changes at preset times based upon an underlying index. Certain of the floating- or variable-rate obligations that may be purchased by the Funds may carry a demand feature that would permit the holder to tender them back to the issuer of the instrument or to a third party at par value prior to maturity.

Some of the demand instruments purchased by a Fund may not be traded in a secondary market and derive their liquidity solely from the ability of the holder to demand repayment from the issuer or third party providing credit support. If a demand instrument is not traded in a secondary market, a Fund will nonetheless treat the instrument as “readily marketable” for the purposes of its investment restriction limiting investments in illiquid securities unless the demand feature has a notice period of more than seven days in which case the instrument will be characterized as “not readily marketable” and therefore illiquid.

Such obligations include variable-rate master demand notes, which are unsecured instruments issued pursuant to an agreement between the issuer and the holder that permit the indebtedness thereunder to vary and to provide for periodic adjustments in the interest rate. A Fund will limit its purchases of floating- and variable-rate obligations to those of the same quality as it is otherwise allowed to purchase.

A Fund’s subadviser will monitor on an ongoing basis the ability of an issuer of a demand instrument to pay principal and interest on demand.

A Fund's right to obtain payment at par on a demand instrument could be affected by events occurring between the date the Fund elects to demand payment and the date payment is due that may affect the ability of the issuer of the instrument or third party providing credit support to make payment when due, except when such demand instruments permit same day settlement. To facilitate settlement, these same day demand instruments may be held in book entry form at a bank other than a Fund's custodian subject to a subcustodian agreement approved by the Fund between that bank and the Fund's custodian.

Medium-Quality, Lower-Quality and High-Yield Securities

Except for the NVIT Money Market Fund, each of the Fixed Income Funds may invest in medium-quality securities and also in lower-quality and high-yield securities (commonly known as "junk bonds") (hereinafter referred to as "lower-quality securities").

Medium-Quality Securities. Medium-quality securities are obligations rated in the fourth highest rating category by any NRSRO. Medium-quality securities, although considered investment-grade, may have some speculative characteristics and may be subject to greater fluctuations in value than higher-rated securities. In addition, the issuers of medium-quality securities may be more vulnerable to adverse economic conditions or changing circumstances than issuers of higher-rated securities.

Lower-Quality/High-Yield Securities. Non-investment grade debt or lower-quality/rated securities include (i) bonds rated as low as C by Moody's, Standard & Poor's, or Fitch, Inc. ("Fitch"); (ii) commercial paper rated as low as C by Standard & Poor's, Not Prime by Moody's or Fitch 4 by Fitch; and (iii) unrated debt securities of comparable quality. Lower-quality securities, while generally offering higher yields than investment grade securities with similar maturities, involve greater risks, including the possibility of default or bankruptcy. There is more risk associated with these investments because of reduced creditworthiness and increased risk of default. Under NRSRO guidelines, lower-quality securities and comparable unrated securities will likely have some quality and protective characteristics that are outweighed by large uncertainties or major risk exposures to adverse conditions. Lower-quality securities are considered to have extremely poor prospects of ever attaining any real investment standing, to have a current identifiable vulnerability to default or to be in default, to be unlikely to have the capacity to make required interest payments and repay principal when due in the event of adverse business, financial or economic conditions, or to be in default or not current in the payment of interest or principal. They are regarded as predominantly speculative with respect to the issuer's capacity to pay interest and repay principal. The special risk considerations in connection with investments in these securities are discussed below.

Effect of Interest Rates and Economic Changes. Interest-bearing securities typically experience appreciation when interest rates decline and depreciation when interest rates rise. The market values of lower-quality and comparable unrated securities tend to reflect individual corporate developments to a greater extent than do higher-rated securities, which react primarily to fluctuations in the general level of interest rates. Lower-quality and comparable unrated securities also tend to be more sensitive to economic conditions than are higher-rated securities. As a result, they generally involve more credit risks than securities in the higher-rated categories. During an economic downturn or a sustained period of rising interest rates, highly leveraged issuers of lower-quality and comparable unrated securities may experience financial stress and may not have sufficient revenues to meet their payment obligations. The issuer's ability to service its debt obligations may also be adversely affected by specific corporate developments, the issuer's inability to meet specific projected business forecasts or the unavailability of additional financing. The risk of loss due to default by an issuer of these securities is significantly greater than issuers of higher-rated securities also because such securities are generally unsecured and are often subordinated to other creditors. Further, if the issuer of a lower-quality or comparable unrated security defaulted, a Fund might incur additional expenses to seek recovery. Periods of economic uncertainty and changes would also generally result in increased volatility in the market prices of these securities and thus in a Fund's net asset value.

As previously stated, the value of a lower-quality or comparable unrated security will generally decrease in a rising interest rate market, and accordingly so will a Fund's net asset value. If a Fund experiences unexpected net redemptions in such a market, it may be forced to liquidate a portion of its portfolio securities without regard to their investment merits. Due to the limited liquidity of lower-quality and comparable unrated securities (discussed

below), a Fund may be forced to liquidate these securities at a substantial discount which would result in a lower rate of return to the Fund.

Payment Expectations. Lower-quality and comparable unrated securities typically contain redemption, call or prepayment provisions which permit the issuer of such securities containing such provisions to, at its discretion, redeem the securities. During periods of falling interest rates, issuers of these securities are likely to redeem or prepay the securities and refinance them with debt securities at a lower interest rate. To the extent an issuer is able to refinance the securities, or otherwise redeem them, a Fund may have to replace the securities with a lower yielding security, which would result in a lower return for that Fund.

Liquidity and Valuation. A Fund may have difficulty disposing of certain lower-quality and comparable unrated securities because there may be a thin trading market for such securities. Because not all dealers maintain markets in all lower-quality and comparable unrated securities, there may be no established retail secondary market for many of these securities. The Funds anticipate that such securities could be sold only to a limited number of dealers or institutional investors. To the extent a secondary trading market does exist, it is generally not as liquid as the secondary market for higher-rated securities. The lack of a liquid secondary market may have an adverse impact on the market price of the security. As a result, a Fund's net asset value and ability to dispose of particular securities, when necessary to meet such Fund's liquidity needs or in response to a specific economic event, may be impacted. The lack of a liquid secondary market for certain securities may also make it more difficult for a Fund to obtain accurate market quotations for purposes of valuing that Fund's portfolio. Market quotations are generally available on many lower-quality and comparable unrated issues only from a limited number of dealers and may not necessarily represent firm bids of such dealers or prices for actual sales. During periods of thin trading, the spread between bid and asked prices is likely to increase significantly. In addition, adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the values and liquidity of lower-quality and comparable unrated securities, especially in a thinly traded market.

Money Market Instruments

Money market instruments in which the NVIT Money Market Fund invests may include the following types of instruments:

- obligations issued or guaranteed as to interest and principal by the U.S. government, its agencies, or instrumentalities, or any federally chartered corporation, with remaining maturities of 397 days or less;
- obligations of sovereign foreign governments, their agencies, instrumentalities and political subdivisions, with remaining maturities of 397 days or less;
- obligations of municipalities and states, their agencies and political subdivisions with remaining maturities of 397 days or less;
- asset-backed commercial paper whose own rating or the rating of any guarantor is in one of the two highest categories of any NRSRO;
- repurchase agreements;
- bank or savings and loan obligations;
- commercial paper (including asset-backed commercial paper), which are short-term unsecured promissory notes issued by corporations in order to finance their current operations. It may also be issued by foreign issuers, such as foreign governments, and states and municipalities. Generally the commercial paper or its guarantor will be rated within the top two rating categories by an NRSRO, or if not rated, is issued and guaranteed as to payment of principal and interest by companies which at the date of investment have a high quality outstanding debt issue;
- bank loan participation agreements representing obligations of corporations having a high quality short-term rating, at the date of investment, and under which the Fund will look to the creditworthiness of the lender bank, which is obligated to make payments of principal and interest on the loan, as well as to creditworthiness of the borrower;
- high quality short-term (maturity in 397 days or less) corporate obligations, rated within the top two rating categories by an NRSRO or, if not rated, deemed to be of comparable quality by the applicable subadviser;

- certain variable-rate and floating -rate securities with maturities longer than 397 days, but which are subject to interest rate resetting provisions and demand features within 397 days, to the extent permitted by Rule 2a-7 of the 1940 Act;
- extendable commercial notes, which differ from traditional commercial paper because the issuer can extend the maturity of the note up to 397 days with the option to call the note any time during the extension period. Because extension will occur when the issuer does not have other viable options for lending, these notes may be considered illiquid, particularly during the extension period, and if the extendable commercial notes are determined to be illiquid, the NVIT Money Market Fund will be limited to holding no more than 5% of its net assets in these and any other illiquid securities (in addition to other liquidity restrictions under Rule 2a-7 of the 1940 Act); and
- unrated short-term (maturing in 397 days or less) debt obligations that are determined by a Fund's subadviser to be of comparable quality to the securities described above.

Insurance Contracts and Funding Agreements. Money market instruments in which the NVIT Money Market Fund may invest also include insurance contracts, such as guaranteed investment contracts, funding agreements and annuities. In connection with these investments, a Fund makes cash contributions to a deposit fund of an insurance company's general account, and the insurance company then credits to the Fund a guaranteed rate of interest, paid on a regular periodic basis (e.g., monthly). The funding agreements or other insurance contracts provide that the guaranteed rate of interest will not be less than a certain minimum rate. The purchase price paid for the contract becomes part of the general assets of the insurance company, and the contract is paid from the general assets of the insurance company. Funding agreements may or may not allow a Fund to demand repayment of principal after an agreed upon waiting period or upon certain other conditions. The insurance company may also have a corresponding right to prepay the principal with accrued interest upon a specified number of days' notice to the Fund. The maturity date of some funding agreements may be extended upon the mutual agreement and consent of the insurance company and a Fund. Generally, funding agreements and other insurance contracts are not assignable or transferable without the permission of the issuing insurance companies, and an active secondary market in certain such insurance contracts does not currently exist. Accordingly, such insurance contracts may be considered to be illiquid. To the extent any such funding agreements or other insurance contracts are considered to be illiquid, the NVIT Money Market Fund will be limited to holding no more than 5% of its net assets in these and any other illiquid securities (in addition to other liquidity restrictions under Rule 2a-7 of the 1940 Act). In addition, funding agreements and other insurance contracts are subject to interest rate risk, i.e., when interest rates increase, the value of insurance contracts decline. Insurance contracts are also subject to credit risk, i.e., that the insurance company may be unable to pay interest or principal when due. If an insurance company's financial condition changes, its credit rating, or the credit rating of the contracts, may be lowered, which could negatively affect the value of the insurance contracts a Fund owns.

Extendable Commercial Notes ("ECN"). ECNs may serve as an alternative to traditional commercial paper investments. ECNs are corporate notes which are issued at a discount and structured such that, while the note has an initial redemption date (the initial redemption date is no more than 90 days from the date of issue) upon which the notes will be redeemed, the issuer on the initial redemption date may extend the repayment of the notes for up to 397 days from the date of issue without seeking note holder consent. In the event the ECN is redeemed by the issuer on its initial redemption date, investors receive a premium step-up rate, which is based on the ECN's rating at the time. If the notes are not redeemed on the initial redemption date, they will bear interest from the initial redemption date to the maturity date of the note at a floating rate of interest (this interest serves as a penalty yield for the issuer and a premium paid to the investor).

The ability of the issuer to exercise its option to extend the ECN beyond the initial redemption date can expose investors to interest rate risks, liquidity risks, credit risks and mark-to-market risks. Proponents of ECNs, however, argue that the punitive interest rate which applies if the ECN is extended beyond its initial redemption date will discourage issuers from extending the notes. Proponents further argue that the reputation risk associated with the decision to extend an ECN obligation will prevent issuers from extending the notes, provided that the issuer is not in extreme financial distress. The subadviser to the NVIT Money Market Fund will perform due diligence from both a credit and portfolio structure perspective before investing in ECNs.

Bank Obligations. Bank obligations include certificates of deposit, bankers' acceptances and fixed time deposits. A certificate of deposit is a short-term negotiable certificate issued by a commercial bank against funds deposited in the bank and is either interest-bearing or purchased on a discount basis. A bankers' acceptance is a short-term draft drawn on a commercial bank by a borrower, usually in connection with an international commercial transaction. The borrower is liable for payment as is the bank, which unconditionally guarantees to pay the draft at its face amount on the maturity date. Fixed time deposits are obligations of branches of U.S. banks or foreign banks which are payable at a stated maturity date and bear a fixed rate of interest. Although fixed time deposits do not have a market, there are no contractual restrictions on the right to transfer a beneficial interest in the deposit to a third party.

Bank obligations may be general obligations of the parent bank or may be limited to the issuing branch by the terms of the specific obligations or by government regulation. Bank obligations may be issued by domestic banks (including their branches located outside the United States), domestic and foreign branches of foreign banks and savings and loan associations.

Eurodollar and Yankee Obligations. Eurodollar bank obligations are dollar-denominated certificates of deposit and time deposits issued outside the U.S. capital markets by foreign branches of U.S. banks and by foreign banks. Yankee bank obligations are dollar-denominated obligations issued in the U.S. capital markets by foreign banks.

Eurodollar and Yankee bank obligations are subject to the same risks that pertain to domestic issues, notably credit risk, market risk and liquidity risk. Additionally, Eurodollar (and to a limited extent, Yankee) bank obligations are subject to certain sovereign risks and other risks associated with foreign investments. One such risk is the possibility that a sovereign country might prevent capital, in the form of dollars, from flowing across their borders. Other risks include: adverse political and economic developments; the extent and quality of government regulation of financial markets and institutions; the imposition of foreign withholding taxes; and the expropriation or nationalization of foreign issues. However, Eurodollar and Yankee bank obligations held in a Fund will undergo the same credit analysis as domestic issuers in which the Fund invests, and will have at least the same financial strength as the domestic issuers approved for the Fund.

Mortgage- and Asset-Backed Securities

Each of the Fixed-Income Funds may invest in mortgage- and asset-backed securities. Mortgage-backed securities represent direct or indirect participation in, or are secured by and payable from, mortgage loans secured by real property. Mortgage-backed securities come in different forms. The simplest form of mortgage-backed securities is pass-through certificates. Such securities may be issued or guaranteed by U.S. government agencies or instrumentalities or may be issued by private issuers, generally originators in mortgage loans, including savings and loan associations, mortgage bankers, commercial banks, investment bankers, and special purpose entities (collectively, "private lenders"). The purchase of mortgage-backed securities from private lenders may entail greater risk than mortgage-backed securities that are issued or guaranteed by the U.S. government, its agencies or instrumentalities. Mortgage-backed securities issued by private lenders may be supported by pools of mortgage loans or other mortgage-backed securities that are guaranteed, directly or indirectly, by the U.S. government or one of its agencies or instrumentalities, or they may be issued without any governmental guarantee of the underlying mortgage assets but with some form of non-governmental credit enhancement. These credit enhancements may include letters of credit, reserve funds, over-collateralization, or guarantees by third parties. There is no guarantee that these credit enhancements, if any, will be sufficient to prevent losses in the event of defaults on the underlying mortgage loans. Additionally, mortgage-backed securities purchased from private lenders are not traded on an exchange and there may be a limited market for the securities, especially when there is a perceived weakness in the mortgage and real estate market sectors. Without an active trading market, mortgage-backed securities held in a Fund's portfolio may be particularly difficult to value because of the complexities involved in assessing the value of the underlying mortgage loan.

Through its investments in mortgage-backed securities, including those issued by private lenders, a Fund may have some exposure to subprime loans, as well as to the mortgage and credit markets generally. Subprime loans

refer to loans made to borrowers with weakened credit histories or with a lower capacity to make timely payments on their loans. For these reasons, the loans underlying these securities have had, in many cases, higher default rates than those loans that meet government underwriting requirements. The risk of non-payment is greater for mortgage-backed securities issued by private lenders that contain subprime loans, but a level of risk exists for all loans.

Since privately-issued mortgage certificates are not guaranteed by an entity having the credit status of GNMA or FHLMC (each of which is defined below under “U.S. Government Securities and U.S. Government Agency Securities”), such securities generally are structured with one or more types of credit enhancement. Such credit enhancement falls into two categories: (i) liquidity protection; and (ii) protection against losses resulting from ultimate default by an obligor on the underlying assets. Liquidity protection refers to the provisions of advances, generally by the entity administering the pool of assets, to ensure that the pass-through of payments due on the underlying pool occurs in a timely fashion. Protection against losses resulting from ultimate default enhances the likelihood of ultimate payment of the obligations on at least a portion of the assets in the pool. Such protection may be provided through guarantees, insurance policies or letters of credit obtained by the issuer or sponsor from third parties, through various means of structuring the transaction or through a combination of such approaches.

The ratings of mortgage-backed securities for which third-party credit enhancement provides liquidity protection or protection against losses from default are generally dependent upon the continued creditworthiness of the provider of the credit enhancement. The ratings of such securities could be subject to reduction in the event of deterioration in the creditworthiness of the credit enhancement provider even in cases where the delinquency loss experienced on the underlying pool of assets is better than expected. There can be no assurance that the private issuers or credit enhancers of mortgage-backed securities will meet their obligations under the relevant policies or other forms of credit enhancement.

Examples of credit support arising out of the structure of the transaction include “senior-subordinated securities” (multiple class securities with one or more classes subordinate to other classes as to the payment of principal thereof and interest thereon, with the result that defaults on the underlying assets are borne first by the holders of the subordinated class), creation of “reserve funds” (where cash or investments sometimes funded from a portion of the payments on the underlying assets are held in reserve against future losses) and “over-collateralization” (where the scheduled payments on, or the principal amount of, the underlying assets exceed those required to make payment of the securities and pay any servicing or other fees). The degree of credit support provided for each issue is generally based on historical information with respect to the level of credit risk associated with the underlying assets. Delinquency or loss in excess of that which is anticipated could adversely affect the return on an investment in such security.

Private lenders or government-related entities may also create mortgage loan pools offering pass-through investments where the mortgages underlying these securities may be alternative mortgage instruments, that is, mortgage instruments whose principal or interest payments may vary or whose terms to maturity may be shorter than was previously customary. As new types of mortgage-related securities are developed and offered to investors, a Fund, consistent with its investment objective and policies, may consider making investments in such new types of securities.

The yield characteristics of mortgage-backed securities differ from those of traditional debt obligations. Among the principal differences are that interest and principal payments are made more frequently on mortgage-backed securities, usually monthly, and that principal may be prepaid at any time because the underlying mortgage loans or other assets generally may be prepaid at any time. As a result, if a Fund purchases these securities at a premium, a prepayment rate that is faster than expected will reduce yield to maturity, while a prepayment rate that is slower than expected will have the opposite effect of increasing the yield to maturity. Conversely, if a Fund purchases these securities at a discount, a prepayment rate that is faster than expected will increase yield to maturity, while a prepayment rate that is slower than expected will reduce yield to maturity. Accelerated prepayments on securities purchased by the Fund at a premium also impose a risk of loss of principal because the premium may not have been fully amortized at the time the principal is prepaid in full.

Unlike fixed rate mortgage-backed securities, adjustable rate mortgage-backed securities are collateralized by or represent interest in mortgage loans with variable-rates of interest. These variable-rates of interest reset periodically to align themselves with market rates. A Fund will not benefit from increases in interest rates to the extent that interest rates rise to the point where they cause the current coupon of the underlying adjustable rate mortgages to exceed any maximum allowable annual or lifetime reset limits (or “cap rates”) for a particular mortgage. In this event, the value of the adjustable rate mortgage-backed securities in a Fund would likely decrease. Also, a Fund’s net asset value could vary to the extent that current yields on adjustable rate mortgage-backed securities are different than market yields during interim periods between coupon reset dates or if the timing of changes to the index upon which the rate for the underlying mortgage is based lags behind changes in market rates. During periods of declining interest rates, income to a Fund derived from adjustable rate mortgage-backed securities which remain in a mortgage pool will decrease in contrast to the income on fixed rate mortgage-backed securities, which will remain constant. Adjustable rate mortgages also have less potential for appreciation in value as interest rates decline than do fixed rate investments.

There are a number of important differences among the agencies and instrumentalities of the U.S. government that issue mortgage-backed securities and among the securities that they issue. Mortgage-backed securities issued by GNMA include GNMA Mortgage Pass-Through Certificates (also known as “Ginnie Maes”), which are guaranteed as to the timely payment of principal and interest by GNMA, and such guarantee is backed by the full faith and credit of the United States. GNMA certificates also are supported by the authority of GNMA to borrow funds from the U.S. Treasury to make payments under its guarantee. Mortgage-backed securities issued by FNMA include FNMA Guaranteed Mortgage Pass-Through Certificates (also known as “Fannie Maes”), which are solely the obligations of FNMA, and are not backed by or entitled to the full faith and credit of the United States. Fannie Maes are guaranteed as to timely payment of the principal and interest by FNMA. Mortgage-backed securities issued by FHLMC (which is defined below under “U.S. Government Securities and U.S. Government Agency Securities”) include FHLMC Mortgage Participation Certificates (also known as “Freddie Macs” or “PCs”). FHLMC is a corporate instrumentality of the United States, created pursuant to an Act of Congress, which is owned entirely by Federal Home Loan Banks. Securities issued by FHLMC do not constitute a debt or obligation of the United States or by any Federal Home Loan Bank. Freddie Macs entitle the holder to timely payment of interest, which is guaranteed by the FHLMC. FHLMC guarantees either ultimate collection or timely payment of all principal payments on the underlying mortgage loans. When the FHLMC does not guarantee timely payment of principal, FHLMC may remit the amount due on account of its guarantee of ultimate payment of principal at any time after default on an underlying mortgage, but in no event later than one year after it becomes payable.

Collateralized Mortgage Obligations (“CMOs”) and Multiclass Pass-Through Securities. CMOs are a more complex form of mortgage-backed security in that they are multi-class debt obligations which are collateralized by mortgage loans or pass-through certificates. As a result of changes prompted by the 1986 Tax Reform Act, most CMOs are today issued as Real Estate Mortgage Investment Conduits (“REMICs”). From the perspective of the investor, REMICs and CMOs are virtually indistinguishable. However, REMICs differ from CMOs in that REMICs provide certain tax advantages for the issuer of the obligation. Multiclass pass-through securities are interests in a trust composed of whole loans or private pass-throughs (collectively hereinafter referred to as “Mortgage Assets”). Unless the context indicates otherwise, all references herein to CMOs include REMICs and multiclass pass-through securities.

Often, CMOs are collateralized by GNMA, Fannie Mae or Freddie Mac Certificates, but also may be collateralized by Mortgage Assets. Unless the context indicates otherwise, all references herein to CMOs include REMICs and multiclass pass-through securities. Payments of principal and interest on the Mortgage Assets, and any reinvestment income thereon, provide the funds to pay debt service on the CMOs or make scheduled distributions on the multiclass pass-through securities. CMOs may be issued by agencies or instrumentalities of the U.S. government, or by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks and special purpose subsidiaries of the foregoing.

In order to form a CMO, the issuer assembles a package of traditional mortgage-backed pass-through securities, or actual mortgage loans, and uses them as collateral for a multi-class security. Each class of CMOs, often referred to as a “tranche,” is issued at a specified fixed or floating coupon rate and has a stated maturity or final

distribution date. Principal prepayments on the Mortgage Assets may cause the CMOs to be retired substantially earlier than their stated maturities or final distribution dates. Interest is paid or accrues on all classes of the CMOs on a monthly, quarterly or semi-annual basis. The principal of and interest on the Mortgage Assets may be allocated among the several classes of a series of a CMO in innumerable ways. In one structure, payments of principal, including any principal prepayments, on the Mortgage Assets are applied to the classes of a CMO in the order of their respective stated maturities or final distribution dates, so that no payment of principal will be made on any class of CMOs until all other classes having an earlier stated maturity or final distribution date have been paid in full. As market conditions change, and particularly during periods of rapid or unanticipated changes in market interest rates, the attractiveness of the CMO classes and the ability of the structure to provide the anticipated investment characteristics may be significantly reduced. Such changes can result in volatility in the market value, and in some instances reduced liquidity, of the CMO class.

A Fund may also invest in, among others types of CMOs, parallel pay CMOs and Planned Amortization Class CMOs (“PAC Bonds”). Parallel pay CMOs are structured to provide payments of principal on each payment date to more than one class. These simultaneous payments are taken into account in calculating the stated maturity date or final distribution date of each class, which, as with other CMO structures, must be retired by its stated maturity date or a final distribution date but may be retired earlier. PAC Bonds are a type of CMO tranche or series designed to provide relatively predictable payments of principal provided that, among other things, the actual prepayment experience on the underlying mortgage loans falls within a predefined range. If the actual prepayment experience on the underlying mortgage loans is at a rate faster or slower than the predefined range or if deviations from other assumptions occur, principal payments on the PAC Bond may be earlier or later than predicted. The magnitude of the predefined range varies from one PAC Bond to another; a narrower range increases the risk that prepayments on the PAC Bond will be greater or smaller than predicted. Because of these features, PAC Bonds generally are less subject to the risks of prepayment than are other types of mortgage-backed securities.

Stripped Mortgage Securities. Stripped mortgage securities are derivative multiclass mortgage securities. Stripped mortgage securities may be issued by agencies or instrumentalities of the U.S. government, or by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks and special purpose subsidiaries of the foregoing. Stripped mortgage securities have greater volatility than other types of mortgage securities. Although stripped mortgage securities are purchased and sold by institutional investors through several investment banking firms acting as brokers or dealers, the market for such securities has not yet been fully developed. Accordingly, stripped mortgage securities are generally illiquid.

Stripped mortgage securities are structured with two or more classes of securities that receive different proportions of the interest and principal distributions on a pool of mortgage assets. A common type of stripped mortgage security will have at least one class receiving only a small portion of the interest and a larger portion of the principal from the mortgage assets, while the other class will receive primarily interest and only a small portion of the principal. In the most extreme case, one class will receive all of the interest (“IO” or interest-only), while the other class will receive the entire principal (“PO” or principal-only class). The yield to maturity on IOs, POs and other mortgage-backed securities that are purchased at a substantial premium or discount generally are extremely sensitive not only to changes in prevailing interest rates but also to the rate of principal payments (including prepayments) on the related underlying mortgage assets, and a rapid rate of principal payments may have a material adverse effect on such securities’ yield to maturity. If the underlying mortgage assets experience greater than anticipated prepayments of principal, a Fund may fail to fully recoup its initial investment in these securities even if the securities have received the highest rating by an NRSRO.

In addition to the stripped mortgage securities described above, certain Funds may invest in similar securities such as Super POs and Levered IOs which are more volatile than POs, IOs and IOettes. Risks associated with instruments such as Super POs are similar in nature to those risks related to investments in POs. IOettes represent the right to receive interest payments on an underlying pool of mortgages with similar risks as those associated with IOs. Unlike IOs, the owner also has the right to receive a very small portion of the principal. Risks connected with Levered IOs and IOettes are similar in nature to those associated with IOs. Such Funds may also invest in other similar instruments developed in the future that are deemed consistent with its investment objective, policies and restrictions. See “Other Tax Consequences” in this SAI.

A Fund may also purchase stripped mortgage-backed securities for hedging purposes to protect that Fund against interest rate fluctuations. For example, since an IO will tend to increase in value as interest rates rise, it may be utilized to hedge against a decrease in value of other fixed-income securities in a rising interest rate environment. Stripped mortgage-backed securities may exhibit greater price volatility than ordinary debt securities because of the manner in which their principal and interest are returned to investors. The market value of the class consisting entirely of principal payments can be extremely volatile in response to changes in interest rates. The yields on stripped mortgage-backed securities that receive all or most of the interest are generally higher than prevailing market yields on other mortgage-backed obligations because their cash flow patterns are also volatile and there is a greater risk that the initial investment will not be fully recouped. The market for CMOs and other stripped mortgage-backed securities may be less liquid if these securities lose their value as a result of changes in interest rates; in that case, a Fund may have difficulty in selling such securities.

Asset-Backed Securities. Asset-backed securities have structural characteristics similar to mortgage-backed securities. However, the underlying assets are not first-lien mortgage loans or interests therein; rather the underlying assets are often consumer or commercial debt contracts such as motor vehicle installment sales contracts, other installment loan contracts, home equity loans, leases of various types of property and receivables from credit card and other revolving credit arrangements. However, almost any type of fixed-income assets may be used to create an asset-backed security, including other fixed-income securities or derivative instruments such as swaps. Payments or distributions of principal and interest on asset-backed securities may be supported by non-governmental credit enhancements similar to those utilized in connection with mortgage-backed securities. Asset-backed securities, though, present certain risks that are not presented by mortgage-backed securities. The credit quality of most asset-backed securities depends primarily on the credit quality of the assets underlying such securities, how well the entity issuing the security is insulated from the credit risk of the originator or any other affiliated entities, and the amount and quality of any credit enhancement of the securities. To the extent a security interest exists, it may be more difficult for the issuer to enforce the security interest as compared to mortgage-backed securities.

Municipal Securities

Each of the Fixed-Income Funds may invest in municipal securities. Municipal securities include debt obligations issued by governmental entities to obtain funds for various public purposes, such as the construction of a wide range of public facilities, the refunding of outstanding obligations, the payment of general operating expenses, and the extension of loans to other public institutions and facilities. Private activity bonds that are issued by or on behalf of public authorities to finance various privately-operated facilities are deemed to be municipal securities, only if the interest paid thereon is exempt from federal taxes. The NVIT Money Market Fund may invest in municipal securities whether or not the interest paid is tax exempt as long as the securities are acceptable investments for money market funds.

Other types of municipal securities include short-term General Obligation Notes, Tax Anticipation Notes, Bond Anticipation Notes, Revenue Anticipation Notes, Project Notes, Tax-Exempt Commercial Paper, Construction Loan Notes and other forms of short-term tax-exempt loans. Such instruments are issued with a short-term maturity in anticipation of the receipt of tax funds, the proceeds of bond placements or other revenues.

Project Notes are issued by a state or local housing agency and are sold by the Department of Housing and Urban Development. While the issuing agency has the primary obligation with respect to its Project Notes, they are also secured by the full faith and credit of the United States through agreements with the issuing authority which provide that, if required, the federal government will lend the issuer an amount equal to the principal of and interest on the Project Notes.

The two principal classifications of municipal securities consist of “general obligation” and “revenue” issues. The Funds may also acquire “moral obligation” issues, which are normally issued by special purpose authorities. There are, of course, variations in the quality of municipal securities, both within a particular classification and between classifications, and the yields on municipal securities depend upon a variety of factors, including the financial condition of the issuer, general conditions of the municipal bond market, the size of a

particular offering, the maturity of the obligation and the rating of the issue. Ratings represent the opinions of an NRSRO as to the quality of municipal securities. It should be emphasized, however, that ratings are general and are not absolute standards of quality, and municipal securities with the same maturity, interest rate and rating may have different yields, while municipal securities of the same maturity and interest rate with different ratings may have the same yield. Subsequent to purchase, an issue of municipal securities may cease to be rated or its rating may be reduced below the minimum rating required for purchase. The subadviser will consider such an event in determining whether a Fund should continue to hold the obligation.

An issuer's obligations under its municipal securities are subject to the provisions of bankruptcy, insolvency, and other laws affecting the rights and remedies of creditors, such as the federal bankruptcy code, and laws, if any, which may be enacted by Congress or state legislatures extending the time for payment of principal or interest, or both, or imposing other constraints upon the enforcement of such obligations or upon the ability of municipalities to levy taxes. The power or ability of an issuer to meet its obligations for the payment of interest on and principal of its municipal securities may be materially adversely affected by litigation or other conditions.

Preferred Stocks, Convertible Securities and Other Equity Securities

Except for the NVIT Money Market Fund, each of the Fixed-Income Funds may invest in preferred stocks and convertible securities, which are described above. In some instances, a Fixed-Income Fund (except the NVIT Money Market Fund) may receive common stock, warrants or other types of equity securities resulting from a corporate action by or bankruptcy of an issuer of debt securities held by the Fund. In such instances, unless such equity securities are preferred stocks or convertible securities, the Fund will sell such equity securities as soon as reasonably practicable.

Put Bonds

Each of the Fixed-Income Funds may invest in "put" bonds, which are securities (including securities with variable interest rates) that may be sold back to the issuer of the security at face value at the option of the holder prior to their stated maturity. A Fund's subadviser intends to purchase only those put bonds for which the put option is an integral part of the security as originally issued. The option to "put" the bond back to the issuer prior to the stated final maturity can cushion the price decline of the bond in a rising interest rate environment. However, the premium paid, if any, for an option to put will have the effect of reducing the yield otherwise payable on the underlying security. For the purpose of determining the "maturity" of securities purchased subject to an option to put, and for the purpose of determining the dollar weighted average maturity of a Fund holding such securities, the Fund will consider "maturity" to be the first date on which it has the right to demand payment from the issuer.

Standby Commitment Agreements

Except for the NVIT Money Market Fund, each Fixed-Income Fund may enter into standby commitment agreements. These agreements commit a Fund, for a stated period of time, to purchase a stated amount of fixed-income securities that may be issued and sold to the Fund at the option of the issuer. The price and coupon of the security is fixed at the time of the commitment. At the time of entering into the agreement the Fund is paid a commitment fee, regardless of whether or not the security is ultimately issued. Funds enter into such agreements for the purpose of investing in the security underlying the commitment at a yield and price that is considered advantageous to the Fund.

There can be no assurance that the securities subject to a standby commitment will be issued and the value of the security, if issued, on the delivery date may be more or less than its purchase price. Since the issuance of the security underlying the commitment is at the option of the issuer, a Fund may bear the risk of a decline in the value of such security and may not benefit from appreciation in the value of the security during the commitment period if the security is not ultimately issued.

The purchase of a security subject to a standby commitment agreement and the related commitment fee will be recorded on the date on which the security can reasonably be expected to be issued, and the value of the security

will thereafter be reflected in the calculation of a Fund's net asset value. The cost basis of the security will be adjusted by the amount of the commitment fee. In the event the security is not issued, the commitment fee will be recorded as income on the expiration date of the standby commitment.

Strip Bonds

The Fixed-Income Funds may invest in strip bonds. Strip bonds are debt securities that are stripped of their interest (usually by a financial intermediary) after the securities are issued. The market value of these securities generally fluctuates more in response to changes in interest rates than interest paying securities of comparable maturity.

U.S. Government Securities and U.S. Government Agency Securities

Each of the Fixed-Income Funds may invest in a variety of securities which are issued or guaranteed as to the payment of principal and interest by the U.S. government, and by various agencies or instrumentalities which have been established or sponsored by the U.S. government.

U.S. Treasury securities are backed by the "full faith and credit" of the United States. Securities issued or guaranteed by federal agencies and U.S. government-sponsored instrumentalities may or may not be backed by the full faith and credit of the United States. In the case of securities not backed by the full faith and credit of the United States, investors in such securities look principally to the agency or instrumentality issuing or guaranteeing the obligation for ultimate repayment, and may not be able to assert a claim against the United States itself in the event the agency or instrumentality does not meet its commitment. Agencies which are backed by the full faith and credit of the United States include the Export-Import Bank, Farmers Home Administration, Federal Financing Bank, and others. Certain agencies and instrumentalities, such as the Government National Mortgage Association ("GNMA"), are, in effect, backed by the full faith and credit of the United States through provisions in their charters that they may make "indefinite and unlimited" drawings on the U.S. Treasury if needed to service its debt. Debt from certain other agencies and instrumentalities, including the Federal Home Loan Banks and Federal National Mortgage Association ("FNMA"), are not guaranteed by the United States, but those institutions are protected by the discretionary authority for the U.S. Treasury to purchase certain amounts of their securities to assist the institutions in meeting their debt obligations. Finally, other agencies and instrumentalities, such as the Farm Credit System and the Federal Home Loan Mortgage Corporation ("FHLMC"), are federally chartered institutions under U.S. government supervision, but their debt securities are backed only by the creditworthiness of those institutions, not the U.S. government.

Some of the U.S. government agencies that issue or guarantee securities include the Export-Import Bank of the United States, Farmers Home Administration, Federal Housing Administration, Maritime Administration, Small Business Administration, and the Tennessee Valley Authority.

An instrumentality of a U.S. government agency is a government agency organized under Federal charter with government supervision. Instrumentalities issuing or guaranteeing securities include, among others, Federal Home Loan Banks, the Federal Land Banks, Central Bank for Cooperatives, Federal Intermediate Credit Banks and the FNMA.

The maturities of such securities usually range from three months to 30 years. While such securities may be guaranteed as to principal and interest by the U.S. government or its instrumentalities, their market values may fluctuate and are not guaranteed, which may, along with the other securities in a Fund's portfolio, cause the Fund's daily net asset value to fluctuate.

The Federal Reserve creates STRIPS (Separate Trading of Registered Interest and Principal of Securities) by separating the coupon payments and the principal payment from an outstanding Treasury security and selling them as individual securities. To the extent a Fund purchases the principal portion of STRIPS, the Fund will not receive regular interest payments. Instead STRIPS are sold at a deep discount from their face value. Because the principal portion of the STRIPS does not pay current income, its price can be volatile when interest rates change. In

calculating its dividend, a Fund takes into account as income a portion of the difference between the principal portion of the STRIPS' purchase price and its face value.

In September 2008, the U.S. Treasury Department and the Federal Housing Finance Administration ("FHFA") announced that FNMA and FHLMC would be placed into a conservatorship under FHFA. The long-term effect that this conservatorship will have on these companies' debt and equity securities is unclear.

Inflation-Protected Bonds. Treasury Inflation-Protected Securities ("TIPS") are fixed-income securities issued by the U.S. Treasury whose principal value is periodically adjusted according to the rate of inflation. The U.S. Treasury uses a structure that accrues inflation into the principal value of the bond. Inflation-indexed securities issued by the U.S. Treasury have maturities of five, ten or thirty years, although it is possible that securities with other maturities will be issued in the future. TIPS bonds typically pay interest on a semi-annual basis, equal to a fixed percentage of the inflation-adjusted amount.

If the periodic adjustment rate measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-indexed bonds, even during a period of deflation. However, the current market value of the bonds is not guaranteed and will fluctuate.

The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates in turn are tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if inflation were to rise at a faster rate than nominal interest rates, real interest rates might decline, leading to an increase in value of inflation-indexed bonds. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation-indexed bonds.

Investors in an inflation-indexed mutual fund who do not reinvest the portion of the income distribution that is attributable to inflation adjustments will not maintain the purchasing power of the investment over the long term. This is because interest earned depends on the amount of principal invested, and that principal will not grow with inflation if the investor fails to reinvest the principal adjustment paid out as part of a Fund's income distributions.

While these securities are expected to be protected from long-term inflationary trends, short-term increases in inflation may lead to a decline in value. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the bond's inflation measure.

The periodic adjustment of U.S. inflation-indexed bonds is tied to the Consumer Price Index for Urban Consumers ("CPI-U"), which is calculated monthly by the U.S. Bureau of Labor Statistics. The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation-indexed securities issued by a foreign government are generally adjusted to reflect a comparable inflation index, calculated by that government. There can be no assurance that the CPI-U or any foreign inflation index will accurately measure the real rate of inflation in the prices of goods and services. Moreover, there can be no assurance that the rate of inflation in a foreign country will be correlated to the rate of inflation in the United States.

Any increase in the principal amount of an inflation-indexed bond will be considered taxable ordinary income, even though investors do not receive their principal until maturity.

When-Issued Securities and Delayed-Delivery Transactions

Each of the Fixed-Income Funds may invest in when-issued securities and engage in delayed-delivery transactions. When securities are purchased on a "when-issued" basis or purchased for delayed delivery, then payment and delivery occur beyond the normal settlement date at a stated price and yield. When-issued transactions

normally settle within 45 days. The payment obligation and the interest rate that will be received on when-issued securities are fixed at the time the buyer enters into the commitment. Due to fluctuations in the value of securities purchased or sold on a when-issued or delayed-delivery basis, the yields obtained on such securities may be higher or lower than the yields available in the market on the dates when the investments are actually delivered to the buyers. The greater a Fund's outstanding commitments for these securities, the greater the exposure to potential fluctuations in the net asset value of the Fund. Purchasing when-issued or delayed-delivery securities may involve the additional risk that the yield or market price available in the market when the delivery occurs may be higher or the market price lower than that obtained at the time of commitment.

When a Fund agrees to purchase when-issued or delayed-delivery securities, to the extent required by the U.S. Securities and Exchange Commission ("SEC"), its custodian will earmark or set aside permissible liquid assets equal to the amount of the commitment in a segregated account. Normally, the custodian will earmark or set aside portfolio securities sufficient to satisfy a purchase commitment, and in such a case the Fund may be required subsequently to earmark or place additional assets in the segregated assets in order to ensure that the value of the segregated account remains equal to the amount of such Fund's commitment. It may be expected that a Fund's net assets will fluctuate to a greater degree when it earmarks or sets aside portfolio securities to cover such purchase commitments than when it sets aside cash. In addition, because the Fund will earmark or set aside cash or liquid portfolio securities to satisfy its purchase commitments in the manner described above, such Fund's liquidity and the ability of its subadviser to manage it might be affected in the event its commitments to purchase "when-issued" securities ever exceed 25% of the value of its total assets. When a Fund engages in when-issued or delayed-delivery transactions, it relies on the other party to consummate the trade. Failure of the seller to do so may result in the Fund incurring a loss or missing an opportunity to obtain a price considered to be advantageous.

Zero Coupon Securities, Step-Coupon Securities, Pay-In-Kind Bonds ("PIK Bonds") and Deferred Payment Securities

Each of the Fixed-Income Funds may invest in zero coupon securities and step-coupon securities. In addition, each of the Fixed-Income Funds, except the NVIT Money Market Fund, may invest in PIK Bonds and deferred payment securities.

Zero coupon securities are debt securities that pay no cash income but are sold at substantial discounts from their value at maturity. Step-coupon securities are debt securities that do not make regular cash interest payments and are sold at a deep discount to their face value. When a zero coupon security is held to maturity, its entire return, which consists of the amortization of discount, comes from the difference between its purchase price and its maturity value. This difference is known at the time of purchase, so that investors holding zero coupon securities until maturity know at the time of their investment what the expected return on their investment will be. Zero coupon securities may have conversion features. PIK bonds pay all or a portion of their interest in the form of debt or equity securities. Deferred payment securities are securities that remain zero coupon securities until a predetermined date, at which time the stated coupon rate becomes effective and interest becomes payable at regular intervals. Deferred payment securities are often sold at substantial discounts from their maturity value.

Zero coupon securities, PIK bonds and deferred payment securities tend to be subject to greater price fluctuations in response to changes in interest rates than are ordinary interest-paying debt securities with similar maturities. The value of zero coupon securities appreciates more during periods of declining interest rates and depreciates more during periods of rising interest rates than ordinary interest-paying debt securities with similar maturities. Zero coupon securities, PIK bonds and deferred payment securities may be issued by a wide variety of corporate and governmental issuers. Although these instruments are generally not traded on a national securities exchange, they are widely traded by brokers and dealers and, to such extent, will not be considered illiquid for the purposes of a Fund's limitation on investments in illiquid securities.

Current federal income tax law requires the holder of zero coupon securities, certain PIK bonds and deferred payment securities acquired at a discount (such as Brady Bonds) to accrue income with respect to these securities prior to the receipt of cash payments. Accordingly, to avoid liability for federal income and excise taxes, a Fund may be required to distribute income accrued with respect to these securities and may have to dispose of

portfolio securities under disadvantageous circumstances in order to generate cash to satisfy these distribution requirements.

THE INDEX FUNDS

NVIT Bond Index Fund. The investment objective of the NVIT Bond Index Fund is to match the performance of the Barclays U.S. Aggregate Bond Index (the “Aggregate Index”) as closely as possible before the deduction of Fund expenses. The Aggregate Index is composed primarily of U.S. dollar denominated investment grade bonds of different types, including U.S. government securities; U.S. government agency securities; corporate bonds issued by U.S. and foreign companies; mortgage-backed securities; securities of foreign governments and their agencies; and securities of supranational entities, such as the World Bank. There can be no assurance that the investment objective of the Fund will be achieved.

NVIT International Index Fund. The investment objective of the NVIT International Index Fund is to match the performance of the MSCI Europe, Australia and Far East Index (the “EAFE Index”) as closely as possible before the deduction of Fund expenses. The EAFE Index is a market-weighted index composed of common stocks of companies from various industrial sectors whose primary trading markets are located outside the United States. There can be no assurance that the investment objective of the Fund will be achieved.

NVIT Mid Cap Index Fund. The investment objective of the NVIT Mid Cap Index Fund is to seek capital appreciation. There can be no assurance that the investment objective of the Fund will be achieved.

NVIT S&P 500 Index Fund. The investment objective of the NVIT S&P 500 Index Fund is to seek long-term capital appreciation. There can be no assurance that the investment objective of the Fund will be achieved.

NVIT Small Cap Index Fund. The investment objective of the NVIT Small Cap Index Fund is to seek to match the performance of the Russell 2000[®] Index (the “Russell 2000”) as closely as possible before the deduction of Fund expenses. The Russell 2000 is a market-weighted index composed of approximately 2000 common stocks of smaller U.S. companies in a wide range of businesses chosen by Russell Investments based on a number of factors, including industry representation, market value, economic sector and operating/financial condition. There can be no assurance that the investment objective of the Fund will be achieved.

About Indexing. The Index Funds are not managed according to traditional methods of “active” investment management, which involve the buying and selling of securities based upon economic, financial, and market analyses and investment judgment. Instead, each Index Fund, utilizing essentially a “passive” or “indexing” investment approach, seeks to replicate, before each Fund’s expenses (which can be expected to reduce the total return of the Fund), the total return of its respective index.

Indexing and Managing the Funds. Each Index Fund will be substantially invested in securities in the applicable index, and will invest at least 80% of its net assets in securities or other financial instruments which are contained in or correlated with securities in the applicable index.

Because each Index Fund seeks to replicate the total return of its respective index, BlackRock Investment Management, LLC (“BlackRock”), subadvisor to each Index Fund, generally will not attempt to judge the merits of any particular security as an investment but will seek only to replicate the total return of the securities in the relevant index. However, BlackRock may omit or remove a security which is included in an index from the portfolio of an Index Fund if, BlackRock judges the security to be insufficiently liquid, believes the merit of the investment has been substantially impaired by extraordinary events or financial conditions, or determines that the security is no longer useful in attempting to replicate the total return of the index.

BlackRock may acquire certain financial instruments based upon individual securities or based upon or consisting of one or more baskets of securities (which basket may be based upon a target index). Certain of these instruments may represent an indirect ownership interest in such securities or baskets. Others may provide for the payment to an Index Fund or by an Index Fund of amounts based upon the performance (positive, negative or both) of a particular security or basket. BlackRock will select such instruments when it believes that the use of the

instrument will correlate substantially with the expected total return of a target security or index. In connection with the use of such instruments, BlackRock may enter into short sales in an effort to adjust the weightings of particular securities represented in the basket to more accurately reflect such securities weightings in the target index.

The ability of each Index Fund to satisfy its investment objective depends to some extent on BlackRock's ability to manage cash flow (primarily from purchases and redemptions and distributions from the Fund's investments). BlackRock will make investment changes to an Index Fund's portfolio to accommodate cash flow while continuing to seek to replicate the total return of the target index. Investors should also be aware that the investment performance of each index is a hypothetical number which does not take into account brokerage commissions and other transaction costs, custody and other costs of investing, and any incremental operating costs (e.g., transfer agency, accounting) that will be borne by the Index Funds.

Each Index Fund's ability to replicate the total return of its respective index may be affected by, among other things, transaction costs, administration and other expenses incurred by the Index Fund, taxes (including foreign withholding taxes, which will affect the NVIT International Index Fund and the NVIT Bond Index Fund due to foreign tax withholding practices), and changes in either the composition of the index or the assets of an Index Fund. In addition, each Index Fund's total return will be affected by incremental operating costs (e.g., investment advisory, transfer agency, accounting) that will be borne by the Fund.

Additional Information Concerning the Indices

Aggregate Index. The NVIT Bond Index Fund is not promoted, sponsored or endorsed by, nor in any way affiliated with Barclays. Barclays has no responsibility for and does not participate in the NVIT Bond Index Fund's management.

Russell 2000. Russell Investment Group is the source and owner of the trademarks, service marks and copyrights related to the Russell 2000 Index. Russell® is a trademark of Russell Investment Group ("Russell Investments"). The NVIT Small Cap Index Fund is not promoted, sponsored or endorsed by, nor in any way affiliated with Russell Investments. Russell Investments is not responsible for and has not reviewed the NVIT Small Cap Index Fund nor any associated literature or publications and Russell Investments makes no representation or warranty, express or implied, as to their accuracy, or completeness, or otherwise.

Russell Investments reserves the right, at any time and without notice, to alter, amend, terminate or in any way change the Russell 2000 Index. Russell Investments has no obligation to take the needs of any particular fund or its shareholders or any other product or person into consideration in determining, composing or calculating the Russell 2000 Index. Russell Investments' publication of the Russell 2000 Index in no way suggests or implies an opinion by Russell Investments as to the attractiveness or appropriateness of investment in any or all securities upon which the Russell 2000 Index is based. RUSSELL INVESTMENTS MAKES NO REPRESENTATION, WARRANTY, OR GUARANTEE AS TO THE ACCURACY, COMPLETENESS, RELIABILITY, OR OTHERWISE OF THE RUSSELL 2000 INDEX OR ANY DATA INCLUDED IN THE RUSSELL 2000 INDEX. RUSSELL INVESTMENTS MAKES NO REPRESENTATION OR WARRANTY REGARDING THE USE, OR THE RESULTS OF USE, OF THE RUSSELL 2000 INDEX OR ANY DATA INCLUDED THEREIN, OR ANY SECURITY (OR COMBINATION THEREOF) COMPRISING THE RUSSELL 2000 INDEX. RUSSELL INVESTMENTS MAKES NO OTHER EXPRESS OR IMPLIED WARRANTY, AND EXPRESSLY DISCLAIMS ANY WARRANTY OF ANY KIND, INCLUDING, WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE WITH RESPECT TO THE RUSSELL 2000 INDEX OR ANY DATA OR ANY SECURITY (OR COMBINATION THEREOF) INCLUDED THEREIN.

EAFE Index. The NVIT International Index Fund is not sponsored, endorsed, sold or promoted by MSCI Inc. ("MSCI"), any of its affiliates, any of its information providers or any other third party involved in, or related to, compiling, computing or creating any MSCI index (collectively, the "MSCI Parties"), including the EAFE Index. The EAFE Index is the exclusive property of MSCI. MSCI and the EAFE Index are service mark(s) of MSCI or its affiliates and have been licensed for use for certain purposes by Nationwide Fund Advisors, as the investment adviser to the NVIT International Index Fund. None of the MSCI Parties makes any representation or warranty,

express or implied, to the issuer or shareholders of the NVIT International Index Fund or any other person or entity regarding the advisability of investing in funds generally or in the NVIT International Index Fund particularly or the ability of any MSCI index to track corresponding stock market performance. MSCI or its affiliates are the licensors of certain trademarks, service marks and trade names and of the MSCI indexes which are determined, composed and calculated by MSCI without regard to the NVIT International Index Fund or its shareholders or any other person or entity. None of the MSCI Parties has any obligation to take the needs of the NVIT International Index Fund or its shareholders or any other person or entity into consideration in determining, composing or calculating the MSCI indexes. None of the MSCI Parties is responsible for or has participated in the determination of the timing of, prices at, or quantities of the NVIT International Index Fund to be issued or in the determination or calculation of the equation by or the consideration into which the NVIT International Index Fund is redeemable. Further, none of the MSCI Parties has any obligation or liability to the NVIT International Index Fund or its shareholders or any other person or entity in connection with the administration, marketing or offering of the NVIT International Index Fund.

Although MSCI shall obtain information for inclusion in or for use in the calculation of the MSCI indexes from sources that MSCI considers reliable, none of the MSCI Parties warrants or guarantees the originality, accuracy and/or the completeness of any MSCI index or any data included therein. None of the MSCI Parties makes any warranty, express or implied, as to results to be obtained by the NVIT International Index Fund, its shareholders, or any other person or entity, from the use of any MSCI index or any data included therein. None of the MSCI Parties shall have any liability for any errors, omissions or interruptions of or in connection with any MSCI index or any data included therein. Further, none of the MSCI Parties makes any express or implied warranties of any kind, and the MSCI Parties hereby expressly disclaim all warranties of merchantability and fitness for a particular purpose, with respect to each MSCI index and any data included therein. Without limiting any of the foregoing, in no event shall any of the MSCI Parties have any liability for any direct, indirect, special, punitive, consequential or any other damages (including lost profits) even if notified of the possibility of such damages.

No purchaser, seller or holder of shares of the NVIT International Index Fund, or any other person or entity, should use or refer to any MSCI trade name, trademark or service mark to sponsor, endorse, market or promote this security without first contacting MSCI to determine whether MSCI's permission is required. Under no circumstances may any person or entity claim any affiliation with MSCI without the prior written permission of MSCI.

S&P 500 Index and S&P 400 Index. The S&P 500 Index and S&P MidCap 400 Index (each, an "Index") are products of S&P Dow Jones Indices LLC ("SPDJI"), and have been licensed for use by the NVIT S&P 500 Index Fund and NVIT Mid Cap Index Fund, respectively (the "NVIT Funds"). Standard & Poor's®, S&P®, S&P 500®, S&P MidCap 400® and S&P 400® are registered trademarks of Standard & Poor's Financial Services LLC ("S&P"); Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC ("Dow Jones"); and these trademarks have been licensed for use by SPDJI and sublicensed for certain purposes by the NVIT Funds. The NVIT Funds are not sponsored, endorsed, sold or promoted by SPDJI, Dow Jones, S&P, any of their respective affiliates (collectively, "S&P Dow Jones Indices"). S&P Dow Jones Indices makes no representation or warranty, express or implied, to the owners of the NVIT Funds or any member of the public regarding the advisability of investing in securities generally or in the NVIT Funds particularly or the ability of the S&P 500 Index or S&P MidCap 400 Index to track general market performance. S&P Dow Jones Indices' only relationship to the NVIT S&P 500 Index Fund and NVIT Mid Cap Index Fund with respect to the S&P 500 Index and S&P MidCap 400 Index, respectively, is the licensing of the Index and certain trademarks, service marks and/or trade names of S&P Dow Jones Indices or its licensors. Each of the S&P 500 Index and S&P MidCap 400 Index is determined, composed and calculated by S&P Dow Jones Indices without regard to the NVIT S&P 500 Index Fund or NVIT Mid Cap Index Fund, respectively. S&P Dow Jones Indices have no obligation to take the needs of the NVIT Funds or the owners of the NVIT Funds into consideration in determining, composing or calculating either Index. S&P Dow Jones Indices is not responsible for and has not participated in the determination of the prices, and amounts of the NVIT Funds or the timing of the issuance or sale of shares of the NVIT Funds or in the determination or calculation of the equation by which shares of the NVIT Funds are to be converted into cash, surrendered or redeemed, as the case may be. S&P Dow Jones Indices has no obligation or liability in connection with the administration, marketing or trading of the NVIT Funds. There is no assurance that investment products based on an Index will accurately track index performance or provide positive investment returns. S&P Dow Jones Indices LLC

is not an investment advisor. Inclusion of a security within an Index is not a recommendation by S&P Dow Jones Indices to buy, sell, or hold such security, nor is it considered to be investment advice. Notwithstanding the foregoing, CME Group Inc. and its affiliates may independently issue and/or sponsor financial products unrelated to the NVIT Funds, but which may be similar to and competitive with the NVIT Funds. In addition, CME Group Inc. and its affiliates may trade financial products which are linked to the performance of the S&P 500 Index.

S&P DOW JONES INDICES DOES NOT GUARANTEE THE ADEQUACY, ACCURACY, TIMELINESS AND/OR THE COMPLETENESS OF THE S&P 500 INDEX, THE S&P MIDCAP 400 INDEX, OR ANY DATA RELATED THERETO OR ANY COMMUNICATION, INCLUDING BUT NOT LIMITED TO, ORAL OR WRITTEN COMMUNICATION (INCLUDING ELECTRONIC COMMUNICATIONS) WITH RESPECT THERETO. S&P DOW JONES INDICES SHALL NOT BE SUBJECT TO ANY DAMAGES OR LIABILITY FOR ANY ERRORS, OMISSIONS, OR DELAYS THEREIN. S&P DOW JONES INDICES MAKES NO EXPRESS OR IMPLIED WARRANTIES, AND EXPRESSLY DISCLAIMS ALL WARRANTIES, OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR USE OR AS TO RESULTS TO BE OBTAINED BY THE NVIT FUNDS, OWNERS OF SHARES OF THE NVIT FUNDS, OR ANY OTHER PERSON OR ENTITY FROM THE USE OF THE S&P 500 INDEX OR S&P MIDCAP 400 INDEX OR WITH RESPECT TO ANY DATA RELATED THERETO. WITHOUT LIMITING ANY OF THE FOREGOING, IN NO EVENT WHATSOEVER SHALL S&P DOW JONES INDICES BE LIABLE FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES INCLUDING BUT NOT LIMITED TO, LOSS OF PROFITS, TRADING LOSSES, LOST TIME OR GOODWILL, EVEN IF THEY HAVE BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES, WHETHER IN CONTRACT, TORT, STRICT LIABILITY, OR OTHERWISE. THERE ARE NO THIRD PARTY BENEFICIARIES OF ANY AGREEMENTS OR ARRANGEMENTS BETWEEN S&P DOW JONES INDICES AND THE NVIT FUNDS, OTHER THAN THE LICENSORS OF S&P DOW JONES INDICES.

Short Selling of Securities

The Index Funds may engage in short selling of securities consistent with its “passive” indexing investment strategies. In a short sale of securities, a Fund sells stock which it does not own, making delivery with securities “borrowed” from a broker. The Fund is then obligated to replace the borrowed security by purchasing it at the market price at the time of replacement. This price may or may not be less than the price at which the security was sold by the Fund. Until the security is replaced, the Fund is required to pay the lender any dividends or interest which accrue during the period of the loan. In order to borrow the security, the Fund may also have to pay a premium and/or interest which would increase the cost of the security sold. The proceeds of the short sale will be retained by the broker, to the extent necessary to meet margin requirements, until the short position is closed out. In addition, the broker may require the deposit of collateral (generally, up to 50% of the value of the securities sold short).

A Fund will incur a loss as a result of the short sale if the price of the security increases between the date of the short sale and the date on which the Fund replaces the borrowed security. A Fund will realize a gain if the security declines in price between those two dates. The amount of any gain will be decreased and the amount of any loss will be increased by any premium or interest the Fund may be required to pay in connection with the short sale. When a cash dividend is declared on a security for which a Fund has a short position, the Fund incurs the obligation to pay an amount equal to that dividend to the lender of the shorted security. However, any such dividend on a security sold short generally reduces the market value of the shorted security, thus increasing the Fund’s unrealized gain or reducing the Fund’s unrealized loss on its short-sale transaction. Whether a Fund will be successful in utilizing a short sale will depend, in part, on its subadviser’s ability to correctly predict whether the price of a security it borrows to sell short will decrease.

In a short sale, the seller does not immediately deliver the securities sold and is said to have a short position in those securities until delivery occurs. A Fund must segregate or earmark an amount of cash or other liquid assets equal to the difference between (a) the market value of securities sold short at the time that they were sold short and (b) the value of the collateral deposited with the broker to meet margin requirements in connection with the short sale (not including the proceeds from the short sale). While the short position is open, the Fund must maintain on a

daily basis segregated or earmarked liquid assets at such a level that the amount segregated or earmarked plus the amount of collateral deposited with the broker as margin equals the current market value of the securities sold short.

A Fund also may engage in short sales if at the time of the short sale the Fund owns or has the right to obtain without additional cost an equal amount of the security being sold short. This investment technique is known as a short sale “against the box.” The Funds do not intend to engage in short sales against the box for investment purposes. A Fund may, however, make a short sale as a hedge, when it believes that the price of a security may decline, causing a decline in the value of a security owned by the Fund (or a security convertible or exchangeable for such security), or when the Fund wants to sell the security at an attractive current price. In such case, any future losses in the Fund’s long position should be offset by a gain in the short position and, conversely, any gain in the long position should be reduced by a loss in the short position. The extent to which such gains or losses are reduced will depend upon the amount of the security sold short relative to the amount the Fund owns. There will be certain additional transaction costs associated with short sales against the box. For tax purposes a Fund that enters into a short sale “against the box” may be treated as having made a constructive sale of an “appreciated financial position” causing the Fund to realize a gain (but not a loss).

ADDITIONAL PORTFOLIO INSTRUMENTS AND STRATEGIES OF THE FUNDS

Borrowing

Each Fund may borrow money from banks, limited by each Fund’s fundamental investment restriction (generally, 33 $\frac{1}{3}$ % of its total assets (including the amount borrowed)), including borrowings for temporary or emergency purposes. In addition to borrowings that are subject to 300% asset coverage and are considered by the SEC to be permitted “senior securities,” the Fund is also permitted under the 1940 Act to borrow for temporary purposes in an amount not exceeding 5% of the value of its total assets at the time when the loan is made. A loan will be presumed to be for temporary purposes if it is repaid within 60 days and is not extended or renewed. A Fund may engage in mortgage dollar roll and reverse repurchase agreements which may be considered a form of borrowing unless the Fund covers its exposure by segregating or earmarking liquid assets.

Asset Segregation. Pursuant to current guidance from the staff of the Securities and Exchange Commission SEC, financial instruments that involve a Fund’s obligation to make future payments to third parties will not be deemed to be creating any “senior security” provided that the Fund “covers” its obligations. Financial instruments that involve an obligation to make future payments to third parties can include, among others, (i) securities purchased on a when-issued, delayed delivery, or to be announced basis, (ii) futures contracts, (iii) forward currency contracts, (iv) swaps, (v) written options, (vi) unfunded commitments, (vii) securities sold short, and (viii) reverse repurchase agreements. A Fund is deemed to have “covered” its obligations involving such a financial instrument when the Fund enters into an offsetting financial position, or segregates liquid assets (such as cash, cash equivalents or other liquid portfolio securities) equal to the Fund’s exposures relating to the financial instrument, as determined on a daily basis. Segregated assets are not required to be physically segregated from other Fund assets, but may be segregated through appropriate notation on the books of a Fund or the Fund’s custodian.

The obligation to cover a financial instrument may require a Fund to sell a portfolio security or exit a transaction, including a transaction in a financial instrument, at a disadvantageous time or price in order to segregate the required amount of assets. Should segregated assets decline in value, a Fund will be required to segregate additional assets or reduce its position in the financial instrument. In addition, segregated assets may not be available to satisfy redemptions or for other purposes, until a Fund’s obligations under the financial instruments have been satisfied.

Consistent with current SEC staff positions, the segregated amount for futures and forward contracts that require only cash settlement, and swap agreements that call for periodic netting between a Fund and its counterparty, is the net amount due under the contract, as determined daily on a mark-to-market basis. For other kinds of futures, forwards and swaps, more assets will be required to cover a Fund’s obligations, which essentially limits the Fund’s ability to use these instruments, to the extent that more assets will be required to cover a Fund’s obligations.

Leverage. The use of leverage by a Fund creates an opportunity for greater total return, but, at the same time, creates special risks. For example, leveraging may exaggerate changes in the net asset value of Fund shares and in the yield on an Index Fund's portfolio. Although the principal of such borrowings will be fixed, a Fund's assets may change in value during the time the borrowings are outstanding. Borrowings will create interest expenses for the Fund which can exceed the income from the assets purchased with the borrowings. To the extent the income or capital appreciation derived from securities purchased with borrowed funds exceeds the interest a Fund will have to pay on the borrowings, the Fund's return will be greater than if leverage had not been used. Conversely, if the income or capital appreciation from the securities purchased with such borrowed funds is not sufficient to cover the cost of borrowing, the return to a Fund will be less than if leverage had not been used, and therefore the amount available for distribution to shareholders as dividends and other distributions will be reduced. In the latter case, a Fund's subadviser in its best judgment nevertheless may determine to maintain the Fund's leveraged position if it expects that the benefits to the Fund's shareholders of maintaining the leveraged position will outweigh the current reduced return.

Certain types of borrowings by a Fund may result in the Fund being subject to covenants in credit agreements relating to asset coverage, portfolio composition requirements and other matters. It is not anticipated that observance of such covenants would impede the Fund's subadviser from managing a Fund's portfolio in accordance with the Fund's investment objectives and policies. However, a breach of any such covenants not cured within the specified cure period may result in acceleration of outstanding indebtedness and require the Fund to dispose of portfolio investments at a time when it may be disadvantageous to do so.

An Index Fund at times may borrow from affiliates of BlackRock, provided that the terms of such borrowings are no less favorable than those available from comparable sources of funds in the marketplace.

Derivative Instruments

Each Fund, except the NVIT Money Market Fund, may use instruments referred to as derivative instruments ("derivatives"). A derivative is a financial instrument the value of which is derived from another security, a commodity (such as gold or oil), a currency or an index (a measure of value or rates, such as the S&P 500 Index or the prime lending rate). Derivatives allow a Fund to increase or decrease the level of risk to which the Fund is exposed more quickly and efficiently than transactions in other types of instruments. Each Fund may use derivatives as a substitute for taking a position in a security, a group of securities or a securities index as well as for hedging purposes. Certain Funds, as noted in their respective Prospectuses, may also use derivatives for speculative purposes to seek to enhance returns. The use of a derivative is speculative if a Fund is primarily seeking to achieve gains, rather than offset the risk of other positions. When a Fund invests in a derivative for speculative purposes, the Fund will be fully exposed to the risks of loss of that derivative, which may sometimes be greater than the derivative's cost. No Fund may use any derivative to gain exposure to an asset or class of assets that it would be prohibited by its investment restrictions from purchasing directly.

Derivatives generally have investment characteristics that are based upon either forward contracts (under which one party is obligated to buy and the other party is obligated to sell an underlying asset at a specific price on a specified date) or option contracts (under which the holder of the option has the right but not the obligation to buy or sell an underlying asset at a specified price on or before a specified date). Consequently, the change in value of a forward-based derivative generally is roughly proportional to the change in value of the underlying asset. In contrast, the buyer of an option-based derivative generally will benefit from favorable movements in the price of the underlying asset but is not exposed to the corresponding losses that result from adverse movements in the value of the underlying asset. The seller (writer) of an option-based derivative generally will receive fees or premiums but generally is exposed to losses resulting from changes in the value of the underlying asset. Depending on the change in the value of the underlying asset, the potential for loss may be limitless. Derivative transactions may include elements of leverage and, accordingly, the fluctuation of the value of the derivative transaction in relation to the underlying asset may be magnified.

The use of these derivatives is subject to applicable regulations of the SEC, the several options and futures exchanges upon which they may be traded, and the Commodity Futures Trading Commission ("CFTC").

Nationwide Fund Advisors, with respect to its management and operation of the Funds, has claimed exclusion from the definition of the term “commodity pool operator” under the Commodity Exchange Act (“CEA”) and, therefore, is not subject to registration or regulation as a commodity pool operator under the CEA.

Special Risks of Derivative Instruments. The use of derivatives involves special considerations and risks as described below. Risks pertaining to particular instruments are described in the sections that follow.

- (1) Successful use of most derivatives depends upon a Fund’s subadviser’s ability to predict movements of the overall securities and currency markets, which requires different skills than predicting changes in the prices of individual securities. There can be no assurance that any particular strategy adopted will succeed.
- (2) There might be imperfect correlation, or even no correlation, between price movements of a derivative and price movements of the investments being hedged. For example, if the value of a derivative used in a short hedge (such as writing a call option, buying a put option, or selling a futures contract) increased by less than the decline in value of the hedged investment, the hedge would not be fully successful. Such a lack of correlation might occur due to factors unrelated to the value of the investments being hedged, such as speculative or other pressures on the markets in which these instruments are traded. The effectiveness of hedges using derivatives on indices will depend on the degree of correlation between price movements in the index and price movements in the investments being hedged, as well as how similar the index is to the portion of the Fund’s assets being hedged in terms of securities composition.
- (3) Hedging strategies, if successful, can reduce the risk of loss by wholly or partially offsetting the negative effect of unfavorable price movements in the investments being hedged. However, hedging strategies can also reduce opportunity for gain by offsetting the positive effect of favorable price movements in the hedged investments. For example, if a Fund entered into a short hedge because a Fund’s subadviser projected a decline in the price of a security in the Fund’s portfolio, and the price of that security increased instead, the gain from that increase might be wholly or partially offset by a decline in the price of the derivative. Moreover, if the price of the derivative declines by more than the increase in the price of the security, a Fund could suffer a loss.
- (4) As described below, a Fund might be required to maintain assets as “cover,” maintain segregated accounts, or make margin payments when it takes positions in derivatives involving obligations to third parties (i.e., instruments other than purchased options). If the Fund were unable to close out its positions in such derivatives, it might be required to continue to maintain such assets or accounts or make such payments until the position expired or matured. The requirements might impair the Fund’s ability to sell a portfolio security or make an investment at a time when it would otherwise be favorable to do so, or require that the Fund sell a portfolio security at a disadvantageous time. The Fund’s ability to close out a position in a derivative prior to expiration or maturity depends on the existence of a liquid secondary market or, in the absence of such a market, the ability and willingness of the other party to the transaction (“counterparty”) to enter into a transaction closing out the position. Therefore, there is no assurance that any hedging position can be closed out at a time and price that is favorable to the Fund.

For a discussion of the federal income tax treatment of a Fund’s derivative instruments, see “Other Tax Consequences.”

Options. A Fund may purchase or write put and call options on securities and indices, and may purchase options on foreign currencies, and enter into closing transactions with respect to such options to terminate an existing position. The purchase of call options serves as a long hedge, and the purchase of put options serves as a short hedge. Writing put or call options can enable a Fund to enhance income by reason of the premiums paid by the purchaser of such options. Writing call options serves as a limited short hedge because declines in the value of the hedged investment would be offset to the extent of the premium received for writing the option. However, if the security appreciates to a price higher than the exercise price of the call option, it can be expected that the option will be exercised, and a Fund will be obligated to sell the security at less than its market value or will be obligated to purchase the security at a price greater than that at which the security must be sold under the option. All or a portion

of any assets used as cover for OTC options written by a Fund would be considered illiquid to the extent described under “Restricted, Non-Publicly Traded and Illiquid Securities” below. Writing put options serves as a limited long hedge because increases in the value of the hedged investment would be offset to the extent of the premium received for writing the option. However, if the security depreciates to a price lower than the exercise price of the put option, it can be expected that the put option will be exercised, and the Fund will be obligated to purchase the security at more than its market value.

The value of an option position will reflect, among other things, the historical price volatility of the underlying investment, the current market value of the underlying investment, the time remaining until expiration of the option, the relationship of the exercise price to the market price of the underlying investment, and general market conditions. Options that expire unexercised have no value. Options used by a Fund may include European-style options, which can only be exercised at expiration. This is in contrast to American-style options which can be exercised at any time prior to the expiration date of the option.

A Fund may effectively terminate its right or obligation under an option by entering into a closing transaction. For example, a Fund may terminate its obligation under a call or put option that it had written by purchasing an identical call or put option; this is known as a closing purchase transaction. Conversely, a Fund may terminate a position in a put or call option it had purchased by writing an identical put or call option; this is known as a closing sale transaction. Closing transactions permit the Fund to realize the profit or limit the loss on an option position prior to its exercise or expiration.

A Fund may purchase or write both OTC options and options traded on foreign and U.S. exchanges. Exchange-traded options are issued by a clearing organization affiliated with the exchange on which the option is listed that, in effect, guarantees completion of every exchange-traded option transaction. OTC options are contracts between the Fund and the counterparty (usually a securities dealer or a bank) with no clearing organization guarantee. Thus, when the Fund purchases or writes an OTC option, it relies on the counterparty to make or take delivery of the underlying investment upon exercise of the option. Failure by the counterparty to do so would result in the loss of any premium paid by the Fund as well as the loss of any expected benefit of the transaction.

A Fund’s ability to establish and close out positions in exchange-listed options depends on the existence of a liquid market. A Fund generally intends to purchase or write only those exchange-traded options for which there appears to be a liquid secondary market. However, there can be no assurance that such a market will exist at any particular time. Closing transactions can be made for OTC options only by negotiating directly with the counterparty, or by a transaction in the secondary market if any such market exists. Although a Fund will enter into OTC options only with counterparties that are expected to be capable of entering into closing transactions with a Fund, there is no assurance that such Fund will in fact be able to close out an OTC option at a favorable price prior to expiration. In the event of insolvency of the counterparty, a Fund might be unable to close out an OTC option position at any time prior to its expiration.

If a Fund is unable to effect a closing transaction for an option it had purchased, it would have to exercise the option to realize any profit. The inability to enter into a closing purchase transaction for a covered call option written by a Fund could cause material losses because the Fund would be unable to sell the investment used as a cover for the written option until the option expires or is exercised.

A Fund may engage in options transactions on indices in much the same manner as the options on securities discussed above, except that index options may serve as a hedge against overall fluctuations in the securities markets in general.

The writing and purchasing of options is a highly specialized activity that involves investment techniques and risks different from those associated with ordinary portfolio securities transactions. Imperfect correlation between the options and securities markets may detract from the effectiveness of attempted hedging.

Transactions using OTC options (other than purchased options) expose a Fund to counterparty risk. To the extent required by SEC regulations and guidance, a Fund will not enter into any such transactions unless it owns

either (1) an offsetting (“covered”) position in securities, other options, or futures or (2) cash and liquid obligations with a value sufficient at all times to cover its potential obligations to the extent not covered as provided in (1) above. A Fund will also earmark or set aside cash and/or appropriate liquid assets in a segregated custodial account if required to do so by SEC and CFTC regulations. Assets used as cover or held in a segregated account cannot be sold while the position in the corresponding option or futures contract is open, unless they are replaced with similar assets. As a result, the commitment of a large portion of the Fund’s assets to earmarking or segregated accounts as a cover could impede portfolio management or the Fund’s ability to meet redemption requests or other current obligations.

An interest rate option is an agreement with a counterparty giving the buyer the right but not the obligation to buy or sell one of an interest rate hedging vehicle (such as a Treasury future or interest rate swap) at a future date at a predetermined price. The option buyer would pay a premium at the inception of the agreement. An interest rate option can be used to actively manage a Fund’s interest rate risk with respect to either an individual bond or an overlay of the entire portfolio.

Spread Transactions. A Fund may purchase covered spread options from securities dealers. Such covered spread options are not presently exchange-listed or exchange-traded. The purchase of a spread option gives a Fund the right to put, or sell, a security that it owns at a fixed dollar spread or fixed yield spread in relationship to another security that the Fund does not own, but which is used as a benchmark. The risk to a Fund in purchasing covered spread options is the cost of the premium paid for the spread option and any transaction costs. In addition, there is no assurance that closing transactions will be available. The purchase of spread options will be used to protect a Fund against adverse changes in prevailing credit quality spreads, i.e., the yield spread between high-quality and lower-quality securities. Such protection is only provided during the life of the spread option.

Futures Contracts. A Fund may enter into futures contracts, including interest rate, index, and currency futures and purchase and write (sell) related options. The purchase of futures or call options thereon can serve as a long hedge, and the sale of futures or the purchase of put options thereon can serve as a short hedge. Writing covered call options on futures contracts can serve as a limited short hedge, and writing covered put options on futures contracts can serve as a limited long hedge, using a strategy similar to that used for writing covered options in securities. A Fund’s hedging may include purchases of futures as an offset against the effect of expected increases in securities prices or currency exchange rates and sales of futures as an offset against the effect of expected declines in securities prices or currency exchange rates. A Fund may write put options on futures contracts while at the same time purchasing call options on the same futures contracts in order to create synthetically a long futures contract position. Such options would have the same strike prices and expiration dates. A Fund will engage in this strategy only when a Fund’s subadviser believes it is more advantageous to a Fund than purchasing the futures contract.

To the extent required by regulatory authorities, a Fund will only enter into futures contracts that are traded on U.S. or foreign exchanges or boards of trade approved by the CFTC and are standardized as to maturity date and underlying financial instrument. These transactions may be entered into for “bona fide hedging” purposes as defined in CFTC regulations and other permissible purposes including increasing return, substituting a position in a security, group of securities or an index, and hedging against changes in the value of portfolio securities due to anticipated changes in interest rates, currency values and/or market conditions. There is no overall limit on the percentage of a Fund’s assets that may be at risk with respect to futures activities. Although techniques other than sales and purchases of futures contracts could be used to obtain or reduce a Fund’s exposure to market, currency, or interest rate fluctuations, such Fund may be able to obtain or hedge its exposure more effectively and perhaps at a lower cost through using futures contracts.

A futures contract provides for the future sale by one party and purchase by another party of a specified amount of a specific financial instrument (e.g., debt security), asset or currency for a specified price at a designated date, time, and place. An index futures contract is an agreement pursuant to which the parties agree to take or make delivery of an amount of cash equal to a specified multiplier times the difference between the value of the index at the close of the last trading day of the contract and the price at which the index futures contract was originally written. Transaction costs are incurred when a futures contract is bought or sold and margin deposits must be maintained. A futures contract may be satisfied by delivery or purchase, as the case may be, of the instrument, the

currency, or by payment of the change in the cash value of the index. More commonly, futures contracts are closed out prior to delivery by entering into an offsetting transaction in a matching futures contract. Although the value of an index might be a function of the value of certain specified securities, no physical delivery of those securities is made. If the offsetting purchase price is less than the original sale price, a Fund realizes a gain; if it is more, a Fund realizes a loss. Conversely, if the offsetting sale price is more than the original purchase price, a Fund realizes a gain; if it is less, a Fund realizes a loss. The transaction costs must also be included in these calculations. There can be no assurance, however, that a Fund will be able to enter into an offsetting transaction with respect to a particular futures contract at a particular time. If a Fund is not able to enter into an offsetting transaction, the Fund will continue to be required to maintain the margin deposits on the futures contract.

No price is paid by a Fund upon entering into a futures contract. Instead, at the inception of a futures contract, the Fund is required to deposit with the futures broker or in a segregated account with its custodian, in the name of the futures broker through whom the transaction was effected, "initial margin" consisting of cash, U.S. government securities or other liquid obligations, in an amount generally equal to 10% or less of the contract value. Margin must also be deposited when writing a call or put option on a futures contract, in accordance with applicable exchange rules. Unlike margin in securities transactions, initial margin on futures contracts does not represent a borrowing, but rather is in the nature of a performance bond or good-faith deposit that is returned to a Fund at the termination of the transaction if all contractual obligations have been satisfied. Under certain circumstances, such as periods of high volatility, a Fund may be required by an exchange to increase the level of its initial margin payment, and initial margin requirements might be increased generally in the future by regulatory action.

Subsequent "variation margin" payments are made to and from the futures broker daily as the value of the futures position varies, a process known as "marking to market." Variation margin does not involve borrowing, but rather represents a daily settlement of a Fund's obligations to or from a futures broker. When a Fund purchases an option on a future, the premium paid plus transaction costs is all that is at risk. In contrast, when a Fund purchases or sells a futures contract or writes a call or put option thereon, it is subject to daily variation margin calls that could be substantial in the event of adverse price movements. If a Fund has insufficient cash to meet daily variation margin requirements, it might need to sell securities at a time when such sales are disadvantageous. Purchasers and sellers of futures positions and options on futures can enter into offsetting closing transactions by selling or purchasing, respectively, an instrument identical to the instrument held or written. Positions in futures and options on futures may be closed only on an exchange or board of trade on which they were entered into (or through a linked exchange). Although the Funds generally intend to enter into futures transactions only on exchanges or boards of trade where there appears to be an active market, there can be no assurance that such a market will exist for a particular contract at a particular time.

Under certain circumstances, futures exchanges may establish daily limits on the amount that the price of a future or option on a futures contract can vary from the previous day's settlement price; once that limit is reached, no trades may be made that day at a price beyond the limit. Daily price limits do not limit potential losses because prices could move to the daily limit for several consecutive days with little or no trading, thereby preventing liquidation of unfavorable positions.

If a Fund were unable to liquidate a futures contract or option on a futures contract position due to the absence of a liquid secondary market or the imposition of price limits, it could incur substantial losses, because it would continue to be subject to market risk with respect to the position. In addition, except in the case of purchased options, the Fund would continue to be required to make daily variation margin payments and might be required to maintain the position being hedged by the future or option or to maintain cash or securities in a segregated account.

Certain characteristics of the futures market might increase the risk that movements in the prices of futures contracts or options on futures contracts might not correlate perfectly with movements in the prices of the investments being hedged. For example, all participants in the futures and options on futures contracts markets are subject to daily variation margin calls and might be compelled to liquidate futures or options on futures contracts positions whose prices are moving unfavorably to avoid being subject to further calls. These liquidations could increase price volatility of the instruments and distort the normal price relationship between the futures or options and the investments being hedged. Also, because initial margin deposit requirements in the futures markets are less

onerous than margin requirements in the securities markets, there might be increased participation by speculators in the future markets. This participation also might cause temporary price distortions. In addition, activities of large traders in both the futures and securities markets involving arbitrage, “program trading” and other investment strategies might result in temporary price distortions.

A Fund that invests in a futures contract is subject to the risk of loss of the initial and variation margin in the event of bankruptcy of the futures commission merchant (“FCM”) with which the Fund has an open futures position. A Fund’s assets may not be fully protected in the event of the bankruptcy of the FCM or central counterparty because the Fund might be limited to recovering only a pro rata share of all available funds and margin segregated on behalf of the FCM’s customers. If the FCM fails to provide accurate reporting, a Fund is also subject to the risk that the FCM could use the Fund’s assets, which are held in an omnibus account with assets belonging to the FCM’s other customers, to satisfy its own obligations or the payment obligations of another customer to the central counterparty.

Indexed and Inverse Securities. A Fund may invest in securities the potential return of which is based on an index or interest rate. As an illustration, a Fund may invest in a debt security that pays interest based on the current value of an interest rate index, such as the prime rate. A Fund may also invest in a debt security that returns principal at maturity based on the level of a securities index or a basket of securities, or based on the relative changes of two indices. In addition, certain Funds may invest in securities the potential return of which is based inversely on the change in an index or interest rate (that is, a security the value of which will move in the opposite direction of changes to an index or interest rate). For example, a Fund may invest in securities that pay a higher rate of interest when a particular index decreases and pay a lower rate of interest (or do not fully return principal) when the value of the index increases. If a Fund invests in such securities, it may be subject to reduced or eliminated interest payments or loss of principal in the event of an adverse movement in the relevant interest rate, index or indices. Indexed and inverse securities involve credit risk, and certain indexed and inverse securities may involve leverage risk, liquidity risk and currency risk. When used for hedging purposes, indexed and inverse securities involve correlation risk. (Furthermore, where such a security includes a contingent liability, in the event of an adverse movement in the underlying index or interest rate, a Fund may be required to pay substantial additional margin to maintain the position.)

Credit Linked Notes. (Fixed-Income Funds only) A credit linked note (“CLN”) is a type of hybrid instrument in which a special purpose entity issues a structured note (the “Note Issuer”) that is intended to replicate a corporate bond or a portfolio of corporate bonds. The purchaser of the CLN (the “Note Purchaser”) invests a par amount and receives a payment during the term of the CLN that equals a fixed or floating rate of interest equivalent to a highly rated funded asset (such as a bank certificate of deposit) plus an additional premium that relates to taking on the credit risk of an identified bond (the “Reference Bond”). Upon maturity of the CLN, the Note Purchaser will receive a payment equal to: (i) the original par amount paid to the Note issuer, if there is neither a designated event of default (an “Event of Default”) with respect to the Reference Bond nor a restructuring of the issuer of the Reference Bond (a “Restructuring Event”); or (ii) the value of the Reference Bond if an Event of Default or a Restructuring Event has occurred. Depending upon the terms of the CLN, it is also possible that the Note Purchaser may be required to take physical delivery of the Reference Bond in the event of an Event of Default or a Restructuring Event.

Swap Agreements. The Federated NVIT High Income Bond Fund may enter into credit default swap agreements for any lawful purpose consistent with the Fund’s investment objective, such as for the purpose of attempting to obtain or preserve a particular desired return or spread at a lower cost to the Fund than if the Fund had invested directly in an instrument that yielded that desired return or spread. The Fund also may enter into credit default swaps in order to protect against an increase in the price of, or the currency exchange rate applicable to, securities that the Fund anticipates purchasing at a later date. Swap agreements are two-party contracts entered into primarily by institutional investors for periods ranging from one or more days to several years. In a standard “swap” transaction, two parties agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or instruments. The gross returns to be exchanged or “swapped” between the parties are calculated with respect to a “notional amount,” i.e., the return on or increase in value of a particular dollar amount invested at a particular interest rate, in a particular foreign currency, or in a “basket” of securities

representing a particular index. Swap agreements may be negotiated bilaterally and traded OTC between the two parties (for an uncleared swap) or, with respect to swaps that have been designated by the CFTC for mandatory clearing (cleared swaps), through an FCM and cleared through a clearinghouse that serves as a central counterparty. See “Uncleared Swaps” and “Cleared Swaps” below for additional explanation of cleared and uncleared swaps. Swap agreements may include interest rate caps, under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates exceed a specified rate, or “cap”; interest rate floors under which, in return for a premium, one party agrees to make payments to the other to the extent that interest rates fall below a specified level, or “floor”; and interest rate collars, under which a party sells a cap and purchases a floor, or vice versa, in an attempt to protect itself against interest rate movements exceeding given minimum or maximum levels.

The “notional amount” of the swap agreement is the agreed upon basis for calculating the obligations that the parties to a swap agreement have agreed to exchange. Under most swap agreements entered into by the Fund, the obligations of the parties would be exchanged on a “net basis.” Consequently, the Fund’s obligation (or rights) under a swap agreement will generally be equal only to the net amount to be paid or received under the agreement based on the relative values of the positions held by each party to the agreement (the “net amount”). The Fund’s obligation under a swap agreement will be accrued daily (offset against amounts owed to the Fund) and any accrued but unpaid net amounts owed to a swap counterparty will be covered by the maintenance of a segregated account consisting of cash or liquid assets.

Whether the Fund’s use of swap agreements will be successful in furthering its investment objective will depend, in part, on the Fund’s subadviser’s ability to predict correctly whether certain types of investments are likely to produce greater returns than other investments or otherwise replicate a particular benchmark index. Swap agreements may be considered to be illiquid.

New swaps regulation. The Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the “Dodd-Frank Act”) and related regulatory developments have imposed comprehensive new regulatory requirements on swaps and swap market participants. The new regulatory framework includes: (1) registration and regulation of swap dealers and major swap participants; (2) central clearing and execution of standardized swaps; (3) margin requirements in swap transactions; (4) position limits and large trader reporting requirements; and (5) record keeping and centralized and public reporting requirements, on an anonymous basis, for most swaps. The CFTC is responsible for the regulation of most swaps, and has completed most of its rules implementing the Dodd-Frank Act swap regulations. The SEC has jurisdiction over a small segment of the market referred to as “security-based swaps,” which includes swaps on single securities or credits, or narrow-based indices of securities or credits, but has not yet completed its rulemaking.

Uncleared swaps. In an uncleared swap, the swap counterparty is typically a brokerage firm, bank or other financial institution. The Fund customarily enters into uncleared swaps based on the standard terms and conditions of an International Swaps and Derivatives Association (ISDA) Master Agreement. ISDA is a voluntary industry association of participants in the over-the-counter derivatives markets that has developed standardized contracts used by such participants that have agreed to be bound by such standardized contracts.

In the event that one party to a swap transaction defaults and the transaction is terminated prior to its scheduled termination date, one of the parties may be required to make an early termination payment to the other. An early termination payment may be payable by either the defaulting or non-defaulting party, depending upon which of them is “in-the-money” with respect to the swap at the time of its termination. Early termination payments may be calculated in various ways, but are intended to approximate the amount the “in-the-money” party would have to pay to replace the swap as of the date of its termination.

The Fund will enter uncleared swap agreements only with counterparties that the Fund’s subadviser reasonably believes are capable of performing under the swap agreements. If there is a default by the other party to such a transaction, the Fund will have to rely on its contractual remedies (which may be limited by bankruptcy, insolvency or similar laws) pursuant to the agreements related to the transaction.

Cleared swaps. Certain swaps have been designated by the CFTC for mandatory central clearing. The Dodd-Frank Act and implementing rules will ultimately require the clearing and exchange-trading of many swaps. Mandatory exchange-trading and clearing will occur on a phased-in basis based on the type of market participant and CFTC approval of contracts for central clearing. To date, the CFTC has designated only certain of the most common types of credit default index swaps and interest rate swaps for mandatory clearing, but it is expected that the CFTC will designate additional categories of swaps for mandatory clearing. Central clearing is intended to reduce counterparty credit risk and increase liquidity, but central clearing does not necessarily eliminate these risks and may involve additional risks not involved with uncleared swaps.

In a cleared swap, a Fund's ultimate counterparty is a central clearinghouse rather than a brokerage firm, bank or other financial institution. The Fund initially will enter into cleared swaps through an executing broker. Such transactions will then be submitted for clearing and, if cleared, will be held at regulated FCMs that are members of the clearinghouse that serves as the central counterparty.

When a Fund enters into a cleared swap, it must deliver to the central counterparty (via the FCM) an amount referred to as "initial margin." Initial margin requirements are determined by the central counterparty, but an FCM may require additional initial margin above the amount required by the central counterparty. During the term of the swap agreement, a "variation margin" amount may also be required to be paid by the Fund or may be received by the Fund in accordance with margin controls set for such accounts, depending upon changes in the price of the underlying reference instrument subject to the swap agreement. At the conclusion of the term of the swap agreement, if the Fund has a loss equal to or greater than the margin amount, the margin amount is paid to the FCM along with any loss in excess of the margin amount. If the Fund has a loss of less than the margin amount, the excess margin is returned to the Fund. If the Fund has a gain, the full margin amount and the amount of the gain is paid to the Fund.

Recently adopted CFTC rules will, when implemented, require the trading and execution of certain cleared swaps on public trading facilities, which will occur for each category of swaps subject to mandatory clearing once one or more trading facilities become accredited and make such category of swaps available to trade. Moving trading to an exchange-type system may increase market transparency and liquidity but may require a Fund to incur increased expenses to access the same types of swaps that it has used in the past.

Rules adopted under the Dodd-Frank Act require centralized reporting of detailed information about many swaps, whether cleared or uncleared. This information is available to regulators and also, to a more limited extent and on an anonymous basis, to the public. Reporting of swaps data is intended to result in greater market transparency. This may be beneficial to funds that use swaps in their trading strategies. However, public reporting imposes additional recordkeeping burdens on these funds, and the safeguards established to protect anonymity are not yet tested and may not provide protection of trader identities as intended.

Certain Internal Revenue Service positions may limit a Fund's ability to use swap agreements in a desired tax strategy. It is possible that developments in the swap markets and/or the laws relating to swap agreements, including potential government regulation, could adversely affect the Fund's ability to benefit from using swap agreements, or could have adverse tax consequences.

Risks of cleared swaps. As noted above, under recent financial reforms, certain types of swaps are, and others eventually are expected to be, required to be cleared through a central counterparty, which may affect counterparty risk and other risks faced by a Fund. Central clearing is designed to reduce counterparty credit risk and increase liquidity compared to bilateral swaps because central clearing interposes the central clearinghouse as the counterparty to each participant's swap, but it does not eliminate those risks completely. There is also a risk of loss by a Fund of the initial and variation margin deposits in the event of bankruptcy of the FCM with which the Fund has an open position in a swap contract. The assets of the Fund may not be fully protected in the event of the bankruptcy of the FCM or central counterparty because the Fund might be limited to recovering only a pro rata share of all available funds and margin segregated on behalf of an FCM's customers. If the FCM does not provide accurate reporting, the Fund is also subject to the risk that the FCM could use the Fund's assets, which are held in an

omnibus account with assets belonging to the FCM's other customers, to satisfy its own financial obligations or the payment obligations of another customer to the central counterparty.

With cleared swaps, the Fund may not be able to obtain as favorable terms as it would be able to negotiate for a bilateral, uncleared swap. In addition, an FCM may unilaterally amend the terms of its agreement with the Fund, which may include the imposition of position limits or additional margin requirements with respect to the Fund's investment in certain types of swaps. Central counterparties and FCMs generally can require termination of existing cleared swap transactions at any time, and can also require increases in margin above the margin that is required at the initiation of the swap agreement. Additionally, depending on a number of factors, the margin required under the rules of the clearinghouse and FCM may be in excess of the collateral required to be posted by a Fund to support its obligations under a similar uncleared swap. However, regulators are expected to adopt rules imposing certain margin requirements, including minimums, on uncleared swaps in the near future, which could change this comparison.

Finally, the Fund is subject to the risk that, after entering into a cleared swap with an executing broker, no FCM or central counterparty is willing or able to clear the transaction. In such an event, the Fund may be required to break the trade and make an early termination payment to the executing broker.

Credit Default Swaps. The Federated NVIT High Income Bond Fund may enter into credit default swap contracts. The Fund would use credit default swap contracts to create direct or synthetic short or long exposure to domestic or foreign corporate or sovereign debt securities.

As the seller in a credit default swap contract, the Fund would be required to pay the par (or other agreed-upon) value of a referenced debt obligation to the counterparty in the event of a default (or similar event) by a third party, such as a U.S. or foreign issuer, on the debt obligation. In return, the Fund would receive from the counterparty a periodic stream of payments over the term of the contract, provided that no event of default (or similar event) occurs. If no event of default (or similar event) occurs, the Fund would keep the stream of payments and would have no payment of obligations. As the seller in a credit default swap contract, the Fund effectively would add economic leverage to its portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap.

As the purchaser in a credit default swap contract, the Fund would function as the counterparty referenced in the preceding paragraph. This would involve the risk that the investment might expire worthless. It also would involve credit risk – that the seller may fail to satisfy its payment obligations to the Fund in the event of a default (or similar event). As the purchaser in a credit default swap contract, the Fund's investment would generate income only in the event of an actual default (or similar event) by the issuer of the underlying obligation.

Foreign Currency-Related Derivative Strategies - Special Considerations. A Fund may use futures and options on futures on foreign currencies and forward currency contracts to hedge against movements in the values of the foreign currencies in which a Fund's securities are denominated. Currency contracts may also be purchased such that net exposure to an individual currency exceeds the value of the Fund's securities that are denominated in that particular currency. A Fund may engage in currency exchange transactions to protect against uncertainty in the level of future exchange rates and may also engage in currency transactions to increase income and total return. Such currency hedges can protect against price movements in a security the Fund owns or intends to acquire that are attributable to changes in the value of the currency in which it is denominated. Such hedges do not, however, protect against price movements in the securities that are attributable to other causes.

A Fund might seek to hedge against changes in the value of a particular currency when no hedging instruments on that currency are available or such hedging instruments are more expensive than certain other hedging instruments. In such cases, a Fund may hedge against price movements in that currency by entering into transactions using hedging instruments on another foreign currency or a basket of currencies, the values of which a subadviser believes will have a high degree of positive correlation to the value of the currency being hedged. The risk that movements in the price of the hedging instrument will not correlate perfectly with movements in the price of the currency being hedged is magnified when this strategy is used.

The value of derivative instruments on foreign currencies depends on the value of the underlying currency relative to the U.S. dollar. Because foreign currency transactions occurring in the interbank market might involve substantially larger amounts than those involved in the use of such hedging instruments, a Fund could be disadvantaged by having to deal in the odd lot market (generally consisting of transactions of less than \$1 million) for the underlying foreign currencies at prices that are less favorable than for round lots.

There is no systematic reporting of last sale information for foreign currencies or any regulatory requirement that quotations available through dealers or other market sources be firm or revised on a timely basis. Quotation information generally is representative of very large transactions in the interbank market and thus might not reflect odd-lot transactions where rates might be less favorable. The interbank market in foreign currencies is a global, round-the-clock market. To the extent the U.S. options or futures markets are closed while the markets for the underlying currencies remain open, significant price and rate movements might take place in the underlying markets that cannot be reflected in the markets for the derivative instruments until they reopen.

Settlement of derivative transactions involving foreign currencies might be required to take place within the country issuing the underlying currency. Thus, a Fund might be required to accept or make delivery of the underlying foreign currency in accordance with any U.S. or foreign regulations regarding the maintenance of foreign banking arrangements by U.S. residents and might be required to pay any fees, taxes and charges associated with such delivery assessed in the issuing country.

Permissible foreign currency options will include options traded primarily in the OTC market. Although options on foreign currencies are traded primarily in the OTC market, a Fund will normally purchase OTC options on foreign currency only when a Fund's subadviser believes a liquid secondary market will exist for a particular option at any specific time.

Forward Currency Contracts. A forward currency contract involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract agreed upon by the parties, at a price set at the time of the contract. These contracts are entered into in the interbank market conducted directly between currency traders (usually large commercial banks) and their customers.

At or before the maturity of a forward currency contract, a Fund may either sell a portfolio security and make delivery of the currency, or retain the security and fully or partially offset its contractual obligation to deliver the currency by purchasing a second contract. If a Fund retains the portfolio security and engages in an offsetting transaction, the Fund, at the time of execution of the offsetting transaction, will incur a gain or a loss to the extent that movement has occurred in forward currency contract prices.

The precise matching of forward currency contract amounts and the value of the securities involved generally will not be possible because the value of such securities, measured in the foreign currency, will change after the foreign currency contract has been established. Thus, the Fund might need to purchase or sell foreign currencies in the spot (cash) market to the extent such foreign currencies are not covered by forward currency contracts. The projection of short-term currency market movements is extremely difficult, and the successful execution of a short-term hedging strategy is highly uncertain.

Markets for trading foreign forward currency contracts offer less protection against defaults than is available when trading in currency instruments on an exchange. Forward contracts are subject to the risk that the counterparty to such contract will default on its obligations. Since a forward foreign currency exchange contract is not guaranteed by an exchange or clearinghouse, a default on the contract would deprive a Fund of unrealized profits or the benefits of a currency hedge, impose transaction costs or force the Fund to cover its purchase or sale commitments, if any, at the current market price. In addition, the institutions that deal in forward currency contracts are not required to continue to make markets in the currencies they trade and these markets can experience periods of illiquidity. To the extent that a substantial portion of a Fund's total assets, adjusted to reflect the Fund's net position after giving effect to currency transactions, is denominated or quoted in currencies of foreign countries, the Fund will be more susceptible to the risk of adverse economic and political developments within those countries.

Currency Hedging. While the values of forward currency contracts, currency options, currency futures and options on futures may be expected to correlate with exchange rates, they will not reflect other factors that may affect the value of a Fund's investments. A currency hedge, for example, should protect a Yen-denominated bond against a decline in the Yen, but will not protect a Fund against price decline if the issuer's creditworthiness deteriorates. Because the value of a Fund's investments denominated in foreign currency will change in response to many factors other than exchange rates, a currency hedge may not be entirely successful in mitigating changes in the value of a Fund's investments denominated in that currency over time.

A decline in the dollar value of a foreign currency in which a Fund's securities are denominated will reduce the dollar value of the securities, even if their value in the foreign currency remains constant. The use of currency hedges does not eliminate fluctuations in the underlying prices of the securities, but it does establish a rate of exchange that can be achieved in the future. In order to protect against such diminutions in the value of securities it holds, a Fund may purchase put options on the foreign currency. If the value of the currency does decline, the Fund will have the right to sell the currency for a fixed amount in dollars and will thereby offset, in whole or in part, the adverse effect on its securities that otherwise would have resulted. Conversely, if a rise in the dollar value of a currency in which securities to be acquired are denominated is projected, thereby potentially increasing the cost of the securities, a Fund may purchase call options on the particular currency. The purchase of these options could offset, at least partially, the effects of the adverse movements in exchange rates. Although currency hedges limit the risk of loss due to a decline in the value of a hedged currency, at the same time, they also limit any potential gain that might result should the value of the currency increase.

A Fund may enter into foreign currency exchange transactions to hedge its currency exposure in specific transactions or portfolio positions. Currency contracts may also be purchased such that net exposure to an individual currency exceeds the value of the Fund's securities that are denominated in that particular currency. Transaction hedging is the purchase or sale of forward currency with respect to specific receivables or payables of a Fund generally accruing in connection with the purchase or sale of its portfolio securities. Position hedging is the sale of forward currency with respect to portfolio security positions. A Fund may not position hedge to an extent greater than the aggregate market value (at the time of making such sale) of the hedged securities.

Foreign Commercial Paper. A Fund may invest in commercial paper which is indexed to certain specific foreign currency exchange rates. The terms of such commercial paper provide that its principal amount is adjusted upward or downward (but not below zero) at maturity to reflect changes in the exchange rate between two currencies while the obligation is outstanding. A Fund will purchase such commercial paper with the currency in which it is denominated and, at maturity, will receive interest and principal payments thereon in that currency, but the amount or principal payable by the issuer at maturity will change in proportion to the change (if any) in the exchange rate between two specified currencies between the date the instrument is issued and the date the instrument matures. While such commercial paper entails the risk of loss of principal, the potential for realizing gains as a result of changes in the foreign currency exchange rate enables a Fund to hedge or cross-hedge against a decline in the U.S. dollar value of investments denominated in foreign currencies while providing an attractive money market rate of return. A Fund will purchase such commercial paper either for hedging purposes or in order to seek investment gain. The Funds believe that such investments do not involve the creation of a senior security, but nevertheless will earmark or establish a segregated account with respect to its investments in this type of commercial paper and maintain in such account cash not available for investment or other liquid assets having a value equal to the aggregate principal amount of outstanding commercial paper of this type.

Foreign Securities

Each Fund may invest in securities of issuers located outside the United States. Funds that invest in foreign securities offer the potential for more diversification than Funds that invest only in the United States because securities traded on foreign markets have often (though not always) performed differently from securities traded in the United States. However, such investments often involve risks not present in U.S. investments that can increase the chances that a Fund will lose money. In particular, a Fund is subject to the risk that, because there are generally fewer investors on foreign exchanges and a smaller number of shares traded each day, it may be difficult for the

Fund to buy and sell securities on those exchanges. In addition, prices of foreign securities may fluctuate more than prices of securities traded in the United States. Investments in foreign markets may also be adversely affected by governmental actions such as the imposition of punitive taxes. In addition, the governments of certain countries may prohibit or impose substantial restrictions on foreign investing in their capital markets or in certain industries. Any of these actions could severely affect security prices, impair a Fund's ability to purchase or sell foreign securities or transfer the Fund's assets or income back into the United States, or otherwise adversely affect a Fund's operations. Other potential foreign market risks include changes in foreign currency exchange rates, exchange controls, difficulties in pricing securities, defaults on foreign government securities, difficulties in enforcing favorable legal judgments in foreign courts, and political and social instability. Legal remedies available to investors in certain foreign countries may be less extensive than those available to investors in the United States or other foreign countries. Dividends or interest on, or proceeds from the sale of, foreign securities may be subject to foreign withholding taxes.

Regional Risk. Adverse conditions in a certain region can adversely affect securities of issuers in other countries whose economies appear to be unrelated. To the extent that a Fund invests a significant portion of its assets in a specific geographic region, the Fund will generally have more exposure to regional economic risks. In the event of economic or political turmoil or a deterioration of diplomatic relations in a region or country where a substantial portion of the Fund's assets are invested, the Fund may experience substantial illiquidity.

Foreign Economy Risk. The economies of certain foreign markets often do not compare favorably with that of the United States with respect to such issues as growth of gross national product, reinvestment of capital, resources, and balance of payments position. Certain such economies may rely heavily on particular industries or foreign capital and are more vulnerable to diplomatic developments, the imposition of economic sanctions against a particular country or countries, changes in international trading patterns, trade barriers, and other protectionist or retaliatory measures.

Currency Risk and Exchange Risk. Unless a Fund's Prospectus states a policy to invest only in securities denominated in U.S. dollars, a Fund may invest in securities denominated or quoted in currencies other than the U.S. dollar. In such case, changes in foreign currency exchange rates will affect the value of a Fund's portfolio. Generally, when the U.S. dollar rises in value against a foreign currency, a security denominated in that currency loses value because the currency is worth fewer U.S. dollars. Conversely, when the U.S. dollar decreases in value against a foreign currency, a security denominated in that currency gains value because the currency is worth more U.S. dollars. This risk, generally known as "currency risk," means that a stronger U.S. dollar will reduce returns for U.S. investors while a weak U.S. dollar will increase those returns.

Governmental Supervision and Regulation/Accounting Standards. Many foreign governments supervise and regulate stock exchanges, brokers and the sale of securities less than does the United States. Some countries may not have laws to protect investors comparable to the U.S. securities laws. For example, some foreign countries may have no laws or rules against insider trading. Insider trading occurs when a person buys or sells a company's securities based on nonpublic information about that company. Accounting standards in other countries are not necessarily the same as in the United States. If the accounting standards in another country do not require as much detail as U.S. accounting standards, it may be harder for Fund management to completely and accurately determine a company's financial condition. In addition, the U.S. government has from time to time in the past imposed restrictions, through penalties and otherwise, on foreign investments by U.S. investors such as the Fund. If such restrictions should be reinstated, it might become necessary for the Fund to invest all or substantially all of its assets in U.S. securities.

Certain Risks of Holding Fund Assets Outside the United States. A Fund generally holds its foreign securities and cash in foreign banks and securities depositories. Some foreign banks and securities depositories may be recently organized or new to the foreign custody business. In addition, there may be limited or no regulatory oversight over their operations. Also, the laws of certain countries may put limits on a Fund's ability to recover its assets if a foreign bank or depository or issuer of a security or any of their agents goes bankrupt. In addition, it is often more expensive for a Fund to buy, sell and hold securities in certain foreign markets than in the United States. The increased expense of investing in foreign markets reduces the amount a Fund can earn on its investments and

typically results in a higher operating expense ratio for the Fund as compared to investment companies that invest only in the United States.

Settlement Risk. Settlement and clearance procedures in certain foreign markets differ significantly from those in the United States. Foreign settlement procedures and trade regulations also may involve certain risks (such as delays in payment for or delivery of securities) not typically generated by the settlement of U.S. investments. Communications between the United States and emerging market countries may be unreliable, increasing the risk of delayed settlements or losses of security certificates in markets that still rely on physical settlement. Settlements in certain foreign countries at times have not kept pace with the number of securities transactions; these problems may make it difficult for a Fund to carry out transactions. If a Fund cannot settle or is delayed in settling a purchase of securities, it may miss attractive investment opportunities and certain of its assets may be uninvested with no return earned thereon for some period. If a Fund cannot settle or is delayed in settling a sale of securities, it may lose money if the value of the security then declines or, if it has contracted to sell the security to another party, the Fund could be liable to that party for any losses incurred.

Investment in Emerging Markets. The Funds (except for the NVIT Money Market Fund) may invest in the securities of issuers domiciled in various countries with emerging capital markets. For purposes of the NVIT Developing Markets Fund and the NVIT Emerging Markets Fund, emerging market countries are developing and low- or middle-income countries that are not classified as developed countries by MSCI. For purposes of each of the other Funds, emerging market countries are developing and low or middle income countries that are included in the MSCI Emerging Markets Index. Emerging market countries may be found in regions such as Asia, Latin America, Eastern Europe, the Middle East and Africa.

Investments in the securities of issuers domiciled in countries with emerging capital markets involve certain additional risks that do not generally apply to investments in securities of issuers in more developed capital markets, such as (i) low or non-existent trading volume, resulting in a lack of liquidity and increased volatility in prices for such securities, as compared to securities of comparable issuers in more developed capital markets; (ii) uncertain national policies and social, political and economic instability, increasing the potential for expropriation of assets, confiscatory taxation, high rates of inflation or unfavorable diplomatic developments; (iii) possible fluctuations in exchange rates, differing legal systems and the existence or possible imposition of exchange controls, custodial restrictions or other foreign or U.S. governmental laws or restrictions applicable to such investments; (iv) national policies that may limit a Fund's investment opportunities such as restrictions on investment in issuers or industries deemed sensitive to national interests; and (v) the lack or relatively early development of legal structures governing private and foreign investments and private property. In addition to withholding taxes on investment income, some countries with emerging markets may impose differential capital gains taxes on foreign investors.

Emerging capital markets are developing in a dynamic political and economic environment brought about by events over recent years that have reshaped political boundaries and traditional ideologies. In such a dynamic environment, there can be no assurance that any or all of these capital markets will continue to present viable investment opportunities for a Fund. In the past, governments of such nations have expropriated substantial amounts of private property, and most claims of the property owners have never been fully settled. There is no assurance that such expropriations will not reoccur. In such an event, it is possible that a Fund could lose the entire value of its investments in the affected market.

Also, there may be less publicly available information about issuers in emerging markets than would be available about issuers in more developed capital markets, and such issuers may not be subject to accounting, auditing and financial reporting standards and requirements comparable to those to which U.S. companies are subject. In certain countries with emerging capital markets, reporting standards vary widely. As a result, traditional investment measurements used in the United States, such as price/earnings ratios, may not be applicable. Emerging market securities may be substantially less liquid and more volatile than those of mature markets, and company shares may be held by a limited number of persons. This may adversely affect the timing and pricing of the Fund's acquisition or disposal of securities.

Practices in relation to settlement of securities transactions in emerging markets involve higher risks than those in developed markets, in part because a Fund will need to use brokers and counterparties that are less well capitalized, and custody and registration of assets in some countries may be unreliable. The possibility of fraud, negligence, undue influence being exerted by the issuer or refusal to recognize ownership exists in some emerging markets, and, along with other factors, could result in ownership registration being completely lost. A Fund would absorb any loss resulting from such registration problems and may have no successful claim for compensation.

Restrictions on Certain Investments. A number of publicly traded closed-end investment companies have been organized to facilitate indirect foreign investment in developing countries, and certain of such countries, such as Thailand, South Korea, Chile and Brazil, have specifically authorized such funds. There also are investment opportunities in certain of such countries in pooled vehicles that resemble open-end investment companies. In accordance with the 1940 Act, a Fund may invest up to 10% of its total assets in securities of other investment companies, not more than 5% of which may be invested in any one such company. In addition, under the 1940 Act, a Fund may not own more than 3% of the total outstanding voting stock of any investment company. These restrictions on investments in securities of investment companies may limit opportunities for a Fund to invest indirectly in certain developing countries. Shares of certain investment companies may at times be acquired only at market prices representing premiums to their net asset values. If a Fund acquires shares of other investment companies, shareholders would bear both their proportionate share of expenses of the Fund (including management and advisory fees) and, indirectly, the expenses of such other investment companies.

Depository Receipts. A Fund may invest in foreign securities by purchasing depository receipts, including American Depository Receipts (“ADRs”), European Depository Receipts (“EDRs”), Global Depository Receipts (“GDRs”) and non-voting depository receipts (“NVDRs”) or other securities convertible into securities of issuers based in foreign countries. These securities may not necessarily be denominated in the same currency as the securities into which they may be converted. Generally, ADRs, in registered form, are denominated in U.S. dollars and are designed for use in the U.S. securities markets, GDRs, in bearer form, are issued and designed for use outside the United States and EDRs (also referred to as Continental Depository Receipts (“CDRs”)), in bearer form, may be denominated in other currencies and are designed for use in European securities markets. ADRs are receipts typically issued by a U.S. bank or trust company evidencing ownership of the underlying securities. EDRs are European receipts evidencing a similar arrangement. GDRs are receipts typically issued by non-U.S. banks and trust companies that evidence ownership of either foreign or domestic securities. For purposes of a Fund’s investment policies, ADRs, GDRs, EDRs and NVDRs are deemed to have the same classification as the underlying securities they represent. Thus, an ADR, GDR, EDR or NVDR representing ownership of common stock will be treated as common stock.

A Fund may invest in depository receipts through “sponsored” or “unsponsored” facilities. While ADRs issued under these two types of facilities are in some respects similar, there are distinctions between them relating to the rights and obligations of ADR holders and the practices of market participants.

A depository may establish an unsponsored facility without participation by (or even necessarily the acquiescence of) the issuer of the deposited securities, although typically the depository requests a letter of non-objection from such issuer prior to the establishment of the facility. Holders of unsponsored ADRs generally bear all the costs of such facilities. The depository usually charges fees upon the deposit and withdrawal of the deposited securities, the conversion of dividends into U.S. dollars, the disposition of non-cash distributions, and the performance of other services. The depository of an unsponsored facility frequently is under no obligation to pass through voting rights to ADR holders in respect of the deposited securities. In addition, an unsponsored facility is generally not obligated to distribute communications received from the issuer of the deposited securities or to disclose material information about such issuer in the U.S. and thus there may not be a correlation between such information and the market value of the depository receipts. Unsponsored ADRs tend to be less liquid than sponsored ADRs.

Sponsored ADR facilities are created in generally the same manner as unsponsored facilities, except that the issuer of the deposited securities enters into a deposit agreement with the depository. The deposit agreement sets out the rights and responsibilities of the issuer, the depository, and the ADR holders. With sponsored facilities, the

issuer of the deposited securities generally will bear some of the costs relating to the facility (such as dividend payment fees of the depository), although ADR holders continue to bear certain other costs (such as deposit and withdrawal fees). Under the terms of most sponsored arrangements, depositories agree to distribute notices of shareholder meetings and voting instructions, and to provide shareholder communications and other information to the ADR holders at the request of the issuer of the deposited securities.

Foreign Sovereign Debt. The Fixed-Income Funds may invest in sovereign debt obligations issued by foreign governments. To the extent that a Fund invests in obligations issued by governments of developing or emerging market countries, these investments involve additional risks. Sovereign obligors in developing and emerging market countries are among the world's largest debtors to commercial banks, other governments, international financial organizations and other financial institutions. These obligors have in the past experienced substantial difficulties in servicing their external debt obligations, which led to defaults on certain obligations and the restructuring of certain indebtedness. Restructuring arrangements have included, among other things, reducing and rescheduling interest and principal payments by negotiating new or amended credit agreements or converting outstanding principal and unpaid interest to Brady Bonds, and obtaining new credit for finance interest payments. Holders of certain foreign sovereign debt securities may be requested to participate in the restructuring of such obligations and to extend further loans to their issuers. There can be no assurance that the foreign sovereign debt securities in which a Fund may invest will not be subject to similar restructuring arrangements or to requests for new credit which may adversely affect the Fund's holdings. Furthermore, certain participants in the secondary market for such debt may be directly involved in negotiating the terms of these arrangements and may therefore have access to information not available to other market participants.

Lending Portfolio Securities

Each Fund may lend its portfolio securities to brokers, dealers and other financial institutions, provided it receives collateral, with respect to each loan of U.S. securities, equal to at least 102% of the value of the portfolio securities loaned, and, with respect to each loan of non-U.S. securities, collateral of at least 105% of the value of the portfolio securities loaned, and at all times thereafter shall require the borrower to mark-to-market such collateral on a daily basis so that the market value of such collateral does not fall below 100% of the market value of the portfolio securities so loaned. By lending its portfolio securities, a Fund can increase its income through the investment of the collateral. For the purposes of this policy, a Fund considers collateral consisting of cash, U.S. government securities or letters of credit issued by banks whose securities meet the standards for investment by the Fund to be the equivalent of cash. From time to time, a Fund may return to the borrower or a third party which is unaffiliated with it, and which is acting as a "placing broker," a part of the interest earned from the investment of collateral received for securities loaned.

The SEC currently requires that the following conditions must be met whenever portfolio securities are loaned: (1) a Fund must receive from the borrower collateral equal to at least 100% of the value of the portfolio securities loaned; (2) the borrower must increase such collateral whenever the market value of the securities loaned rises above the level of such collateral; (3) a Fund must be able to terminate the loan at any time; (4) a Fund must receive reasonable interest on the loan, as well as any dividends, interest or other distributions payable on the loaned securities, and any increase in market value; (5) a Fund may pay only reasonable custodian fees in connection with the loan; and (6) while any voting rights on the loaned securities may pass to the borrower, a Fund must be able to terminate the loan and regain the right to vote the securities. A Fund generally will not seek to vote proxies relating to the securities on loan, unless it is in the best interests of the applicable Fund to do so. In addition, the Fund may not have on loan securities representing more than one-third of its total assets at any given time. The collateral that a Fund receives may be included in calculating a Fund's total assets. These conditions may be subject to future modification. Loan agreements involve certain risks in the event of default or insolvency of the other party including possible delays or restrictions upon the Fund's ability to recover the loaned securities or dispose of the collateral for the loan.

Investment of Securities Lending Collateral. The cash collateral received from a borrower as a result of a Fund's securities lending activities will be used to purchase both fixed-income securities and other securities with debt-like characteristics that are rated A1 or P1 on a fixed rate or floating rate basis, including: bank obligations;

commercial paper; investment agreements, funding agreements, or guaranteed investment contracts entered into with, or guaranteed by an insurance company; loan participations; master notes; medium-term notes; repurchase agreements; and U.S. government securities. Except for the investment agreements, funding agreements or guaranteed investment contracts guaranteed by an insurance company, master notes, and medium-term notes (which are described below), these types of investments are described elsewhere in the SAI. Collateral may also be invested in a money market mutual fund or short-term collective investment trust.

Investment agreements, funding agreements, or guaranteed investment contracts entered into with, or guaranteed by, an insurance company are agreements in which an insurance company either provides for the investment of the Fund's assets or provides for a minimum guaranteed rate of return to the investor.

Master notes are promissory notes issued usually with large, creditworthy broker-dealers on either a fixed-rate or floating-rate basis. Master notes may or may not be collateralized by underlying securities. If the master note is issued by an unrated subsidiary of a broker-dealer, then an unconditional guarantee is provided by the issuer's parent.

Medium-term notes are unsecured, continuously offered corporate debt obligations. Although medium-term notes may be offered with a maturity from one to ten years, in the context of securities lending collateral, the maturity of the medium-term note will not generally exceed two years.

Loan Participations and Assignments

Each Fund may invest in Loan Participations and Assignments. Loan Participations typically will result in a Fund having a contractual relationship only with the lender, not with the borrower. A Fund will have the right to receive payments of principal, interest and any fees to which it is entitled only from the lender selling the Loan Participation and only upon receipt by the lender of the payments from the borrower. In connection with purchasing Loan Participations, a Fund generally will have no right to enforce compliance by the borrower with the terms of the loan agreement relating to the loan, nor any rights of set-off against the borrower, and a Fund may not benefit directly from any collateral supporting the loan in which it has purchased the Loan Participation. As a result, a Fund will assume the credit risk of both the borrower and the lender that is selling the Loan Participation. In the event of the insolvency of the lender selling a Loan Participation, a Fund may be treated as a general creditor of the lender and may not benefit from any set-off between the lender and the borrower. When a Fund purchases Assignments from lenders, the Fund will acquire direct rights against the borrower on the loan, except that under certain circumstances such rights may be more limited than those held by the assigning lender.

A Fund may have difficulty disposing of Assignments and Loan Participations. Because the market for such instruments is not highly liquid, the Fund anticipates that such instruments could be sold only to a limited number of institutional investors. The lack of a highly liquid secondary market may have an adverse impact on the value of such instruments and will have an adverse impact on the Fund's ability to dispose of particular Assignments or Loan Participations in response to a specific economic event, such as deterioration in the creditworthiness of the borrower.

Repurchase Agreements

Each Fund may enter into repurchase agreements. In connection with the purchase by a Fund of a repurchase agreement from member banks of the Federal Reserve System or certain non-bank dealers, the Fund's custodian, or a subcustodian, will have custody of, and will earmark or segregate securities acquired by the Fund under such repurchase agreement. Repurchase agreements are contracts under which the buyer of a security simultaneously commits to resell the security to the seller at an agreed-upon price and date. Repurchase agreements are considered by the staff of the SEC to be loans by the Fund. A Fund will include any collateral that the Fund receives in calculating the Fund's total assets in determining whether a Fund has loaned more than one-third of its assets. Repurchase agreements may be entered into with respect to securities of the type in which the Fund may invest or government securities regardless of their remaining maturities, and will require that additional securities be deposited if the value of the securities purchased should decrease below resale price. Repurchase agreements involve certain risks in the event of default or insolvency by the other party, including possible delays or restrictions

upon a Fund's ability to dispose of the underlying securities, the risk of a possible decline in the value of the underlying securities during the period in which a Fund seeks to assert its rights to them, the risk of incurring expenses associated with asserting those rights and the risk of losing all or part of the income from the repurchase agreement. A Fund's subadviser reviews the creditworthiness of those banks and non-bank dealers with which the Funds enter into repurchase agreements to evaluate these risks.

Restricted, Non-Publicly Traded and Illiquid Securities

A Fund may not invest more than 15% (5% with respect to the NVIT Money Market Fund) of its net assets, in the aggregate, in illiquid securities, including repurchase agreements which have a maturity of longer than seven days, time deposits maturing in more than seven days and securities that are illiquid because of the absence of a readily available market or legal or contractual restrictions on resale or other factors limiting the marketability of the security. Repurchase agreements subject to demand are deemed to have a maturity equal to the notice period.

Historically, illiquid securities have included securities subject to contractual or legal restrictions on resale because they have not been registered under the Securities Act of 1933, as amended (the "Securities Act"), securities which are otherwise not readily marketable and repurchase agreements having a maturity of longer than seven days. In addition, for purposes of the NVIT Money Market Fund, a security is illiquid if it cannot be sold or disposed of within the ordinary course of business within seven calendar days at approximately the value ascribed to it by the Fund. Securities which have not been registered under the Securities Act are referred to as private placements or restricted securities and are purchased directly from the issuer or in the secondary market. Unless subsequently registered for sale, these securities can only be sold in privately negotiated transactions or pursuant to an exemption from registration. The Funds typically do not hold a significant amount of these restricted or other illiquid securities because of the potential for delays on resale and uncertainty in valuation. Limitations on resale may have an adverse effect on the marketability of portfolio securities, and a Fund might be unable to dispose of restricted or other illiquid securities promptly or at reasonable prices and might thereby experience difficulty satisfying redemptions within seven days. A Fund might also have to register such restricted securities in order to dispose of them resulting in additional expense and delay. Adverse market conditions could impede such a public offering of securities.

A large institutional market exists for certain securities that are not registered under the Securities Act including repurchase agreements, commercial paper, foreign securities, municipal securities and corporate bonds and notes. Institutional investors depend on an efficient institutional market in which the unregistered security can be readily resold or on an issuer's ability to honor a demand for repayment. The fact that there are contractual or legal restrictions on resale to the general public or to certain institutions may not be indicative of the liquidity of such investments.

The SEC has adopted Rule 144A which allows for a broader institutional trading market for securities otherwise subject to restriction on resale to the general public. Rule 144A establishes a "safe harbor" from the registration requirements of the Securities Act for resales of certain securities to qualified institutional buyers.

Any such restricted securities will be considered to be illiquid for purposes of a Fund's limitations on investments in illiquid securities unless, pursuant to procedures adopted by the Board of Trustees of the Trust (the "Board of Trustees"), the Fund's subadviser has determined such securities to be liquid because such securities are eligible for resale pursuant to Rule 144A and are readily saleable, or if such securities may be readily saleable in foreign markets. To the extent that qualified institutional buyers may become uninterested in purchasing Rule 144A securities, a Fund's level of illiquidity may increase.

A Fund may sell over-the-counter ("OTC") options and, in connection therewith, earmark or segregate assets to cover its obligations with respect to OTC options written by the Fund. The assets used as cover for OTC options written by a Fund will be considered illiquid unless the OTC options are sold to qualified dealers who agree that the Fund may repurchase any OTC option it writes at a maximum price to be calculated by a formula set forth in the option agreement. The cover for an OTC option written subject to this procedure would be considered illiquid only to the extent that the maximum repurchase price under the formula exceeds the intrinsic value of the option.

A Fund's subadviser will monitor the liquidity of restricted securities in the portion of a Fund it manages. In reaching liquidity decisions, the following factors are considered: (1) the unregistered nature of the security; (2) the frequency of trades and quotes for the security; (3) the number of dealers wishing to purchase or sell the security and the number of other potential purchasers; (4) dealer undertakings to make a market in the security and (5) the nature of the security and the nature of the marketplace trades (e.g., the time needed to dispose of the security, the method of soliciting offers and the mechanics of the transfer).

Private Placement Commercial Paper. Commercial paper eligible for resale under Section 4(2) of the Securities Act ("Section 4(2) paper") is offered only to accredited investors. Rule 506 of Regulation D in the Securities Act lists investment companies as an accredited investor.

Section 4(2) paper not eligible for resale under Rule 144A under the Securities Act shall be deemed liquid if (1) the Section 4(2) paper is not traded flat or in default as to principal and interest; (2) the Section 4(2) paper is rated in one of the two highest rating categories by at least two NRSROs, or if only one NRSRO rates the security, it is rated in one of the two highest categories by that NRSRO; and (3) the Fund's subadviser believes that, based on the trading markets for such security, such security can be disposed of within seven days in the ordinary course of business at approximately the amount at which the Fund has valued the security.

Reverse Repurchase Agreements and Mortgage Dollar Rolls

Each Fund may engage in reverse repurchase agreements to facilitate portfolio liquidity, a practice common in the mutual fund industry, or for arbitrage transactions discussed below. In a reverse repurchase agreement, a Fund would sell a security and enter into an agreement to repurchase the security at a specified future date and price. A Fund generally retains the right to interest and principal payments on the security. Since a Fund receives cash upon entering into a reverse repurchase agreement, it may be considered a borrowing under the 1940 Act (see "Borrowing"). When required by guidelines of the SEC, a Fund will segregate or earmark permissible liquid assets to secure its obligations to repurchase the security. At the time a Fund enters into a reverse repurchase agreement, it will establish and maintain segregated or earmarked liquid assets with an approved custodian having a value not less than the repurchase price (including accrued interest). The segregated or earmarked liquid assets will be marked-to-market daily and additional assets will be segregated or earmarked on any day in which the assets fall below the repurchase price (plus accrued interest). A Fund's liquidity and ability to manage its assets might be affected when it sets aside cash or portfolio securities to cover such commitments. Reverse repurchase agreements involve the risk that the market value of the securities retained in lieu of sale may decline below the price of the securities the Fund has sold but is obligated to repurchase. In the event the buyer of securities under a reverse repurchase agreement files for bankruptcy or becomes insolvent, such buyer or its trustee or receiver may receive an extension of time to determine whether to enforce the Fund's obligation to repurchase the securities, and the Fund's use of the proceeds of the reverse repurchase agreement may effectively be restricted pending such determination.

The Fixed-Income Funds (except the NVIT Money Market Fund) may also invest in mortgage dollar rolls, which are arrangements in which a Fund would sell mortgage-backed securities for delivery in the current month and simultaneously contract to purchase substantially similar securities on a specified future date. While a Fund would forego principal and interest paid on the mortgage-backed securities during the roll period, the Fund would be compensated by the difference between the current sales price and the lower price for the future purchase as well as by any interest earned on the proceeds of the initial sale. A Fund also could be compensated through the receipt of fee income equivalent to a lower forward price. At the time the Fund would enter into a mortgage dollar roll, it would earmark or set aside permissible liquid assets in a segregated account to secure its obligation for the forward commitment to buy mortgage-backed securities. Depending on whether the segregated or earmarked assets are cash equivalent or some other type of security, entering into mortgage dollar rolls may subject the Fund to additional interest rate sensitivity. If the segregated or earmarked assets are cash equivalents that mature prior to the mortgage dollar roll settlement, there is little likelihood that the sensitivity will increase; however, if the segregated or earmarked assets are subject to interest rate risk because they settle later, then the Fund's interest rate sensitivity could increase. Mortgage dollar roll transactions may be considered a borrowing by the Funds (See "Borrowing").

Mortgage dollar rolls and reverse repurchase agreements may be used as arbitrage transactions in which a Fund will maintain an offsetting position in investment grade debt obligations or repurchase agreements that mature on or before the settlement date on the related mortgage dollar roll or reverse repurchase agreements. Since a Fund will receive interest on the securities or repurchase agreements in which it invests the transaction proceeds, such transactions may involve leverage. However, since such securities or repurchase agreements will be high quality and will mature on or before the settlement date of the mortgage dollar roll or reverse repurchase agreement, the Fund's subadviser believes that such arbitrage transactions do not present the risks to the Fund that are associated with other types of leverage.

Securities of Investment Companies

As permitted by the 1940 Act, a Fund may generally invest up to 10% of its total assets, calculated at the time of investment, in the securities of other open-end or closed-end investment companies. No more than 5% of a Fund's total assets may be invested in the securities of any one investment company nor may it acquire more than 3% of the voting securities of any other investment company. Notwithstanding these restrictions, each Fund may invest any amount, pursuant to Rule 12d1-1 of the 1940 Act, in affiliated or unaffiliated investment companies that hold themselves out as "money market funds" and which operate in accordance with Rule 2a-7 of the 1940 Act. A Fund will indirectly bear its proportionate share of any management fees paid by an investment company in which it invests in addition to the advisory fee paid by the Fund. Some of the countries in which a Fund may invest may not permit direct investment by outside investors. Investments in such countries may only be permitted through foreign government-approved or government-authorized investment vehicles, which may include other investment companies.

Exchange-Traded Funds. The Funds (except for the NVIT Money Market Fund) may invest in exchange-traded funds ("ETFs"). ETFs are regulated as registered investment companies under the 1940 Act. Many ETFs acquire and hold securities of all of the companies or other issuers, or a representative sampling of companies or other issuers, that are components of a particular index. Such ETFs typically are intended to provide investment results that, before expenses, generally correspond to the price and yield performance of the corresponding market index, and the value of their shares should, under normal circumstances, closely track the value of the index's underlying component securities. Because an ETF has operating expenses and transaction costs, while a market index does not, ETFs that track particular indices typically will be unable to match the performance of the index exactly. ETF shares may be purchased and sold in the secondary trading market on a securities exchange, in lots of any size, at any time during the trading day. More recently, actively managed ETFs have been created that are managed similarly to other investment companies.

The shares of an ETF may be assembled in a block known as a creation unit and redeemed in kind for a portfolio of the underlying securities (based on the ETF's net asset value) together with a cash payment generally equal to accumulated dividends as of the date of redemption. Conversely, a creation unit may be purchased from the ETF by depositing a specified portfolio of the ETF's underlying securities, as well as a cash payment generally equal to accumulated dividends of the securities (net of expenses) up to the time of deposit. ETF shares, as opposed to creation units, are generally purchased and sold by smaller investors in a secondary market on a securities exchange. ETF shares can be traded in lots of any size, at any time during the trading day. Although the Fund, like most other investors in ETFs, intends to purchase and sell ETF shares primarily in the secondary trading market, the Fund may redeem creation units for the underlying securities (and any applicable cash), and may assemble a portfolio of the underlying securities and use it (and any required cash) to purchase creation units, if the investment manager believes it is in the Fund's best interest to do so.

An investment in an ETF is subject to all of the risks of investing in the securities held by the ETF and has the same risks as investing in a closed-end fund. In addition, because of the ability of large market participants to arbitrage price differences by purchasing or redeeming creation units, the difference between the market value and the net asset value of ETF shares should in most cases be small. An ETF may be terminated and need to liquidate its portfolio securities at a time when the prices for those securities are falling.

Temporary Investments

Generally each of the Funds will be fully invested in accordance with its investment objective and strategies. However, pending investment of cash balances or for other cash management purposes, or if a Fund's subadviser believes that business, economic, political or financial conditions warrant, a Fund may invest without limit in cash or money market cash equivalents, including: (1) short-term U.S. government securities; (2) certificates of deposit, bankers' acceptances, and interest-bearing savings deposits of commercial banks; (3) prime quality commercial paper; (4) repurchase agreements covering any of the securities in which the Fund may invest directly; and (5) subject to the limits of the 1940 Act, shares of other investment companies that invest in securities in which the Fund may invest. Should this occur, a Fund will not be pursuing its investment objective and may miss potential market upswings. Each Index Fund uses an indexing strategy and does not attempt to manage market volatility, use defensive strategies or reduce the effects of any long-term periods of poor securities performance, although each may use temporary investments pending investment of cash balances or to manage anticipated redemption activity.

PORTFOLIO TURNOVER

The portfolio turnover rate for each Fund is calculated by dividing the lesser of purchases or sales of portfolio securities for the year by the monthly average value of the portfolio securities, excluding securities whose maturities at the time of purchase were one year or less. High portfolio turnover rates will generally result in higher brokerage expenses, and may increase the volatility of a Fund.

The table below explains any significant variation in the Funds' portfolio turnover rate for the fiscal years ended December 31, 2013 and 2012 or any anticipated variation in the portfolio turnover rate from that reported for the last fiscal year:

<u>Fund Name</u>	<u>2013</u>	<u>2012</u>
Neuberger Berman NVIT Multi Cap Opportunities Fund	100.24% ¹	125.03%
NVIT Bond Index Fund	226.92% ²	150.75%
NVIT Core Bond Fund	33.61% ¹	44.60%
NVIT Core Plus Bond Fund	333.09% ²	317.74%
NVIT Emerging Markets Fund	78.72% ²	68.20%
NVIT Government Bond Fund	108.42% ²	84.84%
NVIT International Equity Fund	118.28% ²	25.05%
NVIT Multi-Manager International Value Fund	35.44% ¹	68.36%
NVIT Multi-Manager Large Cap Growth Fund	52.44% ¹	108.38%
NVIT Multi-Manager Large Cap Value Fund	62.79% ¹	100.78%
NVIT Multi-Manager Mid Cap Growth Fund	66.14% ¹	79.49%
NVIT Multi-Manager Mid Cap Value Fund	113.76% ²	101.64%
NVIT Multi-Manager Small Cap Growth Fund	119.53% ²	82.85%
NVIT Multi-Manager Small Cap Value Fund	52.17% ²	33.12%
NVIT Multi-Manager Small Company Fund	57.65% ¹	69.03%
NVIT Multi Sector Bond Fund	389.22% ²	375.23%
NVIT Nationwide Fund	108.73% ²	23.86%
NVIT Real Estate Fund	149.86% ²	18.51%

1 The portfolio manager for the Fund is not limited by portfolio turnover in his management style, and the Fund's portfolio turnover will fluctuate based on particular market conditions and stock valuations. In the fiscal year 2013, the portfolio manager made fewer changes than in fiscal year 2012.

- 2 The portfolio manager for the Fund is not limited by portfolio turnover in his management style, and the Fund's portfolio turnover will fluctuate based on particular market conditions and stock valuations. In the fiscal year 2013, the portfolio manager made more changes than in fiscal year 2012.

INVESTMENT RESTRICTIONS

The following are fundamental investment restrictions for each of the Funds which cannot be changed without the vote of the majority of the outstanding shares of the Fund for which a change is proposed. The vote of the majority of the outstanding securities means the vote of (i) 67% or more of the voting securities present at such meeting, if the holders of more than 50% of the outstanding voting securities are present or represented by proxy or (ii) a majority of the outstanding securities, whichever is less.

Each of the Funds:

- May not lend any security or make any other loan except that each Fund may, in accordance with its investment objective and policies, (i) lend portfolio securities, (ii) purchase and hold debt securities or other debt instruments, including but not limited to loan participations and subparticipations, assignments, and structured securities, (iii) make loans secured by mortgages on real property, (iv) enter into repurchase agreements, and (v) make time deposits with financial institutions and invest in instruments issued by financial institutions, and enter into any other lending arrangement as and to the extent permitted by the 1940 Act or any rule, order or interpretation thereunder.
- May not purchase or sell real estate, except that each Fund may (i) acquire real estate through ownership of securities or instruments and sell any real estate acquired thereby, (ii) purchase or sell instruments secured by real estate (including interests therein), and (iii) purchase or sell securities issued by entities or investment vehicles that own or deal in real estate (including interests therein).
- May not borrow money or issue senior securities, except that each Fund may enter into reverse repurchase agreements and may otherwise borrow money and issue senior securities as and to the extent permitted by the 1940 Act or any rule, order or interpretation thereunder.
- May not purchase or sell commodities or commodities contracts, except to the extent disclosed in the current Prospectus or SAI of such Fund.
- May not act as an underwriter of another issuer's securities, except to the extent that each Fund may be deemed an underwriter within the meaning of the Securities Act in connection with the purchase and sale of portfolio securities.

In addition, each Fund, except NVIT S&P 500 Index Fund, NVIT Bond Index Fund, NVIT International Index Fund, NVIT Small Cap Index Fund, NVIT Enhanced Income Fund and NVIT Real Estate Fund:

- May not purchase securities of any one issuer, other than obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities, if, immediately after such purchase, more than 5% of the Fund's total assets would be invested in such issuer or the Fund would hold more than 10% of the outstanding voting securities of the issuer, except that 25% or less of the Fund's total assets may be invested without regard to such limitations. There is no limit to the percentage of assets that may be invested in U.S. Treasury bills, notes, or other obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities. The **NVIT Money Market Fund** will be deemed to be in compliance with this restriction so long as it is in compliance with Rule 2a-7 under the 1940 Act, as such Rule may be amended from time to time.

Each Fund, except for NVIT Real Estate Fund:

- May not purchase the securities of any issuer if, as a result, more than 25% (taken at current value) of the Fund's total assets would be invested in the securities of issuers, the principal activities of which are in the same industry. This limitation does not apply to securities issued by the U.S. government or its agencies or instrumentalities.

Each of the American Century NVIT Growth Fund, NVIT Nationwide Fund, NVIT Government Bond Fund and NVIT Money Market Fund:

- May not purchase securities on margin, but the Fund may obtain such credits as may be necessary for the clearance of purchases and sales of securities and except as may be necessary to make margin payments in connection with derivative securities transactions.

The NVIT S&P 500 Index Fund, NVIT Bond Index Fund, NVIT International Index Fund, and NVIT Small Cap Index Fund:

- May not purchase the securities of any issuer if, as a result, 25% or more (taken at current value) of the Fund's total assets would be invested in the securities of issuers, the principal activities of which are in the same industry; provided, that in replicating the weightings of a particular industry in its target index, the Fund may invest more than 25% of its total assets in securities of issuers in that industry.

The NVIT Enhanced Income Fund:

- May not purchase securities of any one issuer, other than obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities, if, immediately after such purchase, more than 5% of the Fund's total assets would be invested in such issuer or the Fund would hold more than 10% of the outstanding voting securities of the issuer, except that 25% or less of the Fund's total assets may be invested without regard to such limitations. Practically speaking, this means that with respect to 75% of its assets, the Fund may not invest more than 5% of its assets in the securities of any one issuer, and may not hold more than 10% of the outstanding voting securities of such issuer. There is no limit to the percentage of assets that may be invested in U.S. Treasury bills, notes, or other obligations issued or guaranteed by the U.S. Government, its agencies or instrumentalities.
- May not purchase the securities of any issuer if, as a result, 25% or more than (taken at current value) of the Fund's total assets would be invested in the securities of issuers, the principal activities of which are in the same industry; provided, that in replicating the weightings of a particular industry in its target index, the Fund may invest more than 25% of its total assets in securities of issuers in that industry. This limitation does not apply to securities issued by the U.S. government or its agencies or instrumentalities and obligations issued by state, country or municipal governments. The following industries are considered separate industries for purposes of this investment restriction: electric, natural gas distribution, natural gas pipeline, combined electric and natural gas, and telephone utilities, captive borrowing conduit, equipment finance, premium finance, leasing finance, consumer finance and other finance.

Concentration Policies

The following Fund invests 25% or more of its assets in the securities of companies in the same or related industries as described below:

THE NVIT REAL ESTATE FUND*:

- Shall invest more than 25% of its total assets in the securities of issuers in real estate industries.
- * For purposes of calculation of this restriction, the Fund considers whether it has invested 25% or more of its total assets in the companies of the required industries.

The following are the non-fundamental operating policies of each of the Funds, except NVIT Nationwide Fund, American Century NVIT Growth Fund, NVIT Government Bond Fund and NVIT Money Market Fund, which may be changed by the Board of Trustees without shareholder approval:

Each Fund may not:

- Sell securities short (**except for the NVIT Mid Cap Index Fund**), unless the Fund owns or has the right to obtain securities equivalent in kind and amount to the securities sold short or unless it covers such short sales as required by the current rules and positions of the SEC or its staff, and provided that short positions in forward currency contracts, options, futures contracts, options on futures contracts, or other derivative instruments are not deemed to constitute selling securities short. The **NVIT Mid Cap Index Fund** may only sell securities short in accordance with the description contained in their respective Prospectuses or in this SAI.
- Purchase securities on margin, except that the Fund may obtain such short-term credits as are necessary for the clearance of transactions; and provided that margin deposits in connection with options, futures contracts, options on futures contracts, and transactions in currencies or other derivative instruments shall not constitute purchasing securities on margin.
- Purchase or otherwise acquire any security if, as a result, more than 15% of its net assets would be invested in securities that are illiquid. If any percentage restriction or requirement described above is satisfied at the time of investment, a later increase or decrease in such percentage resulting from a change in net asset value will not constitute a violation of such restriction or requirement. However, should a change in net asset value or other external events cause a Fund's investments in illiquid securities including repurchase agreements with maturities in excess of seven days, to exceed the limit set forth above for such Fund's investment in illiquid securities, a Fund will act to cause the aggregate amount of such securities to come within such limit as soon as is reasonably practicable. In such an event, however, such a Fund would not be required to liquidate any portfolio securities where a Fund would suffer a loss on the sale of such securities.
- Pledge, mortgage or hypothecate any assets owned by the Fund except as may be necessary in connection with permissible borrowings or investments and then such pledging, mortgaging, or hypothecating may not exceed 33⅓% of the Fund's total assets.

Each of the Funds, except the NVIT Bond Index Fund, NVIT International Index Fund, and NVIT Small Cap Index fund, may not:

- Purchase securities of other investment companies except in connection with a merger, consolidation, acquisition, reorganization or offer of exchange, or as otherwise permitted under the 1940 Act.

The following are the non-fundamental operating policies of the American Century NVIT Growth Fund, NVIT Nationwide Fund, NVIT Government Bond Fund and NVIT Money Market Fund which may be changed by the Board of Trustees without shareholder approval:

Each Fund may not:

- Make short sales of securities.
- Purchase or otherwise acquire any other securities if, as a result, more than 15% (5% with respect to the **NVIT Money Market Fund**) of its net assets would be invested in securities that are illiquid. If any percentage restriction or requirement described above is satisfied at the time of investment, a later increase or decrease in such percentage resulting from a change in net asset value will not constitute a violation of such restriction or requirement. However, should a change in net asset value or other external events cause a Fund's investments in illiquid securities including repurchase agreements with maturities in excess of seven days, to exceed the limit set forth above for such Fund's investment in illiquid securities, a Fund will act to cause the aggregate amount of such securities to come within such limit as soon as is reasonably practicable. In such event, however, such Fund would not be required to liquidate any portfolio securities where a Fund would suffer a loss on the sale of such securities.

- Purchase securities of other investment companies, except (a) in connection with a merger, consolidation, acquisition or reorganization and (b) to the extent permitted by the 1940 Act, or any rules or regulations thereunder, or pursuant to any exemption therefrom.
- Pledge, mortgage or hypothecate any assets owned by the Fund except as may be necessary in connection with permissible borrowings or investments and then such pledging, mortgaging, or hypothecating may not exceed 33⅓% of the Fund's total assets.

A Fund's obligation not to pledge, mortgage, or hypothecate assets in excess of 33⅓% of the Fund's total assets with respect to permissible borrowings or investments, as described above, is a continuing obligation and such asset segregation and coverage must be maintained on an ongoing basis. For any other percentage restriction or requirement described above that is satisfied at the time of investment, a later increase or decrease in such percentage resulting from a change in net asset value will not constitute a violation of such restriction or requirement. However, should a change in net asset value or other external events cause a Fund's investments in illiquid securities including repurchase agreements with maturities in excess of seven days, to exceed the limit set forth above for such Fund's investment in illiquid securities, a Fund will act to cause the aggregate amount such securities to come within such limit as soon as reasonably practicable. In such event, however, such Fund would not be required to liquidate any portfolio securities where a Fund would suffer a loss on the sale of such securities.

Certain Funds have adopted a non-fundamental policy, as required by Rule 35d-1 under the 1940 Act, to invest, under normal circumstances, at least 80% the Fund's net assets in the type of investment suggested by the Fund's name ("80 Percent Policy"). The scope of the 80 Percent Policy includes Fund names suggesting that a Fund focuses its investments in: (i) a particular type of investment or investments; (ii) a particular industry or group of industries; or (iii) certain countries or geographic regions. The 80 Percent Policy also applies to a Fund name suggesting that the Fund's distributions are exempt from federal income tax or from both federal and state income tax. Each Fund that has adopted the 80 Percent Policy also has adopted a policy to provide its shareholders with at least 60 days' prior written notice of any change in such investment policy.

THE NEUBERGER BERMAN NVIT SOCIALLY RESPONSIBLE FUND:

- May not purchase securities of issuers that derive more than 5% of their total revenue from the production of alcohol, tobacco, weapons or nuclear power and may not purchase securities of issuers deriving more than 5% of total revenue from gambling.

The investment objectives of each of the Funds are not fundamental and may be changed by the Board of Trustees without shareholder approval.

Social Investment Guidelines for the Neuberger Berman NVIT Socially Responsible Fund (this section applies to the **Neuberger Berman NVIT Socially Responsible Fund** only)

All social screens require interpretation in their application and is at the discretion of the portfolio management team. The following discussion provides further detail about the interpretation of the Fund's Social Investment Guidelines.

Tobacco

Manufacturers. The Fund does not buy or hold that companies derive 5% or more of revenues from the manufacture of tobacco products. This screen primarily excludes producers of cigarettes, cigars, pipe tobacco, and smokeless tobacco products (snuff and chewing tobacco).

Processors and Suppliers. The Fund does not buy or hold companies that are in the business of processing tobacco and supplying tobacco to these manufacturers.

Retail Sales. The Fund does not buy or hold companies that derive a majority of revenues from the retail sale of tobacco products.

Tobacco-Related Products. The Fund does not buy or hold companies that derive a majority of revenues from the sale of goods used in the actual manufacture tobacco products, such as cigarette papers and filters.

The Fund *may* buy or hold companies that sell certain key products to the tobacco industry. These items include: cigarette packets, boxes, or cartons; the paperboard used in the manufacture of cigarette boxes or cartons; the cellophane wrap used to enclose cigarette packets or boxes; magazine or newspaper space sold for cigarette advertisements; and billboard space rented for cigarette advertisements. In general, the portfolio managers of the Fund do not exclude such companies from investment, although it may reconsider companies that derive substantial revenues from these activities on a case-by-case basis.

Alcohol

Manufacturers and Producers. The Fund does not buy or hold companies that derive 5% or more of revenues from the manufacture of alcoholic beverages. This screen primarily excludes distillers of hard liquors, brewers, and vintners.

Retail Sales. The Fund does not buy or hold companies that derive a majority of revenues from the retail sale of alcoholic beverages. This screen relates primarily to restaurant chains and convenience stores.

The Fund *may* buy or hold:

- agricultural products companies that sell products to the alcohol industry for use in the production of alcoholic beverages (primarily grain alcohol producers); or
- companies that sell unprocessed agricultural goods, such as barley or grapes, to producers of alcoholic beverages.

Gambling

Owners and Operators. The Fund does not buy or hold companies that derive 5% or more of revenues from the provision of gaming services. This screen primarily excludes owners and operators of casinos, riverboat gambling facilities, horse tracks, dog tracks, bingo parlors, or other betting establishments.

Manufacturers of Gaming Equipment. The Fund does not buy or hold companies that derive 5% or more of revenues from the manufacture of gaming equipment or the provision of goods and services to lottery operations.

The Fund *may* buy or hold companies that:

- provide specialized financial services to casinos; or
- sell goods or services that are clearly nongaming-related to casinos or other gaming operations.

Nuclear Power

Owners and Operators. The Fund does not buy or hold companies that are owners or operators of nuclear power plants. This screen primarily excludes major electric utility companies.

The Fund *may* buy or hold:

- engineering or construction companies that are involved in the construction of a nuclear power plant or provide maintenance services to such plants in operation; or
- electric utility companies that are purchasers and distributors of electricity that may have come from nuclear power plants (but are not themselves owners of such plants).

Military Contracting

Major Prime Contractors. The Fund does not buy or hold companies that derive 5% or more of revenues from weapons-related contracts. Although this screen permits the Fund to invest in companies that derive less than 5% of revenues from weapons contracts, the Fund generally avoids large military contractors that have weapons-related contracts that total less than 5% of revenues but are, nevertheless, large in dollar value and exclusively designed for weapons-related activities. While it is often difficult to obtain precise weapons contracting figures, the portfolio managers of the Fund will make a good faith effort to do so.

Non-Weapons-Related Sales to the Department of Defense. The Fund does not buy or hold companies that derive their total revenue primarily from non-consumer sales to the Department of Defense (“DoD”). In some cases, it is difficult to clearly distinguish between contracts that are weapons-related and those that are not. For example, is jet fuel for fighter aircraft a weapons-related product? The portfolio managers of the Fund have decided to treat jet fuel as a civilian product and may buy or hold a company that produces it. The portfolio managers of the Fund will use their best judgment in making such determinations.

The Fund *may* buy or hold companies that:

- have some minor military business;
- have some contracts with the DoD for goods and services that are clearly not weapons-related; or
- manufacture computers, electric wiring, and semiconductors or that provide telecommunications systems (in the absence of information that these products and services are weapons-related).

Firearms

Manufacturers. The Fund does not buy or hold companies that produce firearms such as pistols, revolvers, rifles, shotguns, or sub-machine guns. The Fund will also not buy or hold companies that produce small arms ammunition.

Retailers. The Fund does not buy or hold companies that derive a majority of revenues from the wholesale or retail distribution of firearms or small arms ammunition.

Environment

Best of Class Approach

The Fund seeks to invest in companies that have demonstrated a commitment to environmental stewardship. Among other things, it will look for companies:

- that have integrated environmental management systems;
- that have measurably reduced their Toxic Release Inventory (TRI) emissions to air, land, or water (on-and off-site releases);
- whose TRI emissions are substantially lower than their peers;
- that participate in voluntary environmental initiatives led by governmental agencies such as the Environmental Protection Agency (EPA), non-industry organizations, or community groups;
- that are committed to the public disclosure of corporate environmental information, such as signatories to CERES (Coalition for Environmentally Responsible Economies) or participants in the GRI (Global Reporting Initiative); or
- have innovative processes or products that offer an environmental benefit.

Environmental Risk

The Fund seeks to avoid companies whose products it has determined pose unacceptable levels of environmental risk. To that end, the Fund does not buy or hold companies that:

- are major manufacturers of hydrochlorofluorocarbons (HCFCs), bromines, or other ozone-depleting chemicals;
- are major manufacturers of pesticides or chemical fertilizers;
- operate in the gold mining industry; or
- design, market, own, or operate nuclear power plants (see Nuclear Power section).

The portfolio managers of the Fund seriously consider a company's environmental liabilities, both accrued and unaccrued, as a measure of environmental risk. It views public disclosure of these liabilities as a positive step.

Regulatory Problems

The Fund seeks to avoid companies with involvement in major environmental controversies. It will look at a combination of factors in this area and will decide if, on balance, a company qualifies for investment. Negative factors may include:

- environmental fines or penalties issued by a state or federal agency or court over the most recent three calendar years; and/or
- highly publicized community environmental lawsuits or controversies.

Positive factors may include:

- good environmental management systems;
- progress in implementing environmental programs; and
- public disclosure of environmental policies, goals, and progress toward those goals.

If a company already held in the Fund becomes involved in an environmental controversy, the portfolio managers of the Fund will communicate with the company to press for positive action. The Fund will not necessarily divest the company's shares if the portfolio managers perceive a path to remediation and policies and procedures are implemented to mitigate risk of recurrence.

Diversity

The Fund strives to invest in companies that are leaders in promoting diversity in the workplace. Among other things, it will look for companies that:

- promote women and people of color into senior line positions;
- appoint women and people of color to their boards of directors;
- offer diversity training and support groups;
- purchase goods and services from women- and minority-owned firms; and
- have implemented innovative hiring, training, or other programs for women, people of color, and/or the disabled, or otherwise have a superior reputation in the area of diversity.

The portfolio managers of the Fund attempt to avoid companies with recent major discrimination lawsuits related to gender, race, disability, or sexual orientation. In general, the Fund does not buy companies:

- that are currently involved in unsettled major class action discrimination lawsuits;
- that are currently involved in unsettled major discrimination lawsuits involving the U.S. Department of Justice or the EEOC (Equal Employment Opportunity Commission); or
- with exceptional historical patterns of discriminatory practices.

Although the portfolio managers of the Fund view companies involved in non-class action discrimination lawsuits and/or lawsuits that have been settled or ruled upon with some concern, it may buy or hold such companies. These types of lawsuits will be given particular weight if a company does not have a strong record of promoting diversity in the workplace.

While the Fund encourages companies to have diverse boards of directors and senior management, the absence of women and minorities in these positions does not warrant a company's exclusion from the Fund.

If a company already held in the Fund becomes involved in a discrimination controversy, the portfolio managers of the Fund will communicate with the company to press for positive action. The Fund will not necessarily divest the company's shares if it perceives a path to remediation and policies and procedures are implemented to mitigate risk of recurrence.

Employment and Workplace Practices

The Fund endeavors to invest in companies whose employment and workplace practices are considered progressive. Among other things, it will look for companies that:

- offer benefits such as maternity leave that exceeds the 12 unpaid weeks mandated by the federal government; paid maternity leave; paternity leave; subsidized child and elder care (particularly for lower-paid staff); flexible spending accounts with dependent care options; flextime or job-sharing arrangements; phaseback for new mothers; adoption assistance; a full time work/family benefits manager; and/or health and other benefits for same-sex domestic partners of its employees;
- have taken extraordinary steps to treat their unionized workforces fairly; and
- have exceptional workplace safety records, particularly OSHA Star certification for a substantial number of its facilities and/or a marked decrease in their lost time accidents and workers compensation rates.

The Fund will seek to avoid investing in companies that have:

- demonstrated a blatant disregard for worker safety; or
- historically had poor relations with their unionized workforces, including involvement in unfair labor practices, union busting, and denying employees the right to organize.

Although the portfolio managers of the Fund are deeply concerned about the labor practices of companies with international operations, it may buy or hold companies that are currently or have been involved in related controversies. The portfolio managers of the Fund recognize that it is often difficult to obtain accurate and consistent information in this area; however, it will seek to include companies that are complying with or exceeding International Labour Organization (ILO) standards.

Community Relations

The portfolio managers of the Fund believe that it is important for companies to have positive relations with the communities in which they are located – communities of all races and socio-economic status. It will seek to invest in companies that:

- have open communications within the communities in which they operate;
- make generous cash donations to charitable organizations, particularly multi-year commitments to local community groups; and
- offer incentives (such as paid time off) to employees to volunteer their time with charitable organizations.

The Fund seeks to avoid companies with involvement in recent environmental controversies that have significantly affected entire communities (See Environment, Regulatory Problems). The portfolio managers of the Fund will be particularly stringent with companies that do not have positive relations with the communities in which they operate.

If a company already held in the Fund becomes involved in a community controversy, the portfolio managers of the Fund will communicate with the company to press for positive action. The Fund will not necessarily divest the company's shares if it perceives a path to remediation and policies and procedures are implemented to mitigate risk of recurrence.

Product Safety

The Fund seeks to avoid companies whose products have negative public health implications. Among other things, the portfolio managers of the Fund will consider:

- the nature of a company's products; or
- whether a company has significant (already accrued or settled lawsuits) or potentially significant (pending lawsuits or settlements) product liabilities.

General

Corporate Actions. If a company held in the Fund subsequently becomes involved in tobacco, alcohol, gambling, weapons, or nuclear power (as described above) through a corporate acquisition or change of business strategy, and no longer satisfies the Social Investment Guidelines, the Fund will eliminate the position at the time deemed appropriate by the Fund given market conditions. The Fund will divest such companies whether or not they have taken strong positive initiatives in the other social issue areas that the Fund considers. In such a case, the Fund may sell a position in a company at a loss.

Ownership. The Fund does not buy or hold companies that are majority owned by companies that are excluded by its Social Investment Guidelines.

Internal Revenue Code Restrictions

In addition to the investment restrictions above, each Fund must be diversified according to Internal Revenue Code requirements. Specifically, at the close of each quarter of the Fund's tax year: (1) at least 50% of the value of the Fund's assets must consist of cash and cash items, U.S. government securities, securities of other regulated investment companies, and securities of other issuers (as to which the Fund has not invested more than 5% of the value of the Fund's total assets in securities of an issuer and as to which the Fund does not hold more than 10% of the outstanding voting securities of the issuer); and (2) no more than 25% of the value of the Fund's total assets may be invested in the securities of any one issuer (other than U.S. government securities or securities of other regulated investment companies), or of two or more issuers which the Fund controls and which are engaged in the same or similar trades or businesses, or, in the securities of one or more qualified publicly traded partnerships ("QPTPs").

Also, there are four requirements imposed on the Funds under Subchapter L of the Internal Revenue Code because they are used as investment options funding variable insurance products.

- 1) A Fund may invest no more than 55% of its total assets in one issuer (including securities issued or guaranteed by the U.S. government or any of its agencies or instrumentalities);
- 2) A Fund may invest no more than 70% of its total assets in two issuers (including securities issued or guaranteed by the U.S. government or any of its agencies or instrumentalities);
- 3) A Fund may invest no more than 80% of its total assets in three issuers (including securities issued or guaranteed by the U.S. government or any of its agencies or instrumentalities); and
- 4) A Fund may invest no more than 90% of its total assets in four issuers (including securities issued or guaranteed by the U.S. government or any of its agencies or instrumentalities).

Each U.S. government agency or instrumentality shall be treated as a separate issuer.

Insurance Law Restrictions

In connection with the Trust's agreement to sell shares to separate accounts to fund benefits payable under variable life insurance policies and variable annuity contracts, the Trust's investment adviser, Nationwide Fund Advisors ("NFA" or the "Adviser") and the insurance companies may enter into agreements, required by certain state insurance departments, under which the NFA may agree to use their best efforts to assure and permit insurance companies to monitor that each Fund of the Trust complies with the investment restrictions and limitations prescribed by state insurance laws and regulations applicable to the investment of separate account assets in shares of mutual funds. If a Fund failed to comply with such restrictions or limitations, the separate accounts would take appropriate action which might include ceasing to make investments in the Fund or withdrawing from the state imposing the limitation. Such restrictions and limitations are not expected to have a significant impact on the Trust's operations.

DISCLOSURE OF PORTFOLIO HOLDINGS

The Board of Trustees has adopted policies and procedures regarding the disclosure of portfolio holdings information to protect the interests of Fund shareholders and to address potential conflicts of interest that could arise between the interests of Fund shareholders and the interests of the Funds' investment adviser, principal underwriter or affiliated persons of the Funds' investment adviser or principal underwriter. The Trust's overall policy with respect to the release of portfolio holdings is to release such information consistent with applicable legal requirements and the fiduciary duties owed to shareholders. Subject to the limited exceptions described below, the Trust will not make available to anyone non-public information with respect to its portfolio holdings until such time as the information is made available to all shareholders or the general public.

The policies and procedures are applicable to NFA and any subadviser to the Funds. Pursuant to the policy, the Funds, NFA, any subadviser, and any service provider acting on their behalf are obligated to:

- Act in the best interests of Fund shareholders by protecting non-public and potentially material portfolio holdings information;
- Ensure that portfolio holdings information is not provided to a favored group of clients or potential clients; and
- Adopt such safeguards and controls around the release of client information so that no client or group of clients is unfairly disadvantaged as a result of such release.

Portfolio holdings information that is not publicly available will be released selectively only pursuant to the exceptions described below. In most cases, even where an exception applies, the release of portfolio holdings is strictly prohibited until the information is at least 15 calendar days old. Nevertheless, NFA's Leadership Team or its duly authorized delegate may authorize, where circumstances dictate, the release of more current portfolio holdings information.

Each Fund posts onto the Trust's Internet site (nationwide.com/mutualfundsnvit) substantially all of its securities holdings as of the end of each month. Such portfolio holdings are available no earlier than 15 calendar days after the end of the previous month, and generally remain available on the Internet site until the Fund files its next quarterly portfolio holdings report on Form N-CSR or Form N-Q with the SEC. The NVIT Money Market Fund posts onto the Trust's Internet site, no later than the fifth business day of each month, a schedule of its investments as of the last business day of the prior month, and maintains such portfolio holdings information for no less than six months after posting. The Funds disclose their complete portfolio holdings information to the SEC using Form N-Q within 60 days of the end of the first and third quarter ends of the Funds' fiscal year and on Form N-CSR on the second and fourth quarter ends of the Funds' fiscal year. Form N-Q is not required to be mailed to shareholders, but is made public through the SEC's electronic filings. Shareholders receive either complete portfolio holdings information or summaries of Fund portfolio holdings with their annual and semiannual reports.

Exceptions to the portfolio holdings release policy described above can only be authorized by NFA's Leadership Team or its duly authorized delegate and will be made only when:

- A Fund has a legitimate business purpose for releasing portfolio holdings information in advance of release to all shareholders or the general public;
- The recipient of the information provides written assurances that the non-public portfolio holdings information will remain confidential and that persons with access to the information will be prohibited from trading based on the information; and
- The release of such information would not otherwise violate the antifraud provisions of the federal securities laws or the Funds' fiduciary duties.

Under this policy, the receipt of compensation by a Fund, NFA, a subadviser, or an affiliate as consideration for disclosing non-public portfolio holdings information will not be deemed a legitimate business purpose.

The Funds have ongoing arrangements to distribute information about the Funds' portfolio holdings to the Funds' third-party service providers described herein (e.g., investment adviser, subadvisers, registered independent public accounting firm, administrator, transfer agent, sub-administrator, sub-transfer agent, custodian and legal counsel) as well as Wolters Kluwer Financial Services, Inc. (GainsKeeper), SunGard Financial Systems (Wall Street Concepts), Ernst & Young, LLP, Lipper Inc., Morningstar, Inc., Bloomberg LP, RiskMetrics Group, Inc., FactSet Research Systems, Inc., the Investment Company Institute, and on occasion, to transition managers such as Abel Noser Corp., BlackRock Institutional Trust Company, Fidelity Capital Markets (a division of National Financial Services LLC), Macquarie Capital (USA) Inc. or MBSC Securities Corporation, where such transition manager provides portfolio transition management assistance (e.g., upon change of subadviser, etc.). These organizations are required to keep such information confidential, and are prohibited from trading based on the information or otherwise using the information except as necessary in providing services to the Funds. No compensation or other consideration is received by the Funds, NFA or any other party in connection with each such ongoing arrangement.

NFA conducts periodic reviews of compliance with the policy and the Funds' Chief Compliance Officer provides annually a report to the Board of Trustees regarding the operation of the policy and any material changes recommended as a result of such review. NFA's compliance staff will also annually submit to the Board of Trustees a list of exceptions granted to the policy, including an explanation of the legitimate business purpose of the Fund that was served as a result of the exception.

TRUSTEES AND OFFICERS OF THE TRUST

Management Information

Trustees who are not “interested persons” (as defined in the 1940 Act) of the Trust are listed in the table below. The names and ages of the Trustees and Officers, the date each was first elected to office, their principal business occupations, other directorships or trusteeships they have held during the last five years in any publicly-traded company or registered investment company, and their experience, qualifications, attributes, and skills also are shown below. There are 62 series of the Trust, all of which are overseen by the Board of Trustees and Officers of the Trust. The address for each Trustee and Officer is c/o Nationwide Funds Group, 1000 Continental Drive, Suite 400, King of Prussia, PA 19406.

Name and Year of Birth	Position(s) Held with the Trust and Length of Time Served ¹	Principal Occupation(s) During Past 5 Years (or Longer)	Number of Portfolios in the Nationwide Fund Complex Overseen by Trustee	Other Directorships Held by Trustee During the Past Five Years ²	Experience, Qualifications, Attributes, and Skills for Board Membership
Charles E. Allen 1948	Trustee since July 2000	Mr. Allen was Chairman, Chief Executive Officer, and President of Graimark Realty Advisors, Inc. (real estate development, investment and asset management) from its founding in 1987 to 2012.	117	None	Significant board experience; significant executive experience, including continuing service as chief executive officer and president of a real estate development, investment and asset management business; past service includes 18 years of financial services experience; audit committee financial expert.

Name and Year of Birth	Position(s) Held with the Trust and Length of Time Served ¹	Principal Occupation(s) During Past 5 Years (or Longer)	Number of Portfolios in the Nationwide Fund Complex Overseen by Trustee	Other Directorships Held by Trustee During the Past Five Years ²	Experience, Qualifications, Attributes, and Skills for Board Membership
Paula H.J. Cholmondeley 1947	Trustee since July 2000	Ms. Cholmondeley focuses full time on corporate governance. She sits on public company boards and is also on the faculty of the National Association of Corporate Directors. She has served as a Chief Executive Officer of Sorrel Group (management consulting company) since January 2004. From April 2000 through December 2003, Ms. Cholmondeley was Vice President and General Manager of Sappi Fine Paper North America.	117	Director of Dentsply International, Inc. (dental products), from 2002 to present, Ultralife Batteries, Inc. from 2004 to 2010, Albany International Corp. (paper industry) from 2005 to 2013, Terex Corporation (construction equipment) from 2004 to present, and Minerals Technology, Inc. (specialty chemicals) from 2005 to present.	Significant board and governance experience; significant executive experience, including continuing service as chief executive officer of a management consulting company and past service as an executive of a manufacturing-based public company; past experience as an executive in a private service-based company; former certified public accountant and former chief financial officer of both public and private companies.

- 1 Length of time served includes time served with the Trust’s predecessors.
- 2 Unless otherwise noted, the information presented is the principal occupation of the Officer during the past five years.
- 3 These positions are held with an affiliated person or principal underwriter of the Funds.

Responsibilities of the Board of Trustees

The Board of Trustees (the “Board”) has oversight responsibility for the conduct of the affairs of the Trust. The Board approves policies and procedures regarding the operation of the Trust, regularly receives and reviews reports from NFA regarding the implementation of such policies and procedures, and elects the Officers of the Trust to perform the daily functions of the Trust. The Chairman of the Board is an Independent Trustee.

Board Leadership Structure

All of the Trustees of the Trust are Independent Trustees. The Independent Trustees approve financial arrangements and other agreements between the Funds, on the one hand, and NFA, the sub-advisers, or other affiliated parties, on the other hand. The Independent Trustees meet regularly as a group in executive session and with independent legal counsel. The Trustees have determined that the efficient conduct of the Board’s affairs makes it desirable to delegate responsibility for certain specific matters to Committees of the Board, as described below. The Committees meet as often as necessary, either in conjunction with regular meetings of the Board or otherwise. The membership and chair of each Committee are appointed by the Board upon recommendation of the Nominating and Fund Governance Committee.

This structure is reviewed by the Board periodically and the Board believes it to be appropriate and effective. The Board also completes an annual self-assessment during which it reviews its leadership and Committee structure, and considers whether its structure remains appropriate in light of the Funds’ current operations.

Each Trustee shall hold office for the lifetime of the Trust or until such Trustee’s earlier death, resignation, removal, retirement, or inability otherwise to serve, or, if sooner than any of such events, until the next meeting of shareholders called for the purpose of electing Trustees or consent of shareholders in lieu thereof for the election of Trustees, and until the election and qualification of his or her successor. The Board of Trustees may fill any vacancy on the Board provided that, after such appointment, at least two-thirds of the Trustees have been elected by shareholders. Any Trustee may be removed by the Board, with or without cause, by action of a majority of the Trustees then in office, or by a vote of shareholders at any meeting called for that purpose. In addition to conducting an annual self-assessment, the Board completes biennial peer evaluations, which focus on the performance and effectiveness of the individual members of the Board.

The Officers of the Trust are appointed by the Board, or, to the extent permitted by the Trust’s By-laws, by the President of the Trust, and each shall serve at the pleasure of the Board, or, to the extent permitted by the Trust’s By-laws, and except for the Chief Compliance Officer, at the pleasure of the President of the Trust, subject to the rights, if any, of an Officer under any contract of employment. The Trust’s Chief Compliance Officer must be approved by a majority of the Independent Trustees. Subject to the rights, if any, of an Officer under any contract of employment, any Officer may be removed, with or without cause, by the Board at any regular or special meeting of the Board, or, to the extent permitted by the Trust’s By-laws, by the President of the Trust; provided, that only the Board may remove, with or without cause, the Chief Compliance Officer of the Trust.

Board Oversight of Trust Risk

The Board’s role is one of oversight, including oversight of the Funds’ risks, rather than active management. The Trustees believe that the Board’s Committee structure enhances the Board’s ability to focus on the oversight of risk as part of its broader oversight of the Funds’ affairs. While risk management is the primary responsibility of NFA and the Funds’ subadvisers, the Trustees regularly receive reports from NFA, Nationwide Fund Management LLC (“NFM”), and various service providers, including the subadvisers, regarding investment risks and compliance risks. The Committee structure allows separate Committees to focus on different aspects of these risks and their potential impact on some or all of the Funds and to discuss with NFA or the Funds’ subadvisers how they monitor and control such risks. In addition, the Officers of the Funds, all of whom are employees of NFA, including the President and Chief Executive Officer, Chief Financial Officer, Chief Compliance Officer and Chief Operating Officer, report to the Board and to the Chairs of its Committees on a variety of risk-related matters,

including the risks inherent in each Officer's area of responsibility, at regular meetings of the Board and on an ad hoc basis.

The Fund has retained NFA as the Funds' investment adviser and NFM as the Funds' administrator. NFA and NFM are responsible for the day-to-day operations of the Funds. NFA has delegated the day-to-day management of the investment activities of each Fund, with the exception of the Funds of Funds, to one or more sub-advisers. NFA and NFM are primarily responsible for the Funds' operations and for supervising the services provided to the Funds by each service provider, including risk management services provided by the Funds' subadvisers. The Board also meets periodically with the Trust's Chief Compliance Officer to receive reports regarding the compliance of each Fund with federal securities laws and the Fund's internal compliance policies and procedures. The Board also reviews the Chief Compliance Officer's annual report, including the Chief Compliance Officer's compliance risk assessments for the Funds. The Board also meets periodically with the portfolio managers of the Funds to receive reports regarding the management of the Funds, including each Fund's investment risks.

Committees of the Board of Trustees

The Board of Trustees has four standing committees: Audit, Valuation and Operations, Nominating and Fund Governance, and Investment Committees. The function of each Committee is oversight.

The purposes of the Audit Committee are to: (a) oversee the Trust's accounting and financial reporting policies and practices, its internal controls and, as appropriate, the internal controls of certain of its service providers; it is the intention of the Board that it is management's responsibility to maintain appropriate systems for accounting and internal control, and the independent auditors' responsibility to plan and carry out a proper audit – the independent auditors are ultimately accountable to the Board and the Committee, as representatives of the Trust's shareholders; (b) oversee the quality and integrity of the Trust's financial statements and the independent audit thereof; (c) ascertain the independence of the Trust's independent auditors; (d) act as a liaison between the Trust's independent auditors and the Board; (e) approve the engagement of the Trust's independent auditors; (f) meet and consider the reports of the Trust's independent auditors; (g) oversee the Trust's written policies and procedures adopted under Rule 38a-1 of the 1940 Act and oversee the appointment and performance of the Trust's designated Chief Compliance Officer; (h) review information provided to the Audit Committee regarding SEC examinations of the Trust and its service providers; and (i) undertake such other responsibilities as may be delegated to the Audit Committee by the Board. The Audit Committee met six times during the past fiscal year, and currently consists of the following Trustees: Ms. Cholmondeley (Chair), Ms. Dryden, Ms. Hennigar, and Mr. Karlawish, each of whom is not an interested person of the Trust, as defined in the 1940 Act.

The purposes of the Valuation and Operations Committee are to: (a) assist the Board in its review and oversight of the valuation of the Trust's portfolio assets; (b) assist the Board with its review and oversight of the implementation and operation of the Trust's Rule 2a-7 Procedures, including with respect to credit risk, applicable to the Trust's money market fund series; (c) review and oversee the actions of the principal underwriter and investment advisers with respect to distribution channels for the Funds' shares and distribution strategies for the Funds including the operation of the Trust's 12b-1 Plans and Administrative Services Plans; (d) review and oversee the investment advisers' brokerage practices as these relate to the Trust; (e) review and evaluate the services received by the Trust in respect of, and the Trust's contractual arrangements relating to, transfer agency, sub-transfer agency, shareholder services, administrative services, custody, and such other areas as may be assigned by the Board to the Committee from time to time; and (f) undertake such other responsibilities as may be delegated to the Committee by the Board. The Valuation and Operations Committee met four times during the past fiscal year, and currently consists of the following Trustees: Mr. Allen (Chair), Ms. Dryden, Ms. Hennigar, Ms. Kosel and Mr. Wetmore, each of whom is not an interested person of the Trust, as defined in the 1940 Act.

The purposes of the Nominating and Fund Governance Committee are to: (a) assist the Board in its review and oversight of governance matters; (b) assist the Board with the selection and nomination of candidates to serve on the Board; (c) oversee legal counsel; (d) assist the Board in its review and oversight of shareholder communications and proxy voting by series of the Trust; and (e) undertake such other responsibilities as may be delegated to the Committee by the Board. The Nominating and Fund Governance Committee met five times during

the past fiscal year, and currently consists of the following Trustees: Mr. Allen, Ms. Jacobs, Ms. Kosel, Mr. Kridler (Chair) and Mr. Wetmore, each of whom is not an interested person of the Trust, as defined in the 1940 Act.

The Nominating and Fund Governance Committee has adopted procedures regarding its review of recommendations for trustee nominees, including those recommendations presented by shareholders. When considering whether to add additional or substitute trustees to the Board of Trustees of the Trust, the Trustees shall take into account any proposals for candidates that are properly submitted to the Trust's Secretary. Shareholders wishing to present one or more candidates for trustee for consideration may do so by submitting a signed written request to the Trust's Secretary at Attn: Secretary, Nationwide Mutual Funds, 1000 Continental Drive, Suite 400, King of Prussia, PA 19406, which includes the following information: (i) name and address of the shareholder and, if applicable, name of broker or record holder; (ii) number of shares owned; (iii) name of Fund(s) in which shares are owned; (iv) whether the proposed candidate(s) consent to being identified in any proxy statement utilized in connection with the election of Trustees; (v) the name, background information, and qualifications of the proposed candidate(s) and (vi) a representation that the candidate or candidates are willing to provide additional information about themselves, including assurances as to their independence.

The purposes of the Investment Committee are to: (a) assist the Board in its review and oversight of the Funds' performance; and (b) undertake such other responsibilities as may be delegated to the Committee by the Board. The Investment Committee met four times during the past fiscal year, and currently consists of the following Trustees: Ms. Cholmondeley, Ms. Jacobs (Chair), Mr. Karlawish and Mr. Kridler, each of whom is not an interested person of the Trust, as defined in the 1940 Act.

Ownership of Shares of Nationwide Funds as of December 31, 2013

2 As of the date of this SAI, subadvisers to the Funds include American Century Investment Management, Inc.; BlackRock Investment Management, LLC; Brookfield Investment Management Inc.; Dimensional Fund Advisors LP; Epoch Investment Partners, Inc.; Federated Investment Management Company; HighMark Capital Management, Inc.; Invesco Advisers, Inc.; JP Morgan Investment Management Inc.; Lazard Asset Management, LLC; Logan Circle Partners, L.P.; Massachusetts Financial Services Company; Morgan Stanley Investment Management Inc.; Nationwide Asset Management, LLC; Neuberger Berman Fixed Income LLC; Neuberger Berman Management LLC; OppenheimerFunds, Inc.; Putnam Investment Management, LLC; Pyramis Global Advisors, LLC; Templeton Investment Counsel, LLC; The Boston Company Asset Management; LLC, Thompson, Siegel & Walmsley LLC; WEDGE Capital Management, L.L.P.; Wells Capital Management, Inc.; Wellington Management Company, LLP; and Winslow Capital Management, LLC.

3 Nationwide Fund Distributors LLC or any company, other than an investment company, that controls a Fund's adviser or distributor.

Compensation of Trustees

The Trustees receive fees and reimbursement for expenses of attending board meetings from the Trust. Unless otherwise agreed by the Board of Trustees, the Adviser or an affiliate of the Adviser pays the fees, if any, and/or reimburses the Trust for fees and expenses paid to Trustees who are interested persons of the Trust. The Compensation Table below sets forth the total compensation paid to the Trustees of the Trust, before reimbursement of any expenses incurred by the Trustees, for the fiscal year ended December 31, 2013. In addition, the table sets forth the total compensation paid to the Trustees from all the Funds in the Fund Complex for the fiscal year ended December 31, 2013. Trust officers receive no compensation from the Trust in their capacity as officers.

The Trust does not maintain any pension or retirement plans for the Officers or Trustees of the Trust.

Name of Trustee	Aggregate Compensation from the Trust	Pension Retirement Benefits Accrued as Part of Trust Expenses	Estimated Annual Benefits Upon Retirement	Total Compensation from the Fund Complex ¹

¹ On December 31, 2013, the Fund Complex included two trusts comprised of 112 investment company funds or series.

² Ms. Kosel became a Trustee of the Trust in March 2013.

Code of Ethics

Federal law requires the Trust, each of its investment adviser, subadvisers, and principal underwriter to adopt codes of ethics which govern the personal securities transactions of their respective personnel. Accordingly, each such entity has adopted a code of ethics pursuant to which their respective personnel may invest securities for their personal accounts (including securities that may be purchased or held by the Trust). Copies of these Codes of Ethics are on file with the SEC and are available to the public.

Proxy Voting Guidelines

Federal law requires the Trust and each of its investment adviser and subadviser to adopt procedures for voting proxies (the "Proxy Voting Guidelines") and to provide a summary of those Proxy Voting Guidelines used to vote the securities held by a Fund. The Funds' proxy voting policies and procedures and information regarding how the Funds voted proxies relating to portfolio securities during the most recent 12-month period ended June 30 are available without charge (i) upon request, by calling 800-848-0920, (ii) on the Trust's website at nationwide.com/mutualfundsnvit, or (iii) on the Securities and Exchange Commission's website at www.sec.gov. The summary of such Proxy Voting Guidelines is attached as Appendix B to this SAI.

INVESTMENT ADVISORY AND OTHER SERVICES

Trust Expenses

The Trust pays the compensation of the Trustees who are not interested persons (as described in the 1940 Act) of the Trust, and all expenses (other than those assumed by the investment adviser), including governmental fees, interest charges, taxes, membership dues in the Investment Company Institute allocable to the Trust; investment advisory fees and any Rule 12b-1 fees; fees under the Trust's Joint Fund Administration and Transfer Agency Agreement which includes the expenses of calculating the Funds' net asset values; fees and expenses of independent certified public accountants, and legal counsel of the Trust and to the independent Trustees; expenses of preparing, printing, and mailing shareholders' reports, notices, proxy statements, and reports to governmental offices and commissions; expenses connected with the execution, recording, and settlement of portfolio security transactions; short sale dividend expenses; insurance premiums; administrative services fees under an Administrative Services Plan; fees and expenses of the custodian for all services to the Trust; expenses of shareholders' meetings; and expenses relating to the issuance, registration, and qualification of shares of the Trust.

The Adviser may, from time to time, agree to voluntarily or contractually waive advisory fees, and if necessary reimburse expenses, in order to limit total operating expenses for certain Funds and/or classes, as described below. These expense limitations apply to the classes described; if a particular class is not referenced, there is no expense limitation for that class.

Investment Adviser

NFA, located at 1000 Continental Drive, Suite 400, King of Prussia, PA 19406, is a wholly owned subsidiary of Nationwide Financial Services, Inc. (“NFS”), a holding company which is a direct wholly owned subsidiary of Nationwide Corporation. All of the common stock of Nationwide Corporation is held by Nationwide Mutual Insurance Company (95.2%) and Nationwide Mutual Fire Insurance Company (4.8%), each of which is a mutual company owned by its policy holders.

Under the Investment Advisory Agreement with the Trust, NFA manages the Funds in accordance with the policies and procedures established by the Trustees. NFA operates primarily as a “Manager of Managers” under which NFA, rather than managing most Funds directly, instead oversees one or more subadvisers.

NFA provides investment management evaluation services in initially selecting and monitoring on an ongoing basis the performance of one or more subadvisers who manage the investment portfolio of a particular Fund. NFA is also authorized to select and place portfolio investments on behalf of such subadvised Funds; however NFA does not intend to do so as a routine matter at this time. The Adviser and the Trust have received an exemptive order from the U.S. Securities and Exchange Commission for a multi-manager structure that allows the Adviser to hire, replace or terminate a subadviser (excluding hiring a subadviser which is an affiliate of the Adviser) without the approval of shareholders. The order also allows the Adviser to revise a subadvisory agreement with an unaffiliated subadviser with the approval of the Board of Trustees but without shareholder approval. If a new unaffiliated subadviser is hired for a Fund, shareholders will receive information about the new subadviser within 90 days of the change. The exemptive order allows the Funds greater flexibility, enabling them to operate more efficiently.

All of the Funds to which this SAI relates are subadvised.

NFA pays the compensation of the officers of the Trust employed by NFA and the compensation and expenses of any Trustees who are interested persons of the Trust. NFA also furnishes, at its own expense, all necessary administrative services, office space, equipment, and clerical personnel for servicing the investments of the Trust and maintaining its investment advisory facilities, and executive and supervisory personnel for managing the investments and effecting the portfolio transactions of the Trust. In addition, NFA pays, out of its legitimate profits, broker-dealers, trust companies, transfer agents and other financial institutions in exchange for their selling of shares of the Trust’s series or for recordkeeping or other shareholder related services.

The Investment Advisory Agreement also specifically provides that NFA, including its directors, officers, and employees, shall not be liable for any error of judgment, or mistake of law, or for any loss arising out of any investment, or for any act or omission in the execution and management of the Trust, except for willful misfeasance, bad faith, or gross negligence in the performance of its duties, or by reason of reckless disregard of its obligations and duties under the Agreement. The Agreement continues in effect for an initial period of one year and thereafter shall continue automatically for successive annual periods provided such continuance is specifically approved at least annually by the Trustees, or by vote of a majority of the outstanding voting securities of the Trust, and, in either case, by a majority of the Trustees who are not parties to the Agreement or interested persons of any such party. The Agreement terminates automatically in the event of its “assignment,” as defined under the 1940 Act. It may be terminated at any time as to a Fund, without penalty, by vote of a majority of the outstanding voting securities of that Fund, by the Board of Trustees or NFA on not more than 60 days’ written notice. The Agreement further provides that NFA may render similar services to others.

For services provided under the Investment Advisory Agreement, NFA receives an annual fee paid monthly based on average daily net assets of the applicable Fund according to the following schedule:

Funds of the Trust**Advisory Fees**

NVIT Nationwide Fund	0.60% on assets up to \$250 million 0.575% on assets of \$250 million or more but less than \$1 billion 0.55% on assets of \$1 billion or more but less than \$2 billion 0.525% on assets of \$2 billion or more but less than \$5 billion 0.50% for assets of \$5 billion or more

Limitation of Fund Expenses

In the interest of limiting the expenses of certain Funds, the Adviser may from time to time waive some or its entire investment advisory fee or reimburse other fees for certain Funds. In this regard, the Adviser has entered into an expense limitation agreement with the Trust on behalf of certain of the Funds (the “Expense Limitation Agreement”). Except as noted below, NFA has agreed contractually to waive advisory fees and, if necessary, reimburse expenses in order to limit the total annual fund operating expenses of each Class of each Fund to the limits described below. The waiver of such fees will cause the total return and yield of a Fund to be higher than they would otherwise be in the absence of such a waiver.

With respect to the American Century NVIT Multi Cap Value Fund, Neuberger Berman NVIT Socially Responsible Fund, NVIT Bond Index Fund, NVIT Core Plus Bond Fund, NVIT Developing Markets Fund, NVIT Emerging Markets Fund, NVIT Enhanced Income Fund, NVIT International Index Fund, NVIT Large Cap Growth Fund, NVIT Mid Cap Index Fund, NVIT Multi-Manager International Growth Fund, NVIT Multi-Manager Large Cap Growth Fund, NVIT Multi-Manager Large Cap Value Fund, NVIT Multi-Manager Mid Cap Growth Fund, NVIT Multi-Manager Mid Cap Value Fund, NVIT Multi-Manager Small Cap Growth Fund, NVIT Multi Sector Bond Fund, NVIT S&P 500 Index Fund, NVIT Small Cap Index Fund and Templeton NVIT International Value

Fund, NFA may request and receive reimbursement from the Funds for the advisory fees waived or limited and other expenses reimbursed by the Adviser pursuant to the Expense Limitation Agreement at a later date when a Fund has reached a sufficient asset size to permit reimbursement to be made without causing the total annual operating expense ratio of the Fund to exceed the limits that were in the Expense Limitation Agreement at the time that NFA waived the fees or reimbursed the expenses. No reimbursement will be made to a Fund unless: (i) such Fund's assets exceed \$100 million; (ii) the total annual expense ratio of the Class making such reimbursement is less than the limit set forth below; and (iii) the payment of such reimbursement is made no more than three years from the fiscal year in which the corresponding reimbursement to the Fund was made. Except as provided for in the Expense Limitation Agreement, reimbursement of amounts previously waived or assumed by NFA is not permitted.

Until at least April 30, 2015, NFA has agreed contractually to waive advisory fees and, if necessary, reimburse expenses in order to limit total annual fund operating expenses (excluding interest, taxes, brokerage commissions, short-sale dividend expenses, other expenditures which are capitalized in accordance with generally accepted accounting principles and other non-routine expenses not incurred in the ordinary course of the Fund's business; in addition, Rule 12b-1 fees, fees paid pursuant to an Administrative Services Plan, other costs incurred in connection with the purchase and sale of portfolio securities, and expenses incurred by the Fund in connection with any merger or reorganization are also excluded) for certain Funds/classes as follows:

- Neuberger Berman NVIT Socially Responsible Fund to 0.78% for Class I, Class II and Class Y shares
- NVIT Bond Index Fund to 0.29% for Class I, Class II and Class Y shares
- NVIT Core Plus Bond Fund to 0.55% for Class I, Class II, Class P and Class Y shares
- NVIT Developing Markets Fund to 1.20% for Class I and Class II shares
- NVIT Emerging Markets Fund to 1.20% for Class I, Class II and Class Y shares
- NVIT Enhanced Income Fund to 0.45% for Class II and Class Y shares
- NVIT International Index Fund to 0.34% for Class I, Class II, Class VIII and Class Y shares
- NVIT Mid Cap Index Fund to 0.30% for Class I, Class II and Class Y shares
- NVIT Multi-Manager International Growth Fund to 0.96% for Class I, Class II and Class Y shares
- NVIT Multi-Manager Large Cap Growth Fund to 0.75% for Class I, Class II and Class Y shares
- NVIT Multi-Manager Large Cap Value Fund to 0.77% for Class I, Class II and Class Y shares
- NVIT Multi-Manager Mid Cap Growth Fund to 0.82% for Class I, Class II and Class Y shares
- NVIT Multi-Manager Mid Cap Value Fund to 0.81% for Class I, Class II and Class Y shares
- NVIT Multi-Manager Small Cap Growth Fund to 1.08% for Class I, Class II and Class Y shares
- NVIT Multi Sector Bond Fund to 0.78% for Class I and Class Y shares
- NVIT S&P 500 Index Fund to 0.21% for Class I, Class II, Class IV, and Class Y shares
- NVIT Small Cap Index Fund to 0.28% for Class II and Class Y shares
- Templeton NVIT International Value Fund to 0.87% for Class I, Class II and Class Y shares

Until at least May 1, 2015, NFA has agreed contractually to waive advisory fees and, if necessary, reimburse expenses in order to limit total annual fund operating expenses (without exclusions) for certain Funds/classes as follows:

- American Century NVIT Multi Cap Value Fund to 0.92%, 1.09% and 0.67% for Class I, Class II and Class Y shares, respectively
- NVIT Large Cap Growth Fund to 0.65%, 0.90%, 0.75% and 0.50% for Class I, Class II, Class P and Class Y shares, respectively

NFA has also agreed contractually to waive advisory fees in an amount equal to 0.0465% with respect to the NVIT Multi-Manager Small Company Fund, and an additional amount equal to 0.11% with respect to the NVIT Multi-Manager Small Cap Growth Fund, in both cases until May 1, 2015.

Investment Advisory Fees

During the fiscal years ended December 31, 2013, 2012 and 2011, the Funds paid NFA fees for investment advisory services (after waivers and reimbursements) as follows:

American Century Investment Management, Inc. (“American Century”) is located at 4500 Main Street, Kansas City, Missouri 64111, and was formed in 1958. American Century is wholly owned by American Century Companies, Inc. (“ACC”). The Stowers Institute of Medical Research (“SIMR”) controls ACC by virtue of its beneficial ownership of more than 25% of the voting securities of ACC. SIMR is part of a not-for-profit biomedical research organization dedicated to finding the keys to the causes, treatments and prevention of disease.

BlackRock Investment Management, LLC (“BlackRock”), 1 University Drive, Princeton, New Jersey 08543-9011, is a wholly owned indirect subsidiary of BlackRock, Inc., a Delaware corporation. BlackRock, Inc. was organized in 1999 and is a registered investment adviser and a registered commodity pool operator. BlackRock, Inc. and its affiliates had approximately 4.34 trillion in assets under management as of December 31, 2013.

Brookfield Investment Management Inc. (“Brookfield”), located at Brookfield Place, 250 Vesey Street, New York, NY 10281-1023, is a global investment manager focused on specialized equity and fixed income securities investments. Brookfield is an SEC-registered investment advisor and, with its affiliates and subsidiaries, had approximately \$10 billion in assets under management as of December 31, 2013. Brookfield is a subsidiary of Brookfield Asset Management Inc., a global alternative asset manager with over \$187 billion in assets under management as of December 31, 2013.

Dimensional Fund Advisors LP (“Dimensional”), located at 6300 Bee Cave Road, Building One, Austin, Texas 78746, has been engaged in the business of providing investment management services since May 1981. DFA is currently organized as a Delaware limited partnership and is controlled and operated by its general partner, Dimensional Holdings Inc., a Delaware corporation. As of December 31, 2013, assets under management for all affiliated advisors totaled approximately \$337 billion.

Epoch Investment Partners, Inc. (“Epoch”) is a wholly owned subsidiary of The Toronto Dominion Bank. . Epoch is located at 399 Park Avenue, New York, NY 10022.

Federated Investment Management Company (“Federated”) is located at Federated Investors Tower, 1001 Liberty Avenue, Pittsburgh, Pennsylvania 15222. Federated is a subsidiary of Federated Investors, Inc. Federated and other subsidiaries of Federated Investors, Inc. serve as investment advisers to number of investment companies as well as a variety of other customized separately managed accounts, private funds and pooled investment vehicles. Federated Advisory Services Company, an affiliate of the sub-adviser, provides certain support services to Federated. The fee for these services is paid by the Federated and not by the Fund.

Highmark Capital Management, Inc. (“HighMark”), located at 350 California Street, San Francisco, CA 94104, is a subsidiary of Union Bank, N.A., which is a subsidiary of UnionBanCal Corporation. UnionBanCal Corporation is wholly owned by The Bank of Tokyo-Mitsubishi UFJ, Ltd. (BTMU). BTMU is in turn a wholly-owned subsidiary of Mitsubishi UFJ Financial Group, Inc. As of December 31, 2013, HighMark had approximately \$15.8 billion in assets under management. HighMark (and its predecessors) have been providing investment management services to individuals, institutions and large corporations since 1919.

Invesco Advisers, Inc. (“Invesco”) is located at 1555 Peachtree Street, N.E., Atlanta, Georgia 30309. Invesco is an indirect wholly owned subsidiary of Invesco Ltd., a publicly traded company that, through its subsidiaries, engages in the business of investment management on an international basis.

JPMorgan Investment Management Inc. (“JPMorgan”) is located at 270 Park Avenue, New York, NY 10017. JPMorgan is an indirect wholly owned subsidiary of JPMorgan Chase & Co., a bank holding company.

JPMorgan offers a wide range of investment management services and acts as investment adviser to corporate and institutional clients.

Lazard Asset Management LLC (“Lazard”), located at 30 Rockefeller Center, 55th Floor, New York, NY 10112, was formally established in 1970, as the U.S. investment management division of parent company Lazard Frères & Co. LLC (LF&Co.). In 1997, the U.S. and U.K. investment management firms were united to form a single entity, allowing Lazard to provide a more globally integrated perspective. In January 2003, Lazard was established as a separate subsidiary of LF&Co. In 2005, Lazard became a public company, listing on the New York Stock Exchange as LAZ. As of December 31, 2013, Lazard had \$167.5 billion in assets under management.

Logan Circle Partners, L.P. (“Logan Circle”) is located at 1717 Arch Street, Suite 1500, Philadelphia, Pennsylvania 19103. Logan Circle’s inception was November 1, 2007 and the firm is wholly owned by Fortress Investment Group LLC (“FIG”), a publicly traded company.

Massachusetts Financial Services Company (“MFS”) is located at 111 Huntington Avenue, Boston, Massachusetts 02199. MFS is a subsidiary of Sun Life of Canada (U.S.) Financial Services Holdings, Inc., which in turn is an indirect majority-owned subsidiary of Sun Life Financial Inc. (a diversified financial services organization).

Morgan Stanley Investment Management Inc. (“MSIM”) principal offices are located at 522 Fifth Avenue, New York, New York 10036. Morgan Stanley is the direct parent of MSIM. Morgan Stanley is a global financial services firm engaged in securities trading and brokerage activities, as well as providing investment banking, research and analysis, financing and financial advisory services. MSIM provides investment advisory services to employee benefit plans, endowment funds, foundations and other institutional investors.

Nationwide Asset Management, LLC, (“NWAM”) is located at One Nationwide Plaza, Mail Code 1-20-19, Columbus, OH 43215, provides investment advisory services to registered investment companies and other types of accounts, such as institutional separate accounts. NWAM was organized in 2007, in part, to serve as investment subadviser for fixed income funds. NWAM is a wholly owned subsidiary of Nationwide Mutual, and thus an affiliate of NFA.

Neuberger Berman Fixed Income LLC (“NBFI”) has principal offices located at 190 South LaSalle Street, Suite 2400, Chicago, Illinois 60603. NBFI is an indirect wholly owned subsidiary of Neuberger Berman Group LLC.

Neuberger Berman Management LLC (“Neuberger Berman”) is located at 605 Third Avenue, New York, New York 10158. Neuberger Berman is a subsidiary of Neuberger Berman Group LLC, an investment advisory company serving individuals, families, and taxable and non-taxable institutions with a broad range of investment products, services and strategies. Neuberger Berman engages in wealth management services including private asset management, tax and financial planning, and personal and institutional trust services; mutual funds, institutional management and alternative investments.

OppenheimerFunds, Inc. (“Oppenheimer”) is located at Two World Financial Center, 225 Liberty Street, 11th Floor, New York, New York 10281. Oppenheimer was formed in 1960 and is wholly owned by Oppenheimer Acquisition Corporation, a holding company controlled by Massachusetts Mutual Life Insurance Company.

Putnam Investment Management, LLC (“Putnam”) is a Delaware limited liability company with principal offices at One Post Office Square, Boston, Massachusetts 02109. Putnam is a subsidiary of Putnam U.S. Holdings I, LLC. Putnam U.S. Holdings I, LLC, an indirect wholly owned subsidiary of Putnam Investments, LLC, which generally conducts business under the name Putnam Investments, and is owned through a series of wholly owned subsidiaries by Great-West Lifeco, Inc., which is a financial services holding company with operations in Canada, United States and Europe and is a member of the Power Financial Corporation group of companies. Power Financial Corporation is a majority-owned subsidiary of Power Corporation of Canada, a majority of whose voting stock is controlled by The Desmarais Family Residual Trust.

Pyramis Global Advisors, LLC (“Pyramis”) is a limited liability company under the laws of the State of Delaware and is located at 900 Salem Street, Smithfield, Rhode Island 02917. Pyramis is a Fidelity Investments company.

Templeton Investment Counsel, LLC (“Templeton”) is located at 300 S.E. 2nd Street, Fort Lauderdale, Florida 33301, and is a wholly owned subsidiary of Templeton Worldwide, Inc., which is in turn a wholly owned subsidiary of Franklin Resources, Inc, which operates worldwide as Franklin Templeton Investments.

The Boston Company Asset Management, LLC (“The Boston Company”) is located at One Boston Place, 14th Floor, Boston, MA 02108. The Boston Company is a wholly owned subsidiary of BNY Mellon Corporation.

Thompson, Siegel & Walmsley LLC (“TS&W”), a Delaware limited liability company, is located at 6806 Paragon Place, Suite 300, Richmond, Virginia 23230, is a majority-owned subsidiary of Old Mutual (US) Holdings, Inc., an indirectly-owned subsidiary of Old Mutual plc, a financial services company based in the United Kingdom. Since 1970, TS&W has provided investment management services to corporations, pensions and profit-sharing plans, 401(k) and thrift plans, trusts, estates and other institutions and individuals.

WEDGE Capital Management, L.L.P., (“WEDGE”) is located at 301 S. College Street, Suite 2920, Charlotte, North Carolina 28202. WEDGE has been active in the management of client portfolios since 1984. WEDGE is independently owned by eight general partners and is organized as a limited liability partnership under the laws of North Carolina.

Wells Capital Management, Inc. (“WellsCap”) is located at 525 Market Street, San Francisco, California 94105. WellsCap is a wholly owned subsidiary of Wells Fargo Bank, N.A., which is owned by Wells Fargo & Company.

Wellington Management Company, LLP (“Wellington Management”) is a Massachusetts limited liability partnership with principal offices at 280 Congress Street, Boston, Massachusetts 02210. Wellington Management is a professional investment counseling firm which provides investment services to investment companies, employee benefit plans, endowments, foundations and other institutions. Wellington Management and its predecessor organizations have provided investment advisory services for over 80 years. As of December 31, 2013, Wellington Management had investment management authority with respect to approximately \$834 billion in assets.

Winslow Capital Management, LLC (“Winslow Capital”) is located at 4720 IDS Tower, 80 South Eighth Street, Minneapolis, Minnesota 55402. Winslow Capital has been an investment adviser since 1992, and was privately held until December 2008 when it became a wholly owned subsidiary of Nuveen Investments, Inc.

Each subadviser provides investment advisory services to one or more Funds pursuant to a Subadvisory Agreement. Each of the Subadvisory Agreements specifically provides that the subadviser shall not be liable for any error of judgment, or mistake of law, or for any loss arising out of any investment, or for any act or omission in the execution and management of the Fund, except for willful misfeasance, bad faith, or gross negligence in the performance of its duties, or by reason of reckless disregard of its obligations and duties under such Agreement. After an initial period of not more than two years, each Subadvisory Agreement must be approved each year by the Trust’s Board of Trustees or by shareholders in order to continue. Each Subadvisory Agreement terminates automatically if it is assigned. It may also be terminated at any time, without penalty, by vote of a majority of the outstanding voting securities, by the Board of Trustees, NFA or the applicable subadviser, on not more than 60 days written notice.

Subadvisory Fees Paid

The following table sets forth the amount NFA paid to the Subadvisers on behalf of each Fund for the fiscal years ended December 31, 2013, 2012 and 2011:

Fund	Year Ended December 31,		
	2013	2012	2011
American Century NVIT Growth Fund	\$501,275	\$442,250	\$401,903
American Century NVIT Multi Cap Value Fund	1,319,827	1,235,699	1,342,939

Templeton NVIT International Value Fund	1,012,075	946,353	949,837

Multi-Manager Structure

NFA and the Trust have received from the SEC an exemptive order for a multi-manager structure which allows NFA to hire, replace or terminate unaffiliated subadvisers without the approval of shareholders; the order also allows NFA to revise a subadvisory agreement with an unaffiliated subadviser without shareholder approval. If a new unaffiliated subadviser is hired, the change will be communicated to shareholders within 90 days of such change, and all change will be approved by the Trust's Board of Trustees, including a majority of the Trustees who are not interested persons of the Trust or NFA. The order is intended to facilitate the efficient operation of the Funds and afford the Trust increased management flexibility.

NFA provides investment management evaluation services to the Funds principally by performing initial due diligence on prospective subadvisers for the Funds and thereafter monitoring the performance of the subadvisers through quantitative and qualitative analysis as well as periodic in-person, telephonic and written consultations with the subadvisers. NFA has responsibility for communicating performance expectations and evaluations to the subadviser and ultimately recommending to the Trust's Board of Trustees whether a subadviser's contract should be renewed, modified or terminated; however, NFA does not expect to recommend frequent changes of subadvisers. NFA will regularly provide written reports to the Trust's Board of Trustees regarding the results of their evaluation and monitoring functions. Although NFA will monitor the performance of the subadvisers, there is no certainty that the subadvisers or the Funds will obtain favorable results at any given time.

Portfolio Managers

Appendix C contains the following information regarding each of the portfolio managers identified in the Funds' prospectuses: (i) the dollar range of the portfolio manager's investments in each Fund; (ii) a description of the portfolio manager's compensation structure; and (iii) information regarding other accounts managed by the portfolio manager and potential conflicts of interest that might arise from the management of multiple accounts.

Distributor

Nationwide Fund Distributors LLC ("NFD" or the "Distributor"), 1000 Continental Drive, Suite 400, King of Prussia, PA 19406 serves as underwriter for each of the Funds in the continuous distribution of their shares pursuant to an Underwriting Agreement dated May 1, 2007 (the "Underwriting Agreement"). Unless otherwise terminated, the Underwriting Agreement will continue for an initial period of two years and from year to year thereafter for successive annual periods, if, as to each Fund, such continuance is approved at least annually by (i) the Trust's Board of Trustees or by the vote of a majority of the outstanding shares of that Fund, and (ii) the vote of a majority of the Trustees of the Trust who are not parties to the Underwriting Agreement or interested persons (as defined in the 1940 Act) of any party to the Underwriting Agreement, cast in person at a meeting called for the purpose of voting on such approval. The Underwriting Agreement may be terminated in the event of any assignment, as defined in the 1940 Act. NFD is a wholly-owned subsidiary of NFS Distributors, Inc., which in turn is a wholly-owned subsidiary of NFS. The following entities or people are affiliates of the Trust and are also affiliates of NFD:

Nationwide Fund Advisors
Nationwide Fund Management LLC
Nationwide Life Insurance Company
Nationwide Life and Annuity Insurance Company
Nationwide Financial Services, Inc.
Nationwide Corporation
Nationwide Mutual Insurance Company
Karen L. Heath-Wade
Joseph Finelli
Brian Hirsch
Stephen T. Grugeon
Eric Miller
Michael S. Spangler

In its capacity as Distributor, NFD solicits orders for the sale of shares, advertises and pays the costs of distributions, advertising, office space and the personnel involved in such activities. NFD receives no compensation under the Underwriting Agreement with the Trust, but may retain all or a portion of the 12b-1 fee, if any, imposed up sales of shares of each of the Funds.

Distribution Plan

The Trust has adopted a Distribution Plan (the “Plan”) under Rule 12b-1 of the 1940 Act with respect to certain classes of shares of certain Funds. The Plan permits such Funds to compensate NFD, as the Funds’ principal underwriter, for expenses associated with the distribution of certain classes of shares of the Funds. Under the Plan, NFD pays an annual fee in an amount that will not exceed the following amounts:

Funds	Amount
American Century NVIT Growth Fund	0.25% of the average daily net assets of Class II shares of each Fund, all of which will be considered a distribution fee.
American Century NVIT Multi Cap Value Fund ¹	
Invesco NVIT Comstock Value Fund	
Neuberger Berman NVIT Multi Cap Opportunities Fund	
Neuberger Berman NVIT Socially Responsible Fund ²	
NVIT Nationwide Fund	
NVIT Bond Index Fund	
NVIT Core Bond Fund	
NVIT Core Plus Bond Fund	
NVIT Developing Markets Fund	
NVIT Emerging Markets Fund	
NVIT Enhanced Income Fund	
NVIT Government Bond Fund	
NVIT International Equity Fund	
NVIT International Index Fund	
NVIT Large Cap Growth Fund

NVIT Multi-Manager Mid Cap Value Fund	
NVIT Multi-Manager Small Cap Growth Fund	
NVIT Multi-Manager Small Cap Value Fund	
NVIT Multi-Manager Small Company Fund	
NVIT Real Estate Fund	
NVIT S&P 500 Index Fund	
NVIT Short Term Bond Fund	
NVIT Small Cap Index Fund	
Templeton NVIT International Value Fund	
NVIT Core Bond Fund	0.25% of the average daily net assets of Class P shares of each Fund, all of which will be considered a distribution fee.
NVIT Core Plus Bond Fund	
NVIT Government Bond Fund	
NVIT Large Cap Growth Fund	
NVIT Short Term Bond Fund	
NVIT International Index Fund	0.40% of the average daily net assets of Class VIII shares of each Fund, all of which will be considered a distribution fee.

- The Trust, on behalf of the American Century NVIT Multi Cap Value Fund, and NFD have entered into a contract waiving 0.08% of the Distribution and/or Service (12b-1) Fee for Class II shares until at least April 30, 2015.
- The Trust, on behalf of the Neuberger Berman NVIT Socially Responsible Fund, and NFD have entered into a contract waiving 0.16% of the Distribution and/or Service (12b-1) Fee for Class II shares until at least April 30, 2015.

During the fiscal year ended December 31, 2013, NFD earned the following distribution fees under the Plan:

<u>Fund</u>	<u>Fees Paid</u>
American Century NVIT Growth Fund	\$77,122
American Century NVIT Multi Cap Value Fund	275,454
Federated NVIT High Income Bond Fund	0

NVIT S&P 500 Index Fund	29,460
NVIT Short Term Bond Fund	266,226
NVIT Small Cap Index Fund	6,941
Templeton NVIT International Value Fund	0

These fees will be paid to NFD for activities or expenses primarily intended to result in the sale or servicing of Fund shares. Distribution fees may be paid to NFD, to an insurance company or its eligible affiliates for distribution activities related to the indirect marketing of the Funds to the owners of variable insurance contracts ("contract owners"), or to any other eligible institution. As described above, a distribution fee may be paid pursuant to the Plan for services including, but not limited to:

- (i) Underwriter services including (1) distribution personnel compensation and expenses, (2) overhead, including office, equipment and computer expenses, supplies and travel, (3) procurement of information, analysis and reports related to marketing and promotional activities and (4) expenses related to marketing and promotional activities;
- (ii) Printed documents including (1) fund prospectuses, statements of additional information and reports for prospective contract owners and (2) promotional literature regarding the Fund;
- (iii) Wholesaling services by NFD or the insurance company including (1) training, (2) seminars and sales meetings and (3) compensation;
- (iv) Life insurance company distribution services including (1) fund disclosure documents and reports (2) variable insurance marketing materials, (3) Fund sub-account performance figures, (4) assisting prospective contract owners with enrollment matters, (5) compensation to the salesperson of the variable insurance contract and (6) providing other reasonable help with the distribution of Fund shares to life insurance companies; and
- (v) Life insurance company contract owner support.

As required by Rule 12b-1, the Plan was approved by the Board of Trustees, including a majority of the Trustees who are not interested persons of the Trust and who have no direct or indirect financial interest in the operation of the Plan (the "Independent Trustees"). The Trust's current Plan was initially approved by the Board of Trustees on May 1, 2007. The Plan may be amended from time to time by vote of a majority of the Trustees, including a majority of the Independent Trustees, cast in person at a meeting called for that purpose. The Plan may be terminated as to the applicable shares of a Fund by vote of a majority of the Independent Trustees, or by vote of a majority of the outstanding shares of that Class or Fund, as applicable. Any change in the Plan that would materially increase the distribution cost to the applicable shareholders requires shareholder approval. The Trustees review quarterly a written report of such costs and the purposes for which such costs have been incurred. As long as the Plan is in effect, selection and nomination of those Trustees who are not interested persons of the Trust shall be committed to the discretion of such disinterested persons. All agreements with any person relating to the implementation of the Plan may be terminated at any time on 60 days' written notice without payment of any penalty, by vote of a majority of the Independent Trustees or by a vote of the majority of the outstanding applicable shares. The Plan will continue in effect for successive one-year periods, provided that each such continuance is specifically approved (i) by the vote of a majority of the Independent Trustees, and (ii) by a vote of a majority of the entire Board of Trustees cast in person at a meeting called for that purpose. The Board of Trustees has a duty to request and evaluate such information as may be reasonably necessary for them to make an informed determination of whether the Plan should be implemented or continued. In addition the Trustees in approving the Plan as to a Fund must determine that there is a reasonable likelihood that the Plan will benefit such Fund and its shareholders.

NFD may enter into, from time to time, agreements with selected dealers pursuant to which such dealers will provide certain services in connection with the distribution of a Fund's shares including, but not limited to, those discussed above. NFD, or an affiliate of NFD, pays additional amounts from its own resources to dealers or other financial intermediaries, including its affiliate, NFS or its subsidiaries, for aid in distribution or for aid in providing administrative services to shareholders.

The Trust has been informed by NFD that during the fiscal year ended December 31, 2013, the following expenditures were made using the 12b-1 fees received by NFD with respect to the Funds:

Fund	Prospectus Printing & Mailing¹	Distributor Compensation & Costs	Broker- Dealer Compensation & Costs²

- 1 Printing and/or mailing of prospectuses to other than current Fund shareholders.
- 2 Broker/dealer compensation and costs were primarily paid to Nationwide Investment Services Corporation, an affiliate of NFD and underwriter of variable insurance contracts, which are offered by the life insurance company affiliates of NFS.

A Fund may not recoup the amount of unreimbursed expenses in a subsequent fiscal year and does not generally participate in joint distribution activities with other Funds. To the extent that certain Funds utilize the remaining Rule 12b-1 fees not allocated to “Broker-Dealer Compensation and Costs” or “Printing and Mailing” of a

prospectus which covers multiple Funds, however, such other Funds may benefit indirectly from the distribution of the Fund paying the Rule 12b-1 fees.

Administrative Services Plan

Under the terms of an Administrative Services Plan, a Fund is permitted to enter Servicing Agreements with servicing organizations who agree to provide certain administrative support services for the Funds. Such administrative support services include but are not limited to the following: establishing and maintaining shareholder accounts, processing purchase and redemption transactions, arranging for bank wires, performing shareholder sub-accounting, answering inquiries regarding the Funds, providing periodic statements showing the account balance for beneficial owners or for Plan participants or contract holders of insurance company separate accounts, transmitting proxy statements, periodic reports, updated prospectuses and other communications to shareholders and, with respect to meetings of shareholders, collecting, tabulating, and forwarding to the Trust executed proxies and obtaining such other information and performing such other services as may reasonably be required.

As authorized by the Administrative Services Plan, the Trust has entered into a Fund Participation Agreement, effective May 2, 2005, pursuant to which NFS has agreed to provide certain administrative support services to the Funds held beneficially by its customers. NFS is a wholly owned subsidiary of Nationwide Corporation, and is the parent company of NFA, and the indirect parent company of NFD. In consideration for providing administrative support services, NFS and other entities with which the Trust may enter into Servicing Agreements will receive a fee, computed at the annual rate of up to 0.25% of the average daily net assets of the Class I, Class II or Class VIII shares of the Funds, the annual rate of up to 0.20% of the average daily net assets of Class IV shares of the Funds and at the annual rate of up to 0.10% of the average daily net assets of the Class V shares held by customers of NFS or any such other entity. No fee is paid with respect to the Class P and Class Y shares of any Fund.

During the fiscal years ended December 31, 2013, 2012 and 2011, NFS and its affiliates earned \$50,094,599, \$44,132,956 and \$39,125,097 in administrative services fees it provided to all Funds of the Trust (including the Funds that are not included in this SAI).

Fund Administration and Transfer Agency Services

Under the terms of the Joint Fund Administration and Transfer Agency Agreement (the "Joint Administration Agreement") dated May 1, 2010, NFM, an indirect wholly owned subsidiary of NFS, provides various administration and accounting services to the Funds and Nationwide Mutual Funds (another trust also advised by NFA), including daily valuation of the Funds' shares, preparation of financial statements, tax returns, and regulatory reports, and presentation of quarterly reports to the Board of Trustees. NFM also serves as transfer agent and dividend disbursing agent for each of the Funds. NFM is located at 1000 Continental Drive, Suite 400, King of Prussia, Pennsylvania 19406. Under the Joint Administration Agreement, NFM is paid an annual fee for fund administration and transfer agency services based on the sum of the following: (i) the amount payable by NFM to J.P. Morgan Chase Bank, N.A. ("JPMorgan Chase") under the Sub-Administration Agreement between NFM and JPMorgan Chase (see "Sub-Administration" below); and (ii) the amount payable by NFM to U.S. Bancorp Fund Services, LLC ("US Bancorp") under the Sub-Transfer Agency Servicing Agreement between NFM and US Bancorp (see "Sub-Transfer Agency" below); and (iii) a percentage of the combined average daily net assets of the Trust and Nationwide Mutual Funds. In addition, the Trust also pays out-of-pocket expenses (including, but not limited to, the cost of pricing services that NFM utilizes) reasonably incurred by NFM in providing services to the Funds and Trust.

During the fiscal years ended December 31, 2013, 2012 and 2011, NFM was paid fund administration and transfer agency fees from the Funds as follows:

<u>Fund</u>	<u>2013</u>	<u>2012</u>	<u>2011</u>

Sub-Administration

NFM has entered into a Sub-Administration Agreement with J.P. Morgan Chase Bank, N.A. (“JPMorgan”), dated May 22, 2009 and effective August 24, 2009, to provide certain fund sub-administration services for each Fund. NFM pays JPMorgan a fee for these services.

Sub-Transfer Agency

NFM has entered into a Sub-Transfer Agent Servicing Agreement with U.S. Bancorp Fund Services, LLC (“US Bancorp”), dated September 1, 2012, to provide certain sub-transfer agency services for the Fund. NFM pays US Bancorp a fee for these services.

Custodian

JPMorgan Chase Bank, N.A., 270 Park Avenue, New York, NY 10008, is the Custodian for the Funds and makes all receipts and disbursements under a Custody Agreement. The Custodian performs no managerial or policy making functions for the Funds.

Legal Counsel

Stradley Ronon Stevens & Young, LLP, 1250 Connecticut Avenue N.W., Suite 500, Washington, D.C. 20036-2652, serves as the Trust's legal counsel.

Independent Registered Public Accounting Firm

PricewaterhouseCoopers LLP, Two Commerce Square, Suite 1700, 2001 Market Street, Philadelphia, PA 19103-7042, serves as the Independent Registered Public Accounting Firm for the Trust.

BROKERAGE ALLOCATION

NFA and each subadviser is responsible for decisions to buy and sell securities and other investments for the Funds, the selection of brokers and dealers to effect the transactions and the negotiation of brokerage commissions, if any. In transactions on stock and commodity exchanges in the United States, these commissions are negotiated, whereas on foreign stock and commodity exchanges these commissions are generally fixed and are generally higher than brokerage commissions in the United States. In the case of securities traded on the over-the-counter markets or for securities traded on a principal basis, there is generally no commission, but the price includes a spread between the dealer's purchase and sale price. This spread is the dealer's profit. In underwritten offerings, the price includes a disclosed, fixed commission or discount. Most short-term obligations are normally traded on a "principal" rather than agency basis. This may be done through a dealer (*e.g.*, a securities firm or bank) who buys or sells for its own account rather than as an agent for another client, or directly with the issuer.

Except as described below, the primary consideration in portfolio security transactions is best price and execution of the transaction *i.e.*, execution at the most favorable prices and in the most effective manner possible. "Best price-best execution" encompasses many factors affecting the overall benefit obtained by the client account in the transaction including, but not necessarily limited to, the price paid or received for a security, the commission charged, the promptness, availability and reliability of execution, the confidentiality and placement accorded the order, and customer service. Therefore, "best price-best execution" does not necessarily mean obtaining the best price alone but is evaluated in the context of all the execution services provided. NFA and the subadvisers have complete freedom as to the markets in and the broker-dealers through which they seek this result.

Subject to the primary consideration of seeking best price-best execution and as discussed below, securities may be bought or sold through broker-dealers who have furnished statistical, research, and other information or services to NFA or a subadviser. In placing orders with such broker-dealers, NFA or the subadviser will, where possible, take into account the comparative usefulness of such information. Such information is useful to NFA or a subadviser even though its dollar value may be indeterminable, and its receipt or availability generally does not reduce NFA's or a subadviser's normal research activities or expenses.

There may be occasions when portfolio transactions for a Fund are executed as part of concurrent authorizations to purchase or sell the same security for trusts or other accounts (including other mutual funds) served by NFA or a subadviser or by an affiliated company thereof. Although such concurrent authorizations potentially could be either advantageous or disadvantageous to a Fund, they are effected only when NFA or a subadviser believes that to do so is in the interest of the Fund. When such concurrent authorizations occur, the executions will be allocated in an equitable manner.

In purchasing and selling investments for the Funds, it is the policy of NFA and each subadviser to obtain best execution at the most favorable prices through responsible broker-dealers. The determination of what may

constitute best execution in a securities transaction by a broker involves a number of considerations, including the overall direct net economic result to the Fund (involving both price paid or received and any commissions and other costs paid), the efficiency with which the transaction is effected, the ability to effect the transaction at all when a large block is involved, the availability of the broker to stand ready to execute possibly difficult transactions in the future, the professionalism of the broker, and the financial strength and stability of the broker. These considerations are judgmental and are weighed by NFA or a subadviser in determining the overall reasonableness of securities executions and commissions paid. In selecting broker-dealers, NFA or a subadviser will consider various relevant factors, including, but not limited to, the size and type of the transaction; the nature and character of the markets for the security or asset to be purchased or sold; the execution efficiency, settlement capability and financial condition of the broker-dealer's firm; the broker-dealer's execution services, rendered on a continuing basis; and the reasonableness of any commissions.

NFA and each subadviser may cause a Fund to pay a broker-dealer who furnishes brokerage and/or research services a commission that is in excess of the commission another broker-dealer would have received for executing the transaction if it is determined, pursuant to the requirements of Section 28(e) of the Exchange Act, that such commission is reasonable in relation to the value of the brokerage and/or research services provided. Such research services may include, among other things, analyses and reports concerning issuers, industries, securities, economic factors and trends, portfolio strategy, analytic or modeling software, market data feeds and historical market information. Any such research and other information provided by brokers to NFA or a subadviser is considered to be in addition to and not in lieu of services required to be performed by it under its investment advisory or subadvisory agreement, as the case may be. The fees paid to NFA or a subadviser pursuant to its respective investment advisory or subadvisory agreement are not reduced by reason of its receiving any brokerage and research services. The research services provided by broker-dealers can be useful to NFA or a subadviser in serving its other clients. All research services received from the brokers to whom commission are paid are used collectively, meaning such services actually may not be utilized in connection with each client account that may have provided the commission paid to the brokers providing such services. NFA and the subadvisers are prohibited from considering the broker-dealers sale of shares of any Fund for which it serves as investment adviser or subadviser, except as may be specifically permitted by law.

Commission Recapture Program. NFA may instruct subadvisers to direct brokerage transactions, subject to seeking best execution, to certain broker-dealers who have agreed to participate in a commission recapture program. Under the commission recapture program, the participating broker-dealer returns a portion of the commission dollars paid by a Fund directly to the Fund. NFA has instructed subadvisers to direct brokerage transactions to broker-dealers participating in the commission recapture program only if the subadviser believes that doing so is consistent with its obligations to seek best execution. Commissions recaptured by a Fund will be included in realized gain (loss) on securities in the Fund's appropriate financial statements.

Fund portfolio transactions may be effected with broker-dealers who have assisted investors in the purchase of variable annuity contracts or variable insurance policies issued by Nationwide Life Insurance Company or Nationwide Life & Annuity Insurance Company. However, neither such assistance nor sale of other investment company shares is a qualifying or disqualifying factor in a broker-dealer's selection, nor is the selection of any broker-dealer based on the volume of shares sold.

The following table lists, for the fiscal year ended December 31, 2013, the total amount of transactions that were directed to brokers in exchange for research services provided and the amount of commissions the Funds paid in connection with such transactions. This information has been provided by the respective Fund's subadvisers and is believed to be reliable. However, the Funds have not independently verified such information.

Fund Name	Total Amount of Transactions on which Commissions Paid	Total Brokerage Commissions
Invesco NVIT Comstock Value Fund	\$59,547,016	\$53,489

Under the 1940 Act, “affiliated persons” of a Fund are prohibited from dealing with it as a principal in the purchase and sale of securities unless an exemptive order allowing such transactions is obtained from the SEC. However, each Fund may purchase securities from underwriting syndicates of which a subadviser or any of its affiliates as defined in the 1940 Act, is a member under certain conditions, in accordance with Rule 10f-3 under the 1940 Act.

Each of the Funds contemplates that, consistent with the policy of obtaining best results, brokerage transactions may be conducted through “affiliated brokers or dealers,” as defined in the 1940 Act. Under the 1940 Act, commissions paid by a Fund to an “affiliated broker or dealer” in connection with a purchase or sale of securities offered on a securities exchange may not exceed the usual and customary broker’s commission. Accordingly, it is the Funds’ policy that the commissions to be paid to an affiliated broker-dealer must, in the judgment of the appropriate subadviser, be (1) at least as favorable as those that would be charged by other brokers having comparable execution capability and (2) at least as favorable as commissions contemporaneously charged by such broker or dealer on comparable transactions for the broker’s or dealer’s most favored unaffiliated customers. Subadvisers do not deem it practicable or in the Funds’ best interests to solicit competitive bids for commissions on each transaction. However, consideration regularly is given to information concerning the prevailing level of commissions charged on comparable transactions by other brokers during comparable periods of time.

During the fiscal years ended December 31, 2013, 2012 and 2011, there were no brokerage commissions paid to affiliated brokers of the Investment Adviser.

During the year ended December 31, 2013, commissions paid by the NVIT Real Estate Fund to Morgan Stanley represented less than 1% of total commissions paid by the Fund.

PURCHASES, REDEMPTIONS AND PRICING OF SHARES

An insurance company purchases shares of the Funds at their net asset value (“NAV”) using purchase payments received on variable annuity contracts and variable life insurance policies issued by separate accounts. These separate accounts are funded by shares of the Funds.

All investments in the Trust are credited to the shareholder’s account in the form of full and fractional shares of the designated Fund (rounded to the nearest 1/1000 of a share). The Trust does not issue share certificates. Subject to the sole discretion of NFA, each Fund may accept payment for shares in the form of securities that are permissible investments for such Fund.

The NAV of each Fund is determined once daily, as of the close of regular trading on the New York Stock Exchange (the “Exchange”) (generally 4 p.m. Eastern Time) on each business day the Exchange is open for regular trading (the “Valuation Time”). To the extent that a Fund’s investments are traded in markets that are open when the Exchange is closed, the value of the Funds’ investments may change on days when shares cannot be purchased or redeemed.

The Trust will not compute NAV for the Funds on customary national business holidays, including the following: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day and other days when the Exchange is closed.

Each Fund reserves the right to not determine NAV when: (i) a Fund has not received any orders to purchase, sell or exchange shares and (ii) changes in the value of the Fund’s portfolio do not affect the Fund’s NAV.

The offering price for orders placed before the close of the Exchange, on each business day the Exchange is open for trading, will be based upon calculation of the NAV at the close of regular trading on the Exchange. For orders placed after the close of regular trading on the Exchange, or on a day on which the Exchange is not open for trading, the offering price is based upon NAV at the close of the Exchange on the next day thereafter on which the Exchange is open for trading. The NAV of each class of a Fund on which offering and redemption prices are based is determined by adding the value of all securities and other assets of a Fund attributable to the class, deducting liabilities attributable to that class, and dividing by the number of that class’ shares outstanding. Each Fund may reject any order to buy shares and may suspend the sale of shares at any time.

Securities for which market quotations are readily available are valued as of Valuation Time. Equity securities are generally valued at the last quoted sale price, or if there is no sale price, the last quoted bid price provided by an independent pricing service approved by the Board. Securities traded on NASDAQ are generally valued at the NASDAQ Official Closing Price. Prices are taken from the primary market or exchange in which each security trades. Debt and other fixed-income securities are generally valued at the bid price provided by an independent pricing service, the use of which has been approved by the Board.

Securities for which market-based quotations are either unavailable (*e.g.*, independent pricing service does not provide a value) or are deemed unreliable, in the judgment of NFA or designee, are generally valued at fair value by the Trustees, or persons to whom the Board has delegated its responsibilities pursuant to procedures approved by the Board (in this case, the Fair Valuation Committee). In addition, fair value determinations are required for securities whose value is affected by a significant event that will materially affect the value of a security and which occurs subsequent to the time of the close of the principal market on which such security trades but prior to the calculation of the Funds’ NAVs. Fair valuation determinations may require subjective determinations. There can be

no assurance that the fair value of an asset is the price at which the asset could have been sold during the period in which the particular fair value was used in determining a Fund's NAV. The Fair Valuation Committee monitors the results of fair valuation determinations and regularly reports the results to the Board of Trustees or a committee of the Board of Trustees.

The Fair Valuation Committee monitors the continuing appropriateness of the valuation methodology with respect to each security. In the event that NFA or a subadviser believes that the valuation methodology being used to value a security does not produce a fair value for such security, the Fair Valuation Committee is notified so that it may meet to determine what adjustment should be made.

To the extent that a Fund invests in foreign securities, the following would be applicable. Generally, trading in foreign securities markets is completed each day at various times prior to the Valuation Time. Due to the time differences between the closings of the relevant foreign securities exchanges and the time that a Fund's NAV is calculated, a Fund may fair value its foreign investments more frequently than it does other securities. When fair value prices are utilized, these prices will attempt to reflect the impact of the financial markets' perceptions and trading activities on the Fund's foreign investments since their last closing prices were calculated on their primary securities markets or exchanges. Pursuant to the Valuation Procedures, a Fund's foreign equity investments generally will be fair valued daily by an independent pricing service using models designed to estimate likely changes in the values of those investments between the times in which the trading in those securities is substantially completed and the close of the Exchange. When a Fund uses fair value pricing, the values assigned to the Fund's foreign investments may not be the quoted or published prices of the investments on their primary markets or exchanges.

NVIT Money Market Fund

The value of portfolio securities in the NVIT Money Market Fund is determined on the basis of the amortized cost method of valuation in accordance with Rule 2a-7 of the 1940 Act. This method involves valuing a security at its cost and thereafter assuming a constant amortization to maturity of any discount or premium, regardless of the impact of fluctuating interest rates on the market value of the instrument. While this method provides certainty in valuation, it may result in periods during which value, as determined by amortized cost, is higher or lower than the price the Fund would receive if it sold the instrument.

The Board has adopted procedures whereby the extent of deviation, if any, of the current NAV per share calculated using available market quotations from the NVIT Money Market Fund's amortized cost price per share will be determined. In the event such deviation from the NVIT Money Market Fund's amortized cost price per share exceeds $\frac{1}{2}$ of 1 percent, NFA or the Chairman of the Board's Valuation and Operations Committee (or, in his absence, the Chairman of the Board of Trustees) shall promptly convene a meeting of the Board to consider what action, if any, should be taken. Where the Board believes that the extent of any deviation from the Fund's amortized cost per share may result in material dilution or other unfair results to shareholders, it shall cause the Fund to take such action as it deems appropriate to eliminate or reduce, to the extent reasonably practicable, such dilution or unfair result. Such action might include: reducing or withholding dividends; redeeming shares in-kind; selling portfolio instruments prior to maturity to realize capital gains or losses to shorten the Fund's average portfolio maturity; or utilizing an NAV as determined by using available market quotations. In addition, in accordance with applicable legal requirements, the NVIT Money Market Fund may suspend redemptions if: (i) the Board, including a majority of its non-interested trustees, determine that the extent of the deviation between amortized cost price per shares and market value per share may result in a material dilution or other unfair results to the Fund's shareholders; (ii) the Board, including a majority of its non-interested trustees, irrevocably approve the liquidation of the Fund; and (iii) the Fund, prior to suspending redemptions, has notified the SEC of the decision to liquidate the Fund and suspend redemptions.

The Board, in supervising the NVIT Money Market Fund's operations and delegating special responsibilities involving portfolio management to NFA, has undertaken as a particular responsibility within its overall duty of care owed to the Fund's shareholders to assure to the extent reasonably practicable, taking into

account current market conditions affecting the Fund's investment objectives, that the NVIT Money Market Fund's NAV will not deviate from \$1.

Pursuant to its objective of maintaining a stable net asset value per share, the NVIT Money Market Fund will only purchase investments with a remaining maturity of 397 days or less and will maintain a dollar weighted average portfolio maturity of 60 days or less and a weighted average life of 120 days or less that is determined without reference to certain interest rate readjustments.

* * *

A separate account redeems shares to make benefit or surrender payments under the terms of its variable annuity contracts or variable life insurance policies. Redemptions are processed on any day on which the Trust is open for business and are effected at NAV next determined after the redemption order, in proper form, is received by the Trust's transfer agent.

The Trust may suspend the right of redemption for such periods as are permitted under the 1940 Act and under the following unusual circumstances: (a) when the Exchange is closed (other than weekends and holidays) or trading is restricted; (b) when an emergency exists, making disposal of portfolio securities or the valuation of net assets not reasonably practicable; or (c) during any period when the SEC has by order permitted a suspension of redemption for the protection of shareholders.

In-Kind Redemptions

The Funds generally plan to redeem their shares for cash. However, each Fund reserves the right, in circumstances where in its sole discretion it determines that cash redemption payments would be undesirable, taking into account the best interests of all fund shareholders, to honor any redemption request by transferring some of the securities held by the Fund directly to a redeeming shareholder ("redemption in-kind").

The Board of Trustees has adopted procedures for redemptions in-kind to affiliated persons of a Fund. Affiliated persons of a Fund include shareholders who are affiliates of the Fund's investment adviser and shareholders of a Fund owning 5% or more of the outstanding shares of that Fund. These procedures provide that a redemption in-kind shall be effected at approximately the affiliated shareholder's proportionate share of the distributing Fund's current net assets, and they are designed so that redemptions will not favor the affiliated shareholder to the detriment of any other shareholder. The procedures also require that the distributed securities be valued in the same manner as they are valued for purposes of computing the distributing Fund's net asset value and that neither the affiliated shareholder nor any other party with the ability and pecuniary incentive to influence the redemption in-kind selects, or influences the selection of, the distributed securities. Use of the redemption in-kind procedures will allow a Fund to avoid having to sell significant portfolio assets to raise cash to meet the shareholder's redemption request – thus limiting the potential adverse effect on the distributing Fund's net asset value.

Other Dealer Compensation

In addition to the dealer commissions and payments under its 12b-1 Plan, from time to time, NFA and/or its affiliates may make payments for distribution and/or shareholder servicing activities out of their past profits and from their own resources. NFA and/or its affiliates may make payments for marketing, promotional, or related services provided by dealers and other financial intermediaries, and may be in exchange for factors that include, without limitation, differing levels or types of services provided by the intermediary, the expected level of assets or sales of shares, the placing of some or all of the Funds on a preferred or recommended list, access to an intermediary's personnel, and other factors. The amount of these payments is determined by NFA.

In addition to these payments described above, NFA or its affiliates may offer other sales incentives in the form of sponsorship of educational or client seminars relating to current products and issues, assistance in training and educating the intermediary's personnel, and/or entertainment or meals. These payments also may include, at the

direction of a retirement plan's named fiduciary, amounts to intermediaries for certain plan expenses or otherwise for the benefit of plan participants and beneficiaries. As permitted by applicable law, NFA or its affiliates may pay or allow other incentives or payments to intermediaries.

The payments described above are often referred to as "revenue sharing payments." The recipients of such payments may include:

- the Distributor and other affiliates of NFA,
- broker-dealers,
- financial institutions, and
- other financial intermediaries through which investors may purchase shares of a Fund.

Payments may be based on current or past sales; current or historical assets; or a flat fee for specific services provided. In some circumstances, such payments may create an incentive for an intermediary or its employees or associated persons to recommend or sell shares of a Fund to you instead of shares of funds offered by competing fund families. NFA does not seek reimbursement by the Funds for such payments.

Additional Compensation to Affiliated Financial Institution. Nationwide Fund Advisors ("NFA") and Nationwide Fund Distributors LLC ("NFD"), pursuant to an agreement by the parties, pay their affiliate, Nationwide Financial Services, Inc., various amounts under the terms of the agreement.

Additional Compensation to Financial Institutions. The unaffiliated financial institutions that receive additional compensation (as described in the prospectus) from NFA, NFM or NFD, from their own resources, include the following (the information set forth below is considered complete as of the date of this SAI; however, agreements may be entered into, terminated, or amended, from time to time, without notice or change to the SAI):

Pruco Life Insurance Company of New Jersey, Pruco Life Insurance Company, American Skandia Life Assurance Corp., American Skandia Marketing, Inc. (collectively, the "Company")

NFA, pursuant to written agreements, pays the Company a service fee at the annualized rate equal to 0.05% (5 basis points) of the average daily net assets of the NVIT Developing Markets Fund for which the Company performed administrative services during the period in which they were earned. If Fund assets administered by the Company are less than \$1 billion, as of December 31 of the prior calendar year, the service fee will be paid on a quarterly basis. If greater than \$1 billion, the service fee will be paid on a monthly basis.

Jefferson National Life Insurance Company ("Jefferson National")

NFA, pursuant to a written agreement, pays Jefferson National a quarterly fee at the annual rate of: (i) 0.05% (5 basis points) of the average daily net asset value of NVIT S&P 500 Index Fund shares held in Jefferson National separate accounts on the books of NVIT; and (ii) 0.07% (7 basis points) of the average daily net asset value of NVIT Mid Cap Index Fund, NVIT Small Cap Index Fund, NVIT International Index Fund, and NVIT Bond Index Fund shares held in Jefferson National separate accounts on the books of NVIT.

ADDITIONAL INFORMATION

Description of Shares

The Amended Declaration of Trust permits the Board of Trustees to issue an unlimited number of full and fractional shares of beneficial interest of each Fund and to divide or combine such shares into a greater or lesser number of shares without thereby exchanging the proportionate beneficial interests in the Trust. Each share of a Fund represents an equal proportionate interest in that Fund with each other share. The Trust reserves the right to create and issue a number of different funds. Shares of each Fund would participate equally in the earnings, dividends, and assets of that particular fund. Upon liquidation of a Fund, shareholders are entitled to share pro rata in the net assets of such Fund available for distribution to shareholders.

The Trust is authorized to offer the following series of shares of beneficial interest, without par value and with the various classes listed:

<u>Series</u>	<u>Share Classes</u>
American Century NVIT Growth Fund	Class I, Class II, Class IV
American Century NVIT Multi Cap Value Fund	Class I, Class II, Class Y
American Funds NVIT Asset Allocation Fund*	Class II, Class P
American Funds NVIT Bond Fund*	Class II
American Funds NVIT Global Growth Fund*	Class II
American Funds NVIT Growth Fund*	Class II
American Funds NVIT Growth-Income Fund*	Class II, Class P
Federated NVIT High Income Bond Fund	Class I, Class Y
Invesco NVIT Comstock Value Fund	Class I, Class II, Class IV, Class Y
Loring Ward NVIT Capital Appreciation Fund*	Class II, Class P
Loring Ward NVIT Moderate Fund*	Class II, Class P
Neuberger Berman NVIT Multi Cap Opportunities Fund	Class I, Class II
Neuberger Berman NVIT Socially Responsible Fund	Class I, Class II, Class Y
NVIT Bond Index Fund	Class I, Class II, Class Y
NVIT Cardinal Aggressive Fund*	Class I, Class II
NVIT Cardinal Balanced Fund*	Class I, Class II
NVIT Cardinal Capital Appreciation Fund*	Class I, Class II
NVIT Cardinal Conservative Fund*	Class I, Class II
NVIT Cardinal Moderate Fund*	Class I, Class II
NVIT Cardinal Moderately Aggressive Fund*	Class I, Class II
NVIT Cardinal Moderately Conservative Fund*	Class I, Class II
NVIT Cardinal Managed Growth Fund*	Class I, Class II
NVIT Cardinal Managed Growth & Income Fund*	Class I, Class II
NVIT Core Bond Fund	Class I, Class II, Class P, Class Y
NVIT Core Plus Bond Fund	Class I, Class II, Class P, Class Y
NVIT Developing Markets Fund	Class I, Class II
NVIT Emerging Markets Fund	Class I, Class II, Class Y
NVIT Enhanced Income Fund	Class II, Class Y
NVIT Government Bond Fund	Class I, Class II, Class IV, Class P, Class Y
NVIT International Equity Fund	Class I, Class II, Class Y
NVIT International Index Fund	Class I, Class II, Class VIII, Class Y
NVIT Investor Destinations Aggressive Fund*	Class II, Class P
NVIT Investor Destinations Balanced Fund*	Class II, Class P
NVIT Investor Destinations Capital Appreciation Fund*	Class II, Class P
NVIT Investor Destinations Conservative Fund*	Class II, Class P
NVIT Investor Destinations Moderate Fund*	Class II, Class P
NVIT Investor Destinations Moderately Aggressive Fund*	Class II, Class P
NVIT Investor Destinations Moderately Conservative Fund*	Class II, Class P

<u>Series</u>	<u>Share Classes</u>
NVIT Investor Destinations Managed Growth Fund*	Class I, Class II
NVIT Investor Destinations Managed Growth & Income Fund*	Class I, Class II
NVIT Large Cap Growth Fund	Class I, Class II, Class P, Class Y
NVIT Mid Cap Index Fund	Class I, Class II, Class Y
NVIT Money Market Fund	Class I, Class II, Class IV, Class V, Class Y
NVIT Multi-Manager International Growth Fund	Class I, Class II, Class Y
NVIT Multi-Manager International Value Fund	Class I, Class II, Class IV, Class Y
NVIT Multi-Manager Large Cap Growth Fund	Class I, Class II, Class Y
NVIT Multi-Manager Large Cap Value Fund	Class I, Class II, Class Y
NVIT Multi-Manager Mid Cap Growth Fund	Class I, Class II, Class Y
NVIT Multi-Manager Mid Cap Value Fund	Class I, Class II, Class Y
NVIT Multi-Manager Small Cap Growth Fund	Class I, Class II, Class Y
NVIT Multi-Manager Small Cap Value Fund	Class I, Class II, Class IV, Class Y
NVIT Multi-Manager Small Company Fund	Class I, Class II, Class IV, Class Y
NVIT Multi Sector Bond Fund	Class I, Class Y
NVIT Nationwide Fund	Class I, Class II, Class IV, Class Y
NVIT Real Estate Fund	Class I, Class II, Class Y
NVIT S&P 500 Index Fund	Class I, Class II, Class IV, Class Y
NVIT Short Term Bond Fund	Class I, Class II, Class P, Class Y
NVIT Small Cap Index Fund	Class II, Class Y
Templeton NVIT International Value Fund	Class I, Class II, Class Y
NVIT Flexible Moderate Growth Fund*	Class P
NVIT Flexible Fixed Income Fund*	Class P
Lazard NVIT Flexible Opportunistic Strategies Fund*	Class P

* Information on these Funds is contained in a separate Statement(s) of Additional Information.

You have an interest only in the assets of the Fund whose shares you own. Shares of a particular class are equal in all respects to the other shares of that class. In the event of liquidation of a Fund, shares of the same class will share pro rata in the distribution of the net assets of such Fund with all other shares of that class. All shares are without par value and when issued and paid for, are fully paid and nonassessable by the Trust. Shares may be exchanged or converted as described in this SAI and in the Prospectus but will have no other preference, conversion, exchange or preemptive rights.

Voting Rights

Shareholders of each class of shares have one vote for each share held and a proportionate fractional vote for any fractional share held. Shareholders may vote in the election of Trustees and on other matters submitted to meetings of shareholders. Shares, when issued, are fully paid and nonassessable. Generally, amendment may not be made to the Amended and Restated Declaration of Trust without the affirmative vote of a majority of the outstanding voting securities of the Trust. The Trustees may, however, further amend the Amended and Restated Declaration of Trust without the vote or consent of shareholders to:

- (1) designate series of the Trust; or
- (2) change the name of the Trust; or
- (3) apply any omission, cure, correct, or supplement any ambiguous, defective, or inconsistent provision to conform the Amended and Restated Declaration of Trust to the requirements of applicable federal laws or regulations if they deem it necessary.

An annual or special meeting of shareholders to conduct necessary business is not required by the Amended and Restated Declaration of Trust, the 1940 Act or other authority, except, under certain circumstances, to amend the Amended and Restated Declaration of Trust, the Investment Advisory Agreement, fundamental investment objectives, investment policies and investment restrictions, to elect and remove Trustees, to reorganize

the Trust or any series or class thereof and to act upon certain other business matters. In regard to termination, sale of assets, modification or change of the Investment Advisory Agreement, or change of investment restrictions, the right to vote is limited to the holders of shares of the particular Fund affected by the proposal. However, shares of all Funds vote together, and not by Fund, in the election of Trustees. If an issue must be approved by a majority as defined in the 1940 Act, a “majority of the outstanding voting securities” means the lesser of (i) 67% or more of the shares present at a meeting when the holders of more than 50% of the outstanding shares are present or represented by proxy, or (ii) more than 50% of the outstanding shares. For the election of Trustees only a plurality is required. Holders of shares subject to a Rule 12b-1 fee will vote as a class and not with holders of any other class with respect to the approval of the Distribution Plan.

With respect to Nationwide Life Insurance Company and Nationwide Life and Annuity Insurance Company (collectively, “Nationwide Life”), and certain other insurance companies (each, a “Participating Insurance Company”) separate accounts, Nationwide Life and each Participating Insurance Company will vote the shares of each Fund at a shareholder meeting in accordance with the timely instructions received from persons entitled to give voting instructions under the variable contracts. Nationwide Life and each Participating Insurance Company are expected to vote shares attributable to variable contracts as to which no voting instructions are received in the same proportion (for, against, or abstain) as those for which timely instructions are received. As a result, those contract owners that actually provide voting instructions may control the outcome of the vote even though their actual percentage ownership of a Fund alone would not be sufficient to approve a Proposal. Contract owners will also be permitted to revoke previously submitted voting instructions in accordance with instructions contained in the proxy statement sent to the Funds’ shareholders and to contract owners.

TAX STATUS

The following sections are a summary of certain additional tax considerations generally affecting a Fund (sometimes referred to as “the Fund”). Because shares of the Fund are sold only to separate accounts of insurance companies, the tax consequences described below are generally not applicable to an owner of a variable life or variable annuity contract.

This “Tax Status” section and the “Other Tax Consequences” and “Tax Consequences to Shareholders” sections are based on the Internal Revenue Code and applicable regulations in effect on the date of this SAI. Future legislative, regulatory or administrative changes, including provisions of current law that sunset and thereafter no longer apply, or court decisions may significantly change the tax rules applicable to the Fund and its shareholders. Any of these changes or court decisions may have a retroactive effect.

This is for general information only and not tax advice. For federal income tax purposes, the insurance company (rather than the purchaser of a variable contract) is treated as the owner of the shares of the Fund selected as an investment option. Holders of variable contracts should consult their own tax advisors for more information on their tax situation, including the possible applicability of federal, state, local and foreign taxes.

Taxation of the Fund

The Fund has elected and intends to qualify, or, if newly organized, intends to elect and qualify, each year as a regulated investment company (sometimes referred to as a “regulated investment company,” “RIC” or “fund”) under Subchapter M of the Internal Revenue Code. If a Fund so qualifies, the Fund will not be subject to federal income tax on the portion of its investment company taxable income (that is, generally, taxable interest, dividends, net short-term capital gains, and other taxable ordinary income, net of expenses, without regard to the deduction for dividends paid) and net capital gain (that is, the excess of net long-term capital gains over net short-term capital losses) that it distributes to shareholders.

In order to qualify for treatment as a regulated investment company, the Fund must satisfy the following requirements:

- **Distribution Requirement** – the Fund must distribute an amount equal to the sum of at least 90% of its investment company taxable income and 90% of its net tax-exempt income, if any, for the tax year (including, for purposes of satisfying this distribution requirement, certain distributions made by the Fund after the close of its taxable year that are treated as made during such taxable year).
- **Income Requirement** – the Fund must derive at least 90% of its gross income from dividends, interest, certain payments with respect to securities loans, and gains from the sale or other disposition of stock, securities or foreign currencies, or other income (including, but not limited to, gains from options, futures or forward contracts) derived from its business of investing in such stock, securities or currencies and net income derived from QPTPs.
- **Asset Diversification Test** – the Fund must satisfy the following asset diversification test at the close of each quarter of the Fund’s tax year: (1) at least 50% of the value of the Fund’s assets must consist of cash and cash items, U.S. government securities, securities of other regulated investment companies, and securities of other issuers (as to which the Fund has not invested more than 5% of the value of the Fund’s total assets in securities of an issuer and as to which the Fund does not hold more than 10% of the outstanding voting securities of the issuer); and (2) no more than 25% of the value of the Fund’s total assets may be invested in the securities of any one issuer (other than U.S. government securities or securities of other regulated investment companies) or of two or more issuers which the Fund controls and which are engaged in the same or similar trades or businesses, or, in the securities of one or more QPTPs.

In some circumstances, the character and timing of income realized by the Fund for purposes of the Income Requirement or the identification of the issuer for purposes of the Asset Diversification Test is uncertain under current law with respect to a particular investment, and an adverse determination or future guidance by the Internal Revenue Service (“IRS”) with respect to such type of investment may adversely affect the Fund’s ability to satisfy

these requirements. See, "Tax Treatment of Portfolio Transactions" below with respect to the application of these requirements to certain types of investments. In other circumstances, the Fund may be required to sell portfolio holdings in order to meet the Income Requirement, Distribution Requirement, or Asset Diversification Test which may have a negative impact on the Fund's income and performance. In lieu of potential disqualification, the Fund is permitted to pay a tax for certain failures to satisfy the Asset Diversification Test or Income Requirement, which, in general, are limited to those due to reasonable cause and not willful neglect.

The Fund may use "equalization accounting" (in lieu of making some cash distributions) in determining the portion of its income and gains that has been distributed. If the Fund uses equalization accounting, it will allocate a portion of its undistributed investment company taxable income and net capital gain to redemptions of Fund shares and will correspondingly reduce the amount of such income and gains that it distributes in cash. If the IRS determines that the Fund's allocation is improper and that the Fund has under-distributed its income and gain for any taxable year, the Fund may be liable for federal income and/or excise tax. If, as a result of such adjustment, the Fund fails to satisfy the Distribution Requirement, the Fund will not qualify that year as a regulated investment company the effect of which is described in the following paragraph.

If for any taxable year the Fund does not qualify as a regulated investment company, all of its taxable income (including its net capital gain) would be subject to tax at regular corporate rates without any deduction for dividends paid to shareholders, and the dividends would be taxable to the shareholders as ordinary income (or possibly as qualified dividend income) to the extent of the Fund's current and accumulated earnings and profits. Failure to qualify as a regulated investment company would thus have a negative impact on the Fund's income and performance. Subject to savings provisions for certain failures to satisfy the Income Requirement or Asset Diversification Test, which, in general, are limited to those due to reasonable cause and not willful neglect, it is possible that the Fund will not qualify as a regulated investment company in any given tax year. Even if such savings provisions apply, the Fund may be subject to a monetary sanction of \$50,000 or more. Moreover, the Board reserves the right not to maintain the qualification of the Fund as a regulated investment company if it determines such a course of action to be beneficial to shareholders.

Capital Loss Carryovers. The capital losses of the Fund, if any, do not flow through to shareholders. Rather, the Fund may use its capital losses, subject to applicable limitations, to offset its capital gains without being required to pay taxes on or distribute to shareholders such gains that are offset by the losses. Under the Regulated Investment Company Modernization Act of 2010, if the Fund has a "net capital loss" (that is, capital losses in excess of capital gains) for a taxable year beginning after December 22, 2010, the excess (if any) of the Fund's net short-term capital losses over its net long-term capital gains is treated as a short-term capital loss arising on the first day of the Fund's next taxable year, and the excess (if any) of the Fund's net long-term capital losses over its net short-term capital gains is treated as a long-term capital loss arising on the first day of the Fund's next taxable year. Any such net capital losses of the Fund that are not used to offset capital gains may be carried forward indefinitely to reduce any future capital gains realized by the Fund in succeeding taxable years. However, for any net capital losses realized in taxable years of the Fund beginning on or before December 22, 2010, the Fund is only permitted to carry forward such capital losses for eight years as a short-term capital loss. Under a transition rule, capital losses arising in a taxable year beginning after December 22, 2010 must be used before capital losses realized in a taxable year beginning on or before December 22, 2010. The amount of capital losses that can be carried forward and used in any single year is subject to an annual limitation if there is a more than 50% "change in ownership" of the Fund. An ownership change generally results when shareholders owning 5% or more of the Fund increase their aggregate holdings by more than 50% over a three-year look-back period. An ownership change could result in capital loss carryovers being used at a slower rate (or, in the case of those realized in taxable years of the Fund beginning on or before December 22, 2010, to expire unutilized), thereby reducing the Fund's ability to offset capital gains with those losses. An increase in the amount of taxable gains distributed to the Fund's shareholders could result from an ownership change. The Fund undertakes no obligation to avoid or prevent an ownership change, which can occur in the normal course of shareholder purchases and redemptions or as a result of engaging in a tax-free reorganization with another fund. Moreover, because of circumstances beyond the Fund's control, there can be no assurance that the Fund will not experience, or has not already experienced, an ownership change. Additionally, if the Fund engages in a tax-free reorganization with another Fund, the effect of these and other rules not discussed herein may be to disallow or postpone the use by the Fund of its capital loss carryovers (including any current year losses and

built-in losses when realized) to offset its own gains or those of the other Fund, or vice versa, thereby reducing the tax benefits Fund shareholders would otherwise have enjoyed from use of such capital loss carryovers.

Deferral of Late Year Losses. The Fund may elect to treat part or all of any "qualified late year loss" as if it had been incurred in the succeeding taxable year in determining the Fund's taxable income, net capital gain, net short-term capital gain, and earnings and profits. The effect of this election is to treat any such "qualified late year loss" as if it had been incurred in the succeeding taxable year in characterizing Fund distributions for any calendar year (see "Taxation of Fund Distributions – Distributions of Capital Gains" below). A "qualified late year loss" includes:

- any net capital loss, net long-term capital loss, or net short-term capital loss incurred after October 31 of the current taxable year ("post-October losses"), and
- the excess, if any, of (1) the sum of (a) specified losses incurred after October 31 of the current taxable year, and (b) other ordinary losses incurred after December 31 of the current taxable year, over (2) the sum of (a) specified gains incurred after October 31 of the current taxable year, and (b) other ordinary gains incurred after December 31 of the current taxable year.

The terms "specified losses" and "specified gains" mean ordinary losses and gains from the sale, exchange, or other disposition of property (including the termination of a position with respect to such property), foreign currency losses and gains, and losses and gains resulting from holding stock in a passive foreign investment company ("PFIC") for which a mark-to-market election is in effect. The terms "ordinary losses" and "ordinary gains" mean other ordinary losses and gains that are not described in the preceding sentence. Special rules apply to a Fund with a fiscal year ending in November or December that elects to use its taxable year for determining its capital gain net income for excise tax purposes.

Undistributed Capital Gains. The Fund may retain or distribute to shareholders its net capital gain for each taxable year. The Fund currently intends to distribute net capital gains. If the Fund elects to retain its net capital gain, the Fund will be taxed thereon (except to the extent of any available capital loss carryovers) at the highest corporate tax rate (currently 35%). If the Fund elects to retain its net capital gain, it is expected that the Fund also will elect to have shareholders treated as if each received a distribution of its pro rata share of such gain, with the result that each shareholder will be required to report its pro rata share of such gain on its tax return as long-term capital gain, will receive a refundable tax credit for its pro rata share of tax paid by the Fund on the gain, and will increase the tax basis for its shares by an amount equal to the deemed distribution less the tax credit.

Excise Tax Distribution Requirements. To avoid a 4% non-deductible excise tax, the Fund must distribute by December 31 of each year an amount equal to at least: (1) 98% of its ordinary income for the calendar year, (2) 98.2% of capital gain net income (that is, the excess of the gains from sales or exchanges of capital assets over the losses from such sales or exchanges) for the one-year period ended on October 31 of such calendar year (or, at the election of a regulated investment company having a taxable year ending November 30 or December 31, for its taxable year), and (3) any prior year undistributed ordinary income and capital gain net income. Federal excise taxes will not apply to the Fund in a given calendar year, however, if all of its shareholders (other than certain "permitted shareholders") at all times during the calendar year are segregated asset accounts of life insurance companies where the shares are held in connection with variable products. For purposes of determining whether the Fund qualifies for this exemption, any shares attributable to an investment in the Fund made in connection with organization of the Fund is disregarded as long as the investment does not exceed \$250,000. Permitted shareholders include other RICs eligible for the exemption (e.g. insurance dedicated funds of funds). If the Fund fails to qualify for the exemption, the Fund intends to declare and pay these distributions in December (or to pay them in January, in which case shareholders must treat them as received in December) to avoid any material liability for federal excise tax, but can give no assurances that its distributions will be sufficient to eliminate all taxes. In addition, under certain circumstances, temporary timing or permanent differences in the realization of income and expense for book and tax purposes can result in the Fund having to pay an excise tax.

Foreign Income Tax. Investment income received by the Fund from sources within foreign countries may be subject to foreign income tax withheld at the source and the amount of tax withheld generally will be treated as

an expense of the Fund. The United States has entered into tax treaties with many foreign countries which entitle the Fund to a reduced rate of, or exemption from, tax on such income. It is impossible to determine the effective rate of foreign tax in advance since the amount of the Fund's assets to be invested in various countries is not known. Under certain circumstances, the Fund may elect to pass-through foreign tax credits to shareholders, although it reserves the right not to do so.

Special Rules Applicable to Variable Contracts

The Fund intends to comply with the diversification requirements of Section 817(h) of the Internal Revenue Code and the regulations thereunder relating to the tax-deferred status of variable accounts that are based on insurance company separate accounts (referred to as "segregated asset accounts" for federal income tax purposes). If these requirements are not met, or under other limited circumstances, it is possible that the contract holders (rather than the insurance company), will be treated for federal income tax purposes as the taxable owners of the assets held by the segregated asset accounts. The Fund intends to comply with these diversification requirements.

Section 817(h) of the Internal Revenue Code generally requires a variable contract (other than a pension plan contract) that is based on a segregated asset account to be adequately diversified. To satisfy these diversification requirements, as of the end of each calendar quarter or within 30 days thereafter, the Fund must either (a) satisfy the Asset Diversification Test and have no more than 55% of the total value of its assets in cash and cash equivalents, government securities and securities of other regulated investment companies; or (b) have no more than 55% of its total assets represented by any one investment, no more than 70% by any two investments, no more than 80% by any three investments, and no more than 90% by any four investments. For purposes of clause (b), all securities of the same issuer are considered a single investment, and each agency or instrumentality of the U.S. government is treated as a separate issuer of securities.

Section 817(h) of the Internal Revenue Code provides a look-through rule for purposes of testing the diversification of a segregated asset account that invests in a regulated investment company such as the Fund. Treasury Regulations Section 1.817-5(f)(1) provides, in part, that if the look-through rule applies, a beneficial interest in an investment company (including a regulated investment company) shall not be treated as a single investment of a segregated asset account; instead, a pro rata portion of each asset of the investment company shall be treated as an asset of the segregated asset account. Treasury Regulations Section 1.817-5(f)(2) provides (except as otherwise permitted) that the look-through rule shall apply to an investment company only if –

- All the beneficial interests in the investment company are held by one or more segregated asset accounts of one or more insurance companies; and
- Public access to such investment company is available exclusively through the purchase of a variable contract.

As provided in their offering documents, all the beneficial interests in the Fund are held by one or more segregated asset accounts of one or more insurance companies (except as otherwise permitted), and public access to the Fund (and any corresponding regulated investment company such as a fund of funds that invests in the Fund) is available solely through the purchase of a variable contract (such a fund is sometimes referred to as a "Closed Fund" as distinguished from a fund the shares of which are available to the general public referred to as a "Public Fund"). Under the look-through rule of Section 817(h) of the Internal Revenue Code and Treasury Regulations Section 1.817-5(f), a pro rata portion of each asset of the Fund, including a pro rata portion of each asset of any Underlying Fund that is a Closed Fund, is treated as an asset of the investing segregated asset account for purposes of determining whether the segregated asset account is adequately diversified. See also, Revenue Ruling 2005-7.

For a variable life or a variable annuity insurance contract to qualify for tax deferral, assets in the segregated asset accounts supporting the contract must be considered to be owned by the insurance company and not by the contract owner. Accordingly, a contract holder should not have an impermissible level of control over the Fund's investment in any particular asset so as to avoid the prohibition on investor control. If the contract holder is considered the owner of the segregated asset account, income and gains produced by the underlying assets would be included currently in the contract holder's gross income with the variable contract being characterized as a mere "wrapper." The Treasury Department has issued rulings addressing the circumstances in which a variable contract

holder's control of the investments of the segregated asset account may cause the contract holder, rather than the insurance company, to be treated as the owner of the assets held by the segregated asset account, and is likely to issue additional rulings in the future. It is not known what standards will be set forth in any such rulings or when, if at all, these rulings may be issued.

The IRS may consider several factors in determining whether a contract holder has an impermissible level of investor control over a segregated asset account. One factor the IRS considers when a segregated asset account invests in one or more RICs is whether a RIC's investment strategies are sufficiently broad to prevent a contract holder from being deemed to be making particular investment decisions through its investment in the segregated asset account. Current IRS guidance indicates that typical RIC investment strategies, even those with a specific sector or geographical focus, are generally considered sufficiently broad to prevent a contract holder from being deemed to be making particular investment decisions through its investment in a segregated asset account. The relationship between the Fund and the variable contracts is designed to satisfy the current expressed view of the IRS on this subject, such that the investor control doctrine should not apply. However, because of some uncertainty with respect to this subject and because the IRS may issue further guidance on this subject, the Fund reserves the right to make such changes as are deemed necessary or appropriate to reduce the risk that a variable contract might be subject to current taxation because of investor control.

Another factor that the IRS examines concerns actions of contract holders. Under the IRS pronouncements, a contract holder may not select or control particular investments, other than choosing among broad investment choices such as selecting a particular fund. A contract holder thus may not select or direct the purchase or sale of a particular investment of the Fund. All investment decisions concerning the Fund must be made by the portfolio managers in their sole and absolute discretion, and not by a contract holder. Furthermore, under the IRS pronouncements, a contract holders may not communicate directly or indirectly with such portfolio managers or any related investment officers concerning the selection, quality, or rate of return of any specific investment or group of investments held by the Fund.

The IRS and the Treasury Department may in the future provide further guidance as to what they deem to constitute an impermissible level of "investor control" over a segregated asset account's investments in funds such as the Fund, and such guidance could affect the treatment of the Fund, including retroactively. In the event that additional rules or regulations are adopted, there can be no assurance that the Fund will be able to operate as currently described, or that the Fund will not have to change its investment objectives or investment policies. The Fund's investment objective and investment policies may be modified as necessary to prevent any such prospective rules and regulations from causing variable contract owners to be considered the owners of the shares of the Fund.

OTHER TAX CONSEQUENCES

Taxation of Fund Distributions

The Fund anticipates distributing substantially all of its investment company taxable income and net capital gain for each taxable year.

Distributions of Net Investment Income. The Fund receives ordinary income generally in the form of dividends and/or interest on its investments. The Fund may also recognize ordinary income from other sources, including, but not limited to, certain gains on foreign currency-related transactions. This income, less expenses incurred in the operation of the Fund, constitutes the Fund's net investment income from which dividends may be paid to the separate account. In the case of a Fund whose strategy includes investing in stocks of corporations, a portion of the income dividends paid to the separate account may be qualified dividends eligible for the corporate dividends received deduction. (See the discussion below under the heading, "Dividends-Received Deduction for Corporations.")

Distributions of Capital Gains. The Fund may derive capital gain and loss in connection with sales or other dispositions of its portfolio securities. Distributions derived from the excess of net short-term capital gain over net

long-term capital loss will be taxable as ordinary income. Distributions paid from the excess of net long-term capital gain over net short-term capital loss will be taxable as long-term capital gain. Any net short-term or long-term capital gain realized by the Fund (net of any capital loss carryovers) generally will be distributed once each year and may be distributed more frequently, if necessary, in order to reduce or eliminate federal excise or income taxes on the Fund.

Maintaining a \$1 Share Price – NVIT Money Market Fund Only. Gains and losses on the sale of portfolio securities and unrealized appreciation or depreciation in the value of these securities may require the Fund to adjust its dividends to maintain its \$1 share price. This procedure may result in under- or over-distributions by the Fund of its net investment income. This in turn may result in return of capital distributions, the effect of which is described in the following paragraph.

Returns of Capital. Distributions by the Fund that are not paid from earnings and profits will be treated as a return of capital to the extent of (and in reduction of) the shareholder's tax basis in its shares; any excess will be treated as gain from the sale of its shares. Thus, the portion of a distribution that constitutes a return of capital will decrease the shareholder's tax basis in its Fund shares (but not below zero), and will result in an increase in the amount of gain (or decrease in the amount of loss) that will be recognized by the shareholder for tax purposes on the later sale of such Fund shares. Return of capital distributions can occur for a number of reasons including, among others, the Fund over-estimates the income to be received from certain investments such as those classified as partnerships or equity REITs. (See "Tax Treatment of Portfolio Transactions – Investments in U.S. REITs" below.)

Dividends-Received Deduction for Corporations. For corporate shareholders, a portion of the dividends paid by the Fund may qualify for the dividends-received deduction. The availability of the dividends-received deduction is subject to certain holding period and debt financing restrictions imposed under the Internal Revenue Code on the corporation claiming the deduction. Income derived by the Fund from investments in derivatives, fixed-income and foreign securities generally is not eligible for this treatment.

Pass-Through of Foreign Tax Credits. If more than 50% of the Fund's total assets at the end of a fiscal year is invested in foreign securities, the Fund may elect to pass through to the Fund's shareholders their pro rata share of foreign taxes paid by the Fund. If this election is made, the Fund may report more taxable income to its shareholders than it actually distributes. The shareholders will then be entitled either to deduct their share of these taxes in computing their taxable income or to claim a foreign tax credit for these taxes against their U.S. federal income tax (subject to limitations for certain shareholders). Shareholders may be unable to claim a credit for the full amount of their proportionate shares of the foreign income tax paid by the Fund due to certain limitations that may apply. The Fund reserves the right not to pass through to its shareholders the amount of foreign income taxes paid by the Fund. Additionally, any foreign tax withheld on payments made "in lieu of" dividends or interest will not qualify for the pass-through of foreign tax credits to shareholders. (See "Tax Treatment of Portfolio Transactions – Securities Lending" below.)

Tax Credit Bonds. If the Fund holds, directly or indirectly, one or more "tax credit bonds" (including build America bonds, clean renewable energy bonds and qualified tax credit bonds) on one or more applicable dates during a taxable year, the Fund may elect to permit its shareholders to claim a tax credit on their income tax returns equal to each shareholder's proportionate share of tax credits from the applicable bonds that otherwise would be allowed to the Fund. In such a case, shareholders must include in gross income (as interest) their proportionate share of the income attributable to their proportionate share of those offsetting tax credits. A shareholder's ability to claim a tax credit associated with one or more tax credit bonds may be subject to certain limitations imposed by the Internal Revenue Code. Even if the Fund is eligible to pass through tax credits to shareholders, the Fund may choose not to do so.

Consent Dividends. The Fund may utilize the consent dividend provisions of section 565 of the Internal Revenue Code to make distributions. Provided that all shareholders agree in a consent filed with the income tax return of the Fund to treat as a dividend the amount specified in the consent, the amount will be considered a distribution just as any other distribution paid in money and reinvested back into the Fund.

Reportable Transactions. Under Treasury regulations, if a shareholder recognizes a loss with respect to the Fund's shares of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder (or certain greater amounts over a combination of years), the shareholder must file with the IRS a disclosure statement on Form 8886. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their tax advisors to determine the applicability of these regulations in light of their individual circumstances.

Tax Treatment of Portfolio Transactions

Set forth below is a general description of the tax treatment of certain types of securities, investment techniques and transactions that may apply to a fund and, in turn, affect the amount, character and timing of dividends and distributions payable by the fund to its shareholders. This section should be read in conjunction with the discussion above under "Additional Information on Portfolio Instruments, Strategies and Investment Policies" for a detailed description of the various types of securities and investment techniques that apply to the Fund.

In General. In general, gain or loss recognized by a fund on the sale or other disposition of portfolio investments will be a capital gain or loss. Such capital gain and loss may be long-term or short-term depending, in general, upon the length of time a particular investment position is maintained and, in some cases, upon the nature of the transaction. Property held for more than one year generally will be eligible for long-term capital gain or loss treatment. The application of certain rules described below may serve to alter the manner in which the holding period for a security is determined or may otherwise affect the characterization as long-term or short-term, and also the timing of the realization and/or character, of certain gains or losses.

Certain Fixed-Income Investments. Gain recognized on the disposition of a debt obligation purchased by a fund at a market discount (generally, at a price less than its principal amount) will be treated as ordinary income to the extent of the portion of the market discount which accrued during the period of time the fund held the debt obligation unless the fund made a current inclusion election to accrue market discount into income as it accrues. If a fund purchases a debt obligation (such as a zero coupon security or pay-in-kind security) that was originally issued at a discount, the fund generally is required to include in gross income each year the portion of the original issue discount which accrues during such year. Therefore, a fund's investment in such securities may cause the fund to recognize income and make distributions to shareholders before it receives any cash payments on the securities. To generate cash to satisfy those distribution requirements, a fund may have to sell portfolio securities that it otherwise might have continued to hold or to use cash flows from other sources such as the sale of fund shares.

Investments in Debt Obligations that are at Risk of or in Default Present Tax Issues for a Fund. Tax rules are not entirely clear about issues such as whether and to what extent a fund should recognize market discount on a debt obligation, when a fund may cease to accrue interest, original issue discount or market discount, when and to what extent a fund may take deductions for bad debts or worthless securities and how a fund should allocate payments received on obligations in default between principal and income. These and other related issues will be addressed by a fund in order to ensure that it distributes sufficient income to preserve its status as a regulated investment company.

Options, Futures, Forward Contracts, Swap Agreements and Hedging Transactions. In general, option premiums received by a fund are not immediately included in the income of the fund. Instead, the premiums are recognized when the option contract expires, the option is exercised by the holder, or the fund transfers or otherwise terminates the option (e.g., through a closing transaction). If an option written by a fund is exercised and the fund sells or delivers the underlying stock, the fund generally will recognize capital gain or loss equal to (a) the sum of the strike price and the option premium received by the fund minus (b) the fund's basis in the stock. Such gain or loss generally will be short-term or long-term depending upon the holding period of the underlying stock. If securities are purchased by a fund pursuant to the exercise of a put option written by it, the fund generally will subtract the premium received from its cost basis in the securities purchased. The gain or loss with respect to any termination of a fund's obligation under an option other than through the exercise of the option and related sale or delivery of the underlying stock generally will be short-term gain or loss depending on whether the premium income received by the fund is greater or less than the amount paid by the fund (if any) in terminating the transaction. Thus,

for example, if an option written by a fund expires unexercised, the fund generally will recognize short-term gain equal to the premium received.

The tax treatment of certain futures contracts entered into by a fund as well as listed non-equity options written or purchased by the fund on U.S. exchanges (including options on futures contracts, broad-based equity indices and debt securities) may be governed by section 1256 of the Internal Revenue Code (“section 1256 contracts”). Gains or losses on section 1256 contracts generally are considered 60% long-term and 40% short-term capital gains or losses (“60/40”), although certain foreign currency gains and losses from such contracts may be treated as ordinary in character. Also, any section 1256 contracts held by a fund at the end of each taxable year (and, for purposes of the 4% excise tax, on certain other dates as prescribed under the Internal Revenue Code) are “marked to market” with the result that unrealized gains or losses are treated as though they were realized and the resulting gain or loss is treated as ordinary or 60/40 gain or loss, as applicable. Section 1256 contracts do not include any interest rate swap, currency swap, basis swap, interest rate cap, interest rate floor, commodity swap, equity swap, equity index swap, credit default swap, or similar agreement.

In addition to the special rules described above in respect of options and futures transactions, a fund’s transactions in other derivative instruments (including options, forward contracts and swap agreements) as well as its other hedging, short sale, or similar transactions, may be subject to one or more special tax rules (including the constructive sale, notional principal contract, straddle, wash sale and short sale rules). These rules may affect whether gains and losses recognized by a fund are treated as ordinary or capital or as short-term or long-term, accelerate the recognition of income or gains to the fund, defer losses to the fund, and cause adjustments in the holding periods of the fund’s securities. These rules, therefore, could affect the amount, timing and/or character of distributions to shareholders. Moreover, because the tax rules applicable to derivative financial instruments are in some cases uncertain under current law, an adverse determination or future guidance by the IRS with respect to these rules (which determination or guidance could be retroactive) may affect whether a fund has made sufficient distributions, and otherwise satisfied the relevant requirements, to maintain its qualification as a regulated investment company and avoid a fund-level tax.

Certain of a fund’s investments in derivatives and foreign currency-denominated instruments, and the fund’s transactions in foreign currencies and hedging activities, may produce a difference between its book income and its taxable income. If a fund’s book income is less than the sum of its taxable income and net tax-exempt income (if any), the fund could be required to make distributions exceeding book income to qualify as a regulated investment company. If a fund’s book income exceeds the sum of its taxable income and net tax-exempt income (if any), the distribution of any such excess will be treated as (i) a dividend to the extent of the fund’s remaining earnings and profits (including current earnings and profits arising from tax-exempt income, reduced by related deductions), (ii) thereafter, as a return of capital to the extent of the recipient’s basis in the shares, and (iii) thereafter, as gain from the sale or exchange of a capital asset.

Foreign Currency Transactions. A fund’s transactions in foreign currencies, foreign currency-denominated debt obligations and certain foreign currency options, futures contracts and forward contracts (and similar instruments) may give rise to ordinary income or loss to the extent such income or loss results from fluctuations in the value of the foreign currency concerned. This treatment could increase or decrease a fund's ordinary income distributions to shareholders, and may cause some or all of the fund's previously distributed income to be classified as a return of capital. In certain cases, a fund may make an election to treat such gain or loss as capital.

PFIC Investments. A fund may invest in securities of foreign companies that may be classified under the Internal Revenue Code as PFICs. In general, a foreign company is classified as a PFIC if at least one-half of its assets constitute investment-type assets or 75% or more of its gross income is investment-type income. When investing in PFIC securities, a fund intends to mark-to-market these securities under certain provisions of the Internal Revenue Code and recognize any unrealized gains as ordinary income at the end of the fund’s fiscal and excise tax years. Deductions for losses are allowable only to the extent of any current or previously recognized gains. These gains (reduced by allowable losses) are treated as ordinary income that a fund is required to distribute, even though it has not sold or received dividends from these securities. Foreign companies are not required to identify themselves as PFICs. Due to various complexities in identifying PFICs, a fund can give no assurances that it

will be able to identify portfolio securities in foreign corporations that are PFICs in time for the fund to make a mark-to-market election. If a fund is unable to identify an investment as a PFIC and thus does not make a mark-to-market election, the fund may be subject to U.S. federal income tax on a portion of any “excess distribution” or gain from the disposition of such shares even if such income is distributed as a taxable dividend by the fund to its shareholders. Additional charges in the nature of interest may be imposed on a fund in respect of deferred taxes arising from such distributions or gains.

Investments in U.S. REITs. A U.S. REIT is not subject to federal income tax on the income and gains it distributes to shareholders. Dividends paid by a U.S. REIT, other than capital gain distributions, will be taxable as ordinary income up to the amount of the U.S. REIT’s current and accumulated earnings and profits. Capital gain dividends paid by a U.S. REIT to a fund will be treated as long term capital gains by the fund and, in turn, may be distributed by the fund to its shareholders as a capital gain distribution. Because of certain noncash expenses, such as property depreciation, an equity U.S. REIT’s cash flow may exceed its taxable income. The equity U.S. REIT, and in turn a fund, may distribute this excess cash to shareholders in the form of a return of capital distribution. However, if a U.S. REIT is operated in a manner that fails to qualify as a REIT, an investment in the U.S. REIT would become subject to double taxation, meaning the taxable income of the U.S. REIT would be subject to federal income tax at regular corporate rates without any deduction for dividends paid to shareholders and the dividends would be taxable to shareholders as ordinary income (or possibly as qualified dividend income) to the extent of the U.S. REIT’s current and accumulated earnings and profits. Also, see, “Tax Treatment of Portfolio Transactions – Investment in Taxable Mortgage Pools (Excess Inclusion Income)” below with respect to certain other tax aspects of investing in U.S. REITs.

Investment in Non-U.S. REITs. While non-U.S. REITs often use complex acquisition structures that seek to minimize taxation in the source country, an investment by a fund in a non-U.S. REIT may subject the fund, directly or indirectly, to corporate taxes, withholding taxes, transfer taxes and other indirect taxes in the country in which the real estate acquired by the non-U.S. REIT is located. A fund’s pro rata share of any such taxes will reduce the fund’s return on its investment. A fund’s investment in a non-U.S. REIT may be considered an investment in a PFIC, as discussed above in “PFIC Investments.” Additionally, foreign withholding taxes on distributions from the non-U.S. REIT may be reduced or eliminated under certain tax treaties, as discussed above in “Taxation of the Fund – Foreign Income Tax.” Also, a fund in certain limited circumstances may be required to file an income tax return in the source country and pay tax on any gain realized from its investment in the non-U.S. REIT under rules similar to those in the United States which tax foreign persons on gain realized from dispositions of interests in U.S. real estate.

Investment in Taxable Mortgage Pools (Excess Inclusion Income). Under a Notice issued by the IRS, the Internal Revenue Code and Treasury regulations to be issued, a portion of a fund’s income from a U.S. REIT that is attributable to the REIT’s residual interest in a real estate mortgage investment conduit (“REMIC”) or equity interests in a “taxable mortgage pool” (referred to in the Internal Revenue Code as an excess inclusion) will be subject to federal income tax in all events. The excess inclusion income of a regulated investment company, such as a fund, will be allocated to shareholders of the regulated investment company in proportion to the dividends received by such shareholders, with the same consequences as if the shareholders held the related REMIC residual interest or, if applicable, taxable mortgage pool directly. In general, excess inclusion income allocated to shareholders (i) cannot be offset by net operating losses (subject to a limited exception for certain thrift institutions), (ii) will constitute unrelated business taxable income (“UBTI”) to entities (including qualified pension plans, individual retirement accounts, 401(k) plans, Keogh plans or other tax-exempt entities) subject to tax on UBTI, thereby potentially requiring such an entity that is allocated excess inclusion income, and otherwise might not be required to file a tax return, to file a tax return and pay tax on such income, and (iii) in the case of a foreign stockholder, will not qualify for any reduction in U.S. federal withholding tax. In addition, if at any time during any taxable year a “disqualified organization” (which generally includes certain cooperatives, governmental entities, and tax-exempt organizations not subject to UBTI) is a record holder of a share in a regulated investment company, then the regulated investment company will be subject to a tax equal to that portion of its excess inclusion income for the taxable year that is allocable to the disqualified organization, multiplied by the highest federal income tax rate imposed on corporations. The Notice imposes certain reporting requirements upon regulated investment companies that have excess inclusion income. Internal Revenue Code Section 860E(f) further provides that, except as provided

in regulations (which have not been issued), with respect to any variable contract (as defined in section 817), there shall be no adjustment in the reserve to the extent of any excess inclusion. There can be no assurance that a fund will not allocate to shareholders excess inclusion income.

These rules are potentially applicable to a fund with respect to any income it receives from the equity interests of certain mortgage pooling vehicles, either directly or, as is more likely, through an investment in a U.S. REIT. It is unlikely that these rules will apply to a fund that has a non-REIT strategy.

Investments in Partnerships and QPTPs. For purposes of the Income Requirement, income derived by a fund from a partnership that is not a QPTP will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership that would be qualifying income if realized directly by the fund. While the rules are not entirely clear with respect to a fund investing in a partnership outside a master-feeder structure, for purposes of testing whether a fund satisfies the Asset Diversification Test, the fund generally is treated as owning a pro rata share of the underlying assets of a partnership. See, "Taxation of the Fund." In contrast, different rules apply to a partnership that is a QPTP. A QPTP is a partnership (a) the interests in which are traded on an established securities market, (b) that is treated as a partnership for federal income tax purposes, and (c) that derives less than 90% of its income from sources that satisfy the Income Requirement (e.g., because it invests in commodities). All of the net income derived by a fund from an interest in a QPTP will be treated as qualifying income but the fund may not invest more than 25% of its total assets in one or more QPTPs. However, there can be no assurance that a partnership classified as a QPTP in one year will qualify as a QPTP in the next year. Any such failure to annually qualify as a QPTP might, in turn, cause a fund to fail to qualify as a regulated investment company. Although, in general, the passive loss rules of the Internal Revenue Code do not apply to RICs, such rules do apply to a fund with respect to items attributable to an interest in a QPTP. Fund investments in partnerships, including in QPTPs, may result in the fund being subject to state, local or foreign income, franchise or withholding tax liabilities.

Securities Lending. While securities are loaned out by a fund, the fund generally will receive from the borrower amounts equal to any dividends or interest paid on the borrowed securities. For federal income tax purposes, payments made "in lieu of" dividends are not considered dividend income. These distributions will not qualify for the 70% dividends received deduction for corporations. Also, any foreign tax withheld on payments made "in lieu of" dividends or interest will not qualify for the pass-through of foreign tax credits to shareholders. Additionally, in the case of a fund with a strategy of investing in tax-exempt securities, any payments made "in lieu of" tax-exempt interest will be considered taxable income to the fund, and thus, to the investors, even though such interest may be tax-exempt when paid to the borrower.

Investments in Convertible Securities. Convertible debt is ordinarily treated as a "single property" consisting of a pure debt interest until conversion, after which the investment becomes an equity interest. If the security is issued at a premium (i.e., for cash in excess of the face amount payable on retirement), the creditor-holder may amortize the premium over the life of the bond. If the security is issued for cash at a price below its face amount, the creditor-holder must accrue original issue discount in income over the life of the debt. The creditor-holder's exercise of the conversion privilege is treated as a nontaxable event. Mandatorily convertible debt (e.g., an exchange traded note or ETN issued in the form of an unsecured obligation that pays a return based on the performance of a specified market index, exchange currency, or commodity) is often, but not always, treated as a contract to buy or sell the reference property rather than debt. Similarly, convertible preferred stock with a mandatory conversion feature is ordinarily, but not always, treated as equity rather than debt. Dividends received generally are eligible for the corporate dividends received deduction. In general, conversion of preferred stock for common stock of the same corporation is tax-free. Conversion of preferred stock for cash is a taxable redemption. Any redemption premium for preferred stock that is redeemable by the issuing company might be required to be amortized under original issue discount ("OID") principles.

Investments in Securities of Uncertain Tax Character. A fund may invest in securities the U.S. federal income tax treatment of which may not be clear or may be subject to recharacterization by the IRS. To the extent the tax treatment of such securities or the income from such securities differs from the tax treatment expected by a fund, it could affect the timing or character of income recognized by the fund, requiring the fund to purchase or sell

securities, or otherwise change its portfolio, in order to comply with the tax rules applicable to regulated investment companies under the Internal Revenue Code.

Effect of Future Legislation; Local Tax Considerations

The foregoing general discussion of U.S. federal income tax consequences is based on the Internal Revenue Code and the regulations issued thereunder as in effect on the date of this SAI. Future legislative or administrative changes, including provisions of current law that sunset and thereafter no longer apply, or court decisions may significantly change the conclusions expressed herein, and any such changes or decisions may have a retroactive effect with respect to the transactions contemplated herein. Rules of state and local taxation of ordinary income, qualified dividend income and capital gain dividends may differ from the rules for U.S. federal income taxation described above. Distributions may also be subject to additional state, local and foreign taxes depending on each shareholder's particular situation. Non-U.S. shareholders may be subject to U.S. tax rules that differ significantly from those summarized above. Shareholders are urged to consult their tax advisors as to the consequences of these and other state and local tax rules affecting investment in the Fund.

TAX CONSEQUENCES TO SHAREHOLDERS

Since shareholders of the Fund will be the insurance company separate accounts, no discussion is included herein concerning federal income tax consequences for the holders of the contracts. For information concerning the federal income tax consequences to any such holder, see the prospectus relating to the applicable contract.

MAJOR SHAREHOLDERS

To the extent NFA and its affiliates (including Nationwide Life Insurance Company and Nationwide Life and Annuity Insurance Company) directly or indirectly own, control and hold power to vote 25% or more of the outstanding shares of the Funds above, they are deemed to have "control" over matters which are subject to a vote of the Fund's shares.

Nationwide Life Insurance Company and Nationwide Life and Annuity Insurance Company, are located at One Nationwide Plaza, Columbus, Ohio 43215. Each of NFA, Nationwide Life Insurance Company and Nationwide Life and Annuity Insurance Company is wholly owned by Nationwide Financial Services, Inc. ("NFS"). NFS, a holding company, is a wholly owned subsidiary of Nationwide Corporation. All of the common stock of Nationwide Corporation is held by Nationwide Mutual Insurance Company (95.2%) and Nationwide Mutual Fire Insurance Company (4.8%), each of which is a mutual company owned by its policyholders.

As of April 1, 2014, the Trustees and Officers of the Trust as a group owned beneficially less than 1% of the shares of any class of the Funds.

As of April 1, 2014, the record shareholders identified in Appendix D to this SAI held five percent or greater of the shares of a class of a Fund. Fund classes are generally sold to and owned by insurance company separate accounts to serve as the investment vehicle for variable annuity and life insurance contracts. Pursuant to an order received from the SEC, the Trust maintains participation agreements with insurance company separate accounts that obligate such insurance companies to pass any proxy solicitations through to underlying contract holders who in turn are asked to designate voting instructions. In the event that an insurance company does not receive voting instructions from contract holders, it is obligated to vote the shares that correspond to such contract holders in the same proportion as instructions received from all other applicable contract holders.

FINANCIAL STATEMENTS

The Report of Independent Registered Public Accounting Firm and Financial Statements of the Trust for the fiscal year ended December 31, 2013 included in the Trust's Annual Report and the Financial Statements of the Trust for the period ended June 30, 2013 included in the Trust's unaudited Semiannual Report are incorporated herein by reference. Copies of the Annual Report are available without charge upon request by writing the Trust or by calling toll free 800-848-0920.

APPENDIX A

DEBT RATINGS

STANDARD & POOR'S DEBT RATINGS

A Standard & Poor's corporate or municipal debt rating is an opinion of the general creditworthiness of an obligor, or the creditworthiness of an obligor with respect to a particular debt security or other financial obligation, based on relevant risk factors.

The debt rating does not constitute a recommendation to purchase, sell, or hold a particular security. In addition, a rating does not comment on the suitability of an investment for a particular investor. The ratings are based on current information furnished by the issuer or obtained by Standard & Poor's from other sources it considers reliable. Standard & Poor's does not perform an audit in connection with any rating and may, on occasion, rely on unaudited financial information. The ratings may be changed, suspended, or withdrawn as a result of changes in, or unavailability of, such information, or for other circumstances.

The ratings are based, in varying degrees, on the following considerations:

1. Likelihood of default - capacity and willingness of the obligor as to its financial commitments in a timely manner in accordance with the terms of the obligation.
2. Nature of and provisions of the obligation.
3. Protection afforded by, and relative position of, the obligation in the event of bankruptcy, reorganization, or other arrangement under the laws of bankruptcy and other laws affecting.

INVESTMENT GRADE

- AAA - Debt rated 'AAA' has the highest rating assigned by Standard & Poor's. Capacity to meet financial commitments is extremely strong.
- AA - Debt rated 'AA' has a very strong capacity to meet financial commitments and differs from the highest rated issues only in small degree.
- A - Debt rated 'A' has a strong capacity to meet financial commitments although it is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than debt in higher rated categories.
- BBB- Debt rated 'BBB' is regarded as having an adequate capacity meet financial commitments. Whereas it normally exhibits adequate protection parameters, adverse economic conditions or changing circumstances are more likely to lead to a weakened capacity to meet financial commitments for debt in this category than in higher rated categories.

SPECULATIVE GRADE

Debt rated 'BB', 'B', 'CCC', 'CC' and 'C' are regarded as having significant speculative characteristics with respect to capacity to pay interest and repay principal. 'BB' indicates the least degree of speculation and 'C' the highest. While such debt will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major risk exposures to adverse conditions.

- BB - Debt rated 'BB' is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions which could lead to inadequate capacity to meet financial commitments.
- B - Debt rated 'B' has a greater vulnerability to nonpayment than obligations rated BB but currently has the capacity to meet its financial commitments. Adverse business, financial, or economic conditions will likely impair capacity or willingness to meet financial commitments.

- CCC - Debt rated 'CCC' is currently vulnerable to nonpayment and is dependent upon favorable business, financial, and economic conditions to meet financial commitments. In the event of adverse business, financial, or economic conditions, it is not likely to have the capacity to meet its financial commitments.
- CC - Debt rated 'CC' typically is currently highly vulnerable to nonpayment.
- C - Debt rated 'C' may signify that a bankruptcy petition has been filed, but debt service payments are continued.
- D - Debt rated 'D' is in payment default. The 'D' rating category is used when interest payments or principal payments are not made on the date due even if the applicable grace period has not expired, unless Standard & Poor's believes that such payments will be made during such grace period. The 'D' rating also will be used upon the filing of a bankruptcy petition if debt service payments are jeopardized.

MOODY'S LONG-TERM DEBT RATINGS

- Aaa - Bonds which are rated Aaa are judged to be of the highest quality, with minimal credit risk.
- Aa - Bonds which are rated Aa are judged to be of high quality by all standards and are subject to very low credit risk.
- A - Bonds which are rated A are to be considered as upper-medium grade obligations and subject to low credit risk.
- Baa - Bonds which are rated Baa are considered as medium-grade obligations, subject to moderate credit risk and in fact may have speculative characteristics.
- Ba - Bonds which are rated Ba are judged to have speculative elements and are subject to substantial credit risk.
- B - Bonds which are rated B are considered speculative and are subject to high credit risk.
- Caa - Bonds which are rated Caa are judged to be of poor standing and are subject to very high credit risk.
- Ca - Bonds which are rated Ca represent obligations which are highly speculative. Such issues are likely in default, or very near, with some prospect of recovery of principal and interest.
- C - Bonds which are rated C are the lowest rated class of bonds, and are typically in default. There is little prospect for recovery of principal or interest.

STATE AND MUNICIPAL NOTES

Excerpts from Moody's Investors Service, Inc., description of state and municipal note ratings:

MIG-1- Notes bearing this designation are of superior credit quality, enjoying excellent protection by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

MIG-2- Notes bearing this designation are of strong credit quality, with margins of protection ample although not so large as in the preceding group.

MIG-3- Notes bearing this designation are of acceptable credit quality, with possibly narrow liquidity and cash-flow protection. Market access for refinancing is likely to be less well established.

SG- Notes bearing this designation are of speculative-grade credit quality and may lack sufficient margins of protection.

FITCH, INC. BOND RATINGS

Fitch investment grade bond ratings provide a guide to investors in determining the credit risk associated with a particular security. The ratings represent Fitch's assessment of the issuer's ability to meet the obligations of a specific debt issue or class of debt in a timely manner.

The rating takes into consideration special features of the issue, its relationship to other obligations of the issuer, the current and prospective financial condition and operating performance of the issuer and any guarantor, as well as the economic and political environment that might affect the issuer's future financial strength and credit quality.

Fitch ratings do not reflect any credit enhancement that may be provided by insurance policies or financial guaranties unless otherwise indicated.

Bonds that have the same rating are of similar but not necessarily identical credit quality since the rating categories do not fully reflect small differences in the degrees of credit risk.

Fitch ratings are not recommendations to buy, sell, or hold any security. ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect of any security.

Fitch ratings are based on information obtained from issuers, other obligors, underwriters, their experts, and other sources Fitch believes to be reliable. Fitch does not audit or verify the truth or accuracy of such information. Ratings may be changed, suspended, or withdrawn as a result of changes in, or the unavailability of, information or for other reasons.

AAA	Bonds considered investment grade and representing the lowest expectation of credit risk. The obligor has an exceptionally strong capacity for timely payment of financial commitments, a capacity that is highly unlikely to be adversely affected by foreseeable events.
AA	Bonds considered to be investment grade and of very high credit quality. This rating indicates a very strong capacity for timely payment of financial commitments, a capacity that is not significantly vulnerable to foreseeable events.
A	Bonds considered to be investment grade and represent a low expectation of credit risk. This rating indicates a strong capacity for timely payment of financial commitments. This capacity may, nevertheless, be more vulnerable to changes in economic conditions or circumstances than long term debt with higher ratings.
BBB	Bonds considered to be in the lowest investment grade and indicates that there is currently low expectation of credit risk. The capacity for timely payment of financial commitments is considered adequate, but adverse changes in economic conditions and circumstances are more likely to impair this capacity.
BB	Bonds are considered speculative. This rating indicates that there is a possibility of credit risk developing, particularly as the result of adverse economic changes over time; however, business or financial alternatives may be available to allow financial commitments to be met. Securities rated in this category are not investment grade.
B	Bonds are considered highly speculative. This rating indicates that significant credit risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is contingent upon a sustained, favorable business and economic environment.
CCC, CC and C	Bonds are considered a high default risk. Default is a real possibility. Capacity for meeting financial commitments is solely reliant upon sustained, favorable business or economic developments. A 'CC' rating indicates that default of some kind appears probable. 'C' rating signal imminent default.
DDD, DD and D	Bonds are in default. Such bonds are not meeting current obligations and are extremely speculative. 'DDD' designates the highest potential for recovery of amounts outstanding on any securities involved and 'D' represents the lowest potential for recovery.

SHORT-TERM RATINGS

STANDARD & POOR'S COMMERCIAL PAPER RATINGS

A Standard & Poor's commercial paper rating is a current assessment of the likelihood of timely payment of debt considered short-term in the relevant market.

Ratings are graded into several categories, ranging from 'A-1' for the highest quality obligations to 'D' for the lowest. These categories are as follows:

- A-1 This highest category indicates that capacity to meet financial commitments is strong. Those issues determined to possess extremely strong safety characteristics are denoted with a plus sign (+) designation.
- A-2 Capacity to meet financial commitments is satisfactory, although more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher rating categories.
- A-3 Issues carrying this designation have adequate protections. They are, however, more vulnerable to adverse economic conditions or changing circumstances which could weaken capacity to meet financial commitments.
- B Issues rated 'B' are regarded as having significant speculative characteristics.
- C This rating is assigned to short-term debt obligations that are vulnerable to nonpayment and dependent on favorable business, financial, and economic conditions in order to meet financial commitments.
- D Debt rated 'D' is in payment default. The 'D' rating category is used when interest payments or principal payments are not made on the date due even if the applicable grace period has not expired, unless Standard & Poor's believes that such payments will be made during such grace period. The 'D' rating also will be used upon the filing of a bankruptcy petition if debt service payments are jeopardized.

STANDARD & POOR'S NOTE RATINGS

An S&P note rating reflects the liquidity factors and market-access risks unique to notes. Notes maturing in three years or less will likely receive a note rating. Nouring beyond three years will most likely receive a long-term debt rating.

The following criteria will be used in making the assessment:

1. Amortization schedule - the larger the final maturity relative to other maturities, the more likely the issue is to be treated as a note.
2. Source of payment - the more the issue depends on the market for its refinancing, the more likely it is to be considered a note.

Note rating symbols and definitions are as follows:

- SP-1 Strong capacity to pay principal and interest. Issues determined to possess very strong capacity to pay principal and interest are given a plus (+) designation.
- SP-2 Satisfactory capacity to pay principal and interest, with some vulnerability to adverse financial and economic changes over the term of the notes.
- SP-3 Speculative capacity to pay principal and interest.

MOODY'S SHORT-TERM RATINGS

Moody's short-term debt ratings are opinions of the ability of issuers to honor short-term financial obligations. These obligations have an original maturity not exceeding thirteen months, unless explicitly noted. Moody's employs the following three designations to indicate the relative repayment capacity of rated issuers:

P-1 Issuers (or supporting institutions) rated Prime-1 have a superior capacity to repay short-term debt obligations.

P-2 Issuers (or supporting institutions) rated Prime-2 have a strong ability to repay short-term debt obligations.

P-3 Issuers (or supporting institutions) rated Prime-3 have an acceptable ability to repay short-term obligations.

Issuers rated Not Prime do not fall within any of the Prime rating categories.

MOODY'S NOTE RATINGS

MIG 1/VMIG 1 Notes bearing this designation are of superior credit quality, enjoying excellent protection by established cash flows, highly reliable liquidity support, or demonstrated broad-based access to the market for refinancing.

MIG 2/VMIG 2 Notes bearing this designation are of strong credit quality, with margins of protection ample although not so large as in the preceding group.

MIG 3/VMIG 3 Notes bearing this designation are of acceptable credit quality, with possibly narrow liquidity and cash-flow protection. Market access for refinancing is likely to be less well established.

SG Notes bearing this designation are of speculative-grade credit quality and may lack sufficient margins of protection.

FITCH'S SHORT-TERM RATINGS

Fitch's short-term ratings apply to debt obligations that are payable on demand or have original maturities of up to three years, including commercial paper, certificates of deposit, medium-term notes, and municipal and investment notes.

The short-term rating places greater emphasis than a long-term rating on the existence of liquidity necessary to meet the issuer's obligations in a timely manner.

F-1+ Best quality, indicating exceptionally strong capacity to meet financial commitments.

F-1 Best quality, indicating strong capacity to meet financial commitments.

F-2 Good quality with satisfactory capacity to meet financial commitments.

F-3 Fair quality with adequate capacity to meet financial commitments but near term adverse conditions could impact the commitments.

B Speculative quality and minimal capacity to meet commitments and vulnerability to short-term adverse changes in financial and economic conditions.

C Possibility of default is high and the financial commitments are dependent upon sustained, favorable business and economic conditions.

D In default and has failed to meet its financial commitments.

APPENDIX B - PROXY VOTING GUIDELINES SUMMARIES

American Century Investment Management, Inc.

The Manager is responsible for exercising the voting rights associated with the securities purchased and/or held by the funds. In exercising its voting obligations, the Manager is guided by general fiduciary principles. It must act prudently, solely in the interest of the funds, and for the exclusive purpose of providing benefits to them. The Manager attempts to consider all factors of its vote that could affect the value of the investment. The funds' board of trustees has approved the Manager's proxy voting policies to govern the Manager's proxy voting activities.

The Manager and the board have agreed on certain significant contributors to shareholder value with respect to a number of matters that are often the subject of proxy solicitations for shareholder meetings. The proxy voting policies specifically address these considerations and establish a framework for the Manager's consideration of the vote that would be appropriate for the funds. In particular, the proxy voting policies outline principles and factors to be considered in the exercise of voting authority for proposals addressing:

- ❖ Routine Matters
- ❖ Election of Directors
- ❖ Ratification of Selection of Auditors
- ❖ Compensation Matters
 - Executive Compensation
 - Equity-Based Compensation Plans
- ❖ Anti-Takeover Proposals
 - Cumulative Voting
 - Staggered Boards
 - "Blank Check" Preferred Stock
 - Elimination of Preemptive Rights
 - Non-targeted Share Repurchase
 - Increase in Authorized Common Stock
 - "Supermajority" Voting Provisions or Super Voting Share Classes
 - "Fair Price" Amendments
 - Limiting the Right to Call Special Shareholder Meetings
 - Poison Pills or Shareholder Rights Plans
 - Golden Parachutes
 - Reincorporation
 - Confidential Voting
 - Opting In or Out of State Takeover Laws
- ❖ Other Matters
 - Shareholder Proposals Involving Social, Moral or Ethical Matters
 - Anti-Greenmail Proposals
 - Changes to Indemnification Provisions
 - Non-Stock Incentive Plans
 - Director Tenure
 - Directors' Stock Options Plans
 - Director Share Ownership
 - Non-U.S. Proxies

Finally, the proxy voting policies establish procedures for voting of proxies in cases in which the Manager may have a potential conflict of interest. Companies with which the Manager has direct business relationships could theoretically use these relationships to attempt to unduly influence the manner in which American Century votes on matters for the funds. To ensure that such conflict of interest does not affect proxy votes cast for the funds, all discretionary (including case-by-case) voting for these companies will be voted in direct consultation with a committee of the independent directors of the funds.

A copy of the Manager's current proxy voting policies and information regarding how the Manager voted proxies relating to portfolio securities during the most recent 12-month period ended June 30 are available on the *About Us* page at americancentury.com. The Manager's proxy voting record also is available on the SEC's website at sec.gov.

BlackRock Investment Management, LLC

I. INTRODUCTION

The Trustees/Directors ("Directors") of the BlackRock-Advised Funds other than the iShares Funds¹ (the "Funds") have the responsibility for voting proxies relating to portfolio securities of the Funds, and have determined that it is in the best interests of the Funds and their shareholders to delegate that responsibility to BlackRock Advisors, LLC and its affiliated U.S. registered investment advisers ("BlackRock"), the investment adviser to the Funds, as part of BlackRock's authority to manage, acquire and dispose of account assets. The Directors hereby direct BlackRock to vote such proxies in accordance with this Policy, and any proxy voting guidelines that the Adviser determines are appropriate and in the best interests of the Funds' shareholders and which are consistent with the principles outlined in this Policy. Individual series of the Funds may be specifically excluded from this Policy by the Directors by virtue of the adoption of alternative proxy voting policy for such series. The Directors have authorized BlackRock to utilize unaffiliated third-parties as its agents to vote portfolio proxies in accordance with this Policy and to maintain records of such portfolio proxy voting.

Rule 206(4)-6 under the Investment Advisers Act of 1940 requires, among other things, that an investment adviser that exercises voting authority over clients' proxy voting adopt policies and procedures reasonably designed to ensure that the adviser votes proxies in the best interests of clients, discloses to its clients information about those policies and procedures and also discloses to clients how they may obtain information on how the adviser has voted their proxies.

BlackRock has adopted guidelines and procedures that are consistent with the principles of this Policy. BlackRock's corporate governance committee structure (the "Committee"), oversees the proxy voting function on behalf of BlackRock and its clients, including the Funds. The Committee is comprised of senior members of BlackRock's Portfolio Management and Administration Groups and is advised by BlackRock's Legal and Compliance Department.

BlackRock votes (or refrains from voting) proxies for each Fund in a manner that BlackRock, in the exercise of its independent business judgment, concludes is in the best economic interests of such Fund. In some cases, BlackRock may determine that it is in the best economic interests of a Fund to refrain from exercising the Fund's proxy voting rights (such as, for example, proxies on certain non-U.S. securities that might impose costly or time-consuming in-person voting requirements). With regard to the relationship between securities lending and proxy voting, BlackRock's approach is also driven by our clients' economic interests. The evaluation of the economic desirability of recalling loans involves balancing the revenue producing value of loans against the likely economic value of casting votes. Based on our evaluation of this relationship, BlackRock believes that the likely economic value of casting a vote generally is less than the securities lending income, either because the votes will not have significant economic consequences or because the outcome of the vote would not be affected by BlackRock recalling loaned securities in order to ensure they are voted. Periodically, BlackRock analyzes the process and benefits of voting proxies for securities on loan, and will consider whether any modification of its proxy voting policies or procedures are necessary in light of any regulatory changes.

BlackRock will normally vote on specific proxy issues in accordance with BlackRock's proxy voting guidelines. BlackRock's proxy voting guidelines provide detailed guidance as to how to vote proxies on certain important or commonly raised issues. BlackRock may, in the exercise of its business judgment, conclude that the proxy voting

¹ The US iShares Funds have adopted a separate Proxy Voting Policy.

guidelines do not cover the specific matter upon which a proxy vote is requested, or that an exception to the proxy voting guidelines would be in the best economic interests of a Fund. BlackRock votes (or refrains from voting) proxies without regard to the relationship of the issuer of the proxy (or any shareholder of such issuer) to the Fund, the Fund's affiliates (if any), BlackRock or BlackRock's affiliates. When voting proxies, BlackRock attempts to encourage companies to follow practices that enhance shareholder value and increase transparency and allow the market to place a proper value on their assets.

II. PROXY VOTING POLICIES

A. Boards of Directors

The Funds generally support the board's nominees in the election of directors and generally support proposals that strengthen the independence of boards of directors. As a general matter, the Funds believe that a company's board of directors (rather than shareholders) is most likely to have access to important, nonpublic information regarding a company's business and prospects, and is therefore best-positioned to set corporate policy and oversee management. The Funds therefore believe that the foundation of good corporate governance is the election of responsible, qualified, independent corporate directors who are likely to diligently represent the interests of shareholders and oversee management of the corporation in a manner that will seek to maximize shareholder value over time. In individual cases, consideration may be given to a director nominee's history of representing shareholder interests as a director of the company issuing the proxy or other companies, or other factors to the extent deemed relevant by the Committee.

B. Auditors

These proposals concern those issues submitted to shareholders related to the selection of auditors. As a general matter, the Funds believe that corporate auditors have a responsibility to represent the interests of shareholders and provide an independent view on the propriety of financial reporting decisions of corporate management. While the Funds anticipate that BlackRock will generally defer to a corporation's choice of auditor, in individual cases, consideration may be given to an auditors' history of representing shareholder interests as auditor of the company issuing the proxy or other companies, to the extent deemed relevant.

C. Compensation and Benefits

These proposals concern those issues submitted to shareholders related to management compensation and employee benefits. As a general matter, the Funds favor disclosure of a company's compensation and benefit policies and oppose excessive compensation, but believe that compensation matters are normally best determined by a corporation's board of directors, rather than shareholders. Proposals to "micro-manage" a company's compensation practices or to set arbitrary restrictions on compensation or benefits should therefore generally not be supported.

D. Capital Structure

These proposals relate to various requests, principally from management, for approval of amendments that would alter the capital structure of a company, such as an increase in authorized shares. As a general matter, the Funds expect that BlackRock will support requests that it believes enhance the rights of common shareholders and oppose requests that appear to be unreasonably dilutive.

E. Corporate Charter and By-Laws

These proposals relate to various requests for approval of amendments to a corporation's charter or by-laws. As a general matter, the Funds generally vote against anti-takeover proposals and proposals that would create additional barriers or costs to corporate transactions that are likely to deliver a premium to shareholders.

F. *Environmental and Social Issues*

These are shareholder proposals addressing either corporate social and environmental policies or requesting specific reporting on these issues. The Funds generally do not support proposals on social issues that lack a demonstrable economic benefit to the issuer and the Fund investing in such issuer. BlackRock seeks to make proxy voting decisions in the manner most likely to protect and promote the long-term economic value of the securities held in client accounts. We intend to support economically advantageous corporate practices while leaving direct oversight of company management and strategy to boards of directors. We seek to avoid micromanagement of companies, as we believe that a company's board of directors is best positioned to represent shareholders and oversee management on shareholders behalf. Issues of corporate social and environmental responsibility are evaluated on a case-by-case basis within this framework.

III. CONFLICTS MANAGEMENT

BlackRock maintains policies and procedures that are designed to prevent any relationship between the issuer of the proxy (or any shareholder of the issuer) and a Fund, a Fund's affiliates (if any), BlackRock or BlackRock's affiliates, from having undue influence on BlackRock's proxy voting activity. In certain instances, BlackRock may determine to engage an independent fiduciary to vote proxies as a further safeguard against potential conflicts of interest or as otherwise required by applicable law. The independent fiduciary may either vote such proxies or provide BlackRock with instructions as to how to vote such proxies. In the latter case, BlackRock votes the proxy in accordance with the independent fiduciary's determination.

IV. REPORTS TO THE BOARD

BlackRock will report to the Directors on proxy votes it has made on behalf of the Funds at least annually.

Brookfield Investment Management Inc.

Brookfield and its affiliates have adopted written policies and procedures that are reasonably designed to ensure that Brookfield votes client securities in the best interest of its clients ("Proxy Voting Policies and Procedures") in compliance with Rule 206(4)-6 of the Advisers Act. The following summary of the Proxy Voting Policies and Procedures is intended to provide clients, including the Fund, with a description of Brookfield's proxy voting process.

Unless otherwise specifically provided in the agreement between the client and Brookfield, Brookfield will generally be responsible for evaluating and voting on all proposals. It is the policy of Brookfield to vote all proxies in the best interest of clients, meaning for the exclusive benefit of the accounts whose assets Brookfield manages. In most, if not all cases, the best interest of clients will mean that the proposals which maximize the value of portfolio securities will be approved without regard to non-economic considerations.

As an investment adviser that has been granted the authority to vote portfolio proxies, Brookfield owes a fiduciary duty to its clients to monitor corporate events and to vote portfolio proxies consistent with the best interests of its clients. In this regard, Brookfield seeks to ensure that all votes are free from unwarranted and inappropriate influences. For certain investment strategies Brookfield has retained an independent proxy voting agent to assist Brookfield in its proxy voting responsibilities.

Brookfield will vote proposals according to its pre-determined voting policy, which is further described in Brookfield's Proxy Voting Policies and Procedures. Brookfield votes portfolio proxies without regard to any other business relationship between Brookfield (or its affiliates) and the company to which the portfolio proxy relates. To

this end, Brookfield and its affiliates generally seek to avoid material conflicts of interests that may arise between the interests of its client and Brookfield, its affiliate or their business relationships. To further minimize possible conflicts of interests, Brookfield has employed procedures to ensure that the course of action is consistent with the best interests of its clients.

Brookfield's Proxy Policies and Procedures are subject to change as necessary to remain current with applicable rules and regulations and Brookfield's internal procedures.

PROXY VOTING POLICIES AND PROCEDURES
DIMENSIONAL FUND ADVISORS LP
DIMENSIONAL FUND ADVISORS LTD.
DFA AUSTRALIA LIMITED
DIMENSIONAL FUND ADVISORS PTE. LTD.

Introduction

Dimensional Fund Advisors LP ("Dimensional") is an investment adviser registered with the U.S. Securities and Exchange Commission ("SEC") pursuant to the Investment Advisers Act of 1940 (the "Advisers Act"). Dimensional controls Dimensional Fund Advisors Ltd. ("DFAL"), DFA Australia Limited ("DFAA") and Dimensional Fund Advisors Pte. Ltd. ("DFAP") (Dimensional, DFAL, DFAA and DFAP are collectively referred to as the "Advisors"). DFAL and DFAA are also investment advisers registered under the Advisers Act.

The Advisors provide investment advisory or subadvisory services to various types of clients, including registered funds, unregistered commingled funds, defined benefit plans, defined contribution plans, private and public pension funds, foundations, endowment funds and other types of investors. These clients frequently give the Advisors the authority and discretion to vote proxy statements relating to the underlying securities that are held on behalf of such clients. Also, a client may, at times, ask an Advisor to provide voting advice on certain proxies without delegating full voting discretion to the Advisor. Depending on the client, the Advisors' duties may include making decisions regarding whether and how to vote proxies as part of an investment manager's fiduciary duty under ERISA.

The following Proxy Voting Policies and Procedures (the "Policy") address the Advisors' objectives for voting proxies received by the Advisors on behalf of client accounts to the extent that relationships with such clients are subject to the Advisers Act or clients that are registered investment companies under the Investment Company Act of 1940 (the "40 Act"), including The DFA Investment Trust Company, DFA Investment Dimensions Group Inc., Dimensional Investment Group Inc. and Dimensional Emerging Markets Value Fund Inc. (together, the "Dimensional Investment Companies"). The Advisors believe that this Policy is reasonably designed to meet their goal of ensuring that the Advisors endeavor to vote (or refrain from voting) proxies in a manner consistent with the best interests of their clients, as understood by the Advisors at the time of the vote.

Exhibit A to this Policy includes a summary of the Advisors' current Proxy Voting Guidelines and will change from time to time (the "Guidelines"). The Guidelines are largely based on those developed by Institutional Shareholder Services, Inc. ("ISS") an independent third party, except with respect to certain matters which are generally described in Exhibit A. The Investment Committee of Dimensional has determined that, in general, voting proxies pursuant to the Guidelines should be in the best interests of clients. Therefore, an Advisor will usually instruct voting of proxies in accordance with the Guidelines. The Guidelines provide a framework for analysis and decision making, but do not address all potential issues. In order to be able to address all the relevant facts and circumstances related to a proxy vote, the Advisors reserve the right to instruct votes counter to the Guidelines if, after a review of the matter, an Advisor believes that a client's best interests would be served by such a vote. In such circumstance, the analysis will be documented in writing and periodically presented to the Committee (as hereinafter defined). To the extent that the Guidelines do not cover potential voting issues, an Advisor will instruct the vote on such issues in a manner that is consistent with the spirit of the Guidelines and that the Advisor believes would be in the best interests of the client.

The Advisors may, but will not ordinarily take social concerns into account in voting proxies with respect to securities held by clients, including those held by socially screened portfolios or accounts. The Advisors will ordinarily take environmental concerns into account in voting proxies with respect to securities held by certain sustainability screened portfolios or accounts.

The Advisors have retained ISS to provide information on shareholder meeting dates and proxy materials, translate proxy materials printed in a foreign language, provide research on proxy proposals and voting recommendations in accordance with the Guidelines, effect votes on behalf of the clients for whom the Advisors have proxy voting responsibility and provide reports concerning the proxies voted (“Proxy Voting Services”). In addition, the Advisors may retain Proxy Voting Services from supplemental third-party proxy service providers to provide, among other things, research on proxy proposals and voting recommendations for certain shareholder meetings, as identified in the Guidelines. Although the Advisors retain third-party service providers for proxy issues, the Advisors remain responsible for proxy voting decisions. In this regard, the Advisors use commercially reasonable efforts to oversee the directed delegation to third-party proxy voting service providers, upon which the Advisors rely to carry out the Proxy Voting Services. In the event that the Guidelines are not implemented precisely as Advisors’ intend because of the actions or omissions of any third party service providers, custodians or sub-custodians or other agents, or any such persons experience any irregularities (e.g. misvotes or missed votes), then such instances will not necessarily be deemed by the Advisors as a breach of this Policy.

Procedures for Voting Proxies

The Investment Committee at Dimensional is generally responsible for overseeing each Advisor’s proxy voting process. The Investment Committee has formed a Corporate Governance Committee (the “Corporate Governance Committee” or the “Committee”) composed of certain officers, directors and other personnel of the Advisors and has delegated to its members authority to (i) oversee the voting of proxies, (ii) make determinations as to how to instruct the vote on certain specific proxies, (iii) verify the on-going compliance with this Policy and (iv) review this Policy from time to time and recommend changes to the Investment Committee. The Committee may designate one or more of its members to oversee specific, ongoing compliance with respect to these Procedures and may designate other personnel of each Advisor to instruct the vote on proxies on behalf of the Advisors' clients, including all authorized traders of the Advisors (“Authorized Persons”). The Committee may modify this Policy from time to time to meet the goal of acting in a manner consistent with the best interests of the clients.

Generally, the Advisors analyze proxy statements on behalf of their clients and instruct the vote (or refrain from voting) proxies in accordance with this Policy and the Guidelines. Therefore, an Advisor generally will not instruct votes differently for different clients unless a client has expressly directed the Advisor to vote differently for such client's account. In the case of separate accounts, where an Advisor has contractually agreed to follow a client’s individualized proxy voting guidelines, the Advisor will instruct such vote on the client’s proxies pursuant to the client’s guidelines.

Each Advisor seeks to vote (or refrain from voting) proxies for its clients in a manner that the Advisor determines is in the best interests of its clients and which seeks to maximize the value of the client’s investments. In some cases, the Advisor may determine that it is in the best interests of clients to refrain from exercising the clients’ proxy voting rights. The Advisor may determine that voting is not in the best interest of a client and refrain from voting if the costs, including the opportunity costs, of voting would, in the view of the Advisor, exceed the expected benefits of voting to the client. For securities on loan, the Advisor will balance the revenue-producing value of loans against the difficult-to-assess value of casting votes. It is the Advisors’ belief that the expected value of casting a vote generally will be less than the securities lending income, either because the votes will not have significant economic consequences or because the outcome of the vote would not be affected by the Advisor recalling loaned securities in order to ensure they are voted. The Advisor does intend to recall securities on loan if based upon information in the Advisor’s possession, it determines that voting the securities is likely to materially affect the value of a client’s investment and that it is in the client’s best interests to do so.

In cases where the Advisor does not receive a solicitation or enough information within a sufficient time (as reasonably determined by the Advisor) prior to the proxy-voting deadline, the Advisor or its service provider may be unable to vote.

Generally, the Advisors do not intend to engage in shareholder activism with respect to a pending vote. However, if an issuer's management, shareholders or proxy solicitors contact the Advisors with respect to a pending vote, a member of the Committee may discuss the vote with such party and report to the full Committee.

International Proxy Voting

While the Advisors utilize the Policy and Guidelines for both their international and domestic portfolios and clients, there are some significant differences between voting U.S. company proxies and voting non-U.S. company proxies. For U.S. companies, it is relatively easy to vote proxies, as the proxies are typically received automatically and may be voted by mail or electronically. In most cases, the officers of a U.S. company soliciting a proxy act as proxies for the company's shareholders.

With respect to non-U.S. companies, however, it is typically both difficult and costly to vote proxies due to local regulations, customs or other requirements or restrictions, and such circumstances may outweigh any anticipated economic benefit of voting. The major difficulties and costs may include: (i) appointing a proxy; (ii) obtaining reliable information about the time and location of a meeting; (iii) obtaining relevant information about voting procedures for foreign shareholders; (iv) restrictions on trading securities that are subject to proxy votes (share-blocking periods); (v) arranging for a proxy to vote locally in person; (vi) fees charged by custody banks for providing certain services with regard to voting proxies; and (vii) foregone income from securities lending programs. The Advisors do not intend to vote proxies of non-U.S. companies if they determine that the expected costs of voting outweigh any anticipated economic benefit to the client of voting.² The Advisors intend to make their determination on whether to vote proxies of non-U.S. companies on a client by client basis, and generally seek to implement uniform voting procedures for all proxies of companies in each country. The Advisors periodically review voting logistics, including costs and other voting difficulties, on a client by client and country by country basis, in order to determine if there have been any material changes that would affect the Advisors' decision of whether or not to vote. In the event an Advisor is made aware of and believes that an issue to be voted is likely to materially affect the economic value of a portfolio, that its vote is reasonably likely to influence the ultimate outcome of the contest, and that the expected benefits to the client of voting the proxies exceed the expected costs, the Advisor will seek to make every reasonable effort to vote such proxies.

Conflicts of Interest

Occasions may arise where an Authorized Person, the Committee, an Advisor, or an affiliated person of the Advisor may have a conflict of interest in connection with the proxy voting process. A conflict of interest may exist, for example, if an Advisor is actively soliciting investment advisory business from the company soliciting the proxy. However, proxies that the Advisors receive on behalf of their clients generally will be voted in accordance with the predetermined Guidelines. Therefore, proxies voted should not result from any conflicts of interest.

In the limited instances where (i) an Authorized Person is considering voting a proxy contrary to the Guidelines (or in cases for which the Guidelines do not prescribe a particular vote and the proposed vote is contrary

² As the SEC has stated, "There may even be times when refraining from voting a proxy is in the client's best interest, such as when the adviser determines that the cost of voting the proxy exceeds the expected benefit to the client. . . For example, casting a vote on a foreign security may involve additional costs such as hiring a translator or traveling to the foreign country to vote the security in person." *See Proxy Voting by Investment Advisers*, Release No. IA-2106 (Jan. 31, 2003). Additionally, the Department of Labor has stated it "interprets ERISA § 404(a)(1) to require the responsible plan fiduciary to weigh the costs and benefits of voting on proxy proposals relating to foreign securities and make an informed decision with respect to whether voting a given proxy proposal is prudent and solely in the interest of the plan's participants and beneficiaries." *See Preamble to Department of Labor Interpretative Bulletin 94-2*, 59 FR 38860 (July 29, 1994) 19,971, CCH, 22,485-23 to 22,485-24 (1994).

to the recommendation of ISS), and (ii) the Authorized Person believes a potential conflict of interest exists, the Authorized Person will disclose the potential conflict to a member of the Committee. Such disclosure will describe the proposal to be voted upon and disclose any potential conflict of interest including but not limited to any potential personal conflict of interest (e.g., familial relationship with company management) the Authorized Person may have relating to the proxy vote, in which case the Authorized Person will remove himself or herself from the proxy voting process.

If the Committee member has actual knowledge of a conflict of interest and recommends a vote contrary to the Guidelines (or in the case where the Guidelines do not prescribe a particular vote and the proposed vote is contrary to the recommendation of ISS), the Committee member will bring the vote to the Committee which will (a) determine how the vote should be cast keeping in mind the principle of preserving shareholder value or (b) determine to abstain from voting, unless abstaining would be materially adverse to the Client's interest. To the extent the Committee makes a determination regarding how to vote or to abstain for a proxy on behalf of a Dimensional Investment Company in the circumstances described in this paragraph, the Advisor will report annually on such determinations to the Board of Directors of the Dimensional Investment Company.

Availability of Proxy Voting Information and Recordkeeping

Each Advisor will inform its clients on how to obtain information regarding the Advisor's voting of its clients' securities. The Advisor will provide its clients with a summary of its proxy voting guidelines, process and policies and will inform its clients of how they can obtain a copy of the complete Policy upon request. If the Advisor is registered under the Adviser's Act, the Advisor will include such information described in the preceding two sentences in Part II of its Form ADV. The Advisor will also provide its existing clients with the above information.

Recordkeeping

The Advisors will also keep records of the following items: (i) their proxy voting guidelines, policies and procedures; (ii) proxy statements received regarding client securities (unless such statements are available on the SEC's Electronic Data Gathering, Analysis, and Retrieval (EDGAR) system); (iii) records of votes they cast on behalf of clients, which may be maintained by a third party service provider if the service provider undertakes to provide copies of those records promptly upon request; (iv) records of written client requests for proxy voting information and the Advisors' responses (whether a client's request was oral or in writing); and (v) any documents prepared by the Advisors that were material to making a decision how to vote, or that memorialized the basis for the decision. The Advisors will maintain these records in an easily accessible place for at least *six years* from the end of the fiscal year during which the last entry was made on such records. For the first *two years*, each Advisor will store such records at one of its principal offices.

Disclosure

Dimensional shall disclose in the statements of additional information of the Dimensional Investment Companies a summary of procedures which Dimensional uses to determine how to vote proxies relating to portfolio securities of the Dimensional Investment Companies. The disclosure will include a description of the procedures used when a vote presents a conflict of interest between shareholders and Dimensional, DFA Securities LLC ("DFAS") or an affiliate of Dimensional or DFAS.

The semi-annual reports of the Dimensional Investment Companies shall indicate that the procedures are available: (i) by calling Dimensional collect; or (ii) on the SEC's website. If a request for the procedures is received, the requested description must be sent within three business days by a prompt method of delivery.

Dimensional, on behalf of each Dimensional Investment Company it advises, shall file its proxy voting record with the SEC on Form N-PX no later than August 31 of each year, for the twelve-month period ending June 30 of the current year. Such filings shall contain all information required to be disclosed on Form N-PX.

Epoch Investment Partners, Inc.

Policy Summary

Epoch votes proxies a manner that it believes is most likely to enhance the economic value of the underlying securities held in client accounts. Epoch will not respond to proxy solicitor requests unless Epoch determines that it is in the best interest of clients to do so.

In light of the Firm's fiduciary duty to its clients, and given the complexity of the issues that may be raised in connection with proxy votes, the Firm has retained Institutional Shareholder Services (formerly RiskMetrics Group)("ISS"). ISS is an independent adviser that specializes in providing a variety of fiduciary-level proxy-related services to institutional investment managers. The services provided to the Firm include in-depth research, voting recommendations, vote execution and recordkeeping. Notwithstanding the foregoing, the Firm will use its best judgment to vote proxies in the manner it deems to be in the best interests of its clients. In the event that judgment differs from that of ISS, the Firm will memorialize the reasons supporting that judgment and retain a copy of those records for the Firm's files. Additionally, the CCO will periodically review the voting of proxies to ensure that all such votes – particularly those diverging from the judgment of ISS – were voting consistent with the Firm's fiduciary duties.

Procedures for Lent Securities and Issuers in Share-blocking Countries

At times, neither the Firm nor ISS will be allowed to vote proxies on behalf of Clients when those clients have adopted a securities lending program. The Firm recognizes that clients who have adopted securities lending programs have made a general determination that the lending program provides a greater economic benefit than retaining the ability to vote proxies. Notwithstanding this fact, in the event that the Firm becomes aware of a proxy voting matter that would enhance the economic value of the client's position and that position is lent out, the Firm will make reasonable efforts to inform the client that neither the Firm nor ISS is able to vote the proxy until the client recalls the lent security.

In certain markets where share blocking occurs, shares must be "frozen" for trading purposes at the custodian or sub-custodian in order to vote. During the time that shares are blocked, any pending trades will not settle. Depending on the market, this period can last from one day to three weeks. Any sales that must be executed will settle late and potentially be subject to interest charges or other punitive fees. For this reason, in blocking markets, the Firm retains the right to vote or not, based on the determination of the Firm's investment personnel. ISS sends a weekly report of upcoming meetings in blocking markets detailing each client account entitled to vote, the number of shares held, type of meeting and blocking period. The CCO will monitor these upcoming meetings, consult with the Firm's investment team members responsible for each industry or market and arrive at a decision on whether or not to vote. If the decision is made to vote, the Firm will process votes through ISS unless other action is required as detailed in this policy.

Procedures for Specific Conflicts of Interest

Conflict Scenario: In the event that Epoch intends to deviate from the proxy voting recommendation of ISS and where the public company is an entity that Epoch has a significant business relationship, then Epoch shall bring the proxy voting issue to the attention of affected Clients for guidance on how to vote the proxy.

For the purpose of this policy, a "significant business relationship" means (a) a broker-dealer that comprises 10 percent or more of the Firm's total dollar amount of transaction flow for the prior 12 months; (b) a firm that is the sponsor of a wrap program or managed account platform for which Epoch is currently a manager but only to the extent that Firm's revenue from such program or platform exceeds 10% of the Firm's total revenue; (c) a Client that is a public company that has retained the Firm as an investment manager and the Client has at least \$50 million in assets under management with the Firm; and (d) a Client that is a 401(k) plan or defined benefit plan for a public company that has retained the Firm as an investment manager and the Client has at least \$50 million in assets under management with the Firm.

Procedures for Proxy Solicitation

In the event that any Employee of Epoch receives a request to reveal or disclose of Epoch's voting intention on a specific proxy event, then the Employee must forward the solicitation onto the Chief Compliance Officer.

Procedures for RMG Policy Selection

Epoch applies the various country specific benchmark guidelines for all accounts unless specifically instructed to apply other criteria by the client.

Procedures for Voting Disclosure

Upon request, Epoch will provide clients with their specific proxy voting history.

Recordkeeping

Epoch must maintain the documentation described in the following section for a period of not less than five (5) years, the first two (2) years at its principal place of business. The Firm will be responsible for the following procedures and for ensuring that the required documentation is retained.

Client request to review proxy votes:

- The Client Service group will record the identity of the client, the date of the request, and the disposition (e.g., provided a written or oral response to client's request, referred to third party, not a proxy voting client, other dispositions, etc.) in a suitable place.
- Furnish the information requested, free of charge, to the client within a reasonable time period (within 10 business days). Maintain a copy of the written record provided in response to client's written (including e-mail) or oral request.

Proxy voting records:

- The proxy voting record periodically provided by ISS.
- Documents prepared or created by Epoch that were material to making a decision on how to vote, or that memorialized the basis for the decision.
- Documentation or notes or any communications received from third parties, other industry analysts, third party service providers, company's management discussions, etc. that were material in the basis for the decision.

Disclosure

- The CCO will ensure that Part II of Form ADV is updated as necessary to reflect: (i) all material changes to this policy; and (ii) regulatory requirements related to proxy voting disclosure.

Federated Investment Management Company (“Federated”)

VOTING PROXIES ON FUND PORTFOLIO SECURITIES

The Board has delegated to Federated authority to vote proxies on the securities held in the Fund’s portfolio. The Board has also approved the Federated’s policies and procedures for voting the proxies, which are described below.

Proxy Voting Policies

Federated’s general policy is to cast proxy votes in favor of proposals that Federated anticipates will enhance the long-term value of the securities being voted. Generally, this will mean voting for proposals that Federated believes will: improve the management of a company; increase the rights or preferences of the voted securities; and/or increase the chance that a premium offer would be made for the company or for the voted securities.

The following examples illustrate how these general policies may apply to proposals submitted by a company’s board of directors. However, whether Federated supports or opposes a proposal will always depend on the specific circumstances described in the proxy statement and other available information.

On matters of corporate governance, generally Federated will vote *for* the full slate of directors nominated in an uncontested election; and *for* proposals to: require a company’s audit committee to be comprised entirely of independent directors; require independent tabulation of proxies and/or confidential voting by shareholders; reorganize in another jurisdiction (unless it would reduce the rights or preferences of the securities being voted); ratify the board’s selection of auditors (unless compensation for non-audit services exceeded 50% of the total compensation received from the company, or the previous auditor was dismissed because of a disagreement with the company); and repeal a shareholder rights plan (also known as a “poison pill”). Federated will generally vote *against* the adoption of such a plan (unless the plan is designed to facilitate, rather than prevent, unsolicited offers for the company).

On matters of capital structure, generally Federated will vote: *against* proposals to authorize or issue shares that are senior in priority or voting rights to the securities being voted; and *for* proposals to: reduce the amount of shares authorized for issuance; authorize a stock repurchase program; and grant preemptive rights to the securities being voted. Federated will generally vote *against* proposals to eliminate such preemptive rights.

On matters relating to management compensation, generally Federated will vote: *for* stock incentive plans that align the recipients’ interests with the interests of shareholders without creating undue dilution; *against* proposals that would permit the amendment or replacement of outstanding stock incentives with new stock incentives having more favorable terms; and *against* executive compensation plans that do not disclose the maximum amounts of compensation that may be awarded or the criteria for determining awards.

On matters relating to corporate transactions, Federated will vote proxies relating to proposed mergers, capital reorganizations, and similar transactions in accordance with the general policy, based upon its analysis of the proposed transaction. Federated will vote proxies in contested elections of directors in accordance with the general policy, based upon its analysis of the opposing slates and their respective proposed business strategies. Some transactions may also involve proposed changes to the company’s corporate governance, capital structure or management compensation. Federated will vote on such changes based on its evaluation of the proposed transaction or contested election. In these circumstances, Federated may vote in a manner contrary to the general practice for similar proposals made outside the context of such a proposed transaction or change in the board. For example, if Federated decides to vote against a proposed transaction, it may vote for anti-takeover measures reasonably designed to prevent the transaction, even though Federated typically votes against such measures in other contexts. Federated generally votes *against* proposals submitted by shareholders without the favorable recommendation of a company’s board. Federated believes that a company’s board should manage its business and policies, and that shareholders who seek specific changes should strive to convince the board of their merits or seek direct representation on the board.

In addition, Federated will not vote if it determines that the consequences or costs outweigh the potential benefit of voting. For example, if a foreign market requires shareholders casting proxies to retain the voted shares until the meeting date (thereby rendering the shares “illiquid” for some period of time), Federated will not vote proxies for such shares.

Proxy Voting Procedures

Federated has established a Proxy Voting Committee (Proxy Committee), to exercise all voting discretion granted to Federated by the Board in accordance with the proxy voting policies. Federated has hired Glass Lewis & Co. (GL) to obtain, vote, and record proxies in accordance with the Proxy Committee’s directions. The Proxy Committee has supplied GL with general voting instructions that represent decisions made by the Proxy Committee in order to vote common proxy proposals; however, the Proxy Committee retains the right to modify these voting instructions at any time or to vote contrary to the voting instructions at any time in order to cast proxy votes in a manner that the Proxy Committee believes is consistent with Federated’s general policy. GL may vote any proxy as directed in the voting instructions without further direction from the Proxy Committee and may make any determinations required to implement the voting instructions. However, if the voting instructions require case-by-case direction for a proposal, GL shall provide the Proxy Committee with all information that it has obtained regarding the proposal and the Proxy Committee will provide specific direction to GL.

Conflicts of Interest

Federated has adopted procedures to address situations where a matter on which a proxy is sought may present a potential conflict between the interests of the Fund (and its shareholders) and those of Federated or Distributor. This may occur where a significant business relationship exists between Federated (or its affiliates) and a company involved with a proxy vote. A company that is a proponent, opponent, or the subject of a proxy vote, and which to the knowledge of the Proxy Committee has this type of significant business relationship, is referred to as an “Interested Company.”

Federated has implemented the following procedures in order to avoid concerns that the conflicting interests of Federated have influenced proxy votes. Any employee of Federated who is contacted by an Interested Company regarding proxies to be voted by Federated must refer the Interested Company to a member of the Proxy Committee, and must inform the Interested Company that the Proxy Committee has exclusive authority to determine how Federated will vote. Any Proxy Committee member contacted by an Interested Company must report it to the full Proxy Committee and provide a written summary of the communication. Under no circumstances will the Proxy Committee or any member of the Proxy Committee make a commitment to an Interested Company regarding the voting of proxies or disclose to an Interested Company how the Proxy Committee has directed such proxies to be voted. If the voting instructions already provide specific direction on the proposal in question, the Proxy Committee shall not alter or amend such directions. If the voting instructions require the Proxy Committee to provide further direction, the Proxy Committee shall do so in accordance with the proxy voting policies, without regard for the interests of Federated with respect to the Interested Company. If the Proxy Committee provides any direction as to the voting of proxies relating to a proposal affecting an Interested Company, it must disclose to the Fund’s Board information regarding: the significant business relationship; any material communication with the Interested Company; the matter(s) voted on; and how, and why, Federated voted as it did. Alternatively, the Proxy Committee may seek direction from the Fund’s Board on how a proposal concerning an Interested Company shall be voted, and shall follow any such direction provided by the Board. In seeking such direction, the Proxy Committee will disclose the reason such company is considered an Interested Company and may provide a recommendation on how such proposal should be voted and the basis for such recommendation.

If the Fund holds shares of another investment company for which Federated (or an affiliate) acts as an investment adviser, the Proxy Committee will vote the Fund’s proxies in the same proportion as the votes cast by shareholders who are not clients of Federated at any shareholders’ meeting called by such investment company, unless otherwise directed by the Board.

Proxy Voting Report

A report on Form N-PX of how the Fund voted any proxies during the most recent 12-month period ended June 30 is available from the EDGAR database on the SEC's website at www.sec.gov.

HighMark Capital Management, Inc. ("HighMark")

It is HighMark Capital Management, Inc.'s ("HCM") policy that proxies be voted in a manner that is consistent with the interests of its clients, including each HighMark Fund. A copy of HCM's Proxy Voting Policies and Procedures may be obtained, without charge, by calling 1-800-582-4734.

For proxies to be voted by HCM, HCM utilizes the services of an outside third party, Institutional Shareholder Services, Inc. ("ISS"), to vote its proxies pursuant to guidelines set by ISS and approved by HCM. ISS' corporate governance policy guiding principles establish a framework to examine all issues with the goal to maximize shareholder value, promote accountability, and mitigate risk. To achieve this goal: 1) ISS supports strong boards that demonstrate a commitment to creating shareholder value and prefers to see mechanisms that promote independence, accountability, responsiveness, and competence. 2) ISS evaluates auditors with the goal of ensuring auditor independence from the firm being audited as it is essential to ensure objectivity and reduce the potential for abuse thereby enabling accurate and reliable financial reporting. 3) ISS protects shareholder interests by examining the adoption of anti-takeover defense proposals or shareholder calls for their removal based on: the right of shareholder approval, the fairness of the voting process, protection of shareholders' right to act, and the ability to evaluate and vote effectively on the aggregate impact of the proposal. 4) ISS evaluates merger and restructuring transactions giving consideration to economic, operational, and governance factors based on: current shareholders' viewpoints, enhancing shareholder value, independent evaluation, and shareholder approval process. 5) ISS evaluates executive and director compensation proposals with the overall goal of aligning compensation practices with shareholders' interests. 6) ISS evaluation of corporate social responsibility issues focuses on the financial aspects of social and environmental proposals.

ISS is an agent of HCM and HCM retains the fiduciary duty to vote the proxies in the best interest of clients. HCM expects ISS to vote such proxies, as well as to maintain and make available appropriate proxy voting records, according to policies adopted by ISS which are in compliance with applicable law. HCM will at least annually review ISS' voting policies and compliance with such policies, and will periodically monitor its proxy voting. HCM will require ISS to promptly notify HCM of any material changes to its voting policies or practices.

For proxies to be voted by HCM, HCM, through its Investment Policy Committee (IPC), reserves the right to withdraw any proxy from ISS and to vote such proxy according to guidelines established by the IPC. HCM shall withdraw any proposed proxy vote from ISS in the event that HCM determines that the proposed vote by ISS would not be consistent with HCM's fiduciary duty to a fund. Before deciding to vote any proxy the IPC shall determine whether HCM or any of its affiliates have a significant business, personal or family relationship that could give rise to a material conflict of interest with regard to the proxy vote. If a conflict of interest exists, HCM will retain an independent fiduciary to vote the proxy or echo vote. To determine whether a material conflict exists, the IPC shall perform a reasonable investigation of information relating to possible conflicts of interest by relying on information about HCM and its affiliates that is publicly available or is generally known by HCM's employees, and on other information actually known by any IPC member. IPC members have a duty to disclose to the IPC conflicts of interest of which the member has actual knowledge but which have not been identified by the IPC in its investigation. The IPC cannot pursue investigation of possible conflicts when the information it would need is (i) nonpublic, (ii) subject to information blocking procedures, or (iii) otherwise not readily available to the IPC. With respect to securities on loan, HCM recognizes that, although voting rights or rights to consent with respect to the loaned securities pass to the borrower, HCM retains the right to call the loans at any time on reasonable notice and will call the loans, vote proxies or otherwise obtain the rights to vote or consent if HCM has knowledge that a material event (as determined by IPC) affecting the investment is to occur and it is determined to be in the best interests of the account and its customers to recall the securities and vote the proxies even at the cost of forgoing the incremental revenue that could be earned by keeping the securities on loan. HCM deems a material event to include proposed transactions the outcome of which would have a significant effect on the value of the investment. Matters

such as uncontested board elections, routine appointments of accountants and shareholder-initiated advisory proposals are generally not considered material events.

If a director, officer or employee of HCM, not involved in the proxy voting process, contacts any IPC member for the purpose of influencing how a proxy is voted, the member has a duty to immediately disclose such contact to the IPC and the IPC shall contact legal counsel who will be asked to recommend an appropriate course of action. All appropriate records regarding proxy-voting activities are maintained by ISS. HCM makes its proxy voting records available to as the extent required by law. HCM complies with the appropriate legal requirements with respect to voting proxies.

In some instances HCM may abstain from voting a client proxy, particularly when the effect on the client's economic interest or the value to the portfolio is insignificant or the cost of voting the proxy outweighs the benefit of the portfolio.

Invesco Advisers, Inc.

Proxy Voting Guidelines

The following policies and procedures apply to all institutional and retail funds and accounts (collectively, the "Accounts") managed by Invesco Advisers, Inc. ("Invesco").

A. GUIDING PRINCIPLES

Invesco may be authorized by its clients, including the funds it manages ("Clients"), to vote proxies appurtenant to the securities owned by such Clients. If so authorized, Invesco carries out this responsibility by voting proxies in a manner reasonably designed to maximize the economic interests of its Clients and to minimize any real or perceived conflicts of interest. Invesco may determine not to vote proxies if it determines that the cost or restrictions placed on a Client are outweighed by the benefit to such Client of voting the proxy.

Invesco is guided by the following principles:

- Invesco votes for proposals that maximize long-term shareholder value.
- Invesco believes in corporate accountability and supports governance structures reinforcing management's accountability to the board of directors and a board of directors' accountability to shareholders.
- In addition to the performance driven considerations noted above, Invesco believes that environmental, social and corporate governance proposals can influence long-term shareholder value and should be voted in a manner where such long-term shareholder value is maximized.

B. OPERATING PROCEDURES AND RESPONSIBLE PARTIES

Proxy administration

Guided by its philosophy that proxy voting is an asset that is to be managed by each investment team, consistent with each team's view as to the best economic interest of its shareholders, Invesco has created the Invesco US Proxy Advisory Committee ("IUPAC"). The IUPAC is an investments driven committee comprised solely of representatives from each investment management team at Invesco. The purpose of the IUPAC is to provide a forum for investment teams to monitor proxy voting trends, understand inconsistent votes within the complex, and to vote proxies where Invesco as a firm has a conflict of interest with an issuer or a member of the IUPAC has a personal conflict of interest with an issuer whose proxy he or she is charged with voting. The IUPAC also will consider and express a view on the proxies of the top twenty-five issuers held across all Client accounts, as measured by the total market value of shares held by Invesco Client accounts, and any other proxy brought to the IUPAC by an IUPAC member in an effort to build consensus around a proxy. Absent a conflict of interest, each investment team may

deviate from the view formed by the IUPAC on any proxy. In cases where there is a firm-level or personal conflict of interest with a proxy, the IUPAC's vote controls the proxy across all applicable Client accounts. Representatives of the IUPAC will have access to third party proxy advisory analyses provided by each of Glass Lewis and Institutional Shareholder Services, Inc. ("ISS") as one of many research tools in determining how to vote a proxy and is not required to vote in accordance with the recommendations of either.

Important principles underlying the Invesco Proxy Voting Guidelines (the "Guidelines")

I. Corporate Governance

Management teams of companies are accountable to the boards of directors, and directors of publicly held companies are accountable to shareholders. Invesco endeavors to vote the proxies of portfolio companies in a manner that will reinforce the notion of a board's accountability. Consequently, Invesco generally votes against any actions that would impair the rights of shareholders or would reduce shareholders' influence over the board or over management.

The following are specific voting issues that illustrate how Invesco applies this principle of accountability.

- *Elections of directors.* In uncontested director elections for companies that do not have a controlling shareholder, Invesco generally votes in favor of slates if they are comprised of at least a majority of independent directors and if the boards' key committees are fully independent. Key committees include the Audit, Compensation and Governance or Nominating Committees. Invesco's standard of independence excludes directors who, in addition to the directorship, have any material business or family relationships with the companies they serve.

Contested director elections are evaluated on a case-by-case basis.

- *Director performance.* Invesco generally withholds votes from directors who exhibit a lack of accountability to shareholders, either through their level of attendance at meetings or by adopting or approving egregious corporate-governance or other policies. In cases of material financial restatements, accounting fraud, habitually late filings, adopting shareholder rights plan ("poison pills") without shareholder approval, or other areas of poor performance, Invesco may withhold votes from some or all of a company's directors. In situations where directors' performance is a concern, Invesco may also support shareholder proposals to take corrective actions such as so-called "clawback" provisions.
- *Auditors and Audit Committee members.* Invesco believes a company's Audit Committee has a high degree of responsibility to shareholders in matters of financial disclosure, integrity of the financial statements and effectiveness of a company's internal controls. Independence, experience and financial expertise are critical elements of a well-functioning Audit Committee. When electing directors who are members of a company's Audit Committee, or when ratifying a company's auditors, Invesco considers the past performance of the Committee and holds its members accountable for the quality of the company's financial statements and reports.
- *Majority standard in director elections.* The right to elect directors is the single most important mechanism shareholders have to promote accountability. Invesco supports the nascent effort to reform the U.S. convention of electing directors, and generally votes in favor of proposals to elect directors by a majority vote.
- *Classified boards.* Invesco generally supports proposals to elect directors annually instead of electing them to staggered multi-year terms because annual elections increase a board's level of accountability to its shareholders.

- *Supermajority voting requirements.* Unless required by law in the state of incorporation, Invesco generally votes against actions that would impose any supermajority voting requirement, and generally supports actions to dismantle existing supermajority requirements.
- *Responsiveness.* Invesco generally withholds votes from directors who do not adequately respond to shareholder proposals that were approved by a majority of votes cast the prior year.
- *Cumulative voting.* The practice of cumulative voting can enable minority shareholders to have representation on a company's board. Invesco generally supports proposals to institute the practice of cumulative voting at companies whose overall corporate-governance standards indicate a particular need to protect the interests of minority shareholders.
- *Shareholder access.* On business matters with potential financial consequences, Invesco generally votes in favor of proposals that would increase shareholders' opportunities to express their views to boards of directors, proposals that would lower barriers to shareholder action and proposals to promote the adoption of generally accepted best practices in corporate governance. Furthermore, Invesco generally votes for shareholder proposals that are designed to protect shareholder rights if a company's corporate governance standards indicate that such additional protections are warranted.

• II. Incentives

Invesco believes properly constructed compensation plans that include equity ownership are effective in creating incentives that induce management and employees of portfolio companies to create greater shareholder wealth. Invesco generally supports equity compensation plans that promote the proper alignment of incentives with shareholders' long-term interests, and generally votes against plans that are overly dilutive to existing shareholders, plans that contain objectionable structural features, and plans that appear likely to reduce the value of the Client's investment.

Following are specific voting issues that illustrate how Invesco evaluates incentive plans.

- *Executive compensation.* Invesco evaluates compensation plans for executives within the context of the company's performance under the executives' tenure. Invesco believes independent compensation committees are best positioned to craft executive-compensation plans that are suitable for their company-specific circumstances. Invesco views the election of independent compensation committee members as the appropriate mechanism for shareholders to express their approval or disapproval of a company's compensation practices. Therefore, Invesco generally does not support shareholder proposals to limit or eliminate certain forms of executive compensation. In the interest of reinforcing the notion of a compensation committee's accountability to shareholders, Invesco generally supports proposals requesting that companies subject each year's compensation record to an advisory shareholder vote, or so-called "say on pay" proposals.
- *Equity-based compensation plans.* Invesco generally votes against plans that contain structural features that would impair the alignment of incentives between shareholders and management. Such features include the ability to reprice or reload options without shareholder approval, the ability to issue options below the stock's current market price, or the ability automatically to replenish shares without shareholder approval.
- *Employee stock-purchase plans.* Invesco generally supports employee stock-purchase plans that are reasonably designed to provide proper incentives to a broad base of employees, provided that the price at which employees may acquire stock is at most a 15 percent discount from the market price.
- *Severance agreements.* Invesco generally votes in favor of proposals requiring advisory shareholder ratification of executives' severance agreements. However, we oppose proposals requiring such agreements to be ratified by shareholders in advance of their adoption. Given the vast differences that may occur in

these agreements, it is necessary to note that IUPAC can and does evaluate some severance agreements on a case-by-case basis.

III. Capitalization

Examples of management proposals related to a company's capital structure include authorizing or issuing additional equity capital, repurchasing outstanding stock, or enacting a stock split or reverse stock split. On requests for additional capital stock, Invesco analyzes the company's stated reasons for the request. Except where the request could adversely affect the Client's ownership stake or voting rights, Invesco generally supports a board's decisions on its needs for additional capital stock. Some capitalization proposals require a case-by-case analysis. Examples of such proposals include authorizing common or preferred stock with special voting rights, or issuing additional stock in connection with an acquisition.

IV. Mergers, Acquisitions and Other Corporate Actions

Issuers occasionally require shareholder approval to engage in certain corporate actions such as mergers, acquisitions, name changes, dissolutions, reorganizations, divestitures and reincorporations and votes for these types of corporate actions are generally determined on a case-by-case basis.

V. Anti-Takeover Measures

Practices designed to protect a company from unsolicited bids can adversely affect shareholder value and voting rights, and they create conflicts of interests among directors, management and shareholders. Except under special issuer-specific circumstances, Invesco generally votes to reduce or eliminate such measures. These measures include adopting or renewing "poison pills", requiring supermajority voting on certain corporate actions, classifying the election of directors instead of electing each director to an annual term, or creating separate classes of common or preferred stock with special voting rights. Invesco generally votes against management proposals to impose these types of measures, and generally votes for shareholder proposals designed to reduce such measures. Invesco generally supports shareholder proposals directing companies to subject their anti-takeover provisions to a shareholder vote.

VI. Environmental and Social Issues

Invesco will evaluate environmental and social proposals when it believes such proposals may influence long-term shareholder value. If Invesco votes on an environmental or social proposal, it shall do so in a manner it believes will maximize long-term shareholder value.

VII. Routine Business Matters

Routine business matters rarely have the potential to have a material effect on the economic prospects of Clients' holdings, so Invesco generally supports the board's discretion on these items. However, Invesco generally votes against proposals where there is insufficient information to make a decision about the nature of the proposal. Similarly, Invesco generally votes against proposals to conduct other unidentified business at shareholder meetings.

C. SUMMARY

These Guidelines provide an important framework for making proxy-voting decisions, and should give our Clients insight into the factors driving Invesco's decisions. The Guidelines cannot address all potential proxy issues, however. Decisions on specific issues must be made within the context of these Guidelines. In addition, at the discretion of the portfolio managers, Invesco may also vote shares held on a Client-by-Client basis.

D. EXCEPTIONS

Client Maintains Right to Vote Proxies

In the case of institutional Clients or sub-advised Clients, Invesco will vote the proxies in accordance with these Guidelines unless a Client, ERISA or non-ERISA, retains, in writing, the right to vote or the named fiduciary (e.g., the plan sponsor) of a Client retains in writing the right to direct the plan trustee or a third party to vote proxies.

Proxy Voting for Fixed Income Assets and Stable Value Wrap Agreements

Some of Invesco's fixed income Clients hold interests in preferred stock of companies and some of Invesco's stable value clients are parties to wrap agreements. From time to time, companies that have issued preferred stock or that are parties to wrap agreements request that Invesco's Clients vote proxies on particular matters. Neither ISS nor GL currently provides proxy analysis or vote recommendations with respect to such proxy votes. Therefore, when a particular matter arises in this category, the portfolio managers responsible for the particular mandate will review the matter and make a recommendation as to how to vote the associated proxy.

Proxy Constraints

In certain circumstances, Invesco may refrain from voting where the economic cost of voting a company's proxy exceeds any anticipated benefits of that proxy proposal. In addition, there may be instances in which Invesco is unable to vote a proxy despite using commercially reasonable efforts to vote all of its Clients' proxies. Particular examples of such instances include, but are not limited to, the following:

- When securities are participating in the securities lending program, Invesco makes a determination of whether to terminate the loan by weighing the benefit to the Clients of voting a particular proxy versus the revenue lost by terminating the loan and recalling the securities. In some countries the exercise of voting rights requires the Client to submit to "share-blocking." Invesco generally refrains from voting proxies in share-blocking countries unless the portfolio manager determines that the benefit to Client(s) of voting a specific proxy outweighs the Client's temporary inability to sell the security.
- An inability to receive proxy materials from our Clients' custodians with enough time and enough information to make a voting decision sometimes precludes Invesco's ability to vote proxies.
- A requirement of some non-U.S. companies that in order to vote a proxy a representative in person must attend the proxy meeting. Invesco makes a determination as to whether the costs of sending a representative or signing a power-of-attorney outweigh the benefit of voting a particular proxy.

In the great majority of instances Invesco is able to vote U.S. and non-U.S. proxies successfully. It is important to note that Invesco makes voting decisions for non-U.S. issuers using these Guidelines as its framework, but also takes into account the corporate governance standards, regulatory environment and generally reasonable and governance-minded practices of the local market.

E. RESOLVING POTENTIAL CONFLICTS OF INTEREST

Firm Level Conflicts of Interest. A potential conflict of interest arises when Invesco votes a proxy for an issuer with which it also maintains a material business relationship. Examples could include issuers that are distributors of Invesco's products, or issuers that employ Invesco to manage portions of their retirement plans or treasury accounts.

Invesco generally resolves such potential conflicts in one of the following ways: (1) if the proposal that gives rise to the potential conflict is specifically addressed by the Guidelines, Invesco may vote the proxy in accordance with the predetermined Guidelines; (2) Invesco may engage an independent third party to determine how the proxy should be

voted; or (3) Invesco may establish an ethical wall or other informational barrier between the persons involved in the potential conflict and the persons making the proxy-voting decision in order to insulate the potential conflict from the decision makers.

Because the Guidelines are pre-determined and crafted to be in the best economic interest of Clients, applying the Guidelines to vote Client proxies should, in most instances, adequately resolve any potential conflict of interest. As an additional safeguard against potential conflicts, persons from Invesco's marketing, distribution and other customer-facing functions are not members of IUPAC.

Personal Conflicts of Interest. If any member of IUPAC has a personal conflict of interest with respect to a company or an issue presented for voting, that IUPAC member will inform IUPAC of such conflict and will abstain from voting on that company or issue. All IUPAC members shall sign an annual conflicts of interest memorandum.

Funds of Funds. Some Invesco Funds offering diversified asset allocation within one investment vehicle own shares in other Invesco Funds. A potential conflict of interest could arise if an underlying Invesco Fund has a shareholder meeting with any proxy issues to be voted on, because Invesco's asset-allocation funds or target-maturity funds may be large shareholders of the underlying fund. In order to avoid any potential for a conflict, the asset-allocation funds and target maturity funds vote their shares in the same proportion as the votes of the external shareholders of the underlying fund.

F. RECORDKEEPING

The Investments Administration team will be responsible for all Proxy Voting record keeping.

Policies and Vote Disclosure

A copy of these Guidelines and the voting record of each Invesco Retail Fund are available on Invesco's web site, www.invesco.com. In accordance with Securities and Exchange Commission regulations, all Invesco Funds file a record of all proxy-voting activity for the prior 12 months ending June 30th. That filing is made on or before August 31st of each year. In the case of institutional and sub-advised Clients, Clients may obtain information about how Invesco voted proxies on their behalf by contacting their client services representative.

J.P. Morgan Investment Management, Inc. ("JPMorgan")

PROXY VOTING PROCEDURES AND GUIDELINES

JPMorgan and its affiliated advisers are part of a global asset management organization with the capability to invest in securities of issuers located around the globe. JPMorgan may be granted by its clients the authority to vote the proxies of the securities held in client portfolios. To ensure that the proxies are voted in the best interests of its clients, JPMorgan has adopted detailed proxy voting procedures ("Procedures") that incorporate detailed proxy guidelines ("Guidelines") for voting proxies on specific types of issues. Because the regulatory framework and the business cultures and practices vary from region to region, the Guidelines are customized for each region to take into account such variations. Separate Guidelines cover the regions of (1) North America, (2) Europe, Middle East, Africa, Central America and South America, (3) Asia (ex-Japan) and (4) Japan, respectively.

Notwithstanding the variations among the Guidelines, all of the Guidelines have been designed with the uniform objective of encouraging corporate action that enhances shareholder value. As a general rule, in voting proxies of a particular security, JPMorgan and its affiliated advisers will apply the Guidelines of the region in which the issuer of such security is organized. Except as noted below, proxy voting decisions will be made in accordance with the Guidelines covering a multitude of both routine and non-routine matters that JPMorgan and its affiliated advisers have encountered globally, based on many years of collective investment management experience.

To oversee and monitor the proxy-voting process, JPMorgan has established a proxy committee and appointed a proxy administrator in each global location where proxies are voted. The primary function of each proxy committee

is to review periodically general proxy-voting matters, review and approve the Guidelines annually, and provide advice and recommendations on general proxy-voting matters as well as on specific voting issues. The procedures permit an independent voting service, to perform certain services otherwise carried out or coordinated by the proxy administrator.

Although for many matters the Guidelines specify the votes to be cast, for many others, the Guidelines contemplate case-by-case determinations. In addition, there will undoubtedly be proxy matters that are not contemplated by the Guidelines. For both of these categories of matters and to override the Guidelines, the Procedures require a certification and review process to be completed before the vote is cast. That process is designed to identify actual or potential material conflicts of interest (between the Fund on the one hand, and the Fund's investment adviser, principal underwriter or an affiliate of any of the foregoing, on the other hand) and ensure that the proxy vote is cast in the best interests of the Fund. A conflict is deemed to exist when the proxy is for JPMorgan Chase & Co. stock or for J.P. Morgan Funds, or when the proxy administrator has actual knowledge indicating that a JPMorgan affiliate is an investment banker or rendered a fairness opinion with respect to the matter that is the subject of the proxy vote. When such conflicts are identified, the proxy will be voted by an independent third party either in accordance with JPMorgan proxy voting guidelines or by the third party using its own guidelines.

When other types of potential material conflicts of interest are identified, the proxy administrator and the Chief Fiduciary Officer will evaluate the potential conflict of interest and determine whether such conflict actually exists, and if so, will recommend how the Adviser will vote the proxy. In addressing any material conflict, JPMorgan may take one or more of the following measures (or other appropriate action): removing or "walling off" from the proxy voting process certain JPMorgan personnel with knowledge of the conflict, voting in accordance with any applicable Guideline if the application of the Guideline would objectively result in the casting of a proxy vote in a predetermined manner, or deferring the vote to or obtaining a recommendation from a third independent party, in which case the proxy voted by, or in accordance with the recommendation of, the independent third party. The following summarizes some of the more noteworthy types of proxy voting policies of the non-U.S. Guidelines:

- Corporate governance procedures differ among the countries. Because of time constraints and local customs, it is not always possible for JPMorgan to receive and review all proxy materials in connection with each item submitted for a vote. Many proxy statements are in foreign languages.
- Proxy materials are generally mailed by the issuer to the sub-custodian which holds the securities for the client in the country where the portfolio company is organized, and there may not be sufficient time for such materials to be transmitted to JPMorgan in time for a vote to be cast. In some countries, proxy statements are not mailed at all, and in some locations, the deadline for voting is two to four days after the initial announcement that a vote is to be solicited and it may not always be possible to obtain sufficient information to make an informed decision in good time to vote.
- Certain markets require that shares being tendered for voting purposes are temporarily immobilized from trading until after the shareholder meeting has taken place. Elsewhere, notably emerging markets, it may not always be possible to obtain sufficient information to make an informed decision in good time to vote. Some markets require a local representative to be hired in order to attend the meeting and vote in person on our behalf, which can result in considerable cost. JPMIM also considers the cost of voting in light of the expected benefit of the vote. In certain instances, it may sometimes be in the Fund's best interests to intentionally refrain from voting in certain overseas markets from time to time.
- Where proxy issues concern corporate governance, takeover defense measures, compensation plans, capital structure changes and so forth, JPMorgan pays particular attention to management's arguments for promoting the prospective change. JPMorgan's sole criterion in determining its voting stance is whether such changes will be to the economic benefit of the beneficial owners of the shares.
- JPMorgan is in favor of a unitary board structure of the type found in the United Kingdom as opposed to tiered board structures. Thus, JPMorgan will generally vote to encourage the gradual phasing out of tiered board

structures, in favor of unitary boards. However, since tiered boards are still very prevalent in markets outside of the United Kingdom, local market practice will always be taken into account.

- JPMorgan will use its voting powers to encourage appropriate levels of board independence, taking into account local market practice.
- JPMorgan will usually vote against discharging the board from responsibility in cases of pending litigation, or if there is evidence of wrongdoing for which the board must be held accountable.
- JPMorgan will vote in favor of increases in capital which enhance a company's long-term prospects. JPMorgan will also vote in favor of the partial suspension of preemptive rights if they are for purely technical reasons (e.g., rights offers which may not be legally offered to shareholders in certain jurisdictions). However, JPMorgan will vote against increases in capital which would allow the company to usually adopt "poison pill" takeover defense tactics, or where the increase in authorized capital would dilute shareholder value in the long term.
- JPMorgan will vote in favor of proposals which will enhance a company's long-term prospects. JPMorgan will vote against an increase in bank borrowing powers which would result in the company reaching an unacceptable level of financial leverage, where such borrowing is expressly intended as part of a takeover defense, or where there is a material reduction in shareholder value.
- JPMorgan will generally vote against anti-takeover devices.
- Where social or environmental issues are the subject of a proxy vote, JPMorgan will consider the issue on a case-by-case basis, keeping in mind at all times the best economic interests of its clients.

The following summarizes some of the more noteworthy types of proxy voting policies of the U.S. Guidelines:

- JPMorgan considers votes on director nominees on a case-by-case basis. Votes generally will be withheld from directors who: (a) attend less than 75% of board and committee meetings without a valid excuse; (b) implement or renew a dead-hand poison pill; (c) are affiliated directors who serve on audit, compensation or nominating committees or are affiliated directors and the full board serves on such committees or the company does not have such committees; or (d) ignore a shareholder proposal that is approved for two consecutive years by a majority of either the shares outstanding or the votes cast.
- JPMorgan votes proposals to classify boards on a case-by-case basis, but normally will vote in favor of such proposal if the issuer's governing documents contain each of eight enumerated safeguards (for example, a majority of the board is composed of independent directors and the nominating committee is composed solely of such directors).
- JPMorgan also considers management poison pill proposals on a case-by-case basis, looking for shareholder-friendly provisions before voting in favor.
- JPMorgan votes against proposals for a super-majority vote to approve a merger.
- JPMorgan considers proposals to increase common and/or preferred shares and to issue shares as part of a debt restructuring plan on a case-by-case basis, taking into account such factors as the extent of dilution and whether the transaction will result in a change in control.
- JPMorgan votes proposals on a stock option plan based primarily on a detailed, quantitative analysis that takes into account factors such as estimated dilution to shareholders' equity and dilution to voting power. JPMorgan generally considers other management compensation proposals on a case-by-case basis.

- JPMorgan also considers on a case-by-case basis proposals to change an issuer's state of incorporation, mergers and acquisitions and other corporate restructuring proposals and certain social and environmental issue proposals.
- JPMIM reviews Say on Pay proposals on a case by case basis with additional review of proposals where the issuer's previous year's proposal received a low level of support.

Lazard Asset Management LLC

As a fiduciary, Lazard Asset Management LLC ("Lazard") is obligated to vote proxies in the best interests of its clients. Lazard has adopted a written policy (the "Policy") that is designed to ensure that it satisfies its fiduciary obligation. Lazard has developed a structure to attempt to ensure that proxy voting is conducted in an appropriate manner, consistent with clients' best interests, and within the framework of the Policy.

Lazard manages assets for a variety of clients, including individuals, Taft-Hartley plans, governmental plans, foundations and endowments, corporations, investment companies and other collective investment vehicles. Absent specific guidelines provided by a client, Lazard's policy is to vote proxies on a given issue the same for all of its clients. The Policy is based on the view that, in its role as investment adviser, Lazard must vote proxies based on what it believes will maximize shareholder value as a long-term investor, and that the votes it casts on behalf of all its clients are intended to accomplish that objective.

Procedures:

Administration and Implementation of Proxy Voting Process. Lazard's proxy-voting process is administered by its Proxy Operations Department ("ProxyOps"), which reports to Lazard's Chief Operating Officer. Oversight of the process is provided by Lazard's Legal/Compliance Department and by a Proxy Committee consisting of senior Lazard officers. To assist it in its proxy-voting responsibilities, Lazard currently subscribes to several research and other proxy-related services offered by Institutional Shareholder Services, Inc. ("ISS"), one of the world's largest providers of proxy-voting services. ISS provides Lazard with its independent analysis and recommendation regarding virtually every proxy proposal that Lazard votes on behalf of its clients, with respect to both U.S. and non-U.S. securities.

Lazard's Proxy Committee has approved specific proxy voting guidelines regarding the most common proxy proposals (the "Approved Guidelines"). These Approved Guidelines provide that Lazard should vote for or against the proposal, or that the proposal should be considered on a case-by-case basis. Lazard believes that its portfolio managers and global research analysts with knowledge of the company ("Portfolio Management") are in the best position to evaluate the impact that the outcome of a given proposal will have on long-term shareholder value. Therefore, ProxyOps seeks Portfolio Management's recommendation on all proposals to be considered on a case-by-case basis. Portfolio Management is also given the opportunity to review all proposals (other than routine proposals) where the Approved Guideline is to vote for or against, and, in compelling circumstances, to overrule the Approved Guideline, subject to the Proxy Committee's final determination. The Manager of ProxyOps may also consult with Lazard's Chief Compliance Officer or the Proxy Committee concerning any proxy agenda or proposal.

Types of Proposals. Shareholders receive proxies involving many different proposals. Many proposals are routine in nature, such as a non-controversial election of Directors or a change in a company's name. Other proposals are more complicated, such as items regarding corporate governance and shareholder rights, changes to capital structure, stock option plans and other executive compensation issues, mergers and other significant transactions and social or political issues. The Policy lists the Approved Guidelines for the most common proposals. New or unusual proposals may be presented from time to time. Such proposals will be presented to Portfolio Management and discussed with the Proxy Committee to determine how they should be voted, and an Approved Guideline will be adopted if appropriate.

Conflicts of Interest. The Policy recognizes that there may be times when meeting agendas or proposals create the appearance of a material conflict of interest for Lazard. Should the appearance of such a conflict exist, Lazard will seek to alleviate the conflict by voting consistent with an Approved Guideline (to vote for or against), or, in

situations where the Approved Guideline is to vote case-by-case, with the recommendation of an independent source, currently Institutional Shareholder Services ("ISS"). If the recommendations of the two services offered by ISS, the Proxy Advisor Service and the Proxy Voter Service, are not the same, Lazard will obtain a recommendation from a third independent source that provides proxy voting advisory services, and will defer to the majority recommendation. If a third independent source is not available, Lazard will follow the recommendation of ISS's Proxy Advisor Service.

Funds. Each Fund is required to file a Form N-PX by August 31 each year containing a complete proxy voting record of the Fund for the twelve-month period ended the previous June 30. Lazard's Proxy Operations team is responsible for maintaining the data necessary to complete this form and to work, in conjunction with ISS, to generate the required information and to file this form annually. In addition, in the Fund's annual and semi-annual report to shareholders and in its Statement of Additional Information ("SAI"), the Fund must include a statement indicating how to obtain the proxy voting record of the Fund for the most recent twelve month period and that such record is available without charge. It should also indicate that such information is available on the SEC's website. The Legal/Compliance Department is responsible for ensuring that such information is included in the annual and semi-annual reports and in the SAI.

Logan Circle Partners, L.P.

PROXY VOTING POLICY AND PROCEDURES

This policy defines procedures for voting securities held on behalf of each client for which Logan Circle Partners, LP ("Logan Circle") has the discretionary authority to vote, and to ensure that such securities are voted for the benefit of and in the best interest of the client.

I. General Policy

It is the policy of Logan Circle to consider and vote each proxy proposal in the best interests of client accounts for whom Logan Circle provides discretionary investment management services and has authority to vote their proxies. Logan Circle will not vote proxies if the advisory agreement does not expressly require Logan Circle to do so. Logan Circle also will not vote proxies if account has explicitly reserved the authority for itself.

In fulfilling its obligations to clients, Logan Circle will act in a manner consistent with the investment objectives and guidelines of its clients. If appropriate to do so, Logan Circle may employ an independent service provider to vote a proxy or to advise in the voting of a proxy. In certain situations, a client or its fiduciary may provide Logan Circle with their own proxy voting policy. In these situations, Logan Circle will generally seek to comply with such policy to the extent it would not be inconsistent with the fiduciary responsibility of Logan Circle.

II. Procedures for Voting Proxies

To assist Logan Circle in its responsibility for voting proxies and to ensure consistency in voting proxies on behalf of its clients, Logan Circle utilizes the proxy voting and recordkeeping services of Institutional Shareholder Services ("ISS"). ISS is an independent third-party service provider that specializes in providing a variety of proxy-related services to institutional investment managers. The services provided by ISS to Logan Circle include research, issuer analysis, and voting recommendations as well as vote execution, reporting, and recordkeeping.

A. Monitoring for Proxies

Both ISS and client custodians monitor for corporate events of the underlying securities held in client accounts. For those accounts for which Logan Circle has proxy voting authority, Logan Circle will give direction to each client's custodian to forward the proxy statements to ISS to vote the proxy. Operations staff will notify ISS of all new and existing client accounts that have delegated proxy voting authorization to Logan Circle. Operations staff will provide all necessary information to ISS and to the client's custodian in order to facilitate ISS tracking clients' proxy statements and ballots, reconciling the share amounts reflected on the proxy ballot with client account

holdings, to electronically vote such ballots, and maintaining the required records which detail the manner in which ISS has voted Logan Circle client account proxies.

B. Proxy Evaluation and Voting

1. Logan Circle shall designate one or more employees of Logan Circle (each a “designated employee”) to review proxies received by Logan Circle for which Logan Circle has the responsibility to vote and to ensure that all proxies are voted according to Logan Circle’s guidelines. Logan Circle’s voting actions shall follow the recommendations of ISS set forth in its Proxy Voting Guidelines, unless otherwise stated in Logan Circle’s guidelines.

2. In instances where Logan Circle does not follow ISS’s recommendation, the designated Logan Circle employee will review the proxy materials and provide a written recommendation to the portfolio manager(s), Compliance and Operations for review and approval. All overrides of ISS recommendations will be documented and approved by Compliance. The documentation may include copies of materials that were material to the evaluation and the recommendation made by the designated employee.

3. In instances where ISS does not provide a recommendation, Operations staff of Logan Circle shall promptly forward such proxy materials to the designated employee of Logan Circle for review. The designated Logan Circle employee will review the proxy materials and provide a written recommendation as set for in subsection B.2. above.

4. In cases where a client has asked Logan Circle for advice with respect to a proxy, the designated employee will submit a written recommendation to Compliance, who will review the recommendation for delivery to the client to confirm that there is not a potential conflict of interest.

C. Conflicts of Interest

1. The term “conflict of interest” refers to a situation in which Logan Circle or its affiliates have a financial interest in a matter presented by a proxy, other than the obligation Logan Circle incurs as investment adviser, which may compromise Logan Circle’s freedom of judgment and action with respect to the voting of the proxy. Examples include:

a. Companies affiliated with directors and officers of Logan Circle or its affiliates;

or

b. Companies that maintain significant business relationships with Logan Circle or its affiliates, or with which Logan Circle or its affiliate are actively seeking a significant business relationship.

2. When a potential conflict of interest exists, proxies will be voted in accordance with the ISS Proxy Voting Guidelines. In rare instances, Logan Circle may decline to vote the proxy the potential conflict of interest cannot be mitigated.

3. All voting decisions by Logan Circle on behalf of its clients shall be influenced by other clients of Logan Circle. All proxy voting proposals are intended to be voted in the client’s best interests.

D. Reporting and Disclosure

Logan Circle shall disclose within its Form ADV where clients can obtain information on how their securities were voted. Logan Circle shall also describe this proxy voting policy and procedures within the Form ADV, along with a disclosure that a client shall be provided a copy upon request.

E. Annual Review of Proxy Voting and Recordkeeping Service Providers

1. Operations and Compliance shall annually review the services provided by ISS or any other proxy voting and recording service provider retained by Logan Circle to assess whether the proxy service provider is capable of making impartial proxy voting recommendations in the best interests of Logan Circle's clients. In making such an assessment the review may consider:

a. The proxy service provider's conflict management procedures and assessment of the effectiveness of the implementation of such procedures;

b. The proxy service provider's Form ADV, if applicable, and other disclosure made by a proxy service provider regarding its products, services and methods of addressing conflicts of interest; and/or,

c. Inquiries to, and discussions with, representatives of a proxy service provider regarding its products, services and methods of addressing conflicts of interest.

2. No less than annually, Logan Circle shall obtain from each proxy service provider a copy of its conflict management procedures and request that the proxy service provider provide an update of any material revision to such procedures.

F. Recordkeeping

1. Logan Circle shall retain records relating to the voting of proxies, including:

a. A copy of this Proxy Voting Policy and Procedures and the ISS Proxy Voting Guidelines relating to the voting of proxies.

b. A copy of each proxy statement received by Logan Circle regarding portfolio securities in client accounts: however, Logan Circle shall rely on proxy statements filed on the SEC's EDGAR system instead of maintaining its own copies of proxy statements.

c. A record of each vote cast by Logan Circle on behalf of a client. Logan Circle may maintain records of proxy votes cast on behalf of Logan Circle's clients at ISS provided that ISS provides an undertaking to provide a copy of the documents promptly upon request.

d. A copy of each written client request for information on how Logan Circle voted proxies on behalf of the client account, and a copy of any written response by Logan Circle to the client account.

e. A copy of any document prepared by Logan Circle that was material to making a decision regarding how to vote proxies or that memorializes the basis for the decision.

2. These records shall be retained for five (5) years from the end of the fiscal year during which the last entry was made on such record and during the first two (2) years onsite at the appropriate office of Logan Circle.

Adopted: November 1, 2007
Amended: July 1 2011
Amended: January 1, 2014

Summary Proxy Voting Guidelines

Logan Circle Partners will follow the proxy voting guidelines adopted by of Institutional Shareholder Services (“ISS”) except as stated below:

Political Spending & Lobbying Activities

- Generally vote AGAINST proposals requesting greater disclosure of a company's political contributions and trade association spending policies and activities. However, the following will be considered:
 - The company's current disclosure of policies and oversight mechanisms related to its direct political contributions and payments to trade associations or other groups that may be used for political purposes, including information on the types of organizations supported and the business rationale for supporting these organizations; and
 - Recent significant controversies, fines, or litigation related to the company's political contributions or political activities.

MASSACHUSETTS FINANCIAL SERVICES COMPANY PROXY VOTING POLICIES AND PROCEDURES

February 1, 2014

Massachusetts Financial Services Company, MFS Institutional Advisors, Inc., MFS International (UK) Limited, MFS Heritage Trust Company, MFS Investment Management (Canada) Limited, MFS Investment Management Company (Lux) S.à r.l., MFS International Singapore Pte. Ltd., and MFS’ other subsidiaries that perform discretionary investment management activities (collectively, “MFS”) have adopted proxy voting policies and procedures, as set forth below (“MFS Proxy Voting Policies and Procedures”), with respect to securities owned by the clients for which MFS serves as investment adviser and has the power to vote proxies, including the pooled investment vehicles sponsored by MFS (the “MFS Funds”). References to “clients” in these policies and procedures include the MFS Funds and other clients of MFS, such as funds organized offshore, sub-advised funds and separate account clients, to the extent these clients have delegated to MFS the responsibility to vote proxies on their behalf under the MFS Proxy Voting Policies and Procedures.

The MFS Proxy Voting Policies and Procedures include:

- A. Voting Guidelines;
- B. Administrative Procedures;
- C. Records Retention; and
- D. Reports.

A. VOTING GUIDELINES

1. General Policy; Potential Conflicts of Interest

MFS’ policy is that proxy voting decisions are made in what MFS believes to be the best long-term economic interests of MFS’ clients, and not in the interests of any other party or in MFS’ corporate

interests, including interests such as the distribution of MFS Fund shares and institutional client relationships.

MFS reviews corporate governance issues and proxy voting matters that are presented for shareholder vote by either management or shareholders of public companies. Based on the overall principle that all votes cast by MFS on behalf of its clients must be in what MFS believes to be the best long-term economic interests of such clients, MFS has adopted proxy voting guidelines, set forth below, that govern how MFS generally will vote on specific matters presented for shareholder vote.

As a general matter, MFS votes consistently on similar proxy proposals across all shareholder meetings. However, some proxy proposals, such as certain excessive executive compensation, environmental, social and governance matters, are analyzed on a case-by-case basis in light of all the relevant facts and circumstances of the proposal. Therefore, MFS may vote similar proposals differently at different shareholder meetings based on the specific facts and circumstances of the issuer or the terms of the proposal. In addition, MFS also reserves the right to override the guidelines with respect to a particular proxy proposal when such an override is, in MFS' best judgment, consistent with the overall principle of voting proxies in the best long-term economic interests of MFS' clients.

MFS also generally votes consistently on the same matter when securities of an issuer are held by multiple client accounts, unless MFS has received explicit voting instructions to vote differently from a client for its own account. From time to time, MFS may also receive comments on the MFS Proxy Voting Policies and Procedures from its clients. These comments are carefully considered by MFS when it reviews these guidelines and revises them as appropriate.

These policies and procedures are intended to address any potential material conflicts of interest on the part of MFS or its subsidiaries that are likely to arise in connection with the voting of proxies on behalf of MFS' clients. If such potential material conflicts of interest do arise, MFS will analyze, document and report on such potential material conflicts of interest (see Sections B.2 and D below), and shall ultimately vote the relevant proxies in what MFS believes to be the best long-term economic interests of its clients. The MFS Proxy Voting Committee is responsible for monitoring and reporting with respect to such potential material conflicts of interest.

MFS is also a signatory to the United Nations Principles for Responsible Investment. In developing these guidelines, MFS considered environmental, social and corporate governance issues in light of MFS' fiduciary obligation to vote proxies in the best long-term economic interest of its clients.

B. ADMINISTRATIVE PROCEDURES

1. MFS Proxy Voting Committee

The administration of these MFS Proxy Voting Policies and Procedures is overseen by the MFS Proxy Voting Committee, which includes senior personnel from the MFS Legal and Global Investment Support Departments. The Proxy Voting Committee does not include individuals whose primary duties relate to client relationship management, marketing, or sales. The MFS Proxy Voting Committee:

- a. Reviews these MFS Proxy Voting Policies and Procedures at least annually and recommends any amendments considered to be necessary or advisable;
- b. Determines whether any potential material conflict of interest exists with respect to instances in which MFS (i) seeks to override these MFS Proxy Voting Policies and Procedures; (ii) votes on ballot items not governed by these MFS Proxy Voting Policies and Procedures; (iii) evaluates an excessive executive compensation issue in relation to the election of directors; or (iv) requests a vote recommendation from an MFS portfolio manager or investment analyst (e.g. mergers and acquisitions); and
- c. Considers special proxy issues as they may arise from time to time.

2. Potential Conflicts of Interest

The MFS Proxy Voting Committee is responsible for monitoring potential material conflicts of interest on the part of MFS or its subsidiaries that could arise in connection with the voting of proxies on behalf of MFS' clients. Due to the client focus of our investment management business, we believe that the potential for actual material conflict of interest issues is small. Nonetheless, we have developed precautions to assure that all proxy votes are cast in the best long-term economic interest of shareholders.³ Other MFS internal policies require all MFS employees to avoid actual and potential conflicts of interests between personal activities and MFS' client activities. If an employee (including investment professionals) identifies an actual or potential conflict of interest with respect to any voting decision (including the ownership of securities in their individual portfolio), then that employee must recuse himself/herself from participating in the voting process. Any significant attempt by an employee of MFS or its subsidiaries to unduly influence MFS' voting on a particular proxy matter should also be reported to the MFS Proxy Voting Committee.

In cases where proxies are voted in accordance with these MFS Proxy Voting Policies and Procedures, no material conflict of interest will be deemed to exist. In cases where (i) MFS is considering overriding these MFS Proxy Voting Policies and Procedures, (ii) matters presented for vote are not governed by these MFS Proxy Voting Policies and Procedures, (iii) MFS evaluates a potentially excessive executive compensation issue in relation to the election of directors or advisory pay or severance package vote, (iv) a vote recommendation is requested from an MFS portfolio manager or investment analyst (e.g. mergers and acquisitions); or (v) MFS evaluates a director nominee who also serves as a director of the MFS Funds (collectively, "Non-Standard Votes"); the MFS Proxy Voting Committee will follow these procedures:

- a. Compare the name of the issuer of such proxy against a list of significant current (i) distributors of MFS Fund shares, and (ii) MFS institutional clients (the "MFS Significant Distributor and Client List");
- b. If the name of the issuer does not appear on the MFS Significant Distributor and Client List, then no material conflict of interest will be deemed to exist, and the proxy will be voted as otherwise determined by the MFS Proxy Voting Committee;
- c. If the name of the issuer appears on the MFS Significant Distributor and Client List, then the MFS Proxy Voting Committee will be apprised of that fact and each member of the MFS Proxy Voting Committee will carefully evaluate the proposed vote in order to ensure that the proxy ultimately is voted in what MFS believes to be the best long-term economic interests of MFS' clients, and not in MFS' corporate interests; and
- d. For all potential material conflicts of interest identified under clause (c) above, the MFS Proxy Voting Committee will document: the name of the issuer, the issuer's relationship to MFS, the analysis of the matters submitted for proxy vote, the votes as to be cast and the reasons why the MFS Proxy Voting Committee determined that the votes were cast in the best long-term economic interests of MFS' clients, and not in MFS' corporate interests. A copy of the foregoing documentation will be provided to MFS' Conflicts Officer.

The members of the MFS Proxy Voting Committee are responsible for creating and maintaining the MFS Significant Distributor and Client List, in consultation with MFS' distribution and institutional business units. The MFS Significant Distributor and Client List will be reviewed and updated periodically, as appropriate.

³ For clarification purposes, note that MFS votes in what we believe to be the best, long-term economic interest of our clients entitled to vote at the shareholder meeting, regardless of whether other MFS clients hold "short" positions in the same issuer.

If an MFS client has the right to vote on a matter submitted to shareholders by Sun Life Financial, Inc. or any of its affiliates (collectively "Sun Life"), MFS will cast a vote on behalf of such MFS client pursuant to the recommendations of Institutional Shareholder Services, Inc.'s ("ISS") benchmark policy, or as required by law.

Except as described in the MFS Fund's prospectus, from time to time, certain MFS Funds (the "top tier fund") may own shares of other MFS Funds (the "underlying fund"). If an underlying fund submits a matter to a shareholder vote, the top tier fund will generally vote its shares in the same proportion as the other shareholders of the underlying fund. If there are no other shareholders in the underlying fund, the top tier fund will vote in what MFS believes to be in the top tier fund's best long-term economic interest. If an MFS client has the right to vote on a matter submitted to shareholders by a pooled investment vehicle advised by MFS, MFS will cast a vote on behalf of such MFS client in the same proportion as the other shareholders of the pooled investment vehicle.

3. Gathering Proxies

Most proxies received by MFS and its clients originate at Broadridge Financial Solutions, Inc. ("Broadridge"). Broadridge and other service providers, on behalf of custodians, send proxy related material to the record holders of the shares beneficially owned by MFS' clients, usually to the client's proxy voting administrator or, less commonly, to the client itself. This material will include proxy ballots reflecting the shareholdings of Funds and of clients on the record dates for such shareholder meetings, as well as proxy materials with the issuer's explanation of the items to be voted upon.

MFS, on behalf of itself and certain of its clients (including the MFS Funds) has entered into an agreement with an independent proxy administration firm pursuant to which the proxy administration firm performs various proxy vote related administrative services such as vote processing and recordkeeping functions. Except as noted below, the proxy administration firm for MFS and its clients, including the MFS Funds, is ISS. The proxy administration firm for MFS Development Funds, LLC is Glass, Lewis & Co., Inc. ("Glass Lewis"; Glass Lewis and ISS are each hereinafter referred to as the "Proxy Administrator").

The Proxy Administrator receives proxy statements and proxy ballots directly or indirectly from various custodians, logs these materials into its database and matches upcoming meetings with MFS Fund and client portfolio holdings, which are input into the Proxy Administrator's system by an MFS holdings data-feed. Through the use of the Proxy Administrator system, ballots and proxy material summaries for all upcoming shareholders' meetings are available on-line to certain MFS employees and members of the MFS Proxy Voting Committee.

It is the responsibility of the Proxy Administrator and MFS to monitor the receipt of ballots. When proxy ballots and materials for clients are received by the Proxy Administrator, they are input into the Proxy Administrator's on-line system. The Proxy Administrator then reconciles a list of all MFS accounts that hold shares of a company's stock and the number of shares held on the record date by these accounts with the Proxy Administrator's list of any upcoming shareholder's meeting of that company. If a proxy ballot has not been received, the Proxy Administrator contacts the custodian requesting the reason as to why a ballot has not been received.

4. Analyzing Proxies

Proxies are voted in accordance with these MFS Proxy Voting Policies and Procedures. The Proxy Administrator, at the prior direction of MFS, automatically votes all proxy matters that do not require the particular exercise of discretion or judgment with respect to these MFS Proxy Voting Policies and Procedures as determined by MFS. With respect to proxy matters that require the particular exercise of discretion or judgment, the MFS Proxy Voting Committee considers and votes on those proxy matters. MFS also receives research and recommendations from the Proxy Administrator which it may take into account in deciding how to vote. MFS uses the research of ISS to identify (i) circumstances in which a board may have approved excessive executive compensation, (ii) environmental and social proposals that warrant further consideration or (iii) circumstances in which a non-U.S. company is not in compliance with

local governance or compensation best practices. In those situations where the only MFS fund that is eligible to vote at a shareholder meeting has Glass Lewis as its Proxy Administrator, then we will utilize research from Glass Lewis to identify such issues. MFS analyzes such issues independently and does not necessarily vote with the ISS or Glass Lewis recommendations on these issues. MFS may also use other research tools in order to identify the circumstances described above. Representatives of the MFS Proxy Voting Committee review, as appropriate, votes cast to ensure conformity with these MFS Proxy Voting Policies and Procedures.

As a general matter, portfolio managers and investment analysts have little involvement in most votes taken by MFS. This is designed to promote consistency in the application of MFS' voting guidelines, to promote consistency in voting on the same or similar issues (for the same or for multiple issuers) across all client accounts, and to minimize the potential that proxy solicitors, issuers, or third parties might attempt to exert inappropriate influence on the vote. In limited types of votes (e.g. mergers and acquisitions, capitalization matters, potentially excessive executive compensation issues, or shareholder proposals relating to environmental and social issues), a representative of MFS Proxy Voting Committee may consult with or seek recommendations from MFS portfolio managers or investment analysts.⁴ However, the MFS Proxy Voting Committee would ultimately determine the manner in which all proxies are voted.

As noted above, MFS reserves the right to override the guidelines when such an override is, in MFS' best judgment, consistent with the overall principle of voting proxies in the best long-term economic interests of MFS' clients. Any such override of the guidelines shall be analyzed, documented and reported in accordance with the procedures set forth in these policies.

5. Voting Proxies

In accordance with its contract with MFS, the Proxy Administrator also generates a variety of reports for the MFS Proxy Voting Committee, and makes available on-line various other types of information so that the MFS Proxy Voting Committee or proxy team may review and monitor the votes cast by the Proxy Administrator on behalf of MFS' clients.

For those markets that utilize a "record date" to determine which shareholders are eligible to vote, MFS generally will vote all eligible shares pursuant to these guidelines regardless of whether all (or a portion of) the shares held by our clients have been sold prior to the meeting date.

6. Securities Lending

From time to time, the MFS Funds or other pooled investment vehicles sponsored by MFS may participate in a securities lending program. In the event MFS or its agent receives timely notice of a shareholder meeting for a U.S. security, MFS and its agent will attempt to recall any securities on loan before the meeting's record date so that MFS will be entitled to vote these shares. However, there may be instances in which MFS is unable to timely recall securities on loan for a U.S. security, in which cases MFS will not be able to vote these shares. MFS will report to the appropriate board of the MFS Funds those instances in which MFS is not able to timely recall the loaned securities. MFS generally does not recall non-U.S. securities on loan because there may be insufficient advance notice of proxy materials, record dates, or vote cut-off dates to allow MFS to timely recall the shares in certain markets on an automated basis. As a result, non-U.S. securities that are on loan will not generally be voted. If MFS receives timely notice of what MFS determines to be an unusual, significant vote for a non-U.S. security

⁴ From time to time, due to travel schedules and other commitments, an appropriate portfolio manager or research analyst may not be available to provide a vote recommendation. If such a recommendation cannot be obtained within a reasonable time prior to the cut-off date of the shareholder meeting, the MFS Proxy Voting Committee may determine to abstain from voting.

whereas MFS shares are on loan, and determines that voting is in the best long-term economic interest of shareholders, then MFS will attempt to timely recall the loaned shares.

7. *Engagement*

The MFS Proxy Voting Policies and Procedures are available on www.mfs.com and may be accessed by both MFS' clients and the companies in which MFS' clients invest. From time to time, MFS may determine that it is appropriate and beneficial for representatives from the MFS Proxy Voting Committee to engage in a dialogue or written communication with a company or other shareholders regarding certain matters on the company's proxy statement that are of concern to shareholders, including environmental, social and governance matters. A company or shareholder may also seek to engage with representatives of the MFS Proxy Voting Committee in advance of the company's formal proxy solicitation to review issues more generally or gauge support for certain contemplated proposals.

C. RECORDS RETENTION

MFS will retain copies of these MFS Proxy Voting Policies and Procedures in effect from time to time and will retain all proxy voting reports submitted to the Board of Trustees of the MFS Funds for the period required by applicable law. Proxy solicitation materials, including electronic versions of the proxy ballots completed by representatives of the MFS Proxy Voting Committee, together with their respective notes and comments, are maintained in an electronic format by the Proxy Administrator and are accessible on-line by the MFS Proxy Voting Committee. All proxy voting materials and supporting documentation, including records generated by the Proxy Administrator's system as to proxies processed, including the dates when proxy ballots were received and submitted, and the votes on each company's proxy issues, are retained as required by applicable law.

D. REPORTS

U.S. Registered MFS Funds

MFS publicly discloses the proxy voting records of the U.S. registered MFS Funds on a quarterly basis. MFS will also report the results of its voting to the Board of Trustees of the U.S. registered MFS Funds. These reports will include: (i) a summary of how votes were cast (including advisory votes on pay and "golden parachutes"); (ii) a summary of votes against management's recommendation; (iii) a review of situations where MFS did not vote in accordance with the guidelines and the rationale therefore; (iv) a review of the procedures used by MFS to identify material conflicts of interest and any matters identified as a material conflict of interest; (v) a review of these policies and the guidelines; (vi) a review of our proxy engagement activity; (vii) a report and impact assessment of instances in which the recall of loaned securities of a U.S. issuer was unsuccessful; and (viii) as necessary or appropriate, any proposed modifications thereto to reflect new developments in corporate governance and other issues. Based on these reviews, the Trustees of the U.S. registered MFS Funds will consider possible modifications to these policies to the extent necessary or advisable.

Other MFS Clients

MFS may publicly disclose the proxy voting records of certain other clients (including certain MFS Funds) or the votes it casts with respect to certain matters as required by law. A report can also be printed by MFS for each client who has requested that MFS furnish a record of votes cast. The report specifies the proxy issues which have been voted for the client during the year and the position taken with respect to each issue and, upon request, may identify situations where MFS did not vote in accordance with the MFS Proxy Voting Policies and Procedures.

Except as described above, MFS generally will not divulge actual voting practices to any party other than the client or its representatives because we consider that information to be confidential and

proprietary to the client. However, as noted above, MFS may determine that it is appropriate and beneficial to engage in a dialogue with a company regarding certain matters. During such dialogue with the company, MFS may disclose the vote it intends to cast in order to potentially effect positive change at a company in regards to environmental, social or governance issues.

MORGAN STANLEY INVESTMENT MANAGEMENT
PROXY VOTING POLICY AND PROCEDURES
October 3, 2013

I. POLICY STATEMENT

Morgan Stanley Investment Management’s (“MSIM”) policy and procedures for voting proxies (“Policy”) with respect to securities held in the accounts of clients applies to those MSIM entities that provide discretionary investment management services and for which an MSIM entity has authority to vote proxies. This Policy is reviewed and updated as necessary to address new and evolving proxy voting issues and standards.

The MSIM entities covered by this Policy currently include the following: Morgan Stanley AIP GP LP, Morgan Stanley Investment Management Inc., Morgan Stanley Investment Management Limited, Morgan Stanley Investment Management Company, Morgan Stanley Investment Management (Japan) Co., Limited, Morgan Stanley Investment Management Private Limited and Private Investment Partners Inc. (each an “MSIM Affiliate” and collectively referred to as the “MSIM Affiliates” or as “we” below).

Each MSIM Affiliate will use its best efforts to vote proxies as part of its authority to manage, acquire and dispose of account assets. With respect to the MSIM registered management investment companies (“MSIM Funds”), each MSIM Affiliate will vote proxies under this Policy pursuant to authority granted under its applicable investment advisory agreement or, in the absence of such authority, as authorized by the Board of Directors/Trustees of the MSIM Funds. An MSIM Affiliate will not vote proxies unless the investment management or investment advisory agreement explicitly authorizes the MSIM Affiliate to vote proxies.

MSIM Affiliates will vote proxies in a prudent and diligent manner and in the best interests of clients, including beneficiaries of and participants in a client’s benefit plan(s) for which the MSIM Affiliates manage assets, consistent with the objective of maximizing long-term investment returns (“Client Proxy Standard”). In addition to voting proxies at portfolio companies, MSIM routinely engages with the management and may also engage with the board, of companies in which we invest on a range of governance issues. Governance is a window into or proxy for management and board quality. MSIM engages with companies where we have larger positions, voting issues are material or where we believe we can make a positive impact on the governance structure. MSIM’s engagement process, through private communication with companies, allows us to understand the governance structures at investee companies and better inform our voting decisions. In certain situations, a client or its fiduciary may provide an MSIM Affiliate with a proxy voting policy. In these situations, the MSIM Affiliate will comply with the client’s policy.

Proxy Research Services - ISS and Glass Lewis (together with other proxy research providers as we may retain from time to time, the “Research Providers”) are independent advisers that specialize in providing a variety of fiduciary-level proxy-related services to institutional investment managers, plan sponsors, custodians, consultants, and other institutional investors. The services provided include in-depth research, global issuer analysis, and voting recommendations. While we may review and utilize the recommendations of one or more Research Providers in making proxy voting decisions, we are in no way obligated to follow such recommendations. In addition to research, ISS provides vote execution, reporting, and recordkeeping services.

Voting Proxies for Certain Non-U.S. Companies - Voting proxies of companies located in some jurisdictions may involve several problems that can restrict or prevent the ability to vote such proxies or entail significant costs. These problems include, but are not limited to: (i) proxy statements and ballots being written in a language other than English; (ii) untimely and/or inadequate notice of shareholder meetings; (iii) restrictions on the ability of holders outside the issuer's jurisdiction of organization to exercise votes; (iv) requirements to vote proxies in person; (v) the imposition of restrictions on the sale of the securities for a period of time in proximity to the shareholder meeting; and (vi) requirements to provide local agents with power of attorney to facilitate our voting instructions. As a result, we vote clients' non-U.S. proxies on a best efforts basis only, after weighing the costs and benefits of voting such proxies, consistent with the Client Proxy Standard. ISS has been retained to provide assistance in connection with voting non-U.S. proxies.

II. GENERAL PROXY VOTING GUIDELINES

To promote consistency in voting proxies on behalf of its clients, we follow this Policy (subject to any exception set forth herein). The Policy addresses a broad range of issues, and provides general voting parameters on proposals that arise most frequently. However, details of specific proposals vary, and those details affect particular voting decisions, as do factors specific to a given company. Pursuant to the procedures set forth herein, we may vote in a manner that is not in accordance with the following general guidelines, provided the vote is approved by the Proxy Review Committee (see Section III for description) and is consistent with the Client Proxy Standard. Morgan Stanley AIP GP LP will follow the procedures as described in Appendix A.

We endeavor to integrate governance and proxy voting policy with investment goals, using the vote to encourage portfolio companies to enhance long-term shareholder value and to provide a high standard of transparency such that equity markets can value corporate assets appropriately.

We seek to follow the Client Proxy Standard for each client. At times, this may result in split votes, for example when different clients have varying economic interests in the outcome of a particular voting matter (such as a case in which varied ownership interests in two companies involved in a merger result in different stakes in the outcome). We also may split votes at times based on differing views of portfolio managers.

We may abstain on matters for which disclosure is inadequate.

A. Routine Matters.

We generally support routine management proposals. The following are examples of routine management proposals:

- Approval of financial statements and auditor reports if delivered with an unqualified auditor's opinion.
- General updating/corrective amendments to the charter, articles of association or bylaws, unless we believe that such amendments would diminish shareholder rights.
- Most proposals related to the conduct of the annual meeting, with the following exceptions. We generally oppose proposals that relate to "the transaction of such other business which may come before the meeting," and open-ended requests for adjournment. However, where management specifically states the reason for requesting an adjournment and the requested adjournment would facilitate passage of a proposal that would otherwise be supported under this Policy (i.e. an uncontested corporate transaction), the adjournment request will be supported.

We generally support shareholder proposals advocating confidential voting procedures and independent tabulation of voting results.

B. Board of Directors.

1. Election of directors: Votes on board nominees can involve balancing a variety of considerations. In vote decisions, we may take into consideration whether the company has a majority voting policy in place that we believe makes the director vote more meaningful. In the absence of a proxy contest, we generally support the board's nominees for director except as follows:
 - a. We consider withholding support from or voting against a nominee if we believe a direct conflict exists between the interests of the nominee and the public shareholders, including failure to meet fiduciary standards of care and/or loyalty. We may oppose directors where we conclude that actions of directors are unlawful, unethical or negligent. We consider opposing individual board members or an entire slate if we believe the board is entrenched and/or dealing inadequately with performance problems; if we believe the board is acting with insufficient independence between the board and management; or if we believe the board has not been sufficiently forthcoming with information on key governance or other material matters.
 - b. We consider withholding support from or voting against interested directors if the company's board does not meet market standards for director independence, or if otherwise we believe board independence is insufficient. We refer to prevalent market standards as promulgated by a stock exchange or other authority within a given market (e.g., New York Stock Exchange or Nasdaq rules for most U.S. companies, and The Combined Code on Corporate Governance in the United Kingdom). Thus, for an NYSE company with no controlling shareholder, we would expect that at a minimum a majority of directors should be independent as defined by NYSE. Where we view market standards as inadequate, we may withhold votes based on stronger independence standards. Market standards notwithstanding, we generally do not view long board tenure alone as a basis to classify a director as non-independent.
 - i. At a company with a shareholder or group that controls the company by virtue of a majority economic interest in the company, we have a reduced expectation for board independence, although we believe the presence of independent directors can be helpful, particularly in staffing the audit committee, and at times we may withhold support from or vote against a nominee on the view the board or its committees are not sufficiently independent. In markets where board independence is not the norm (e.g. Japan), however, we consider factors including whether a board of a controlled company includes independent members who can be expected to look out for interests of minority holders.
 - ii. We consider withholding support from or voting against a nominee if he or she is affiliated with a major shareholder that has representation on a board disproportionate to its economic interest.
 - c. Depending on market standards, we consider withholding support from or voting against a nominee who is interested and who is standing for election as a member of the company's compensation/remuneration, nominating/governance or audit committee.
 - d. We consider withholding support from or voting against nominees if the term for which they are nominated is excessive. We consider this issue on a market-specific basis.

- e. We consider withholding support from or voting against nominees if in our view there has been insufficient board renewal (turnover), particularly in the context of extended poor company performance.
 - f. We consider withholding support from or voting against a nominee standing for election if the board has not taken action to implement generally accepted governance practices for which there is a “bright line” test. For example, in the context of the U.S. market, failure to eliminate a dead hand or slow hand poison pill would be seen as a basis for opposing one or more incumbent nominees.
 - g. In markets that encourage designated audit committee financial experts, we consider voting against members of an audit committee if no members are designated as such. We also consider voting against the audit committee members if the company has faced financial reporting issues and/or does not put the auditor up for ratification by shareholders.
 - h. We believe investors should have the ability to vote on individual nominees, and may abstain or vote against a slate of nominees where we are not given the opportunity to vote on individual nominees.
 - i. We consider withholding support from or voting against a nominee who has failed to attend at least 75% of the nominee’s board and board committee meetings within a given year without a reasonable excuse. We also consider opposing nominees if the company does not meet market standards for disclosure on attendance.
 - j. We consider withholding support from or voting against a nominee who appears overcommitted, particularly through service on an excessive number of boards. Market expectations are incorporated into this analysis; for U.S. boards, we generally oppose election of a nominee who serves on more than six public company boards (excluding investment companies), although we also may reference National Association of Corporate Directors guidance suggesting that public company CEOs, for example, should serve on no more than two outside boards given level of time commitment required in their primary job.
 - k. We consider withholding support from or voting against a nominee where we believe executive remuneration practices are poor, particularly if the company does not offer shareholders a separate “say-on-pay” advisory vote on pay.
2. Discharge of directors’ duties: In markets where an annual discharge of directors' responsibility is a routine agenda item, we generally support such discharge. However, we may vote against discharge or abstain from voting where there are serious findings of fraud or other unethical behavior for which the individual bears responsibility. The annual discharge of responsibility represents shareholder approval of disclosed actions taken by the board during the year and may make future shareholder action against the board difficult to pursue.
